About Pearson

Pearson is the world's learning company, with presence across 70 countries worldwide. Our unique insights and world-class expertise comes from a long history of working closely with renowned teachers, authors and thought leaders, as a result of which, we have emerged as the preferred choice for millions of teachers and learners across the world.

We believe learning opens up opportunities, creates fulfilling careers and hence better lives. We hence collaborate with the best of minds to deliver you class-leading products, spread across the Higher Education and K12 spectrum.

Superior learning experience and improved outcomes are at the heart of everything we do. This product is the result of one such effort.

Your feedback plays a critical role in the evolution of our products and you can contact us - reachus@pearson.com. We look forward to it.

Preface

With new frontiers of knowledge being explored every moment, the role of a teacher in the society can only get bigger. It is only a teacher who imparts knowledge, inculcates values, and teaches norms of the society to the youngsters. There has always been an insatiable demand for people who adopt teaching as a long-term career option.

NTA-UGC NET/SET/JRF Paper I—Teaching and Research Aptitude has been written for students who aspire to eke out a career in academics and research. This book not only focuses on preparing the candidates for qualifying the NET Examination but also focuses on developing teaching and research aptitude in real terms. It is primarily designed to help students assess their **reasoning ability, comprehension, divergent thinking, and general awareness**.

The book has been divided into 10 units as per the prescribed syllabus. The discussion throughout the book has been supported by updated facts, figures, and diagrams as per the previous years' examination pattern. A NET aspirant's Teaching and Research aptitude is tested through Papers I of NTA-UGC Net Exam and subject knowledge is assessed on the basis of performance in Paper II. Exam pattern was made totally objective in June 2012. Now the marks obtained in Paper 1 are counted for the preparation of final list of qualifying candidates. Thus performance in this paper has become very crucial.

A genuine attempt has been made to incorporate concepts on which questions can be asked in the forthcoming examinations. The language is simple, short, and crisp. Each unit is followed by extensive practice questions, so as to instill candidates with the confidence. The solutions offered at the end of the papers actually come in handy. The variety and scope of probable questions is expanding with each examination, but, importantly, the level of difficulty has remained almost the same.

For suggestions and feedback you may write to: kvsm2003@yahoo.co.in or contact at 09417315300.

ACKNOWLEDGMENTS

I feel indebted to Prof. Surindra Lal (formerly Principal of Multani Mal Modi College, Patiala, and a renowned authority on Physics) who has always been a mentor and continuous source of inspiration to me at a personal level. I am thankful to my friends and faculty colleagues—Dr Sukhwinder Kaur (Director Career Spot, Chandigarh), Dr Kiran Thakur (NIT, Hamirpur), Prof. (Dr) Pankaj Thakur, School of Chemistry, Shoolini University, Solan (HP), and Mr Parveen Bansal (MD, Abhimanu IAS Visions, Chandigarh) who have always been forthcoming to offer their help and support.

I would like to extend my gratitude to the Team Pearson, who have always been prompt in offering help during different stages of publishing. My special gratitude is due for Mr Vikas Sharma, who is actually the motivation behind the whole project, and like an elder brother to me, provided inputs that enabled me to come out with the improvised third edition as per requirements of the NET career aspirants. It is not possible for me to put his contribution into words. My younger brother Parminder Madaan also provided me motivational support.

Last, but not the least, I am indebted to my better half Anshu Bala for keeping me motivated during all stages of project. I always feel a divine power supporting my efforts when kids Jiya, Srijan, and Jappan are around. They actually made me work harder on the project.

KVS Madaan

About NTA

The National Testing Agency (NTA) has been established as a premier, specialist, autonomous and self-sustained testing organization to conduct entrance examinations for admission or fellowship in higher educational institutions. It has been set up with the following specific objectives.

1. To conduct tests in an efficient, transparent and international standard in order to assess the competency of candidates for admission and recruitment purposes.
2. To undertake research on educational, professional and testing systems in order to identify gaps in the knowledge systems and take steps for bridging them.
3. To identify experts and institutions in formulating examination questions.
4. To produce and disseminate information and research on education and professional development standards.

The NET exam is conducted on behalf of UGC for determining the eligibility of candidates opting for the post of Assistant Professor only or Junior Research Fellowship (JRF) and Assistant Professor both in Indian universities and colleges. The JRFs being selected will acquire essential stipend while pursuing PhD/Fellowship.

Until recently, the CBSE conducted NET exam in 84 subjects at 91 selected cities spread across the country. From December 2018, the UGC-NET (Eligibility for Assistant Professor only or Junior Research Fellowship and Eligibility for both Assistant Professor) is to be conducted by NTA.

The NTA intends to create a question bank for all subjects using modern techniques. The administration of NTA has been entrusted to the governing body with Shri R. Subrahmanyam, Secretary, Department of Higher Education, MHRD, being its first chairman.

ELIGIBILITY

Candidates who have secured at least 55% marks in Master's degree or equivalent examination from recognized universities in Humanities (including languages) and Social Science, Computer Science and Applications, Electronic Science, etc., are eligible to appear for this test. A relaxation of 5% for other reserved categories has also been entitled to candidates.

Candidates who are pursuing their Master's degree or equivalent course should comply to all the eligibility criteria. It is essential for the candidates to complete their Master's degree or equivalent examination within two years from the date of NET result with required percentage of marks, failing to which they will be treated as disqualified.

The Ph.D. degree holders whose Master's level examination had been completed by 19th September 1991 (irrespective of the date of result declaration) shall be eligible for a relaxation of 5% in aggregate marks, i.e., from 55% to 50% for appearing in NET.

Candidates are advised to appear in the subject of their post-graduation only. The candidates, whose post-graduation subject is not covered in the list of subjects, may appear in a related subject.

About the Author

KVS Madaan is Faculty cum Founder-director of netmentor.net – a Mock Test platform for various prestigious competitive exams. A post graduate in Business Administration from Haryana School of Business, GJUST, Hisar, he qualified for UGC-NET in the subject area of Management and is currently pursuing his Ph.D. With more than eighteen years of rich teaching and research experience, he has helped thousands of career aspirants to realise their goals.

He has worked as Associate Director, School of Business Management, Arni University, Kathgarh (Himachal Pradesh); Director, Punjab Business School, Mohali and Head of Department – Management, MM University, Solan, Himachal Pradesh; and also as Faculty for Management with Chandigarh University, SAS Nagar, Mohali.

A trainer cum keynote speaker at many UGC and AICTE sponsored Faculty Development Programmes; he has conducted training sessions with many renowned institutes across the country.

Syllabus

UNIVERSITY GRANTS COMMISSION NET BUREAU

PAPER-I

Subject: General Paper on Teaching and Research Aptitude

The main objective is to assess the teaching and research capabilities of the candidates. The test aims at assessing the teaching and research aptitude as well. Candidates are expected to possess and exhibit cognitive abilities, which include comprehension, analysis, evaluation, understanding the structure of arguments, deductive and inductive reasoning. The candidates are also expected to have a general awareness about teaching and learning processes in higher education system. Further, they should be aware of interaction between people, environment, natural resources and their impact on the quality of life.

The details of syllabi are as follows:

I. Teaching Aptitude

- Teaching: Concept, Objectives, Levels of teaching (Memory, Understanding and Reflective), Characteristics and basic requirements.
- Learner's characteristics: Characteristics of adolescent and adult learners (Academic, Social, Emotional and Cognitive), Individual differences.
- Factors affecting teaching related to: Teacher, Learner, Support material, Instructional facilities, Learning environment and Institution.
- Methods of teaching in Institutions of higher learning: Teacher centred vs. Learner centred methods; Off-line vs. On-line methods (Swayam, Swayamprabha, MOOCs etc.).
- Teaching Support System: Traditional, Modern and ICT based.
- Evaluation Systems: Elements and Types of evaluation, Evaluation in Choice Based Credit System in Higher education, Computer based testing, Innovations in evaluation systems.

II. Research Aptitude

- Research: Meaning, Types, and Characteristics, Positivism and Post-positivistic approach to research.
- Methods of Research: Experimental, Descriptive, Historical, Qualitative and Quantitative methods.
- Steps of Research.
- Thesis and Article writing: Format and styles of referencing.
- Application of ICT in research.
- Research ethics.

III. Comprehension

- A passage of text be given. Questions be asked from the passage to be answered.

IV. Communication

- Communication: Meaning, types and characteristics of communication.
- Effective communication: Verbal and Non-verbal, Inter-Cultural and group communications, Classroom communication.
- Barriers to effective communication.
- Mass-Media and Society.

V. Mathematical Reasoning and Aptitude

- Types of reasoning.
- Number series, Letter series, Codes and Relationships.
- Mathematical Aptitude (Fraction, Time & Distance, Ratio, Proportion and Percentage, Profit and Loss, Interest and Discounting, Averages etc.).

VI. Logical Reasoning

- Understanding the structure of arguments: argument forms, structure of categorical propositions, Mood and Figure, Formal and Informal fallacies, Uses of language, Connotations and denotations of terms, Classical square of opposition.
- Evaluating and distinguishing deductive and inductive reasoning.
- Analogies.
- Venn diagram: Simple and multiple use for establishing validity of arguments.
- Indian Logic: Means of knowledge.
- Pramanas: Pratyaksha (Perception), Anumana (Inference), Upamana (Comparison), Shabda (Verbal testimony), Arthapatti (Implication) and Anupalabdhi (Non-apprehension).
- Structure and kinds of Anumana (inference), Vyapti (invariable relation), Hetvabhasas (fallacies of inference).

VII. Data Interpretation

- Sources, acquisition and classification of Data.
- Quantitative and Qualitative Data.
- Graphical representation (Bar-chart, Histograms, Pie-chart, Table-chart and Line-chart) and mapping of Data.
- Data Interpretation.
- Data and Governance.

VIII. Information and Communication Technology (ICT)

- ICT: General abbreviations and terminology.
- Basics of Internet, Intranet, E-mail, Audio and Video-conferencing.
- Digital initiatives in higher education.
- ICT and Governance.

IX. People, Development and Environment

- Development and environment: Millennium development and Sustainable development goals.
- Human and environment interaction: Anthropogenic activities and their impacts on environment.
- Environmental issues: Local, Regional and Global; Air pollution, Water pollution, Soil pollution, Noise pollution, Waste (solid, liquid, biomedical, hazardous, electronic), Climate change and its Socio-Economic and Political dimensions.
- Impacts of pollutants on human health.
- Natural and energy resources: Solar, Wind, Soil, Hydro, Geothermal, Biomass, Nuclear and Forests.
- Natural hazards and disasters: Mitigation strategies.
- Environmental Protection Act (1986), National Action Plan on Climate Change, International agreements/efforts-Montreal Protocol, Rio Summit, Convention on Biodiversity, Kyoto Protocol, Paris Agreement, International Solar Alliance.

X. Higher Education System

- Institutions of higher learning and education in ancient India.
- Evolution of higher learning and research in Post Independence India.
- Oriental, Conventional and Non-conventional learning programmes in India.
- Professional, Technical and Skill Based education.
- Value education and environmental education.
- Policies, Governance, and Administration.

- NOTE:** (i) Five questions each carrying 2 marks are to be set from each Module.
(ii) Whenever graphical/pictorial question(s) are set for sighted candidates, a passage followed by equal number of questions and weightage be set for visually impaired candidates.

SAMPLE QUESTIONS

I. Teaching Aptitude

- Which one of the following is the main objective of teaching?
 - To give information related to the syllabus.
 - To develop thinking power of students.
 - To dictate notes to students.
 - To prepare students to pass the examination.

Key: (b)
- Which one of the following is a good method of teaching?

(a) Lecture and Dictation	(b) Seminar and Project
(c) Seminar and Dictation	(d) Dictation and Assignment

Key: (b)
- Teacher uses teaching aids for
 - Making teaching interesting
 - Making teaching within understanding level of students
 - Making students attentive
 - The sake of its use

Key: (b)
- Effectiveness of teaching depends on

(a) Qualification of teacher	(b) Personality of teacher
(c) Handwriting of teacher	(d) Subject understanding of teacher

Key: (d)
- Which of the following is not characteristic of a good question paper?

(a) Objectivity	(b) Subjectivity
(c) No use of vague words	(d) Reliable.

Key: (b)

II. Research Aptitude

- A researcher is generally expected to:
 - Study the existing literature in a field
 - Generate new principles and theories
 - Synthesize the ideas given by others
 - Evaluate the findings of a study.

Key: (b)
- One of the essential characteristics of research is:

(a) Reliability	(b) Generalizability
(c) Usability	(d) Objectivity

Key: (d)
- The Government of India conducts Census after every 10 years. The method of research used in this process is:

(a) Case study	(b) Developmental
(c) Survey	(d) Experimental

Key: (c)
- An academic association assembled at one place to discuss the progress of its work and future plans. Such an assembly is known as a

(a) Conference	(b) Seminar
(c) Workshop	(d) Symposium

Key: (a)
- An investigator studied the census data for a given area and prepared a write-up based on them. Such a write-up is called:

(a) Research paper	(b) Article
(c) Thesis	(d) Research report

Key: (b)

III. Comprehension

Read the following passage and answer the question nos. 1 to 5:

The Constitution guarantees every citizen the fundamental right to equality. Yet after 50 years of independence, just one perusal of the female infant mortality figures, the literacy rates and the employment opportunities for women is sufficient evidence that discrimination exists. Almost predictably, this gender bias is evident in our political system as well. In the 13th Lok Sabha, there were only 43 women MPs out of a total of 543; it is not a surprising figure, for never has women's representation in Parliament been more than 10 per cent.

Historically, the manifestos of major political parties have always encouraged women's participation. It has been merely a charade. So, women's organizations, denied a place on merit, opted for the last resort: a reservation of seats for women in parliament and State Assemblies. Parties, which look at everything with a vote bank in mind, seemed to endorse this. Alas, this too was a mirage.

But there is another aspect also. At a time when caste is the trump card, some politicians want the bill to include further quotas for women from among minorities and backward castes. There is more to it. A survey shows that there is a general antipathy towards the bill. It is actually a classic case of doublespeak: in public, politicians were endorsing women's reservation but in the backrooms of Parliament, they were busy sabotaging it. The reasons are clear: Men just don't want to vacate their seats of power.

- The problem raised in the passage reflects badly on our
 - Political system
 - Social behaviour
 - Individual behaviour
 - Behaviour of a group of people
 Key: (b)
- According to the passage, political parties have mostly in mind
 - Economic prosperity
 - Vote bank
 - People' welfare
 - Patriotism
 Key: (b)
- "Trump Card" means
 - Trying to move a dead horse
 - Playing the card cautiously
 - Sabotaging all the moves by others
 - Making the final jolt for success
 Key: (d)
- The sentence "Men just don't want to vacate their seats of power" implies
 - Lust for power
 - Desire to serve the nation
 - Conviction in one's own political abilities
 - Political corruption
 Key: (a)
- What is the percentage of women in the Lok Sabha?
 - 10
 - 7.91
 - 43
 - 9.1
 Key: (b)

IV. Communication

- Informal communication network within the organization is known as
 - Interpersonal Communication
 - Intrapersonal Communication
 - Mass Communication
 - Grapevine Communication
 Key: (d)
- TV Channel launched for covering only Engineering and Technology subjects is known as
 - Gyan Darshan
 - Vyas
 - Eklavya
 - Kisan
 Key: (c)
- In which state the maximum number of periodicals are brought out for public information:
 - Uttar Pradesh
 - Tamil Nadu
 - Kerala
 - Punjab
 Key: (c)
- The main objective of public broadcasting system i.e. Prasar Bharti is
 - Inform, Entertainment and Education
 - Entertain, Information and Interaction
 - Educate, Interact and entertain
 - Entertainment only
 Key: (a)
- The competency of an effective communicator can be judged on the basis of:
 - Personality of communicator
 - Experience in the field
 - Interactivity with target audience
 - Meeting the needs of target audience.
 Key: (d)

V. Mathematical Reasoning and Aptitude

- Which one of the following belongs to the category of homogeneous data:
 - Multi-storeyed houses in a colony.
 - Trees in a garden
 - Vehicular traffic on a highway
 - Student population in a class.
 Key: (a)

2. In which of the following ways a theory is not different from a belief?
 (a) Antecedent – consequent (b) Acceptability
 (c) Verifiability (d) Demonstrability **Key: (b)**
3. The state – “Honesty is the best policy” is
 (a) A fact (b) An value
 (c) An opinion (d) A value judgement **Key: (d)**
4. Which one is like pillar, pole and standard?
 (a) Beam (b) Plank (c) Shaft (d) Timber **Key: (a)**
5. Following incomplete series is presented. Find out the number which should come at the place of question mark which will complete the series:
 4, 16, 36, 64, ?
 (a) 300 (b) 200 (c) 100 (d) 150 **Key: (a)**

VI. Logical Reasoning

1. The following question is based on the diagram given below. If the two big circles represent animals living on soil and those living in water, and the small circle stands for the animals who both live on soil and in water, which figure represents the relationships among them?

Key: (d)

2. Of the following statements, there are two statements both of which cannot be true but both can be false. Which are these two statements?
 (i) All machines make noise
 (ii) Some machines are noisy
 (iii) No machine makes noise
 (iv) Some machines are not noisy
 (a) (i) and (ii) (b) (iii) and (iv)
 (c) (i) and (iii) (d) (ii) and (iv) **Key: (c)**
3. In the following question, a statement is followed by two assumptions (i) and (ii). An assumption is something supposed or taken for granted. Consider the statement and the following assumptions and decide which of the following assumptions is implicit in the statement.

Statement: We need not worry about errors but must try to learn from our errors.

Assumptions:

- (i) Errors may take place when we are carrying out certain work.
 (ii) We are capable of benefiting from the past and improve our chances of error-free work.
 (a) Only assumption (i) is implicit
 (b) Only assumption (ii) is implicit
 (c) Either assumption (i) or (ii) is implicit
 (d) Both the assumptions are implicit **Key: (d)**
4. The question below is followed by two arguments numbered (i) and (ii). Decide which of the arguments is ‘strong’ and which is ‘weak’. Choose the correct answer from the given options below:
 (a) (b) (c) (d)

Should the press exercise some self-restraint?

- (i) Yes, they should not publish news items which may incite the readers to indulge in wrong practices.
 (ii) No, it is the responsibility of the press to present the truth irrespective of the consequences.

- (a) Only the argument (i) is strong
 (b) Only the argument (ii) is strong
 (c) Neither argument (i) nor argument (ii) is strong
 (d) Both the arguments (i) and (ii) are strong

Key: (a)

5. Study the argument and the inference drawn from that argument, given below carefully.

Argument: Anything that goes up definitely falls down. Helicopter goes up.

Inference: So the helicopter will definitely fall down.

What in your opinion is the inference drawn from the argument?

- (a) Valid (b) Invalid
 (c) Doubtful (d) Long drawn one

Key: (d)

VII. Data Interpretation

Four students W, X, Y, Z appeared in four papers, I, II, III and IV in a test. Their scores out of 100 are given below:

Students	Papers			
	I	II	III	IV
W	60	81	45	55
X	59	43	51	A
Y	74	A	71	65
Z	72	76	A	68

Where 'A' stands for absent.

Read the above table and answer below mentioned questions 1 to 5

- Which candidate has secured between 60–65% marks in aggregate?
 (a) W (b) X (c) Y (d) Z
- Who has obtained the lowest average in aggregate?
 (a) W (b) X (c) Y (d) Z
- Who has obtained the highest average?
 (a) W (b) X (c) Y (d) Z
- In which paper the lowest marks were obtained by the candidates?
 (a) I (b) II (c) III (d) IV
- Which candidate has secured the highest percentage in the papers appeared?
 (a) W (b) X (c) Y (d) Z

Key: (a)

Key: (b)

Key: (a)

Key: (b)

Key: (d)

VIII. Information and Communication Technology (ICT)

- ICT stands for
 (a) Information common technology
 (b) Information and communication technology
 (c) Information and computer technology
 (d) Inter connected technology

Key: (b)

2. Computer can
 (a) Process both quantitative and qualitative information
 (b) Store huge information
 (c) Process information and fast accurately
 (d) All the above **Key: (d)**
3. Satellite Communication works through
 (a) Radar (b) Transponder
 (c) Receptor (d) Transmitter **Key: (b)**
4. A computer is that machine which works more like a human brain. This definition of computer is
 (a) Correct (b) Incorrect
 (c) Partially correct (d) None of the above **Key: (a)**
5. Information and communication technology includes
 (a) E-mail (b) Internet
 (c) Educational television (d) All the above **Key: (d)**

IX. People, Development and Environment

1. It is believed that our globe is warming progressively. This global warming will eventually result in
 (a) Increase in availability of usable land.
 (b) Uniformity of climate at equator and poles.
 (c) Fall in the sea level
 (d) Melting of polar ice. **Key: (d)**
2. In which parts of India ground water is affected with arsenic contamination?
 (a) Haryana (b) Andhra Pradesh
 (c) Sikkim (d) West Bengal **Key: (d)**
3. Sunderban in Hooghly delta is known for
 (a) Grasslands (b) Conifers
 (c) Mangroves (d) Arid forests **Key: (c)**
4. Sardar Sarover dam is located on the river
 (a) Ganga (b) Godavari
 (c) Mahanadi (d) Narmada **Key: (d)**
5. Which one of the following trees has medicinal value?
 (a) Pine (b) Teak
 (c) Neem (d) Oak **Key: (c)**

X. Higher Education System

1. Which one of the following is not considered a part of technical education in India:
 (a) Medical (b) Management
 (c) Pharmaceutical (d) Aeronautical **Key: (a)**
2. Which of the following is a Central University?
 (a) Mumbai University (b) Calcutta University
 (c) Delhi University (d) Madras University **Key: (c)**
3. Identify the main Principle on which the Parliamentary System operates.
 (a) Responsibility of Executive to Legislature
 (b) Supremacy of Parliament
 (c) Supremacy of Judiciary
 (d) Theory of Separation of Power **Key: (a)**
4. The reservation of seats for women in the Panchayat Raj Institutions is:
 (a) 30% of the total seats
 (b) 33% of the total seats
 (c) 33% of the total population
 (d) In proportion to their population **Key: (b)**

5. Match List-I with List-II and select the correct answer from the code given below:

List-I (Institutions)	List-II (Locations)
(1) Indian Veterinary Research Institute	(i) Pune
(2) Institute of Armament Technology	(ii) Izat Nagar
(3) Indian Institute of Science	(iii) Delhi
(4) National Institute for Educational Pannesi and Administrators	(iv) Bangalore

(a) 1 (ii), 2 (i), 3 (iv), 4 (iii)
 (c) 1 (ii), 2 (iii), 3 (i), 4 (iv)

(b) 1 (ii), 2 (iv), 3 (ii), 4 (iii)
 (d) 1 (iv), 2 (iii), 3 (ii), 4 (i)

Key: (a)

Strategy about NTA-UGC NET Exam

The National Eligibility Test is a national level exam conducted in India by NTA on the behalf of University Grants Commission (UGC). This test enables Post Graduate students to qualify for university level teaching jobs in India and also to seek admissions in Ph.D. level programmes. The test ensures that a candidate qualifies for the minimum standards in the teaching profession and research. The test is conducted in Humanities (including languages), Social Sciences, Environmental Sciences, Geography, Commerce, Management to name a few.

CAREER OPTIONS AFTER QUALIFYING IN UGC NET EXAM

Once you clear UGC NET, you are eligible to become an Assistant Professor or pursue Junior Research Fellowship in distinguished universities. The vacancies are announced from time-to-time and you have to apply for the same.

ASSISTANT PROFESSOR

Once you clear NET, you can apply for the post of Assistant Professor as and when the vacancies are announced by the colleges and universities. While clearing NET is a mandatory criterion in many colleges and universities, the final appointment will depend on how well you fare in the interview conducted by the concerned university.

JUNIOR RESEARCH FELLOWSHIP

Junior Research Fellowship is for those who have their heart set on research. You become eligible for the Junior Research Fellowship if you have applied for it in your application form and you have subsequently cleared NET. Once you get selected, then you can pursue research in any prestigious university and get the tuition fees reimbursed. In some universities, the students even get direct admission into M.Phil. programmes in case they qualify NET Exam.

TIPS AND TECHNIQUES TO PREPARE FOR UGC NET

- **Preparing well in time:** The preparation for UGC NET Exam starts while undergoing Post Graduate course. Once Post Graduation is complete, a focused preparation of three to six months is mandatory. Preparation should be planned and implemented in such a manner that it leaves scope for revision also.
- **Refer to past questions:** The previous years' questions help the career aspirant to get familiarity with pattern of the exam. Go through them, and try to solve at least few of them. This will give you an idea of what to expect in the exam, and it also builds the confidence in you. Take help of the teachers or seniors if required. Better, if can, make a list of important topics, though it is an objective pattern now.
- **Gaining familiarity with the syllabus:** Run through the syllabus thoroughly. It is important that you understand the syllabus completely and prepare for each topic accordingly. As all papers are objective now, do not leave out any topic.
- **Prioritising the subjects:** Out of the three papers, Paper II and Paper III will be based on the subject of your choice, whereas Paper I will be based on General Awareness and Aptitude. It is very important that you have a complete hold over your subject, as you can score well there. While focusing your attention on the subject papers, start preparing for the General Awareness test by solving sample papers.
UGC NET Paper I, which is not merely qualifying now, marks are calculated towards the final score also. Therefore, students are taking this paper seriously now. Earlier, Paper I was only qualifying in nature, and one had to score only 40% in this paper, only then Paper II and Paper III would be evaluated.

- **Making personal notes:** This is applicable for all the subjects and Paper I also. These notes work as a kind of ‘ready reckoner’ once the exam is nearing fast. In general, go for big page note books or registers, divide the page into three columns—on the left-hand side, write main topics, titles, serial number, etc., the middle column is for main discussion of the topic, and right-hand side for any addition, updations, references, etc., that may be required to be done at some later date. The notes help in revision. The same may be done in case of Paper I also.
- **Build upon speed and quality of preparation:** While your aim should be on completing all the topics mentioned in the syllabus, quality must also be kept in mind. While preparing, concentrate on improving the quality of your preparation, which means you can concentrate more on zeroing down on what exactly has to be studied and how much has to be studied.
- **Time management:** Time management depends upon the nature of subject. Some subjects are purely theoretical, some are technical, and some are both. Utilise time in an efficient manner. Have a strategy in place as to how to complete all the questions within the given time. It is best if you time yourself while preparing the subjects.
- **Be confident:** There is no substitute of confidence. Confidence is the outcome of your degree of preparation. Once you decide that you have to eke out a distinguished career in teaching, then UGC NET Exam is the stepping stone.

“All The Best and Do Your Best”

Teaching Aptitude

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- **Education:** Basic Elements
- **Teaching:** Concept, Objectives, Levels of teaching (Memory, Understanding and Reflective), Characteristics and basic requirements.
- **Learner's characteristics:** Characteristics of adolescent and adult learners (Academic, Social, Emotional and Cognitive), Individual differences.
- **Factors affecting teaching related to:** Teacher, Learner, Support material, Instructional facilities, Learning environment and Institution.
- **Methods of teaching in Institutions of higher learning:** Teacher centred vs. Learner centred methods; Off-line vs. On-line methods (Swayam, Swayamprabha, MOOCs etc.).
- **Teaching Support System:** Traditional, Modern and ICT based.
- **Evaluation Systems:** Elements and Types of evaluation, Evaluation in Choice Based Credit System in Higher education, Computer based testing, Innovations in evaluation systems.

EDUCATION

Definitions and Meaning of Education

The word 'education' has a wide meaning, and it is difficult to define it in precise terms. As per NTA Exam pattern, there are no direct question pertaining to definition, still some of the statements are here for better retention of concept of education.

The terms education, teaching and learning are closely related. The objective of education is learning, not teaching. Teaching is the way to make students learn, but then, it is not the only way. Education is the key to everything that is good in our world today. Education is not only about the past and present, but it is also the key to the future. Education not only teaches our children facts but also teaches them how to think and learn on their own.

Swami Vivekananda defines education as the manifestation of perfection already in man.

Aristotle defined education as a 'creation of a sound mind in a sound body'.

According to Heinrich Pestalozzi, 'Education is the natural harmonious and progressive development

of man's innate powers'. This definition means each human being has immense natural, inborn talent or talents in him. Education provides development conducive atmosphere to him or her.

John Dewey defines education as the power by which man is able to control his environment and fulfill his possibilities.

According to Froebel, 'Education is a process by which the child develops its inner potential in a manner so as to participate meaningfully in the external environment'. 'The purpose of education is to expand the life of the individual in order to participate in its all pervading spirit which manifests and realizes itself in and through the whole universe'.

Major Philosophies and Approaches in Education

Philosophy is a vast subject. All aspects of education such as aims, objectives, curriculum, teaching methods, teacher, text books and discipline are influenced by philosophy. Keeping in view that an examiner now tends to ask multidimensional aspects in a single question, philosophies become important.

1. Three basis of education: The educational process is decided on the basis of three questions – ‘Why’, ‘How’, and ‘What’. Here, the question of ‘Why’ is most important. This is answered by philosophy. The ‘How’ is decided by the psychology and ‘What’ is decided by the social needs. Hence, education is based on the basis of philosophical, psychological, and sociological basis.

There are many philosophies of education, some of the important philosophies of education have been mentioned below.

2. Idealism: The word ‘idealism’ has been derived from ‘Ideal’. It is basically about ‘Mind and Self’, that is actually spiritualism. The universal mind or God is central in understanding the world. God is the source of all creation and knowledge, spirit and mind constitute reality.

Values are absolute, eternal and unchanging.

Real knowledge is perceived in mind that is more important than knowledge gained through the senses.

Man has a superior nature that is expressed in the form of intellectual culture, morality and religion.

Froebel, Kant, Plato, Swami Dayanand, Vivekananda and Sri Aurobindo are main proponents of idealism.

3. Naturalism: Contrary to idealism, naturalism is a philosophy with the belief that nature alone represents the entire reality. Human life is a part of nature; it is a self sufficient entity having its own natural matter, natural force and natural laws. Its emphasis is on matter and the physical world. It does not believe in spirituality and supernaturalism.

Our senses are the gateway to knowledge, and nature is the source of all knowledge. Mind is subordinate to nature. The educative process must be pleasurable and set in natural surroundings.

The main protagonists of naturalism are Tagore, Rousseau, and Herbert Spencer.

4. Pragmatism: ‘Pragmatism’ is basically a greek word that means practice or action. Here, the key word is ‘utility’, whatever is useful is good and whatever is good is useful. A pragmatist lives in a world of facts.

Pragmatism focuses on activity or doing. There are no absolute values of life. Truth is created during the course of experience. Humans are active beings and have the ability to solve their problems through the logic of experiments and scientific methods.

The main thinkers are John Dewey, Kilpatrick, Mead are some of the exponents of this philosophy.

5. Constructivism: The learner actively constructs knowledge. Jean Piaget and J. S. Bruner believed that learning involves an active processing of information and that each individual activity organizes and constructs knowledge for itself. Educational psychology believes that there are developmental stages for knowledge organization.

According to Jean Piaget, ‘accommodation’ and ‘assimilation’ are basic to learning. A learner develops new ‘schema’ through accommodation. New experiences are assimilated into already existing schemas or they may be accommodated by creating new schemas.

6. Humanism: It is a reasonable balance in life and regards humans as the centre and measure of all activities. Humanism believes in the interests and welfare of all human beings. Thus, the life of a human being should be transformed so that the welfare of all becomes the goal. The form of learning is on self-actualization.

It advocates cooperation, mutual tolerance and social understanding.

7. Rationalism: Rationalists claim that there are significant ways in which our concepts and knowledge are gained independently of sense experience.

8. Empiricists claim that sense experience is the ultimate source of all our concepts and knowledge.

9. Existentialism: It is a philosophy that emphasizes individual existence, freedom and choice. This emphasizes the uniqueness and isolation of the individual experience in a hostile or in different universe, regards human existence as unexplainable, and stresses freedom of choice and responsibility for the consequences of one’s acts.

10. Behaviourism: It assumes that learner is a passive organism who may be conditioned to learn new behaviour.

Therefore, learning could be explained by change in observable behaviour. E. L. Thorndike postulated the law of exercise and the law of effect.

(a) Law of exercise: Repeating a conditioned response would strengthen the bond between the stimulus and the response. In other words, practice makes a man perfect.

(b) Law of effect: Law of effect is the principle of reinforcement and punishment. Pleasures and pains resulting from previous behavior decides our future behaviour.

11. Gestalt psychology: It believes that the whole is greater than the sum of its parts.

For example, in the human body, there are cells, tissues, organs, systems, etc., the sum of all these components (human body) is greater than the sum of its parts. This is because the parts are interrelated to each other.

Further, Gestalt psychology demonstrated the significance of perception. It also showed that complex learning need not occur gradually through lengthy practice but may develop through insight.

12. Eclectic philosophy: Eclecticism is nothing but fusion of knowledge from all sources. It is a peculiar type of educational philosophy which combines all good ideas and principles from various philosophies.

There are many more philosophies of education, each of the philosophies have its contributions and limitations. Not a single philosophy is complete in itself. Also, a single philosophy cannot be applied successfully in all situations because the world and its values are continuously changing. The educational system also changes from time to time.

Table 1.1 Important Concepts in Education and its Proponents

Concepts	Main proponents
Basic education (Wardha Education System)	Mahatma Gandhi
Learning to take place in nature and from nature	Rabindranath Tagore
Integral education	Sri Aurobindo
Focus on spiritual aspects of Indian philosophy	Dr. Sarvepalli Radhakrishnan
Education to transform human mind	J. Krishnamurti
Experiential learning	John Dewey
Self-education through development of individuality	Maria Montessori
Kindergarten focus on self-activity, creativeness, and social cooperation	Froebel
No formal learning nature is the only teacher	Rousseau

Forms of Education

Though there are no clear-cut forms of education, we can discuss about the three types that are as follows.

1. Formal
2. Informal
3. Non-formal

1. Formal education: It is pre-planned direct, organized and given in specific educational institutions, such as schools and colleges. It is limited to a specific period and it has well-defined curriculum.

It is given by qualified and trained teachers. Formal Education observes strict discipline. It occurs at different levels, such as in primary, middle, secondary, higher secondary, graduate, post graduate, doctorate, post doctorate. It can be in humanities, science, technical and professional areas.

2. Informal education: The quote by George Santayana, 'A child educated only at school is an uneducated child', amply reflects upon the importance of informal education.

Informal education is not pre-planned or deliberate, it is indirect and spontaneous. It takes place from day to day activities, experiences and living in the family or community. There are no formal goals. Pestalozzi believed parents are the first informal teachers of every man or woman, family environment is the first learning environment.

3. Non-formal education: Education is a lifelong process, it is integrated with life and work.

It falls within the formal and informal types of education. It is a flexible system. It is intentional, incidental and given outside the formal system of system. It is consciously and deliberately planned, organized and systematically implemented. It is an open system of education without rigid rules, regulations and fixed ages, stages or time schedule.

Social or adult education, distance education are the examples of non-formal education.

All these three types of education, such as formal, informal and non-formal, have their due place in the modern system of education. Each has its own merits and demerits. There is need to integrate the three forms and make education holistic and comprehensive.

Thus we can see that above three components are mixed up in actual life situations. Active agencies like family, schools and colleges work through human interaction. Cinemas, radios, newspapers and magazines are counted as passive agencies where education is mostly seen as one way interaction but some feedback mechanism and panel discussions may also exist.

AIMS AND OBJECTIVES OF EDUCATION

In today's situation, no nation can think of social or economic development without an abundant supply of highly educated and skilled people. The issue of function and objectives of education is of utmost importance because all other aspects of education, like the content (subject matter), method (of teaching and instruction), discipline and evaluation are integrated with it.

Most of the functions of education become clear to us through various definitions given above.

Havighurst and Neugarten have given two important functions of education system:

1. A mirror that reflects society as it is or to be stabilizer of the society.
2. An agent of social change or a force directed towards implementing the ideas of society.

George Payne, a sociologist, has given three main functions:

1. Assimilation of traditions
2. Development of new social patterns
3. Creative and constructive role

Emile Durkheim established ideas on transmission of society's norms and values as the major function of society. He also acknowledged education as a training for specialized roles including adopting some occupation for livelihood. Education is required to perform the function of cultural transmission and enrichment, acceptance and reformulation, change and reconstruction. The process why the young generation learns the traditional ways of society is called enculturation and it differs from society to society. Through education, enculturation is formalized.

Acculturation is a process through which a person or group from one culture comes to adopt the practices and values of another culture, while still retaining their own distinct culture. This concept has become important in an increasingly globalized society.

Factors Determining Educational Aims

Education is mostly a planned and purposeful activity. Educational aims are necessary in giving direction to unique activities which are determined by the following factors.

1. **Philosophy:** Philosophy and education are the two sides of a coin. Philosophy is the main factor that determines the aim of education. Education is termed to be the best means for propagation of philosophy.
2. **Human nature:** It is closely linked with philosophy. For example, idealists regard unfolding of the divine in man as the aim of education.
3. **Socio-cultural factors and problems:** Education has to preserve and transmit the cultural heritage and traditions from one generation to another.
4. **Religious factors:** In ancient India, Buddhism emphasized the inculcation of the ideals of religion, such as ahimsa and truth into the prevailing educational system.
5. **Political ideologies:** The educational aims of a democratic political system can be quite different from that of an autocratic political set up.
6. **Exploration of knowledge:** Knowledge is must for good interpersonal relationships, healthy adjustment in life, modification of behaviour, self-awareness and for social growth, it is also a source of happiness.
7. **Vocational:** Education should prepare the child to earn his livelihood and make him self-sufficient and efficient in both economic and social factors.

8. **Self-actualization and total development:** Education should help a person to become what he has to become according to his or her individual potentials.

The education aims at total development of an individual and it includes physical, mental, emotional, social and spiritual developments.

9. **Harmonious development:** Mahatma Gandhi emphasized this aim of education very much when he said 'By education, we mean an all round drawing out of the best in child and man-body, mind and spirit'.
10. **Moral and character development:** Some educationalists consider these as the supreme aim of education.

Herbert Spencer emphasized that education must enable the child to cultivate moral values and virtues, such as truthfulness, goodness, purity, courage, reverence and honesty.

11. **Citizenship:** As a member of the society, a student should be conscious about his or her duties, functions and obligations towards society.
12. **Education for leisure:** Leisure is the time which is utilized for enjoyment and recreation. It is needed to keep up rest and regain energy. Leisure, if wisely used, gives birth to physical and mental balance. Artistic, moral and aesthetic developments can be inspired through the beneficial use of leisure time.

Some specified aims of education in Indian context: When India became free there was a need for re-orientation and restructuring of all our existing social, political and educational systems, in order to meet the socio-economic, political and educational needs of the country.

Since independence, various committees and commissions were appointed to lay down the aims and objectives of education in India.

1. University Education Commission of 1948 was chaired by Dr. S. Radhakrishnan.
2. Secondary Education Commissions of 1952–53. was headed by Dr. Murlidhar as its chairman.
3. National Education Committee was set up under Dr. S. Radhakrishnan as its chairman.
4. Kothari Education Commission of 1964–66.

National Educational Policy (1986) specified the following aims and objectives of our education:

1. All round material and spiritual development of all people.
2. Cultural orientations and development of interest in Indian culture.
3. Scientific temper
4. National cohesion

5. Independence of mind and spirit. Furthering the goals of socialism, secularism and democracy.
6. Man-power development for different levels of economy.
7. Fostering research in all areas of development.
8. Education for equality.

TEACHING CONCEPT

‘Educationists should build the capacities of the spirit of inquiry, creativity, entrepreneurial and moral leadership among students and become their role model’

—Dr. APJ Abdul Kalam

These words reflect the whole idea of what it means to be a teacher. The progress and prosperity of a nation depends upon the development of its human resources. For this purpose, we need highly competent teachers.

Teaching aptitude is all about evaluating candidates who want to enter teaching profession on the basis of their knowledge and skills. It refers to basic qualities required to become a successful teacher. This includes qualification, intelligence, attitude and many other qualities expected from a person who wants to become a successful teacher.

Teaching can be defined in the following ways:

1. Teaching is the purposeful direction and management of the learning process.
2. Teaching is a process of providing opportunities for students to produce relatively permanent change through engagement in experiences provided by the teachers.
3. Teaching is a skilful application of knowledge, experience and scientific principles with an objective to set up an environment to facilitate learning.
4. Teaching is a planned activity and effective teaching depends on the following factors.
 - (a) How clearly the students understand what they are expected to learn.
 - (b) How accurately their learning can be measured.
5. Teaching is a process in which the learner, teacher and other variables are organized in a systematic way to attain some predetermined goals.
6. Teaching is an activity that influences a child to learn and acquire desired knowledge and skills and also their desired ways of living in the society.

BASIC TEACHING MODELS

There is no basic model of teaching that augurs well for all the situations. Two contrasting models are discussed here; these models separately or in combination could be used for different courses.

Pedagogy Model

Pedagogy is a conventional approach. In this method, the instructor, more or less, controls the material to be learned and the pace of learning while presenting the course content to the students. The purpose of this method of learning is to acquire and memorize new knowledge or learn new skills.

Instructor-centred teaching can also be described as ‘pedagogical approach’. Pedagogy is the art and science of teaching. It determines ‘how the teaching occurs, the approach to teaching and learning, the way the content is delivered, and what the students learn as a result of the process’.

In pedagogical approach, the learner is dependent upon the instructor for all learning, and the teacher assumes full responsibility for what is taught and how it is learned. The teacher or instructor evaluates the learning processes of the students.

Andragogical Model

In this model, the learner is mostly self-directed and is responsible for his or her own learning. The students learn best not only by receiving knowledge but also by interpreting it, i.e., learning through discovery and, at the same time, setting the pace of their own learning. In this method, the instructors facilitate the learning of participants and help them by offering opportunities to learn themselves and acquire new knowledge

Table 1.2 Major Shifts in Pedagogy

From	To
Teacher centered, fixed designs	Learner centered, flexible process
Teacher’s direction and decisions	Learner’s autonomy
Teacher’s guidance and monitoring of learning	Teacher’s facilitation, support and encouragement for learning
Passive reception in learning	Active participation in learning
Learning within the four walls of the classrooms	Learning in the wider social context
Knowledge as ‘given’ and ‘fixed’	Knowledge as it evolves and is created
Disciplinary focus	Multidisciplinary, educational focus
Linear exposure	Multiple and divergent exposure
Assessment short, Few	Assessment multifarious, continuous

Source: NCERT Pedagogy

and develop new skills. This type of teaching is also referred to as andragogical approach.

Self-evaluation is also the characteristic of this approach. Andragogical approach is also identified with 'adult learning.'

NATURE OR CHARACTERISTIC FEATURES OF TEACHING

The characteristic features of teaching includes the following:

1. It has different levels of teaching.
2. It takes place in a dynamic environment.
3. It is closely related to education, learning, instruction and training.
4. It is essentially an intellectual activity.
5. It is an art as well as science.
6. It tends towards self-organization.
7. It is a social service.
8. It includes lengthy period of study and training.
9. It has high degree of autonomy.
10. It is a continuous process.
11. Teaching is a profession.

Different Levels of Teaching

Teaching takes place at three levels progressively, such as memory level of teaching, understanding level of teaching and reflective level of teaching.

Memory Level of Teaching (MLT)

1. Herbart is the main proponent of memory level of teaching.
2. It is the initial stage of teaching.
3. It induces the habit of rote memorization of facts and bites of information.
4. The teaching-learning process is basically a 'Stimulus-Response' (S-R) here.
5. It enables the learner to retain and also to reproduce the learnt material whenever required.
6. The evaluation system mainly includes oral, written and essay-type examination.
7. Good memory includes rapidity in learning, stability of retention, rapidity in recalling and the ability to bring only desirable contents to the conscious level.

Understanding Level of Teaching (ULT)

1. Morrison is the main proponent of understanding level of teaching.
2. It is 'memory plus insight' as it goes beyond just memorizing of facts. It focuses on mastery of the subject.

3. It makes pupil understand the generalizations, principles and facts.
4. It provides more and more opportunities for the students to develop 'intellectual behaviour'.
5. It provides active role for both the pupil and the teacher for the assimilation of facts.
6. The evaluation system mainly includes both essay and objective-type questions.

Reflective Level of Teaching (RLT)

1. Hunt is the main proponent of reflective level of teaching.
2. It is the highest level of teaching and it includes both ULT and MLT.
3. It is a problem-centric approach of teaching.
4. The students are assumed to adopt some sort of research approach to solve the problem.
5. Classroom environment is to be sufficiently 'open and independent'. The learners are motivated and active.
6. The aim is to develop the reflective power of learners so that they can solve problems of their lives by reasoning, logic and imagination, and lead successful and happy lives.
7. The pupils occupy the primary place and teachers assume the secondary place.
8. Essay-type test is used for evaluation. Attitude, belief and involvement are also evaluated.

Dynamic Environment

Teaching is dominated by communication, which is very dynamic in nature. Teaching changes according to time and place. Its environment consists of interaction among three variables, namely, independent, dependent and intervening variables.

As students depend upon teachers for learning, students are assumed to be dependent variables. Teachers are in a position to manipulate the behaviours of students and hence, teachers are considered as independent variables. Teaching methods, teaching instructional facilities and motivational techniques which also facilitate the teaching-learning process are termed as intervening variables.

In case we want to look at teacher, learner, curriculum, physical conditions (climate), the following scenarios emerge, starting from bipolar to quadrilateral.

1. It is a bipolar process

Figure 1.1 Bipolar Process

2. It is a tripolar process

Figure 1.2 Tripolar Process

3. It is a quadri polar process

Figure 1.3 Quadripolar Process

According to the modern concept, education is more of a tripolar process that involves pupil, teacher and social environment.

Closely Related to Education, Learning, Instruction and Training

Teaching is basically a method to influence the learning process. Nothing is assumed to be taught unless it is learnt by the students. Thus, learning and teaching go hand in hand. Teaching is the main tool to educate a person.

Intellectual Activity

Teaching is essentially an intellectual activity. It is not merely talking or expressing one's ideas, whereas it requires conscious and continuous organization of learning activities. It entails the creation of a conducive and supportive learning environment. A teacher has to evolve a suitable plan of action to achieve desired changes in the behaviour of a group of learners. In teaching-learning process, learners constitute the raw material. Learners are prepared to teach in continuous involvements in the society with varied expectations.

Teaching Is a Science as well as an Art

The teaching profession is based upon a systematic body of knowledge, which has been derived from

Important Concepts Related to Teaching

Instruction: It is the delivery of contents by the teacher. It does not involve an interaction between the teacher and the learner but it still facilitates the achievement of teaching objectives. Instruction includes both teaching and classroom management.

Teaching and Training: The main purpose of imparting training is to equip candidates with specific or job-related or technical skills. Teaching is assumed to be a wider concept than training. While teaching deals mainly with theoretical aspects and training is the practical application of theoretical knowledge.

Also, teaching seeks to impart new knowledge while training equips and enhances the already knowledgeable concepts with tools and techniques to develop a specific skill set. One of teaching's goals is to enrich the mind while training's end is to mould habits or performance.

Teaching is usually within the context of the academic world while training is generally associated with the commercial realm. Another difference is found between thought and action.

Indoctrination: Indoctrination can be termed as the highest order of teaching. In indoctrination, the beliefs and ideas are impressed upon others and can be included in teaching. Teaching can be done without indoctrination but no indoctrination is possible without teaching.

social, psychological, historical, political and economical spheres of life. It is also influenced by the religious, spiritual and ethical beliefs of the society. Teaching techniques are systematic, it has definite steps to be followed, and are easily communicable. On the basis of assumptions of science, a teacher can be trained. There are definite steps that are followed in training a teacher.

Teaching is an art as well. It takes place in a dynamic environment. The teacher has to deal with individual differences in a class in a tactful manner, it needs a lot of individualized approach and discretion.

Self Organization

The people in teaching profession are sensitive towards growth and development because it is self-organized. They evolve a definite mechanism to sustain and promote the standards of teaching profession. The growth in teaching profession is organic in nature, i.e., the growth happens in a spontaneous manner.

Social Service

It has been accepted that education is a potent tool to bring about changes in any nation. It is useful to develop the society.

High Degree of Autonomy

There is a high degree of autonomy in the teaching profession right from curriculum development, planning activities of a year, identifying instructional objectives, deciding upon the method of teaching, media, evaluation criteria and techniques to divide the admission and promotion rules, and autonomy in planning and execution of co-curricular activities.

Teaching as a Profession

Teaching is the profession that makes other professions possible. There are many courses, such as B.Ed, M.Ed, etc., which impart knowledge and skills that establish the foundation for a successful pathway to a teaching career. It entails a number of years of study and intermittent training periods. A teacher has to improve his or her qualification for advancements in the teaching career.

EFFECTIVE TEACHING PRACTICES

Maxims of Teaching

A maxim is a ground rule or fundamental principle that has evolved over a period of time. It is a guide for future action or behaviour. Teaching has also its own set of maxims, which have been discussed below.

1. **From simple to complex:** The teacher should start with simple things and ideas, and these can be done with day-to-day examples, if possible. Then gradually, a teacher can move towards concepts and technical terms. This creates interest among learners to acquire new knowledge. This is helpful in better retention.
2. **From known to unknown:** This is related to first maxim. Retention is always better if new knowledge can be linked with the known one.
3. **From seen to unseen:** The students should be imparted knowledge about the present and then they can understand the past and the future better.
4. **From concrete to abstract:** The mental development of students happen better with the concrete objects, they become familiar with and define micro-words for them at a later stage.
5. **From particular to general:** The students should be presented with examples first and then general laws and their derivations can be explained to them. The experiments and demonstrations serve this purpose.

6. **From whole to part:** Gestalt psychologists have proved that we first see the whole object and then its parts. For example, we first perceive the tree and then its trunk, branches, leaves, etc. Thus, the introduction or overview of the topics is important.
7. **From indefinite to definite:** The teacher should help to transform indefinite knowledge into definite one and aim to clarify the doubts of students.
8. **From psychological to logical:** During initial stages, psychological order is more important, whereas for grown-up learners, logical order is emphasized more.
9. **From analysis to synthesis:** Initially, the students have little or vague knowledge about the topics. Analysis means dividing problems into its constituent parts, and then, these are studied.
Synthesis means to understand by connecting the knowledge acquired through analysing the parts. A teacher should use analytic-synthetic method.
10. **Follow nature:** It means to regulate the education of a pupil according to his nature.
11. **Training of senses:** The types of sense, like sight, hearing, taste, smell and touch are gateways to knowledge. It is better if all or maximum of these senses can be applied in teaching. Montessori and Froebel are the main proponents of this maxim.
12. **Encouragement to self-study:** Dalton's system is based on self-study.

Principles of Teaching

They are closely related to maxims. Teaching methods are based on two types of principles, such as general principles and psychological principles.

General Principles

1. **Principle of motivation:** It creates curiosity among students to learn new things.
2. **Principle of activity (learning by doing):** Froebel's Kindergarten (KG) system is based on this principle. It includes both physical and mental activities. For example, students are asked to make charts and models.
3. **Principle of interest:** By generating genuine interest among the learner's community, the effectiveness of the teaching-learning process can be increased.
4. **Principle of linking with life:** Life is a continuous experience and learning linked with life can be more enduring.
5. **Principle of definite aim:** This is important for optimum utilization of teaching resources and making learning more focused.
6. **Principle of recognizing individual differences:** Every student is unique in terms of intelligence,

attitude, abilities and potentialities, and socio-economic background. The teaching method should be devised in such a manner to make all the students to avail equal opportunities in life.

7. **Principle of selection:** The horizon of knowledge is expanding every single day. The teacher should be able to pick contents that can be more relevant and updated to the learners' objectives.
8. **Principle of planning:** Every teacher has certain time-bound objectives, and hence, teaching should be systematic to make optimum use of resources within the time limit.
9. **Principle of division:** To make learning easier, the subject matter should be divided into units and there should be links between the units.
10. **Principle of revision:** To make learning enduring, the acquired knowledge should be revised immediately and repeatedly.
11. **Principle of creation and recreation:** This principle is a must to make the classroom environment humorous and creative.
12. **Principle of democratic dealing:** It entails students in planning and executing different activities; it helps in developing self-confidence and self-respect among the learners.

Psychological Principles

1. **Principle of motivation and interest:** A teacher needs to understand that every student is a unique psychological entity and a student can be motivated after identifying his or her motives and needs.
2. **Principle of recreation:** Recreation is necessary to tackle fatigue after attending lengthy classes. This breaks monotony and prepares students for learning again.
3. **Principle of repetition and exercise:** This is specifically true in case of small children.
4. **Principle of encouraging creativity and self-expression:** This is specifically applicable in subjects, such as mathematics and in learning languages.
5. **Principle of sympathy and cooperation:** This principle is required for the motivation of students.
6. **Principle of reinforcement:** Students should be suitably rewarded for their desired behaviour.
7. **Principle of imparting training to senses:** The use of multimedia makes many senses get involved simultaneously, which is crucial for enduring learning.
8. **Principle of remedial teaching:** This principle is necessary for the teacher to identify mistakes and suggest better answers to the problems.

Microteaching

Microteaching is a teacher training technique for learning teaching skills. It employs real teaching situation for developing teaching skills and helps to get deeper knowledge regarding the art of teaching. This Stanford technique involves the steps of 'plan, teach, observe, re-plan, re-teach, and re-observe'. Most of the pre-service teacher education programs widely use microteaching, and it is a proven method to attain gross improvement in the instructional experiences. Effective student teaching should be the prime quality of a teacher. As an innovative method of equipping teachers to be effective, skills and practices of microteaching have been implemented.

OBJECTIVES OF TEACHING

An objective describes an intended result of instruction rather than the process of instruction itself. A good objective should be specific, outcome based (i.e., it should emphasize on the output rather than the process of instruction) and measurable.

The objectives of teaching and learning must integrate at the end of the instruction.

There are two main ways of classifying instructional objectives. One classification is given by Bloom, whereas another classification is given by Gagne and Briggs.

Bloom's Classification of Teaching and Instructional Objectives

According to this classification, instructional objectives fall under one of the following three categories:

1. **Cognitive domain:** It is related to the development of intellectual capability (i.e., thinking or knowledge) and it is the core learning domain. The other domains (i.e., affective and psychomotor) require at least some cognitive components. It functions at six levels, which are as follows.
 - (a) **Knowledge:** It is basically about recalling information or contents.
 - (b) **Comprehension:** It is the ability to grasp the meaning of a material.
 - (c) **Application:** It converts abstract knowledge into practice.
 - (d) **Analysis:** It involves breaking down a communication into its constituent parts in such a manner that relationship of ideas is understood better.

- (e) **Synthesis:** It is basically about combining the constituent parts to make it a whole. It is the antonym of analysis.
- (f) **Evaluation:** It involves judgement made about the value of methods and materials for particular purposes.

Anderson, a former student of Bloom, and David Krathwohl rearranged the levels as following:

- (i) **Remembering:** Recall or retrieve previous learned information.
- (ii) **Understanding:** Comprehending the meaning, translation, interpolation and interpretation of instructions and problems. State a problem in one's own words.
- (iii) **Applying:** Use a concept in a new situation or unprompted use of an abstraction. Applies what was learned in the classroom into novel situations in the work place.
- (iv) **Analysing:** It separates a material or concepts into component parts so that its organizational structure may be understood. It distinguishes between facts and inferences.
- (v) **Evaluating:** Make judgments about the value of ideas or materials.
- (vi) **Creating:** Builds a structure or pattern from diverse elements. Put parts together to form a whole, with emphasis on creating a new meaning or structure.

2. **Affective domain:** Man is a rational animal being endowed with human qualities of love, sympathy, tolerance, co-operation, fellow-feeling and similar things. The term 'affects' has a literary meaning of feeling, emotion and having preference for some object, issue, notion and etc. Affect is also treated as a response to different social, political and economic issues in the form of attitudes.

An individual has to develop and nurture desirable positive attitudes and interests for his or her better adjustment in the society.

Thus, affective domain deals with attitude, motivation, willingness to participate, valuing what is being learned and ultimately incorporating the values of discipline into a way of life. It asks for better student participation. It includes the following levels:

- (a) **Receiving:** Willingness to listen.
- (b) **Responding:** Willingness to participate.
- (c) **Valuing:** Willingness to be involved.
- (d) **Organizing:** Willingness to be an advocate of an idea.
- (e) **Characterization:** Willingness to change one's behaviour or way of life.

Affective education takes a long time to achieve the objectives. For example, any desirable change in the learner's affective behaviour cannot be accomplished through a singular learning situation.

As per one finding, an individual's emotional and rational components of the brain are somewhat independent of each other and operate separately. But there are times when both the components work in harmony with each other.

When the individual is faced with a problem or dilemma and is required to make a decision, the emotional center of the brain functions first while the rational brain is yet to start functioning.

This implies that the educational process should provide the individual with adequate knowledge about the situation to enable him or her to use reasoning to mould the emotional behaviour in a desirable form. Daniel Golemann (1995) calls this type of mental functioning 'Emotional Intelligence', which enables the individual to deal intelligently with various social problems that one faces in life situations.

An individual's affective behaviour or learning is influenced by both emotional intelligence and cognitive learning.

Therefore, the implication for the educational process is that cognitive learning and affective learning should be planned to go hand in hand.

3. **Psychomotor domain:** It is mainly concerned with the acquisition of technical skills. Following are the five different levels of instructional objectives in psychomotor domain.

- (a) **Imitation:** It includes demonstration of a skill by a skilled person and the learner tries to follow the same.
- (b) **Manipulation:** A learner tries to experiment various aspects, like manipulating machinery, equipment, etc.
- (c) **Precision:** Accuracy in performing various acts increases with practice.
- (d) **Articulation:** Achieving a desired level of efficiency and effectiveness through practice.
- (e) **Naturalization:** Skill is internalized and an individual is able to adapt, modify or design new techniques, methods or procedures according to the requirements of a situation.

Thus, we can see that learning takes place through three different channels cognitive, psychomotor and affective, it takes place as one process.

The three types of learning are not mutually exclusive, the differentiation among them is warranted because of the nature of the behavioural outcomes.

It is clear that cognitive as well as affective learning takes place simultaneously and with the same content of learning.

Gagne and Briggs Classification of Teaching and Instructional Objectives

According to this classification, the learning outcomes fall under one of the following categories.

- 1. Intellectual skills:** These skills are crucial for dealing with the environment. They include concept learning, rule learning and problem solving.
- 2. Cognitive strategies:** These include methods and techniques for one's own learning, remembering and thinking skills.
- 3. Verbal information:** It refers to organized bodies of knowledge that an individual acquires.
- 4. Motor skills:** They are basically about motions carried out when the brain, nervous system and muscles work together.
- 5. Attitudes:** They refer to an internal state of an individual.

Objectives can be put in the following forms also:

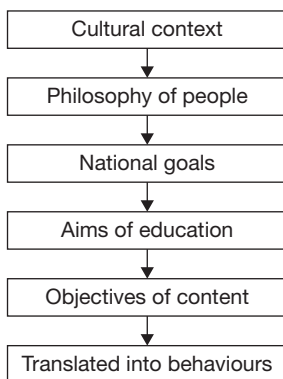

Figure 1.4 Hierarchy of Formulation of Objectives

Table 1.3 Important Methods of Instruction

Teacher-centred strategy	Mixed strategy	Learner-centred strategy
Large group methods	Small group methods	Individualized methods
1. Lectures	1. Group discussion	1. Tutorials
2. Team teaching	2. Seminar	2. Assignments
3. TV or video presentation	3. Panel discussion	3. Project work
	4. Brainstorming	4. Case study
	5. Project method or work	5. Programmed instruction
	6. Tutorials	6. Computer-assisted learning
	7. Case study	7. Interactive video
	8. Role play	8. Open learning
	9. Simulation	9. Personalized system of instruction (PSI)
	10. Demonstration	10. Heuristic method

METHODS OF TEACHING

'If a child can't learn the way we teach, we should teach the way they learn'

—Ignacio Estrada

Once the instructional objectives are specified, the next step is to select an appropriate instructional method to achieve them. The teacher has a number of methods at his disposal to select from. These methods are as follows.

As per NTA-NET syllabus, we have the following two extreme set of methods for institutes of higher learning:

1. Teacher centred methods
2. Learner centred methods

These can be assumed to be two extreme approaches. In between we can have a third method approach, that is called as mixed approach.

Teacher-centred Teaching Methods

Lecture Method

Lecture method is the most conventional and dominating teaching method and is preferred by many teachers. In this method, a teacher attempts to explain facts, principles or relationships to help learners understand. Here, the teacher is an active participant, the students are assumed to be passive listeners. Usually, the students do not converse with the teacher during lecture by the teacher. That way, it is one way communication. The teacher talks more or less continuously to the class. The class listens, writes and notes facts and the ideas for remembering and to think them over later. It can be made a two way communication, if the teacher allows students to ask few questions to clarify a point but no discussion is usually held.

Basic Features

1. It is formal and narrative in nature.
2. It presents a series of events or facts.
3. It explores problem.

Advantages

1. It is economical and a single teacher can teach a large number of students at a time which is not possible by using other methods. It saves much time and the syllabus can be very easily covered within a limited time.
2. It simplifies the task of the teacher.
3. It is useful for imparting factual information and drawing attention to its important points.
4. During lecture, interruptions and distractions are usually avoided.

Limitations

1. It provides very little opportunity for student activity, the teacher takes special care to make the class interesting.
2. It usually does not provide opportunities to learners to solve problems.
3. It offers limited opportunities for checking learning progress, whether the students are attending and understanding all that the teacher is explaining.
4. The interests, abilities and intelligence of students are not taken care of.
5. It does not allow individual pace of learning.

Suggestions to make lecture method more effective:

1. The teacher should avoid the tendency to read from the lecture notes word by word.
2. The teacher should maintain eye to eye contact with the students so as to seek their continuous attention.
3. Good lesson planning with introductory remarks, main headings, sub-headings, figures and important data and concluding remarks. The students should get opportunity to make notes.
4. Use of simple language so that students are able to understand. The main points should be repeated in alternative language.
5. Make effective use of audio-visual instructional facilities to improve communication of ideas.
6. Make appropriate use of illustration and examples. There is a need to ensure fair presentation of different views and theories.
7. Provide short breaks during the lecture period for asking thought provoking, stimulating and problem solving questions. Leave time at the end for clarifications and questions.

Team Teaching Method

Team teaching is an innovative approach in teaching large groups in which two or more teachers are involved in planning, executing and evaluating the learning experiences for a group of students.

Advantages

1. Sharing the best faculty by more students.
2. Optimum use of multiple teaching techniques and devices.
3. Improvement of teaching quality.

Limitations

1. Finding teachers with special competencies is a difficult task.
2. More teachers are required for this method.
3. Not useful for teaching all subjects.
4. Requires much time for planning and scheduling.

TV or Video Presentation

Television or video presentation is an improved presentation of radio or audio presentation and it can virtually bring the whole world inside the classroom. Screening of video presentation is followed by a discussion or task.

Advantages

1. Many important personalities and experts are brought to the classroom through video presentation.
2. Specifically useful for adult learners.
3. Illustrated lectures and demonstrations can be supplemented by other teaching instructional facilities, such as slides, models, specimens, etc.
4. Easily accessible for learners in remote areas.
5. Specifically useful for subjects, such as geography, astronomy, etc.

Limitations

1. Less possibility for two-way communication.
2. There can be difficulty in adjusting to complicated schedules to telecast period.

Mixed Group Teaching Methods

Most of the methods of instructional delivery for the learning of smaller groups numbering between 3 and 12 trainees lean towards trainee-centred approach. Some of these methods are group discussion, seminar, project work, tutorials, role playing, etc. These are briefly discussed below.

Group Discussion (GD)

This may be counted under small as large group teaching methods. It is one of the oldest methods used by Greek scholars and scholars from Nalanda University.

A discussion method of teaching is a democratic method used to develop better understanding among students, for supplementing a lecture, in connection with an observation visit or case presentation and for sharing information.

In this method of considering various facts about the topic under consideration, understanding of these facts by studying their relationships and drawing out conclusions of the facts and their relationships are studied. It stimulates students' thinking process to analyse and integrate facts and help in developing their abilities in presentation of their ideas and facts clearly and fluently.

Forms of Discussion

The types of discussion can be classroom discussion, formal group discussion, discussion in terms of symposium, panel, seminar and conference.

1. **Classroom discussion:** This is an informal method of discussion with the class. If the class is not too large, sometimes the teacher may select a particular topic with the whole class participating as one group. In this situation, the teacher acts as a leader, they present the topic guides and directs the discussion. At times, a student may take the role of a leader. The leader usually notes down the main points on the blackboard or may ask one of the students to do this. He or she also assists the group in summing up.
2. **Formal group discussion:** Formal group discussion is comprised of small group discussion followed by large group discussion. It is desirable when the number of students is more or when it is desirable to discuss several aspects of a topic. To start with the discussion, the teacher may act as the chairman. He or she introduces the topic for discussion and explains the objectives of discussion. He or she helps the students get organized into 3 to 5 small groups. Each group selects a leader and a recorder. Each sub-group (small group) discusses the topic. The leader initiates, coordinates and controls the group discussion. The recorder notes down the discussion points. The teacher acts as a facilitator and a resource person. She is available to assist groups as required. At the end of allotted time (not more than 30 minutes), all the groups reassemble as large group. The leader or the recorder of each small group presents the report; and the teacher then leads the general discussion, clarifies points and finally sums up.

Symposium, seminars are also forms of group discussions but they have been discussed in the second unit as many questions have been asked from them in the NTA-NET Exam.

Group discussion can be of the following types as well:

1. **Planned:** There is certainty about the conclusions and objectives. The discussion is guided by the trainer in an appropriate sequence.
2. **Partly planned:** Here, the concluding and opening statements are known, but the discussions in-between is not directed or very loosely guided.
3. **Unplanned:** The topic presented for discussion is without any opening statement and the discussion that follows is entirely spontaneous without any guidance from the trainer.

Advantages

1. A stimulating thinking process, it helps in the development of critical thinking.
2. It is pooling of knowledge, ideas and feelings of several persons analysis and integration of facts, ideas and concepts.
3. Rationalization of facts and it thus promotes intelligent learning.
4. Learning together, sharing responsibilities and interests.
5. Developing team spirit in teaching-learning process.
6. Discovering talented students. Good for developing oral and non-verbal communication

Limitations

1. It requires more time, efforts and resources of both teachers and students.
2. It may involve unnecessary arguments. Discussion may go off the track.
3. It may create emotional stress and unpleasant feelings.
4. Possibility of domination of session by a few students.
5. It is not suitable for all the topics.

General Principles for Organizing Discussion

1. The objectives should be clearly defined and understood by all participants.
2. The members of the group should come prepared, have a basic knowledge about the topic to be discussed.
3. The leader needs to guide and coordinate the proceedings so that the discussion should be kept to the point.
4. A recorder may be elected by the group to record the main points of discussion as it is going on. The points can be noted on the black board.

5. Each one in the group should feel free to participate and a shy person should be encouraged to contribute.
6. All points of view should be fairly considered.
7. Discussions should be properly ended with a report, decision, recommendation or summing up of the matters are discussed.

Seminar

It is a type of group discussion where one trainee or several, prepare a paper on a given topic, issue or problem, which is then presented to the whole group for discussion and analysis. A series of seminars can be presented by the trainees around a major topic, so that they form a linked series of discussions. The main stages in seminar are preparation of paper, presentation of paper and discussion on it. Seminars can be bigger ones also.

Advantages

1. This method gives more independence, which leads to the development of presentation skills of the participants.
2. It provides opportunity for the trainees to prepare and contribute to a particular topic thoroughly.
3. It provides opportunity to the trainees towards practical group leadership and allows them to use analytical skills, research on conclusions, solve a problem, etc.

Limitations

1. It is time consuming and may cause stress to participants.
2. It needs a group of trainees with fairly high-level of attainment.

Panel Discussion

A panel consists of a small group of six to eight people. They carry on a guided and informal discussion before an audience. For example, a panel discussion takes place on the issue of climate change. The leader must, in addition, take special care to select the panel members who can think and speak effectively. He must also be sure that they prepare themselves to discuss the subject.

Advantages

1. Panel discussions, if well conducted, are usually more interesting to the audience than the single-speaker forum.
2. Usually on socially relevant issues.

Limitations

1. Bringing experts to a single forum can be difficult.
2. The audience is not actively involved.

Brainstorming

Brainstorming is a creative group work in which the group members produce a large number of ideas quickly on a given topic or problem for subsequent evaluation. In this method, anyone can exchange remarks with anyone except that the participants are not allowed to criticize the ideas at the time when views are being invited. Sometimes quantity of ideas is more important than quality. Spontaneity is the hallmark of brainstorming sessions.

Several rounds of brainstorming are conducted till all the ideas are exhausted. Participants are then asked to evaluate all ideas and list the best one.

Advantages

1. It encourages creativity that helps trainers to produce, think and explore ideas.
2. Scope for larger participation.
3. It is economical as it does not require much preparation.

Limitations

1. It is not a very systematic way of studying a subject.
2. There is a possibility of some trainees being reluctant to participate.

Project Method

This can be described as both a small group and an individualized instruction. In this method, the students are allowed to explore and experience their environment through their senses and direct their own learning by their individual interests. Very little is taught from the textbooks and the emphasis is on experiential learning rather than rote learning and memorization. A project method classroom focuses on democracy and collaboration to solve purposeful problems.

Advantages

1. Students are likely to develop the habit of critical thinking.
2. They develop the habit of working in teams.

Limitations

1. Continuous monitoring may be required.
2. Additional resources may be required.

Role Playing

Role playing has been used effectively by many teachers to help solve classroom interpersonal problems and to teach human-relations skills in the classroom. Role playing has also been used to facilitate subject-matter learning through the dramatization of literary and historical works and historical or current events.

In all these uses, role playing provides the student with a dramatic confrontation and clarification.

Advantages

1. It is the semblance to real-life situations.
2. Interactive and interesting, it entails participation of every member of the group.
3. It gives immediate feedback.
4. It develops social, decision-making, problem-solving, negotiating and manipulating skills.
5. It is effective to change the attitude of the participants.

Limitations

1. It has unpredictable outcomes.
2. Real-life situations are usually more complex.
3. It requires a considerable amount of resources.

Simulation

Simulation means creating conditions that are quite similar to actual conditions and then training is provided under those conditions. For example, the training of pilots and astronauts takes place in conditions that are quite similar to actual flight conditions. Simulation is specifically used for training purpose.

Advantages

1. They are economical in the long run.
2. Safety aspects are taken care of.

Limitation

1. It entails high initial investment in machinery equipment, etc.

Tutorials

Tutorial method is a method employed for teaching small groups for developing skills for solving numerical problems, providing individual guidance and sorting personal problems. It is appropriate for taking care of individual differences and guiding the students as per their needs, mastery, learning, comprehending concepts, principles and their applications and for remedial exercises.

Advantages

1. Focused attention
2. Generates more ideas
3. Better control over pace of teaching and learning process.

Limitations

1. It is difficult to find a suitable pace if the trainees vary greatly in ability.
2. It can be time consuming.

Demonstration Method

This method is based on the principle of learning by doing and learning from concrete to abstract. The term demonstration means to show. It is adopted in the classroom for the achievement of cognitive, affective and psychomotor objectives.

Demonstration can be defined as a combination of verbal explanation coupled with a live display of using apparatus for presenting important facts, ideas or processes. It may entail audio-visual explanation.

Advantages

1. It is effective in explaining materials, objects and ideas.
2. It is effective in explaining abstract concepts.
3. It is useful for achieving objectives in cognitive, psychomotor and affective domains as there is mental and physical participation of students.

Limitation

1. Only few get opportunities to participate in the experimental process.

Learner Centred Teaching Methods

The learner centred teaching methods try to accommodate the differences displayed between the learners. The main teaching methods include assignments, case-study approach, computer-based learning, open learning, personalized system of instruction and programmed instructions, which are discussed below.

Assignments

Assignments are given to students for a number of purposes, such as for acquiring additional information, surveying, application of knowledge and solving numerical problems. Although the main role is of the learner, the teacher too has a crucial role. The teacher has to plan the assignments and guide the student regarding references for collecting relevant information.

Assignments can be prepared on any type of topic, but the nature of assignment should be such that the students may not merely copy from the books. The assignments should be open-ended and should promote creativity among the students.

Advantages

1. It helps students work independently.
2. It helps in sharpening the student's comprehension, analytical and problem-solving abilities.
3. It helps in the inculcation of creativity among the students.

Limitation

1. Students may copy each others material unless the assignments are carefully planned.

Case Study

For students who have been exposed only to the traditional teaching methods. The case studies calls for a major change in their approach to learning.

A case is usually a 'description of an actual situation, commonly involving a decision, a challenge, an opportunity, a problem, or an issue faced by a person or persons in a social set up such as an organization'. In learning with case studies, the students must deal with situations described in the case, i.e., in the role of a decision maker facing the situation. This method has applications across disciplines, such as psychology, management, biology, law, sociology, history, etc., to name a few.

By allowing the students to gain hands-on experience of the real world and shifting the work focus from professor to the student, the case-study method becomes an efficient tool for the creation of a learner-centred education rather than a teacher-centred education. The student becomes actively involved in the course and is no longer an observer in class developments.

The cases can be short from brief classroom discussions to long and elaborate semester-long projects. It is important for bringing real-world problems into a classroom or a workshop. They ensure active participation and may lead to innovative solutions to the problems.

Advantages

1. It provides opportunity to the participants to analyse, critically examine, evaluate and express reasoned opinions.
2. It enhances decision-making and problem-solving skills.
3. It ensures active participation, which may lead to innovative solutions.

Limitations

1. It requires training for the teachers to use this method.
2. It is not useful for all subjects and situations.

Programmed Instruction

Programmed Instruction (PI) is a general term for a highly structured system of learning, which is based on logical sequence of self-paced, learning steps with feedback between each step. The learner gets immediate feedback after each step.

Advantages

1. There is regular feedback.
2. This ensures active participation of the learner and it can be used for any subject.

Limitation

1. Learner motivation may get diminished after sometime.

Personalized System of Instruction

Personalized System of Instruction (PSI) can be used for all subject matters except where the students are to select the contents. Learners must achieve mastery of a series of written mastery units, assisted by teachers, proctors and enriching lectures before proceeding to the final test. PSI consists of five basic elements as shown below.

1. Mastery learning
2. Self-pacing
3. Stress on written material
4. Proctors
5. Lectures

It is best suited for contents that are usually conveyed through written material.

Advantages

1. It is based on mastery learning.
2. It facilitates self-paced learning.

Limitations

1. It is not suitable for rapidly changing course contents.
2. It is not suitable for psychomotor and affective domains.

Computer-assisted Learning

Computer-assisted Learning (CAL) is concerned with the use of a computer to mediate the flow of information in a learning process. A computer has the ability to process information very quickly, accurately and to adapt and respond to the learner's need, difficulties, and progress, which is much greater than that of a book or video tape.

Advantages

1. It has more flexibility and better control in comparison to other methods.
2. It can be effectively used for drilling and practicing, simulation and modelling.

Limitation

1. It is impersonal and costly.

Open Learning

It is a flexible method of delivering the instruction, where the learner has open access to learning resources of people, material, equipment and accommodation, although regular class attendances are not

necessary. There are no or minimal restrictions on admissions.

The face-to-face interaction between teachers and students through tutorials should form a part of open learning. For open learning, the learning packages are to be developed, making use of multimedia. Open learning instruction is, however, not suitable for the rapidly changing nature of content as this involves time, expertise and resources.

Advantage

1. It offers flexibility to the learner.

Limitations

1. It is not suitable for achieving psychomotor and affective learning objectives.
2. It requires time, expertise, resources and hence, not suitable for subjects of rapidly changing nature.

Interactive Video

The interactive video approach to teaching can be employed to achieve cognitive, psychomotor and affective objectives. It allows the learner to randomly access any piece of information and provide immediate feedback regarding the consequences of their action. The essence of the interactive video experience is video simulation with more number of video presentations of real images as possible.

Advantage

1. Interactive video approach enhances the decision-making power of the individual.

Limitation

1. This method is time consuming and requires resources and expertise.

Heuristic Method

This method was advocated by Professor Armstrong. In this method, the student has to find out the answer to his/her own problem by unaided efforts. Thus, the child becomes a discoverer of knowledge by developing a spirit of inquiry. The main aim of teaching by this method is not to provide much facts about Science, Mathematics, Grammar, etc., but to teach how knowledge of these can be obtained.

Advantage

1. Self-learning approach

Limitation

1. Not much focus on factual knowledge

Differentiated Instruction (DI)

Differentiated instruction is a dynamic, proactive method of teaching. It means that the teacher plans

and uses a variety of ways to teach learning. It is a combination of whole group, small group and individual instruction methods.

In this method, the qualitative aspects are given more weightage than quantitative aspects. It uses multiple approaches to accommodate multiple intelligences. It is student-centred, meaning that the lessons are engaging, relevant, interesting and active. It is an organized and planned method of teaching.

Reflective Teaching

Classroom teaching depends on many factors, such as individual differences, class environment, teacher's and learner's abilities and the lesson subject matter. There is no standard and perfect teaching method to follow and the teachers should seek a suitable approach to present their lessons.

We assume that reflective teachers are knowledgeable about pedagogy, but still there is scope of improvement.

Reflective teaching is a means of 'looking at what you do in the classroom, thinking about why you do it, and thinking about if it works, a process of self-observation and self-evaluation'. The purpose of doing it is to improve the quality of teaching. In general, reflection involves 'working towards a better understanding of the problems and ways of solving it'. The steps involved in reflective teaching cover 'suggestions, problems, hypothesis, reasoning and testing'. Reflective teaching is also seen as the attitude of questioning the practice of teacher's profession. The peer observation, written account of experiences, self-reports, auto biographies, journal writing, collaborative diary keeping and recording lessons, student's feedback, teacher's stories.

It may be specifically helpful for pre-service teachers in their professional development, where in a teacher act as adult learner and the facilitator in education system. It also includes training, practice and feedback.

Blended learning: This term originated in USA. There is no clear single definition available for it. Blended learning combines online learning with face-to-face learning. It is also defined as the combination of multiple approaches to pedagogy or teaching, for example, self-paced, collaborative or inquiry-based study. The goal of blended learning is to provide the most efficient and effective instruction experience by combining delivery modalities.

OFFLINE VS ONLINE METHODS

Their differences have been shown below:

Table 1.4 Differences Between Offline Classroom and Online Classroom

Offline Teaching Methods	Online Teaching Methods
It is teacher focused. Teacher is the central component of teaching l-learning process.	It is learner focused. Learner is the central focus of teaching –learning process.
Learning is more passive; there are fewer roles for learners in the instructional process.	Learning is more active and role of learners is more in the instructional process
Teacher concentrates on delivering knowledge and subject content	Teacher helps in construction of knowledge
Instructional strategy is verbal oriented and is based on traditional methods of teaching	Less focus on verbal instruction. Instructional strategies make use of different styles and methods of teaching
Multimedia may be used, but delivery of instruction is mainly verbal	Multimedia are used in a variety of ways
Student interaction with technology is less	Students' interaction with technology is more
Focus on face-to-face interaction between teacher and learners	Opportunity of face-to-face interaction between teacher and learners is less
Less chance for motivation and self leaning	It gives learners chances for selflearning and motivation
More use of traditional styles of teaching	Makes use of innovative techniques of instruction
Use of technological instruments is less.	Use of technological instruments is more
Opportunity of interaction between students and teacher is limited	Opportunity of interaction between teacher and student is more
Duration and period of study is fixed	Duration and period of study is not fixed
Rigid in character	Flexible in nature

Massive Open Online Courses (MOOCs)

MOOCs have become a popular avenue for diverse learners to upgrade their knowledge and skills. Instructors who are new to creating MOOCs tend to focus on the use of technology features to mimic their classroom actions. While it is necessary to be aware of the technology affordances, it is more important to

focus on the pedagogy of how to use the MOOC features effectively to foster student engagement and learning. Hence MOOC instructors need a set of design principles and guidelines to create a learner-centric MOOC.

In this course, we will discuss the Learner-Centric MOOC (LCM) model, and how to apply it to create effective MOOCs.

Intended Audience: Teachers, MOOC creators

Core/Elective: Elective

UG/PG: PG

Prerequisites: None

Industry Support: Companies creating online courses, L&D (Training) divisions in companies across various sectors.

SWAYAM

SWAYAM is an educational programme started by Government. It was designed to achieve the three cardinal principles of Education - access, equity and quality. The main objective of this programme is to take the best optimal teaching learning resources to all, including the most disadvantaged sections of the society. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy.

The more details of Swayam have been discussed in the 8th Unit of ICT.

SWAYAM PRABHA

The SWAYAM PRABHA is a group of 32 DTH channels devoted to telecasting of high-quality educational programmes on 24 × 7 basis using the GSAT-15 satellite. Every day, there will be new content for at least (4) hours which would be repeated 5 more times in a day, allowing the students to choose the time of their convenience. The channels are uplinked from BISAG, Gandhinagar. The contents are provided by NPTEL, IITs, UGC, CEC, IGNOU, NCERT and NIOS. The INFLIBNET Centre maintains the web portal.

The DTH Channels shall cover the following:

- 1. Higher Education:** Curriculum-based course contents at post-graduate and under-graduate level covering diverse disciplines such as arts, science, commerce, performing arts, social sciences and humanities, engineering, technology, law, medicine, agriculture, etc. All courses would be certification-ready in their detailed offering through SWAYAM, the platform being developed for offering MOOCs courses.

- 2. School education (9-12 levels):** These are basic modules for teacher's training, teaching and learning instructional facilities for our children to help them understand the subjects in better manner. It also helps learners to prepare themselves for various competitive exams to get admissions into professional degree courses.
- 3.** Curriculum-based courses that can meet the needs of life-long learners of Indian citizens in India and abroad.
- 4.** Assist students (class 11th and 12th) prepare for competitive exams.

Teaching Support System

Teacher Support System is basically a set of tools that helps to improve student achievement by building newer capacities in the teachers. It can be taken as kind of process as well, it influences the way decisions are made and what information is passed on. This helps us to know that how teachers acquire new skills and increase student achievement in areas they are under-performing. Though they are happening simultaneously, the movement has taken place from traditional to modern to ICT (Information and Communication Technology) based education. It happens with help from technology also. Traditional can be somewhat compared with orthodox education also.

Traditional and Modern Methods

Let's first differentiate between traditional and modern approaches:

- 1.** Traditional is basically teacher centred instruction that reflects educational essentialism and education perennialism.
Modern is students' centric approach that reflects educational progressivism.
- 2.** In traditional approach, memorization of facts, objective information; correct knowledge is paramount.
In modern approach, understanding the facts, Application of facts, Analysis, Evaluation, Innovation; Critical thinking is paramount
- 3.** Traditional approach aims at high test scores, grades and ultimately degrees. Subjects are individual and independent.
Modern approach aims at Learning, retention, accumulation of valuable knowledge & skills. Subjects are integrated and multidisciplinary.
- 4.** In traditional methods, students matched by age, ability etc, while modern and possibly also by ability.
In modern approach, students match by interest or ability for each project or subject. It can be multi-age also.

- 5.** Traditional method has direct instruction and lectures, seatwork. Here, students learn through listening and observation. The teacher relies on textbooks, lectures, and individual written assignments etc.

In modern teaching, practicality, discoveries, group activities are the main pillars. Focus is on Internet, library and outside experts.

- 6.** In traditional approach, presentation and testing methods favor students who have prior exposure to the material or exposure in multiple contexts.

In Modern approach, context learning integrates personal knowledge within the school environment.

ICT Based Teaching

ICT based teaching support is an approach to facilitate and enhance learning through, and based on, both computer and communication technology. It refers to the use of computer-based electronic technologies of internet, e-mail, websites and CD-ROMS to deliver, facilitate and enhance both formal and informal learning and knowledge sharing from any place at any time. The communication devices can also include digital television, personal digital assistants (PDAs) and mobile phones.

ICT based learning is also called Computer-Based Training (CBT). Generally, CBT and e-learning are treated as synonyms, but CBT is the older term dating from the 1980s. The term ICT evolved from CBT along with the maturation of the internet, CDs and DVDs. It includes Internet-based Learning, Web-based Learning and Online Learning.

ICT is significant in many ways. It enables flexible learning where just-in-time, effective and efficient learning. The pace is determined by the learner.

ICT facilitates collaborative internet and web-based learning opportunities to the learners.

ICT supports distance learning with wide area networks (WAN) and by creating multimedia CD-ROMs or websites.

In ICT teaching methods, there is advantage of having hyperlinking. There are interactive parts that illustrate difficult things. Here doing some exercises is also possible; It allows a wider range of learning experiences, such as there is educational animation to online learners. It also imparts e-training through the asynchronous and synchronous communication modes. Thus it permits learners the convenience of flexibility. Learners may look at many other options to learn.

Specialised training is rendered through customised software, which addresses the particular needs of the clientele mostly through the synchronous mode on a

dedicated broadband internet connectivity. Equally, it also renders training to the learners through the generic software displaying universal contents in asynchronous mode to the learners through a shared network with limited internet access or on World Wide Web; and enhances teaching by professional development of teachers through training on usage of ICT in education. World Links enables the teachers to integrate technology into teaching and thus create dynamic student-centred learning environment in classrooms. The faculties can also interact with their peer groups in the world and exchange ideas and notes on the subject.

ICT is a planned effort towards providing interactive and experiential learning; flexibility in terms of time, place and pace; participation and accessibility; expertise and qualitative subject matter; best resource at the learners' doorsteps and personalised training; and centres round the trainees.

LEARNING AND LEARNER'S CHARACTERISTICS

Learning Defined

It appears quite simple to define the term 'learning', where we all have spent our entire lives learning new things. Learning is basically psychological in nature and a few definitions offered by psychologists are given below.

1. Learning is the process whereby the behaviour of an organism undergoes changes as a result of experience.
2. Learning is relatively a permanent change in the capacity for performance, which is acquired through experience.
3. Learning is the way through which human beings acquire new skills, knowledge, attitudes and values. The outcomes of learning are the new capabilities possessed by the learner.

Individual Differences in Learning – Types of Learners

Learners have many common characteristics at various ages and stages, but they also differ significantly in many ways. Teachers need to understand both the commonalities and the differences in order to meet the students' needs as no two individuals are alike. There are variations among learners with respect to their age, cultural environment, past experiences, physical, mental and emotional make up, goals, needs, etc.

Furthermore, different learners have different learning styles and as heterogeneity is increasing day

by day, they may perceive, interpret and evaluate the same learning event in different ways.

Learners' characteristics, therefore, merit consideration in selection of media. Learners benefit from those media that match their individual learning styles. Therefore, it is understandable why a variety of methods, resources and paths should be provided for different students to achieve a particular objective. Thus, while designing an instructional plan, the important task for the designer is to identify the most critical characteristics for the attainment of instructional objectives.

Elements of Learning Event

The main components of learning event are as follows:

1. **Learner:** The learner must interpret the stimulus, differentiate and combine them and give them some meaning.
2. **Stimulus:** Any stimulus or set of stimuli to which the learner is sensitive can become a part of his learning situation.
3. **The internal conditions of the learner:** These are perception, cognitive structure, self-concept, attitudes, needs, motives, intelligence, previous learning, etc.
4. **Response:** Any action or reaction to a learning situation.

Main Steps in Learning Process

In NET Exam, there may be direct or indirect questions on learning process.

Reception: Gaining attention by making some abrupt changes in stimulus or stimuli.

Expectancy: Informing learners of the objective and what they will be able to do after learning.

Retrieval to working memory: Stimulating recall of prior knowledge.

Selective perception: Displaying contents with distinct features.

Semantic encoding: Learning guidance.

Responding: Asking learner to perform.

Reinforcement: Providing feedback to the learner.

Retrieval and reinforcement: Additional performance by learner and it entails feedback also.

Generalization: More practice of varied problems so as to increase retention.

Types of Learners

In the past, many direct and indirect questions have been asked in the NET exam. There are three main categories of learner characteristics, such as general characteristics, specific entry competencies and learning styles.

Learner Characteristics

1. On the basis of personal and social attributes:

They help in planning instructional objectives as it may reveal physical characteristics that are relevant to training or instructional decisions. The social factors mainly include the following.

- (a) Age and maturity level
- (b) Motivation and attitude towards the subject
- (c) Expectations and vocational aspirations
- (d) Special talents
- (e) Mechanical dexterity
- (f) Ability to work under various environmental conditions.

Some of the differences in learner characteristics between the adolescence and the adults has been described further.

2. Field independent vs. Field dependent: 'Field' here means context or surroundings. Some people are more and some less, influenced by the context when performing a skill or learning.

Field-independent learners tend to rely less on the teacher or other learners for support. Field independent learners perceive analytically. They see objects separately from the surrounding field, they prefer to work in self-structured situation and have self-defined goals. In the classroom activities, such as extensive reading and writing, which learners can carry out alone are useful for field-independent learners.

On the other hand, field-dependent learners often work well in teams as they tend to be better at interpersonal relationships. They perceive globally. They prefer to work in existing structure or context, they require externally defined goals and reinforcements and are more aware of their surroundings.

In the classroom, activities that connect different parts of a lesson are useful for field-dependent learners. For example, learners can discuss what they know about a topic, predict content or look at and listen to related material.

3. Reflectivity and impulsivity: When a question is posed, some students take long time to respond while others are quick in response. The speed

with which the respondents make a response to the task and the number of errors they make is termed as conceptual tempo. Those students who respond quickly and make a fair number of mistakes are said to have a fast conceptual tempo. They are said to possess impulsive style of learning.

Learners who are slow in response and tend to make fewer mistakes are called reflective. In problem-solving situations, the impulsive learner collects less data, they are less systematic and does not look for alternative solutions. Reflective learner spends more time collecting information and analyzing the data before offering a response.

4. Class-room based learning styles: Learning styles are traits that refer to how learners receive and process information.

(a) **Visual learners** learn easily and better through sight. Brightness, size, colour, distance, clarity, frame and symmetry are important to visual learners. Visual learners must see so that they may learn easily. Visual learners may be categorized as **verbalists** (they see words and letters) or **imagists** (they see images, i.e., pictures).

(b) **Auditory learners** acquire information through sound, i.e., the ear gate. Various aspects of sound, for example, pitch, volume, tempo, rhythm, resonance are important for auditory learners. Auditory learners may be **aural** (they learn by listening to others) or **oral** (they learn by talking and hearing themselves).

(c) **Motor learners** learn through motor activity. Various aspects of action, for example, frequency, duration, intensity, pressure, etc., are important for them. Motor learners may be **kinesthetic** (they learn through the use of gross motor muscles) or **mechanical** (they use fine motor muscles to support their learning). Apart from above, the classroom style learners can be of the following types.

(i) **Intuitive:** Insights and hunches

(ii) **Inductive:** From facts to generalization

(iii) **Deductive:** From theory to individual facts

(iv) **Reflectively:** Introspection

5. Learner characteristics on the basis of listening skills: Listening is an important skill and there are four types of listening styles, which are as follows:

(a) **Active listening:** It is listening with a purpose.

(b) **Empathic listening:** It is a form of active listening in which you attempt to understand the other person.

- (c) **Evaluative listening or critical listening:** In this type, the listener evaluates the accuracy, meaningfulness and utility of speaker's message.
- (d) **Appreciative listening:** Listening for enjoyment involves seeking situations involving relaxing, fun or emotionally stimulating information.
6. **Learner characteristics on the basis of thinking styles:** There are different thinking styles of learners, which are mentioned below.
- (a) **Reflective thinkers**
- View new information with respect to the subject.
 - Relate new information to past experiences.
 - Always ask 'why?'
 - Examine their feelings about what they are learning.
- (b) **Creative thinkers**
- Like to play with new information.
 - Always ask 'why?'
 - Create their own solutions and shortcuts.
- (c) **Practical thinkers**
- Always look for factual information.
 - Seek the simplest and the most efficient way to do their work.
 - Not satisfied until they know how to apply their new skills to their job or other interest.
- (d) **Conceptual thinkers**
- Accept new information only after seeing the big picture.
 - Want to know how things work, not just the final outcome.
 - Learn the concepts that are presented but also want to know the related concepts that may not have been included.

Characteristics of Adolescence and Adult Learners: Academic, Social, Emotional and Cognitive

*'Live as if you were to die tomorrow'
'Learn as if you were to live forever'*

— Mahatma Gandhi

Learning is a fundamental, continuous, ongoing and a lifelong process. It's for our successful adaptation of human beings to internal and external environment. It should be according to the physical and intellectual ability of the learner. Both teachers and learners must be aware of this fact. Here, we are first going to discuss concepts of adolescence and adult learning and thereafter comparison of both.

Adolescence Learners

Adolescence means 'to emerge' to achieve 'identity'. It is a time for the maturing of mind and behaviors. It is not an age, but a stage. It is divided into three major stages:

- 1. Early adolescence:** (10 to 12 years) growth hands, feet and later in the limbs. There is demand for independence and privacy, so chances of conflict.
- 2. Middle adolescence:** (12 to 16 years) there are further bodily and genetic developments, specifically in girls.
Girls develop into personal skills quicker, loyalty and commitment matter more. The decisions of vocations and education are made. The physical effect of pubertal development becomes incorporated into the self-image.
- 3. Late adolescence:** (16 to 19 years) and transformation towards adulthood. In late adolescence, career decisions are finally traced. The child gradually returns to the family, on a new footing.

WHO defines adolescence both in terms of age spanning the ages between 10 and 19 years. Hall describes adolescence as "storm and stress" period that reflects the unsettling growth period in modern societies. This concept was recognized by Margaret Mead also.

Academically, adolescence is the time spent in high schools and early colleges.

Psychologically it is a period of transition, during which cognitive, physical, personality and social changes occur.

Sociologically, it is a period that fills the gap between dependent childhoods to self-sufficient adulthood. From medical point of view, adolescence begins with the growth and hormonal changes with the growth of body.

In India, the adolescent is dependent on his parents for many more years in comparison to the West. The emotional dependence is also termed as 'Delayed Adolescence' that can go upto 21 years and even up to 25 years.

Academic Achievements

Adolescents spend more waking time in school. Academic achievement during adolescence is predicted by interpersonal (parental engagement), intrapersonal (intrinsic motivation), and institutional factors. It can set the stage for future career opportunities. Sports, games, arts and crafts also play some role. Parents put greater efforts during this stage.

Malcom Knowles has identified following characteristics of adult learners.

1. More autonomous and self-directed
2. Goal-oriented and practical

3. Relevancy-oriented and see a reason for learning something.
4. Adults must be shown respect. The adult trainers must acknowledge the wealth of experiences that adult participants bring to the classroom.

Now-a-days children know more, learn more, and want more. This may lead to arguments, friction and tears, all leading to a 'cultural gap' from their parents.

Adults learn voluntarily, they require more time to practice new skills. They have many responsibilities and have less time to learn. They prefer to learn by participation.

As they have own self-esteem and ego, they evaluate learning in terms of results, and its utility to their life situations.

Social Changes

Margaret Mead highlighted the role of cultural factors in the development of personality of the Adolescent. Mead observed "*storm and stress*" as a serene and gradual, transition from childhood to adulthood and an easy acceptance of adult roles. It is relatively stress-free in a society.

Harold W Bernard also subscribes it as a cultural phenomenon. The cultural aspect of adolescence states that two main aspects:

1. a rapidly widening life
2. an increasing overlapping between the roles of the child and adult.

Adolescents may feel bad while facing conflicts, values, emotional tension and extreme attitudes.

With industrialization, urbanization and individualization, the incidents of Juvenile delinquency also increase.

With fast growth and structural bodily changes, new attitude towards oneself and others, rising awareness of one's rights and duties, adolescence is a transitional period.

The adolescence is affected by the following:

1. There is search for self concept or self identity.
2. There is demand for more independence to make decisions.
3. They think more about right values and wrong values.
4. Peer pressure also increase.
5. They communicating in different ways - through internet, cell phones and social media

Socialisation is affected during this stage.

During 'Homophily', an adolescence spends more time with friends. The peer groups evolve from primarily single-sex to mixed-sex.

The '*deviant peer contagion*' under which peers reinforce problem behavior by laughing or showing other signs of approval that then increase the likelihood of future problem behavior. Negative peer pressure leads to vices and crime. Friends may provide support mechanism.

Crowds refer to different groups of people such as 'theater kids' or 'environmentalists'. Friendships are reciprocal dyadic relationships. Cliques refer to frequently interacting groups of individuals. They enjoy 'shared reputations' than actual interactions, such as when the whole group is famous or notorious for an activity.

Romantic relationships are usually short-lived rather than long term commitment.

Emotional Changes

Research indicates that emotions cannot be separated from the intellect (learning). If the learner is stressed, over anxious he/she will not be able to learn. Role confusion is an indicator of not successfully meeting the task of adolescence.

Adolescents face problems of morality and being much ambitious. They favour freedom and democratic life. They like permissive atmosphere so that parents and teachers to be lenient towards them. They tend to be rebellious by nature.

'Conscience formation' takes place during this stage. Adolescents possess a self-owned yearning for religion, God, worship, prayer and spiritual values.

Hall says that the major physical changes during this phase cause major psychological changes.

Adolescent years are more important for the formation of personality. Anne believed that the libido, which quieted during the latency years, reawakens in Adolescence and threatens to upset the delicate balance of ego and id.

According to Erik Erickson adolescence resolves the conflict of identity vis-à-vis identity confusion.

Early puberty and cognitive changes come with worse outcomes for girls than boys. It impacts decision making controls also.

The emotional changes with the unique combination of genes, brain, environment, experiences, and culture shape development. There is more self-consciousness about physical appearance and changes. It is basically an "invincible" stage of thinking and acting.

The egoistic needs are in the form of dominance, achievement, retention, attention, autonomy, acquisition, cognizance and destruction. Moffitt regards adolescent-limited antisocial behavior as resulting from a "maturity gap".

The genetic changes to environmental factors are called as a *differential susceptibility* model. These variations are considered riskier than others. Individual differences play an important role in

adolescent development. The 'unholy triad' sums up these as substances abuse, violence and early sexual experimentation.

Cognitive Development

Cognitive development refers to the mental activities that enable an individual to adjust to the environment while mental development refers to intelligence, thinking or imagination about the environment. Cognitive development takes place at different paces at different stages of life. At elementary level, there is an increase in children's capacity to learn, qualitative aspects and maturity. The capacity develops in the learners through interaction of innate power (heredity), environment and maturation. It is the mental process that can systematize, organise and utilise knowledge.

Piaget mentioned the following stages for cognitive development:

1. Sensory period (0–2 years)
2. Pre-operational period (2–7 years)
3. Concrete operation period (7–11 years)
4. Formal operation period (11–15 years)

The main characteristics displayed here are:

1. Systematic analysis of a problem
2. Logical approach towards a solution of problem – to move away from rote learning.
3. Ability to use higher order structure to solve a problem
4. Systematic analysis of a problem
5. Moral maturity

It has been observed that the type of language used in uneducated homes is mostly of commands whereas in educated homes it is mostly of explanations. Individuals struggle through environmental changes. Through this process of adaptation, cognitive development takes place. The purpose of this process of adjustment is to bring about a 'State of Equilibrium' in the life of individuals.

At adolescence stage, social interaction plays a very significant role in learning. Readymade solutions of problems should be discouraged. The teachers should provide such type of education that helps to form minds which can be critical, can verify and not accept everything that is offered.

At the stage of formal operation, the child displays three new qualities: 1 i. systematic analysis (with all possible solutions) of the problem ii. logical approach, and i i iii. ability to use higher order structure.

There is no knowledge development without relating objects within the environment. An individual acquires knowledge not by passively copying objects in the environment but by acting upon it.

Adult Learners

Life is busy, adults are busy.

They are actively engaged in the process of life. To take time out of this busy process, adults may ask: How will this benefit me?

What makes learning this worth the effort?

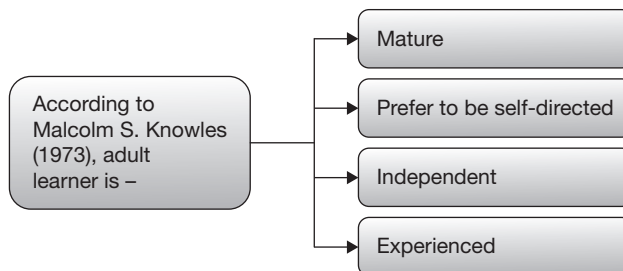

Figure 1.5

Adult education is based on a philosophy called 'andragogy' that is art and science of helping adults learn. The guiding principles of adult learning aim at bringing:

1. changes in what people know
2. changes in what can do
3. changes in what people think
4. changes in what people actually do.

In other words, it must emphasize change knowledge, attitude and skills of the learner.

Adulthood is mostly defined on the basis of age or cognitive maturity. While in India, adulthood is defined between 15 to 35 years, UNESCO and Organisation for Economic Cooperation and Development defines it between 24 to 65 years.

Adult learning process may be systematic learning process, be it formal or non formal or informal, it may be self-mentored or corporate-sponsored, may be undertaken as fulltime or a part time learner.

Important Characteristics of Adulthood

Adults are not just grown children. Adults learn differently from children.

With the maturity, the self concept of a person moves from being a dependent personality towards one of being a self directed person. Adulthood is the stage where this transition occurs.

Adults are experiential learners. The person accumulates a growing wealth of experience that is used to make sense of the environment. Adults may know more than the teacher.

With maturity, the readiness to learn becomes oriented to the development tasks of social roles, but contents must be relevant and legitimate. The life application is critical.

With maturity, the time perspective moves from one of the postponed application to one of the immediate application. The shift is from subject-centeredness to problem centeredness. Adults enjoy solving problems.

Here, the motivation to learn is increasingly internal. Personality responsibility is significant. Adult learners want to meet the requirements of their lives. They want to be successful. In India, an adult learner is a person who has had no opportunity of formal education in their early years of life.

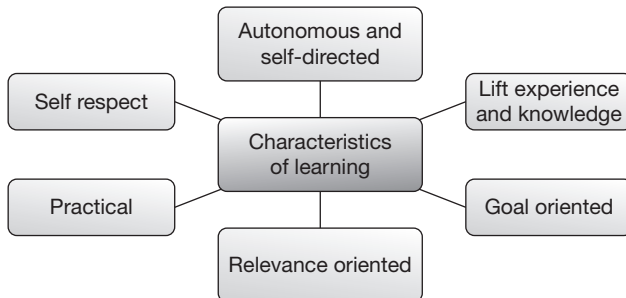

Figure 1.6 Characteristics of Learning by an Adult Learner

Figure 1.7 Principles of Adult Learning

Once gone through both adolescence and adult learners, we need to get focused on difference between the two:

Table 1.5 Differences Between the Adolescence and the Adults

Elements	Adolescence Learners	Adult Learners
Learner	<ul style="list-style-type: none"> The learner is dependent on the teacher for learning 	<ul style="list-style-type: none"> The learner is selfmotivated and self directed
Role of learners experience	<ul style="list-style-type: none"> The learner has little experience. It has to be built on, more than used as resource The experience of the instructor is most influential 	<ul style="list-style-type: none"> The learners have a tremendous amount of life experience Adults are a rich resource for one another Experience becomes the source of self identify
Orientation to learning	<ul style="list-style-type: none"> Learning is a process of acquiring prescribed subject matter Content units are sequenced according to the logic of the subject matter 	<ul style="list-style-type: none"> Learning must have relevance to real-life tasks Learning is organized around life/work situations rather than subject matter units
Motivation for learning	<ul style="list-style-type: none"> Primarily motivated by external rewards and punishment, competition for grades, and the consequences of failure 	<ul style="list-style-type: none"> Motivation by internal incentives: recognition, better quality of life, self confidence self actualization The need to know, in order to perform more effectively in some aspect of one's life is important
Demand for learning	<ul style="list-style-type: none"> Learner must balance life responsibilities with the demands of learning 	<ul style="list-style-type: none"> Learner can devote more time to the demands of learning because responsibilities are minimal
Permanence of learning	<ul style="list-style-type: none"> Learning is self-initiated and tends to last a long time 	<ul style="list-style-type: none"> Learning is compulsory and tends to disappear shortly after instruction.
Climate	<ul style="list-style-type: none"> Tense, low trust Formal, cold, aloof Authority-oriented Competitive, judgmental 	<ul style="list-style-type: none"> Relaxed, trusting Mutually respectful Informal, warm Collaborative, supportive

(Continued)

Elements	Adolescence Learners	Adult Learners
Diagnosis of needs	<ul style="list-style-type: none"> Primarily by teaching system and teacher 	<ul style="list-style-type: none"> Mutual assessment by learner and facilitator
Planning of curriculum	<ul style="list-style-type: none"> Primarily by teaching system and teacher 	<ul style="list-style-type: none"> Mutually by learners and facilitator
Objectives of learning	<ul style="list-style-type: none"> Objectives are set by teaching system Objectives are predetermined and inflexible 	<ul style="list-style-type: none"> Objectives are set by mutual negotiation Objectives are flexible
Designing learning plans	<ul style="list-style-type: none"> Teachers' content plans Fixed course syllabus Logical sequence 	<ul style="list-style-type: none"> Learning contracts Learning projects Sequenced by readiness
Learning activities	<ul style="list-style-type: none"> Passive teaching methods like transmitted techniques, assigned readings, etc., are used 	<ul style="list-style-type: none"> Active training methods are used
Pace of learning	<ul style="list-style-type: none"> Teachers' control timing and pace of learning 	<ul style="list-style-type: none"> Learners influence timing and pace of learning
Evaluation	<ul style="list-style-type: none"> By teacher Norm-referenced (on a curve) with grades 	<ul style="list-style-type: none"> By learner-collected evidence validated by peers, facilitators, experts Criterion-referenced

TEACHING AND LEARNING FACTORS

According to new NTA-NET Exam pattern, teaching and learning are important for effective teaching.

Figure 1.8 Effective Teaching

Teaching Factors

A teacher should have the following qualities.

1. Personal qualities like warmth, affectionate, sympathetic, democratic, optimistic, dynamic, etc.
2. Professional competencies like command on the subject matter, effective communication, proper use of teaching instructional facilities, classroom management, evaluating students learning also.

From the training point of view, we classify teaching skills into three broad categories. These are:

1. Core teaching skills (common for all subjects)
2. Specific teaching skills (for specific subject areas like language, Social Science, Science, Maths, etc.)
3. Target group specific skills (for exceptional children).

Some factors as practised by teachers in classroom are as follows:

1. A teacher having limited exposure and experience in teaching is prone to:
 - (a) follow textbook reading by the students
 - (b) transmit information through lecture
 - (c) dictate notes
 - (d) impart required information
2. A teacher having professional training and reflective thinking is tempted to:
 - (a) adopt new ways to teach
 - (b) involve students in teaching
 - (c) generate new ideas through problem solving
 - (d) teach through group activities
 - (e) follow cooperative learning
 - (f) adopt interactive approach.

At different stages of teaching, with added experience, a teacher goes on enriching higher style of teaching. This is indicative of teacher's growth in higher professional pursuits.

Teacher on its role needs to focus on clarity, variety, task orientation, engagement in learning task in classroom environment. A teacher like a doctor, pilot, engineer or a counselor is supposed to possess the repertoire of teaching skills so that s/he could perform his/her teaching well. These are called as 'Metacore Skills'. These help during professional coaching. The more variety of sub-skills is called as 'Polycrest skills'.

The National Council of Educational Research and Training (NCERT) in its publication *Core Teaching Skills* (1982) has laid stress on the following teaching skills:

1. Writing instructional objectives
2. Organizing the content
3. Creating set for introducing the lesson
4. Introducing a lesson
5. Structuring classroom questions
6. Question delivery and its distribution
7. Response management
8. Explaining
9. Illustrating with examples
10. Using teaching instructional facilities
11. Stimulus variation
12. Pacing of the lesson
13. Promoting pupil participation
14. Use of blackboard
15. Achieving closure of the lesson
16. Giving assignments
17. Evaluating the pupil's progress
18. Diagnosing pupil learning difficulties and taking remedial measures
19. Management of the class

Learning Factors

In effective learning, mostly we notice of these factors

1. more intensity of learning
2. more retention
3. Joyful learning
4. more scope of cognitive development
5. self-directed learning
6. self-motivation for further learning.

Keeping the above in consideration, the following factors become automatically important:

1. Background of the learner (repertoire)
2. Nature of learning material (easy or difficult)
3. Environmental factors (space, physical condition and psychological support)
4. Motivation (intrinsic and extrinsic)
5. Learning support (human-teachers and parents; electronic - audio, video and computer)

Certain qualities and traits of learners such as their level of intelligence, their attitudes, their motivation, their learning styles, aptitudes, their readiness to take risks, etc. can impact the way they learn. Many factors have been defined under the learning topic itself.

Teacher Support Material

The support materials aim to support teachers and students in achieving the learning outcomes of any subject. The ideas and resources are neither prescriptive nor exhaustive. Teachers and students can discover many other ways of reaching the learning outcomes. They can relate to any book, practical sessions, some specific activities etc. We can take example from a book here:

1. **Teacher solutions manual:** They are designed to assist teachers in effective teaching such as the solutions manual provide suggestions on how to teach a topic. They are kind of comprehensive supplementary resources such as an end-to-end solution.
2. **Lecture slides:** While teachers develop their own instructional facilities to deliver a lecture in the class, the lecture slides provide a firm base for instructors to build on.
3. **Extra practice questions:** Students always demand extra practice that authors of a book can provide. The texts are bundled with extra exercise questions, case studies, and other such materials used by teachers to frame homework, quizzes and tests.

Learning Environment and Institutions: We have discussed many things that contribute towards learning. The leadership approach of management also comes into play. That can be autocratic, democratic, laissez faire and so on. Political, social, legal environments can also be used here.

The present trends in the management of institutions of higher education indicate changes in many directions. These changes may be implementation of democratic principles for better participatory culture, delegation of power to the lower level executive bodies; faculty members participation etc. There is increased focus on identifying objectives and planning for both short-term and long-term perspective; and greater concern for the economics of institutional operations.

The term institutional building is the process of internal development of an institution as well its impact on the society. The functions of any university-teaching, research and extension activities - are more important. The delegating and organising function, organization Development, the directive function, the operative function, and the evaluative function are all important for the management of an institution. The sharing of experiences, innovations, approaches and problems among institutions, feed-back on various dimensions of teaching and, non-teaching activities and generating ideas and suggestions to solve the main problems faced by the institution.

EVALUATION SYSTEMS

Interdependence of Teaching, Learning, and Evaluation

Teaching has been defined as the process of facilitating learning and learning is broadly defined as the process of acquiring knowledge, attitude, skills, habits and abilities. To determine whether teaching has facilitated learning, evaluation is carried out. In other

words, teaching, learning and evaluation are the three interdependent aspects of the educative process. This interdependence is clearly seen when the main purpose of instruction is conceived in terms of helping students achieve a set of learning outcomes that include changes in the cognitive, psychomotor and affective domains. The instructional objectives or the desired changes in students (learning) are brought about by planned learning activities (teaching) and the students' progress is determined by tests and other devices (evaluation).

There is a direct relationship among the four important factors of the educational system, such as objective, curriculum, method and evaluation. As the Indian Education Commission (1944–1966) has remarked, 'It is now agreed that evaluation is a continuous process, it forms an integral part of the total system of education, and is intimately related to educational objectives, it exercises a great influence on pupil's study habits and the teacher's method of instruction and this helps not only to measure educational achievement but also to improve it'.

Desirable Characteristics of Evaluation

- 1. Comprehensiveness:** It must try to assess all aspects of a child's development. Thus, different techniques might be used by the teachers to evaluate the performance of the child.
- 2. Continuous:** Evaluation is a continuous process in education. It is not just an examination but a part of the evaluation process. There is no fixed time limit for the completion of evaluation work, but it is a continuous process.

CBSE's Continuous and Comprehensive Evaluation (CCE) is based on the above two parameters. CCE helps in improving the student's performance by identifying his or her learning difficulties at regular time intervals right from the beginning of the academic session and employing suitable remedial measures for enhancing their learning performance.

Functions of Evaluation

Evaluation does not end with the summarization of results. It has direct bearing on the improvement of the system as a whole. The functions of evaluation are as follows:

- 1. Feedback:** To assess strengths and weaknesses.
- 2. Motivation:** The mere realization that you would be evaluated propels a student to work hard.
- 3. Better guidance:** Crucial for the growth of pupils.
- 4. Remediation:** It helps in locating the areas that require remedial measures.
- 5. Facilitates planning:** It helps the teacher in planning, organizing and implementing learning activities.
- 6. Revision of curriculum.**
- 7. Inter-institutional comparison.**
- 8. Educational decision-making:** It relates to selection, classification, placement, promotion, etc.
- 9. Submission of progress report to parents.**

Classification of Evaluation Techniques

A good evaluation device is one which secures valid evidence regarding the desired change of behaviour. A teacher needs to know the various devices that are helpful in gathering evidence on the changes taking place in a pupil.

They can be categorized into quantitative and qualitative techniques and it is described as follows.

Quantitative Techniques

- 1. Written examination:** It is also known as paper pencil test. In this technique, the answers are to be written as per the instruction of questions.
- 2. Oral examination:** They supplement the written examination. Examples are test of reading ability, and pronunciation and viva voce is also an example.
- 3. Practical examination:** These tests are necessary to test experimental and manipulative skills of a learner, particularly in subjects, such as science, technology, agriculture, craft and music.

Qualitative Techniques

- 1. Observation and interviews:** Observation is used to evaluate the behaviour of the pupil in controlled and uncontrolled situations. It is purposive and systematic and carefully viewing or observing the behaviour and recording it. Interview is sometimes superior to other devices. It is because of the fact that pupils are usually more willing to talk than write.
- 2. Checklist:** A checklist is an instrument that is used for collecting and recording evidence regarding significant behavioural tendencies of the pupils or specific problems they present in the classroom.
- 3. Rating scale:** Rating is a term applied to the expression of opinion or judgement regarding some situation, object or character. Rating scale is a device by which judgements can be quantified.
- 4. Cumulative records:** Anecdotal records, cumulative record cards and diaries of pupils are some other devices used in evaluation process to know the details about a child's behaviour.

Type of Evaluation on the Basis of Phase of Instruction

In the various phases of instruction, evaluation is integrated. The four types of evaluation are placement, formative, diagnostic and summative.

- 1. Placement evaluation:** It determines the knowledge and skills the students possess, which are necessary at the beginning of instruction in a given subject area. The purpose of placement evaluation is to check the aptitude of a candidate for the course or subject, whether the candidate has calibre or not. Various entrance exams can also be conducted for the same purpose. This is also done to see the knowledge base of students and a teacher can start discussion keeping that in view.
- 2. Formative evaluation:** A formative evaluation (also referred to as internal evaluation) is a method for judging the worth of a programme while the programme activities are in progress. It focuses on the process. This evaluation provides the student with feedback regarding his or her success or failure in attaining the instructional objectives. It also identifies the specific learning error that needs to be corrected.
For instance, a student learns and scores high on the objective part of the test but fails in the essay part and he is reinforced to exert more effort in answering essay questions in the succeeding tests. For a teacher, formative evaluation provides information for making instructions and remedies more effective. Quizzes, unit tests and chapter tests are examples of evaluative instruments used in this type of evaluation.
- 3. Diagnostic evaluation:** The formative evaluation determines the extent to which students accomplish the learning targets. Therefore, it focuses on the measurement of the intended outcomes. The diagnostic evaluation goes a step further and tries to provide an explanation for the possible causes for problems in learning. Thus, diagnostic tests are more comprehensive and detailed.
- 4. Summative evaluation (external evaluation):** Summative evaluation is a method of judging the worth of a programme at the end of the programme activities (summation). The focus is on the outcome. It determines the extent to which the objectives of instruction have been achieved and is used for assigning course grades. Summative evaluation generally includes oral reports, projects, term papers and teacher-made achievement tests and it shows how good or how satisfactory the student is in accomplishing the objectives of instruction.

Instructional Facilities

'I hear and I forget, I see and I believe, I do and I understand'

—Confucius

As mentioned in new NTA-NET Exam, teaching instructional facilities or Teaching Learning Material can be assumed to be part of major instructional facilities.

These are also termed as instructional facilities that assist an instructor in the teaching-learning process. They supplement teaching methods and are themselves not as self-supporting as teaching methods.

The teaching instructional facilities include audio-visual instructional facilities. They follow the assumption that learning originates from senses' experience. They help in better learning, retention and recall, thinking and reasoning, activity, interest, imagination, better assimilation and personal growth and development.

The Main Benefits of Instructional Facilities

Instructional facilities are also known as Teaching Learning Materials (TLMs).

They are used to make the teaching-learning process effective. They also help learners achieve the learning outcomes after classroom teaching and learning. Some of the reasons to use teaching instructional facilities in classroom are of various types as described below.

- 1. Motivation of learners:** Capturing attention is the first step to any learning and teaching instructional facilities help in capturing the attention of learner in classroom. Teaching instructional facilities provide a variety of stimuli, which helps in making classroom teaching most effective.
- 2. Based on maxims of teaching:** The use of teaching instructional facilities is not a haphazard exercise, but based on maxims of teaching.
- 3. Better retention of information:** The more the number of sensory channels involved in interacting with teaching instructional facilities, the longer will be the retention of information. Therefore, the learning will be effective and will last long.
- 4. Teaching instructional facilities facilitate change in attitude:** Pictures, models, etc., helps in the inculcation of positive attitude of learners.
- 5. Better organization of classroom teaching:** The teachers need to organize learning experiences, making them as realistic as possible. They need to use visual or verbal teaching instructional facilities to present accurate data in sequentially organized manner. Teaching instructional facilities helps in overcoming shortcomings in verbal or visual communication.
- 6. To facilitate holistic learning:** Keeping in view that there are varied learning objectives in cognitive, affective and psychomotor domains. Therefore,

varied learning experiences need to be provided, which can be done through teaching instructional facilities. They supplement classroom teaching. They cater to individual differences as well.

7. **Promotion of scientific temper:** Teaching instructional facilities promotes scientific temper, which is one of the main goals of education.
8. **Practical applications:** Teaching instructional facilities show application of theoretical knowledge into practical applications.
9. **Making learning fun:** Learners enjoy novelty of handling new objects and learn new concepts through them.
10. **Concept formation:** Teaching instructional facilities facilitate the formation and attainment of concepts among children. They concretize the abstract concepts. Thus, children are able to understand them and not resort to rote learning.

Educational Technology

Educational technology can be divided into two categories, they are hardware approach and software approach.

1. **Hardware approach:** It mechanizes the process of teaching so that teachers are able to deal with more students with less expenditure in educating them. Hardware includes computer, epidiascope, overhead projector, radio, slide and film projector, teaching machines, television, etc.
2. **Software approach:** This makes use of the principle of psychology for building in the learner a complex repertoire of knowledge, modifying a learner's behaviour. It evolved through the pioneering work of Skinner and other behaviourists. Software approach is characterized by task analysis, writing precise objectives, selection of appropriate learning strategies, immediate reinforcement of responses and constant evaluation. Newspapers, books, magazines, educational games, flash cards, etc., also form a part of software approach.

According to the senses involved, the educational technology can be divided into audio audio, video and audio-video instructional facilities.

1. **Audio instructional facilities:** They are instructional devices through which message can only be heard. We spend more than 50% of our time in hearing. This reflects the importance of audio media in our life. Examples of audio instructional facilities include language labs, radio sets, sound distribution sets, etc.

2. **Visual instructional facilities:** Instructional devices through which the message can only be seen are known as visual instructional facilities. Examples include posters, flashcards, charts, bulletin boards, maps, models, photographs, etc.
3. **Audio-visual instructional facilities:** Audio-visual instructional facilities are those instructional facilities that help in completing the triangular process of learning, i.e., motivation, classification and stimulation. They are instructional devices in which the message can be heard and seen simultaneously. Out of five senses, seeing at 87% and hearing at 7% are the major ones to attract attention and increase learning. Examples of audio-visual instructional facilities include television, video films, documentary films, etc.

Functions of Audio-visual Instructional Facilities

When properly used, audio-visual instructional facilities contribute to one or more of the following functions.

1. More clarity and understanding.
2. Better attention, interest and retention.
3. It helps in faster and comprehensive learning.
4. Better access
5. Save the instructor's time.
6. Supplement the spoken words by combining audio and visual stimuli.

Limitations of Audio-visual Instructional Facilities

1. Learners may form distorted impressions unless audio-visual instructional facilities are supplemented with required explanations.
2. Teaching may be narrowed down to only a few big ideas, not giving the complete picture of a subject.
3. There is the possible risk of spectatorism instead of the attitude of thoughtful enquiry. Some extension workers acquire the mistaken idea that they have little to do when audio-visuals are used.
4. **Multimedia:** It is a combination of more than one media, but it could include several forms of media and audios, texts, still images, animations, graphics, videos and films.

Types of Instructional Facilities According to Projection or Show

Teaching instructional facilities according to projection or show are divided into projected and non-projected instructional facilities.

1. **Projected instructional facilities:** Visual instructional devices that are shown with a projector are called projected instructional facilities. Examples

Table 1.6 Projected and Non-projected Instructional Facilities

Projected instructional facilities	Non-projected instructional facilities				
	Graphic	Display boards	3-D	Audio	Activity
Films	Charts	Blackboard	Models	Radio	Field trips
Slides	Flash cards	Whiteboard	Mock-ups	Recordings	Experimentation
Overhead projector	Posters	Bulletin board	Objects and specimens	Digital Audio Player	Dramatics
Epidiascope	Pictures and photographs	Flannel board	Puppets	Television	Teaching machines
Video projectors	Graphs	Magnetic board		Telephone and mobile	Programmed instructions
Film strips	Map diagrams	Peg board			

include slides, filmstrip, silent films, cartoons, etc. These are projected through an opaque projector (epidiascope) or an overhead projector.

- 2. Non-projected instructional facilities:** Visual instructional devices that are simply presented without any projection equipment are non-projected instructional facilities. Examples include blackboard, chart, etc.

Apart from these instructional facilities, there are two additional categories of the teaching instructional facilities, they are display instructional facilities and presentation instructional facilities.

- 1. Display instructional facilities:** Visual instructional facilities that are spread before the audience for viewing information and instruction. Examples are posters, bulletin boards, models, exhibits, etc.
- 2. Presentation instructional facilities:** Visuals instructional facilities are presented or projected before the audience for viewing, explaining or presenting the message of the visuals, so that the audience gets meaningful understanding of the subject. Examples are flashcards, slides, filmstrips, etc.

Table 1.6 shows the different types of teaching instructional facilities according to projection or show.

PROJECTED VISUAL INSTRUCTIONAL FACILITIES

Any visual instructional facilities that is used for magnification of image on a screen in dark or semi-dark conditions can be called a projected visual instructional facilities. There are three important methods of projection and they are listed below.

- 1. Direct projection:** Slide and film projectors
- 2. Indirect projection:** Overhead projector
- 3. Reflected projection:** Opaque projector and epidiascope

Slides

A slide is a transparent-mounted picture that is projected by focusing light through it. The projection may be made on a screen or on a white wall. Slides of 35 mm films mounted on individual cardboard or plastic frames are common and are extensively used in extension work during training programmes, seminars, workshops, group meetings, campaigns, exhibitions, etc.

Overhead Projector (OHP)

The overhead projector projects the picture over the head of the speaker on the screen. Drawings, diagrams, letterings, etc., are made on transparent sheets and are put on the glass platform of the overhead projector, through which a strong light is passed. The rays of light are made to converge with a lens and are reflected by a mirror held at an angle on the screen at the back.

Transparencies can also be made through photographic, xerox or electronic processes as well. Overhead projection is used in training programmes, group meetings, seminars, symposiums, workshops, etc.

Advantages include synchronization of projections with audio, facing audience and observing their reaction, sustaining audience interest, clear presentation of complex ideas, time saving and easy availability of materials for making transparencies.

Handheld Projector

It is also known as a pocket projector, a mobile projector or a pico-projector. It is an emerging technology that applies the use of a projector in a handheld device. It is a response to the emergence of compact portable devices, such as mobile phones, personal digital assistants and digital cameras, which have sufficient storage capacity to handle presentation materials with an attached display screen.

Mind Mapping

Mind Mapping as a method of teaching was developed by Tony Buzan in 1960. A 'mind map' is a diagram for representing tasks, words, concepts or items linked to and arranged around a central concept or subject. It uses a non-linear graphical layout that allows the user to build an intuitive framework around a central concept and it can turn a long list of monotonous information into a colourful, memorable and highly organized diagram that works in-line with a learner's brain's natural way of doing things.

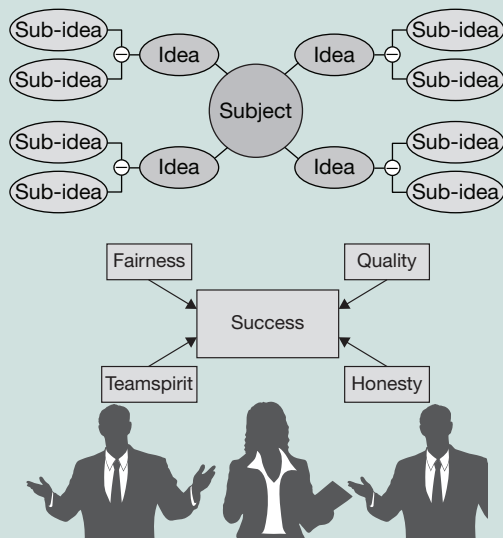

Figure 1.9 Mind Map

Using mind maps as an innovative thinking tool in education helps students to visualize and externalize concepts and understand the connections between different ideas. It is commonly used in presentations, critical thinking, brainstorming, decision making and project management.

Video Projector

A video projector is also known as a digital projector, which is now popular for many applications for extension and development. All video projectors use a very bright light to project the image.

Opaque Projector (Epidiascope or Episcopes)

It is a device that displays opaque materials by shining a bright lamp onto the object from above. The material can be book pages, drawings, mineral specimens, leaves, etc.

Microsoft PowerPoint Presentations

PowerPoint is an application program of presentation that is found in Microsoft Office. Nowadays, many of the audio-visual teaching instructional facilities have been replaced with PowerPoint presentations. Here, the slides give us the flexibility in terms of fonts, visuals, sizes, ability to change, etc. It allows the teachers to reflect on a lesson and correct any changes, and they can create perfect lessons and can print them out. Using PowerPoint improves the students' learning motivation, increases authentic materials for study and encourages interaction between the teacher and the students.

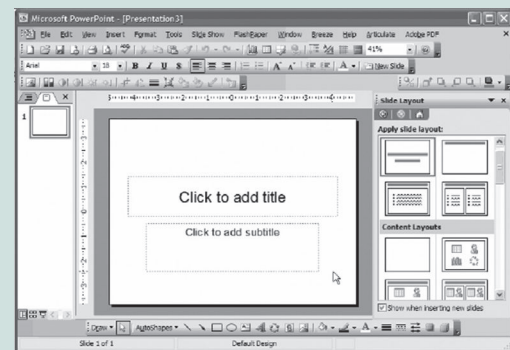

Figure 1.10

Microsoft PowerPoint, copyright © 2003
Microsoft Corporation.

Film Strips

The filmstrip was a common form of still image instructional multimedia. It was once commonly used by educators in primary and secondary schools, now overtaken by newer and increasingly low-cost, full-motion videocassettes and DVDs, since 1940s till 1980s.

NON-PROJECTED VISUAL INSTRUCTIONAL FACILITIES

Non-projected visual instructional facilities are those instructional facilities that are used without projection or help of any projector. Advantages include easy availability, no specific power supply requirement, economical and ease in handling. They can be useful in small group situations. Many of them can be converted into projected instructional facilities. For example, charts, flannel graphs and flash cards can be photographed or scanned and converted into slides. Some of them can be projected through an opaque projector.

Charts

A chart is a symbolized visual instructional facilities with pictures of relationships and changes, which are

used to tabulate a large mass of information or show a progression. Charts can help communicate difficult and dull subject matter in an interesting and effective way. They make facts and figures clear and interesting, show or compare changes and show the size and placement of parts. They are also helpful in summarizing information and presenting abstract ideas in visual form.

Types of Charts

There are many varieties of charts. Some common types of charts are briefly discussed below for your understanding.

1. **Process charts** are used to show steps in a process. For example, charts can show life cycles of insects, energy cycles, etc.
2. **Organizational charts** are used to represent hierarchical relationships, flow of communication among different departments in an organization.
3. **Time charts** are used to represent events, occurrences in chronological sequences, such as evolution of man, political empires, etc.
4. **Tabular chart** represents data in tabular form for easy comparison and understanding. For example, types of plantations, etc., are represented in tabular form, which makes comprehension easier.
5. **Tree chart** shows the growth and development from single source to many branches like in a tree. For example, family tree is a familiar example.
6. **Stream chart** is opposite to a tree chart wherein many branches come together to converge into a single stream. For example: Many rivers like Yamuna fall in Ganga, which then flows down to fall in the sea.
7. **Sequence charts or flip charts** are collection of charts like flip charts used to show many events or series of events in succession.

The flip chart is like a calendar with a sheet each for twelve months. As the month changes, the sheet is flipped over. Actually, flip chart consists of several charts arranged in a sequential order and fastened together at one end with this spiral, metal or wooden strip.

Flash Cards

Flash cards are brief visual messages on poster board. The cards are flashed (turned over at short intervals) before the audience to emphasize the important points in a presentation. Flash cards are held like a pack of cards and are flashed to the audience one at a time in a sequence along with the talk.

Poster

A poster is displayed in a public place with the purpose of creating awareness among the people. A poster is

generally seen from a distance and the person glancing at it seldom has the time or inclination to stop and read. The job of the poster is to stop the persons hurrying past and thrust the message upon them.

1. Posters give only an initial idea and cannot furnish detailed information. They need to be reported for further information by another instructional facilities or method (Examples: Leaflets and demonstration).
2. The production of good posters is a technical job and requires skill and time.
3. It cannot be repeated, so for each occasion, a new poster has to be made.

An attractive poster with appealing text to indulge the audience is known as 'caption'. Usually, a caption conveys the important message and the visual is to attract attention and therefore, to support the message to be conveyed. Posters can be of themes, such as 'Save Earth', 'Swachh Bharat Abhiyan', 'Rural Health', etc.

Pictures and Photographs

A picture is a representation made by drawing, painting or photography, which gives an accurate idea of an object. A good picture may tell a story without using a single word. Pictures may be in black and white or in colour. Nowadays, digital cameras are popularly used to take many photos and eye-catching images.

Graphs

A graph is an image that represents data symbolically. A graph is used to present complex information and numerical data in a simple, compact format. Bar graphs, line graphs, scatter graphs, and pictographs are some types of graphs. In a two-dimensional graph, the information is represented along two co-ordinates: X coordinate and Y coordinate. An independent variable is shown along X axis and dependent along Y axis. More about graphs is discussed in Chapter 7 on Data Interpretation.

Maps

A map is a visual representation of an area. It is a symbolic depiction highlighting the relationship between elements of that space, such as objects, regions and themes. Cartography or map-making is the study and practice of crafting representations of the earth upon a flat surface.

Maps are useful tool in every discipline. In social studies, it is very important for learning geographical, historical and economical concepts.

Diagrams

A plan, sketch, drawing or outline designed to demonstrate or explain how something works or to clarify the relationship between the parts of a whole is called a diagram.

Display Boards

Blackboard or Chalkboard

It is one of the oldest teaching instructional facilities and the chalkboard is probably the simplest, inexpensive, most convenient, and widely used non-projected visual instructional facilities in extension teaching. It is a vehicle for a variety of visual materials.

The chalkboard is suitable for use in lectures, training programmes, group meetings, etc.

It facilitates step-by-step presentation of the topic, creates a dramatic impact and sustains audience interest. Presentations may be adjusted according to the receptivity of the audience. It helps the audience to take notes. It helps in comprehension and retention of knowledge.

White Board

Modern classrooms are equipped with boards also called marker boards or multipurpose boards. They require special erasable markers. A felt eraser is required to erase the surface soon after use. Markers are available in different colours. It may be used as surface for projecting films, slides and overhead transparencies. A white board with a steel backing can be used as magnetic board for display.

An interactive white board is a large interactive display that connects to a computer and projector. A projector projects the computer's desktop onto the board's surface, where users control the computer using a pen, finger or other device. The board is typically mounted to a wall or to a floor stand.

Bulletin Board

A bulletin board displays messages. It is a surface in which bulletins, news, information and announcements of specific or general interest can be displayed. Bulletin boards are of different sizes with provisions to hold pins, book exhibits and other materials.

Flannel Board and Flannel Graph

A flannel board is a visual instructional facilities in which messages are written or drawn on thick paper and presented step-by-step to the audience to synchronize with the talk. The board is a flannel-covered flat surface. Flannel is stretched and then glued to a piece of plywood or heavy cardboard.

Magnetic Board

It can be a sheet of tinplate and it is simply a type of chalkboard and the surface of which is treated or coated with a porcelain-like substance. The base of the board is steel and pictures and objects can be pasted or mounted with small magnets and can easily be moved about.

Peg Board

Perforated hardboard is tempered hardboard, which is pre-drilled with evenly spaced holes. The holes are used to accept pegs or hooks to support various items, such as tools in a workshop.

Three-dimensional Models

Real things may not be available all the times, and in the desired form. Hence, models help to tide over this problem. A model is a recognizable representation of real things in three-dimensional view, such as its height, width and depth. This makes the understanding better and easy.

Models can be of three types, such as (i) solids, (ii) cut away or cross sections and (iii) working models. They have advantages of reality depiction, illustration and are complex and intricate. They are long-lasting and inexpensive.

Objects, Specimens, and Globe

Objects are collections of real things for instructional use. Specimen is any typical object representing a class or group of things. A globe is the spherical model of earth.

Audio Instructional Facilities

Radio

Radio has been a popular mass medium for close to a century. These days many of us are tuned to Radio through FM channels. Radio is due to its easy access, speed and immediacy. In its start in 1917, radio was visualized as a source for mass education. In India, the first radio station was established in Mumbai (Bombay) in July 1927. Two more radio stations in Calcutta and Delhi were established in 1936. All India Radio (AIR) broadcasted radio programmes for the country. In 1937, Calcutta station broadcasted school programmes for the first time and it continues till date.

School educational programmes are still in demand and are used by teachers to generate interest of students. **Gyan Vani** is a dedicated FM channel for educational broadcasts. It is used to broadcast educational programmes from Educational Media Production Centre (EMPC) of Indira Gandhi National Open University (IGNOU), New Delhi. Audio programmes developed by Central Institute of Educational Technology (CIET) of NCERT for school children are also broadcast by Gyan Vani.

Podcast

Radio is a mass broadcast medium whereas podcasts are personalized broadcast.

Podcasts are prepared for specific target and made available to the target group for specific learning objectives. Podcast is the portmanteau of words 'pod' from iPod and 'cast' from broadcasting.

Recordings

A tape recorder or any other kind of audio recording is suitable for extension work in meetings, training programmes, campaigns, recording radio programmes, etc. It facilitates on-the-spot recording of sound. It is easy to operate and preserve. It has low operational cost as the same tape may be used again.

Digital Audio Player

A digital audio player is sometimes referred to as an MP3 player and has the primary function of storing, organizing and playing audio files. Some digital audio players are also referred to as portable media players as they have image viewing and video-playing support. An ideal example is iPod (fourth generation audio instructional facilities).

Telephone and Mobile

Usually, two persons can communicate at a time through a telephone and the system serves many people in a given area if a speaker is attached to it like Cell Phone-Operated Mobile Audio Communication and Conference System (COMBACCS). This technology is seeing a phenomenal growth in many developing countries. Short message service (SMS) and wireless application protocol (WAP)-enabled cell phones with cameras can be effective in offering always available extension between experts and people. COMBACCS can help community members at different locations build relationships and understanding.

Television

Television is an effective tool in expressing abstract concepts or ideas. Abstract concepts are usually produced and conveyed with words. Besides this, in making an abstract concept concrete, the role of animation and visual experimentation is very important.

Activity Instructional Facilities

- 1. Field trip:** A field trip is a structured activity that occurs outside the classroom. It can be a brief observational activity or a longer, more sustained investigation or project. Field trips offer an opportunity to students to get exposure to real people, events and opportunity to make connections with others.
- 2. Experimentation:** The experiments are specifically useful in science subjects so as to relate theory with practice.
- 3. Dramatics:** They can convey some message to society or public at large. These are usually theme-based and the students are assigned different roles.

- 4. Teaching machines:** There are many types of teaching machines. In general, they all work on the same method, which is to present a question, have the user indicate the answer and then provide the user with the correct answer. They are usually programmed. They are particularly useful in subjects that require drill, such as arithmetic or a foreign language. Users can proceed at their own pace and also have an opportunity to review their work. If the machines are used in a classroom, they relieve teachers of some of the time-consuming aspects of drilling students and allowing them to give more attention to individuals with specific problems or to concentrate on some particularly difficult area of instruction.
- 5. Programmed instructions:** They are also useful instrument.

FACTORS INFLUENCING THE SELECTION OF INSTRUCTIONAL FACILITIES

No single rule-of-thumb can be given for the selection and use of various audio-visual instructional facilities to ensure effectiveness in all situations. In order to get the most effective results, the following aspects are important:

1. Selection of appropriate instructional facilities
2. Suitable combination of the selected instructional facilities
3. Their use in proper sequence.

Audio-visual instructional facilities are used singly or in combination, thereby taking into consideration the following factors.

- 1. Nature of audience:** Printed media are meant for literate people, whereas exhibits, pictures and symbols are for less literate people.
- 2. Size of audience:** A video show or whiteboard cannot be used effectively when the number of participants exceeds 30 and internet can be used for large audiences.
- 3. Teaching objective or expected nature of change:** Select the audio-visual instructional facilities based on the objective of extension teaching, i.e., to bring about a change in
 - (a) Thinking or knowledge
 - (b) Attitude or feeling
 - (c) Actions or skills.

If you merely want to inform or to influence a large number of people slightly, then use mass media, such as radio or television.

- 4. Nature of subject matter:** In case new practice is simple and familiar, a news article, a radio message, or a circular letter will be effective, whereas complex or unfamiliar practices will require audio-visual instructional facilities.

5. **Availability of instructional facilities:** Despite the availability of the Internet two decades back, it was not being used on a large scale. With the availability of speed, due to better technology and cost effectiveness, more people are now using internet-based technologies as teaching instructional facilities.
6. **Relative cost:** Effective instructional facilities need not be necessarily costly. The amount expended on audio-visual instructional facilities, in relation to the extent of effectiveness is also an important consideration in their selection and use.

Dale's Cone of Experience

Dale's Cone of Experience is a model that incorporates several theories related to instructional design and learning processes. During 1960s, Edgar Dale theorized that learners retain more information by what they 'do' as opposed to what is 'heard', 'read', or 'observed'. His research led to the development of the 'Cone of Experience'. Today, this 'learning by doing' has become known as 'experiential learning' or 'action learning'.

How can instructors use the cone of experience? According to Dale's research, the least effective method at the top involves learning from information presented through verbal symbols, i.e., listening to spoken words. The most effective methods at the bottom involve direct, purposeful learning experiences, such as hands-on or field experience. Direct purposeful experiences represent reality or the closest things to real, everyday life. The cone charts the average retention rate for various methods of teaching. The further you progress down the cone, the greater the learning and the more information are likely to be retained. It also suggests that when choosing an instructional method, it is important to remember that involving students in the process strengthens knowledge retention. It reveals that 'action-learning' techniques result in up to 90% retention. People learn best when they use perceptual learning styles and these learning styles are sensory based.

The more sensory channels possible in interacting with a resource, the better chance that many students can learn from it. According to Dale, the instructors

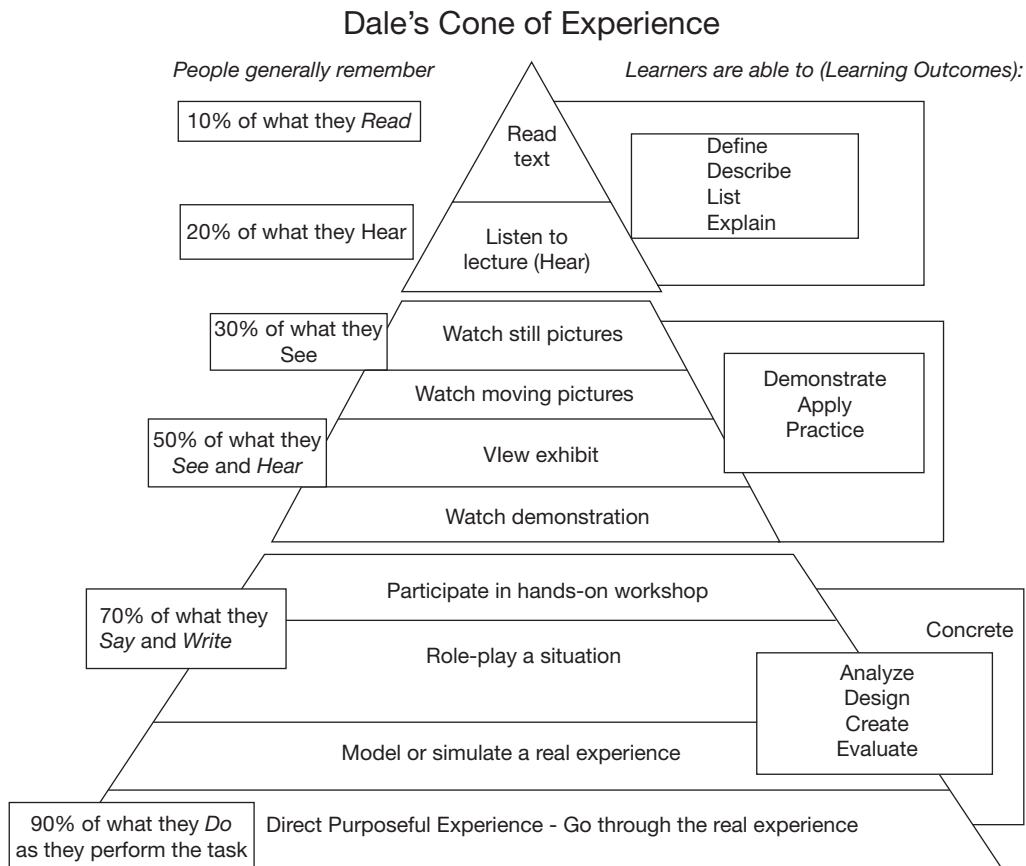

Figure 1.11 Dale's Cone of Experience

should design instructional activities that build upon more real-life experiences. Dales' cone of experience is a tool to help instructors make decisions about resources and activities.

IMPORTANT TIPS FOR BETTER CLASSROOM MANAGEMENT

In NET examination, there are questions about class indiscipline and how to deal with the situation. There are number of things a teacher must keep in mind when dealing with students who do not behave in a disciplined manner in the class. There is a basic rule that the teacher must consider that he or she does not hurt them physically or emotionally. This would prove psychologically harmful to the student and our purpose is surely not to harm them but to modify their behaviour as individuals.

Punishments, if any, should be seen as reasonable and fair, and never vicious. The ability to control a group of students depends on the personality of the teacher and also the rapport that he or she develops with them. There are some tips to be kept in mind.

- 1. Immediate action:** In case of deviant behaviour, a teacher must take immediate action.
- 2. Stop teaching in case of misbehaviour:** The moment the teacher stops teaching, it is clear that the teacher means business and will not tolerate misbehaviour in the class.
- 3. Change seats:** If few students disrupt the class, change their seats. Separating the troublemakers is quite effective in controlling indiscipline.
- 4. Adapt and be sensitive:** In case the entire class is gradually getting out of control, then it's a signal that the activity is boring. The best way of

controlling them is by changing the activity, for example, if they are reading, immediately switch over to a writing task, which would keep them all quiet and involved. The teacher must learn to adapt and be sensitive to the mood of the class.

- 5. Counsel after class:** One of the most effective ways of tackling a student is by giving counselling after class. The teacher should also clearly explain the consequences of not improving.
- 6. Talk to the parents:** In several cases, a talk with the parents will improve the behaviour of the student. It would also give a better insight into the reasons for indiscipline by individual students.

EVALUATION SYSTEMS

Interdependence of Teaching, Learning, and Evaluation

Teaching has been defined as the process of facilitating learning and the term learning is broadly defined as the process of acquiring knowledge, attitude, skills, habits and abilities. To determine whether teaching has facilitated learning and if yes, upto what an extent, evaluation is carried out. In other words, teaching, learning and evaluation are the three inter-dependent aspects of the educative process. This interdependence is clearly seen when the main purpose of instruction is conceived in terms of helping students achieve a set of learning outcomes that include changes in the cognitive, psychomotor and affective domains.

There is a direct relationship among the four important factors of the educational system, such as objective, curriculum, method and evaluation. As Indian Education Commission (1944–1966) has remarked, 'It is now agreed that evaluation is a continuous process, it forms an integral part of the total system of education, and is intimately related to educational objectives. It exercises a great influence on pupil's study habits and the teacher's method of instruction and this helps not only to measure educational achievement but also to improve it'.

Evaluation

Evaluation is a systematic process of collecting, analysing and interpreting information to determine the extent to which instructional objectives are being achieved.

Perhaps the most comprehensive definition of evaluation has been given by Beeby, 'Evaluation is the systematic collection and interpretation of evidence leading as a part of process to a judgement of value with a view to action'.

Teaching with Sense of Humour

- Laughter is a natural, universal phenomenon, with beneficial effects, which is both physical and psychological.
- Everyone loves a teacher with an infectious sense of humour.
- It builds cordial relationship.
- It has the ability to relax people and reduce tension.
- It is an effective advertising strategy.
- Teaching with the help of cartoon is a very effective way.
- When there is a willingness to change, there is hope for progress in any field.
- Students enjoy humour in forms of funny anecdotes.

From this definition, it is clear that the following four key elements constitute the process of evaluation.

1. Systematic collection of evidence (**Example:** score)
2. Its interpretation
3. Judgement of value
4. With a view to action

Difference between Measurement, Assessment and Evaluation

Measurement is the quantitative description of one's performance. For example, a student scored 92 in Mathematics, 75 in Science, 65 in Social Science, 64 in Hindi and 68 in English.

Figure 1.12

Assessment is the second step of evaluating student's performance. The description that a student stood first in the class represents the concept of assessment. It makes student's performance more meaningful. Unless we interpret, analyse, rank-order and compare one's individual score with the average score of the group, we cannot find out one's relative position in a group.

Figure 1.13

If in case of a student, the case of a student, we find that she has 'improved significantly in half-yearly examination' in comparison to her performance in the earlier examinations. What does it mean?

We can conclude that this type of judgement carry certain value and add to the performance of student to make it more meaningful.

While forming the judgement like 'improved significantly', the earlier performance of student in the previous examinations has been taken into consideration by the teacher. When we add value to the assessment of student performance, we carry out evaluation of their performance.

Figure 1.14

The comparison can be depicted with the help of following diagrams as well.

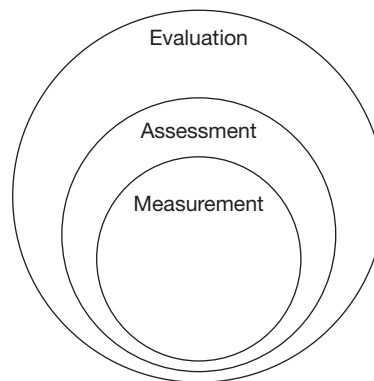

Figure 1.15

Functions of Evaluation

Evaluation does not end with the summarization of results. It has direct bearing on the improvement of the system as a whole. The functions of evaluation are as follows.

1. **Feedback:** To assess strengths and weaknesses.
2. **Motivation:** The mere realization that you would be evaluated propels a student to work hard.
3. **Better guidance:** Crucial for the growth of pupils.
4. **Remediation:** It helps in locating the areas that require remedial measures.
5. **Facilitates planning:** It helps the teacher in planning, organizing and implementing learning activities.
6. Revision of curriculum.
7. Inter-institutional comparison.
8. **Educational decision-making:** It relates to selection, classification, placement, promotion, etc.
9. Submission of progress report to parents.

Types of Evaluation

A good evaluation device is one which secures valid evidence regarding the desired change of behaviour. A teacher needs to know the various devices that are helpful in gathering evidence on the changes taking place in a pupil.

The following table depicts the categorization of evaluations that is very important from NTA-NET Exam point of view. It is important to mention here that there is some overlapping among different concepts.

According to basic nature: They can be categorized into quantitative and qualitative techniques:

Quantitative Techniques

1. **Written examination:** It is also known as paper pencil test. In this technique, the answers are to be written as per the instruction of questions.

Table 1.7

According to approaches	According to phase of instruction/function	According to nature of reference	According to purpose	According to grades
Quantitative techniques	1. Placement	1. Norm referenced	1. Diagnostic tests	Direct
	2. Formative	2. Criterion referenced	2. Aptitude tests	
Qualitative techniques	3. Diagnostic		3. Achievement tests	Indirect
	4. Summative		4. Proficiency tests	

- 2. Oral examination:** They supplement the written examination. Examples are test of reading ability, and pronunciation and viva voce is also an example.
- 3. Practical examination:** These tests are necessary to test experimental and manipulative skills of a learner, particularly in subjects, such as science, technology, agriculture, craft, and music.

Qualitative Techniques

- 1. Observation and interviews:** Observation is used to evaluate the behaviour of the pupil in controlled and uncontrolled situations. It is purposive and systematic and carefully viewing or observing the behaviour and recording it. Interview is sometimes superior to other devices. It is because of the fact that pupils are usually more willing to talk than write.
- 2. Checklist:** A checklist is an instrument that is used for collecting and recording evidence regarding significant behavioural tendencies of the pupils or specific problems they present in the classroom.
- 3. Rating scale:** Rating is a term applied to the expression of opinion or judgement regarding some situation, object or character. Rating scale is a device by which judgements can be quantified.
- 4. Cumulative records:** Anecdotal records, cumulative record cards and diaries of pupils are some other devices used in evaluation process to know the details about a child's behaviour.

Type of Evaluation on the Basis of Phase of Instruction

In the various phases of instruction, evaluation is integrated. The four types of evaluation are placement, formative, diagnostic and summative.

- 1. Placement evaluation:** The key word which is used for placement assessment is the 'entry behaviour'. It determines the knowledge and skills the students possess, which are necessary at the beginning of instruction in a given subject area. Evaluation of entry behaviour is done just before teaching starts, a teacher should know the

previous knowledge of students. This helps teacher to organise teaching-learning activities according to the previous knowledge of learners.

Various entrance exams can also be conducted for the same purpose. This is also done to see the knowledge base of students and a teacher can start discussion keeping that in view.

- 2. Formative evaluation:** It is also known as internal valuation, it is done during the programme before its completion. It focuses on the process. It is conducted more than once depending upon the length of activity. This evaluation provides the student with feedback regarding his or her success or failure in attaining the instructional objectives. It also identifies the specific learning error that needs to be corrected. For instance, a student learns and scores high on the objective part of the test but fails in the essay part. He is reinforced to exert more effort in answering essay questions in the succeeding tests. For a teacher, formative evaluation provides information for making instructions and remedies more effective. Formative evaluation is quite helpful in the early stage of development of a programme as it helps in improving the programme. The examples of formative evaluation are unit end tests, monthly test, quarterly tests, etc.
- 3. Diagnostic evaluation:** While the formative evaluation determines the extent to which students accomplish the learning targets, the diagnostic evaluation goes a step further and tries to provide an explanation for the possible causes for problems in learning. Thus, diagnostic tests are more comprehensive and detailed. Diagnostic evaluation is done at any time in the programme to pin point anything wrong in the programme. This helps the teacher in correcting the problems immediately, thereby, improving the course.
- 4. Summative evaluation (external evaluation):** As the name indicates, it is done at the end or completion of the course.

It determines the extent to which the objectives of instruction have been achieved and is used for assigning course grades. Summative evaluation

generally includes oral reports, projects, term papers and teacher-made achievement tests and it shows how good or how satisfactory the student is in accomplishing the objectives of instruction.

Types of Evaluation and their Functions

- 1. According to nature of reference:** Here, norm-referenced testing and criterion-referenced testing can be termed as the two alternative approaches to educational testing. Though there are some similarities between these two approaches to testing, there are also fundamental differences between the two. These are termed as complementary approaches.

Table 1.8

Areas of function	Types of evaluation and their functions
After instructions	Summative evaluation (To certify the learner)
During instructions	Diagnostic evaluation (To solve learning difficulties)
	Formative evaluation (To provide feedback on the teaching-learning process and to know mastery in content)
Before instructions	Placement evaluation (To know entry behaviour)

Scholastic Assessment

Scholastic assessment refers to the assessment of cognitive abilities of learners in various academic activities, which are associated with various subjects.

Therefore, all those abilities in cognitive domain, namely, knowledge, understanding, application, analysis, synthesis, evaluation and creativity comes under scholastic abilities. Continuous and comprehensive evaluation is one such example.

- 2. Criterion-referenced evaluation:** Glasar (1963) first used this term, 'Criterion-reference test' to describe the learner's achievement on a performance continuum.

Consider the following statements:

- Amit scored 95 or 95% marks in Mathematics.
- The typing speed of Davinder is 58 words per minute.

A criterion-referenced test is used to ascertain an individual's status with respect to a defined

achievement domain. In the above statements, there is no reference to the performance of other members of the group. Thus, criterion-referenced evaluation determines an individual's status with reference to well-defined criterion behaviour. There are clearly defined learning outcomes which serve as referents (criteria). Success of criterion-reference test lies in the delineation of all defined levels of achievement which are usually specified in terms of behaviourally stated instructional objectives.

The purpose of criterion-referenced evaluation or test is to assess the objectives and that's why it is termed as objective based test. The objectives are assessed, in terms of behavioural changes among the students. Hively and Millman (1974) suggested a new term, domain-referenced that has a wider connotation. A criterion referenced test can measure one or more assessment domain/s.

- 3. Norm referenced evaluation:** A norm-referenced test is used to ascertain an individual's status with respect to the performance of other individuals on that test. It is normally used in competitive exams.

Consider the following statements:

- Amit stood third in Mathematics test.
- Rajesh scored 98 percentile that means only 2% candidates scored better than him. This is used in CAT for admission into IIMs and some other top notch institutes in India.

In the above statements, the person's performance is compared to others of their group and the relative standing position of the person in his/her group is mentioned. We compare an individual's performance with similar information about the performance of others.

Norm-referenced tests are mostly easy but can be tough as well

Reflective Prompts

Reflective prompts is a technique in which the teacher provides a set of flexible questions to the students that prompt them to reflect on their own learning. In this technique, each student answers some questions such as given below after completion of a lesson/unit by the teacher. If the test scores are interpreted in terms of an individual, then they are known as self-referenced.

Types of Evaluation Tests of the Basis of Purpose

Though there is some overlapping with the evaluation techniques as discussed earlier, purpose-specific category includes tests designed to achieve a specific

purpose of evaluation. Generally four test-types are identified in this category. Let us briefly present the features of each of these.

Diagnostic Test

These tests help us in identifying 'area of learning' in which a learner may need a remedial course and they provide us a profile of what the learner knows and does not know. A diagnostic test may consist of a battery of a number of sub-tests to cover sub areas.

Aptitude Test

Aptitude tests basically serve a predictive function, they help us in identifying potential talents and desirable characteristics which are essential for one to be competent to perform a specific task. These tests are generally used while selecting people for special courses.

Achievement Test

As the name indicates, such tests aim to measure the extent to which the objectives of a course have been achieved. The usual end-of-course exam may be taken as a typical example of an achievement test.

Proficiency Tests

These tests aim to assess the general ability of a person at a given time.

Their scope is governed by a reasonable exception of what abilities learners of a given status (say, matriculates or graduates) should possess.

Grading System of Evaluation

The word 'grade' is derived from the Latin word Gradus which means 'step.' In educational measurement, grading involves the use of a set of symbols to communicate the level of achievement of the students.

Types of Grading

- 1. Direct grading:** In direct grading, the performance exhibited by an individual is assessed in qualitative terms and the impression so obtained by the examiner is directly expressed in terms of letter grades. The advantage of direct grading is that it minimizes the inter-examiner variability. Moreover, it is easier to use in comparison to indirect grading. Direct grading lacks transparency.
- 2. Indirect grading:** In this method, the performance of an examinee is first assessed in terms of marks and subsequently transformed into letter grades by using different modes. This transformation may be carried out in terms of both 'absolute grading' and 'relative grading' as discussed below.

- (a) Absolute grading:** Absolute grading is a conventional technique of evaluation. It is based on a pre-determined standard that becomes a reference point for assessment of students' performance. It involves direct conversion of marks into grades, irrespective of the distribution of marks in a subject. For example, the categorization of students into five groups, namely, distinction (75% and above), first division (60% and less than 75%), second division (45% and less than 60%), third division (33% and less than 45%) and unsatisfactory (Below 33%).
- (b) Relative grading:** Relative grading is generally used in public examination. In this system, grade of a student is decided not by her performance alone rather than performance of the group. This type of grading is popularly known as 'grading on the curve.'

CHOICE BASED CREDIT SYSTEM (CBCS)

Ministry of Human Resource Development has started the process for developing New Education Policy (NEP) in our country to bring out reforms in Indian education system. With UGC has more active participation, it has already initiated several steps to bring equity, efficiency and academic excellence in National Higher Education System. The important ones include innovation and improvement in course- curricula, introduction of paradigm shift in learning and teaching pedagogy, examination and education system. The education plays enormously significant role in building of a nation. There are quite a large number of educational institutions, engaged in imparting education in our country. Majority of them have entered recently into semester system to match with international educational pattern.

There has been complete lack of relationship between education, employment and skill development in conventional education system. The present alarming situation necessitates transformation and/or redesigning of education system, not only by introducing innovations but developing "learner-centric approach in the entire education delivery mechanism and globally followed evaluation system as well. Majority of Indian higher education institutions have been following marks or percentage based evaluation system, which obstructs the flexibility for the students to study the subjects/courses of their choice and their mobility to different institutions. There is need to allow the flexibility in education system, so that students

depending upon their interests and aims can choose interdisciplinary, intra-disciplinary and skill-based courses. This can only be possible when choice based credit system (CBCS), an internationally acknowledged system, is adopted. The choice based credit system not only offers opportunities and avenues to learn core subjects but also exploring additional avenues of learning beyond the core subjects for holistic development of an individual.

Advantages of the choice based credit system:

1. Shift in focus from the teacher-centric to student-centric education.
2. Student may undertake as many credits as they can cope with (without repeating all courses in a given semester if they fail in one/more courses).
3. CBCS allows students to choose inter-disciplinary, intra-disciplinary courses, skill oriented papers (even from other disciplines according to their learning needs, interests and aptitude) and more flexibility for students).
4. CBCS makes education broad-based and at par with global standards. One can take credits by combining unique combinations. For example, Physics with Economics, Microbiology with Chemistry or Environment Science etc.
5. CBCS offers flexibility for students to study at different times and at different institutions to complete one course (ease mobility of students).
6. Credits earned at one institution can be transferred.

Though difficult to adopt, the uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations, the UGC has formulated the guidelines to be followed.

Outline of Choice Based Credit System

1. **Core course:** A course, which should compulsorily be studied by a candidate as a core requirement is termed as a Core course.
2. **Elective course:** Generally a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline/subject of study or which provides an extended scope or which enables an exposure to some other discipline/subject/domain or nurtures the candidate's proficiency/skill is called an Elective Course.
3. **Discipline Specific Elective (DSE) Course:** Elective courses may be offered by the main discipline/subject of study is referred to as Discipline

Specific Elective. The University/Institute may also offer discipline related Elective courses of interdisciplinary nature (to be offered by main discipline/subject of study).

4. **Dissertation/Project:** An elective course designed to acquire special/advanced knowledge, with an advisory support by a teacher/faculty member is called dissertation/project.
5. **Generic Elective (GE) Course:** An elective course chosen generally from an unrelated discipline/subject, with an intention to seek exposure is called a Generic Elective.
6. **Ability Enhancement Courses (AEC):** This may be of two kinds: Ability Enhancement Compulsory Courses (AECC) and Skill Enhancement Courses (SEC). "AECC" courses are the courses based upon the content that leads to Knowledge enhancement; Skill Enhancement Courses (SEC): These courses may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge.

Central/State Universities have lot of flexibility in deciding common minimum syllabi of the core papers and at least follow common minimum curriculum as fixed by the UGC. This allows deviation from the syllabi being 20 % at the maximum.

COMPUTER BASED TESTING (CBT)

CBT seems to be catalyst for changes in pedagogical methods. It brings about a transformation in learning, pedagogy and curricula in educational institutions. The setting is the basis of both computer-based and paper-based testing.

Benefits of Computer-Based Testing (CBT)

1. More frequent testing opportunities
2. Data rich results
3. Increasing candidate reach
4. Streamlined logistics

There are two types of CBT which include:

1. **Linear test:** This involves a full-length examination in which the computer selects different questions for individuals without considering their performance level.
2. **Adaptive test:** Here the computer selects the range of questions based on individuals performance level. These questions are taken from a very large pool of possible questions categorized by content and difficulty.

Using the waterfall model, the CBTS SDLC was split up into a number of independent steps. Each step was

carried out in sequence and accordance to one after the other. The previous stage is always completed before moving to the next stage of the life cycle.

1. Requirements analysis and definition
2. System and software design
3. Implementation and unit testing
4. Integration and system testing
5. Operation and maintenance

In India, CBT has been started for number of exams such as by IBPS for banking exams and currently by National Testing Agency (NTA) to conduct exams for UGC, NEET, GPAT, GMA etc.

CURRICULUM FRAMEWORK, CURRICULUM AND SYLLABUS

Until 1976, Indian constitution allowed the state governments to take decisions on all matters pertaining to education including curriculum. The centre could only provide guidance to the states on policy issues. National Council for Education Research and Training developed National Curriculum Framework (NCF) in

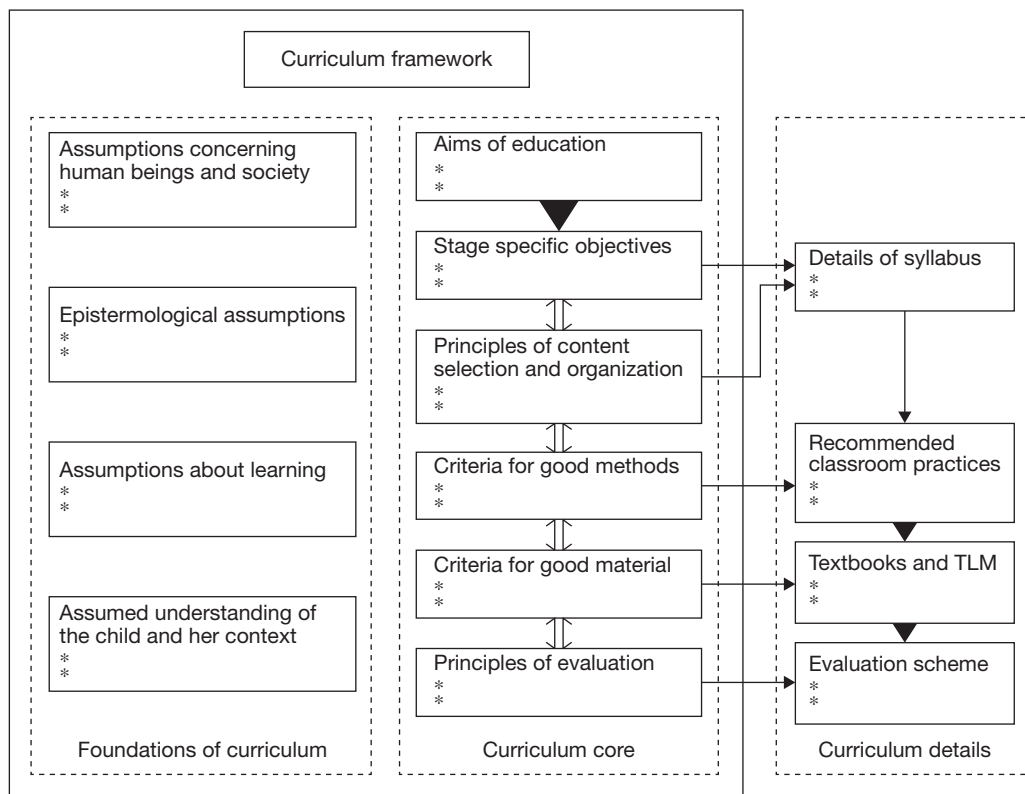

1975 following the recommendations of Education Policy on 1968.

In 1976, the constitution was amended to include education in the concurrent list and for the first time in 1986 the country as a whole had a National Policy on Education (NPE-1986) which envisions NCF as a means of modernizing education, taking into consideration the capability of responding to India's geographical and cultural diversity while ensuring the common core values and a comparable standards of education. NPE-1986 emphasized a relevant, flexible and learner-centred curriculum. NCF was subsequently revised in the years 1988, 2000 and 2005.

The curriculum framework is a plan that interprets educational aims with regard to both individual and society. This plan leads to an understanding of the kinds of learning experiences that an educational institute must provide to children.

Curriculum is perhaps best thought of as the sum total of all deliberately planned set of activities, which facilitate learning and are designed to implement specific educational aims.

It is a plan to explain what concepts are to be transacted, what knowledge, skills and attitudes are to be

Source: NCERT Pedagogy

Figure 1.16 Curriculum Framework

deliberately developed among learners. It includes statements of criteria for selection of content and choice of methods for transaction of content as well as evaluation. It is concerned with the following factors.

1. The general objectives of education at a particular stage or class.
2. Subject-wise learning objectives and content.
3. Course of studies and time allocation.
4. Teaching-learning experiences.
5. Teaching-learning instructional facilities and materials.
6. Evaluation of learning and feedback to learners.

In reference to the discussion given above, it would mean that curriculum core and syllabus put together form the curriculum.

Syllabus

It is a document that gives details of the content of subjects to be transacted and the skills, knowledge and the attitude which are to be deliberately fostered together with the stage (level) specific objectives.

Syllabus is a descriptive list of subjects to be covered and a summary of their contents. It describes and summarizes what should be taught to the students, it may have details, such as schedule, assessments,

assignments, projects, etc. Thus, it may highlight the schedule of assignments, projects and exams, etc.

Main Differences Between Syllabus and Curriculum

1. The syllabus is described as the summary of the topics covered to be taught in the particular subject. Curriculum refers to the overall content, taught in an educational system or a course.
2. The curriculum has a wider scope than the syllabus. Syllabus is descriptive in nature, but the curriculum is prescriptive. Syllabus varies from teacher to teacher while the curriculum is same for all teachers.
3. The syllabus is accessible to the learners, at the beginning of course in secondary or tertiary education. They can use it as a guide for their studies. On the other hand, curriculum is not made available to the learners unless they specifically ask for it.
4. Syllabus is set for a particular subject, unlike curriculum, that covers a particular course of study or a program.
5. Syllabus is mostly prepared by the teachers. Conversely, a curriculum is decided by the government or school or college administration.
6. The duration of a syllabus is for a year only, but curriculum lasts till the completion of the course.

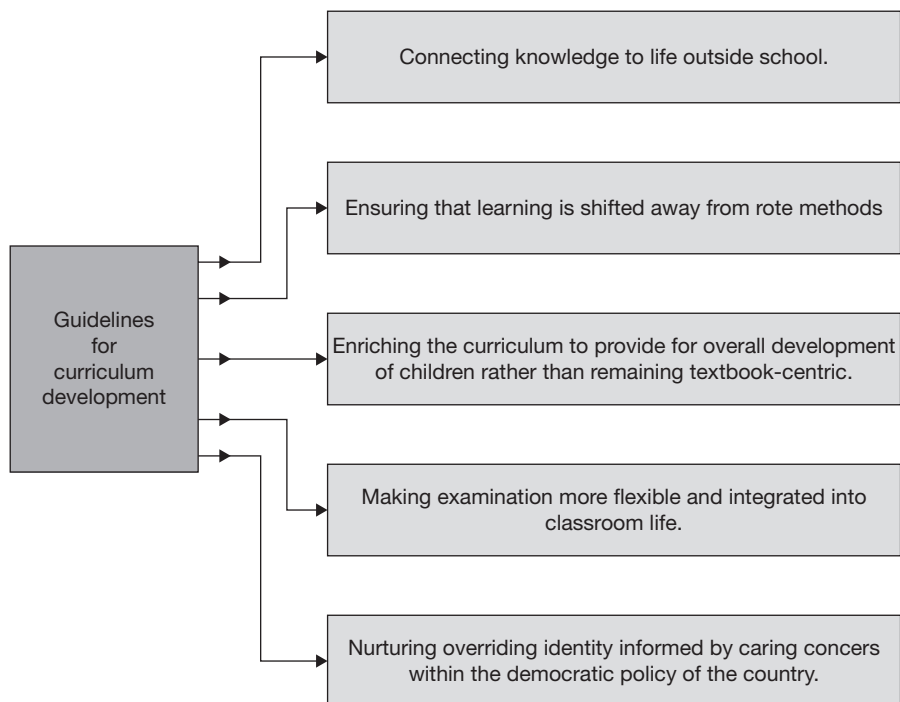

Figure 1.17 Curriculum Development Guidelines

Basic Approaches to Curriculum

- 1. Subject-centred curriculum:** Here it is assumed that universal and objective knowledge can be transmitted directly from those who have acquired the knowledge to those who have not.

Lecture is the most commonly used method to communicate subject knowledge to students. Students generally memorize the subject content provided by the teacher or textbook. Examinations test the content knowledge of students.

- 2. Behaviourist curriculum:** Behaviourist psychologists view learning as change in behaviour and learning objectives are defined in terms of behavioural change. Knowledge is the capability for action, identified as the 'successful performance of tasks.' The only way to determine whether or not students 'know' or 'do not know,' something is to see how they behave in certain situations.

The following falls within the scope of behaviourist theories of learning:

- (a) Competency-based curriculum
- (b) Criterion referenced curriculum
- (c) Mastery learning
- (d) Programmed learning

These approaches assume that large or complex tasks can be broken down into small or simpler tasks and these can be sequenced in order from simple to complex. In competency-based curriculum, terminal competencies are defined in behavioural terms. These are then sub-delineated into sub-competencies. The competency based curriculum (minimum levels of learning) has been developed in India and some other countries.

In behaviourist curriculum, the teachers are instrumental to implement curriculum developed by curriculum developers. Teachers do not question the 'ends or means of curriculum.' The behaviourist curriculum does not take into consideration the learner's experiences, context and cognitive predispositions. The learners are treated as passive receivers of knowledge and teachers are regarded as transmitter of knowledge.

Chalk and talk is the common method of teaching. Learners memorize, recite or study their lessons silently without questioning. Childhood is viewed as the preparation for adulthood within

the society. The education aims at developing such knowledge and skills which will be helpful for students to serve society in their adult life.

Critiques of subject-centred and behaviourist approaches say that these curricula do not help in achieving the aim of all-round development of the learner.

- 3. Learner centred curriculum:** Here the purpose is to stimulate and nurture growth of learners and teachers must trust in the innate abilities of learners.

The learning is viewed from a constructivist perspective. Learning is more effective when learners engage with stimulating environment, get involved in inquiry and make meaning for themselves out of interactions with environment. Here, the mantra is 'what is happening within' and the learner stands between stimulus and response. The curriculum must engage learners with stimulating experiences by arranging suitable learning environment.

The educators are interested in parameters, such as the state of learner's cognitive structures, her meaning-making abilities and her creative spirit.

'Constructivist curriculum' is based on the following assumptions.

- (a) Knowledge is actively constructed, invented, created or discovered by learners. It is not passively received and stored by learners.
- (b) Knowledge cannot be separated from the process of learning. It is based on learner's conceptual structures and prior experiences.
- (c) Learners are constantly constructing and reconstructing their cognitive structures, both as a result of newly acquired knowledge and as a result of their reflection on previously acquired knowledge.
- (d) Social interactions with peers and adults in a cultural context are important in the construction of knowledge.
- (e) Concept formation progresses from concrete to abstract slowly.
- (f) Learners have different learning styles and teaching-learning should accommodate this process.
- (g) The teacher in constructivist curriculum is the provider of the learning environment and a facilitator of learning.

EDUCATION AND TEACHING-RELATED IMPORTANT DAYS

Table 1.9 Important Dates Related to Education

Dates	Important days
January 04	World Braille Day—A form of written language for blind people, in which the characters are represented by patterns of raised dots that are felt with the fingertips.
January 24	National Girl Child Day also known as Balika Divas.
February 21	International Mother Language Day
February 28	National Science Day—To commemorate invention of the Raman Effect in India by the Indian physicist Sir Chandrasekhara Venkata Raman on the same day in 1928.
June 21	International Day of Yoga— United Nations proclaimed 21 June as International Yoga Day.
September 5	Teachers' Day is celebrated on 5th September every year, which is also the birthday of Dr Sarvepalli Radhakrishnan, the first Vice-President of independent India and the second President of the country.
September 8	International Literacy Day—To highlight the importance of literacy in life and remind ourselves of the status of literacy and adult learning worldwide.
September 14	Hindi Day
October 5	World Teachers' Day—UN World Teachers' Day commemorates the work of teachers and their contributions to society.
October 11	International Day of Girl Child
October 20	World Statistics Day
November 1	National Education Day—It is also the birthday of Maulana Abul Kalam Azad, eminent educationist and the first Education Minister of independent India.
November 14	Children's Day—It is also the birthday of independent India's first Prime Minister Pt. Jawaharlal Nehru.
November 20	Universal Children's Day

Practice Exercises

CONCEPTS, NATURE, AND CHARACTERISTICS

- Which of the following is/are the basic paradigms in classroom teaching?
 (a) Learning paradigm (b) Instructional paradigm
 (c) Both (a) and (b) (d) None of the above
- The prime requirement to become a good teacher is to have
 (a) Genuine interest in teaching
 (b) Knowledge about controlling students
 (c) Subject knowledge
 (d) Good expression
- Which of the following statement/s is/are NOT true?
 [June 1997]
 (a) Teaching is just an art
 (b) Teachers can be trained only
 (c) Teachers are born
 (d) All the above
- The most desirable skill of teacher is to
 (a) Make the students understand what the teacher says.
 (b) Cover the prescribed course.
 (c) Keep students relaxed while teaching.
 (d) Keep higher authorities informed about the class activities.
- Match List-I with List-II

List-I (Level of teaching)	List-II (Main proponent)
A Memory level	I Herbart
B Understanding level	II Morrison
C Reflective level	III Hunt

Codes:

- (a) A-I, B-II, C-III (b) A-I, B-III, C-II
(c) A-II, B-III, C-I (d) A-II, B-I, C-III

6. Which of the following is the sequence of different levels of teaching?
(a) Memory level-Understanding level-Reflective level
(b) Understanding level-Memory level-Reflective level
(c) Reflective level-Understanding level-Memory Level
(d) Memory level-Reflective level-Understanding level
7. Which of the following is an independent variable in teaching-learning process?
(a) Teacher (b) Student
(c) Institution (d) Parents
8. Which of the following method should be used by each teacher?
(a) Analytical-synthetic (b) Synthetic-analytical
(c) Only analytical (d) Only synthetic
9. Match List-I with List-II.

List-I (Teaching maxims)	List-II (Main proponents)
A From whole to part	I Gestalt psychologists
B Self-study	II Dalton
C Training of senses	III Montessori and Froebel

Codes:

- (a) A-I, B-II, C-III (b) A-I, B-III, C-II
(c) A-II, B-III, C-I (d) A-II, B-I, C-III

10. Which of the following reflects the nature of teaching?
(a) It is an art.
(b) It is a science.
(c) It is an art as well as science.
(d) It is neither art nor science.
11. Which of the following orders are the three levels of teaching?
(i) Memory level of teaching
(ii) Understanding level of teaching
(iii) Reflective level of teaching
(iv) Pedagogical level of teaching
(a) (i), (ii) and (iii) (b) (ii), (iii) and (iv)
(c) (i), (iii) and (iv) (d) (i), (ii) and (iv)
12. Nowadays, teaching is becoming more and more
(a) Learner-centred (b) Instructor-centred
(c) Group-centred (d) None of the above
13. When the learner is self-directed, it is termed as
(a) Pedagogical learning
(b) Andragogical learning
(c) Distance education learning
(d) None of the above
14. Instructional objectives are written for the student and they state what the student is expected to do. These objectives should be
(a) Specific (b) Observable
(c) Measurable (d) All the above

15. In context of dynamic teaching environment, which of the following statement is true?
(a) Teacher is a dependent variable and student is an independent variable.
(b) Teacher is an independent variable and student is a dependent variable.
(c) Both teacher and student are intervening variables.
(d) None of the above
16. At which of the following teaching levels, classroom environment is required to be sufficiently 'open and independent'?
(a) Memory level (b) Understanding level
(c) Reflective level (d) All the above
17. What is meant by the term 'curriculum' ?
(a) The subject of study offered by an educational institution.
(b) Organized whole of learning and other experiences provided by educational institutions to realize set goals.
(c) The prescribed syllabi in various subjects, plus practical courses and project/dissertation.
(d) Theory and practical courses to be completed to qualify for a level of education.
18. The classification of cognitive domain was presented by
(a) Benjamin S. Bloom (b) Skinner
(c) Krathwohl (d) Simpson
19. To make use of previously learned material in new situation is
(a) Comprehension (b) Application
(c) Knowledge (d) Analysis
20. The highest level of cognitive domain is
(a) Synthesis (b) Analysis
(c) Comprehension (d) Evaluation
21. At authoritarian level, teaching is
(a) Teacher-centred (b) Child-centred
(c) Headmaster-centred (d) Experience-based
22. Match List-I with List-II

List-I (Characteristic)	List-II (Philosophy)
A Learning by doing	I Naturalism
B Education through environment	II Idealism
C Realization of truth, beauty, and goodness	III Pragmatism
D 'World as it is here and now'	IV Realism

Codes:

- (a) A-I, B-IV, C-II, D-III (b) A-III, B-I, C-II, D-IV
(c) A-I, B-III, C-II, D-IV (d) A-III, B-II, C-IV, D-I

23. The intellectual skills are reflected by
(a) Cognitive domain (b) Affective domain
(c) Psychomotor domain (d) None of the above

24. Attitudes, values and interests are reflected by
 (a) Cognitive domain (b) Affective domain
 (c) Psychomotor domain (d) None of the above
25. Which domain is concerned with physical and motor skills?
 (a) Cognitive domain (b) Affective domain
 (c) Psychomotor domain (d) None of the above
26. Which of the following can be cited as an example of cognitive domain?
 (a) Describe a specific topic
 (b) Develop a photographic film
 (c) Typing an essay
 (d) Take responsibility for maintenance
27. Which of the following can be taken as an example of psychomotor domain in the context of teaching?
 (a) Demonstrates awareness to environmental pollution
 (b) Performing an experiment
 (c) Computing results of two experiments
 (d) Narrating a story
28. Which of the following statements is false?
 (a) Teaching and instruction are the same concepts.
 (b) There is difference between teaching and learning.
 (c) Education is a wider term than teaching, training, research, etc.
 (d) All the above are true.
29. Teaching is based upon the mastery of
 (a) Knowledge of concepts (b) Teaching skills
 (c) Decision-making skills (d) All the above
30. Which of the following is/are the teaching maxims?
 (i) From psychological to logical
 (ii) From analysis to synthesis
 (iii) From concrete to abstract
 (iv) Follow nature
 (a) (i), (ii), and (iii) (b) (i), (ii), and (iv)
 (c) (i), (iii), and (iv) (d) All the above
31. Analysis means
 (a) Ability to break a problem into its constituent parts
 (b) To combine the constituent parts
 (c) Both (a) and (b)
 (d) None of the above
32. The rules of presenting the contents to make them easy are called
 (a) Methods of teaching (b) Maxims of teaching
 (c) Techniques of teaching (d) Teaching strategies
33. With smaller classes, teachers are much more able to
 (a) Identify learning problems
 (b) Provide individual attention
 (c) Adapt instruction to individual differences among students.
 (d) All the above
34. The single most important factor in the beginning of the teaching career is
 (a) Meritorious academic record
 (b) Communication skills
 (c) One's personality and ability to relate to class and students.
 (d) Organizing ability
35. Effective teaching, by and large, is a function of
 (a) Maintaining discipline in the class.
 (b) Teachers' honesty
 (c) Teachers making students learn and understand.
 (d) Teachers' liking for the job of teaching.
36. In List-I, the names of the philosophers are given and in List-II, the statements regarding the philosophy are given. Match List-I with List-II in correct order.

List-I (Characteristic)	List-II (Philosophy)
A Tagore	I Harmonious development of personality
B Vivekananda	II The doctrine of karma
C Mahatma Gandhi	III Child is more, important than all kinds of books
D Buddhism	IV Yoga as a method of education
	V The doctrine of dharma

Codes:

- (a) A-V, B-I C-II D-IV (b) A-III, B-IV, C-II D-V
 (c) A-III, B-IV, C-I D-II (d) A-IV, B-II, C-I D-III

37. Who said this 'Education is man-making. It is that by which character is formed, strength of mind is increased, intellect is expanded and by which man can stand on his own feet'?
- (a) Swami Vivekananda
 (b) Rabindranath Tagore
 (c) Swami Dayanand Saraswati
 (d) None of these
38. Prior to teaching, the teacher does
 (a) Identification of objectives
 (b) Preparation of teaching lesson plan
 (c) Know the interest of students
 (d) All the above
39. Effective teaching includes
 (a) Teacher is active but students may or may not be active.
 (b) Teacher may be active or inactive but students are active.
 (c) Teacher is active and students are active.
 (d) All the above
40. The most expected immediate outcome of teaching is
 (a) Changes in the behaviour of students in desirable direction.
 (b) Development of total personality of students.
 (c) Building characters of the students.
 (d) Getting selected for a suitable job.
41. The basic requirement of teaching efficiency is
 (a) Mastery on teaching skills
 (b) Mastery over use of different techniques of teaching.
 (c) Mastery over appropriate use of media and technology in teaching.
 (d) All the above

42. Which of the following statements is NOT correct?
[June 1997]
- A good communicator cannot be a good teacher.
 - A good communicator has good sense of humour.
 - A good communicator has wide reading knowledge.
 - A good communicator has command over language.
43. A teacher is successful only if he
- Knows his subject thoroughly well
 - Produces cent per cent result
 - Is approachable
 - Publishes papers in journals of repute.
44. If a teacher wants to enhance his income, he should
- Teach in coaching institutes during extra time.
 - Take more remunerative works in the school/college.
 - Join contractual assignments other than teaching.
 - Write books
45. As a principal, you will encourage your teacher colleagues to
- Participate in seminars and conferences in India and abroad.
 - Participate in refresher courses for enhancement of subject knowledge.
 - Doing community services for the upliftment of down trodden.
 - All the above
46. Which of the following activities can help a teacher inculcate social and moral values among the students?
- Delivering lectures on values.
 - Showing TV programmes.
 - Involving students actively in co-curricular activities.
 - Observing religious festivals.
47. A teacher will become an effective communicator if
[December 1997]
- He uses instructional facilities.
 - He helps students get meaning out of what he teaches.
 - He asks question in between teaching.
 - He helps students get correct answer to the questions on the topic.
48. Teaching in higher education implies
[December 1997]
- Presenting the information given in the textbook.
 - Asking question in the class and conducting examinations.
 - Helping students prepare for and pass the examination.
 - Helping students to learn.
49. Teaching will be effective if the teacher [June 1998]
- Is the master of the subject.
 - Has much experience in teaching the subject.
 - Starts from what students know already.
 - Uses many instructional facilities.
50. A college teacher will really help the students when she
[June 1998]
- Dictates notes in the class.
 - Is objective in her evaluation.
 - Encourages students to ask questions.
 - Covers the syllabus completely in class.
51. Which is the most desirable outcome of teaching in higher education?
[June 1998]
- Increase in student achievement.
 - Increase in the level of independent thinking of students.
 - Higher percentage of result.
 - Increase in the number of students who opt for the subject.
52. Books can be a powerful source of communication, provided
[December 1998]
- The content is abstract.
 - The content is illustrative.
 - The medium is Hindi.
 - The content is presented through good print.
53. Good teaching is best reflected by [December 1998]
- Attendance of students
 - Number of distinctions
 - Meaningful questions asked by students
 - Pin-drop silence in the class
54. The main aim of classroom teaching is
[December 1998]
- To give information
 - To develop inquiring mind
 - To develop personality of students
 - To help students pass examinations
55. Students prefer those teachers who
[December 2000]
- Dictate notes in the class.
 - Give important questions before examination.
 - Can clear their difficulties regarding subject matter.
 - Are themselves disciplined.
56. Which of the following is the main objective of teaching?
- To give information related to the syllabus.
 - Prepare the students for examination.
 - Help the students in getting jobs.
 - To develop the thinking capability of students.
57. The teacher's role in higher education is to
- Provide information to the students.
 - Only prepare students for examination.
 - Motivate students for self-learning.
 - Encourage competition among students.
- (i) and (ii)
 - (ii), (iii), and (iv)
 - (i), (iii), and (iv)
 - All the above
58. An effective teacher will ensure
[December 2002]
- Cooperation among his students
 - Laissez-faire role
 - Competition among students
 - Competition or cooperation as the situation demands
59. A new teacher to start with will have to
[December 2002]
- Enforce discipline in class.
 - Establish rapport with the students.
 - Cut jokes with the students.
 - Tell the students about his qualifications.

60. Who has the least chance of becoming an effective teacher? [December 2002]
 (a) One who is a strict disciplinarian.
 (b) One who knows his subject well.
 (c) One who has no interest in teaching.
 (d) One who teaches moral values.
61. A teacher can establish rapport with students by
 (a) Playing the role of a guide who desires to help them.
 (b) Becoming a figure of authority.
 (c) Impressing the students with knowledge.
 (d) Implementing strict rules.
62. The quality of teaching can be assessed
 (a) By the result in annual exam.
 (b) By the attendance of students.
 (c) By the quality of interaction of students in the class.
 (d) By the silence in the class.
63. Which of the following is the least important aspect of the teacher's role in the guidance of learning?
 (a) The development of insight to overcome the pitfalls and obstacles.
 (b) The development of insight into what constitutes an adequate performance.
 (c) The provision of encouragement and moral support.
 (d) The provision of continuous diagnostic and remedial help.
64. Which of the following should not be the main role of the teacher at the higher educational level?
 (a) Provide information to students.
 (b) Promote self-learning in the students.
 (c) Encourage healthy competition among students.
 (d) Help the students to solve their personal problems.
65. Arrange the following activities of interaction in logical order.
 (i) Analysis of the work done
 (ii) Planning and preparation
 (iii) Presentation of material
 (iv) Modification and improvement
 (a) (i), (ii), (iii) and (iv)
 (b) (ii), (iii), (i) and (iv)
 (c) (iv), (i), (ii) and (iii)
 (d) (i), (iii), (iv) and (ii)
66. Effective teaching means all of the following except
 (a) A teacher teaches with enthusiasm.
 (b) A teacher finds fault in his students.
 (c) A teacher puts emphasis more on teaching than on class control.
 (d) A teacher is interested in making the subject matter understood rather than on completing the course.
67. If some students fail in the examination, it is the fault of
 (a) The teacher
 (b) The principal
 (c) Students themselves
 (d) It cannot be generalized
68. A teacher who is not able to draw the attention of his students should
 (a) Evaluate his teaching method and improve it
 (b) Resign from the post
 (c) Find fault in his pupils
 (d) Start dictating
69. The primary task of a teacher is
 (a) To teach the prescribed curriculum.
 (b) To stimulate and guide student's learning.
 (c) To provide diagnostic and remedial instructional facilities wherever desired.
 (d) To promote habits of conformity to adult demands and expectations.
70. Which of the following teacher's behaviour suggests a dimension of 'unsuccessful' teacher behaviour? A teacher who is
 (a) Always motivating students
 (b) Business-like and friendly approach
 (c) Aloof and focused on routine tasks
 (d) Understanding and sympathetic
71. A teacher
 (a) Should provide overview of the topic to be taught in the class.
 (b) Should have good communication skills.
 (c) Should command over his subject.
 (d) All the above
72. Which of the following is desirable from a new teacher as his/her professional responsibility?
 (a) Changing the course curriculum.
 (b) Cooperate with the fellow teacher despite the differences.
 (c) Follow the procedures of the institute.
 (d) None of the above
73. The greatest important cause of failure in beginning for a teacher lies in the area of
 (a) Interpersonal relationship
 (b) Verbal ability
 (c) Knowledge of the teacher
 (d) Tight handling of the students
74. 'Mirambaka'—The school based on ideas of free progress education was advocated by
 (a) M. K. Gandhi (b) Vivekananda
 (c) John Dewey (d) Aurobindo
75. The most important single factor of success for a teacher in the beginning of teaching career is
 (a) Verbal fluency and organizational ability.
 (b) Positive attitude and outlook towards life.
 (c) Personality and ability to adjust to classroom.
 (d) Competence and professional ethics.
76. For a teacher in higher educational institution, which of the following is the best option to do in leisure time?
 (a) Taking rest in teacher's room
 (b) Reading magazines in library
 (c) Talking to administrative staff
 (d) Doing research
77. What are the components of Tyler's model of curriculum?
 (a) Aims, subject content, teaching, evaluation.
 (b) Purpose, educational experiences, effective organization of experiences, verification of goal.
 (c) Aims of education, organization of content, testing, feedback.
 (d) Subject content, teaching, learning, testing.
78. The experienced teachers do not require the detailed lesson plan of a topic because

- (a) They can teach more effectively without its help.
 (b) There are just few curious students in the class.
 (c) The teacher is not likely to face any challenges from students even if they are wrong.
 (d) They can equip themselves with brief outline as they gain specialization in it through experience.
79. The ideal teacher
 (a) Covers the whole syllabus in class.
 (b) Helps his students in learning.
 (c) Is a friend, philosopher and guide.
 (d) Is a strict disciplinarian.
80. The field of education is permeated by conflicts and misconceptions because
 (a) Subjectivity of interpretation.
 (b) Problems are not amenable to rigorous scientific investigation.
 (c) Lack of good teaching methods.
 (d) All the above
81. In the introduction part of a lesson plan, a teacher aims to get student's
 (a) Assignments (b) Aptitude
 (c) Attention (d) Abilities
82. With the development of technology, the role of a teacher in future will be
 (a) To provide information
 (b) To develop new textbooks
 (c) To guide students
 (d) To use the Internet in teaching
83. Which of the following is not a level of teaching learning?
 (a) Differentiation level (b) Memory level
 (c) Reflective level (d) Understanding level
84. What does the cognitive domain of Bloom's Taxonomy of Educational Objectives affect in learners?
 (a) Thoughts (b) Emotions
 (c) Skills (d) All the above
85. Integral education concept is propounded by
 (a) Sri Aurobindo (b) Mahatma Gandhi
 (c) Swami Dayanand (d) Swami Vivekananda
86. The standard of education can be raised by
 (a) Appointing good teachers
 (b) Providing physical facilities in schools
 (c) Reforming examination system
 (d) Providing computer in schools
87. Which of the following skills are needed for the present-day teacher to adjust effectively with classroom teaching?
 I. Knowledge of technology
 II. Use of technology in teaching learning
 III. Knowledge of students' needs
 IV. Content mastery
Codes:
 (a) I and III (b) II and III
 (c) II, III, and IV (d) II and IV
88. The primary duty of a teacher is to
 (a) Raise the intellectual standards of students
 (b) Improve the physical standards of students
 (c) Help in all-round development of students
 (d) Imbibe value system in students
89. Which one of the following is the most important quality of a good teacher?
 (a) Punctuality and sincerity
 (b) Content mastery
 (c) Content mastery and reactive
 (d) Content mastery and sociable
90. The primary responsibility for the teacher's adjustment lies with
 (a) The children (b) The principal
 (c) The teacher himself (d) The community
91. Which one of the following statements is correct?
 (a) Syllabus is an annexure to the curriculum.
 (b) Curriculum is the same in all educational institutions.
 (c) Curriculum includes both formal and informal education.
 (d) Curriculum does not include methods of evaluation.
92. A successful teacher is one who is
 (a) Compassionate and disciplinarian
 (b) Quite and reactive
 (c) Tolerant and dominating
 (d) Passive and active
93. The most important quality of a good teacher is
 (a) Sound knowledge of subject matter
 (b) Good communication skills
 (c) Concern for students' welfare
 (d) Effective leadership qualities
94. The most important challenge in teaching a resource teacher is
 (a) Identification and assessment of the disabled children.
 (b) Sensitization of public, parents and peer groups.
 (c) Establishing resource room and supplying assisting devices.
 (d) Teaching plus curricular activities.

TEACHING METHODS AND TEACHING INSTRUCTIONAL FACILITIES

95. Micro teaching is more effective [December 2009]
 (a) During preparation for teaching practice
 (b) During teaching practice
 (c) After the teaching practice
 (d) Always
96. Microteaching is useful to students of
 (a) Primary classes only
 (b) Junior classes only
 (c) 10 + 2 classes only
 (d) Both for primary and higher classes

97. Which of the following university was the pioneer in microteaching concept started in 1961?
(a) Stanford University
(b) Oxford University
(c) Delhi University
(d) JNU University, New Delhi
98. In which of the following is instructional procedure the main component?
(a) Synectics teaching model
(b) Basic teaching model
(c) Inductive model
(d) Social stimulation
99. In education, John Dewey stressed on
(a) Learning by doing
(b) Authoritarian teaching methods
(c) Rote learning
(d) None of the above
100. Symposium is a type of
(a) Discovery method
(b) Discussion method
(c) Lecture method
(d) Demonstration method
101. Questioning skill in teaching is most useful in
(a) Ensuring students' active participation in learning.
(b) Memorizing the facts by students.
(c) Making students disciplined.
(d) Preparing students for examination.
102. Which of the following statement is incorrect about microteaching?
(a) It is a method of teaching.
(b) It consists of core teaching skills.
(c) Each skill is practised separately.
(d) Questioning is one component of microteaching.
103. Armstrong was the main exponent of
(a) Problem-solving method
(b) Project method
(c) Discussion method
(d) Heuristic method
104. Discussion method is useful if
(a) The topic is very easy.
(b) The topic is difficult.
(c) The topic is very difficult.
(d) In all situations
105. Educational technology is useful because
(a) It is the need of the hour.
(b) It is adopted by famous institutions.
(c) It makes teaching effective and efficient.
(d) It attracts students towards teaching and learning activities.
106. Which component(s) might be included in a lesson plan?
(a) Development or outline of a lesson.
(b) Varied materials and media to supplement and clarify content.
(c) Specific objectives of the lesson.
(d) All the above
107. One of the most popular forms of drill and practice is
(a) Questioning
(b) Direct instruction
(c) Experiential instruction
(d) None of the above
108. Practice is made in
(a) Inductive method (b) Deductive method
(c) Drill method (d) Discussion method
109. In which of the following subjects, role playing can be mainly useful for teaching?
(a) History (b) Science subjects
(c) Mathematics (d) Language
110. Which is not the advantage of team teaching?
(a) Better utilization of resources
(b) Better planning
(c) Better use of teaching techniques
(d) Better financial benefits of teachers
111. A teacher performs practically and explains in
(a) Lecture method
(b) Discovery method
(c) Demonstration method
(d) Problem-solving method
112. The main assumption underlying team teaching is
(a) Teachers feel bored while working alone.
(b) Teachers are not competent.
(c) The best teachers can be shared by more students.
(d) The single teacher cannot control the class.
113. CAI stands for
(a) Computer-analysed instruction
(b) Computer-assisted instruction
(c) Computer-assisted intelligence
(d) None of the above
114. Which is not the mode of CAI?
(a) Tutorial mode (b) Drill mode
(c) Simulation mode (d) Question mode
115. When presenting materials, teachers should consider which of the following?
(a) Structuring (b) Balancing
(c) Motivating (d) All the above
116. The technology in education is making teaching
(a) Learner oriented (b) Teacher oriented
(c) Both (a) and (b) (d) None of the above
117. Which of the following is/are true of whole-group instruction?
(a) Permits students to progress at their own pace.
(b) Convenient for teaching the same skills or content to the entire class.
(c) Gives the teacher a chance to introduce new skills at a level suited to particular students.
(d) All the above
118. Which of the following methods of communication is the most effective?
(a) Verbal communication
(b) Oral Communication
(c) Multimedia method
(d) Difficult to generalize and depends upon the situation

119. Maximum participation of students is possible in teaching through
(a) Lecture method
(b) Discussions
(c) Textbook method
(d) Audio-visual instructional facilities
120. Which type of teaching paradigm would focus on a technical or 'one right way to teach' approach to presenting content?
(a) Learning paradigm
(b) Instructional paradigm
(c) Value-added paradigm
(d) None of the above
121. Which of the following cannot be a good way of communication in promoting literacy among villagers?
(a) Demonstration
(b) Reading and writing
(c) Providing material on TV and film projector
(d) Large group discussion
122. The main advantage of giving home assignments to students is
(a) Keeping them busy in studies all the time.
(b) To stop them from watching TV.
(c) To develop the habit of self-study.
(d) None of the above
123. Instruction-medium affects the absence and escape from class teaching.
(a) Agreed (b) Indefinite
(c) Disagreed (d) None of the above
124. The main task of educational computer is
(a) Scoring the answers
(b) Preserves the information
(c) Analysis of data
(d) All the above
125. The computer-based teaching model has been developed by
(a) Gilbert
(b) Stolorow and Davis
(c) Robert Gagne
(d) Mecner
126. Which of the following expectation students have from group learning?
(a) To get appreciation from the group.
(b) To distribute the work equally.
(c) To ignore individual view point.
(d) To motivate isolated students to become members of the group.
127. Which of the following combines scopes of large group, small group and individualized teaching methods?
(a) Group discussion
(b) Differentiated instruction
(c) Brainstorming
(d) None of the above
128. Which combination of teaching methods listed below would encourage the learner-centred paradigm?
(a) Individualized instruction and lecture method.
(b) Simulation and demonstration.
(c) Lecture method and experimentation.
(d) Projects and direct experiences.
129. What is the limitation of the project method of teaching?
(a) It is learner-centred.
(b) Learners get practical experience.
(c) The learners are usually not properly supervised.
(d) None of the above
130. The heuristic approach is based on
(a) Rote memorization (b) Home work
(c) Spirit of inquiry (d) None of the above
131. A teacher uses the learning instructional facilities to make learning
(a) Simple (b) More knowledgeable
(c) Quicker (d) Interesting
132. Which of the following is a teaching instructional facilities?
(a) LCD projector (b) Green board
(c) Tape recorder (d) All the above
133. Teacher uses visual instructional facilities to make learning
(a) Interesting (b) Passive
(c) Quicker (d) Complex
134. Which of the following is not true about projects as a learning activity?
(a) It is a purposeful activity.
(b) It is proceeds in social environment.
(c) It is accomplished in real-life situations.
(d) It is teacher-centred activity.
135. Use of telecast materials facilitates
(a) Better concentration and learning.
(b) To reach large number of people.
(c) Better retention of topics taught.
(d) All the above
136. Which of the following is a benefit associated with the overhead projector?
(a) They are relatively inexpensive.
(b) Overhead transparencies can be made relatively quickly.
(c) They offer teachers the option of writing on transparencies during the class activity.
(d) All the above
137. What is most important while writing on blackboard?
(a) Good handwriting
(b) Clarity in writing
(c) Writing in big letters
(d) Writing in small letters
138. Blackboard can be included in which group or category of teaching instructional facilities?
(a) Audio instructional facilities
(b) Visual instructional facilities
(c) Audio-visual instructional facilities
(d) None of the above
139. Which of the following is related with teaching skill?
(a) Blackboard writing (b) Solving questions
(c) Asking questions (d) All the above
140. Why do teachers use teaching instructional facilities?
(a) To make teaching fun filled.
(b) To teach within the understanding level of students.
(c) For students' attention.
(d) To make students attentive.

141. Which among the following gives more freedom to the learner to interact?
 (a) Use of film.
 (b) Small group discussion.
 (c) Lectures by experts.
 (d) Viewing country wide classroom programme on TV.
142. Which of the following is more interactive and student centric?
 (a) Seminar (b) Workshop
 (c) Lecture (d) Group discussion
143. An effective teaching instructional facilities is one which
 (a) Is colourful and good looking.
 (b) Activates all faculties.
 (c) Is visible to all students.
 (d) Easy to prepare and use.
144. Which of the following belongs to a projected instructional facilities?
 (a) Blackboard (b) Diorama
 (c) Epidiascope (d) Globe

LEARNER CHARACTERISTICS

145. Understanding theories and principles of children's learning is of fundamental importance
 (a) For effective teaching.
 (b) For effective curriculum planning.
 (c) For motivation of the learner.
 (d) All the above
146. The most appropriate meaning of learning is
 (a) Inculcation of knowledge
 (b) Modification of behaviour
 (c) Personal adjustment
 (d) Acquisition of skills
147. Teachers knowledge on student's needs and interests are covered by the subject
 (a) Philosophy of education
 (b) Psychology of education
 (c) Sociology of education
 (d) Politics of education
148. The most important challenge before a teacher is
 [June 1997]
 (a) To maintain discipline in the class.
 (b) To make students do their homework.
 (c) To prepare question paper.
 (d) To make teaching-learning process enjoyable.
149. The psychological aspects of the classroom are best managed by
 [December 1998]
 (a) The class teacher (b) The subject teacher
 (c) The principal (d) The student themselves
150. Students can be classified into four types on the basis of their learning. Which one of the following seeks meaning and reasoning to the learning?
 [December 2000]
 (a) Innovative learner (b) Analytic learner
 (c) Common sense learner (d) Dynamic learner
151. Instruction that takes into account various types of learners and learning styles and is adapted accordingly is said to be
 (a) Teacher-centred (b) Differentiated
 (c) Direct instruction (d) None of the above
152. A heavy emphasis on measurable outcomes leads to
 (a) Rote learning (b) Memorization
 (c) Both (a) and (b) (d) None of the above
153. Teachers who are enthusiastic in the classroom teaching
 (a) Lack proficiency in the subjects, which stays hidden under their enthusiasm.
 (b) Simply dramatize to hold the student's attention.
 (c) Involve their students in the teaching-learning process.
 (d) All the above
154. Diversity in student demographics requires common academic standards to
 (a) Provide a common benchmark for assessment.
 (b) Promote genuine learning for high-performing students.
 (c) Ensure that all states have the same requirements as required by the Central government.
 (d) None of the above
155. Intuitive thinking
 (a) Is part of the process of discovery.
 (b) Has been encouraged by traditional teaching.
 (c) Is not a cognitive process.
 (d) None of the above
156. While presenting your ideas in a classroom it is better to
 [December 2000]
 (i) Recognize that there can be other views.
 (ii) Recognize that students are not a homogenous mass.
 (iii) Take dissenting views also in consideration.
 (a) Both (i) and (iii) (b) Only (iii)
 (c) Only (ii) and (iii) (d) (i), (ii) and (iii)
157. 'Individual differences' in learning process are given the least importance in
 (a) Naturalism (b) Realism
 (c) Idealism (d) Pragmatism
158. Arrange the following experimental learning activities adopted by a teacher in cyclic order.
 (i) Accommodation (ii) Converging
 (iii) Assimilation (iv) Diverging
Codes:
 (a) (i), (ii), (iii) and (iv) (b) (iv), (iii), (ii) and (i)
 (c) (ii), (iii), (iv) and (i) (d) (iii), (i), (ii) and (iv)
159. We usually say that no two students are alike. They may differ from each other in terms of
 (a) Upbringing and social status
 (b) Aptitude
 (c) Attitude
 (d) All the above

160. Reinforcement is provided by any factor that increases the probability that a response will be repeated. Which of the following can be factor(s) of reinforcement?
(a) Praise
(b) Token reward
(c) Simply succeeding in a task
(d) All the above
161. When you complete your math's exercise, you can play the computer game. Using such kind of reinforcement wherein student's favourite activity can be used to reinforce a student's engagement in a less popular activity is termed as
(a) Premack principle (b) Thorndike law
(c) Pavlov experiment (d) None of the above
162. Morphographs is the term associated with
(a) Corrective spelling
(b) Corrective reading
(c) Corrective learning
(d) Corrective behaviour
163. Which of the following description(s) apply in context of constructivist approach and cognitive theory of learning?
(a) Learners as active participants in learning process.
(b) Seeking to interpret.
(c) Using multiple sources of information.
(d) All the above
164. Organized bodies of knowledge that we build up about particular objects, situations or phenomena are termed as
(a) Schemas or mental schemata
(b) Memory
(c) Cognition
(d) None of the above
165. The taking in of new information is termed as
(a) Assimilation (b) Accommodation
(c) Cognition (d) Reception
166. The term which is used to refer to the variety of ways in which teachers and others help or support learners to move beyond their current level of understanding by giving them cues, suggestions or even direct guidance at appropriate moments in their investigations or activities is known as
(a) Scaffolding (b) Cognition
(c) Reinforcement (d) None of the above
167. The changes in behaviour (learning) are the net result of environmental influences, interacting with innate predispositions and processes within the learner
(a) Neo-behavioural theory
(b) Cognitive theory
(c) Behavioural theory
(d) None of the above
168. The students or individuals may develop beliefs (positive or negative) about their own ability to cope effectively in a variety of situations. This can be termed as
(a) Self-efficacy (b) Self-regulation
(c) Ego (d) Confidence
169. The ability of an individual to think about one's own thought processes, self-monitor and modify one's learning strategies as necessary is termed as
(a) Metacognition (b) Self-regulation
(c) Simple cognition (d) None of the above
170. Teachers blame a student's learning problems on
(a) Lack of motivation
(b) Lack of intelligence
(c) Casual parental attitude
(d) None of the above
171. The memory that refers to our memory of meaningful facts, rules, definitions, concepts and principles is termed as
(a) Semantic memory
(b) Episodic memory
(c) Procedural memory
(d) None of the above
172. An individual's awareness of his or her own memory processes and the ways in which storage and retrieval of information can be enhanced is termed as
(a) Semantic memory (b) Episodic memory
(c) Procedural memory (d) Meta memory
173. Which of the following can impact process listening in an adverse manner?
(a) Excess of listened material – message overload
(b) Very high speed of speaking
(c) A good amount of hearing loss
(d) All the above
174. The most important aspect of communication, which is listening can be improved by
(a) Linking listening to monetary reward system.
(b) Making the contents interesting and need based.
(c) Enhancing voice effectiveness and impressiveness.
(d) All the above
175. Listening to a lecture is basically
(a) Informational listening
(b) Evaluative listening
(c) Emphatic listening
(d) Dynamic Listening
176. The evaluative listening is basically about
(a) To accept or reject an idea given to the listener.
(b) To evaluate the speaker's credibility and personality.
(c) Both (a) and (b).
(d) None of the above
177. According to Francis Gallon, heredity does not go to immediate parents but to remote ancestors. Only 50% of the heredity is due to
(a) Parents (b) Great-grandparents
(c) Grand parents (d) None of the above
178. Arrange the following teaching processes in order.
(i) Relating the present knowledge with the previous knowledge.
(ii) Evaluation
(iii) Re-teaching
(iv) Formulation of teaching objectives.
(v) Presentation of materials.

Codes:

- (a) (i), (ii), (iii), (iv), (v)
 (b) (ii), (i), (iii), (iv), (v)
 (c) (v), (iv), (iii), (i), (ii)
 (d) (iv), (i), (v), (ii), (iii)
- 179.** A student helps a teacher to solve the problem during the course of lecture in classroom. He is
 (a) An emphatic listener
 (b) An evaluative listener
 (c) A realistic listener
 (d) None of the above
- 180.** The process of communication enhances through
 (a) The feeling of belongings and commonness.
 (b) Security and freedom to make choices.
 (c) Informal environment
 (d) All the above
- 181.** Which one of the following is a product of learning?
 (a) Intelligence (b) Maturation
 (c) Skills (d) Memory
- 182.** Which of the following explains the mental growth most suitably?
 (a) A growth pattern runs parallel to the physical growth.
 (b) It is an erratic pattern.
 (c) It is not an erratic pattern.
 (d) Uniform rise to the middle teens and gradual levelling off during middle twenties.
- 183.** While comparing hearing and listening, we can say that
 (a) Hearing is a physical process and listening is a psychological process.
 (b) Hearing is a psychological process and listening is a physical process.
 (c) Both are mainly physical processes.
 (d) Both are biological processes.
- 184.** Which of the following statements is true?
 (a) The human relationships are not affected by listening.
 (b) When communicating, college students spend over half of their lives listening.
 (c) Listening constitutes just a small fraction of our overall communication.
 (d) None of the above.
- 185.** When a person listens and attempts to understand the other person's viewpoint, it can be termed as
 (a) Active listening
 (b) Empathetic listening
 (c) Critical listening
 (d) None of the above
- 186.** Which gender tends to listen in order to solve problems, is less attentive to nonverbal cues and interrupts to switch topics?
 (a) Men (b) Women
 (c) Both genders (d) Neither gender
- 187.** Critical thinking
 (a) Focuses solely on the details instead of the main point.
 (b) Ignores the context in which communication is occurring.
 (c) Is important when making judgments about the message being presented.
 (d) Is only associated with listening.
- 188.** Asking questions to clarify information, paraphrasing messages and identifying confusing areas are basically
 (a) Barriers to listening.
 (b) Listening for fun.
 (c) Techniques for checking your understanding of a message.
 (d) None of the above
- 189.** Suggestions for lecture listening include
 (a) Focusing on the delivery part and avoiding summarizing and reviewing the information.
 (b) Poor attention in order to think creatively, listening for details and ignoring lecture cues.
 (c) Not to make notes so as to focus better on lecture and message delivery.
 (d) Finding areas of interest to you, avoiding distractions and listening for main ideas.
- 190.** The ability to locate, evaluate and effectively use information is an important trait known as
 (a) Critical thinking (b) Information literacy
 (c) Hearing (d) Selective attention
- 191.** At primary level, it is better to teach in mother language because
 (a) It develops self-confidence in children.
 (b) It makes learning easy.
 (c) It is helpful in intellectual development.
 (d) It helps children to learn in natural atmosphere.
- 192.** The best approach to motivate students is by
 (a) Giving them suitable prizes.
 (b) Providing them proper guidance.
 (c) Giving examples all the time.
 (d) Delivering speech in class.
- 193.** The best way a teacher can try to inculcate good values among students is
 (a) Storytelling
 (b) By developing sense of discipline.
 (c) Ideal behaviour of teacher themselves.
 (d) To take their parents into confidence.
- 194.** How the students should be motivated to get success in life?
 (a) Selected study (b) Incidental study
 (c) Intensive study (d) Rote learning
- 195.** The problem of absenteeism can be tackled in a better way through
 (a) Reduction of the weight of curriculum.
 (b) Sympathy of teachers.
 (c) Attractive environment of the school.
 (d) Motivation of the students.
- 196.** The best remedy of a student's problems related with learning is
 (a) Suggestion for hard work
 (b) Supervised study in library
 (c) Suggestion for private tuition
 (d) Diagnostic teaching

197. Emotional adjustment of students is effective in
 (a) Personality formation (b) Class teaching
 (c) Discipline (d) All the above
198. Who among the following is described as 'Father of Psychoanalysis'?
 (a) Erik H. Erikson (b) Jean Piaget
 (c) Jerome S. Bruner (d) Sigmund Freud
199. The main proponent of the cognitive theory of teaching is
 (a) N. L. Gage (b) Shiv Kumar Mitra
 (c) B. F. Skinner (d) McDonald
200. Practical knowledge of language is learnt at
 (a) School
 (b) Language laboratory
 (c) Language teaching
 (d) Language instruction
201. In which domain does the following objective fall? At the end of the lesson, the learner should be able to hit the football using the head.
 (a) Affective domain (b) Cognitive domain
 (c) Psychomotor domain (d) Both (a) and (c)
202. Planning or arranging the student's environment in order to predict the consequences of a student's behaviour is referred to as
 (a) Prompting (b) Reinforcement
 (c) Shaping (d) Stimulus control
203. Which theory of learning has found that knowledge of internal processes is crucial to the understanding of learning?
 (a) Cognitive theory
 (b) Stimulus-response theory
 (c) Operant conditioning theory
 (d) Classical conditioning theory
204. Which aspect of evaluation is used when a teacher ensures that students complete an exercise in mathematics and also makes sure that instructions are clear and specific?
 (a) Validity (b) Practicality
 (c) Reliability (d) Consistency
205. Which of the following is not a characteristic of a slow learner?
 (a) Limited vocabulary
 (b) Short span of attention
 (c) Abstract thinking
 (d) Limited range of interests
206. A teacher used the following statement to change the behaviour of a student who was a smoker. 'Smoking is healthy for the nation'. This is an example of:
 (a) Cognitive dissonance
 (b) Conceptual conflict
 (c) Meaningful learning
 (d) Challenge
207. The best way to memorize is
 (a) Study for long time
 (b) To understand the concept
 (c) To read loudly
 (d) To write the concept
208. Attitudes, concepts, skills, and knowledge are products of
 (a) Learning (b) Research
 (c) Heredity (d) Explanation
209. Which of the following is not a product of learning?
 (a) Attitudes (b) Concepts
 (c) Knowledge (d) Maturation
210. Some students in a class exhibit great curiosity for learning. It may be because such children
 (a) are gifted
 (b) come from rich families
 (c) show artificial behaviour
 (d) create indiscipline in the class

CLASSROOM SITUATION MANAGEMENT

211. The best way to react to a wrong answer given by a student is [December 1997]
 (a) To scold him for not having learnt the lesson.
 (b) To explain why the answer is wrong.
 (c) To ask another student to give the correct answer.
 (d) To ignore the wrong answer and pass on the next question.
212. When a student asks a question to which the teacher has no direct, correct answer, he should [December 1997]
 (a) Give some vague answer and satisfy the student.
 (b) Tell the student not to ask much irrelevant questions.
 (c) Tell the student that he would give the correct answer later.
 (d) Ask the student to find out the answer himself from the books in the library.
213. If the students do not understand what is taught in the class, the teacher should [December 1997]
 (a) Repeat the lesson once again.
 (b) Teach the lesson again citing suitable examples.
 (c) Check the previous knowledge of the students in the topic.
 (d) Proceed to the next topic.
214. An ideal situation in a classroom would be where [December 2000]
 (a) A teacher comes fully prepared to deliver his lecture.
 (b) Students come fully prepared and discuss the subject with each other in teacher's presence.
 (c) Teachers and students discuss the subject.
 (d) The teacher uses audio-visual instructional facilities while learning.
 (a) Both (a) and (c) (b) Both (c) and (d)
 (c) Only (b) (d) Only (d)

215. Which of the following categories of teachers tend to favour the traditional, formal seating pattern of rows of students directly facing the teacher at the front of the classroom?
(a) Direct instruction (b) Indirect instruction
(c) Student centred (d) None of the above
216. Which of the following teacher can be identified with authoritarian teaching style?
(a) Democratic teacher
(b) Indirect teacher
(c) Laissez-faire teacher
(d) Direct instruction teacher
217. What is more desirable in a classroom?
[December 2000]
(a) A teacher delivering a lecture on the basis of the text and his own research.
(b) A teacher delivering a lecture on the basis of course content and standard books.
(c) A teacher answering questions raised by students.
(d) A teacher maintaining strict discipline and taking attendance regularly.
218. Which process of communication is the best for controlling noise in a classroom?
(a) Saying 'do not talk'.
(b) Raising one's voice above students' voice.
(c) Remaining calm and just looking at the students.
(d) Continue teaching without caring for noisy class.
219. As a teacher, what will you do if students do not attend your class?
(a) Blame students for their absence from the class.
(b) Ponder over the present attitude of students in a calm manner.
(c) Think about using some interesting techniques of teaching.
(d) Try to understand the reasons and try to eliminate them.
220. A teacher is strict in maintaining discipline in the class both in curricular and extracurricular activities. However, there is always room for discussion regarding clarification of doubts in teaching-learning and conducting other activities. What is the approach of teacher towards students?
(a) Authoritative (b) Democratic
(c) Flexible (d) Rigid
221. Better classroom management means
(a) Effective group work and interaction among the students.
(b) Proper planning and preparation in developing suitable teaching instructional facilities.
(c) Punctuality of the teachers and ability to complete course in time.
(d) All the above
222. Which of the following can be described as the most probable characteristic of an ineffective teacher?
(a) Always focus on achievement of instructional objectives.
(b) Always focus on observance of teaching standards.
(c) Always focus upon control of immediate situation.
(d) None of the above
223. If majority of students in your class are weak, as a teacher you should
(a) Not care about the intelligent students.
(b) Keep your speed of teaching fast so that students' comprehension level may increase.
(c) Keep your teaching slow.
(d) Keep your teaching slow along with some extra guidance to bright pupils.
224. If some of the students misbehave with the teacher in the college campus, which kind of solution can help in the long run?
(a) Report to their parents.
(b) Teacher should improve their behaviour by their own character and scholarship.
(c) Report the matter to the principal.
(d) Mobilize other teachers against these guys.
225. A teacher in the class should keep the pitch of his voice
(a) High enough
(b) Low
(c) Moderate
(d) Sometime low and sometime high
226. Which of the following should a teacher adopt in a lecture?
[December 2002]
(a) Precise and low tone (b) Elongated tone
(c) Precise and high tone (d) Moderate tone
227. If students do not understand what is taught in the classroom, the teacher should feel [June 2002]
(a) Terribly bored
(b) To explain it in a different way.
(c) That he is wasting time.
(d) Pity for the students.
228. With specific reference to classroom environment, all except one of the major components of listening is
(a) Hearing
(b) Being attentive
(c) Answering
(d) Understanding and remembering
229. Which of the following will not hamper effective communication in the classroom? [June 2002]
(a) A lengthy statement
(b) An ambiguous statement
(c) A precise statement
(d) A statement which allows the listener to his own conclusions.
230. If backbenchers are always talking in the classroom, a teacher should
(a) Let them do what they are doing.
(b) Punish them
(c) Ask them to sit on the front benches.
(d) None of the above
231. If a teacher is not able to answer the question raised by a student in the classroom, he should
(a) Say that he will answer after consultation.
(b) Rebuke the student.
(c) Try to manipulate the students.
(d) Feel shy of his ignorance.

232. If students are not able to follow, you should
(a) Give them prompt explanation
(b) Make the matter easy
(c) Illustrate with examples
(d) All the above
233. If students pass remarks on you while you are working as a teacher, you will
(a) Punish them
(b) Expel them from the college.
(c) Take revenge while evaluating internal test copies.
(d) Be impartial at the time of evaluation.
234. Discussion in class will be more effective if the topic of discussion is [December 2002]
(a) Not introduced
(b) Stated before the start of the discussion.
(c) Written on the board without introducing it.
(d) Informed to the students in advance.
235. Failure of teacher to communicate his ideals well to the students may result in [December 2002]
(a) Classroom indiscipline
(b) Loss of students' interest in the topic being taught.
(c) Increased number of absentees in the class.
(d) All the above
236. Which of the following is the most important single factor in underlying the success of beginning as a teacher?
(a) Scholarship
(b) Communicative ability
(c) Personality and its ability to relate to the class and to the pupils.
(d) Organizational ability
237. All of the following are the characteristic features of an effective teacher except
(a) Emphasis upon maintaining standards of education.
(b) Emphasizing group discussion for the purpose of clarifying the objectives.
(c) Emphasis upon providing solution of immediate problems.
(d) Differential treatment meted out to students of his class.
238. Some students send a greeting card to you on teacher's day. As a teacher, you will
(a) Not respond at all.
(b) Say thanks to them.
(c) Ask them to not waste money.
(d) Reciprocate wishes to them.
239. A student comes late in your class. As a teacher you will
(a) Inform to principal and parents.
(b) Punish him to set an example.
(c) Try to know the reason.
(d) It is not worth paying attention.
240. When a number of students regularly fail in the exams, it can be understood that
(a) The system has failed
(b) The teacher's failure
(c) The textbooks failure
(d) The individual student's failure
241. If a student asks questions on some unrelated topic in the class, as a teacher you will
(a) Allow him to ask unrelated questions.
(b) Not allow him to ask unrelated questions.
(c) Answer the question after the class.
(d) Consider it as an act of indiscipline.
242. A guardian never comes to see you in school. As a teacher, you will
(a) Ignore the child.
(b) Write a letter to the guardian.
(c) Go to meet him yourself if possible.
(d) Start punishing the child.
243. To maintain interest among students in class, a teacher should
(a) Make maximum use of teaching instructional facilities
(b) Discuss
(c) Ask questions intermittently
(d) All the above
244. A teacher asks the questions in the class to
(a) Keep students busy
(b) Maintain discipline
(c) Attract student's attention
(d) Teach
245. To keep a check on the habit of absenteeism among students
(a) The principal and parents should get worried.
(b) The officials should put notice against absentee students on the notice board.
(c) The teachers should take it as a serious problem.
(d) They should be given less priority in the classroom in relation to regular students.
246. When the students try to solve the questions in some different way not taught by the teacher from prescribed books, then these students should be
(a) Always discouraged to consult some other books on the subject.
(b) Always encouraged to consult other books on the subject.
(c) Suggested to seek permission of their respective class teachers before referring to other books.
(d) No action required.
247. Students who ask questions in the class should be
(a) Advised to meet the teacher after the class.
(b) Encouraged to participate in the discussion in the class.
(c) Encouraged to continue asking questions.
(d) Encouraged to search answers independently.
248. In order to modify the undesirable behaviour of a student, the most effective method is
(a) To punish the student.
(b) To bring it to the notice of parents.
(c) To find out the reasons for the undesirable behaviour and provide remedies.
(d) All the above
249. A majority of classroom tasks initiated by teachers in traditional classrooms are usually

- (a) Low-level cognitive processes
 (b) High-order cognitive processes
 (c) Affective processes
 (d) Both (a) and (b)
250. In totality, the teacher helps student the most in which of the following way?
 (a) Integrated development of the child
 (b) Physical growth of the child
 (c) For socio-cultural
 (d) Development of the child
251. If students are not able to follow, the teacher in the class should
 (a) Give them prompt reply.
 (b) Illustrate with suitable examples.
 (c) Make the contents easier.
 (d) All the above
252. If the students are not taking interest in your teaching, then you will
 (a) Ignore them
 (b) Leave the class
 (c) Ask them to pay attention
 (d) Review the teaching method
253. What quality the students like the most in a teacher?
 (a) Idealist philosophy (b) Compassion
 (c) Discipline (d) Entertaining
254. Research has shown that the most frequent symptom of nervous instability among teachers is
 (a) Digestive upsets (b) Explosive behaviour
 (c) Fatigue (d) Worry
255. Which one of the following is appropriate with respect to teacher-student relationship?
 (a) Very informal and intimate
 (b) Limited to classroom only
 (c) Cordial and respectful
 (d) Indifferent
256. In a lively classroom situation, there is likely to be
 (a) Occasional roars of laughter
 (b) Complete silence
 (c) Frequent teacher–student dialogue
 (d) Loud discussion among students
257. For maintaining an effective discipline in the class, the teacher should
 (a) Allow students to do what they like.
 (b) Deal with the students strictly.
 (c) Give the students some problems to solve.
 (d) Deal with them politely and firmly.
258. Those teachers are popular among students who
 (a) Develop intimacy with them.
 (b) Help them solve their problems.
 (c) Award good grades.
 (d) Take classes for extra tuition fee.
259. The essence of an effective classroom environment is
 (a) A variety of teaching instructional facilities.
 (b) Lively student–teacher interaction.
 (c) Pin-drop silence
 (d) Strict discipline
260. On the first day of his class, if a teacher is asked by the students to introduce himself, he should
 (a) Ask them to meet after the class.
 (b) Tell them about him in brief.
 (c) Ignore the demand and start teaching.
 (d) Scold the student for this unwanted demand.
261. Moral values can be effectively inculcated among the students when the teacher
 (a) Frequently talks about values.
 (b) Himself practices them.
 (c) Tells stories of great people.
 (d) Talks of gods and goddesses.
262. Suppose a student wants to share his problems with his teacher and he visits the teacher’s house for the purpose. The teacher should
 (a) Contact the student’s parents and solve his problem.
 (b) Suggest him that he should never visit his house.
 (c) Suggest him to meet the principal and solve the problem.
 (d) Extend reasonable help and boost his morale.
263. When some students are deliberately attempting to disturb the discipline of the class by making mischief, what will be your role as a teacher?
 (a) Expelling those students.
 (b) Isolate those students.
 (c) Reform the group with your authority.
 (d) Giving them an opportunity for introspection and improve their behaviour.
264. A teacher is said to be fluent in asking questions, if he can ask
 (a) Meaningful questions
 (b) As many questions as possible.
 (c) Maximum number of questions in a fixed time.
 (d) Many meaningful questions in a fixed time.

LEARNER'S EVALUATION

265. The most significant approach of evaluation is
 (a) Continuous and comprehensive evaluation.
 (b) Conducting objective term end examination.
 (c) Maintaining cumulative records of students.
 (d) Semester system evaluation.
266. What type of test is most effective when trying to test memorization?
 (a) True or false
 (b) Multiple choices
 (c) Fill in blanks
 (d) Both (b) and (c)

267. Essay-type tests are not reliable because
 (a) Their answers are different.
 (b) Their results are different.
 (c) Their checking is affected by examiner's mood.
 (d) Their responding styles are different.
268. To raise the standard of education, it is necessary
 (a) To evaluate students continuously.
 (b) To give high salary to teachers.
 (c) To revise curriculum.
 (d) To make good school building.
269. The best method of checking a student's homework is
 (a) To assign it to intelligent students of the class.
 (b) To check the answers in the class in group manner.
 (c) To check them with the help of specimen answer.
 (d) To check by the teacher himself in a regular way.
270. A time-bound testing programme for students should be implemented in schools so that
 (a) The progress of the students should be informed to their parents.
 (b) A regular practice can be carried out.
 (c) The students can be trained for final examinations.
 (d) The remedial programme can be adopted on the basis of the feedback from the results.
271. The most important indicator of quality of education in an educational institute is
 (a) Infrastructural facilities of a school.
 (b) Classroom system
 (c) Textbooks and teaching-learning material.
 (d) Student achievement level
272. Teachers use placement evaluation in order to
 (a) Find out what knowledge and skills students have mastered.
 (b) Discover the causes of students' learning or behavioural problems.
 (c) Both (a) and (b)
 (d) None of the above
273. Summative evaluation is used for which of the following purposes?
 (a) To monitor student's progress during the learning process.
 (b) Primarily to certify or grade students.
 (c) To find out the students interests and work habits.
 (d) To assign students to specific learning groups.
274. For the homework to be effective in accomplishing its purposes, which of the following suggestions for teachers is correct?
 (a) Do give homework as punishment.
 (b) Make up spur-of-the-moment homework assignments for student practice.
 (c) Do not expect students to always have their homework assignments completed.
 (d) Do not listen to what students say about their experiences in completing homework assignments.
275. When a student takes the same test twice it is referred to as?
 (a) Post-test (b) Pre-test
 (c) Test-retest (d) After-test
276. Which type of evaluation is carried out at the end of a course of study?
 (a) Summative (b) Assessment
 (c) Formative (d) Both (a) and (b)
277. Which test is carried out to determine the ability of a learner?
 (a) Aptitude (b) Attitude
 (c) Achievement (d) Scholastic
278. The verbs write, list, label and name when used in an examination, test the
 (a) Comprehension level (b) Application level
 (c) Knowledge level (d) Synthesis level
279. Good evaluation of written material should not be based on
 (a) Linguistic expression
 (b) Logical presentation
 (c) Ability to reproduce whatever is read.
 (d) Comprehension of subject.
280. By which of the following methods, the true evaluation of the students is possible?
 (a) Evaluation at the end of the course.
 (b) Evaluation twice in a year
 (c) Continuous evaluation
 (d) Formative evaluation

MISCELLANEOUS TOPICS

281. CHEER stands for
 (a) Children Enrichment Education through Radio
 (b) Child Health Education Electronic Recording
 (c) Children for Engineers and Energy Requirement
 (d) None of the above
282. Educational TV was first introduced in India during
 (a) 1961 (b) 1959
 (c) 1968 (d) 1961
283. SITE stands for
 (a) System for International Technology and Engineering
 (b) Satellite Instructional Television Experiment
 (c) South Indian Trade Estate
 (d) None of the above
284. When an action or response produces a pleasant or rewarding outcome that behaviour is likely to be repeated and responses that bring displeasure or pain are likely to weaken and fade, it is called
 (a) Thorndike's law of effect
 (b) Thorndike's law of exercise
 (c) Both (a) and (b)
 (d) None of the above
285. National Literacy Mission was established in
 (a) 1996 (b) 1988
 (c) 1999 (d) 2000

286. The main aim of National Council for Teacher Education is
(a) To open colleges of education.
(b) To promote research in education.
(c) To maintain standards in colleges of education.
(d) To provide grant to colleges of education.
287. Kindergarten system of education was constituted by
(a) T. P. Nunn (b) Spencer
(c) Froebel (d) Montessori
288. 'National Council of Educational Research and Training' was established in
(a) 1961 (b) 1962
(c) 1963 (d) 1964
289. The main purpose of new education policy is
(a) To provide equal opportunity of education to all.
(b) To improve the whole education system.
(c) To link education with employment.
(d) None of the above
290. It is desirable that students play games in the campus as
(a) It makes them physically fit.
(b) It lessens the burden on the teacher.
(c) It develops cooperation and physical balance.
(d) None of the above
291. Family is the main agency of
(a) Informal education
(b) Formal education
(c) Non-formal education
(d) None of the above
292. To whom the responsibility of organization of curricular activities should be stored with?
(a) The principal
(b) The teacher who is appointed for this work.
(c) The teachers who take interest in it.
(d) All the teachers
293. The aim of education should be
(a) To develop vocational skills in the students.
(b) To develop social awareness among students.
(c) To prepare the students for examination.
(d) To prepare the students for practical life.
294. The contribution of taxpayers in primary education is in the form of
(a) Income tax
(b) Tuition fee
(c) Paying money for individual tuition
(d) Educational cess
295. The priority to girls education should be given because
(a) The girls are more intelligent in comparison than the boys.
(b) The girls are lesser in number than boys.
(c) The girls were badly discriminated in favour of boys in the past.
(d) Only girls are capable of leading for social change.
296. The success of integrated education depends on
(a) The support of community.
(b) The excellence of textbooks.
(c) The highest quality of teaching-learning material.
(d) The attitudinal changes in teachers.
297. The quality of school education exclusively depends upon
(a) Infrastructural facilities
(b) Financial provisions
(c) International support
(d) The quality of teacher's education
298. The idea of Basic Education was propounded by
(a) Dr. Zakir Husain
(b) Dr. Rajendra Prasad
(c) Mahatma Gandhi
(d) Rabindranath Tagore
299. The in-service teacher training can be made more effective by
(a) Using training package which is well prepared in advance.
(b) Making it a residential programme.
(c) Using cooperative approach.
(d) Practicing training follow-up procedures.
300. Who developed the interaction analysis category system in education for increasing the teacher's effectiveness?
(a) Flander (b) Rayon
(c) Amidon and Simon (d) Richard Over
301. One of the important theories of moral development was proposed by
(a) Lawrence Kohlberg (b) Erich Fromm
(c) Daniel Coleman (d) Benjamin Bloom
302. Character is developed by
(a) Will power (b) Conduct and behaviour
(c) Morality (d) All the above
303. Spare the rod and spoil the child. This assumption is related to the type of discipline which has been advocated
(a) By naturalist philosophy
(b) By pragmatist philosophy
(c) In Victorian era
(d) In democratic era
304. The determinant of teaching skill training is
(a) Components (b) Pupil-teacher
(c) Supervisor (d) Headmaster
305. Which of the following is an approach to educational planning?
(a) Manpower approach
(b) Social demand approach
(c) Both (a) and (b)
(d) None of the above
306. 'Man is born free but everywhere he is in chains'. This statement was given by
(a) Abraham Maslow
(b) Jean-Jacques Rousseau
(c) John Dewey
(d) W. H. Kilpatrick
307. The purpose of National Education Policy is
(a) Universalization of primary education.
(b) Vocationalization of education.
(c) To review the education.
(d) To give equal opportunity of education to all.

308. The academic performance of students can be improved if parents are encouraged to
 (a) Supervise the work of their wards.
 (b) Arrange for extra tuition.
 (c) Remain unconcerned about it.
 (d) Interact with teachers frequently.
309. If a parent approaches the teacher to do some favour to his or her ward in the examination, the teacher should
 (a) Try to help him.
 (b) Ask him not to talk in those terms.
 (c) Refuse politely and firmly.
 (d) Ask him rudely to go away.
310. When the children become mischievous and disobedient in the classroom, the teacher should examine
 (a) Home background of the students.
 (b) Influence of outside elements in class.
 (c) Teaching methods and subject knowledge.
 (d) Co-curricular and other attractions in the school.

Research Aptitude

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- Research: Meaning, Types, and Characteristics
- Positivism and Postpositivistic Approach to Research
- Methods of Research: Experimental, Descriptive, Historical
- Qualitative and Quantitative Methods
- Steps of Research
- Thesis and Article Writing
- Format and Styles of Referencing
- Application of ICT in Research
- Research Ethics

RESEARCH: MEANING AND CHARACTERISTICS

Earlier it might have taken thousands of years to double up the amount of knowledge, but now, this may happen every few years. Progress in any domain of knowledge, be it natural science, applied science or social science does not happen without research.

Research is the lifeblood of any institute of higher learning. Research is more than a set of specific skills, it is a way of thinking and it critically examines the various aspects of any professional work.

It is a structured enquiry that utilizes the acceptable scientific methodology to solve problems and create new knowledge that is generally applicable. The enquiry is aimed at understanding a thing or phenomenon or solving a problem.

The term research comprises of two words, namely 're' and 'search'. Generally, 're' means again and 'search' means to find out. According to Advanced Learner's Dictionary, 'research is a careful investigation or inquiry specially to search for new facts in any branch of knowledge'.

According to Creswell, 'research is a process of steps used to collect and analyse information to increase our understanding of a topic or issue'.

From the definitions mentioned above, there is a general agreement that research

1. Is a process of enquiry and investigation,
2. Is systematic and methodical and
3. Increases the knowledge.

Cook has beautifully outlined research as an honest, exhaustive, intelligent searching for facts and their meanings or implications, with reference to a problem. To him, research is an acronym of the following that defines its essence.

R = Rational way of thinking

E = Expert and exhaustive treatment

S = Search and solution

E = Exactness

A = Analysis

R = Relationship of facts

C = Critical observation, careful planning, constructive attitude and condensed generalization

H = Honesty and hard working

The scientific method consists of systematic observation, classification and interpretation of data. Research is basically scientific in nature to provide an objective, which is an unbiased evaluation of data. There is nothing like unscientific research approach, even in case of social sciences.

Here, we should know what is scientific method. According to Random House Dictionary, scientific method is a method in which a problem is identified, relevant data is gathered, a hypothesis is formulated, which is empirically tested.

Research is like undertaking a journey and one must know about its destination and which route to take. The sequence of steps during the journey is not absolute. At every step, there is multiplicity of methods, approaches and procedures. Here, experience of guide comes handy to guide our actions to achieve our objectives.

For a teacher, the following questions may be important to you.

1. What are the common conditions prevalent among rural students?
2. What are the possible causes of such conditions?
3. What is the degree of satisfaction of parents with the teaching of school?
4. The change in level of understanding of students with the change in method of teaching.

The list of questions may be endless. Various research should be carried out to find answers to these questions.

RESEARCH OBJECTIVES

Research adds to the existing stock of knowledge. The main purpose of research is to discover answers to questions through the application of scientific procedures.

The typical objectives of research can be summarized as follows:

1. Gain familiarity with a new phenomenon or develop new insight into a phenomenon.
2. Review and synthesize the existing knowledge.
3. Investigate some existing situation or problem.
4. Offer solutions to a problem.
5. Explore and analyse more general issues.
6. Construct or create a new procedure or system.
7. Generate new knowledge.

The actual research may encompass one or the combination of any of the above objectives.

MOTIVATION IN CONDUCTING RESEARCH

Although there is some overlapping between the research objectives and motivation for undertaking research, they are different. Some factors, single or combined, for undertaking any research are as follows.

1. Acquire a research degree along with its consequential benefits.
2. Face the challenge in solving unsolved problems.

3. Intellectual satisfaction of doing some innovative work.
4. Service to the society.
5. Desire to enhance the social status.
6. Input for policy decision-making.

However, the list for motivating people to undertake research studies is not exhaustive.

RESEARCH CHARACTERISTICS

There are certain common desirable characteristics in the research process. However, there is a word of caution, that there is an overlapping in the meaning and scope of these characteristics. They ensure that research is free of biases, prejudices and subjective errors.

1. **Objectivity:** It means research is without any bias. All other characteristics are built around it. Researchers usually take utmost precautions that results are not affected by their own presence, behaviour and attitude. They critically examine the research methods to avoid any bias.

The following means can be adopted to ensure objectivity during research process:

- (a) **Procedural safeguards:** The processes involved in procedural safeguards is as follows.
 - (i) Keeping complete records of observations and data analyses in a form that other researchers can understand and evaluate.
 - (ii) Most scientific reports are written in a similar form and published by organizations of scientists. These reports communicate ideas to the entire scientific community and open those ideas to criticism.
- (b) **Standardization:** It means using uniform, consistent procedures in all phases of data collection.
- (c) **Operationalization of concepts:** It is basically standardizing the meaning of concepts.

An operational definition of a concept defines that concept in terms of how it is measured or what operations produce it.

- (d) **Avoiding bias:** Bias from external influences, personal beliefs, observers' perspectives and human expectations can distort all data. As we know that research follows scientific approach with the sole purpose of finding out the truth which is hidden and which has not been discovered as yet. But finding the truth may be affected by certain kinds of biases. So, the most formidable challenge in research is to remain objective and free from biases. There can be a variety of biases to distort people's impressions of collected data.

Let's discuss some important biases:

- (i) **External influences:** One's culture or opinion created by media (say social media) can influence people to accept a particular world view.
- (ii) **Personal bias:** This may happen due to personal beliefs, attributes or past experiences.
- (iii) **Observer bias:** Some events are taken as meaningful by some and not taken as meaningful by others. Researchers themselves were raised in certain cultures and societies. They also have role expectations. These background factors can all affect the way that researchers observe and interpret events in their lives.
- (iv) **Expectancy bias:** Researchers sometimes expect to find specific outcomes, they may see (or note) what they expect to see rather than remain objective.
- (v) **Placebo biases:** It operates when people strongly want to believe a treatment is successful. For example, many people may claim to feel better after taking a placebo, such as a sugar pill.

Here it is important to mention that there can be overlapping of biases.

2. **Reliability:** Reliability in the context of research is consistency. It refers to the extent to which an investigation produces consistent results. It can also be termed as verifiability.

If any research yields similar results each time, then it is undertaken with similar population in the given context and with similar procedures, it is said to be a reliable research.

Suppose a research is conducted on the effects of watching television on the class performance of the children and if the results conclude that watching TV causes low grades in class and if another sample taken from the population shows the same results with the same research procedure, then we can say that the research procedure and the outcomes are reliable. The more the similarity in the results, the more is the reliability of research. The coefficient of determination is also termed as reliability coefficient.

3. **Validity:** Here, validity in research mainly stands for accuracy of procedures, research instruments, tests, etc.

The concept of validity can also be understood by posing a question, 'are we measuring or able to measure what we originally intended to measure?'

Validity means that research must be unbiased and free from any systematic error as these may impact the applicability of research. Without validity, research goes in the wrong direction.

Generally, validity is termed to be much more important than reliability. To keep the research on the right track, it is must that the concepts are defined in the best possible manner so that no error occurs during measurement. Different types of validity are given below.

- (a) **Internal validity:** With higher internal validity, a researcher is able to establish better causal relationship between two or more variables. This is specifically true in case of laboratory experiments where cause-and-effect relationship is supposed to be more clearly established.
- (b) **External validity:** It means that external factors that can affect the study must be controlled. For example, the response of a respondent in social sciences surveys may be affected by the mere presence of a non-participant observer. It also refers to the extent to which the research outcome can be generalized and applied to other cases that are not under study.

Sometimes, internal validity is also termed as credibility and external validity is termed as generalizability or transferability. Both credibility and generalizability have been discussed as separate features also in the ensuing discussion.

- (c) **Face validity:** By valid, we mean that survey and questionnaire accurately measures what they are supposed to measure. For example, all participants who filled a questionnaire meant for measuring certain personality traits agree that this exercise appears to measure those traits and not something very different.
 - (d) **Content validity:** The indicator measures all aspects of the construct (or concept as discussed earlier) and not just a part of it.
 - (e) **Criterion validity:** The indicator corresponds with and is predictive of measurements using related indicators.
 - (f) **Construct validity:** The indicator measures the construct in a manner that is convergent with other measures in terms of direction.
- For example:** The level of education and income level converge. The indicator also allows discrimination of opposing constructs.
4. **Accuracy:** It is closely related to validity. It is also the degree to which research processes, instruments and tools are related to each other. Accuracy also measures whether the research tools have been selected in the best possible manner and research procedures suit the research problem or not.

Rigorous scientific methods and procedures have been adopted in research and each step in the

research is tested for accuracy. Thus, choosing the best data collection tool improves the accuracy of research.

5. **Credibility:** It is the use of best source of information and the best procedures in the research. The use of secondary data saves time and reduces cost. However, the excessive reliance on secondary data when the option of primary data is available entails the risk of reducing the credibility of the research. Hence, it has to be a trade-off between primary data and secondary data.
The accurate references in research enhances the credibility of research but fake references also decreases the credibility of research.
6. **Generalizability:** It is closely related to validity. It refers to the degree to which research findings can be applied to a larger population. The sample considered is the representative of the whole population so the findings should also be applicable to the whole population.
7. **Empirical research:** It is based on real-life experiences, direct experiences or observation by the researcher. It implies that research is related basically to one or more aspects of a real situation and deals with concrete data that provides a basis for external validity to the results of the research.
8. **Systematic:** For a research to be effective, it has to be systematic. It is the only approach to undertake any research work and each step must follow the other. There are a set of procedures that have been tested over a period of time and are, thus, suitable to use in research. Therefore, each research should follow a definite procedure.
9. **Controlled factors:** In real-life experience, there is always more than one factor that affects an outcome of an event. Similarly, in research, various factors may affect the outcome and some are taken as controlled factors, whereas the others are tested for possible outcome. The concept of control implies that, in exploring causality in relation with two variables (factors), we set up a study in a way that minimizes the effects of other factors affecting the relationship. The controlled factors or variables have to be controlled rigorously.
In physical sciences, it is easier to control such factors as the experiments are conducted in laboratories. In social sciences, it is extremely difficult as research is carried out on the issues related to human beings living in society, where exerting such controls are not possible. Moreover, within social sciences, the level of control may vary significantly from one discipline to another.
10. **Cyclical:** Research is a cyclical process because it starts with a problem and ends with a problem.

11. **Logical:** The statement, a good research is logical, implies that research is guided by the rules of logical reasoning. Induction and deduction are of great value in research, which have been discussed under types of research.
12. **Replicable:** This characteristic allows the results of the research to be verified by replicating the study and thereby building a sound basis for decisions.

Positivism and Postpositivistic Approach to Research

The research is basically about gaining knowledge for different purposes. To gain knowledge is a human quest. Different approaches were developed over the period to acquire knowledge through research. In NET Exams, the questions are asked on basic concepts. These concepts will help the candidates in better understanding of various aspects of research as well.

Metaphysics is the branch of philosophy that deals with abstract concepts, such as being, knowing, identity, time and space. It is intimately connected with epistemology.

Epistemology is the study of knowledge. It deals with the origin, nature, scope and methods to acquire knowledge. This term was first used by Frederick Ferrier. There are basically two ways to acquire knowledge and they are rationalism and empiricism.

1. **Rationalism:** Rationalism tends to believe that logic and reason as the means of acquiring knowledge. Mind is given the authority over senses. This is basically a prior use of logic and reason comes first to conclude something before experience. Rationalism is associated with deduction.
2. **Empiricism:** Empiricists claim that sensing experience is the ultimate starting point for all our knowledge. The senses give us all our raw data about the world and without this raw material, there would be no knowledge at all. This is termed as a posteriori. It is related to induction.

Theory: A theory is a set of systematically related statements, including some law-like generalizations that can be tested empirically. These generalizations provide hypothesis and these hypothesis determine what must be measured.

Research paradigms: A paradigm is a model of the functions and interrelationships of a process, a 'way of thinking' about something and how to study it. There is a difference between natural sciences and social sciences and so is the difference between research approaches relating to them. Hence, there are two competing paradigms to acquire knowledge. The paradigms are grouped as positivist paradigm and interpretive paradigms.

Positivist Paradigm

The term positivism was coined by the French philosopher Auguste Comte in 19th century and reflected through by Francis Bacon, John Locke, Isaac Newton and contemporary thinkers like Mortiz Schlick, Ernst Mach, Rudolf Carnap among others.

Auguste Comte worked upon *Course of Positive Philosophy* (1829), *Elementary Treatise on Analytic Geometry* (1843), the *Philosophical Treatise on Popular Astronomy* (1844) and *The Discourse on the Positive Spirit*. Comte also divided the theological stage into three parts, such as Animism, Polytheism and Monotheism.

Bacon proposed that philosophers should not attempt to wander beyond the 'limits of nature'. Saint-Simon applied the term positive in his *Essay on the Science of Man* to the sciences which were based on facts which have been observed and analyzed.

The term 'positivist' has no negative connotation. In philosophy, positivism mainly adheres to the idea that 'factual' knowledge gained through observation (senses and measurement) is trustworthy. Positivism depends on quantifiable observations that lead to statistical analyses. Here, the role of the researcher is limited to data collection and interpretation in an objective way. He is independent from the study and there are no provisions for human interests within the study. Positivists usually adopt deductive approach, the concentration is on facts. The researcher is independent that means maintaining minimal interaction with participants and research is purely objective and world is external. There is one reality, knowable within probability.

Let's look at the other aspects which is important from the examination point of view as well with the help of diagram:

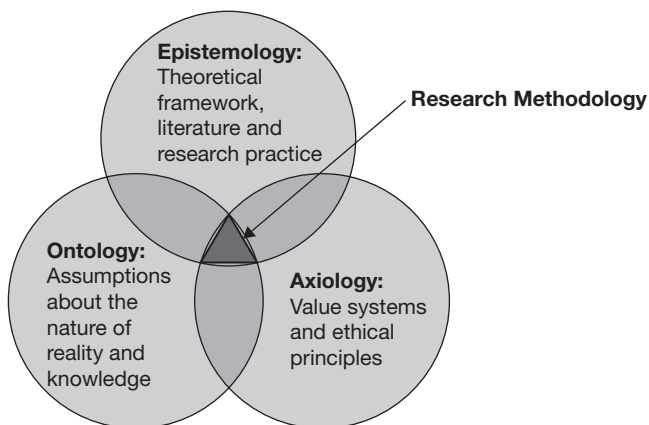

Figure 2.1 Approaches to Find Research Methodology

Specifically, positivism relies on the following aspects of science.

1. Science is deterministic as it explains the cause and effect relationships.
2. Science is mechanistic as researchers develop hypotheses to be proved or disproved via application of specific research methods.
3. Science uses methods such as selection of sample, measurements, analysis and reaching conclusions about hypotheses.
4. Science deals with empiricism, where it is assessed as objective, as seen or measured. Science must be value free.

Drawbacks of Positivism

Positivism as an epistemology is associated with the following set of disadvantages.

1. Positivism relies on experience as a valid source of knowledge.
2. All types of processes can be perceived as a certain variation of actions of individuals or relationships between individuals.
3. Adoption of positivism in business studies and other studies can be criticized for reliance on status quo.
4. Sometimes positivism is a rejection of metaphysics. It is a position that holds that the goal of knowledge which is simply to describe the phenomena that we experience.

There can be many approaches to carry out the research. Some of them have been mentioned below for the sake of comparison.

Positivist/post-positivist paradigm: To discover laws that are generalizable and govern the universe.

Constructivist/interpretative paradigm: To understand and describe human nature.

Transformative/emancipatory paradigm: To destroy myths and empower people to change society radically.

Postcolonial/indigenous research paradigm: To challenge deficit thinking and pathological descriptions of the former colonized and reconstruct a body of knowledge that carries hope and promotes transformation and social change among the historically oppressed.

(Continued)

The following terms are also important.

Interpretive paradigm: It is usually associated with qualitative research strategies. It is specifically applicable in social sciences, such as sociology, political science, etc. According to interpretive approach, the research design should be flexible and unstructured, the methods should be valid and the research design should generate small-scale and intensive data, using insider accounts and based on descriptions of what is seen and what is heard.

Verstehen: The term is closely associated with the work of the German sociologist, Max Weber. In social sciences, such as anthropology and sociology, *Verstehen* means a systematic interpretive process in which an outside observer of a culture attempts to relate to it and understand others. *Verstehen* roughly translates to ‘meaningful understanding’ or ‘putting yourself in the shoes of others to see things from their perspective’. The method of the natural sciences (Physics, Chemistry, Biology, etc.) is explanation (*erklären*), whereas that of history is understanding (*verstehen*). The understanding about positivist and interpretive paradigms is crucial to differentiate between quantitative, qualitative and other types of approaches or methods that are basic types of research.

Post-positivism

According to Collins, we can categorize four sociological traditions and they are listed below.

1. **Tradition of conflict:** Society is inherently conflictual.
2. **Utilitarian-rationalist tradition:** Human beings are rational.
3. **Holistic tradition:** ‘Durkheimian’.
4. **Micro-interactionist:** Interactions must be analyzed at the micro-relational level.

As we discussed, positivism is associated with quantitative research strategies. There is one particular view of how research should be conducted, which suggests that we should carry out research in social sciences in ways that are similar to the methods within the natural sciences (Physics, Chemistry and Biology). Two people observe the same event and understand it differently, based upon their own experiences and beliefs. Objectivity can be achieved by using multiple measurements and observations and triangulating the data to gain a clearer understanding of what is happening in reality. It is important to note that the post-positivists share a lot in common with positivists, but most of the

research approaches and practices in social science today fit better into the post-positivist category.

Since the inception of 21st century, the focus of research shifted from ‘reality’ to ‘critical reality’. Physicists like Werner Heisenberg and Niels Bohr focused on this reality. The emphasis was turned away from absolute certainty to probability. Now the scientist was portrayed as a person who constructs knowledge, instead of just passively noting the laws of nature and no matter how faithfully the scientist adheres to scientific method research, research outcomes are neither totally objective nor unquestionably certain. This approach was called up as post-positivism (or logical empiricism), where it describes a less strict form of positivism. Logical empiricists (or post-positivists) support the idea that social scientists and natural scientists share the same goals for research and employ similar methods of investigation.

It can be distinguished from positivism according to whether the focus is on theory verification (positivism) or on theory falsification (post-positivist). A million white swans cannot prove that all swans are white, but one black swan can disprove this contention.

Critical realism recognizes that observations may involve error and theories can be modified. Reality cannot be known with certainty. Observations are theory laden and influenced by the observer’s biases and worldview.

METHODS OF RESEARCH

Table 2.1 gives an idea about the main basis adopted for the classification of research. Here, it is important to mention that these approaches are not exclusive. The research is usually interdisciplinary. Depending upon the subject area, it is better that the researcher specializes in any one form of research because all research methods have their own advantages and disadvantages.

Table 2.1 enlists the basis for classification and the types of research that form a part of it. It is important to note that there is overlapping among different types of research.

Classification of Research on the Basis of Objectives

From the purpose and objectives point of view, a research can be classified as follows.

1. Descriptive research
2. Correlational research
3. Explanatory research
4. Experimental research

Table 2.1 Classification of Research

S. No.	Basis of classification	Types
1.	Objectives	1. Descriptive 2. Correlational 3. Explanatory 4. Exploratory 5. Experimental
2.	Outcome	1. Fundamental 2. Applied
3.	Logic	1. Deductive 2. Inductive
4.	Process	1. Quantitative 2. Qualitative
5.	Inquiry mode	1. Structured 2. Unstructured
6.	Idea or concept	1. Conceptual 2. Empirical

DESCRIPTIVE RESEARCH

The term 'Descriptive' is self-explanatory and the research that describes a situation, an event and an institution is descriptive research. It describes the nature of a situation as it exists at the time of study. Descriptive research answers the questions who, what, where, when and how.....

Descriptive research is a quantitative research method. In simple words, descriptive research is all about describing the phenomenon, observing and drawing conclusions from it.

Here, the information is collected without changing the environment (i.e., nothing is manipulated). It is 'any study that is not truly experimental'.

It includes surveys and fact-finding enquiries with adequate interpretation.

National Sample Surveys (NSS) and Census can be taken as the best examples of descriptive research. Census unveils what exists, but not necessarily known earlier by us with accuracy, such as population, literacy, etc., and also the differences among states.

'The study of socio-economic status of distance education students in India' describes the gender composition, economic status of students, rural-urban composition, etc. The findings (description) of one such study, say in 2009, can be different than what one would find in a similar study in 2019. The aim of descriptive research is to describe 'what exists' with respect to variables or conditions in a situation.

Studying relationships between two or more variables also falls under the scope of descriptive studies. For example, 'study the problem of relationship between residential status of learners and their performance in university examination'.

We can go little beyond and study the cause and effect relationships among variables. You may try to find out the causes of drop out among the rural background students.

For example, in human research, a descriptive research can provide information about the naturally occurring health status, behaviour, attitudes or other characteristics of a particular group.

Depending upon the number of times the data is collected, descriptive research can be of two types:

- 1. Cross-sectional study:** Onetime interaction or one time data collection.
- 2. Longitudinal study:** A study that collects data more than once from the same individuals.

Two specific examples are being given here,

1. Ministry of Agriculture would like to know about the crop patterns across different states in India and
2. School principal may be interested to know about the result of his own school in comparison to other schools in the district.

Types of Descriptive Research

This categorization helps us to understand the phenomenon (research) more clearly.

Survey research, correlational studies, and causal-comparative studies are the main types of descriptive research. Ex post facto, historical, exploratory and analytical research are other variants of descriptive research and many times are used interchangeably.

- 1. Survey studies:** Often, descriptive research itself is equated with survey research. It is better to consider survey as one category of research under descriptive research. Surveys are conducted to create authentic descriptions of existing situation, phenomena that help carrying out situational analysis, diagnosing problems and make more informed decisions and intelligent plans for improving the situation. The objective may not only be to ascertain the status, but also to evaluate the status against pre-decided norms or established standards. Researcher needs to collect data according to the purpose of survey.
- 2. Correlational studies:** As the name indicates, the purpose of correlational studies is to explore whether there is any relationship or interdependence between two variables or characteristics, and to ascertain the degree of such relationships. The value of correlational research is to discover relationships among phenomena with a view to predict and in some situations, controlling their occurrence. Much of social sciences research in general and educational research in particular, is concerned with establishing interrelationships

among variables. They enable us to measure the extent to which variations in one variable are associated with variations in another.

Some examples of descriptive research are as follows:

- (a) How performance of learners is related to their learning skills and study habits?
- (b) Whether a relationship exists between the number of years spent in full-time education and subsequent annual income?
- (c) Whether there is a link between personality and achievement?

Correlational studies are generally intended to answer the following three questions.

1. Is there a relationship between two variables (or two sets of data)? If 'yes', then two other questions follow:
 - (a) What is the direction of the relationship and is it positive or negative?
 - (b) What is the magnitude of the relationship as indicated by the coefficient of correlation?

The correlational statistics will help test researchers hypothesis about the relationship between two variables and assess the magnitude of the relationship.

Ex Post Facto Research

1. It is used in social sciences and business organizations.
2. It is conducted in context of a phenomenon after it has occurred or at the time of its occurrence.
3. It basically deals with non-manipulated variables of a phenomenon.

Historical Research

1. It is another dimension of descriptive research and somewhat similar to *ex post facto research*.
2. It usually focuses on the historical aspect of an issue of interest or problem.
3. Examples are growth of trade unions in India, evolution of modern education system in India, etc.

Analytical Research

1. In this method, the researcher uses facts or information already available.
2. It attempts to make critical evaluation of the material.

Explanatory Research

Explanatory research attempts to answer how and why between two aspects of a situation or a phenomenon. For example, why examination-related stress leads to rote learning? Why and how stress leads to a heart disease?

Exploratory Research

1. It is generally done in the beginning of a research. It is undertaken to explore an area where little is known or to investigate the possibilities of undertaking a particular research study and is akin to feasibility study or pilot study. A 'small-scale study' is undertaken to decide whether it is worth carrying out a detailed investigation.
2. It attempts to clarify why and how there is a relationship between two or more aspects of a situation or phenomenon.
3. The purpose of exploratory research is to gain background information, to define terms, to clarify the problems, to develop hypothesis, to establish research priorities and objectives, and to develop questions to be answered.
4. It makes use of secondary data (mainly literature review), experience surveys, case studies, interviews (mainly focus groups' interviews), projective techniques, and Delphi techniques.

EXPERIMENTAL RESEARCH

Experimental research is designed for establishing causal relationships. It begins with a question concerning the relationship between two or more variables. Simultaneously, the researcher develops one or more hypotheses to state the nature of expected relationship. The experiment is the event planned and carried out by Then researcher tries to get evidence.

The application of experimental method yielded better results in physical sciences. Therefore, this method was soon applied to other sciences like biological sciences and medicine.

In its simplest form, an experiment has three characteristics as follows:

1. An independent variable is manipulated.
2. All other variables except the independent variables are held constant.
3. The effect of manipulation of the independent variable on the dependent variable is observed.

The variable upon which the effects of changes are observed is called the dependent variable, which is observed but not manipulated by the experimenter. The dependent variable is so named because its value is hypothesized to depend upon and vary with the value of the independent variable.

For example, to examine the effect of different teaching methods upon achievement in reading, an investigator would manipulate method, the independent variable, by using different teaching methods in order to ascertain their effect upon achievement, the dependent variable.

Three Characteristics of Experimental Research

There are three essential ingredients in the conduct of an experiment and they are control, manipulation and observation. We shall discuss each of them as follows.

- 1. Control:** Control is the first essential ingredient of experimental method. The main purpose of 'control' in an experiment is to arrange a situation in which the effect of variables can be measured, specifically to evaluate the effects of an independent variable.

A high degree of control is much easier to achieve in a physical sciences, such as in a laboratory setting. In the laboratory, there are only a limited number of variables which can be manipulated easily. However, social sciences research as human beings are involved, there are always many variables present in a situation. In such situations, the law of the single significant variable is more appropriate. For example, if you were to study the effect of two methods of teaching Mathematics to two groups of children, then you are likely to select the two groups which are identical in every aspect regardless of the method in which they are taught arithmetic. But it is impossible to have two groups that are identical in every respect to the extent possible. The variables identified could be, general intelligence, motivation, reading ability, etc. Other variables, such as height and weight, that are not likely to affect achievement in arithmetic can be ignored while establishing the similarity of the two groups.

An extraneous variable is a variable that is not related to the purpose of the study but may affect the dependent variable.

- 2. Manipulation:** Manipulation of a variable is another distinguishing characteristic of experimental research. It refers to a deliberate operation performed by the researcher. In contrast to the descriptive research, in which the researcher simply observes conditions as they occur naturally, the researcher in the experimental research actually sets the stage for the occurrence of the factors whose performance is to be studied under conditions where all other factors are controlled or eliminated. For example, if the researcher compares two methods of teaching, then the method of teaching is the independent variable and can be manipulated by the teacher. We may manipulate a single variable or a number of variables simultaneously.
- 3. Observation:** In experimentation, we are interested in the effect of the manipulation of the independent variable on a dependent variable.

Reflexivity refers to circular relationships between cause and effect. A reflexive relationship is bidirectional with both the cause and the effect affecting one another in a relationship in which neither can be assigned as causes or effects. For example, poverty is the main cause of unemployment and unemployment is the main cause of poverty.

Classification of Research on the Basis of Application

On the basis of application, research is of two types, namely pure (or basic research) and applied research. Table 2.2 gives the classification of research based on application.

Table 2.2 Classification of Research on the Basis of Application

Fundamental research	Applied research
Addition to knowledge	Solution to existing problems
Discovery or invention	Innovation or application
Mostly academic	Practical use in solving a problem
Extensive in nature	Intensive in nature

Fundamental (Basic or Pure) Research

1. The main purpose of basic research is to add to the existing stock of knowledge and thus, it can be intellectually challenging.
2. The knowledge produced through pure research is sought in order to add to the existing body of research methods.
3. It is not likely to have any practical application at the present time or even in the future.

Applied Research

1. Applied research is done to solve specific, practical questions facing the society.
2. It can be used for policy formulation, administration and understanding of a phenomenon.
3. It is always done according to basic research and can be carried out by academic or industrial institutions. For example, an academic institution, such as a university, will have a specific applied research program funded by an industrial partner interested in that program.

Classification of Research on the Basis of Logic

In research, the conclusions are based on two approaches and they are known as deduction and induction.

Deductive Approach

It is also termed as top-down or general-to-specific approach.

In deduction, we start from a theory and try to prove it right with the help of available information. The deductive method involves the following three steps.

1. State the hypothesis (based on theory or research literature).
2. Collect data to test the hypothesis.
3. Make decision to accept or reject the hypothesis.

Examples

1. All men are mortal (general fact, applies to all men).
2. Socrates is a man.
3. (Therefore,) Socrates is mortal (specific).

Inductive Approach

It is also termed as bottom-up approach.

In inductive research, we move from specific to general. This approach also involves the following three steps.

1. Observe the different phenomena in the world.
2. Make a search for a pattern in what is observed.
3. Make a generalization about what is occurring.

Examples

1. Socrates is mortal (specific).
2. Alexander is mortal (specific), Pluto is mortal and so on (specific).
3. All men are mortal (general).

Take another example: $3 + 5 = 8$ and eight is an even number. $7 + 59 = 66$ and the result is again an even number. Therefore, the conclusion is when an odd number is added to another odd number, the result will be an even number.

Figure 2.2 shows the main components that form a part of inductive and deductive approach.

Classification of Research on the Basis of Inquiry Mode

Basically, the process adopted to find answers to research questions involves two approaches, they are structured and unstructured.

Figure 2.2 Induction and Deduction

Structured Approach

1. The structured approach to inquiry is usually classified as quantitative research.
2. Everything that forms the research process, such as objectives, design, sample and the questions that a researcher plans to ask of respondents, is predetermined.
3. It is more appropriate to determine the extent of a problem, issue or phenomenon by quantifying the variation. For example, how many people have a particular problem? How many people hold a particular attitude?

Unstructured Approach

1. The unstructured approach to inquiry is usually classified as qualitative research.
2. It allows flexibility in all aspects of the research process.
3. It is more appropriate to explore the nature of a problem, issue or phenomenon without quantifying it.

Classification of Research on the Basis of Process

Quantitative Research

It is similar to deductive research. It is also termed as linear research as it typically follows a linear path.

1. Stating with testable hypothesis
2. Collection of data
3. Analysing the data
4. Accepting or rejecting the hypothesis.

Quantitative research is mostly associated with the positivist or post-positivist paradigm. It involves collecting and converting data into numerical form. We can do statistical calculations and draw conclusions.

Qualitative Research

1. This is basically an approach and not just a method to conduct research.
2. Qualitative research is basically inductive or spiral in nature and has a very different structure. The researcher starts with a tentative idea or question and these questions become more specific with progress in research. Then, a pattern may emerge in research. Thus, in qualitative research, one starts with observation and ends with a theoretical position or stance. Thus, it is inductive in nature, i.e., the research moves from specific to theory.

Qualitative research is appropriate when:

1. The intended research area is not well studied or understood.
2. A subject needs to be studied in depth.

3. A holistic perspective is needed.
4. Behavioural aspects of people need to be studied.
5. Measurement techniques like questionnaires are not considered suitable.
6. A researcher is more interested in the process (how it works) and not the product (the outcome).

The important methods and approaches used in qualitative research have been discussed below.

1. **In-depth interview:** This is usually one-to-one interview, with one participant at a time. Though it is systematically planned, it may have unstructured elements as well. The researcher prepares questions in advance to make sure that only the most important questions are asked to the participant. The interview can last anywhere between twenty minutes to half an hour, during which the researcher tries to collect as many meaningful data as possible from the participants to draw inferences.
2. **Focus group:** A focus group comprises of around 6–10 participants who are usually subject matter experts. A moderator, usually an experienced person, is assigned to a focus group to facilitate the discussion. The role of a moderator is to probe the participants by asking the correct research questions so as to collect research related information.
3. **Narrative research:** It is an approach to review the literature. Sometimes, it is contrasted with a systematic review. It tends to be less focused than a systematic review and seeks to arrive at a critical interpretation of the literature that it covers.
4. **Phenomenology:** It is a form of qualitative research in which the researcher attempts to understand how one or more individuals experience a phenomenon. For example, interviewing

the wives of 10 prisoners of war and asking them to describe their experiences.

5. **Ethnography:** It is the process of studying and describing a culture (a culture is the shared attitudes, values, norms, practises, language and material things of a group of people). Ethnographic research is an in-depth form of research where people are observed in their natural environment without any changes. It intends to provide an insider's picture of a community under study. A researcher may go and live in that specific community and study the culture and their educational practises.
6. **Case study research:** Case study research is mostly used to study an organization or an entity. This research method has evolved over the years as one of the most valuable qualitative research methods. This type of research is used in the areas of management, education sector, philosophical and psychological. This method involves a deep digging into the developments and collects data.
7. **Content analysis:** Content analysis is also known as text analysis, this method is a bit different from other qualitative research methods. It is used to analyse the social life by decoding words, texts, etc., through any available form of documentation. The researcher studies and understands the context in which the documents are furnished with the information and then tries to draw meaningful inferences from it. In modern times, researchers follow activities on a social media platform and try to understand the pattern of thoughts.
8. **Grounded theory:** It is a qualitative approach to generate and develop a theory from data that the researcher collects. Role play, simulation and diary methods are also used in qualitative research.

Once the candidates go through the research process, they can have a look at the following table again:

Table 2.3

Qualitative Research	Quantitative Research
Here, the main objective is to develop understanding on human beings/social sciences to know what people feel and think.	Researcher decides what to do and what not to, then to generate numerical data and hard facts by employing statistical, logical and mathematical techniques.
The main objective of subjective approach here is to explore and gain understanding of the problems.	Objective approach is to describe, explain and quantify the problem.
The approach is bottom-up. It explores to know 'How' and 'When'.	The approach is top-down. The objective is to confirm - 'what' and 'when'.
Inductive reasoning method starts from observation , then pattern , develop the tentative hypothesis and finally form the theory .	Deductive reasoning method starts from the theory , then form hypothesis , make the Observation and finally confirm our hypothesis .
Verbal data such as words and images. In-depth Interviews, Focus Group Discussion, observation and document reviews	Data collected such as numbers and statistics, structured interviews, surveys and statistical records.

(Continued)

Qualitative Research	Quantitative Research
Holistic approach contains mostly 'random sampling' where we get limited information of more cases. There is higher possibility of methodological innovations.	It is non-random sampling. The specific variables are picked for discussion here.
Process oriented inquiry.	Result-oriented inquiry.
No statistical tests required.	Statistical tests are necessary to prove the hypothesis.
Generation of hypothesis.	Testing of hypothesis.
Less generalisable findings.	More generalisable findings.
Results are very descriptive.	Results are quite specific.
Report of qualitative researches are narrative that includes direct quotation of the participants.	Report of quantitative researches are more statistical that shows the relationship between the variables.
Small sample size, large volume of data, researchers bias and creative process are the main issues.	Good statistical analysis, more sample size requirement are the main challenges.

Action Research

Introduction: There is a question on action research almost every time in NTA-NET Exam, it has been discussed in detail here.

There are two dimensions attached to this word 'Action Research', where one is action, which is doing something and second is research, which is analyzing. Action research also means 'learning by doing'.

Action research refers to a wide variety of evaluative, investigative and analytical research methods designed to diagnose problems or weaknesses, and help researchers to develop practical solutions to address them quickly and efficiently. It may also be applied to programs or educational techniques that are not necessarily experiencing any problems, but that researchers simply want to learn more about the techniques and improve their knowledge.

The term 'action research' was coined during 1940s by Kurt Lewin, a German-American social psychologist who is widely considered to be the founder of 'Action Research'. He said 'if you want to know how things really are, just try to change them'. He defined Action Research as 'a spiral of steps, each of which is composed of a circle of planning, action, and fact-finding about the result of the action'. Cohen and Manion (1989) described action research as, 'a small-scale intervention in the functioning of the real world and a close examination of the effects of such intervention'. A lot of research has taken place on 'action research'.

Features of Action Research: On the basis of various definitions, the following points emerge to describe action research in a comprehensive manner.

- 1. Situational and problem solving perspective:** It usually emerges out of situational needs and a solution to a problem is also designed with respect to the situation.
- 2. Intervention in real world:** As problem emerges in practical real life situation, so action is to be taken in real world as well.
- 3. Adoption of alternative practices:** Through action research, we intend to discover new and alternative ways to achieve our objectives, be it teaching or management sector.
- 4. Immediate problematic situation:** The focus may be more on problems that need urgent attention.
- 5. Goals of social science:** It is mostly in social situations, such as in educational institutions.
- 6. Collaborative and participatory.**
- 7. Co-learning:** As action research is collaborative approach, co-learning is also the outcome.
- 8. Self-evaluative:** Just as action research is self-initiated since it evolves out of the perception of problems by the practising individual or group, it becomes self-evaluative where the action research team evaluates the outcome of the exercise.
- 9. Action research is a process:** It has been discussed in the following paragraphs.

(Continued)

Action Research Process or Cycle

To get an overview first, the basic steps of an action research process constitute an action plan in which we review our current practice, identify an aspect that we want to investigate, imagine a way forward, try it out and take stock of what happens.

Action research is a process by which change and understanding can be pursued at one time. It is usually described as cyclic, with action and critical reflection taking place in turn. The reflection is used to review the previous action and plan the next one. It is commonly done by a group of people, though sometimes individuals use it to improve their practice.

Stephen Kemmis has developed a simple model of the cyclical nature of the typical action research process, that consists of four steps, such as planning, acting, observing and reflecting.

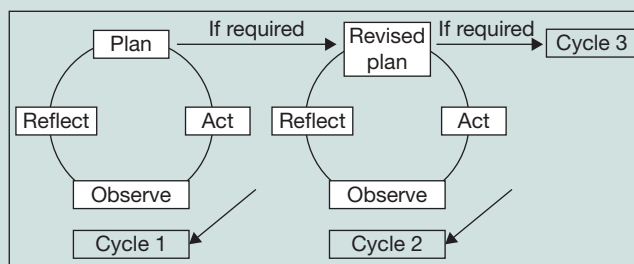

Figure 2.3 Action Research

Development and research in any field of life cannot be separated from each other. In order to effectively handle the intricacies of teaching-learning process, apart from being properly trained, a teacher must also be able to comprehend the problems emerging at every step of the process and to find their appropriate and scientific solution. A teacher may face many problems and he or she tries to find an instant solution based on previous experiences, but many times such solution is either partial or temporary. Thus, a teacher needs to find a solution which is based on research, so that the solution obtained really solves the problem. Here, action research comes handy.

1. Suggesting a solution based on above analysis.
2. Testing the solution herself or himself.
3. Accepting the solution only when it satisfies the above test.

Such a process adopted by the teacher to solve her or his own problem is called 'action research'. Action research is done by practitioners themselves rather than professional researchers. The solution so found may or may be generalizable. In this case, teacher is a part of situation, rather than outside spectator.

1. **Planning:** First thing to do is to analyze the problem scientifically in the specific perspective in which the problem has emerged. Planning covers the initial reflection. A teacher faces a number of issues in the teaching-learning process which needs to be addressed. It may be a general concern, a perceived need or a problem with a class you are teaching.
Planning entails identification of the problem and changes a teacher can make to overcome the problem.
2. **Action:** After the planning stage in which all the procedures of investigation have been determined, comes the action stage. This stage is time bound. The researcher has to administer tools to collect data and information. Systematic analysis has to be done. Results have to be recorded.
3. **Observation:** During 'action research', observation of tools has to be done cautiously. Observation has to be objectively done without any presuppositions. The detailed observations, monitoring and recording enables you to report your findings to others. Those involved in action research should also keep a detailed diary or journal.
4. **Reflection:** Once the results have been obtained and analysed and conclusions drawn, you are ready to initiate changes in your teaching strategy. This change or modification in the style of teaching is the result of action-research aimed at improving the teaching-learning process. It is also aimed at adopting a new method. You would also reflect on the efficacy of the changes you are bringing in.

(Continued)

Scope of action research in education: As action research is a well-developed research technique. It is also widely used in various sectors, especially in sector education, it covers almost every area of education as mentioned below.

1. Curriculum planning and course material development
2. Programme delivery and learning strategies
3. Student assessment and evaluation
4. Staff development
5. Management and administration
6. Behavioural changes, like attitudes, values, staff motivation, etc.

Thus, almost all areas have the potentiality of using action research for solving problems and for improvement of practices.

Mixed Research

Both quantitative and qualitative researches are not exclusive. Qualitative research may end in a hypothesis that can be quantitatively tested later. Quantitative research may involve qualitative research elements.

Quantitative research may answer questions, such as the extent and pattern of poverty in India, but it may not be efficient in answering questions, such as what is the experience of facing poverty, hardships, consequences and circumstances that lead to poverty. This may be answered by qualitative research. As quantitative research is generally well known, it may be useful to outline when qualitative research is needed.

Classification of Research on the Basis of Concept

Conceptual Research

Conceptual research is generally used by philosophers and thinkers to develop new concepts or to reinterpret the existing concepts. It is related to some abstract idea or theory.

Empirical Research

Empirical research relies on experience or observation alone, which is without due regards for system and theory. It is a data-based research coming up with conclusions that are capable of being verified by observation or experiment.

In this research, the researcher must formulate a working hypothesis. He collects data to prove or disprove his hypothesis. The researcher is in control over the facts. Empirical research is appropriate when proof is sought that certain variables affect other variables in one way or the another.

STEPS OF RESEARCH

The research process usually adopts the following three criteria:

Triangulation: There are multiple realities in social research. It is akin to solving a research problem in multiple ways so as to increase the validity of answer. The triangulation is mostly used in the qualitative research. It entails the use of multiple data sources, multiple investigators and multiple methods. It also overcomes the problem of subjectivity. It involves the use of multiple data sources, multiple investigators and most importantly, multiple methods (such as participant observation, focus groups, case studies and so on) to get complete understanding of the social phenomena. This provides validity to research process and also overcomes the problem of subjectivity and biasedness to an extent. It is the multiple validations of results.

The use of results from one set of data to corroborate those from another type of data is also known as triangulation.

1. It is conducted within a framework of a set of approaches. It may be qualitative or quantitative and depends upon academic discipline.
2. The logical sequencing of steps undertaken in order to find the answers to the research questions are termed as research methodology. It adopts procedures, methods and techniques that are tested for their validity and reliability.
3. It is unbiased and objective.

According to the definition given by Cresswell, research consists of three basic steps:

1. Formulating a research question or posing a problem, to which the researcher wants to find answers to.
2. Collecting data to answer the questions.
3. Present an answer to the question.

These basic steps have been elaborated further in Table 2.4 and discussed in detail in the following paragraphs.

Table 2.4 Research Process—a Snapshot

STEP 1: FORMULATION OF THE RESEARCH PROBLEM

The manner in which a problem is formulated determines almost every step that follows.

Steps in Formulation of a Research Problem

Here, we can start with the concept of ‘context of discovery’. This is the initial phase of research. During this process, observations, belief, information and general knowledge, etc., guide us about a new idea or a different way of thinking about phenomena.

A reasonable level of knowledge in the broad subject area is required to work through these steps. Usually, the following steps are undertaken to formulate a research problem.

Step 1: Identifying a broad area of interest: What really interests me as a professional? As a teacher, I might be interested in the area of teaching methodology or increasing acts of violence among students, psychology or existence of common conditions of the students in an area.

Step 2: Dividing broad areas into subareas: Suppose I want to study acts of violence among students. It can have various subareas (1) profile of families these students come from, (2) profile of perpetrators, (3) causes for violence, (4) role of politicization of education, (5) impact on society and so on.

Step 3: Focusing on and selecting an area of interest: The researcher may choose one or two areas for current research because it is not possible to pick many

areas simultaneously. Delete the subareas in which you as a researcher do not have any interest and subsequently focus on the area you are passionate about.

Step 4: Identifying the gaps and raising research questions: Within an area, list all the questions the researcher wants to find answers to.

Step 5: Formulation of broad objectives: Objectives grow out of the questions.

Step 6: Assessing and reviewing objectives: As a researcher narrows the research problem, the specific identification of study population is crucial in order to select the appropriate respondents.

Main Considerations in Selecting a Research Problem

These help ensure that your study remains manageable and that you remain motivated.

You can find innumerable research problems in any area. Obviously, you cannot study all the problems.

- 1. Interest:** Research is usually time-consuming and entails the use of resources. Many unforeseen problems may crop up. So the topic should be of interest to the researcher to sustain the desired motivation level.
- 2. Manageable magnitude:** The topic should be manageable within the available time and resources. The broader topic should be broken down to something that is more relevant for the purpose and manageable. It should be specific and clear to the extent possible. The cardinal principle is to choose a research problem that is not too small to be insignificant but not too big to be impossible.

3. **Concept measurement:** The clarity about indicators and measurement of concepts is required. The idea of construct is important here.
4. **Level of expertise:** The adequate level of skills for the task is required.
5. **Relevance:** Though relevance is again a subjective term, the research should add to the existing stock of knowledge and bridge the current knowledge gaps.
6. **Availability of data:** The availability of data of sources is to be ensured before finalizing the topic.
7. **Ethical issues:** The ethical issues and their remedies must be anticipated before formulating the problem.

Extensive Literature Review

Literature review is an integral part of entire research process. It makes significant contribution to each and every operational step at a later stage. After passing through this stage, a researcher is able to acquaint oneself with the available body of knowledge in the area of interest. The main objectives of literature review are as follows.

1. It broadens the knowledge of researcher about the research problem.
2. It brings better clarity and focus to the research problem and it also helps to improve the authenticity of research.
3. It helps to improve the research methodology.
4. It helps to contextualize the findings. It means how value addition has been done by the researcher to the existing stock of knowledge.

The procedure for reviewing literature covers searching the existing literature, reviewing it and developing a theoretical and conceptual framework.

The main sources of literature review are books and journals. In both cases, specifically in journals, there can be a gap of two to three years between the completion of a research project and the publication in a journal.

As with books, the researcher needs to prepare a list of journals for identifying the literatures relevant to his research. Nowadays, researchers make extensive use of the internet sources for literature survey and review, and at the same time, the researcher should be careful about the authenticity of the contents.

Bibliography given at the end of a project gives a clear and complete description of the sources that were used while preparing the report.

Formulation of Objectives

Objectives are the goals you set out to attain in your study. They inform the reader what the researcher

wants to accomplish through the research work. The wording of the objective should be very precise and specific.

Objectives can be written under two headings:

1. Main objectives or aims
2. Sub-objectives

The main objective is an overall statement of the study. It also states the main associations and relationships that we want to establish. The sub-objectives are the specific aspects of the topic that you want to investigate within the main framework.

1. They should be listed numerically.
2. The wording should be clear, complete and specific.
3. Each objective should contain only one aspect of the study.
4. Use action-oriented words or verbs when writing objectives.

The objectives should start with words, such as 'to determine', 'to find out', 'to ascertain', 'to measure', 'to explore', etc. The wording of objectives determines the type of research (descriptive, correlational and experimental) and the type of research design you need to adopt to achieve them. For example, in case of descriptive studies, the objective can be stated as, 'To describe the types of incentives provided by the organizations in Chandigarh to their employees in IT industry'.

In correlational studies, it may state, 'To ascertain the impact of coaching classes on students' performance'.

Example of Main Objective and Sub-objectives

Main Objective

The main objective is to explore the relationship between the use of modern teaching techniques and student performance.

Sub-objectives

The sub-objectives are as follows:

1. To find out the extent of relationship between the use of modern teaching techniques and student performance.
2. To compare the use of modern teaching techniques in government and private schools.
3. To study the impact of modern teaching and the level of motivation of students to learn.

Concepts and Variables

The meanings of terms, such as teaching effectiveness, class performance, job satisfaction may vary from one person to another, from one place to another. Concepts (also known as constructs) are mental images, thus

are not directly measurable. For research, we have to define concepts so that they are understood in the same sense by respondents in case we collect data.

Again for research purpose, concepts have to be made measurable, otherwise how the data can be collected. It means that concepts should be capable of assuming different values. Here, the term indicators and variables come into picture. Anything capable of assuming different values is known as variable.

Let's take another example, if richness is a concept or construct, then assets and income are its indicators. The asset values and annual incomes are variables.

Types of Variables

The variables are classified into categorical and quantitative variables. Quantitative variables vary in degree or amount, such as annual income and categorical variables vary in type or kind such as gender. Categorical variables have been discussed in subsequent discussion.

On the basis of causation, the variables are basically of two types, namely independent and dependent variables.

In an experiment, one discovers and confirms a relationship between an independent variable and a dependent variable.

1. Independent variables (IV) are also known as the manipulated, experimental or treatment variables.

They become the cause of another variable. It is the variable manipulated by the researcher in an experiment.

2. Dependent variables (DV) are also called the outcome or response variables. The dependent variable is the variable that changes as a result of changes made on the independent variable.

For example, in the study about impact of coaching on student performance, coaching is independent variable and student performance is dependent variable.

In addition, there can be intervening variables and extraneous variables.

1. Intervening variables: These are also termed as mediator variables. They establish link between IV and DV. These are variables through which one variable affects another variable. These are helpful to understand the process.

For example, tissue damage is an intervening variable in smoking and lung cancer relationship. We can use arrows (which mean causes or affects) and draw the relationship that includes an intervening variable like the one given below.

Smoking \implies Tissue damage \implies Lung cancer

2. Extraneous variable:

(a) In real-life situations, there can be many factors or variables that may affect the outcome. These variables are termed as extraneous variables.

(b) Extraneous variables also affect the dependent variable, although these are not manipulated by the researcher.

(c) They may 'mask' the relationship between independent variable and dependent variable.

Extraneous variables may directly affect the dependent variable or may combine with the independent variable to produce an effect. Therefore, extraneous variables must be controlled so that the experimenter can determine whether the dependent variable changes in relation to variation in the independent variable.

They actually compete with the independent variable in explaining the outcome.

(d) If an extraneous variable is the real reason for an outcome instead of independent variables, then it is also known as confounding variable because it has confused or confounded the relationship we are interested in.

Take an example from teaching. Speed of learning then depends upon meaningfulness of topic, the greater the meaningfulness, the faster the learning. Therefore, the speed of learning is called dependent variable and meaningfulness is independent variable.

On the basis of study design, the variables can be active variables and attribute variables. Active variables can be manipulated or controlled during the study, whereas attribute variables, such as gender, age, etc., cannot be changed, controlled or manipulated.

On the basis of unit of measurement, the variables can be categorical or continuous. Categorical are measured on nominal or ordinal scale and they can be further classified as follows.

1. Constant variable: Only one value, such as flower, tree, etc.

2. Dichotomous variable: Two categories such as male and female, rich and poor, etc.

3. Polytomous variable: More than two categories, such as below average, average, above average, etc.

Measuring Variables

Measurement of variables is central to research studies. According to Stevens, measurement scales can be of four types and they are listed below.

1. Nominal scale: It is also termed as classificatory scale. A variable being measured on a nominal scale may have one, two or more subcategories

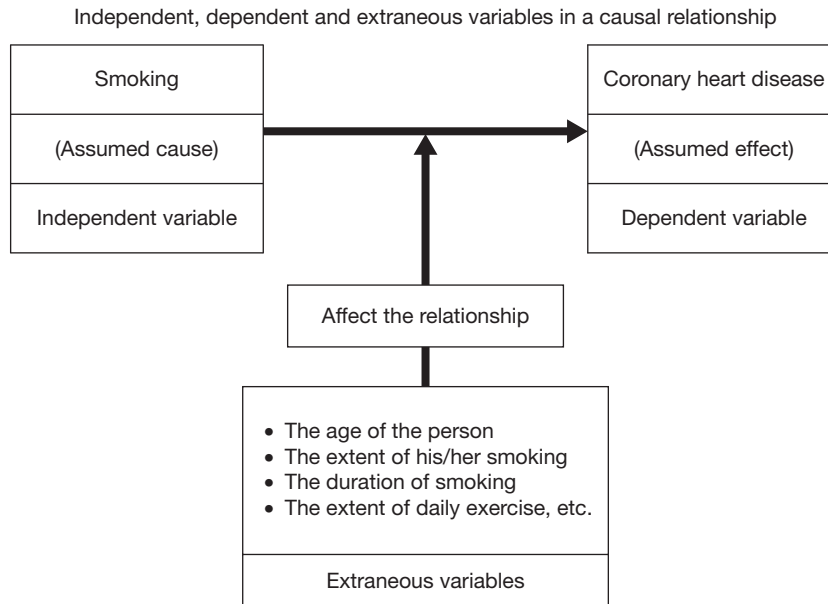

Figure 2.4 Relationship between Independent, Dependent and Extraneous Variables

depending upon the extent of variation. For example, gender can be classified into two subcategories, such as male and female.

2. **Ordinal or ranking scale:** It usually ranks the subgroups in a certain sequence or order. For example, examination marks can be measured either quantitatively, i.e., in absolute terms or in percentage terms or qualitatively using subcategories, like above average, average and below average. The distance between these subcategories may or may not be equal.

The socio-economic status can be categorized as lower class, middle class and higher class. The middle class can further be divided into lower middle, middle-middle, and higher middle. The attitudinal or Likert scale also falls in the same category.

3. **Interval scale:** An interval scale has all the characteristics of an ordinal scale. In addition, it uses a unit of measurement with an arbitrary starting and terminating points. For example, Celsius scale is from 0°C to 100°C.
4. **Ratio scale:** They are used to gather quantitative information. It combines the properties of nominal, ordinal and interval scales. In addition, it has its own property. It has a fixed starting point. Ratio scale consists of equidistant points and has a meaningful zero point. If we ask respondents about their ages, the difference between any two years would always be the same and zero signifies the absence of age or birth. A 20-year-old person is twice the age of 10-year-old ones. In order to respect the

notion of equal distance between adjacent points on the scale, you must make each category of the same size. Therefore, if the first category is ₹0 to ₹9,999, then the second category is to be ₹10,000 to ₹19,999, and so on. There should be no overlapping of categories, and they should follow a logical order, in increasing order.

Attitudinal Scale

If you want to ascertain the attitude of students towards a teacher, the questionnaire framed may be open-ended or close-ended. If the questionnaire is open-ended, it may invite respondents from sample to describe the attitude they hold towards teaching quality. If the researcher has framed close-ended questions, the respondent is given options, such as strongly agree (SA), agree (A), undecided (U), disagree (D) and strongly disagree (SD).

Types of Attitudinal Scale

As the attitudinal scales are very important in qualitative research, the different types of attitudinal scales are as follows.

1. **Likert scale:** It is also termed as summated rating scale. It is the easiest one to construct. It is based upon the assumption that each statement or item on the scale has equal attitudinal value, importance or weight. The quality of a teacher may have many dimensions, like use of knowledge base, communication skills, presentation of contents,

organization of material, promptness to solve student problems, etc. The respondents may have different attitudes towards different aspects.

Statements about teacher	SA	A	U	D	SD
1. Knows the subject well (+)					
2. Willing to solve students' problems (+)					
3. Have poor communication skills (-)					
4. Is hard to approach (-)					
5. Good teaching skills (+)					
6. Liking/disliking (+/-)					

Some statements may be positive, some negative and some neutral. Then, the scores may be assigned to different responses and the score of each respondent is calculated. Some respondents may have more positive attitude than others. There can be numerical scale as well. Instead of SA, A, U, D and SD, it will have values 5, 4, 3, 2, and 1.

- Thurstone scale:** It may assign weightages to the different statements, such as willing to solve student problem may have a weight of 1, the statement about subject knowledge has weight of 1.5, and statement in context of teaching skill can have weight of 2 and the scores are calculated accordingly.
- Guttman scale:** It is mainly based on ratio scale. It is quite difficult to develop.

Factor Analysis

Factor analysis allows researchers to describe many variables using few factors, thus reducing the number of variables to a manageable level in terms of factors can be analysed further.

Formulating Hypothesis (Plural – Hypotheses)

Researchers will have one or more hypothesis. These are the questions that they want to address, which include predictions about possible relationships between the things they want to investigate (variables).

As a researcher, we do not know the exact truth but have a hunch about the outcome and thus, we make some prediction about the outcome. This hunch or prediction about the outcome is called hypothesis. It can also be termed as an educated guess or assumption about some phenomenon. This assumption is tested by collecting information that will enable us to conclude if our hunch was right. Thus, defining hypothesis has the following features.

- It is a tentative proposition.
- The validity of a hypothesis is unknown.
- In most cases, formulating a hypothesis specifies the logical relationship between two variables.
- It must be generalizable.
- It should be simple.

Main Functions of a Hypothesis

Formulating a hypothesis, though important, is not absolutely necessary for a research. A perfectly valid research can be conducted even without formulating any hypothesis. In general, formulation performs the following functions.

- They bring focus, clarity and specificity in the research study.
- It helps in making sample design.
- They make the study more objective.
- They facilitate the formulation of a theory.

Hypothesis can be of the following types:

- Descriptive hypothesis:** It is formulated to describe the characteristics. For example, the present rate of unemployment in urban areas of India is 10%.
- Relational hypothesis:** They indicate the relationship between two variables. For example, parents residing in urban areas spend more money on the education of their children.
- Explanatory hypothesis:** They guide about the cause-and-effect relationship between two variables. For example, when salaries increase, the spending on food items also increase. However, reverse may not be true.

In statistical hypothesis testing, you have a null hypothesis against which you are testing an alternative. The hypothesis concerns one or more characteristics of the distribution.

Concept of Null and Alternative Hypotheses

Professor R. A. Fisher was the first to use such an experiment for testing the hypothesis by scientific investigation. He talked about the principle of replication, randomization and local control in research.

Observations that run contrary to those predicted are taken as evidence against the hypothesis; observations that are in agreement with those predicted are taken as supporting the hypothesis. It is the same as we solve everyday problems, but there is only a small twist that is termed as null and alternate hypothesis.

As discussed, a hypothesis is a statement that relates two or more constructs. For example, the greater the stress experienced in a job, the lower the job satisfaction of employees.

Here, you need a clear operational definition of stress and job satisfaction. A good hypothesis is tested by the research that you propose to do.

In classical hypothesis testing, a statement about the population parameter and then a random sample from the population are taken and the hypothesis are tested with the appropriate sample statistics.

Suppose, as a teacher you are under the impression that a high dropout rate exists among students from rural background or semi-urban areas. Then, we collect data from all the students or some of them to check the validity of the assumption or prediction.

Null hypothesis (H_0) will state that the place of residence (rural, urban, semi urban) does not have any impact on the dropout ratio. The alternative hypothesis (H_A) will state that dropout rate is higher among students from rural areas. Then, data are collected to challenge the null hypothesis. If null hypothesis is rejected based on the data analysis, the alternative hypothesis will be automatically accepted. Hypothesis can also become the basis of further enquiry. Its formulation is based upon your own or someone else's observation.

Directional and Non-directional Hypothesis

In studies relating to the academic performance of boys and girls, the null hypothesis would state that boys and girls have equal performance level. The directional hypothesis may state that boys or girls are more able. It tends to be more specific about the outcome. The non-directional alternative would simply state that there is a gender difference. We have no idea whether boys are more able or girls are more able and only say that they are not the same.

STEP 2: PREPARING RESEARCH DESIGN AND STUDY DESIGN

Now, when the setting up of hypothesis is done, the next step is research design. It is a roadmap to carry out the research. It is a step-by-step approach addressing basic questions like, what is the scope of research study?, what type of data is to be collected? or something like, what methods should be used to collect the data and to analyse them? The justification is required at every step as the resources are at stake. In fact, many of the research methods are basically research designs or closely linked with them.

Research design is an activity and time-based plan keeping in view of the research objectives. It guides about the types of information to be collected and their sources. It is a framework for specifying the relationship among the variables under study. It outlines the procedures. It also answers questions, like is that an

intensive study of a small sample more effective than a less intensive study of a large sample? and should the analysis be primarily qualitative or quantitative?

Research design is also defined as plan, structure and strategy of investigation to get answers to research questions. It also controls variance. It is a master plan specifying the methods and procedures for collecting and analyzing the needed information.

Ghuri (1995) tried to establish a link between research design and problem structure as shown in Figure 2.5.

Figure 2.5 Research Design

Therefore, research design involves the following consideration.

1. Objectives of research study
2. Selection of method of data collection
3. Source of information—sample design
4. Tools for data collection
5. Data analysis—qualitative and quantitative

Research design achieves the following purposes:

1. It makes research efficient
2. Optimum utilization of resources—maximum information with minimal expenditure, time and money
3. Flexibility
4. Minimization of bias
5. Reliability and objectivity

Study Design on the Basis of Number of Contacts

On the basis of contacts, research can be cross-sectional or longitudinal. In cross-sectional studies, data is collected only once during the research process. The data are not necessarily gathered simultaneously and data collection may spread over a period of time, such as one week, one month or so. It may also take a longer period. For example, data may be collected about holiday preference of software professionals in India.

In longitudinal studies, data would be collected at several points of time. For example, a drug has been administered to a group of patients to check the efficacy of drug and the data may have to be collected many times to check their health conditions. HR department of an organization may collect data about

employee satisfaction level before and after the raise of pay or promotion. The marketer may be interested in getting information about the impact of advertisement on sales.

Study Design on the Basis of Reference Period

1. **Retrospective study design:** It is meant for a phenomenon or a situation that has occurred in the past.
2. **Prospective study design:** It pertains to likely prevalence of a phenomenon in the future.

Study design based on reference period can be a combination of both retrospective and prospective studies.

Study Design on the Basis of Nature of Investigation

For example, a pharmaceutical company wants to test the impact of a drug in treating people. There is cause-and-effect relationship between the two variables. The research can be broadly classified into two for the purpose of study design, namely experimental study and non-experimental study.

Experimental Study

If a study is done in a manner that we start from cause to establish the effects, the independent variable can be manipulated by the researcher so as to see the effect of change in independent variable (cause) on dependent variable (effect).

The treatment groups (not in terms of medical science) are of two types, they are experimental group and control group.

1. **Experimental group:** Group receiving treatment is the experimental group.
Example: Students of a class being taught with new teaching method, a group of patients being administered a new medicine, etc.
2. **Control group:** Group not receiving treatment is the control group.

Example: Students being taught with same conventional method, a group of patients with no medicine or no new medicine, etc.

Control in an experiment means that the researcher wants to investigate the effect of various factors one at a time in that experiment.

Randomization

It covers the following aspects:

1. The selection of a group as experimental or control group is random.
2. All participants have equal chance of being chosen for experimental group or control group.

3. The larger the number of participants, the greater the chance that groups will represent the population.

Non-experimental Study

It is a retrospective type of study. Thus, we start from the effects to trace the cause. Here, the assumed cause has already occurred. Variables are still referred to as IV and DV. *Example:* Comparing opinions from natural groups.

There can be other types of study designs as well. A few important study designs are as follows.

1. **Action research:** Action research has been discussed earlier. It is a research initiated to solve an immediate problem. It was coined by Kurt Lewin. The aim of fundamental research is the development of theory and that of applied research is on its general application, whereas the action research is focused on immediate application of theory.
For example, the objective of action research by the teacher will be to identify the problems and then to improve classroom practises himself.
2. **Cohort studies:** It is based on the existence of some common characteristics, such as year of birth, graduation or marriage. For example, the researcher wants to study the pattern of employment of MBAs passed in 1991, when India was facing economic crisis or study of people born between 1995 and 2000.
3. **Placebo design:** A patient, for example, may have an impression that he is undergoing treatment, but in reality, he is being given only sugar pills. It can play an important role in his recovery. There can be two groups, where one receiving the actual treatment and the second receiving placebo treatment. The control group can also be used in this design. The first group receives the actual treatment, the second placebo treatment and the third group (control group) receives nothing.

STEP 3: DEVELOPING DATA COLLECTION INSTRUMENT (RESEARCH INSTRUMENT)

Data is defined as the information recorded to represent facts. Some important points about data are worth mentioning here.

1. Data represent facts about hypothesized variables.
2. Data is analysed to determine consistency with prediction. Prediction is in the form of setting up of hypothesis.
3. If data and prediction are consistent, then null hypothesis is supported.
4. If data and prediction are inconsistent, hypothesis is not supported and is rejected.

The quality and validity of the output are solely dependent on the tools used for data collection. The data can be classified as primary and secondary, objective and subjective, and qualitative and quantitative.

Primary Data and Secondary Data

Primary data is collected for the purpose of current research project, whereas secondary data is collected for some other research purpose. It is collected fresh by the researcher and is based on surveys, observations and experimentation. It is expensive and difficult to acquire. It is reliable as it has been obtained directly with a specific problem in view. Figure 2.6 shows various ways in which primary data can be collected.

Figure 2.6 Sources for Collection of Primary Data

Secondary data is collected from external sources, such as TV, radio, the Internet, magazines, books and newspapers. These data might have been collected for different purposes. It is an inexpensive and a quick method to obtain information. Sometimes, it is the only way when the original source is inaccessible. It should be ascertained (i) whether the data is relevant to your study? and (ii) is it credible?

Objective Data and Subjective Data

Objective data are independent of any single person's opinion, whereas subjective data can be an individual's opinion or it can be dependent upon the researcher.

Qualitative Data and Quantitative Data

Qualitative data is the description of things made without assigning numeric values. For example, facts generated from unstructured interview. It needs the researcher's interpretation.

Quantitative data entail measurements in which the numbers are used directly to represent properties of things. It is ready for statistical analysis. A larger sample is required in quantitative data and with proper sampling design, the ability to generalize is also high.

Observation Method

This is used in behavioural sciences. It is about collecting primary data by investigator's own direct observation of relevant people, actions, and situations without asking from the respondent. For example, a retail chain

sends observers posing as customers into competitors' stores to check on cleanliness and customer service.

Observation can yield information which people are normally not willing or able to provide. For example, by observing many copies of class work, the untidy copies indicate that quality of teaching is not satisfactory.

Types of Observations

1. Structured—for descriptive research
2. Unstructured—for exploratory research
3. Participant observation
4. Non-participant observation
5. Disguised observation

Limitations

Initially, there are many behavioural aspects that may not be observable directly. For example, marketer as a researcher cannot measure the feelings, beliefs and attitudes that motivate buying behaviour and infrequent behaviour cannot be observed.

Secondly, the observation method is quite expensive.

Survey Method

Sometimes, observation method is supplemented with survey method. This approach is most suited for gathering descriptive information and this research may be direct or indirect. It is of two types and they are structured and unstructured surveys.

1. **Structured surveys:** They use formal lists of questions to be asked from all respondents in the same manner.
2. **Unstructured surveys:** They give the interviewer the flexibility to probe respondents and direct the interview according to their answers.

Advantages

1. Quick and low cost in comparison to observation method.
2. Survey method can be administered to collect many different types of information.

Limitations

1. Privacy issues
2. Reluctance on the part of respondents
3. Biases.

Contact Methods

Information may be collected by mails, telephone, personal interview, etc.

Mail Questionnaires

Advantages

1. It includes collecting large amounts of information at a low cost per respondent.

2. Respondents may give more honest answers to personal questions on a mail questionnaire.
3. It is unbiased as no interviewer is involved.
4. Convenient for respondents who can answer when they have time.
5. Good way to reach people who travel.

Limitations

1. It is not flexible.
2. It takes a longer time to complete than telephonic or personal interviews.
3. It has low response rate.
4. Little control of researcher over the process.

Telephonic Interviewing

Advantages

1. It is a quick method.
2. It gives greater flexibility to interviewer as he can explain questions not understood properly by the respondent.
3. It has greater sample control.
4. It has higher response rate.

Limitations

1. High cost per respondent as interviewer should be more skilled.
2. Privacy issues.
3. Complete standardization is not possible.
4. Wrong entry is possible due to lack of time.

Personal Interviewing

It is very flexible and can be used to collect large amounts of information. Trained interviewers can hold the respondent's attention and are available to clarify difficult questions.

They can guide interviews, explore issues and probe as the situation requires. Personal interviews can be used in any type of questionnaire and can be conducted fairly quickly. Interviewers can also show actual products, advertisements or packages, and observe and record their reactions and behaviour. This takes two forms, namely intercept interviewing (for individuals) and focus group interviewing (for groups).

Intercept Interviewing

Advantages

1. It is widely used in marketing research such as tourism.
2. It allows the researcher to reach known people in a short period of time.
3. It is the only method of reaching people whose names and addresses are unknown.
4. It involves talking to people at homes, offices, on the street or in shopping malls.

5. The interviewer must gain the interviewee's cooperation.
6. It is time-consuming and may range from a few minutes to several hours (for longer surveys, compensation may be offered).
7. It involves the use of judgemental sampling, i.e., the interviewer has guidelines as to whom to intercept, such as 25% under 20 years of age and 75% over 60 years of age.

Limitations

1. There is greater room for error and bias on the part of the interviewer who may not be able to correctly judge age, race, etc.
2. Interviewer may not be comfortable talking to certain ethnic or age groups.

Focus Group Interviewing

Advantages

1. It is usually conducted by inviting 6–10 people to gather for a few hours with a trained moderator to talk about a product, service or organization. The meeting is held in a pleasant place and refreshments are served to create a relaxed environment.
2. The moderator needs objectivity, knowledge of the subject and industry and some understanding of group and individual behaviour.
3. The moderator starts with a broad question before moving to more specific issues, encouraging open and easy discussion to bring out the true feelings and thoughts. At the same time, the interviewer focuses on the discussion and hence, the name focus group interviewing.
4. It is often held to help determine the subject areas on which questions should be asked in a later, large-scale, structured, direct interview.
5. Comments are recorded through note taking or videotaped and studied later (content analysis).

Limitations

1. It is more expensive than telephonic survey.
2. Group interview studies keep the sample size small enough to keep the time and cost down. Therefore, it may be difficult to generalize from the results.
3. There is some possibility of interviewer bias.

Construction of a Research Tool (Questionnaire)

The questionnaire depends upon research objectives. For each objective or research questions, list all the associated questions that a researcher wants to answer through study. Then, the information required to answer them is listed and finally, the questions are listed.

Questionnaire - Concept and Types

A questionnaire consists of a set of questions presented to a respondent for answers. The questionnaire is used during structured surveys or interviews. The respondents read the questions, interpret what is expected, and then write down the answers themselves. It is also called an interview schedule when the researcher asks the questions and records the respondent's reply on the interview schedule. Here, the researcher may have to explain questions to the respondents.

There are many options before the researchers adopt this method, but questionnaires should be developed and tested carefully before being administered on a large scale. There are three basic types of questionnaires, such as closed-ended, open-ended and a combination of both.

- 1. Closed-ended questionnaire:** Closed-ended questionnaires generally include multiple choice questions or scale questions. This type of questionnaire can be administered to a large number of respondents or sample size. As there is a set format, the data generated from questionnaire can be easily fed into a computer system for the purpose of analysis.
- 2. Open-ended questionnaire:** Open-ended questionnaires offer the flexibility to respondents to answer in their own words. It may leave a blank section to write an answer.
Closed-ended questionnaires might be used to find out how many people use metro rail service in New Delhi, but open-ended questionnaires might be used to find out what people think about the quality of service.
- 3. Combined questionnaire:** In this method, it is possible to find out how many people use a service and what they think of the service in the same form. The combined questionnaire may begin with a series of closed-ended questions, with boxes to tick or scales to rank and then finish with a section of open-ended questions or a more detailed response.

STEP 4: SELECTING SAMPLES

If the population under study is small or manageable then the data should be collected on each item or entity under study. But this is rarely the situation in a survey research. Sampling is required if the universe of population under study is too large.

A sample may be defined as a representative subset or cross section of the population in miniature. It should homogeneously represent the entire field.

Validity of research results much depends upon the quality of the sample drawn. There are scientific,

logical or statistical techniques for formulating a sample.

If the sample is biased or lopsided then the results cannot be trusted or generalized.

The main benefits of sampling are as follows:

- 1. Reduction in overall cost of research.**
- 2. Less time-consuming and in certain cases, this is desirable as well.**
- 3. In case, the population is consistent, this becomes even more desirable.**

Ideally, a representative sample should be an unbiased indication of what the population is like. Some of the factors that researchers consider when selecting a representative sample include sex, age, educational level, socioeconomic status and marital status.

For example, if roughly half of the total population of interest is female, then a sample should be made up of approximately 50 per cent women in order to be representative.

In research, the population does not mean only human population all the times and it can be factories, schools, etc. Population is denoted by N and sample as n .

The factors affecting inferences drawn from a sample are dependent upon the following.

- 1. Sample size:** The larger the sample, the more is the accuracy.
- 2. Variation in population:** The greater the variation in population, the greater will be the uncertainty of outcome. The higher the consistency in population, the more confident we are about the quality of outcome. The higher the variations in population, the larger should be the sample size.

Types of Sampling Techniques

- 1. Probability or random samples:** Each person in the population has equal, independent and known chances of being selected. In case, there are 100 elements in a population, every element has 1/100 chance of being selected in a sampling exercise. Here, independence means that selection of one element is neither being affected by the selection of other elements nor it will affect the other elements.

Though probability or random sampling is mostly correct, still some error, technically known as 'Margin of Error' cannot be avoided. It can be calculated statistically and accounted for in the results. NET aspirants can refer to terms, such as 'level of significance' for better idea.

Now we can discuss the important types of probability sampling.

- (a) **Simple random sample:** Every element or member of the population has a known and equal chance of being selected.
- (b) **Stratified random sample:** In case, the population is heterogeneous, the population can be divided into different strata. The population within a stratum is homogeneous with respect to the characteristics under study. Population is divided into mutually exclusive groups, such as age groups and random samples are drawn from each group. The population in a particular stratum may be in proportion to its population. Suppose there are 1000 students in a college, 600 of them study humanities and 400 pupils study commerce. In a sample of 100, 60 students will be from humanities and 40 from commerce, i.e., in the same ratio as in the overall population.
- (c) **Cluster sample:** The simple and stratified sampling is adopted in situations when population size is small and units are identifiable. But if the population is larger, the researcher can go for cluster sampling. The population is divided into mutually exclusive groups and the researcher draws a sample of the group to interview. For example, in a national level survey, at the first few levels, a few states may be selected. Within the states, a few districts may be selected and then, within each district, blocks may be selected and then villages. It is termed as 'multistage cluster sampling'.
2. **Non-probability sampling:** It is a non-structured sample and items are included in the study due to some convenience of the researcher, etc. This sampling takes less time and is handy. As all members of population do not get equal chance of being selected, non-probability sampling may be lopsided, loaded with biases and has higher margin of error.

The types of non-probably sampling have been discussed as follows:

- (a) **Convenience sampling:** The researcher selects the easiest population members from which to obtain information.
- (b) **Judgement or purposive sampling:** The researcher uses his or her judgement to select population members who are likely to provide accurate information. This can be used for historical research or descriptive research.
- (c) **Quota sampling:** The researcher finds and interviews a prescribed number of people in each of several categories. Here, the main criterion used by the researcher is the ease to access sample population. The sample is selected from a location convenient to him

or her. Here, there are some possibilities to include people with some visible characteristics. However, the results may not be generalized to larger populations.

- (d) **Accidental sampling:** It is akin to quota sampling, but it is used in market research (in market places) where a researcher can come across any person and they may not have any information.
- (e) **Snowball sampling:** In this kind of sampling, the information may be selected from few individuals and they may identify other people for the purpose of gathering information. They may also become a part of the sample. It creates a network of sample elements.

Determining Sample Design

Designing the sample calls for three decisions:

1. **Sample itself:** Who will be surveyed? It further depends upon what type of information is required.
2. **Sample size:** How many people should ideally be surveyed? Large samples are likely to give more reliable results than small samples. However, it has to be a trade-off between cost and accuracy.
3. **Sampling:** How should the sample be chosen? Sampling can be done by adopting either probability or non-probability method.

The sample size for any research study depends upon four Ps:

1. **Purpose:** The required precision of study.
2. **Population:** The size and nature of population under study
3. **Procedure:** The time, budget and resources available.
4. **Publishing:** The importance of the studies.

Note: The more heterogeneous or diverse the population is, the bigger should be the sample size.

STEP 5: WRITING A RESEARCH PROPOSAL

A research proposal is a document of usually three to seven pages that informs others of a proposed piece of research. This proposed research is usually a Masters or Doctorate by thesis, but it can also be a work for a corporate purpose.

A research proposal is a document written by a researcher that provides a detailed description of the proposed program. It is like an outline of the entire research process that gives the reader a summary of information discussed in the project. Research

proposals are written for various reasons, like budget request for the research certification requirements for research, etc.

Main Elements of Research Proposal

1. Need of a specific research project
2. Benefits and beneficiaries
3. The type of data to be collected and the means to collect the data.
4. Types of analysis.
5. Help required from other organization, if any.
6. Duration, facilities and requirement of funds.
7. Profile and credentials of the proposers.

STEP 6: COLLECTING DATA

There are many alternatives available to collect relevant data. The researcher should select one of these methods of collecting data taking into account the nature of investigation, scope and objective of inquiry, financial cost, availability of time and the desired accuracy.

Primary data can be collected either through experiment or through survey. If the researcher conducts an experiment, he will take some quantitative measurements (data). The data is analysed further to test the hypothesis.

In case of a survey, data can be collected by any one or more of the following ways.

1. **By observation:** This entails the collection of information by the way of investigator's own observation without interviewing the respondents. The information obtained relates to the current happenings. This method is very expensive and the information gathered in such a manner is limited. This method is not suitable for research where large samples are required as is the case with quantitative research.
2. **Personal interviews:** The investigator follows structured approach and the questions are pre-conceived. Here, the output also depends upon the ability of the interviewer to a large extent.
3. **Telephonic interviews:** This method of collecting information involves contacting the respondents on telephone itself. It is used when the survey has to be accomplished in a very limited time.
4. **Mailed questionnaires:** Questionnaires are mailed to the respondents with a request to return after completing the same. It is the most commonly used method in economic and business surveys. A pilot study may be conducted for testing the questionnaire to check its appropriateness for the purpose.

5. **Schedules:** In this method, the enumerators are specially appointed and trained for gathering information. Schedules consist of relevant questions. The enumerators visit respondents with these schedules. Schedules are filled up by the enumerators on the basis of replies given by the respondents.

Some random checking by the supervisors may be required to ensure the validity of the research process. Although he should pay attention to all these factors, but much depends upon the ability and experience of the researcher.

STEP 7: PROCESSING AND ANALYSING DATA

After collecting data, the next step is to analyse it. It requires a number of closely related operations, such as establishment of categories and the application of these categories to raw data through coding, tabulation and then drawing statistical inferences.

The large data should be condensed into a few manageable groups and tables for further analysis. This is done with the help of classification of data into more relevant, purposeful and usable categories.

1. **Editing:** The process of cleaning data is called editing. The purpose of editing is to identify and minimize errors, miscalculations, misclassification or any gap in information provided by the respondent. Editing improves the quality of the data for coding.
2. **Coding:** It depends upon how a variable has been measured in your research instrument. For coding, the first step is to ensure the nature of data, i.e., whether it is quantitative or qualitative. The qualitative data may be descriptive about the following details or case history. For example, categorical or discrete, gender (male or female), income (below average or above average), attitude (strongly favourable, favourable or unfavourable).

Quantitative and categorical information is processed to be converted into numerical values called codes. It is usually done at this stage through which the categories of data are transformed into symbols that may be tabulated and counted. After coding is completed, the data are tabulated.

The descriptive information goes through a process called content analysis with a motive to get an idea about the 'themes' of the descriptive information such as an interview. In descriptive or qualitative data, the researcher may go through the transcription of all interviews in which people may use different words to express the same phenomenon.

Research Biases

The most formidable challenge in research is to remain objective and free from biases. There can be a variety of biases to distort people's impressions of collected data.

Let's discuss some important biases as shown below:

- 1. External influences:** One's culture or opinion created by media (say social media) can influence people to accept a particular world view.
- 2. Personal bias:** This may happen due to personal beliefs, attributes or past experiences.
- 3. Observer bias:** Some events are taken as meaningful by some and not taken meaningful by others. Researchers themselves were raised in certain cultures and societies. They also have role expectations. These background factors can affect all the way that researchers observe and interpret events in their lives.
- 4. Expectancy bias:** Researchers sometimes expect to find specific outcomes, they may see (or note) what they expect to see rather than remain objective.
- 5. Placebo biases:** It operates when people strongly want to believe a treatment is successful. For example, many people may claim to feel better after taking a placebo such as a sugar pill.

Classification of Data

Classification of data is a process of arranging data in groups or classes on the basis of common characteristics. It can be done in the following ways.

Classification According to Attributes

The data can be descriptive (**Example:** Literacy, sex, religion, etc.) or numerical (**Example:** Weight, height, income, etc.). Further classification can be either simple classification or manifold classification.

- 1. Simple classification:** In this classification, we consider only one attribute and divide the universe into two classes, where one class consisting of items possessing the given attribute and the other class consisting of items which does not possess the given attribute.

Example: The number of candidates with MBA degree is as follows.

	Yes	No	Total
MBA degree	21	09	30

- 2. Manifold classification:** In this classification, we consider two or more attributes simultaneously and divide the data into a number of classes.

Example: The educational qualification of faculty members is given below.

	Yes		No		Total	
Gender	M	F	M	F	M	F
PG degree						
Ph.D.						

Classification According to Class Intervals

Classification is done with data relating to income, age, weight, tariff, production, occupancy, etc. Such quantitative data are known as the statistics of variables and are classified on the basis of class intervals. For example, people whose income is within ₹2001 and ₹4000 can form one group or class, those with income within ₹4001 and ₹6000 can form another group or class and so on. The number of items which fall in a given class is known as the frequency of the given class.

Tabulation

Tabulation is a part of the technical procedure wherein the classified data are put in the form of tables. It is the process of summarizing raw data and displaying the same in compact form for further analysis. The mechanical devices can also be used for this purpose. When data are really large, computers can be used for tabulation. It also makes it possible to study large number of variables affecting a problem simultaneously. It is an orderly arrangement of data in columns and rows. It is essential because of the following reasons.

1. It conserves space and reduces explanatory and descriptive statement to a minimum.
2. It facilitates the process of comparison.
3. It facilitates the summation of items and the detection of errors and omissions.
4. It provides the basis for various statistical computations.

Tabulation may also be classified as simple and complex tabulations. Simple tabulation generally results in a one-way table that supplies answers to questions about one characteristic of data only. Complex tabulation usually results in two-way tables, which give information about two interrelated characteristics of data, three-way tables or still higher order tables are also known as manifold tables.

Analysis of Data

After tabulation, analysis is done with the help of different mathematical and statistical techniques, such

as percentages, averages, coefficients of correlation, regression and so on. It largely depends upon whether the data is qualitative or quantitative.

Qualitative Data Analysis

The analytical approach may be personalized and there may be few rigid rules and procedures. Generally, the researcher needs to go through a process called content analysis. Content analysis means analysis of the contents of an interview in order to identify the main themes that emerge from responses given by the respondents. This process involves the following steps:

- 1. Identify the main themes:** The researcher needs to carefully go through the descriptive responses given by respondents to each question so as to understand the meaning they communicate. It helps in developing broad themes that reflect these meanings. For example, people use different words and languages to express themselves.
- 2. Assign codes to the main themes:** Assigning codes is required when the researcher wants to count the number of times a theme has occurred in an interview.
- 3. Classify responses under the main themes:** Having identified the themes, the next step is to go through the transcripts of all the interviews and classify the responses under different themes.
- 4. Integrate themes and responses into the text of your report:** Having identified the responses that fall under different themes, the next step is to integrate the themes and responses into the text of your report. It entirely depends upon the way the researcher wants to communicate the findings to the readers.

Quantitative Data Analysis

This method is most suitable for large, well-designed and well-administered surveys using properly constructed and worded questionnaire. Data can be analysed either manually or with the help of a computer.

- 1. Manual data analysis:** This can be done if the number of respondents is reasonably small and if there are not many variables to analyse. However, this is useful only for calculating frequencies and for simple cross-tabulations. Manual data analysis is time consuming. The easiest way to do this is to code it directly onto a large graph paper in columns.
- 2. Data analysis using a computer:** If you want to analyse the data using computer, you should be familiar with the appropriate program. In this area, knowledge of computer and statistics plays an important role.

The most common software is SPSS for windows. However, data input can be a long and laborious process and if data is entered incorrectly, it will influence the final results.

In the process of analysis, relationships or differences, supporting or conflicting with original or new hypothesis should be subjected to tests of significance to determine with what validity the data can be said to indicate any conclusions.

Hypothesis Testing

After analysing the data as stated above, the researcher is in a position to test the hypothesis. As discussed earlier, the qualitative studies may not have any formal hypothesis.

In quantitative studies, we have to see whether the facts support the hypothesis or they happen to be contrary. This is the usual question that should be answered while testing hypothesis. Various tests, such as Chi-square test, *t*-test and *F*-test have been developed by statisticians for this purpose.

The hypothesis may be tested through use of one or more such tests, depending upon the nature and object of research inquiry. Hypothesis testing will result in either accepting the hypothesis or rejecting it. If the researcher had no hypothesis to start with, generalizations established on the basis of data may be stated as hypothesis to be tested by subsequent researches in times to come.

Generalizations and Interpretation

If a hypothesis is tested and upheld several times, it may be possible for the researcher to arrive at generalization, i.e., to build a theory. As a matter of fact, the real value of research lies in its ability to arrive at certain generalizations. If the researcher had no hypothesis to start with, he might seek to explain his findings on the basis of some theory. It is known as interpretation. The process of interpretation may trigger off new questions which in turn may lead to further researches.

STEP 8: WRITING A RESEARCH REPORT

Writing a report is the last and for many, the most difficult step of the research process. The report informs the world what you have done, what you have discovered and what conclusions you have drawn from your findings. The report should be written in an academic style. The language should be formal and not journalistic.

Research Report Format

Traditional written reports tend to be produced in the following format.

Title Page

1. Title of the research project.
2. Name of the researcher.
3. Purpose of the research project.
For example: 'A research project submitted on partial fulfilment of the requirements of XYZ University, New Delhi, for the degree of _____'.
4. Date of publication.

Table of Contents

In this section, the contents of the report, either in chapters or in subheadings are listed.

Example

Contents	Page No.
Introduction	
Chapter I Theoretical Framework and Review of Related Literature	
Chapter II Research Design	
Chapter III Data Analysis and Interpretation	
Chapter IV Summary and Conclusion.	
Suggestions for Further Research	
References/Bibliography	
Appendices	
Appendix I Questionnaire for Employees	
Appendix II Questionnaire for Managers	

List of Tables

This section includes the title and page numbers of all tables.

Example

Table No.	Title	Page No.
1.	Income levels of respondents	
2.	Age distribution of respondents	

List of Figures

This section contains the title and page numbers of all graphs, pie charts, etc.

Example

Figure No.	Title	Page No.
1.	Pie chart showing the age distribution of respondents	
2.	Bar graph showing the popularity of menu items	

Acknowledgements

In this section, the researcher may acknowledge the institute, principal, faculty guides (both research guide and technical guide), research participants, friends, etc.

Introduction

This section introduces the research, setting out the main aims and objectives. It is actually a rationale for the research.

Theoretical Framework and Review of Literature

This section includes all the background research information that has been obtained from the literature review. You must indicate from where all the information was obtained. Thus, it is mandatory to keep a complete record of everything the researcher has read. Otherwise, there are chances that the researcher could be accused of plagiarism, which is akin to intellectual theft.

Research Design

This section includes all practical details followed for the research. After reading this, any interested party should be able to replicate the research study. It includes the methods used for data collection, sampling procedures, tools used for data collection and analysis of data.

Data Analysis and Interpretation

If you have conducted a large quantitative survey, this section may contain tables, graphs, pie charts and associated statistics. If you have conducted a qualitative piece of research, this section may be a descriptive prose.

Summary and Conclusion

In this section, you sum up your findings and draw conclusions from them, perhaps in relation to other research or literature.

Recommendations

If the research has been conducted for any client organization, this section could be treated as the most important part of the report. Sometimes, this section is included at the beginning of the report.

Suggestions for Further Research

Research is a continuous process. This section shows how research could be continued. This could happen as some results are inconclusive or the research itself has thrown up many more research questions that need to be addressed. It also shows the honesty and integrity of

the researcher that he has a wider perspective and has actually not tried to cover up the shortcomings.

List of References/Bibliography

The list of references contains only the details of those works cited in the text. It includes sources not cited in the main text matter but are relevant to the subject of study, specifically in case of larger dissertations or thesis. Small research projects may need just a reference section to include all the literature that has been referred to in the report.

For Books

1. Authors' surname (alphabetically), followed by their initials.
2. Date of publication.
3. Title of the book in italics.
4. Place of publication and publisher.

For Journal Articles

The title of the article appears in inverted commas and name of the journal comes in italics, followed by the volume number and pages of the article.

Example

Madaan KVS; 'Influence of British Rule on Indian Culture'; Journal of Tourism; 10–18.

Appendices

This is specifically required in case of questionnaires or interview schedules constructed for conducting the research; it may be useful to include them in the report as an appendix.

Appendices do not count towards your total number of pages or words. It is a useful way of including relevant material so that the examiner can gain a deeper understanding of your work by reading it.

Certificate

Certified that this research project titled _____ is the bonafide record of work carried out by _____ for final year _____.

Dissertation and Thesis

A dissertation culminates in a postgraduate degree such as MS/M.Tech./M.Sc./M.Phil., whereas a thesis leads to a doctoral degree (Europe and India). In American universities, a dissertation leads to a Ph.D. degree and a thesis leads to a Master's degree. We will adhere to the former one.

In a dissertation, it is adequate if one has a decent knowledge of the new discoveries in order to arrive at the conclusion effectively. In a thesis, one has to substantiate the hypothesis with original research work. The hypothesis or the 'synopsis' should contain the gist of the new findings one has made on the subject of research. The written thesis should contain all details of original research work that one has made on the subject. A thesis may be subjected to scrutiny for any plagiarism to determine the originality of the effort. Another finite difference between the two is that in a thesis, analysis of any existing literature is added, whereas a dissertation by itself is an analysis of any existing literature. The differences between a dissertation and a thesis are given below.

1. A researcher has to utilize the already collected information in order to prepare a dissertation, whereas thesis is based on the research conducted all by himself.
2. A thesis is lengthier, thus, it takes more time to be completed, whereas dissertation is short. Therefore, it does not consume too much time to be completed.
3. In thesis, the researcher have to include a hypothesis based on your research work. In contrast to thesis, in dissertation, researcher should have a decent knowledge of the new discoveries in order to infer conclusion effectively.
4. In thesis, the researcher has to focus on your primary argument in order to prove your standpoint to the readers. In contrast to thesis, dissertation focuses on background work.
5. In Master's dissertation, the researcher has to utilize the research work in order to prove his point. In case of Ph.D. thesis, the researcher has to add novel findings to the existing literature.
6. Thesis is written as an academic research paper, whereas dissertation is more like an academic book.
7. The data collected in dissertation is based upon the hypothetical analysis of contents, whereas thesis is comprised of theory and argumentation based on original research.

The structure of a dissertation and thesis writing is normally described in university students' handbook.

FORMAT AND STYLES OF REFERENCING

A referencing style is a set of rules telling you how to acknowledge the thoughts, ideas and works of others in a particular way.

Referencing plays a crucial role in the following:

1. Successful academic writing
2. Avoiding plagiarism
3. Key to your assignments and research.

Earlier, after the last step of research steps, we discussed about the 'Research Report Format' that may vary somewhat according to university as well. Different types of sources have different formatting in the bibliography. Background research plan and bibliography worksheet help in the development of bibliography.

There are standards for documenting sources of information in research papers. Even though different journals may use a slightly different format for the bibliography, they all contain the same basic information. The most basic information that each reference should have is the author's name, the title, the date and the source.

In research areas, the two most commonly used guidelines for this formatting are published by the MLA (Modern Language Association) and the APA (American Psychological Association). The MLA guidelines call for the bibliography to be called 'works cited'.

The APA guidelines call for the bibliography to be called the Reference List.

APA article from a database	Author, A. A., Author, B. B., and Author, C. C. (Year). Title of article. <i>Title of Periodical</i> , volume number (issue number), pages. DOI
APA Website	Author, A. A., and Author, B. B. (Date of publication). Title of document. Retrieved date, from name of Website, http://Web address

MLA article from a database	Author, First name. 'Title of Article.' Title of Journal Volume. Issue (Year): pages. Name of database. Web. Date of access.
MLA Website	Editor, author, or compiler name. <i>Name of Site</i> . Version number. Institution/organization affiliated with the site, date of resource creation. Web. Date of access.

APA Style	MLA Style
Used in social sciences	Used in humanities
The title is in Italics – only the most necessary words are put in capital letters.	The title is underlined, all major words are capitalized.
The source page is titled as 'references' or reference links.	Source page is titled as 'works cited'.
Here, only the last name of author is used.	Here, it is the full name.
Author's name and year of publication is used for 'in-text' citations.	Here, it is author's name and page numbers.
Commas are used for 'in-text' citations.	No use of commas.

The other styles have been given as follows:

Abbreviation	Full Name
ACS	American Chemical Society
AGLC	Australian Guide to Legal Citation
AMA	American Medical Association
AMJ	Academy of Management style
Chicago	Chicago Manual of Style
CSE (CBE)	Council of Science Editors/Council of Biology Editors
Harvard	
IEEE	Institute of Electrical and Electronics Engineers
Vancouver	

Chicago/Turabian style is generally used by Business, History, and the Fine Arts.

Main Terms Used in Context of Footnotes and Reference Writing

Ibid is the abbreviation for the Latin *Ibidem*, meaning the same. It refers to the same author and source (**Examples:** Book and journal) in the immediately preceding reference.

op. cit. is the abbreviation for the Latin *opus citatum*, meaning the work cited. It refers to the reference listed earlier by the same author.

Loc. cit. is of Latin origin and the abbreviation for *loco citato*, meaning in the place cited. It is a footnote or endnote term used to repeat the title and page number for a given work.

et. al. refers to and others, where it is used when referring to a number of people.

The Indian National Bibliography has been conceived as an authoritative bibliographical record of current Indian publications in Assamese, Bengali, English, Gujarati, Hindi, Kannada, Malayalam, Marathi, Oriya, Punjabi, Sanskrit, Tamil, Telugu and Urdu languages, received in the National Library, Kolkata, under the Delivery of Books and Newspapers (Public Libraries) Act, 1954.

The main entries are in Roman Script and the collocations and annotations, if any, are in English. The classified portion follows the Dewey Decimal Scheme of Classification, but the numbers from the Colon Classification scheme are assigned to each entry at the bottom right hand to facilitate the use of the bibliography and libraries arranged according to the Colon Schemes of classification. Indian National Bibliography and Central Reference Library fall under the supervision of Ministry of Culture, Government of India.

Shodhganga and Shodhgangotri: Shodhganga is the name coined to denote the digital repository of Indian electronics thesis and dissertations set up by Information and Library Network (INFLIBNET) Centre, an autonomous Inter-University Centre (IUC) of the University Grants Commission. Now, the candidates will have to store the thesis in a compact disc (CD) and upload each chapter in a separate PDF file using naming convention as prescribed by Shodhganga. The CD must be authenticated by the Supervisor/Head of Department.

INFLIBNET introduced Shodhgangotri, which has been built to maintain a database of synopsis of on-going M.Phil./Ph.D. in Indian universities and institutions.

APPLICATION OF ICT TOOLS ON RESEARCH PROCESS

Use of ICT in research is very extensive, where nowadays it is difficult to conceive a scientific research project without it.

Many research studies cannot be carried out without the use of computers and specifically ICT that entails complex computations, data analysis and modelling. Computer in scientific research is used at all stages of study, from proposal/budget stage to submission/presentation of findings.

Statistical Analysis Tool: The acronym SPSS stands for Statistical Package for Social Sciences. The latest version of SPSS is IBM SPSS STATISTICS 20 (purchased by IBM after version 19). It provides the following attributes.

1. Provides data view and variable view measures of central tendency and dispersion
2. Statistical inference
3. Correlation and regression analysis
4. Analysis of variance
5. Non-parametric test
6. Hypothesis tests: T-test, chi-square, z-test, ANOVA, Bipartite variable, etc.
7. Multivariate data analysis
8. Frequency distribution
9. Data exposition by using various graphs, like line, scatter, bar, Ogive, histogram, pie chart....

Data Analysis Tool: Spreadsheet Packages

Since ICT has become indispensable tool for research, the various contents have been picked from websites to throw some information on it. A spreadsheet is a computer application that simulates a paper worksheet. It displays multiple cells that together make up a grid consisting of rows and columns, each cell containing either alphanumeric text or numeric values.

Microsoft Excel is a popular spreadsheet software. The other spreadsheet packages are Lotus 1-2-3,

Quattro Pro, Javelin Plus, Multiplan, VisiCalc, SuperCalc, Plan Perfect, etc.

Other Statistical Tools

SAS, S-PLUS, LISREL, EViews, etc.

Word Processor Packages

A word processor (document preparation system) is an ICT application used for the production (including composition, editing, formatting and possibly printing) of any sort of printable material.

The word processing packages are Microsoft Word, WordStar, WordPerfect, Softward, AKHAR (Gujarati), Ami Pro, etc.

Presentation Software

A presentation program is a computer software package used to display information, normally in the form of a slide show. It typically includes three major functions, such as an editor that allows text to be inserted and formatted, a method for inserting and manipulating graphic images and a slide show system to display the content.

The presentation packages are Microsoft Powerpoint, Lotus Freelance Graphics, Corel Presentations, Apple Keynote, etc.

Database Management Packages (DBMS)

Database is an organized collection of information. A DBMS is a software designed to manage the database.

The various desktop databases are Microsoft Access, Paradox, dBase or dBase III+ , FoxBASE, FoxPro/ Visual FoxPro, FileMaker Pro.

The commercial database servers that supports multiuser are Oracle, MS SQL Server, Sybase, Ingres, Informix, DB2 UDB (IBM), Unify, Integral, etc.

The open source database packages are MySQL, PostgreSQL, Firebird, etc.

Browsers

A web browser is a software application which enables a user to display and interact with text, images, videos, music, games and other information typically by accessing a web page found on a website which is collectively provided in the World Wide Web or a local area network.

Some examples of browsers are Microsoft Internet explorer, Mozilla Firefox, Opera, Netscape Navigator, Chrome (Google browser), Safari, etc.

Online forms - Online questionnaires

Online surveys

Collaboration tools

Skype : Voice and video conferencing

Google Hangouts : Voice and video conferencing

Modern Research Tools

Modern electronic research tools, like Zotero and Evernote, make the collection of research data and collaboration between colleagues possible, which that in the past would have been difficult, expensive or even impossible. They also save large amount of time citing and creating bibliographies. Evernote allows the user to capture digital content, including web pages, PDF files or snippets of web pages, organize them, annotate them, share them, publish them and search them.

RESEARCH ETHICS

Ethics are the principles and guidelines that help us to uphold the things we value. Ethics and law are different aspects, although laws of the land are intended to be based on certain ethics. Almost all societies have legal rules to govern certain behaviour in a country or society, but ethical norms tend to be broader and more informal than laws. An action may be legal but unethical or illegal but ethical. Ethics aim to achieve two fundamental objectives, i.e., to tell us how we ought to act in a given situation and to provide us with strong reasons for doing so.

Ethics always emerge from conflict between values, and research ethics are not an exception. In research, these conflicts may take different forms, such as participant's concern for privacy versus some justification for manipulation, openness and replication versus confidentiality, present loss versus future benefits and so on. Each decision made in research involves a potential compromise of one value for another. However, still researchers must try to minimize the risk to participants, colleagues and society while trying to optimize the quality of outcome. Research ethics help us to reconcile value conflicts.

The benefits of observing ethics in research studies are as follows:

1. It helps in promoting the aims of research, such as bringing out the truth and avoidance of errors.
2. It promotes the values that are essential to collaborative work, such as trust, accountability, mutual respect and fairness.
3. It holds the researcher accountable to the public and society.
4. It helps in building public support for research, which in return can help in getting participants who take part in the research willingly.

Main Approaches to Research Ethics

The following are the three major approaches to ethics:

1. **Deontological approach:** We should identify and use a universal code in making ethical decisions. This is an absolutist approach.
2. **Ethical scepticism approach:** It states that ethical standards are not universal but are relative to one's own particular culture and time. This is based on relativism.
3. **Utilitarianism approach:** Decisions regarding ethics in research should be based on an examination and comparison of the costs and benefits that may arise from a study. If the expected benefits exceed the expected risks, the study is presumed to be ethical. The risk-benefit precaution is a modern

version of the end justifying the means. It has its most direct application when those exposed to the risks also receive the benefits. The ratio is more difficult to justify when the participants are subjected to potential harm and when the benefits are directed to other individuals or to the society to be absolute in their requirements.

Some Desirable Elements to Ensure Ethics in Research

The following is a general summary of some research ethical guidelines and principals that various codes address.

1. Honesty in reporting data, results, methods and procedures and publication status.
2. Objectivity to avoid bias in experimental design, data analysis, interpretation and peer review.
3. Integrity, acting with sincerity, striving for consistency of thought and action.
4. Carefulness to avoid careless errors and negligence and proper documentation of all aspects.
5. Openness in sharing data, results, ideas, tools, resources and openness to criticisms and new ideas.
6. Respect for intellectual property rights, such as patents, copyrights and other forms of intellectual property.
7. Confidentiality in context of communications, personal records and privacy issues.
8. Responsible publication with an aim to serve the society. Avoiding wasteful and duplicative publication.
9. Responsible mentoring in terms of guiding research students.
10. Respect for colleagues translates to extending fair treatment to the colleagues.
11. Social responsibility means to serve the society and different stakeholders.
12. Non-discrimination against colleagues or students on the basis of sex, race or factors that are not related to their scientific competence and integrity.
13. Enhancing competence for own professional advancement or lifelong learning and taking steps to promote competence in science as a whole.
14. Ensuring legality of the whole process by obeying relevant laws, i.e., institutional and governmental policies.
15. Animal care through proper experimental designs.

Stakeholders in Research

There are three stakeholders in the research process, namely participants or subjects, researcher and the funding organization.

Ethical Issues Relating to Participants

There are many ethical issues in relation to participants of a research activity. One of the most commonly cited ethical principles is that we should not cause harm to our research participants. The issue of ethics in research mainly caught the attention of policy makers as a result of many gruesome instances, few of which have been mentioned below.

1. Medical experiments conducted by Nazi doctors in German concentration camps in 1930s. Nazi doctors in German concentration camps killed twin gypsy teenagers in order to determine why some of them had differently coloured eyes while conducting experiments.
2. A South African oncologist experimented with women suffering from cancer to excessive dosages of chemotherapeutics without informing the patients and taking their due consents.
3. Ethical issues during organ transplant, sterilization and so on.
4. Experiments on animals.

In research, specifically in medical sciences, the observance of ethics is very crucial. Even now, when pharmaceutical companies want to conduct clinical trials in underdeveloped or developing countries, this issue crops up again and again. It is a general understanding that ethical research issues are more moral than legal.

Apart from physical injury, the psychological distress or emotional harm, loss of self-esteem, being persuaded to conduct morally reprehensible acts and hampering one's physical, intellectual or emotional development are other important concerns.

We must also be careful about the security of our research records, so that respondents may not be identified or otherwise harmed through loss of confidentiality.

During the initial phase of medical research history, people participating in trials were referred to as research subjects. Now, they are known as trial participants. Now, their role has transformed from a passive subject to that of an active participant. Thus, we can see that research ethics are basically about means of ensuring that vulnerable people are protected from exploitation and other forms of harm. The ethical issues are to be observed at every stage of a research process.

1. **Collecting information:** Before a researcher actually collects information, his request for information may put pressure or create anxiety on a respondent and it may not be ethical, but without research, there will be no intellectual progress or development in the society. A researcher is required to improve the conditions by considering various points in the ensuing discussion.

2. **Seeking consent of participants:** Informed consent refers to an individual's willingness to participate in a study. Individuals who provide informed consent have been made aware of the design and procedures with enough detail to exercise a rational decision to participate.
3. **Providing incentives:** Most people do not participate in a study because of incentives, but they are motivated because of the importance of the study. Giving a gift before data collection is not ethical on the part of a researcher.
4. **Seeking sensitive information:** Some pieces of information can be regarded as sensitive or confidential by some people. This may be akin to invading their privacy. Seeking such kind of information may make them upset. Questions on income, age, marital status, etc., may be considered as intrusive. However, it may not be unethical to enquire if the participants be explained before the research and give them sufficient time to decide if they want to participate without any major inducement.
3. **Using inappropriate research methodology:** The deliberate use of a highly biased sample, method or procedure is unethical.
4. **Incorrect reporting:** This can be done to advance the interests of the researcher.
5. **Inappropriate use of the information:** Sometimes, it is possible to harm individuals in the process of achieving benefits for the organization. An example would be a study to help in the formulation of a policy by the organization. New policy may not serve the interests of certain individuals but may be good for the organization as such. Should you ask respondents for information that is likely to be used against them?

Some of the key terms used in the context of ethical issues concerning researchers are as follows:

5. **Possibility of causing harm to the participants:** When you collect data from the respondents or involve subjects in an experiment, you need to examine carefully whether their involvement is likely to harm them in any way. Harm may include use of chemicals, drugs, discomfort, anxiety, harassment, invasion of privacy or demeaning or dehumanizing procedures. Even after the consent, the researcher must make sure that the risk is minimal.
6. **Maintaining confidentiality:** In case, the researcher has to identify the respondent as information needs to be sought more than once, sharing information about a respondent with others for purposes other than research is not ethical and at least the information provided by the respondent should be kept anonymous.
1. **Fabricating behaviour:** Creation of spurious data by researcher, their recording and drawing inferences.
2. **Falsification:** It manipulates the research material, equipment and processes or changes or omits data or results such that the research is not accurately represented in the research records.
3. **Plagiarism:** It is the act of appropriating somebody else's ideas, thoughts, pictures, theories, words or stories as your own. If a researcher plagiarizes the work of others, the integrity, ethics and trustworthiness of the sum total of his or her research becomes questionable. Plagiarism is both an illegal and punishable act and is considered to be on the same level as stealing from the author who originally created it. It can take the following forms.
 - (a) **Intra-corporeal:** A case of plagiarism where one student has copied from another in the same submission is known as intra-corporeal plagiarism.
 - (b) **Extra-corporeal:** It is an instance of plagiarism where a student has copied the material from an external source (*Example:* Books, journal article, world wide web, etc.).
 - (c) **Autoplagerism:** It is citing one's own work without acknowledgement.
4. **Multiple authorship:** There can be many improprieties in authorship. Improper assignment of credit, such as excluding other authors, inclusion of other as authors who have not made a definite contribution towards the work published or submission of multi-authored publication without the knowledge of all the authors.
5. **Peer review:** It is the process in which an author submits a written manuscript or an article to a journal for publication. The journal editor distributes

Ethical Issues Relating to the Researcher

1. **Avoiding bias:** Objectivity in research means to avoid bias in the research process as it is considered unethical. Bias means deliberate attempt to either hide facts or to under represent or over represent them. It may undermine the truth.
2. **Provision or deprivation of a treatment:** This is specifically true in case of medical research. Is it ethical to provide to a study population with an intervention or treatment that has not yet been conclusively proven effective? Thus, it imposes an ethical dilemma before researchers. Informed consent, minimum risk and frank discussion can help to resolve the ethical issues.

the article to experts or reviewers. The peer review process seldom proceeds in a straight line. The entire process may involve several rounds of communication between the editor, the reviewers and the original author before an article is ready for publication.

The two most important ethics in the process are maintaining confidentiality and protection of intellectual property. Reviewers and author should not know the names of each other. Only then, the peer review process can be genuinely open and beneficial. None in the process can publicly disclose the information in the article or use the information in a submitted article for personal gain.

6. **Duplicate and partial publication:** It is publishing the same data and same results in more than one publication or journal. This is unethical but may be acceptable in certain cases, such as publishing results in a journal to provide research participants with a summary of the results. Partial publication involves publishing parts of your results in different journals. It is specifically unethical for a small, focused study. However, in case of large studies with many variables, this may be acceptable as different publications involve different research questions and different data and it actually advances the interest of the study.

Important Measures to Make Research More Ethical

1. **Informed consent:** The provision of informed consent also includes the knowledge that the informed participation is voluntary and that participants can withdraw from the study at any time.
2. **Protective research design:** This involves estimating the probability of happening of harmful effects, their severity and the likely duration of these effects.
3. **Screening:** It is an attempt to select only those individuals for study who show a high tolerance for potential risks.
4. **Pilot studies:** When the potential harms are uncertain, a useful precaution involves a pilot study with follow-up diagnostic interviews to assess the effects and request advice from the participants.
5. **Outside proposal review:** Requesting others to review research proposals is a helpful precaution in minimizing risks.
6. **Professional codes:** Two features of professional codes are important for discussion. Firstly, professional codes have been developed inductively from the wide research experiences of professionals. Secondly, professional codes place strong emphasis on researchers' responsibility for their research.

7. **Government regulations:** Government regulations such as state and central laws are designed to protect or advance the interests of society and its individuals. Thus, the researchers are required to take certain precautions.

ARTICLES, WORKSHOP, SEMINAR, CONFERENCE, AND SYMPOSIUM

Article or Journal Article

'The whole of science is nothing more than a refinement of everyday thinking'

— Albert Einstein

Since we are discussing articles within research, an article is also to be discussed in the manner of research only. This topic can be divided into research article and review paper.

A research article is based on original research. The kind of research varies depending upon the field or the topic (experiments, survey, interview, questionnaire, etc.). Here, the authors need to collect and analyze raw data and conduct an original study. The research paper will be based on the analysis and interpretation of this data.

The various steps followed to show the process have been given as:

1. Conducting research
2. Manuscript writing
3. Journal selection
4. Journal submission
5. Manuscript tracking
6. Peer review
7. Manuscript rejection
8. Post publication

A review article or review paper summarizes the findings of existing literature. So, the readers can develop an idea about the existing knowledge on a topic without having to read all the published works in the field. It does not report original research. Review articles generally summarize the existing literature on a topic in an attempt to explain the current state of understanding on the topic. Review articles can be of three kinds.

1. **Narrative review:** It explains the existing knowledge on a topic based on all the published research available on the topic.
2. **Systematic review:** It searches for the answer to a particular question in the existing scientific literature on a topic.
3. **Meta-analysis:** It compares and combines the findings of previously published studies, usually to assess the effectiveness of an intervention or mode of treatment.

Most reputed journals publish review articles. If published in a good peer-reviewed journal, the review articles often have a high impact and receive a lot of citations.

Difference Between a Thesis and an Article

A researcher is always under pressure to publish, where one good way to do this is to convert doctoral thesis into a journal article, during or after Ph.D. It is essential to know how a thesis differs from a journal article. Here are some of the elements that you will need to work on to successfully create a journal article from your thesis.

	Thesis	Article
Purpose	The purpose is education as it shows how much a person knows.	The purpose is advancement to enhance credibility and contribution in the field.
Audience	Educational committee and professors to decide whether a person is worthy of degree.	Here, person may look up to become a scientist or further researcher.
Abstract	Longer up to 500 words	Shorter up to 150–250 words.
Introduction	More detailed	More concise, only absolutely required information.
Length	Longer as the page count can be up to 50 pages and around 20000 words.	It is shorter between 3 to 6000 words. Better to avoid copying, rewriting or paraphrasing.
Material and method	Extensive presentation	Controlled presentation
Discussion	Detailed interpretation of results	Clear and concise presentation of results.
References	Exhaustive list	Selective list
Appendices	Inclusion mandatory	Inclusion optional

Meeting

A meeting is an assembly or coming together of people be it a symposium, workshop, conference or so. In a very remote sort of a way, all of them convey the same meaning, i.e., people coming together for a purpose.

Symposium

It is usually a formal meeting at which specialists deliver short addresses on a topic or on related topics and then answer the questions relating to these topics. It is especially one in which the participants form an audience and make presentations.

Symposium is also defined as a collection of writings on a particular topic, as in a magazine.

Colloquium

It is usually an academic meeting at which specialists deliver addresses on a topic or on related topics and then answer the questions relating to these topics. A colloquium is targeted to a well-educated but not specialized audience.

Conference

A conference is a meeting of people who confer about a topic. It is a meeting where people come for discussion.

It features keynotes and presentations delivered to all attendees, as well as multiple break-out sessions. Attendees expect to receive information about industry trends and developments.

It can be an academic conference (a formal event where researchers present results), a business conference (organized to discuss business-related matters), or a parent–teacher conference (meeting with a child’s teacher to discuss grades and school performance), a peace conference (a diplomatic meeting to end conflict) and so on.

Webinars or Web Conferences

Webinars or web conferences are presentations that involve an audio and video component. The audio portion of the event is delivered via phone or over the Internet, so that participants can listen via their computer speakers. The video portion of the event is delivered via the Internet, giving participants a presentation to watch while listening to the instructor.

Seminar

The word seminar is derived from the Latin word *seminarium*, meaning seed plot. It is a formal presentation by one or more experts to a small group of audience. It can be conducted on recurring or regular basis, monthly or even weekly, there is an invited speaker, and audience is much more technically versed or specific in nature.

The motive behind the seminar system is to familiarize the students extensively with vital aspects of their study and also to allow them to interact with examples of practical problems that always occur during study or research work. Thus, a seminar is a form of academic instruction either at an academic institution or offered by a commercial or professional organization.

Seminars focus on some particular subject in which everyone present is requested to actively participate.

Colloquia and seminars both happen in an academic setting. Phenomena such as global warming and climate change and nuclear power accidents are discussed but from the perspective of a scientist. However, well-educated audience is able to understand it.

Teleseminars are seminars which is delivered via a conference call over the telephone and/or through the Internet.

Workshops

Workshops tend to be smaller and more intense than seminars. This format involves students practising their new skills during the event under the watchful eye of an instructor.

Hands-on workshops typically involve participants doing work on a particular issue during the program. The promise is that when they leave, they will have at least a rough plan or tools in place to address the challenge.

Impact Factor

The **impact factor** of an academic journal is a measure reflecting the average number of citations to recent articles published in the journal. It reflects the relative importance of a journal within its field. The journals with higher impact factors are deemed to be more important than those with lower ones.

The *h*-index is an index that attempts to measure both the productivity and the impact of the published work of a scientist or a scholar.

The *g*-index is like *h*-index and it has an averaged citations count.

The *i*10-index indicates the number of academic publications an author has written that have at least ten citations from others. It was introduced in July 2011 by Google as part of their work on Google Scholar, a search engine dedicated to academic and related papers.

Practice Exercises

RESEARCH – BASIC CONCEPTS

- Research is
 - A purposeful, systematic activity.
 - Conducted for purely academic purposes.
 - Conducted to answer questions about practical issues.
 - A random, unplanned process of discovery.
- All good research aims at
 - Betterment of the society.
 - Developing generalizations, theories and principles.
 - Solving routine problems.
 - None of the above
- A grand theory
 - Explains interrelationships among concepts.
 - Is highly abstract.
 - Broad explanation of phenomenon in a discipline.
 - All the above
- The idea that knowledge comes from experience is
 - Rationalism
 - Deductive reasoning
 - Logic
 - Empiricism
- A theory is defined as
 - Set of systematically related statements
 - Law like generalizations
 - Both (a) and (b)
 - None of the above
- Epistemology refers to
 - A term specifically used in the social sciences.
 - A term used to study the types of diseases.
 - Acceptable level of knowledge in a field of study.
 - A type of interviewing technique.
- Which of the following is a function of theory?
 - Integrating and summarizing current knowledge
 - Making predictions
 - Explaining phenomena
 - All of the above
- Which of the following term explains the idea that knowledge comes from experience?
 - Rationalism
 - Empiricism
 - Logic
 - Deduction
- In every field, research pursuits promote systematic and gradual advancement of knowledge but discoveries are rare because **[December 1997]**
 - Result is a continuous critical investigation.
 - It is not common to be able to think beyond a grooved channel.
 - Sustained experimental work needed for discovery is not easily forthcoming.
 - Most people lack the depth of knowledge needed for it.

10. 'Metaphysics' means
 (a) A branch of Physics
 (b) Exploring the nature of ultimate reality
 (c) Physics of metals
 (d) Physics of weather
11. Which of the following statements is not correct?
 [June 1997]
 (a) A researcher is expected to be a well-read person.
 (b) One research gives birth to another research.
 (c) All researchers contribute to existing knowledge.
 (d) A good researcher is a nice person.
12. Which of the following is defined as a systematic method of evaluating statistical data based on the results of several independent studies of the same problem?
 (a) Factor analysis (b) Meta-analysis
 (c) Systematic analysis (d) None of the above
13. The quality of a research study is mainly evaluated on the basis of
 (a) The place of publication.
 (b) The manner in which the recommendations are implemented.
 (c) The rigour with which it was conducted.
 (d) None of the above
14. The quality of research is judged by the
 [December 1998]
 (a) Relevance of research
 (b) Methodology adopted in conducting the research
 (c) Depth of research
 (d) Experience of researcher
15. One of the following is not a quality of a researcher?
 [December 2005]
 (a) Unison with that of which he is in search.
 (b) He must be of alert mind.
 (c) Keeness in inquiry.
 (d) His assertion to outstrip the evidence.
16. Which of the following periodical is specifically meant for publishing research work?
 (a) Magazine (b) Monographs
 (c) Journals (d) Books
17. Which of the following options are the main tasks of research in modern society?
 [June 2006]
 (I) To keep pace with the advancement in the knowledge.
 (II) To discover new things.
 (III) To write a critique on the earlier writings.
 (IV) To systematically examine and critically analyse the investigations or sources with objectivity.
 (a) IV, II, and I (b) I, II, and III
 (c) I and III (d) II, III, and IV
18. Which of following description is true in context of defining 'theory'?
 (a) An organized body of concepts and principles intended to explain a particular phenomenon.
 (b) Tentative explanations that new data either support or do not support.
 (c) Apt to drive further research.
 (d) None of the above
19. Research can be conducted by a person who
 [December 2006]
 (a) Has studied research methodology.
 (b) Holds a postgraduate degree.
 (c) Possesses thinking and reasoning ability.
 (d) Is a hard worker.
20. The best quality of a researcher is
 (a) Curiosity (b) Active imagination
 (c) Ability (d) All the above
21. The result of building up information from pieces of information is known as
 (a) An analysis (b) A synthesis
 (c) A synopsis (d) None of the above
22. The result of setting out a reasoned argument in steps is known as
 (a) A comparison (b) A debate
 (c) An evaluation (d) An analysis
23. A researcher is generally expected to
 (a) Study the existing literature in a field.
 (b) Generate new principles and theories.
 (c) Synthesize different ideas
 (d) None of the above
24. What do you consider as the main aim of interdisciplinary research?
 [June 2006]
 (a) To bring out holistic approach to research.
 (b) To reduce the emphasis of single subject in research domain.
 (c) To oversimplify the problem of research.
 (d) To create a new trend in research methodology.
25. One of the essential characteristics of research is
 (a) Replicability
 (b) Generalizability
 (c) Usability
 (d) None of the above
26. The depth of any research can be judged by
 [June 2006]
 (a) Title of the research.
 (b) Objectives of the research.
 (c) Total expenditure on the research.
 (d) Duration of the research.
27. Which of the following statements is true about the theory?
 (a) It explains phenomenon in simple manner.
 (b) It explains the 'how' and 'why' questions.
 (c) It can be a well-developed explanatory system.
 (d) All the above
28. The research is always
 [December 2008]
 (a) Verifying the old knowledge.
 (b) Exploring new knowledge.
 (c) Filling the gaps between the knowledge.
 (d) All the above
29. Which of the following is a function of theory?
 (a) Summarizing the current knowledge
 (b) Making predictions
 (c) Explaining phenomena
 (d) All the above

30. The feasibility of a research study generally depends upon
 (a) Cost factor
 (b) Time required to conduct research
 (c) Skills set of the researcher
 (d) All the above
31. An empiricist believes that
 (a) Natural science methods should not be applied to social science research.
 (b) Social science methods cannot be applied in natural sciences.
 (c) Knowledge is acquired through our sensory perceptions.
 (d) None of the above
32. The experimental study is based on
 (a) Law of single variable (b) Manipulation
 (c) Both (a) and (b) (d) None of the above
33. What is the position held by a positivist as far as acquiring knowledge is concerned?
 (a) A general positive attitude towards research.
 (b) Scientific research should be based on value-free, empirical observations.
 (c) Exact knowledge can be acquired from the society.
 (d) None of the above
34. The approach which is based on the assumption that social phenomena can be explained by observing cause and effect is
 (a) Positivism (b) Interpretivism
 (c) Qualitative (d) None of the above
35. An ontological question is usually about
 (a) Diagnose of a medical problem.
 (b) Study of things outside ourselves, an external reality.
 (c) Use of questionnaires or interviews in project.
 (d) Acceptable level of knowledge.
36. Which of the following is not a characteristic of a researcher?
 (a) Industrious and persistent.
 (b) Specialist rather than a generalist.
 (c) Objective
 (d) Not versatile in his interest and even in his native abilities.
37. An important practical issue to consider while designing a research project is
 (a) An interesting theoretical perspective.
 (b) Add to knowledge of researcher only.
 (c) Availability of time and other resources.
 (d) None of the above

TYPES OF RESEARCH

38. The two main approaches of a research are
 (a) Data collection and data analysis
 (b) Surveys and questionnaires
 (c) Sampling and data collection
 (d) Qualitative and quantitative
39. A researcher designs an experiment to test how variables interact to influence how well children learn spelling words. In this case, the main purpose of the study is
 (a) Explanation (b) Description
 (c) Influence (d) Prediction
40. Qualitative research is
 (a) Without any specific purpose.
 (b) Primarily concerned with in-depth exploration of phenomena.
 (c) Deals with the collection and analysis of numerical data.
 (d) None of the above
41. Match List-I with List-II and choose the correct answer from the code given below. **[December 2004]**
- | List-I | List-II |
|------------------------|--------------------|
| A Historical method | I Past events |
| B Survey method | II Vision |
| C Philosophical method | III Present events |
| D Experimental method | IV Future action |
- Codes:**
 (a) A-I, B-III, C-II, D-IV (b) A-I, B-II, C-III, D-IV
 (c) A-I, B-II, C-III, D-IV (d) A-II, B-III, C-I, D-IV
42. Which of the following research specifically requires objectivity to discover facts and causes from the data gathered for the purpose?
 (a) Quantitative research
 (b) Fundamental research
 (c) Qualitative research
 (d) Action research
43. In psychology and education, experimental research is also termed as
 (a) S-R (stimulus-response) research
 (b) Analytical research
 (c) Historical research
 (d) Post Facto research
44. Fundamental research is usually carried out in
 (a) Classroom
 (b) Field setting
 (c) Laboratory conditions
 (d) Social setting
45. The research which is exploring new facts through the study of the past is called
 (a) Philosophical research
 (b) Historical research
 (c) Mythological research
 (d) Content analysis
46. The scientific method can be used
 (a) Only in physical sciences such as physics and chemistry.
 (b) Only in social sciences.
 (c) Both in physical and social sciences.
 (d) None of the above

47. In the method of naturalistic observation, there will be
 (a) Haphazard behaviour as it naturally occurs.
 (b) Setting up of controlled experiments by which they uncover causal elements in behaviour.
 (c) Set out to actively observe subjects in their natural environments.
 (d) Interview subjects at different stages of life.
48. Which of the following is a form of explanatory research in which the researcher develops a theoretical model and empirically tests the model to determine how well the model fits the data?
 (a) Causal modelling (b) Predictive research
 (c) Descriptive research (d) Exploratory research
49. Match the following two lists.

List-I	List-II
A Experimental	I Criticism
B Historical	II Control
C Case study	III Interpretative
D Ethnography	IV Intensive
	V Intuitive

Codes:

- (a) A-II, B-III, C-IV, D-V (b) A-I, B-II, C-V, D-III
 (c) A-III, B-I, C-IV, D-V (d) A-II, B-I, C-IV, D-III
50. The important prerequisites of a research in sciences, social sciences and humanities are **[December 2005]**
 (a) Laboratory skills, records, supervisor and topic.
 (b) Supervisor, topic, critical analysis and patience.
 (c) Archives, supervisor, topic and flexibility in thinking.
 (d) Topic, supervisor, good temperament and preconceived notions.
51. One of the aims of scientific method in research is to **[June 2006]**
 (a) Improve data interpretation
 (b) Eliminate spurious relations
 (c) Confirm triangulation
 (d) Introduce new variables
52. Which of the following is not the method of research? **[December 2006]**
 (a) Observation (b) Historical
 (c) Survey (d) Philosophical
53. Research can be classified as **[December 2006]**
 (a) Basic, applied and action research.
 (b) Quantitative and qualitative research.
 (c) Philosophical, historical, survey and experimental research.
 (d) All the above
54. The term associated with the theory and the method of interpretation of human action in social sciences is **[December 2006]**
 (a) Theology (b) Hermeneutics
 (c) Ontology (d) None of the above
55. Which research approach is the most appropriate to establish a relationship that is causal in nature?
 (a) Causal-comparative (b) Experimental
 (c) Correlational (d) Descriptive
56. Books and records are the primary sources of data in
 (a) Historical research (b) Participatory research
 (c) Clinical research (d) Laboratory research
57. The type of research that tests hypothesis and theories in order to explain how and why a phenomenon operates as it does is
 (a) Descriptive research (b) Predictive research
 (c) Explanatory research (d) None of the above
58. The study in which investigators attempt to trace an effect is known as **[June 2007]**
 (a) Survey research (b) 'Ex post facto' research
 (c) Historical research (d) Summative research
59. Fundamental research reflects the ability to **[June 2007]**
 (a) Synthesize new ideas
 (b) Expound new principles
 (c) Evaluate the existing material concerning research
 (d) Study the existing literature regarding various topics
60. The classification of studies into exploratory, descriptive, analytical or predictive research is based on
 (a) Logic (b) Outcome
 (c) Process (d) Purpose
61. The strongest evidence for causality comes from which of the following research methods?
 (a) Experimental (b) Causal-comparative
 (c) Correlational (d) None of the above
62. One of the limitations of the case study is that
 (a) There are few subjects for which it is applicable.
 (b) There are no control groups.
 (c) It requires a large and expensive sample size.
 (d) None of the above
63. Which of the following research method is termed as controlled observation?
 (a) Historical research
 (b) Philosophical research
 (c) Field experimentation
 (d) All the above
64. Fieldwork-based research is classified as **[June 2008]**
 (a) Empirical (b) Historical
 (c) Experimental (d) Biographical
65. The research that applies the laws at the time of field study to draw more and more clear ideas about the problem is **[December 2008]**
 (a) Applied research (b) Action research
 (c) Experimental research (d) None of the above
66. Which of the following is classified in the category of developmental research? **[June 2009]**
 (a) Philosophical research (b) Action research
 (c) Descriptive research (d) All the above
67. Action research is **[December 2009]**
 (a) An applied research
 (b) A research carried out to solve immediate problems
 (c) A longitudinal research
 (d) Simulative research

68. The term 'phenomenology' is associated with the process of **[December 2010]**
 (a) Qualitative research (b) Analysis of variance
 (c) Correlational study (d) Probability sampling
69. Which of the following is not a longitudinal design?
 (a) Panel
 (b) Cross-sectional
 (c) Trend
 (d) Both (a) and (c) are longitudinal designs
70. When a researcher starts with the dependent variable and moves backwards, it is called
 (a) Predictive research
 (b) Retrospective research
 (c) Exploratory research
 (d) Descriptive research
71. The essence of the experimental method is
 (a) Correct calculation of Karl Pearson's Coefficient of correlation.
 (b) Obtaining direct reports from subjects about their subjective experience.
 (c) Careful measurement and record keeping.
 (d) Using control to identify cause-and-effect connections.
72. Which research paradigm is based on the pragmatic view of reality?
 (a) Quantitative research (b) Qualitative research
 (c) Mixed research (d) None of the above
73. Which research paradigm is not much concerned about generalizing its findings?
 (a) Quantitative research (b) Qualitative research
 (c) Mixed research (d) None of the above
74. Which of the following best describes quantitative research?
 (a) The collection of non-numerical data.
 (b) An attempt to confirm the researcher's hypothesis.
 (c) Research that is exploratory.
 (d) Research that attempts to generate a new theory.
75. Which of the following are common characteristics of experimental research?
 (a) It relies primarily on the collection of numerical data.
 (b) It can produce important knowledge about cause and effect.
 (c) It uses the deductive scientific method.
 (d) All the above
76. Which type of research is likely to provide the strongest evidence about the existence of cause-and-effect relationships?
 (a) Non-experimental research
 (b) Experimental research
 (c) Historical research
 (d) None of the above
77. Research in which the researcher uses the qualitative paradigm for one phase and the quantitative paradigm for another phase is known as
 (a) Action research
 (b) Basic research
 (c) Quantitative research
 (d) Mixed method research
78. Research that is done to understand an event from the past is known as
 (a) Experimental research (b) Historical research
 (c) Replication (d) Archival research
79. The type of research typically conducted by teachers, counsellors and other professionals to answer questions they have and to specifically help them solve local problems is called
 (a) Action research (b) Basic research
 (c) Predictive research (d) Longitudinal research
80. Which form of reasoning is the process of drawing a specific conclusion from a set of premises?
 (a) Rationalism (b) Deductive reasoning
 (c) Inductive reasoning (d) Probabilistic
81. Research that is done to examine the findings of someone else using the 'same variables but different people' is called
 (a) Exploration (b) Hypothesis
 (c) Replication (d) Empiricism
82. Which scientific method is a top-down or confirmatory approach?
 (a) Deductive method (b) Inductive method
 (c) Hypothesis method (d) Pattern method
83. Which scientific method is a bottom-up or generative approach to research?
 (a) Deductive method (b) Inductive method
 (c) Hypothesis method (d) Pattern method
84. The method of drawing conclusions based on the observation of each and every instance of a population is called
 (a) Scientific method (b) Deductive method
 (c) Inductive method (d) Dialectic method
85. Which of the following is not a characteristic of a good theory or explanation?
 (a) It is parsimonious.
 (b) It is testable.
 (c) It is general enough to apply to different situations.
 (d) All the above
86. Which scientific method follows these steps, (i) observation/data, (ii) patterns and (iii) theory?
 (a) Inductive (b) Deductive
 (c) Top-down (d) None of the above
87. Which scientific method is a top-down or confirmatory approach?
 (a) Deductive method (b) Inductive method
 (c) Hypothesis method (d) Pattern method
88. Which of the following terms can be associated with research in social sciences?
 (a) Causal research (b) Empirical research
 (c) Correlational research (d) All the above
89. Which scientific method focuses on testing hypothesis developed from theories?
 (a) Deductive method (b) Inductive method
 (c) Hypothesis method (d) Pattern method

90. Which scientific method focuses on generating new hypothesis and theories?
(a) Deductive method (b) Inductive method
(c) Both (a) and (b) (d) None of the above
91. Which research method is most appropriate if a researcher is looking for a causal relationship?
(a) Experimental method
(b) Case study
(c) Correlational study
(d) Naturalistic observation
92. A field experiment is one that takes place in
(a) Real world
(b) Laboratory
(c) Both in real world and laboratory
(d) Naturalistic environment
93. Characteristics of the scientific method necessarily include
(a) Lab experiments only
(b) Controlled observation
(c) Analysis formulation
(d) All the above
94. A correlational study determines
(a) The relationship between independent and dependent variable.
(b) Impact of the observer on the participant.
(c) Cause-and-effect relationship.
(d) The relationship between two events.
95. The qualitative research is usually
(a) Deductive in nature.
(b) Inductive in nature.
(c) Deductive or inductive in nature.
(d) None of the above
96. Which of the following types of research is associated with theory generating?
(a) Inductive research
(b) Deductive research
(c) Both inductive and deductive
(d) None of the above
97. Which of the following types of research is associated with theory testing?
(a) Inductive research
(b) Deductive research
(c) Both inductive and deductive
(d) None of the above
98. A non-government organization conducted a study in a Gram Panchayat to see the impacts of campaign approach on enrolment and retention of rural elementary school children. This is an example of
(a) Descriptive study (b) Field experiment
(c) Ex-post facto research (d) Historical research
99. The classification of studies into exploratory, descriptive, analytical or predictive research is based on
(a) Logic of the research
(b) Outcome of the research
(c) Process of the research
(d) Purpose of the research
100. Research study that take place over a long period of time is termed as
(a) Cross-sectional research
(b) Longitudinal research
(c) Research methodology
(d) None of the above
101. The main difference between longitudinal and cross-sectional researches is in terms of
(a) Frequency of data collection
(b) Primary versus secondary
(c) The qualification of researcher
(d) None of the above
102. Defining hypothesis is a useful way of approaching research because
(a) It will impress the reader.
(b) It allows the development of testable propositions.
(c) It allows for the development of indisputable proof to be established in research findings.
(d) It looks suitably scientific.
103. The government of India conducts census after every 10 years. The method of research used in this process is
(a) Case study (b) Developmental
(c) Survey (d) Experimental
104. A nine-year-old is taller than seven-year-old ones. It is an example of
(a) Vertical studies
(b) Cross-sectional studies
(c) Experimental studies
(d) Case studies
105. The main difference between basic research and applied research lies in
(a) Basic process (b) Sample size
(c) Utility (d) All the above
106. Which type of method can be used in order to create a real-world laboratory?
(a) Correlational coefficients
(b) Field experiment
(c) Case study
(d) Random assignment
107. In a research study to learn the impact of the Internet surfing on exam performance, it was found that as the number of hours spent on the Internet surfing increases, the exam performance deteriorates. This study is an example of
(a) Experimental method
(b) Correlational research
(c) Case study
(d) None of the above
108. A researcher spent several years observing social behaviour of people in their native habitat. The research method used here is
(a) Case study
(b) Experimental method
(c) Correlational study
(d) Naturalistic observation
109. In a study of two variables, when one variable goes up as another goes down in value is known as a
(a) Positive correlation
(b) No correlation
(c) Negative correlation
(d) Fluctuating correlation

RESEARCH PROCESS

110. In the context of survey research, the following steps are taken in certain order. Which of the following options represent the correct order?
 (I) Sampling
 (II) Inference
 (III) Data analysis
 (IV) Data collection
 (a) (II), (III), (I), (IV) (b) (I), (IV), (III), (II)
 (c) (III), (II), (IV), (I) (d) (IV), (I), (II), (III)
111. Which of the following is not the requirement of a hypothesis? [June 1998]
 (a) Be based on facts.
 (b) Be conceivable.
 (c) Contradict the knowledge of nature.
 (d) Allow consequences to be deduced from it.
112. For a proposition to be true, it should have the following characteristics except which of the following? [June 1998]
 (a) It must be objective.
 (b) It must be in tune with accepted beliefs.
 (c) It must be consistent.
 (d) It must be testable.
113. The objective of a research can be written [December 1998]
 (a) Only in question form.
 (b) Only in statement form.
 (c) Both question and statement forms.
 (d) In hypothetical form.
114. *sine qua non* (essential elements) of good research is [June 2000]
 (a) A well-formulated hypothesis
 (b) A good research supervisor
 (c) Adequate library
 (d) A well-formulated problem
115. A good hypothesis should be
 (a) Precise, specific and consistent with most known facts.
 (b) Formulated in such a way that it can be tested by the data.
 (c) Of limited scope and should not have global significance.
 (d) All the above
116. Hypothesis cannot be stated in
 (a) Null and question form terms
 (b) Declarative terms
 (c) General terms
 (d) None of the above
117. Which of the following statements is true? [December 2004]
 (a) In research, objectives can be worded in question form.
 (b) In research, objectives can be worded in statement form.
 (c) Objectives are to be stated in Chapter I of the thesis.
 (d) All the above
118. Which of the following statement is correct? [December 2005]
 (a) Objectives should be pin-pointed.
 (b) Objectives can be written in statement or question forms.
 (c) Another word for problem is variable.
 (d) All the above
119. A satisfactory statistical quantitative method should not possess which one of the following qualities? [December 2005]
 (a) Appropriateness (b) Measurability
 (c) Comparability (d) Flexibility
120. The accuracy of the research process depends upon the
 (a) Unbiased attitude of researchers
 (b) The sample size
 (c) The research method adopted
 (d) All the above
121. Who is regarded as the father of scientific social surveys?
 (a) Best
 (b) Booth
 (c) Darwin
 (d) None of the above
122. A research plan
 (a) Should be detailed.
 (b) Should be given to others for review and comments.
 (c) Sets out the rationale for a research study.
 (d) All the above
123. Sources of researchable problems can include
 (a) Researchers' own experiences as educators.
 (b) Practical issues that require solutions.
 (c) Theory and past research.
 (d) All the above
124. The introduction section of the research plan
 (a) Gives an overview of prior relevant studies.
 (b) Contains a statement of the purpose of the study.
 (c) Concludes with a statement of the research questions.
 (d) All the above
125. A statement that predicts the cause-and-effect relationship between variables is known as the
 (a) Null hypothesis
 (b) Experimental hypothesis
 (c) Independent variable
 (d) Dependent variable
126. To be confident that a cause-and-effect relationship exists, it is necessary to
 (a) Engage in naturalistic observation.
 (b) Develop a positive correlation.
 (c) Perform a controlled experiment.
 (d) Test for a negative correlation.
127. Match List-I (interviews) with List-II (meaning) and select the correct answer from the code given below. [June 2006]

List-I (Interviews)	List-II (Meanings)
A Structured interviews	I Greater flexibility approach
B Unstructured interviews	II Attention on questions to be answered
C Focused interviews	III Individual life experience
D Clinical interviews	IV Predetermined question
	V Non-directive

Codes:

- (a) A-IV, B-I, C-II, D-III (b) A-II, B-IV, C-I, D-III
(c) A-V, B-II, C-IV, D-I (d) A-I, B-III, C-V, D-IV

- 128.** The first step of research is [December 2006]
(a) Selecting a problem
(b) Searching a problem
(c) Finding a problem
(d) Identifying a problem
- 129.** Which of the following statements is correct? [December 2006]
(a) Objectives of research are stated in first chapter of the thesis.
(b) Researcher must possess analytical ability.
(c) Variability is the source of problem.
(d) All the above
- 130.** A research problem is feasible only when [June 2007]
(a) It has utility and relevance.
(b) It is researchable.
(c) It is new and adds something to the knowledge.
(d) All the above
- 131.** The first question that a researcher interested in the application of statistical techniques to his problem has to ask is
(a) Whether the data could be quantified.
(b) Whether appropriate statistical techniques are available.
(c) Whether analysis of data would be possible.
(d) Whether worthwhile inferences could be drawn.
- 132.** Which one of the following is a data collection method?
(a) The opinion (b) Positivism
(c) The case study (d) The interview
- 133.** In which of the following techniques of data collection, several participants, including facilitator, emphasize on questioning a specific and defined topic and interaction within the group and the joint construction of meaning?
(a) Case study (b) Focus group
(c) Ethnography (d) None of the above
- 134.** The process not needed in experimental research is
(a) Observation
(b) Manipulation and replication
(c) Controlling
(d) Reference collection
- 135.** Which type of study will be preferred by a researcher to estimate the degree of relationship between the level of education and achievement motivation?
(a) Naturalistic (b) Inventory
(c) Correlational (d) Experimental
- 136.** Which scale is the simplest form of measurement?
(a) Nominal (b) Ordinal
(c) Interval (d) Ratio
- 137.** Which of the following is the correct order of Steven's four levels of measurement?
(a) Ordinal, nominal, ratio and interval.
(b) Nominal, ordinal, interval and ratio.
(c) Interval, nominal, ordinal and ratio.
(d) Ratio, interval, nominal and ordinal.
- 138.** We use factor analysis [June 2009]
(a) To know the relationship between two variables.
(b) To test the hypothesis.
(c) To know the difference between two variables.
(d) To know the difference among many variables.
- 139.** The process not needed in experimental researches is [December 2009]
(a) Observation (b) Manipulation
(c) Controlling (d) Content analysis
- 140.** Which of the following correlational values is the strongest?
(a) +0.10 (b) -0.95
(c) +0.90 (d) -1.00
- 141.** The correlation between intelligence test scores and grades is
(a) Positive (b) Negative
(c) Perfect (d) No correlation
- 142.** Which of the following figures reflect the highest value of Karl Pearson's coefficient of correlation?
(a) +0.22 (b) +0.91
(c) -0.49 (d) -0.92
- 143.** A widely used format developed by Rensis Likert is used for asking questions about
(a) Attitude (b) Personality
(c) Morale (d) None of the above

RESEARCH CHARACTERISTICS

- 144.** Objectivity in research implies [June 2000]
(a) Exact judgement of truth
(b) Findings consistent with reality
(c) Inter-researcher agreement
(d) Methodological sophistication
- 145.** The extent to which an instrument measures a characteristic that cannot be directly observed but is assumed to exist is
(a) Face validity (b) Construct validity
(c) Criterion validity (d) Content validity

146. Field study is related to
 (a) Real-life situations
 (b) Experimental situations
 (c) Laboratory situations
 (d) None of the above
147. The verification that the method of measurement actually measures what it is expected to measure is known as
 (a) Content validity (b) Face validity
 (c) Construct validity (d) Criterion validity
148. The extent to which the results of a research study apply to situations beyond the study itself and the extent to which conclusions can be generalized is
 (a) External validity (b) Internal validity
 (c) Situation validity (d) None of the above
149. The extent to which the design and data of a research study allows the researcher to draw accurate conclusions about cause-and-effect and other relationships within the data is
 (a) External validity
 (b) Internal validity
 (c) Situation validity
 (d) None of the above
150. The validity and reliability of a research will be at stake when
 (a) The incident was reported after a long period of time from its occurrence.
 (b) The author who is a source of information is biased and incompetent.
 (c) The researcher is not competent enough to draw logical conclusions.
 (d) All the above
151. The term used to describe when a research measures the variable or dimension it is supposed to measure is
 (a) Validity (b) Reliability
 (c) Dependability (d) Suitability
152. Which of the following is not a characteristic of research? [December 2004]
 (a) Research is systematic.
 (b) Research is not a process.
 (c) Research is problem oriented.
 (d) Research is not passive.
153. Which of the following terms is closely related to generalization of outcome of research?
 (a) External validity (b) Inference
 (c) Both (a) and (b) (d) None of the above
154. A research instrument giving inconsistent results has
 (a) Low validity (b) High validity
 (c) Low reliability (d) High reliability
155. Authenticity of research finding is its
 (a) Originality (b) Validity
 (c) Objectivity (d) All the above
156. How can the objectivity of research be enhanced? [June 2009]
 (a) Through its impartiality
 (b) Through its reliability
 (c) Through its validity
 (d) All the above
157. Manipulation is always a part of [December 2009]
 (a) Historical research
 (b) Fundamental research
 (c) Descriptive research
 (d) Experimental research

FORMULATION OF HYPOTHESIS

158. An educated guess about what is controlling some behaviour is called
 (a) Experimental control
 (b) A hypothesis
 (c) An experimental variable
 (d) A theory
159. It is best to use the method of working multiple hypothesis
 (a) During the final stages of research.
 (b) While planning your research study.
 (c) At the time of publishing the results.
 (d) None of the above
160. To test null hypothesis, a researcher uses [June 2007]
 (a) *t*-test (b) ANOVA
 (c) χ^2 (Chi-square test) (d) Factorial analysis
161. Hypothesis cannot be stated in
 (a) Declarative terms
 (b) Null hypothesis and question form terms
 (c) General terms
 (d) Directional terms
162. What type of research would be least likely to include a research hypothesis?
 (a) Intervention research
 (b) Associational research
 (c) Descriptive research
 (d) None of the above
163. The basis on which the assumptions are formulated is [June 2009]
 (a) Cultural background of the country
 (b) Universities
 (c) Specific characteristics of the castes
 (d) All the above
164. A null hypothesis is [December 2009]
 (a) When there is no difference between the variables.
 (b) The same as research hypothesis.
 (c) Subjective in nature.
 (d) When there is difference between the variables.
165. Research hypothesis are
 (a) A review of current research.
 (b) Statements of predicted relationships between variables.
 (c) Stated such that they can be confirmed or refuted.
 (d) Both (b) and (c)

166. Which of the following best describes the development process for a research question?
 (a) A broad question is made more specific as terms are more clearly defined.
 (b) A broad question is made more specific in order to be more significant.
 (c) A specific question is broadened as terms are more clearly defined.
 (d) A specific question is broadened in order to be more significant.
167. Good research questions are
 (a) Clear, significant and ethical.
 (b) Feasible, clear, significant and ethical.
 (c) Feasible, clear, significant and include a hypothesis.
 (d) Feasible, clear and ethical.
168. The essential characteristic of a researchable question is
 (a) Question seems interesting to answer.
 (b) Possibility of data collection that can be collected in an attempt to answer a question.
 (c) Possibility of commercialization.
 (d) A significant positive change in society.
169. A good hypothesis should be
 (a) Formulated in such a way that it can be tested by the data.
 (b) Precise, specific and consistent with most known facts.
 (c) Of limited scope and should not have global significance.
 (d) All the above
170. A hypothesis can be described as
 (a) Just as a hunch.
 (b) A wild guess.
 (c) A type of statement made by researchers when they are attempting to get funding for their research.
 (d) A prediction of some sort regarding the possible outcomes of a study.
171. Formulation of hypothesis may not be required in
 (a) Survey method (b) Historical studies
 (c) Experimental studies (d) Normative studies
172. An operational definition is
 (a) No relation to the underlying concept.
 (b) An abstract, theoretical definition of a concept.
 (c) In terms of specific and empirical measures.
 (d) None of the above
173. What is the purpose of the conclusion in a research report?
 (a) It explains how concepts were operationally defined and measured.
 (b) It summarizes the key findings in relation to the research questions.
 (c) It contains a useful review of the relevant literature.
 (d) It outlines the methodological procedures that were employed.
174. Which of the following is an advantage of stating hypothesis?
 (a) It forces the researcher to think more deeply and specifically about the possible outcomes of a study.
 (b) It simplifies the study.
 (c) It clarifies definitions.
 (d) It reduces researcher bias.
175. Which of the following is an example of a directional hypothesis?
 (a) There will be a difference between the students' reading levels.
 (b) There will be a difference between lecture and group instruction.
 (c) Group instruction is more effective than lecture in the elementary classroom.
 (d) There will be an increase in learning.
176. Formulation of hypothesis may not be necessary in
 (a) Survey studies
 (b) Fact finding historical research
 (c) Experimental studies
 (d) None of the above
177. Which of the following is true in context of a hypothesis?
 (a) It is a tentative proposition.
 (b) The validity of hypothesis is unknown.
 (c) It must be generalizable.
 (d) All the above
178. In mixed methods research, quantitative and qualitative findings should be
 (a) Listed in the order of importance.
 (b) Contained in separate sections.
 (c) Integrated
 (d) Shown fully in appendices.

RESEARCH VARIABLES

179. Attributes of objects, events or things which can be measured are called
 (a) Qualitative measure (b) Data
 (c) Variables (d) None of the above
180. A statistical technique used for large number of variables to establish whether there is a tendency of groups to be interrelated is [December 2006]
 (a) Simple correlation (b) Multiple correlation
 (c) Factor analysis (d) None of the above
181. When studying an active independent variable, an intervention or treatment given to group of participants is called
 (a) Experimental group (b) Control group
 (c) Both (a) and (b) (d) Neither (a) or (b)
182. Which of the following can best be described as a categorical variable?
 (a) Age (b) Annual income
 (c) Grade point average (d) Religion

183. The experimental studies are based on
[December 2007]
(a) The manipulation of the variables
(b) Conceptual parameters
(c) Replication of research
(d) Survey of literature
184. A manipulated independent variable is called?
(a) Extraneous variable (b) Intervening variable
(c) Subject variable (d) Active variable
185. Control groups and experimental groups are exactly the same except for
(a) Dependent variable
(b) Independent variable
(c) Extraneous variables
(d) Replication variables
186. The behaviour that is measured during an experiment is known as the
(a) Confounding variable
(b) Independent variable
(c) Dependent variable
(d) Control variable
187. This type of longitudinal research studies the same individuals over an extended period of time.
(a) Trend study (b) Panel study
(c) Both (a) and (b) (d) Neither (a) nor (b)
188. An example of a categorical variable is
(a) Teacher's hair colour.
(b) Average time it takes a teacher to grade an essay.
(c) Distance a teacher has to travel from the office to her class.
(d) None of the above
189. Which variables are those that a researcher chooses to study in order to assess their possible effects on one or more other variables?
(a) Dependent (b) Independent
(c) Extraneous (d) None of the above
190. A condition or characteristic that can take on different values or categories is called
(a) A constant
(b) A variable
(c) A cause-and-effect relationship
(d) A descriptive relationship
191. Which of the following includes examples of quantitative variables?
(a) Age, temperature, income and height.
(b) Grade point average, anxiety level and reading performance.
(c) Gender, religion and ethnic group.
(d) Both (a) and (b)
192. In research, something that does not 'vary' is called a
(a) Variable (b) Method
(c) Constant (d) None of the above
193. We use factorial analysis [June 2009]
(a) To know the relationship between two variables.
(b) To test the hypothesis.
(c) To know the difference between two variables.
(d) To know the difference among many variables.
194. A variable that is presumed to cause a change in another variable is called
(a) A categorical variable
(b) A dependent variable
(c) An independent variable
(d) An intervening variable
195. Which of the following independent variables cannot be manipulated in a research study?
(a) Gender
(b) Ethnicity
(c) Intelligence and other traits
(d) None of the above
196. In an experimental design, the dependent variable is the one
(a) In which any changes are observed
(b) Which is not manipulated
(c) Both (a) and (b)
(d) None of the above
197. This variable depends upon what is done to it by the independent variable.
(a) Extraneous (b) Dependent
(c) Manipulated (d) All the above
198. Extraneous variables are essentially
(a) Independent variables
(b) Dependent variables
(c) Independent or dependent
(d) Neither independent nor dependent
199. These variables are those that are created by the researcher and are typically found in experimental studies.
(a) Extraneous (b) Manipulated
(c) Dependent (d) None of the above
200. An experiment is performed to test the effects of sleep deprivation on rote memory. In this experiment, the dependent variable is
(a) Number of hours subjects go without sleep.
(b) Rote memory scores.
(c) Number of subjects deprived of sleep in the experimental group.
(d) Correlation between hours of sleep and fatigue.
201. The variable manipulated by the researcher in an experiment is called the
(a) Response variable
(b) Independent variable
(c) Dependent variable
(d) Extraneous variable.
202. Which of the following would not be an appropriate synonym for the dependent variable?
(a) Outcome variable
(b) Response variable
(c) Effected variable
(d) Experimental variable
203. An example of quantitative variable is the
(a) Date of birth
(b) Highest educational qualification
(c) Time taken to complete a task
(d) Postal code

SAMPLING

204. Generalized conclusion on the basis of a sample is technically known as [December 2007]
 (a) Data analysis and interpretation
 (b) Parameter inference
 (c) Statistical inference
 (d) All the above
205. The process of selecting a subset of a population for a survey is known as
 (a) Survey research (b) Representation
 (c) Triangulation (d) Sampling
206. Researchers ultimately want the answer to a research question to pertain to the
 (a) Sample
 (b) Accessible population
 (c) Target population
 (d) World
207. When a research problem is related to heterogeneous population, the most suitable method is [December 2008]
 (a) Cluster sampling (b) Stratified sampling
 (c) Convenient sampling (d) Lottery method
208. An investigator wants to study the vocational aspirations of visually challenged children in a wide geographical area. He should select his sample by using
 (a) Simple random sampling
 (b) Stratified sampling
 (c) Purposive sampling
 (d) Convenient sampling
209. The type of sampling where each person in population has equal chance of being selected is
 (a) Probability sampling
 (b) Non-probability sampling
 (c) Judgement sampling
 (d) None of the above
210. Here, some people have greater chance of being elected than other members of the population. It is
 (a) Probability sampling
 (b) Non-probability sampling
 (c) Quota sampling
 (d) None of the above
211. Which of the following variables cannot be expressed in quantitative terms? [December 2010]
 (a) Socio-economic status
 (b) Marital status
 (c) Numerical aptitude
 (d) Professional attitude
212. A representative sample is essential in
 (a) Survey method (b) Experimental method
 (c) Case study (d) Clinical method
213. Which one is known as non-probability sampling?
 (a) Cluster sampling
 (b) Quota sampling
 (c) Systematic sampling
 (d) Stratified random sampling
214. While the statistical measure based upon entire population is called parameter, the measure based upon a sample is known as
 (a) Sample parameter (b) Inference
 (c) Statistic (d) None of the above
215. A researcher selects a probability sample of 100 out of the total population. It is called
 (a) A quota sample
 (b) A simple random sample
 (c) A stratified random sample
 (d) A systematic sample
216. A researcher divides the school students on the basis of gender and then by using the random digit table, he selects some of them from each group. This process is called
 (a) Stratified sampling
 (b) Stratified random sampling
 (c) Representative sampling
 (d) None of the above
217. To ensure accuracy of a research, the sample should be
 (a) Taken randomly
 (b) Fixed by quota
 (c) Representative of the population
 (d) Purposive
218. A researcher can keep the sample size low if population is
 (a) Heterogeneous (b) Inaccessible
 (c) Homogeneous (d) All the above
219. Which technique is generally followed when the population is finite?
 (a) Area sampling technique
 (b) Purposive sampling technique
 (c) Systematic sampling technique
 (d) None of the above
220. Cluster sampling is used when
 (a) Population is scattered and sample size is to be kept large.
 (b) Population is heterogeneous.
 (c) Long survey is needed.
 (d) Both (a) and (c)
221. A researcher divides his population into certain groups and fixes the size of the sample from each group. It is called
 (a) Stratified sample (b) Quota sample
 (c) Cluster sample (d) All the above
222. Which of the following is a non-probability sample?
 (a) Quota sample (b) Simple random sample
 (c) Purposive sample (d) Both (a) and (c)
223. If a researcher selected five schools at random and then interviewed each of the teachers in those five schools, the researcher used
 (a) Simple random sampling
 (b) Stratified random sampling
 (c) Cluster random sampling
 (d) None of the above

224. Which of the following terms best describes data that were originally collected at an earlier time by a different person for a different purpose?
 (a) Primary data (b) Secondary data
 (c) Experimental data (d) None of the above
225. Which of these is not a method of data collection?
 (a) Questionnaires (b) Interviews
 (c) Observations (d) Experiments
226. Which of the following is an example of a random sampling method?
 (a) Systematic sampling
 (b) Convenience sampling
 (c) Purposive sampling
 (d) None of the above
227. Which of the following is not an example of a random sampling method?
 (a) Systematic sampling
 (b) Stratified random sampling
 (c) Simple random sampling
 (d) All the above
228. Which of the following is an example of a random sampling method?
 (a) Two-stage random sampling
 (b) Systematic sampling
 (c) Convenience sampling
 (d) Purposive sampling
229. Which of the following is an example of a non-random sampling method?
 (a) Convenience sampling
 (b) Stratified random sampling
 (c) Simple random
 (d) Cluster random
230. The purpose of stratified random sampling is to make certain that
 (a) Every member of the population has an equal chance of being selected.
 (b) For proportionate representation from different categories.
 (c) Prompt response from respondents.
 (d) None of the above
231. A correlation coefficient is best characterized as
 (a) A measure of the extent of the relationship between two variables.
 (b) An index of the causal direction between an independent and dependent variable.
 (c) An indication of the likelihood that an experimental finding will be replicated by others.
 (d) A measure of the likelihood that observed differences may be attributed to chance.
232. Responding to a substance like a sugar pill as if it were a drug is called
 (a) The placebo effect.
 (b) An extraneous factor
 (c) Variability
 (d) None of the above
233. What is a cross-sectional design?
 (a) A study of one specific segment of customers.
 (b) The research design that is free from any personal bias.
 (c) The collection of data from more than respondent in the same time period.
 (d) A comparison of two or more variables over a long period of time.

RESEARCH ETHICS/MISC

234. Research is not considered ethical if it
[December 2011]
 (a) Tries to prove a particular point.
 (b) Does not ensure privacy and anonymity of the respondent.
 (c) Does not investigate the data scientifically.
 (d) Is not of a very high standard.
235. Ethical transgression is
 (a) Following ethical principles
 (b) Defying ethical principles
 (c) Defining ethics
 (d) None of the above
236. Which of the following ideas is not associated with the stance of situation ethics?
 (a) Anything goes
 (b) The end justifies the means
 (c) No choice
 (d) All the above
237. Which of the following is a form of harm that might be suffered by research participants?
 (a) Physical injury
 (b) Stress and anxiety
 (c) Impaired development
 (d) All the above
238. The main purpose of personal data being kept confidential in research studies is
 (a) To hide from participants what has been written about them.
 (b) Apprehension of harm identification or disclosure of personal information.
 (c) For access by government authorities.
 (d) To know more about private lives of participants.
239. Which method is most directly associated with lack of informed consent?
 (a) In-depth interviewing
 (b) Content analysis
 (c) Covert observation
 (d) Case study
240. Which of the following is a form of harm that might be suffered by research participants?
 (a) Psychological distress
 (b) Physical injury
 (c) Loss of self-esteem
 (d) All the above

241. The act of publishing the same data and results in more than one journal or publication refers to which of the following professional issues?
(a) Partial publication
(b) Duplicate publication
(c) Full publication
(d) None of the above
242. Why is it important that personal data about research participants be kept within secure confidential records?
(a) To observe principle of research ethics.
(b) To sell the data at a later stage to recover the cost of research.
(c) To keep secrecy from other researchers.
(d) None of the above
243. The importance of measurement in quantitative research is that
(a) It allows us to delineate fine differences between people or cases.
(b) It provides a consistent device or yardstick.
(c) It allows for precise estimates of the degree of relationship between concepts.
(d) All the above
244. One of the preoccupations of quantitative researchers is with generalization, which is a sign of
(a) External validity (b) Internal reliability
(c) External reliability (d) Internal validity
245. Population generalizability refers to
(a) Conclusions researchers make about a random sample.
(b) Conclusions researchers make about information uncovered in research study.
(c) The degree to which a sample represents the population of interest.
(d) The degree to which results of a study can be extended to other settings or conditions.
246. The degree to which results of a study can be extended to other settings or conditions describes
(a) Population generalizability
(b) Conclusions researchers make about a random sample.
(c) Conclusions researchers make about information uncovered in research study.
(d) Ecological generalizability
247. The research design is
(a) A common method adopted by all researchers to carry out research.
(b) The final choice between using qualitative or quantitative methods.
(c) Presentation of research findings.
(d) A framework for every stage of the data collection and its analysis.
248. Recognizing our own values in pursuit of research is essential because
(a) It allows us to eliminate them.
(b) It allows us to be honest with ourselves about what may influence our research.
(c) At least we know what we can ignore.
(d) It enables us to persuade others of our values.
249. As the value of one variable is increasing, the value of second variable is also increasing, then the correlation coefficient will be
(a) Positive
(b) Negative
(c) Zero
(d) None of the above
250. Which form of reasoning is the process of drawing a specific conclusion from a set of premises?
(a) Rationalism
(b) Deductive reasoning
(c) Inductive reasoning
(d) Probabilistic
251. It is important that academics produce research that can be widely used and valued by academic community around the world. This is termed as
(a) Research impact (b) Citation impact
(c) Ethics impact (d) None of the above
252. The problem of researcher seeing only what they expect to see is called
(a) Researcher bias (b) Experimenter effect
(c) Leniency effect (d) Halo effect
253. Which of the following is most appropriate to impart training for SPSS, a software package used for statistical analysis?
(a) Seminar (b) Conference
(c) Workshop (d) Paper
254. Which of the following is essentially an academic meeting?
(a) Colloquium (b) Conference
(c) Symposium (d) None of the above
255. In which of the following, it is required to cite sources in a bibliography at the end?
(a) Conference (b) Colloquium
(c) Seminar (d) Paper
256. Which of the following is most likely to make use of the Internet?
(a) Web Conference (b) Seminar
(c) Symposium (d) None of the above
257. Which of the following is published in a journal?
(a) Article (b) Paper
(c) Both (a) and (b) (d) None of the above
258. A researcher conducted three experiments with 100 subjects each following uniform design instead of one experiment with 300 subjects. This is known as
(a) Replication (b) Manipulation
(c) Observation (d) Validation

ANSWER KEYS

Comprehension

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- Solution Guidelines
- Main Question Categories
- Five Specimen Passages
- Eighteen Practice Passages

COMPREHENSION PASSAGE

According to Wren and Martin, comprehension exercise can be defined as a passage, upon which questions are set to test the students' ability to understand the content of the given text and to infer information and meanings from it. To put it in simple terms, reading comprehension is the act of understanding what you are reading.

It mainly requires two inputs from the reader, i.e., vocabulary knowledge and text comprehension. In order to understand a text, the reader must be able to comprehend the vocabulary used in a piece of writing. A comprehension test requires specific reading skills, the ability to grasp the main ideas from the passage, linking them, inferring and drawing conclusions based on the proper understanding of a passage. Eventually, by gaining clear understandability, a candidate is supposed to answer the questions given at the end of the passage.

For candidates, even though they have ample choice among questions, reading comprehension (RC) is a must attempt as it does not require any specific study and some practice can help in answering the questions with confidence. Usually, each RC is followed by five to six questions in UGC Paper I Exam.

Solution Guidelines

Here are some techniques that can be used to make comprehension easier:

- 1. Identification of key ideas:** There are always certain key sentences that determine the flow of the ideas in a passage. To make comprehension simpler, these sentences are supposed to be identified during the first reading of the passage. The paragraph(s) should be read quickly to get a generalized idea. It should be read again, a little slowly, so as to know the details. The key ideas can also be underlined.
- 2. Summarize the paragraph:** While reading the passage, develop a habit of mentally summarizing each paragraph and keep linking them as you proceed. This helps in understanding the overall idea of the passage and as a result, the candidate may find it easier to answer the questions. Some readers may prefer to study the questions again and turn to the relevant portions of the passage later.
- 3. Determine sentence links:** Usually, the sentences within a passage are directly or subtly linked. Here, practice helps a lot in identifying such links. However, failing to practice will adhere to miss out the most important points.
- 4. Ask questions:** Whenever in doubt, the reader should always ask questions to oneself. For example, the following questions are asked: Why has the author mentioned this example? What is the purpose of the second paragraph? This kind of reflection helps in developing a deeper perspective about the main ideas.

MAIN QUESTION CATEGORIES

Comprehension passage questions can be classified into the following categories:

Main Theme or Central Idea

These type of questions are based on the passage as a whole and they are typical in nature as they reflect upon the author's motive to write the passage.

These questions will put someone to test by scrutinizing the ability of the reader in understanding the given paragraph.

Solution Approach

Usually, the answers to such type of questions lie in the introductory or the concluding paragraphs. A quick reading of the first or last or both the paragraphs is helpful.

Examples

1. Which of the following alternatives best narrate the passage?
2. Which of the following sentences reflect upon the main idea of the passage?

Paying attention to single words and phrases helps to understand the relationship between the ideas within a paragraph.

1. *Cause and effect words*—as a result, therefore
2. *Time words*—meanwhile, before
3. *Contrast words*—in contrast, conversely
4. *Addition words*—also, in addition
5. *Emphasis words*—more important, remember

Author's Opinion and Attitude

Such questions are based on the author's viewpoint and the answers are not explicitly mentioned. They have to be derived from the key sentences used by the author to express his thoughts and opinions. The questions are framed so as to test one's ability to judge the author's attitude or his knowledge on the subject by analysing the content, style and phraseology used in the passage. The candidate needs to be empathetic with the author while answering such questions. Such a set of questions examine the candidate on many fronts.

Solution Approach

One can look for the writing style and the sentences that determine the tone used by the author, which serve as a clue to the answers. If a particular part of the passage is in question form, then try to understand the reasoning used by the author to explain that part.

Alternatively, the reader could focus on the adverbs and adjectives used by the author to describe something. These words are indicative of the mood and intensity of his thoughts.

Examples

1. What is the author's tone in the second paragraph?
2. According to the author, what can be a logical solution to the issue at hand?
3. Which of the following ideas is most likely to agree with?

Explicit or Direct Information

These are direct questions based on the names, dates, figures, data, facts or opinions mentioned in the passage and are easily noticed during the first read itself. The answer options may also be direct sentences picked up from the passage. Scan the passage to spot the keywords for specific details.

Some specific detail questions are negative and are singled by the words, such as not, except, most and least. If you cannot find the correct answer for negative-specific details, eliminate the choices given and choose the one that remains as the correct response. It also makes a lot of sense to read the questions first as it gives an idea of what to look for while reading the passage. Questions based on explicit information should be verified by reading specific parts of the passage that contain the answer.

Examples

1. Which one of the following options is true according to the passage?
2. Which one of the following options is no longer a motivation for youth today?

Implicit Information

The answers to these types of questions are not explicitly stated but are implied/inferred/deducted from the passage.

These questions test both our comprehension skills and our ability to relate to author's opinion.

Solution Approach

Understanding the overall idea of the passage helps to answer these questions. While reading the passage, the candidate should try to understand the arguments presented by the author.

Examples

1. According to the passage, which of the following options can be inferred?
2. With which of the following arguments is the author most likely to agree?

Language Expression Questions

These questions are based on specific words or phrases mentioned in the passage. However, sometimes, there may be synonym or antonym-based questions, which test our understanding of a word in the context of the passage. The aim of the reader should be to understand the contextual meanings of the words with respect to the passage rather than sticking to their dictionary meanings.

These questions test our ability to move simple, known words and their literal meanings to understand the language usage and the subject matter of the passage. They test our reasoning skills and the ability to relate to the author's ideas while reading the passage.

Solution Approach

A thorough second reading of that part of the passage from where the phrase has been picked up help us in correctly understanding the context of the passage.

Examples

1. In the context of paragraph, what does, as good as it gets, mean?
2. From the options, find the word closest in meaning to the given word as it has been used in the passage.

Organization of the Passage

These questions are based on the structure of the passage and the literary techniques used by the author in expressing his arguments. Questions dealing with strengthening and weakening arguments fall in this category.

These questions test our ability to analyse the structure of the passage, identify sentences and paragraphs as assumptions, arguments, solutions, conclusions, etc.

Solution Approach

A lot of reading can help a reader to acquire literary skills.

Examples

1. Which of these options best represent the structure of the passage?
2. What is the fundamental premise on which the author has based his analysis?
3. What is the assumption made by the author when he says democracy will never fall?

Analogous Argument

A candidate is required to choose the option that is similar or conforms to reasoning along the same lines as the arguments mentioned in the passage.

This question tests our comprehension and our ability to illustrate the analysis formed in our mind based

on our reading of the passage. It also tests our capacity to associate two separate illustrations that follow a single line of reasoning.

Solution Approach

The key to answering such questions is understanding the base arguments before having a look at the options and then eliminating the options by comparing them with compactness of the line of reasoning provided in the question stem.

Examples

1. Which of the following illustrations best represent the arguments mentioned in the second paragraph?
2. The phrase, to err is human, is applicable in which one of the situations listed below?

SPECIMEN PASSAGE I

The sugar maple is a hard maple tree. It can grow as tall as 100 feet and as wide as 4 feet. The sugar maple is commercially valued for its sap, which is used in making maple syrup. Two north-eastern states, Vermont and New York, rank as major producers of maple syrup. In Canada, Quebec's annual syrup production surpasses 2.5 million gallons. To make pure maple syrup, holes are made in the trunk of the tree at the end of winter or in early spring. The water-like sap seeps through the holes and runs through a plastic spout that is put into the hole. Afterwards, the collected sap is transferred into tubes that are hooked up to a tank kept in the sugar house. Then, the sap goes through the boiling process. Boiling enhances flavour and adds colour to the sap. Once the sugar content of the sap is about 65–66%, the sap is ready to be strained and marketed. However, maple syrup found in supermarkets is usually not pure and has other additives. The colour of pure maple may range from golden honey to light brown. Between 35 to 50 gallons of sap is needed to produce 1 gallon of maple syrup. It is also popular for the strength and finish of its wood, the sugar maple tree has been put to use in furniture, interior woodwork, flooring and crates.

Questions

1. What is the main purpose of the passage?
 - (a) To examine the economic viability of making maple syrup.
 - (b) To list a number of major producers of maple syrup.
 - (c) To provide information on preparation of maple syrup.
 - (d) To discuss the use of maple wood in furniture and other products.

This is a general inference question. Most of the passage explains the technique used for making maple syrup. Hence, the correct answer is (c).

2. For which of the following words does the author provide a definition?
- (a) The sugar maple (b) A tank
(c) Additives (d) Furniture

This specific detailed question tests our understanding of a definition. Only sugar maple is defined in the first line of the passage. Other words have just been mentioned in the passage. Hence, the correct answer is (a).

3. According to the passage, which of the following periods is ideal for sapping?
- (a) End of winter or in early spring.
(b) Beginning of winter or in early spring.
(c) End of winter or late spring.
(d) Throughout the year.

This is again a specific question. Based on the information in the passage, sapping takes place at the end of winter and in early spring. Hence, the correct answer is (a).

4. All of the following is true about boiling except which of the following?
- (a) It enhances the colour.
(b) It improves the flavour.
(c) It increases the sugar content.
(d) It reduces the shelf-life of the syrup.

This specifically detailed question is negative and we can eliminate choices that are not applicable. Hence, the correct answer is (d).

5. What can be inferred about the production of maple syrup?
- (a) It is simple, but time-consuming.
(b) It is labour-intensive.
(c) Its processing demands complex equipment.
(d) The higher the volume, the less predictable is the quality.

This question tests our inference ability. The answer to the question is not directly stated in the passage.

Hence, the correct option is (a). The production technique is quite straightforward, but it takes time. The producers have to depend on the natural flow of sap.

6. The phrase, to be strained, could best be replaced by which of the following statement?
- (a) To be tried (b) To be purified
(c) To be filtered (d) To be solidified

This is a language/expression question. Hence, the correct option is (c).

SPECIMEN PASSAGE 2

Now, India's children have to receive at least eight years of education. The gnawing question is whether it will remain on paper or it will become a reality. One hardly needs a reminder that this right is different from others enshrined in the constitution, that the beneficiary—a six-year-old child cannot demand it, nor can he or she fight a legal battle when the right is denied or violated. In all cases, it is the adult society that must act on behalf of the child. In another peculiarity, where a child's right to education (RTE) is denied, no compensation offered later can be adequate or relevant. This is so because childhood does not last long. If a legal battle fought on behalf of a child is eventually won, it may be of little use to a boy or girl because the opportunity missed at school during childhood cannot serve the same purpose later in life. This may be painfully true for girls because our society permits them only a short childhood, if at all. The RTE has become a crucial point of law in India's history when the ghastly practice of female infanticide has resurfaced in the form of foeticide. This is 'symptomatic of deeper turmoil' in society, which is compounding the traditional obstacles to girls' education. Tenacious prejudice against intellectual potential of girls runs across our cultural diversity and the system of education has not been able to address it.

Questions

1. With reference to the passage, consider the following statements.
- (A) When children are denied education, adult society does not act on behalf of them.
(B) Right to education as a law cannot be enforced in the country.

Which of the statements given above is/are incorrect?

- (a) Only (A) (b) Both (A) and (B)
(c) Only (B) (d) Either (A) or (B)

Explanation

Statement (A) is incorrect. The enactment of RTE itself shows that adult society may act on behalf of children to ensure their education.

Statement (B) is incorrect as the passage does not indicate that the right cannot be enforced in the country but rather mentions the shortfalls and difficulties which may occur in the act of enforcing the law.

Both A and B are incorrect statements. Hence, (b) is the right answer.

2. According to the passage, what could be traditional obstacles to the education of girls?

- (A) Inability of the parents to fight a legal battle when the right to education is denied to their children.
- (B) The traditional way of thinking about girls' role in society.
- (C) The prejudice against the intellectual potential of girls.
- (D) Improper system of education.

Select the correct answer from the codes given below.

- (a) Only (A) and (B)
- (b) Only (A), (C), and (D)
- (c) Only (B), (C), and (D)
- (d) (A), (B), (C), and (D)

Explanation

Statement (A) is not mentioned in the passage anywhere. The statements (B), (C) and (D) are mentioned as traditional obstacles at the end of paragraph. Hence, (c) is the correct answer.

3. Where a child's right to education is denied, no compensation offered later can be adequate or relevant is reflected through the fact that
- (a) Childhood is short.
 - (b) Opportunity to learn missed during specific childhood period may not be compensated later in life.
 - (c) Both (a) and (b)
 - (d) None of the above

Explanation

Explicitly mentioned in the passage. Both (a) and (b) apply. Hence, the correct option is (c).

4. The expression, symptomatic of deeper turmoil reflects
- (a) Lack of proper girl's education in society.
 - (b) Enactment of right to education.
 - (c) Prevailing political environment in the country.
 - (d) None of the above

Explanation

There is a mention of girl's education in the second part of the sentence. Hence, the correct option is (a).

5. Which one of the following statement conveys the key message of the passage?
- (a) India has declared that education is compulsory for its children.
 - (b) Adult society is not keen on implementing the right to education.
 - (c) The right to education, particularly for a girl child, needs to be safeguarded.
 - (d) None of the above

Explanation

Option (a) is incorrect as there is no mention of education being made compulsory. Option (b) is also incorrect, as there is no mention of adults not being keen in implementing the right to education and it simply mentions that it is the adult society which must act on behalf of the child. The author is specifically concerned about girl child's education. Hence, the correct option is (c).

6. Which one of the following statements convey the inference of the passage?
- (a) The society has a tenacious prejudice against the intellectual potential of girls.
 - (b) Adults cannot be relied upon to fight on behalf of children for their right to education.
 - (c) The legal fight to get education for children is protracted and prohibitive.
 - (d) There is no sufficient substitute for education received in childhood.

Explanation

The option (a) is directly mentioned in the passage and hence, it is not an inference. Option (c) has the word 'prohibitive' that cannot be inferred from the passage. Option (d) is supported by 'if a legal battle ... if at all' which points out the opportunity cost of a missed childhood, particularly for girls. Hence, the correct option is (d).

SPECIMEN PASSAGE 3

The concept of creative society refers to the phase of development of a society in which a large number of potential contradictions become articulate and active. This is most evident when oppressed social groups get politically mobilized and demand their rights. The upsurge of peasants and tribes, the movements for regional autonomy and self-determination, the environmental movements and the women's movements in the developing countries are signs of emergence of creative society in contemporary times. The forms of social movements and their intensity may vary from country to country and place to place within a country, but the very presence of movements for social transformations in various spheres of a society indicates the emergence of a creative society in a country.

Questions

1. What does the author imply by creative society?
- (A) A society where diverse art forms and literary writings seek incentive.
 - (B) A society where social inequalities are accepted as a norm.

- (C) A society where a large number of contradictions are articulate.
 (D) A society where the exploited and the oppressed groups grow conscious of their human rights and upliftment.

Select the correct answer using the codes given below:

- (a) (A), (B), and (C) (b) Only (D)
 (c) Only (C) and (D) (d) Only (B) and (D)

Explanation

Statement (A) takes the literal meaning of creative society, which is not appropriate in the given context of the paragraph. Statement (B) contradicts the passage as there is talk of oppressed social groups get politically mobilized and ... rights. Statement (C) is mentioned in the first sentence where potential contradictions become 'articulate'. Statement (D) is mentioned in 'this is most evident ... creative society in temporary times'. Hence, the correct option is (c).

2. According to the passage, what are the manifestations of social movements?
 (A) Being aggressive
 (B) Involvement of the whole society.
 (C) Quest for social equality and individual freedom.
 (D) None of the above

Select the correct answer using the codes given below.

- (a) Only (A) and (B) (b) Only (C)
 (c) Only (B) and (C) (d) (A), (B) and (C)

Explanation

Social movements do not need to be aggressive. Hence, (A) is incorrect. Statement (B) contradicts the passage since social groups get politically mobilized and demand their rights internally and not externally. The entire passage supports statement (C). Hence, the correct option is (b).

3. With reference to the passage, consider the following statements.
 (A) To be a creative society, it is essential to have a variety of social movements.
 (B) To be a creative society, it is imperative to have potential contradictions and conflicts.

Which of the statements given above is/are correct?

- (a) Only (A) (b) Only (B)
 (c) Both (A) and (B) (d) Neither (A) nor (B)

Explanation

Statements (A) and (B) invert the argument in the passage. The paragraph does not mention having a

variety of social movements as a necessary condition to be creative in the entire paragraph, so statement (A) is incorrect. For statement (B), just the presence of potential contradictions and conflicts is itself not a necessary condition for social movement, but their 'articulation and (being) active' is also required. So statement (B) is also incorrect. So the answer should be neither (A) nor (B). Hence, the correct option is (d).

4. Which of the following are examples of different social movements?
 (A) Upsurge of peasants and tribes.
 (B) The movements for regional autonomy and self-determination.
 (C) The environmental movements
 (D) The women's movements

Codes:

- (a) (A), (B) and (C) (b) (B), (C) and (D)
 (c) (A), (B) and (D) (d) All the above

Explanation

It is explicitly mentioned in the third line of the passage. Hence, the correct option is (d).

5. Which of following can be described as the most appropriate aim(s) for various social movements?
 (A) To achieve the status of a creative society
 (B) To achieve rights
 (C) Social transformation

Codes:

- (a) (A) and (B) (b) (B) and (C)
 (c) (A) and (C) (d) Only (C)

Explanation

Statement (A) is not the explicit aim of any movement. Statement (B) is mentioned in the second line of the paragraph. Social transformation has been mentioned in the last line of the paragraph. Hence, the correct option is (b).

6. Which of following can be considered as the most suitable title for the passage?
 (a) Creative society and social movements.
 (b) Social movement as the prerequisite of a creative society.
 (c) Social movements
 (d) None of the above

Explanation

Option (a) seems to be the most appropriate option. Option (b) is not the answer; it is nowhere mentioned in the paragraph that social movement is the prerequisite of a creative society. Yes, social movements indicate the emergence of creative society. Option (c) is also not the answer as the paragraph is mainly about creative society.

SPECIMEN PASSAGE 4

A country under foreign domination seeks escape from the present in dreams of a vanished age and finds consolation in visions about the greatness of past generations. That is a foolish and dangerous pastime in which many of us indulge.

An equally questionable practice for us in India is to imagine that we are still spiritually great though we have come down in the world in other respects. Spiritual or any other such greatness cannot be found on lack of freedom and opportunity or on starvation and misery. Many western writers have encouraged the notion that Indians are other-worldly. I suppose that the poor and unfortunate in every country become other-worldly to some extent, unless they become revolutionaries, for this world is evidently not meant for them. So also the subject people.

As a man grows to maturity, he is not entirely engrossed in or satisfied with the external objective world. He also seeks some inner meaning and some psychological and physical satisfaction. Therefore, along with people and civilizations, they mature and grow as adult. Every civilization and every person exhibits these parallel streams of external and internal lives. Where they meet or keep close to each other, there is an equilibrium and stability, when they diverge, conflicts and crisis arise that torture the mind and the spirit.

Questions

- The passage mentions that 'this world is evidently not meant for them'. It refers to people who
 - Seek freedom from foreign domination.
 - Live in starvation and misery.
 - Become revolutionaries
 - All the above

Explanation

The pronoun, them, refers to the poor and unfortunate in every country. Hence, the correct option is (b).

- Which of the following can be taken as the most valid assumption of the paragraph?
 - A country under foreign domination cannot indulge in spiritual pursuit.
 - Poverty is an impediment in suitable pursuit.
 - Both (a) and (b)
 - None of the above

Explanation

Statement (a) is contradictory to the passage. Statement (b) is an assumption implied from 'Spiritual or any other ... starvation and misery'. Hence the correct option is (b).

- Which of the following can be considered as the main theme of the paragraph?
 - The state of mind of oppressed people.
 - Starvation and misery.
 - The growth of civilization.
 - Body, mind and spirit of people in general.

Explanation

Statements (b), (c), and (d) are just references in the passage. Hence, the correct option is (a).

- According to the passage, the torture of the mind and spirit is caused
 - By the ruthlessness of foreign domination.
 - By the desire to escape from foreign domination and find consolation in visions of past greatness.
 - By the desire to become either other-worldly or revolutionary.
 - Due to lack of equilibrium between an external life and an internal life.

Explanation

Statement (d) is the correct option. It is mentioned in the last line of the third paragraph—'this has been rephrased in the specimen passage. Needs to be rephrased here also. Where they meet or keep ... and crises arise that torture the mind and spirit'.

- As a person grows in maturity, she/he seeks satisfaction in
 - Psychological satisfaction only.
 - Physical satisfaction only.
 - Both psychological and physical satisfaction.
 - Neither (a) or (b).

Explanation

It is mentioned explicitly in the last paragraph.

- Many western writers have encouraged the notion that Indians are other-worldly. What can be the possible meaning of 'other-worldly' in the context of entire passage?
 - They are still basking in past greatness and are not in touch with the realities of the present-day world.
 - Poor, unfortunate and subject people.
 - Both (a) and (b)
 - Neither (a) nor (b)

Explanation

The term 'other-worldly' has been explicitly used in the second paragraph for poor people. In common parlance, it means that poor people are cut off from main stream society. Hence, the correct option is (b).

SPECIMEN PASSAGE 5

Ecosystems provide people with a variety of goods and services, food, clean water, clean air, flood control, soil stabilization, pollination, climate regulation, spiritual fulfilment and aesthetic enjoyment, to name just a few. Most of these benefits are either irreplaceable or the technology necessary to replace them is prohibitively expensive. For example, potable freshwater can be provided by desalinating sea water, but only at great cost.

The rapidly expanding human population has greatly modified the earth's ecosystem to meet their increased requirements of some of the goods and services, particularly food, freshwater, timber, fibre and fuel. These modifications have contributed substantially to human well-being and economic development. The benefits have not been equally distributed. Some people have actually been harmed by these changes. Moreover, short-term increases in some ecosystems' goods and services have come at the cost of long-term degradation of others. For example, efforts to increase the production of food and fibre have decreased the ability of some ecosystems to provide clean water, regulate flooding and support biodiversity.

Questions

- Expanding human population has an adverse effect on
 - Spiritual fulfilment
 - Availability of potable freshwater
 - Employment
 - Biodiversity

Which of the statements given above are correct?

- (A), (B) and (C)
- (B), (C) and (D)
- (B) and (D)
- All the above

Explanation

The last sentence indicates an adverse effect on the availability of clean water and biodiversity. Hence, the correct option is (c).

- The passage mentions that 'some people have actually been harmed by these changes'. It indicates towards
 - Inequitable distribution of benefits.
 - Decrease in the ability of some ecosystems to provide clean water, regulate flooding and support biodiversity.
 - Both (a) and (b)
 - Neither (a) nor (b)

Explanation

Both (a) and (b) indicate inequitable distribution of benefits and resources. Hence, the correct option is (c).

- Which of the following is correct in the context of the passage?

- The rapid expansion of population has adversely affected some people.
- Sufficient efforts have not been made to increase the production of food and fibre.
- In short term, some people may be harmed, but in long term, everyone will benefit from modifications in earth's ecosystem.
- None of the above

Explanation

Only statement (a) is implied, (b) is irrelevant and the discussion in the passage does not support (c). Hence, the correct option is (a).

- With reference to the passage, consider the following statements:

- It is imperative to modify the earth's ecosystem for the well-being of mankind.
- Technology can never replace all the goods and services provided by ecosystems.

Which of the following statements given above is/are correct?

- Only (A)
- Only (B)
- Both (A) and (B)
- Neither (A) nor (B)

Explanation

Statement (A) is incorrect since the passage is almost about positive and negative aspects of the modification of our ecosystem. Statement (B) is mentioned clearly in the passage. Hence, the correct option is (b).

- According to the passage, which of the following can be taken as the main reason for modification of earth's ecosystem?
 - Technology
 - Increasing population
 - Lack of an integrated approach
 - All the above

Explanation

Though both technology and lack of integrated approach may be applicable, both are long drawn inferences. Among the available choices, increasing population is clearly mentioned. Hence, the correct option is (b).

- Which of the following can be considered as the most suitable title for the passage?
 - Modification of our ecosystem.
 - Our natural resources.
 - Harmful effect of increase in human population.
 - Human interference in our ecosystem.

Explanation

Clearly, options (b), (c), and (d) may be relevant to the discussion in the passage, but it is mainly about the causes and effect of changes in our ecosystem. Hence, the correct option is (a).

Practice Exercises

PRACTICE PASSAGES

Passage 1

Read the following passage and answer the questions 1–5.

Each day at Shantiniketan, the school starts with Saraswati Vandana. When painting competitions are held in the school, images of Hindu gods and goddesses are the most common. Sanskrit is the favourite subject of many students. Nothing is new about it except that the 1200 odd students studying in the Hindu-run school are Muslims. In 1983, when Ranchodbhai Kiri started Shantiniketan in the all-Muslim Juhapura area of Ahmedabad in Gujarat, only 20% of the students were Muslims, but when riots involving the Muslims of Juhapura and the Hindus of nearby Jivraj Park, Vejalpur, affected the locality, Hindus started migrating. Today, all the students are Muslims and the school is an unparalleled example of harmony. In 2002, when a section of inflamed Muslims wanted the school closed, the parents of the students stood like a wall behind it. Shantiniketan's principal said, 'We never thought of moving the school out of the area because of the love and affection of the local Muslims. Indeed, they value the high standard of education which we have set'. Such is the reputation of the school that some of the local Muslim strongmen accused of involvement in communal riots are willing to protect the school during riots. The parents of Shantiniketan's students believe that it is the best school when it comes to quality of teaching. A large number of students have gone for both graduation and post-graduation studies. Significantly, the only Muslim teacher in the 40-member teaching staff named Husena Mansuri teaches Sanskrit. In fact, she is so happy with the school that she recently declined the Principalship of another Muslim-run school. Some of the students' entries in a recent inter-school painting competition were truly moving. One drew a picture of Bharat Mata with a mosque and temple, while another portrayed a boy tying rakhi to his sister. Truly, Shantiniketan is a beacon of hope that despite the provocations from both communities, Hindus and Muslims, can live side by side with mutual respect.

- How does Shantiniketan school start the day?
 - Prayer
 - National anthem
 - Saraswati Vandana
 - Puja
- Write the subject which is most preferred by the students.
 - English
 - Hindi
 - Sanskrit
 - Gujarati
- Who protects the school during the riot times?
 - Hindus
 - Local Muslims
 - Politicians
 - Christians
- Who is the teacher of Sanskrit?
 - Manisha Vakil
 - Ranchodbhai Kiri
 - Husena Mansuri
 - Husena Khatoon
- What is the hope despite the communal riots?
 - Hindus and Muslims can live side by side.
 - Only Hindus can live.
 - Hindus and Muslims cannot live side by side.
 - Only Muslims can live.

Passage 2

Read the following passage and answer the questions 6–10.

Some religious leaders have taught that man is made up of a body and a soul, but they have been silent about intellect. Their followers try to feed the body to earth and save the soul from perdition after death—but they neglected the claims of the mind. Bread for the body and virtue for the soul, these are regarded as indispensable requisites of human welfare. Nothing is said about knowledge and education. Thus, Jesus Christ spoke of feeding the hungry, healing the sick and converting the sinners, but he never taught the duty of teaching an ignorant and increasing scientific knowledge. He himself was not a well-educated man and intellectual pursuits were beyond his horizon. Gautama Buddha also laid stress on morality, meditation and asceticism, but he did not attach great importance to history, science, art or literature. St. Ambrose deprecated scientific studies and wrote, 'To discuss the nature and position of the earth does not help us in our hope for life to come'. St. Basil said very frankly and foolishly, 'It is not a matter of interest to us whether the earth is a sphere, a cylinder or a disc'. Thomas Carlyle also followed the Christian tradition and declared that he honoured only two kinds of men and no third, i.e., the manual labourer and the religious teacher. He forgot the scientist, the scholar and the artist. The cynics of Greece despised education at last.

- What have the religious teachers taught in the past?
 - That man is made up of body only.
 - That man is made up of soul only.
 - That man is made up of bubbles.
 - That man is made up of body and soul together.
- According to the passage, what is food for the soul?
 - Bread
 - Virtue
 - Vice
 - Education
- The following philosophers are mentioned in the paragraph:

- (A) Jesus (B) Gautama Buddha
 (C) St. Ambrose (D) Thomas Carlyle
 (E) St. Basil

Which of the following depicts the correct order as they appear in the paragraph.

- (a) (A), (B), (C), (D) and (E)
 (b) (A), (C), (D), (E) and (B)
 (c) (A), (B), (C), (E) and (D)
 (d) (B), (A), (C), (D) and (E)
9. Intellectual pursuits have been neglected because
 (A) They are unnecessary and superfluous.
 (B) They make people dwarf.
 (C) They lead people to hell.
 (a) Only (A) is correct
 (b) Only (B) is correct
 (c) Only (C) is correct
 (d) Only (A) and (B) are correct
10. The style of the passage is
 (a) Narrative (b) Expository
 (c) Critical (d) Analytical

Passage 3

[December 2000]

Read the following passage and answer the questions 11–15.

The previous decade has reversed the presumptions about development and more than anything else, it has made it difficult to decide what is in store during the next decade. However, there are some things about which one can make claims with some confidence.

Firstly, education, health and productive employment are the decisive factors for development and impartiality. We believe that all these are the results of rapid economic development and to achieve these ends, development only can generate resources. In the present form, it will be best to view it as a better reason than as a result of development. In fact, in every case of successful development, the evaluation of previous reforms in education, technical skills, health, existence and productive tasks are included.

Secondly, technical ability is a vital resource and explains the high ratio of development in production and trade as compared to ratios of development in more traditional factors, such as natural resources or capital formation. There is no requisite capability in research. In fact, industrial momentum in a factory or farm is more important than the presence of a research organization.

Thirdly, essentially required environment also cannot be ignored for a long time period, which is next only to the issue of disarmament in the list of international issues. At the national level, there has been a definite rise in ignorance towards the environment due to development.

In the context of India, at least two immediate factors increase the ratio mentioned above. The first one of these is the rise in population level. By giving momentum to expansion of population and the workforce, human resource development has achieved synergistic importance. An increase in population is also a factor but is not the most important one, which delineated environmental decay in rural and urban areas. Second, as a large country, we cannot make an independent place for ourselves in the global system without

developing appropriate ability for the development of our self-respect. In order to achieve this objective, the achievement of technical skills is a decisive step.

So far, we have taken human resource development, technical and environmental issues as supporting factors of the main part of the plan. Along with the expansion of quality of basic infrastructure and targets of production (tonnes of steel and kilowatt hours of electricity), other targets of capacity (kilometres) and other targets (number of schools and students, number of electrified villages), known techniques, full use of natural resources and maximum possible use of available financial resources have been emphasized upon.

11. According to this passage, what has been considered to be the most important by us out of the following?
 (a) Basic facilities and increase in the number of achieved targets.
 (b) Ideal use of available natural resources.
 (c) Maximum use of available financial resources.
 (d) All the above
12. According to the author of the passage, whose effect, out of the following is felt at the national level?
 (a) Expansion of workforce of high quality.
 (b) Lack of care and activism for the protection of environmental resources.
 (c) Continuous decay of technical potentialities in urbanized countries.
 (d) Emphasis on a slower pace of disarmament as compared to disarmament in other nations.
13. According to the author of the passage, which of the following factors is of synergistic importance?
 (a) Population growth
 (b) Workforce
 (c) Human resource development
 (d) None of the above
14. Which of the following areas has not been included among various 'targets' mentioned in the passage?
 (a) Maximum use of financial resources
 (b) Electricity production
 (c) Population growth
 (d) Number of schools and children
15. Which of the following can be the most suitable title of the passage?
 (a) Potential obstacles in economic development.
 (b) Main factors of development.
 (c) Targets in development process.
 (d) Role of population growth in development.

Passage 4

[June 2001]

Read the following passage and answer the questions 16–20.

The great Acharyas have said that everything discovered has a great goal; surrender yourself to that goal and act towards it by drawing your inspiration from that goal whereby you will get a new column of energy. Do not allow this energy to be dissipated in the futile memory of past regrets or failures, or excitement of the present and bring that entire energy focused into activity, i.e., the highest creative action in the world outside, whereby the individual who is till now

considered the most inefficient finds his way to the highest achievement and success.

This can be said very easily in a second. In order to train our mind to this attitude, considerable training is needed because we have already trained our mind wrongly to such an extent that we have become perfect in imperfections. Not knowing the art of action, we have mastered artists in doing wrong things and the totality of activity will bring the country to a wrong end indeed.

If each one is given a car to achieve an ideal socialistic pattern and nobody knows driving, but starts driving, what would be the condition on road? Everybody has equal rights on the public road. Then, each car will necessarily dash against the other and there is bound to be a jumble.

There seems to be a very apt pattern of life that we are heading to. Every one of us is a vehicle. We know how to go forward. The point intellect is very powerful and everybody is driving but nobody knows how to control the mental energy and direct it properly or guide it to the proper destination.

16. What is the effect of wrong training of our mind?
 - (a) Becoming perfect in all aspects of life.
 - (b) Becoming master artists.
 - (c) Taking the country to wrong destination.
 - (d) Carrying on activities without knowing how to control mental energies.
17. The source of energy according to the author is
 - (a) Highest creative action.
 - (b) Proper training of mind.
 - (c) Inspiration from past events.
 - (d) Stimulation obtained from a set goal.
18. The author's main focus in the passage is
 - (a) Finding out a worthy goal in life.
 - (b) Regulation of energy in proper channels.
 - (c) Struggle for equal rights.
 - (d) Car accidents due to lack of driving skills.
19. The country may perish because of
 - (a) Failures in past acts.
 - (b) Wrong deeds performed without proper knowledge.
 - (c) Completely surrender to anyone goal.
 - (d) Directing mental energy to the right destination.
20. The author considers everyone to be a vehicle that knows how to go forward
 - (a) Without driving energy
 - (b) With least consideration for others
 - (c) With no sense of direction
 - (d) With no control on speed

Passage 5

Read the following passage carefully and answer the questions 21–25.

The phrase 'What is it like?' stands for a fundamental thought process. How does one go about observing and reporting on things and events that occupy the segments of earth space? Of all the infinite varieties of phenomena on the face of the earth, how does one decide what phenomena to observe? There is no such thing as a complete description of the earth or any part of it, for every microscopic point on the earth's

surface differs from every other such point. Experience shows that the things observed are already familiar because they are like phenomena that occur at home or because they resemble the abstract images and models developed in the human mind.

How are abstract images formed? Humans alone, among all other animals on the earth, possess language and their words symbolize not only specific things but also mental images of classes of things. People can remember what they have seen or experienced because they attach a word symbol to them.

During the long record of our efforts to gain more and more knowledge about the face of the earth as the human habitat, there has been a continuing interplay between things and events. The direct observation through the senses is described as a percept and the mental image is described as a concept. Percepts are what some people describe as reality, in contrast to mental images, which are theoretical, implying that they are not real.

The relation of percept to concept is not as simple as the definition implies. It is now quite clear that people of different cultures or even individuals in the same culture develop different mental images of reality and what they perceive is a reflection of these preconceptions. The direct observation of things and events on the face of the earth is so clearly a function of the mental images of the mind of the observer that the whole idea of reality must be reconsidered.

Concepts determine what the observer perceives, yet concepts are derived from the generalizations of previous percepts. What happens is that the educated observer is taught to accept a set of concepts and then sharpens or changes these concepts during a professional career. In any one field of scholarship, professional opinion at one time determines what concepts and procedures are acceptable and these form a kind of model of scholarly behaviour.

21. The problem raised in the passage reflects on
 - (a) Thought process
 - (b) Human behaviour
 - (c) Cultural perceptions
 - (d) Professional opinion
22. According to the passage, human beings have which of the following in mind the most?
 - (a) Observation of things
 - (b) Preparation of mental images
 - (c) Expression through language
 - (d) To gain knowledge
23. Concept means
 - (a) A mental image
 - (b) A reality
 - (c) An idea expressed in language form
 - (d) All the above
24. The relation of percept to concept is
 - (a) Positive
 - (b) Negative
 - (c) Reflective
 - (d) Absolute
25. In the passage, the earth is taken as
 - (a) The globe
 - (b) The human habitat
 - (c) A celestial body
 - (d) A planet

Passage 6

Read the following passage carefully and answer the questions 26–30.

It should be remembered that the Nationalist Movement in India, like all nationalist movements was essentially a bourgeois movement. It represented the natural historical stage of development and to consider it or to criticise it, as a Working Class Movement is wrong. Gandhi represented that movement and the Indian masses in relation to that movement to a supreme degree and he became the voice of Indian people to that extent. The main contribution of Gandhi to India and the Indian masses has been through the powerful movements that he launched through the National Congress. Through nation-wide action, he sought to mould the millions and largely succeeded in doing so. He changed them from a demoralized, timid and hopeless mass, bullied and crushed by every dominant interest and incapable of resistance into a people with self-respect and self-reliance, resisting tyranny, and capable of united action and sacrifice for a larger cause. Gandhi made people think of political and economic issues and every village and every bazaar hummed with argument and debate on the new ideas and hopes that filled the people.

That was an amazing psychological change. The time was ripe for it, of course, and circumstances and world conditions worked for this change. However, a great leader was necessary to take the advantage of those circumstances and conditions. Gandhi was that leader and he released many bonds that imprisoned and disabled our minds and none of us who experienced it can ever forget that great feeling of release and exhilaration that came over the Indian people.

Gandhi has played a revolutionary role of greatest importance in India because he knew how to make the most of the objective conditions and could reach the heart of the masses, whereas groups with a more advanced ideology functioned largely in air because they did not fit in with those conditions and could, therefore, not evoke any substantial response from the masses.

It is perfectly true that Gandhi, functioning in nationalist plane, did not think in terms of the conflict of classes, trying to compose their differences. However, the actions he indulged in and taught the people have inevitably raised mass consciousness tremendously and made social issues vital. Gandhi and the Congress must be judged by the policies they pursued and the action they indulged in. But behind this, personality counts and colours those policies and activities. In case of very exceptional people like Gandhi, the question of personality becomes especially important in order to understand and appraise him. To us, he represented the spirit and honour of India, the yearning of her sorrowing millions to be rid of their innumerable burdens and an insult to him by the British Government or others was an insult to India and her people.

26. Which one of the following is true of the given passage?
- The passage is a critique of Gandhi's role in Indian movement for independence.
 - The passage hails the role of Gandhi in India's freedom movement.
 - The author is neutral on Gandhi's role in India's freedom movement.
 - It is an account of Indian National Congress's support to the Working Class Movement.

- The change that the Gandhian movement brought among the Indian masses was
 - Physical
 - Cultural
 - Technological
 - Psychological
- To consider the Nationalist Movement or to criticize it as a Working Class Movement was wrong because it was a
 - Historical movement
 - Voice of the Indian people
 - Bourgeois movement
 - Movement represented by Gandhi
- Gandhi played a revolutionary role in India because he could
 - Preach morality
 - Reach the hearts of Indians
 - See the conflict of classes
 - Lead the Indian National Congress
- Groups with advanced ideology functioned in air as they did not fit in with
 - Objective conditions of masses
 - The Gandhian ideology
 - The class consciousness of the people
 - The differences among masses

Passage 7

Read the following passage and answer the questions 31–35.

Modern biotechnology, especially, the creation of genetically modified (GM) crops is often presented as a magical solution or universal panacea for the problems of poverty, inadequate nutrition and even environmental degradation across the world. Conversely, there are people who present the picture of tech-generated monsters and major human health hazards being created by science. Many of the technological changes currently being utilized in agriculture can have unforeseen consequences, and their safety and future viability are far from secure.

The reality, as always, is far more complex than either of these two extremes. Even today, the total food production in the world is adequate to feed the hungry of the world. The problem is rather one of unequal distribution, a large part of the population of developing countries engaged in agriculture, face many problems, such as lack of infrastructure, poor or unstable market access, volatile input and output prices, etc. These issues cannot be addressed by biotechnology as their solution is a far cry.

It is true that transgenic plants can offer a range of benefits (more effective pest resistance of seeds and crops through genetically controlled methods and leads to improved yield), which are above and beyond those that emerged from more traditional innovations. A basic question, of course, is whether the new GM technology is safe, and whether this is absolutely crucial since the effects may only be known much later. The jury is still very much out on this matter and the controversy does not appear to resolve quickly.

The trouble is that most governments in developing countries have relatively low food and beverage regulatory standards and public systems for monitoring and surveillance of such standards are either poor or non-existent. This leaves them open for entry and even dumping of a range of

agricultural products of new technology, which may not pass the regulatory standards in more developed countries.

31. Which of the following is true in context of the passage?
- Genetically modified crops have been universally recognized as a solution to poverty and environmental degradation.
 - The only way to improve the deficit in food requirement and food production in the world is by adapting genetically modified crops.
 - Genetically modified crops produce more yield as compared to yield from traditional methods.
 - Taking advantage of the absence of regulatory standards, scientists have been dumping new products in the market without appropriate approval.
32. Choose the word/group of words which is most similar in meaning to OPEN in the context of the passage.
- Vulnerable
 - Capable
 - Threatened
 - Uncertain
33. Choose the word/group of words which is most opposite in meaning to VOLATILE as used in the passage
- Never-ending
 - Valuable
 - Irreversible
 - Stable
34. The author of the given passage seems to be definitely
- Suggesting the use of traditional methods of agriculture as against biotechnology by developing countries owing to their poor regulatory standards.
 - In favour of utilizing biotechnology as a tool for the alleviation of poverty in the world.
 - Urging the policy makers to improve infrastructural facilities so that farmers can maximize the benefits of genetically modified crops.
 - Unconvinced of the long-term effects and rationale for immediate requirement of genetically modified products.
35. Why, according to the author, is genetic modification of crops not an answer to the problem of hunger in the world?
- People being highly doubtful of the long-term effects of genetically modified crops do not buy the products grown by such methods.
 - The problem of hunger in the world is not due to inadequate production of food but due to unequal distribution of it.
 - Many developing countries have banned genetically modified products as developed countries have been using such countries as dumping grounds for new genetically modified products.
- Only (A)
 - Only (B)
 - Both (B) and (C)
 - Both (A) and (C)

Passage 8

Read the following passage and answer the questions 36–40.

Though top leaders of the nationalist movement were the policy makers, the immediate day-to-day leadership was provided by the middle-class intellectuals. The rural origin of the industrial labour force together with rampant illiteracy and their simplistic docility attracted social workers, mainly

drawn from the middle-class intellectuals. They had an obvious advantage. Not being employees, the leaders were free from fear of victimization and immune towards the risks of leadership. Being generally well educated, they had a better perspective and sense of organization. They could see the issue in a broader context. They belonged to a higher social plane than the workers and with good education intellectual development comparable to the best among the employers they could meet the employers on their own plane and carry on negotiations on an equal footing. According to Royal Commission on Labour in India, 'the effect of this surge was enhanced by the political turmoil which added to the prevailing feelings of unrest and assured to provide willing leaders of a trade union movement'. But outside leadership had led to the politicization of the movement.

Politicization of the labour movement in India contributed both to its strength and weakness. While economic hardship was present all along as a latent force, the major impetus for growth of unionism was primarily provided by major political currents, particularly the movement for national independence. For the zeal and the organizing ability, which the leaders of the nationalist movement brought to bear upon the Indian Trade Union Movement, it would not have gained the dimensions and the position it had by 1909 within a decade of its formal start.

36. Leadership to Trade Union was provided by the middle-class intellectuals in India because
- They were the active participants in the nationalist movement.
 - They were literates among the workers.
 - They were able to negotiate with employers on equal terms.
 - The workers did not want any one among them to be their leader.
37. During the early years, Trade Union Movement gained greater dimensions because
- The workers accepted outside leaders.
 - It started along with the independence movement.
 - The leaders were well educated with broad perspectives.
 - The leaders were devoted to the welfare of workers.
38. Early history of trade union movement in India
- Trade Union Movement in India
 - Royal Commission on Trade Union Movement
 - Outside leadership to trade union
 - Negotiation with employers
39. What would be the reason for workers not coming forward to take up the leadership in Trade Union Movement in the early years?
- Lack of time
 - Illiteracy
 - Fear of victimization
 - Risk in leadership
40. According to the passage, which of the following leadership primarily led to the politicization of the movement?
- Inside leadership
 - Outside leadership
 - Both (a) and (b)
 - Illiterate leadership

Passage 9

Read the following passage and answer the questions 41–45.

It is no longer enough for us to talk about providing for universal access to education. Making available schooling facilities is an essential prerequisite, but it is insufficient to ensure that all children attend school and participate in the learning process. The school may be there, but children may not attend or they may drop out after a few months. Through school and social mapping, we must address the entire gamut of social, economic, cultural and indeed linguistic and pedagogic issues, factors that prevent children from weaker sections and disadvantaged groups, as also girls, from regularly attending and complementing elementary education. The focus must be on the poorest and most vulnerable since these groups are the most disempowered and at the greatest risk of violation or denial of their right to education.

The right to education goes beyond free and compulsory education to include quality education for all. Quality is an integral part of the right to education. If the education process lacks quality, children are being denied their right. The Right of Children to Free and Compulsory Education Act lays down that the curriculum should provide for learning through activities, exploration and discovery. This places an obligation on us to change our perception of children as passive receivers of knowledge and to move beyond the convention of using textbooks as the basis of examinations. The teaching-learning process must become stress-free and a massive programme for curricular reform should be initiated to provide for a child-friendly learning system, that is more relevant and empowering. Teacher accountability systems and processes must ensure that children are learning and that their right to learn in a child-friendly environment is not violated. Testing and assessment systems must be reexamined and redesigned to ensure that these do not force children to struggle between school and tuition centres, and bypass childhood.

41. Which one of the following does depict the school in the best possible manner ?
 (a) Through school and school mapping.
 (b) The focus must be on the poorest sections of society.
 (c) Both (a) and (b)
 (d) None of the above
42. According to the passage, which of the following is/are of paramount importance under the Right to Education?
 1. Sending of children to school by all parents.
 2. Provision of adequate physical infrastructure in schools.
 3. Curricular reforms for developing child-friendly learning system.
 Select the correct answer using the code given below.
 (a) Only 1 (b) Only 1 and 2
 (c) Only 3 (d) None of the above
43. With reference to the above passage, the following assumptions have been made:
 1. The Right to Education guarantees teachers' accountability for the learning process of children.
 2. The Right to Education guarantees 100% enrolment of children in the schools.
3. The Right to Education intends to take full advantage of demographic dividend.
 Which of the above assumptions is/are valid?
 (a) Only 1 (b) Only 2 and 3
 (c) Only 3 (d) 1, 2 and 3
44. According to the passage, which one of the following is critical in bringing quality in education?
 (a) Ensuring regular attendance of children as well as teachers in school.
 (b) Giving pecuniary benefits to teachers to motivate them.
 (c) Understanding the socio-cultural background of children.
 (d) Inculcating learning through activities and discovery.
45. What is the *essential message* in this passage?
 (a) The Right to Education now is a fundamental right.
 (b) The Right to Education enables the children of poor and weaker sections of the society to attend schools.
 (c) The Right to Free and Compulsory Education should include quality education for all.
 (d) The government as well as parents should ensure that all children attend schools.

Passage 10

Read the following passage and answer the questions 46–50.

'Desertification' is a term used to explain a process of decline in the biological productivity of an ecosystem, leading to total loss of productivity. While this phenomenon is often linked to the arid, semi-arid and sub-humid ecosystems, even in the humid tropics, the impact could be most dramatic. Impoverishment of human-impacted terrestrial ecosystems may exhibit itself in a variety of ways, such as accelerated erosion as in the mountain regions of the country, salinization of land as in the semi-arid and arid 'green revolution' areas of the country, for example, in Haryana and western Uttar Pradesh, and site quality decline—a common phenomenon due to general decline in tree cover and monotonous monoculture of rice/wheat across the Indian plains. A major consequence of deforestation is that it relates to adverse alterations in the hydrology and related soil and nutrient losses. The consequences of deforestation invariably arise out of site degradation through erosive losses. Tropical Asia, Africa and South America have the highest levels of erosion. The already high rates for the tropics are increasing at an alarming rate (For example, through the major river systems, such as Ganga and Brahmaputra in the Indian context), due to deforestation and ill-suited land management practices subsequent to forest clearing. In the mountain context, the declining moisture retention of the mountain soils, drying up of the underground springs and smaller rivers in the Himalayan region could be attributed to drastic changes in the forest cover. An indirect consequence is drastic alteration in the upland-lowland interaction, mediated through water. The current concern the tea planter of Assam has is about the damage to tea plantations due to frequent inundation along the flood-plains of Brahmaputra, and the damage to tea plantation and the consequent loss in tea productivity is

due to rising level of the river bottom because of siltation and the changing course of the river system. The ultimate consequences of site desertification are soil degradation, alteration in available water and its quality, and the consequent decline in food, fodder and fuel- wood yields essential for the economic well-being of rural communities.

46. According to the passage, which of the following are the consequences of decline in forest cover?
1. Loss of topsoil
 2. Loss of smaller rivers
 3. Adverse effect on agricultural production
 4. Declining of groundwater

Select the correct answer using the code given below.

- (a) Only 1, 2 and 3 (b) Only 2, 3 and 4
(c) Only 1 and 4 only (d) 1, 2, 3 and 4

47. Which of the following is/are the **correct inference/inferences** that can be made from the passage?

1. Deforestation can cause changes in the course of rivers.
2. Salinization of land takes place due to human activities only.
3. Intense monoculture practice in plains is a major reason for desertification in Tropical Asia, Africa and South America.

Select the correct answer using the code given below.

- (a) Only 1
(b) Only 1 and 2
(c) Only 2 and 3
(d) None of the above is a correct inference

48. With reference to 'desertification' as described in the passage, the following assumptions have been made:

1. Desertification is a phenomenon in tropical areas only.
2. Deforestation invariably leads to floods and desertification.

Which of the above assumptions is/are valid?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

49. Which of the following depicts the passage after going through the paragraph?

- (a) Decline in the biological loss of productivity.
(b) Total loss of the productivity of soil.
(c) Combining (a) and (b)
(d) None of the above

50. Which of the following sums up the site desertification of the soil?

- (a) Soil degradation
(b) Alternation in available water
(c) Consequent decline in food and fodder
(d) All the above

Passage II

Read the following passage and answer the questions 51–55.

A sanctuary may be defined as a place where Man is passive and the rest of nature active. Till recently, nature had her own sanctuaries, whereas man either did not go at all or only as a tool-using animal in comparatively small numbers. But

now, in this machinery age, there is no place left where man cannot go with overwhelming forces at his command. He can strangle to death all the nobler wildlife in the world today. Tomorrow he certainly will have done so, unless he exercises due foresight and self-control in the mean time.

There is not the slightest doubt that birds and mammals are now being killed off much faster than they can breed. And it is always the largest and noblest forms of life that suffer most. The whales and elephants, lions and eagles, go. The rats and flies, and all mean parasites remain. This is inevitable in certain cases. But it is wanton killing off that I am speaking of tonight. Civilized man begins by destroying the very forms of wild life he learns to appreciate most when he becomes still more civilized. The obvious remedy is to begin conservation at an earlier stage, when it is easier and better in every way by enforcing laws for close seasons, game preserves, the selective protection of certain species and sanctuaries.

I have just defined a sanctuary as a place where man is passive and the rest of Nature is active. But this general definition is too absolute for any special case. The mere fact that man has to protect a sanctuary does away with his purely passive attitude. Then, he can be beneficially active by destroying pests and parasites, like botflies or mosquitoes and by finding antidotes for diseases like the epidemic which periodically kills off the rabbits and thus starves many of the carnivora to death. But, except in cases, where experiment has proved his intervention to be beneficial, the less he upsets the balance of nature the better, even when he tries to be an earthly providence.

51. The author implies that his first definition of a sanctuary is

- (a) Totally wrong (b) Somewhat idealistic
(c) Unhelpful (d) Indefensible

52. The author's argument that destroying botflies and mosquitoes would be a beneficial action is most weakened by all of the following except

- (a) Parasites have an important role to play in the regulation of populations.
(b) The elimination of any species can have unpredictable effects on the balance of nature.
(c) The pests themselves are part of the food chain.
(d) These insects have been introduced to the area by human activities.

53. It can be inferred that the passage is

- (a) Part of an article in a scientific journal.
(b) Extracted from the minutes of a nature club.
(c) Part of a speech delivered to an educated audience.
(d) A speech delivered in a court of law.

54. What should be the most appropriate central idea of this passage?

- (a) The author argues that man kills big animals but saves mosquitoes and other parasites.
(b) Man is selfish by nature so he is up against the wildlife which is harmful for his survival
(c) Ecological balance, if not maintained by man will be harmful in the long run.
(d) The author proposes a programme for not disturbing the balance of nature as it is beneficial for mankind.

55. Which of the following represents the tone of the author as has been expressed in the passage?
- Descriptive to analytical
 - Sarcastically humorous
 - Objective to narrative
 - Sarcastically critical to suggestive

Passage 12

Read the following passage and answer the questions 56–60.

The function of education is to prepare young people to understand the whole process of life. The end of education is not merely to pass some examinations and get a job and earn one's livelihood. If education is to make people understand life, then surely life is not merely a job or an occupation, where life is something extraordinarily wide and profound, it is a great mystery, a vast realm in which we function as human beings. If we prepare ourselves only to earn a livelihood, we shall miss the whole point of life. To understand life is much more important than to get a degree or pass an examination for a job. Life, with all its subtleties, is such a vast expanse. It has its extraordinary beauty, its sorrows and joys. It also has its hidden things of the mind, such as envies, ambitions, passions, fears, fulfilments and anxieties. The birds, the flowers, the flourishing trees, the heavens, the stars, the rivers and the fishes therein all this is life. When we are young, we must seek and find out what life is all about. Thus, we cultivate intelligence with the help of education. Intelligence is the capacity to think freely, without fear, without a formula, so that we begin to discover for ourselves what is real and what is true. Anyone who is gripped with fear will never be intelligent. Most of us have fear in one form or another. Where there is fear there is no intelligence. Thus, what education should do is help us understand the need of freedom. Unless we are free we will not understand the whole process of living. When we are free we have no fear. We do not imitate but we discover.

56. What is the effect of fear on humans?
- We understand life's great mystery.
 - We are not able to develop our intelligence.
 - We think freely.
 - We see the vast expanse of life.
57. The aim of education is to make us realize the need of
- Understanding science
 - Freedom
 - Jobs
 - Passing examinations
58. When we are young we should
- Seek the meaning of life
 - Study and get a degree
 - Try for a good job
 - Study science
59. Education helps us realize the
- Way to develop our career
 - Need for good health
 - Meaning of fear
 - Necessity of freedom

60. The passage is about
- Education
 - Freedom
 - Intelligence
 - Livelihood

Passage 13

Read the following passage and answer the questions 61–65.

The Alaska pipeline starts at the frozen edge of the Arctic Ocean. It stretches southward across the largest and northernmost state in the United States, ending at a remote ice-free seaport village nearly 800 miles from where it begins. It is massive in size and extremely complicated to operate. The steel pipe crosses windswept plains and endless miles of delicate tundra that tops the frozen ground. It weaves through crooked canyons, climbs sheer mountains, plunges over rocky crags, makes its way through thick forests and passes over or under hundreds of rivers and streams. The pipe is 4 feet in diameter and up to 2 million barrels (or 84 million gallons) of crude oil can be pumped through it daily. Resting on H-shaped steel racks called 'bents', long sections of the pipeline follow a zigzag course high above the frozen earth. Other long sections drop out of sight beneath spongy or rocky ground and return to the surface later on. The pattern of the pipeline's up-and-down route is determined by the often harsh demands of the arctic and sub-arctic climate, the tortuous lay of the land, and the varied compositions of soil, rock or permafrost (permanently frozen ground). A little more than half of the pipeline is elevated above the ground. The remainder is buried anywhere from 3 to 12 feet, depending largely upon the type of terrain and the properties of the soil. One of the largest in the world, the pipeline cost approximately \$8 billion and is by far the biggest and most expensive construction project ever undertaken by private industry. In fact, no single business could raise that much money, so 8 major oil companies formed a consortium in order to share the costs. Each company controlled oil rights to particular shares of land in the oil fields and paid into the pipeline-construction fund according to the size of its holdings. Today, despite enormous problems of climate, supply shortage, equipment breakdowns, labour disagreements, treacherous terrain, a certain amount of mismanagement and even theft, the Alaska pipeline has been completed and is operating.

61. The Alaskan pipeline ends
- North of Alaska
 - At a seaport village
 - After passing through canyons and rivers
 - At a tundra covered village
62. What is the capacity of the Alaskan pipeline?
- 2 million gallons of crude oil
 - 4 million barrels of crude oil
 - 84 million gallons of crude oil
 - 84 billion barrels of crude oil
63. What are 'bents'?
- Zigzag shape of pipeline.
 - Pipeline's up and down route.
 - The section of the pipeline that drops out of sight.
 - The H-shaped steel racks.

64. How was the fund for pipeline construction generated?
 (a) 8 major oil companies joined hands to share the cost.
 (b) 8 major oil companies borrowed \$8 billion.
 (c) A single private company raised \$8 billion.
 (d) Oil rights were sold to 8 major oil companies.
65. Which of the following were not problems faced while constructing the pipeline?
 (a) Supply shortages
 (b) Treacherous terrain
 (c) Lack of funds
 (d) Equipment breakdown

Passage 14

Read the following passage and answer the questions 66–70.

Corruption is not a new phenomenon in India. It has been prevalent in society since ancient times. History reveals that it was present even in the Mauryan period. Great scholar, Kautilya, mentions the pressure of forty types of corruption in his contemporary society. It was practised even in Mughal and Sultanate period. When the East India Company took control of the country, corruption reached new height. Corruption in India has become so common that people now are averse to thinking of public life with it. Corruption has been defined variously by scholars. But the simple meaning of it is that corruption implies perversion of morality, integrity, character or duty out of mercenary motives, i.e., bribery without any regard to honour, right and justice. In other words, undue favour for any one for some monetary or other gains is corruption. Simultaneously, depriving the genuinely deserving from their right or privilege is also a corrupt practice. Shrinking from one's duty or dereliction of duty are also forms of corruption. Besides, thefts, wastage of public property constitute varieties of corruption. Dishonesty, exploitation, malpractices, scams and scandals are various manifestations of corruption.

66. According to the passage, corruption is
 (a) New phenomenon in India.
 (b) Insignificant to Indian society.
 (c) Prevalent since ancient times.
 (d) Prevalent only in middle east countries.
67. Kautilya mentions the pressure of how many types of corruption in his contemporary society?
 (a) 20 (b) 30
 (c) 40 (d) 50
68. Perversion of what is not mentioned in the passage?
 (a) Character (b) Attitude
 (c) Morality (d) Integrity
69. According to the passage, what all are the manifestation of corruption?
 (a) Malpractices (b) Dishonesty
 (c) Scams and scandals (d) All of these
70. What people are averse of due to corruption in India?
 (a) Thinking of stardom
 (b) Thinking of public life
 (c) Thinking of monetary gains
 (d) Thinking of undue favours

Passage 15

Read the following passage and answer Questions 71–75:

The decisive shift in British Policy came under mass pressure in the autumn and winter of 1945–46—the months which Penderel Moon, while editing Wavell's Journal, has perceptively described as The Edge of a Volcano. Very foolishly, the British initially decided to hold public trials of several hundreds of the 20,000 INA prisoners as well as dismissing them from service and detaining without trial, no less than 7000. They compounded the folly by holding the first trial in the Red Fort, Delhi, in November 1945, and putting on the dock a Hindu, a Muslim, and a Sikh (P. K. Sehgal, Shah Nawaz, and Gurbaksh Singh Dhillon). Bhulabhai Desai, Tejbahadur Sapru, and Nehru appeared for the defence (the latter putting on his barrister's gown after 25 years), and the Muslim League also joined the countrywide protest. On November 20, the Intelligence Bureau note admitted that, 'There has seldom been a matter which has attracted so much Indian public interest and, it is safe to say, sympathy ... this particular brand of sympathy cuts across communal barriers.' A journalist (B. Shiva Rao) visiting the Red Fort prisoners on the same day reported that, 'There is not the slightest feeling among them of Hindu and Muslim ... A majority of the men, now awaiting trial in the Red Fort, are Muslims. Some of these men are bitter that Mr. Jinnah is keeping alive a controversy about Pakistan.' The British became extremely nervous about the INA spirit spreading to the Indian Army, and in January, the Punjab Governor reported that a Lahore reception for released INA prisoners had been attended by Indian soldiers in uniform.

71. Which heading is more appropriate to assign to the passage?
 (a) Wavell's Journal (b) Role of Muslim League
 (c) INA trials (d) Red Fort prisoners
72. The trial of P. K. Sehgal, Shah Nawaz, and Gurbaksh Singh Dhillon symbolizes
 (a) Communal harmony
 (b) Threat to all religious persons
 (c) Threat to persons fighting for the freedom
 (d) British reaction against the natives
73. INA stands for
 (a) Indian National Assembly
 (b) Indian National Association
 (c) Inter-national Association
 (d) Indian National Army
74. 'There has seldom been a matter which has attracted so much Indian Public Interest and, it is safe to say, sympathy ... this particular brand of sympathy cuts across communal barriers.'
 Who sympathizes to whom and against whom?
 (a) Muslims sympathized with Shah Nawaz against the British
 (b) Hindus sympathized with P. K. Sehgal against the British
 (c) Sikhs sympathized with Gurbaksh Singh Dhillon against the British
 (d) Indians sympathized with the persons who were to be tried

75. The majority of people waiting for trial outside the Red Fort and criticizing Jinnah were
- Hindus
 - Muslims
 - Sikhs
 - Both Hindus and Muslims

Passage 16

Read the following passage and answer questions 76 to 80:

While the British rule in India was detrimental to the economic development of the country, it did help in starting the process of modernizing the Indian society and formed several progressive institutions during that process. One of the most beneficial institutions, which were initiated by the British, was democracy. Nobody can dispute that despite its many shortcomings, democracy was and is a far better alternative to the arbitrary rule of the rajas and nawabs, which prevailed in India in the pre-British days.

However, one of the harmful traditions of British democracy inherited by India was that of conflict instead of cooperation between elected members. This was its essential feature. The party, which got the support of the majority of elected members, formed the government while the others constituted a standing opposition. The existence of the opposition to those in power was and is regarded as a hallmark of democracy.

In principle, democracy consists of rule by the people; but where direct rule is not possible, it rules by persons elected by the people. It is natural that there would be some differences of opinion among the elected members as in the rest of the society.

Normally, members of any organization have differences of opinion between themselves on different issues but they manage to work on the basis of a consensus and they do not normally form a division between some who are in majority and are placed in power, while treating the others as in opposition. The members of an organization usually work on consensus. Consensus simply means that after an adequate discussion, members agree that the majority opinion may prevail for the time being. Thus, persons who form a majority on one issue and whose opinion is allowed to prevail may not be on the same side if there is a difference on some other issue. It was largely by accident that instead of this normal procedure, a two party system came to prevail in Britain and that is now being generally taken as the best method of democratic rule. Many democratically inclined persons in India regret that such a two party system was not brought about in the country. It appears that to have two parties in India – of more or less equal strength - is a virtual impossibility. Those who regret the absence of a two-party system should take the reasons into consideration. When the two party system got established in Britain, there were two groups among the rules (consisting of a limited electorate) who had the same economic interests among themselves and who therefore formed two groups within the selected members of Parliament. There were members of the British aristocracy (which landed interests and consisting of lord, barons etc) and members of the new commercial class consisting of merchants and artisans. These groups were more or less of equal strength and they were able to establish their separate rule at different times.

76. In the pre-British period, when India was ruled by the independent rulers
- Peace and prosperity prevailed in the society
 - People were isolated from political affairs
 - Public opinion was inevitable for policy-making
 - Law was equal for one and all
77. What is the distinguishing feature of the democracy practiced in Britain?
- End to the rule of might is right
 - Rule of the people, by the people, and for the people
 - It has stood the test of time
 - Cooperation between elected members
78. Democracy is practiced where
- Elected members form a uniform opinion regarding policy matter
 - Opposition is more powerful than the ruling combine
 - Representatives of masses
 - None of the above
79. Which of the following is true about the British rule in India?
- It was behind the modernization of the Indian society
 - India gained economically during that period
 - Various establishments were formed for the purpose of progress
 - None of the above
80. Who became the members of the new commercial class during that time?
- British aristocrats
 - Lord and barons
 - Political persons
 - Merchants and artisans

Passage 17

Read the following passage carefully and answer the questions from 81 to 85:

The phrase 'What is it like?' stands for a fundamental thought process. How does one go about observing and reporting on things and events that occupy the segments of earth space? Of all the infinite varieties of phenomena on the face of the earth, how does one decide what phenomena to observe? There is no such thing as a complete description of the earth or any part of it, for every microscopic point on the earth's surface differs from every other such point. Experience shows that the things observed are already familiar because they are like phenomena that occur at home or because they resemble the abstract images and models developed in the human mind.

How are abstract images formed? Humans alone, among all other animals on the earth, possess language; their words symbolize not only specific things but also mental images of classes of things. People can remember what they have seen or experienced because they attach a word symbol to them.

During the long record of our efforts to gain more and more knowledge about the face of the earth as the human habitat, there has been a continuing interplay between things and events. The direct observation through the senses is described as a percept; the mental image is described as a

concept. Percepts are what some people describe as reality, in contrast to mental images, which are theoretical, implying that they are not real.

The relation of percept to concept is not as simple as the definition implies. It is now quite clear that people of different cultures or even individuals in the same culture develop different mental images of reality and what they perceive is a reflection of these preconceptions. The direct observation of things and events on the face of the earth is so clearly a function of the mental images of the mind of the observer that the whole idea of reality must be reconsidered.

Concepts determine what the observer perceives, yet concepts are derived from the generalizations of previous percepts. What happens is that the educated observer is taught to accept a set of concepts and then sharpens or changes these concepts during a professional career. In any one field of scholarship, professional opinion at one time determines what concepts and procedures are acceptable, and these form a kind of model of scholarly behaviour.

81. The problem raised in the passage reflects on
 - (a) Thought process
 - (b) Human behaviour
 - (c) Cultural perceptions
 - (d) Professional opinion
82. According to the passage, human beings have mostly in mind
 - (a) Observation of things
 - (b) Preparation of mental images
 - (c) Expression through language
 - (d) To gain knowledge
83. Concept means
 - (a) A mental image
 - (b) A reality
 - (c) An idea expressed in language form
 - (d) All the above
84. The relation of percept to concept is

(a) Positive	(b) Negative
(c) Reflective	(d) Absolute
85. In the passage, the earth is taken as
 - (a) The globe
 - (b) The human habitat
 - (c) A celestial body
 - (d) A planet

Passage 18

Read the following passage carefully and answer questions 86 to 90.

It should be remembered that the nationalist movement in India, like all nationalist movements, was essentially a bourgeois movement. It represented the natural historical stage of development and to consider it, or to criticise it, as a working-class movement is wrong. Gandhi represented that movement and the Indian masses in relation to that movement to a supreme degree, and he became the voice of Indian people to that extent. The main contribution of Gandhi to India and the Indian masses has been through the powerful movements that he launched through the National Congress.

Through nation-wide action, he sought to mould the millions and largely succeeded in doing so. He changed them from a demoralized, timid, and hopeless mass, bullied and crushed by every dominant interest and incapable of resistance, into a people with self-respect and self-reliance, resisting tyranny, and capable of united action and sacrifice for a larger cause. Gandhi made people think of political and economic issues, and every village and every bazaar hummed with argument and debate on the new ideas and hopes that filled the people.

That was an amazing psychological change. The time was ripe for it, of course, and circumstances and world conditions worked for this change. But a great leader was necessary to take the advantage of those circumstances and conditions. Gandhi was that leader, and he released many bonds that imprisoned and disabled our minds, and none of us who experienced it can ever forget that great feeling of release and exhilaration that came over the Indian people.

Gandhi has played a revolutionary role of greatest importance in India because he knew how to make the most of the objective conditions and could reach the heart of the masses, whereas groups with a more advanced ideology functioned largely in air because they did not fit in with those conditions and could, therefore, not evoke any substantial response from the masses.

It is perfectly true that Gandhi, functioning in nationalist plane, did not think in terms of the conflict of classes, trying to compose their differences. But the actions he indulged in and taught the people has inevitably raised mass consciousness tremendously and made social issues vital. Gandhi and the Congress must be judged by the policies they pursued and the action they indulged in. But behind this, personality counts and colours those policies and activities. In case of very exceptional persons like Gandhi, the question of personality becomes especially important in order to understand and appraise him. To us, he represented the spirit and honour of India, the yearning of her sorrowing millions to be rid of their innumerable burdens, and an insult to him by the British Government or others was an insult to India and her people.

86. Which one of the following is true of the given passage?
 - (a) The passage is a critique of Gandhi's role in Indian movement for independence.
 - (b) The passage hails the role of Gandhi in India's freedom movement.
 - (c) The author is neutral on Gandhi's role in India's freedom movement.
 - (d) It is an account of Indian National Congress's support to the working-class movement.
87. The change that the Gandhian movement brought among the Indian masses was

(a) Physical	(b) Cultural
(c) Technological	(d) Psychological
88. To consider the nationalist movement or to criticize it as a working-class movement was wrong because it was a
 - (a) Historical movement
 - (b) Voice of the Indian people
 - (c) Bourgeois movement
 - (d) Movement represented by Gandhi

89. Gandhi played a revolutionary role in India because he could
- (a) Preach morality
 - (b) Reach the hearts of Indians
 - (c) See the conflict of classes
 - (d) Lead the Indian National Congress
90. Groups with advanced ideology functioned in air as they did not fit in with
- (a) Objective conditions of masses
 - (b) The Gandhian ideology
 - (c) The class consciousness of the people
 - (d) The differences among masses

ANSWER KEYS

Passage 1

1. (c) 2. (c) 3. (b) 4. (c) 5. (a)

Passage 2

6. (d) 7. (b) 8. (c) 9. (a) 10. (a)

Passage 3

11. (d) 12. (b) 13. (c) 14. (c) 15. (b)

Passage 4

16. (d) 17. (d) 18. (b) 19. (b) 20. (c)

Passage 5

Communication

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- Communication: Meaning, Types and Characteristics of Communication
- Effective Communication: Verbal and Non-verbal, Inter-cultural and Group Communications, Classroom Communication
- Barriers to Effective Communication
- Mass-Media and Society

COMMUNICATION: MEANING, TYPES AND CHARACTERISTICS OF COMMUNICATION

Communication plays a vital role right from our childhood. It is not only a specific tool which is essential for our survival but also a basic right. This modern age of communication is characterized by speed, efficiency and the ability to transcend physical or geographical limitations. The dictionary meaning of communication is 'to exchange (thoughts) or convey (information or feelings) by oration, writing or other means to disseminate data.

Communication is more than just messaging or swapping information, where words are not the only tool to be prioritized but also our senses. In order to convey or communicate some information in our day-to-day interactions, the parameters, such as our facial expression, oral tone, body language, ability to listen with patience are the contributing factors in delivering a message.

Communication is the most integral part of human nature. Human beings have a compulsive urge to communicate with each other as more than 70% of their time is spent in communicating with others.

No meaningful understanding is possible without communication. Of all the creatures, man has the ability and power to express in words. The evolution of mankind is basically the story of his/her progress in communication methods.

There are many definitions of communication. According to Oxford Dictionary, 'Communication is transferring or conveying of meaning'.

According to Little, 'Human communication is the process by which information is passed between people by means of previously agreed symbols, in order to produce a desired response'.

Communication is the form of interaction that takes place through symbols. The symbols may be gestural, pictorial, plastic, verbal, or any other which operate as stimuli to behaviour which would not be evoked by the symbol itself in the special conditions of the persons who respond.

In communication process, the sender (encoder) encodes the message and then using a medium/channel, sends it to the receiver (decoder) who decodes the message, and after processing the information, the receiver sends back appropriate feedback/reply using a medium/channel.

It is important to mention that effective communication always includes feedback.

Theory of Communication

It is helpful to examine communication and communication theory through one of the following viewpoints:

1. **Mechanistic:** The perfect transaction of a message from the sender to the receiver.
2. **Psychological:** The sending of a message to a receiver and emotions of the receiver upon interpreting the message.
3. **Social constructionist (Symbolic interactionist):** It sees the product of the interactants sharing and creating of meaning of message, while 'transmission model' sees communication as robotic and computer-like situation.
4. **Systemic:** The new messages created via 'through-put', or what happens as the message is being interpreted and reinterpreted as it travels through people.
5. **Critical:** A source of power and oppression of individuals and social groups. Inspection of a particular theory on this level will provide a framework on the nature of communication as seen within the confines of that theory.

MODELS OF COMMUNICATION

There have been dozens of models of communication. Though no direct question has been asked from them, but sometimes references have been found in the form of questions.

Figure 4.1 General Communication Model

Aristotle Model of Communication includes three communication elements, such as the speaker, subject and audience. According to him, persuasion was a result of the influence that a speaker makes, he used 'discovery

of the available means of persuasion' for defining the whole art of persuasive communication.

Schramm (1964) talked about the role of 'Field of Experience' (type of orientation or attitudes) in his communication model.

Figure 4.2 Schramm Communication Model

Katz's (1957) in his 'Intermediary Model of Communication' in 'speaker, gatekeeper and audience' talks about the role of 'gatekeepers / intermediaries', also called about censor groups.

Shannon and Weaver (1949) provided a visual mode of communication system in relation to electronic media popularly referred to as 'Mathematical model of communication'.

Figure 4.3 Shannon-weaver Information Model

Shannon and Weaver talked about the three levels of problems in the communication of information. The three levels are technical (signals), semantic (interpretation of meaning) and influential (effectiveness). Though the model attempts to explain the process of communication further, it is a linear, one-way communication model without any emphasis on feedback. Shannon and Weaver talked about the following concepts as well.

1. **Entropy:** The information can be measured by entropy, i.e., one's 'degree of freedom of choice' to select a message. The ratio of the actual to the maximum entropy is called relative entropy.
2. **Redundancy:** The amount of information that can be eliminated or added **Communication** in a noiseless channel, so that the message would still have meaning.
3. **Channel capacity:** The amount of information that can be transmitted per unit of time. Beyond optimum level of information would lead to errors.

There are certain limitations of this model, it is usually applied more for interpersonal communication than group communication and mass communication. Here, sender plays the primary role that sends messages and receiver plays the passive part. Feedback is taken as less important in comparison to the messages sent by the sender.

Leagan's model (1961) focused upon communicator, message or content, channels of communication, treatment of message, audience and audience response/feedback.

Helical Model of Communication

Frank Dance proposed a communication model inspired by a helix in 1967, known as helical model of communication. A helix is a three-dimensional spring like curve in the shape of a cylinder or a cone. The model is linear as well as circular combined and disagrees the concept of linearity and circularity individually.

Constitutive Metamodel

This is another way of dividing up the communication field. Craig proposes seven different traditions as listed below.

1. **Rhetorical:** The practical art of discourse.
2. **Semiotic:** The mediation by signs.
3. **Phenomenological:** The experience of dialogue with others.
4. **Cybernetic:** The main flow of information.
5. **Socio-psychological:** The interaction of individuals.
6. **Socio-cultural:** The production and reproduction of the social order.
7. **Critical:** As a process in which all assumptions can be challenged.

Berlo's Model of Communication

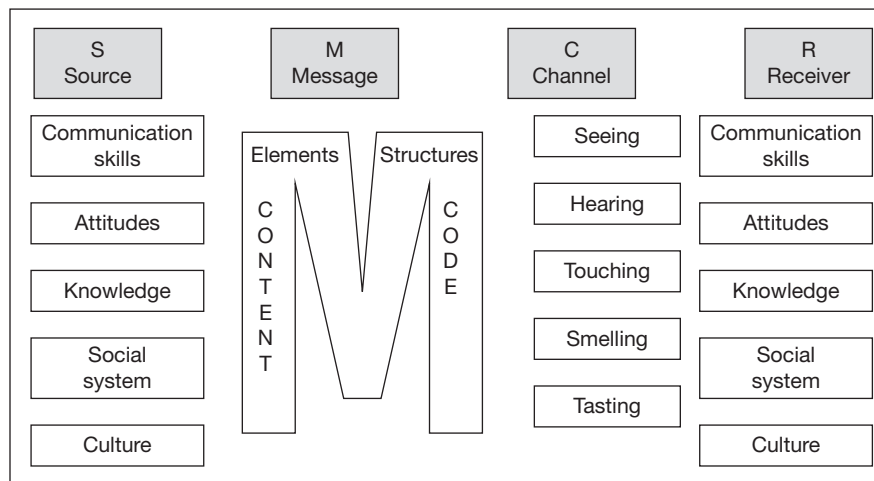

Figure 4.4 S-M-C-R Model

Berlo tried to explain communication as **S-R Model or sender-receiver model**, where sender stands for stimulus and receiver stands for response.

This was later extended to **S-M-C-R Model** that stands for Sender-Message-Channel-Receiver.

It is the basic communication process. It is a linear model of communication, there is no two way communication. There is no concept of feedback. There is no noise as well and so no concept of barriers in communication.

Alex Fish has given three models of communication which have been listed below.

- 1. Transmission/Linear model:** Communication is just one thing. There is no feedback.

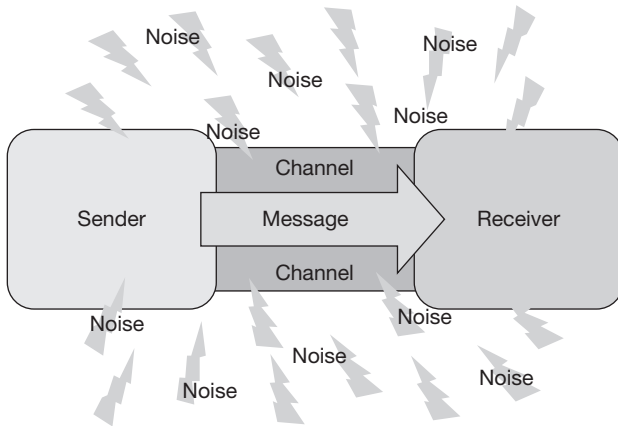

Figure 4.5 Transmission Model

- 2. Interactive model of communication:** Communication is sending and receiving. Interactive model is also known as convergence model. Field of experience is a communication pattern alteration factor, like culture, social, psychology, situation and channels use.

Figure 4.6 Interactive Model of Communication

- 3. Transactional model of communication:** Communication is integrated in our internal realities.

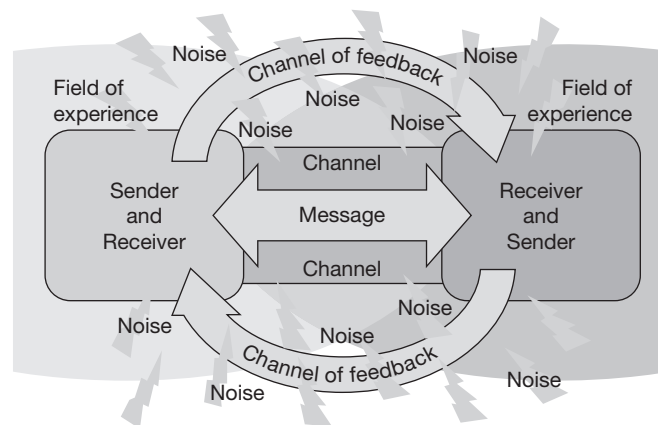

Figure 4.7 Transactional Model

Brown and Yule (1983) use two terms to describe the major functions of language. The functions of language where the transfer of information is involved is called 'Transactional' and that function involved in expressing social relations and personal attitudes is called 'Interactional'.

1. **A:** There's no message for you (Transactional)
B: Ok
2. **A:** How are you? (Interactional)
B: Fine, thank you.

MASS MEDIA MODEL

We have mass media in our syllabus. It has been discussed under communication types. Here we want to discuss a communication model called as the 'Attention-gaining Model' or "Attention Model". It is essential communicative activity of mass media to attract and keep attention. Communication has three models – Transmission, Expression/Ritual and Attention-gaining.

Mass Media Model	Sender's Orientation	Receiver's Orientation
Transmission	Transfer of meaning	Cognitive processing
Expression/Ritual	Performance	Shared Experience
Attention-gaining	Display	Spectatorship

1. The Transmission model is mostly linked with institutional contexts such as education, religion and government. It is, however not relevant to most media activity.
2. The ritual model shares some elements with the transmission model, but emphasises more on external interpretation by observers than the stated purpose of receivers and senders.
3. The attention gaining model comes closest to the main media goal of attracting audiences. Audiences view media as escapist and diversionary. Thus it is in conflict with the above two models. Media culture and practice have a lot to do with the attention-holding goal. Attention is measurable in the time allotted and the intensity of involvement with the type of content. Attention-display forms and associations are associated with the service mode. The mass communication market is mainly concerned with attention more than anything else. This is what sells the medium to the advertisers.

TYPES OF COMMUNICATION

We communicate with each other in various ways, where it totally depends upon the message and context in which it is being forwarded. The choice and style of channel also affects communication.

Classification on the Basis of Relationship Element

Intrapersonal Communication

1. It is communication within an individual almost all the times, including talking to oneself, listening to oneself and relating one to oneself.
2. It includes individual reflection, meditation, contemplation and even praying to God.
3. We conceptualize and formulate our thoughts or ideas before we actually indulge in overt communication.

Muttering 'Oh My God', 'Oh No' (when in trouble), 'Wow' and 'Thank God' are few common examples of intrapersonal communication.

Interpersonal Communication

1. It is also termed as dyadic communication.
2. It is universal form of face-to-face routine communication between two people, both sending and receiving messages.
3. It may be formal or informal, verbal or non-verbal.
4. It takes place anywhere by means of words, sounds, facial expression, gestures and postures.
5. It is an effective communication situation because you can get immediate feedback.
6. Due to proximity between the sender and the receiver, interpersonal communication has emotional appeal too. It can also motivate, encourage and coordinate work more effectively than any other form of communication.
7. The efficacy of interpersonal communication depends very much on the mutual relationship between two partners in communication, their status, roles and skills.
8. It has greater scope for grapevine.

Interpersonal communication can be further subdivided into formal (meeting and conference) or informal (private discussion with family members or friends).

Group Communication

Group communication situations are quite common in day-to-day life. Our educational background, profession, economic status, religious affiliation, etc., distinguish us and make us belong to one or more groups at the same time. A group is a number of people that has a common goal, interact with one another to attain the goal, recognize one another's existence, and see themselves as part of the group. An individual may belong to more than one group simultaneously. Since the large majority of us do not live alone, we consequently live in groups - all kinds of groups.

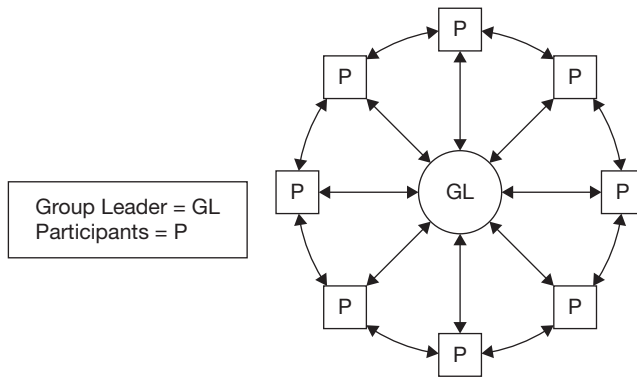

Figure 4.8 Group Communication

Groups may be of two types, namely primary and secondary. According to C. H. Cooley, primary groups are composed of individuals with intimate, personal relations and who interact face to face, figuratively and not literally. It is the degree of intimacy or social distance rather than physical distance which determines the primary group. The family is considered a primary group. The other examples of primary group are play groups, kinship groups, labour groups, clan, etc.

Secondary groups are all those in which individuals have formal, impersonal and status relations. All other groups, which are not primary are considered secondary.

Groups may be statistical (demographic arrangements), societal (common consciousness), social (actual association) and associational groups (formal structure). Group communication is interpersonal communication.

Characteristics of group in relation to an individual on the basis of membership, dependence, acceptance, attraction, volition (voluntary basis), innate (by birth), pressure (confirm to certain standards), change and flexibility (no group is rigid and static) and leadership as well.

The leader leads the group in two manners:

- 1. Task oriented roles:** Initiation of discussion, giving and receiving information, elaboration and clarification, orientation and summarization, tests of consensus
- 2. Maintenance roles:** Compromising, supporting and encouraging, gate-keeping, standard setting and testing.

Leadership can be democratic, authoritarian or Laissez-faire (creative and committed people).

The degree of formality governing the 'jurisdiction' of the participants in group communication activity differs according to the context.

Group communication is influenced by several heterogeneous factors, like age, sex, education, economic, social, linguistic, religious, national, regional and racial differences.

The careful balance of interaction in dyad no longer exists in group communication. According to Baker, the best size in terms of total interaction and greatest efficiency is somewhere between five and seven members. Participation and sharing of information is central to the functioning of a group. A group can function on the basis of committees (small groups for a specific purpose) or conferences (large group and more formal). Group communication is considered effective as it provides an opportunity for direct interaction among the members of the group and it helps in bringing about changes in attitudes and beliefs.

Mass Media/Communication:

Mass communication and mass media are generally considered synonymous. At a different level, mass communication has three characteristics.

- 1. The audience is large and heterogeneous:** Radio and television is assumed to have larger audience in comparison to newspaper.
- 2. The source is an institution or a group of people:** For example, the Ministry of Information and Broadcasting, Government of India, is engaged in broadcasting television and radio programmes all over the country.
- 3. Some kind of mechanism is used to reproduce information**
 - (a) It is also termed as 'mediated communication'.
 - (b) It is a special kind of communication with mass audiences and hence, the name mass communication.
 - (c) Channels for mass communication are termed as mass media.
 - (d) It uses mechanical devices that multiply messages and convey information to a large number of people simultaneously.
 - (e) Examples of mass media include radio, TV, newspapers, magazines and films (both electronic and print media).

Thus, we see that every medium of mass communication works in its own unique way and carries the message to reach wide in faraway places. Each medium has its advantages and limitations in the areas of operation, influence and impact, be it TV, radio or print.

Harold Lasswell has considered three functions in context of mass media in any society:

- 1. Surveillance of the environment media:** As an 'informer', ears, eyes and voice of the audience and for shaping our thoughts, attitudes and actions. For instance, the advertisements make known to us the new products.
- 2. Correlation:** Developing public opinion, thus helping to create consensus in a society on key issues.
- 3. Admission of social inheritance:** Today's media have assumed the functions of transmitting social inheritance, which was done by parents, teachers and other elders. The media today provide main frames of reference to society. Urbanization, relative anonymity, social uprootings and the transition from traditional social organizations like joint family, clan have increased the role of media as transmitters of knowledge and values. Mass media have today become essential to carry out certain functions of socialization and transmission of social heritage.

Mass Media and society

Almost everyone gets his or her information about the world, national and local affairs from the mass media. This fact gives both print and broadcast journalism important functions that include influencing public opinion, determining the political agenda, providing a link between the government and the people, acting as a government watchdog and affecting socialization.

Mass media makes impact in the following forms:

1. Creating public opinion.
- 2. Setting up of political agenda:** The term political agenda is broader in scope than the term public opinion.
3. Mass media sets link between the government and people.
4. Mass media works as government watchdog.
5. Mass media has become an agency of socialization as well.

Communication can also be categorized on the basis of involvement of parties, such as intrapersonal (reading a newspaper, meditation, introspection), interpersonal (conversation with a colleague) and apersonal (use of mass media, publicity, advertisement).

Communication Types on the Basis of Channels

On the basis of channels, communication is of two types and they are listed below.

1. Verbal communication
2. Non-verbal communication

Verbal Communication

Verbal means the use of words in communication process and in design and formulation of messages. In verbal communication, message is transmitted verbally, i.e., by making use of words, such as oral and written.

In verbal communication, remember the acronym KISS (keep it short and simple).

In order to deliver the right message, the communicator must be empathetic. Verbal communication is further divided into the following types.

1. Oral communication
2. Written communication

Oral Communication

In oral communication, spoken words are used. It includes face-to-face conversations, speech, telephonic conversation, video, radio, television and voice over the internet. In oral communication, the communication is influenced by the following factors.

- 1. Pitch and volume:** Pitch is the degree of highness or lowness of a tone and it depends upon the frequency of sound waves. It is the key element in the teaching-learning process. Teacher's voice and knowing the correct language is the main input in speech. One should be loud enough to be heard. When speaking, one should remember to change the pitch in your voice as a monotone voice may become boring. Excitement is indicated by a high pitch and anger by a low pitch.
Volume depends upon the proximity and number of people and is measured in decibels.
- 2. Rate:** It is the speed at which words are delivered. One should maintain regularity when speaking because a regular or rhythmic voice makes you sound more confident. Irregular speech may show a sign of uncertainty. If a teacher talks at a slow pace, then the students may become frustrated because the information is not being given quickly enough.
- 3. Clarity in speaking and articulation:** Proper pronunciation and delivery of words contribute towards the effectiveness of the message. It also depends upon clarity of thought of the communicator. Pitch, volume, rate and clarity are termed as components of paralanguage.

The advantages of oral communication are as follows:

1. It is spontaneous and natural.
2. It is, therefore, easy for others to understand.
3. Choice of words generally suits the listeners.

4. It is supported by non-verbal communication.
5. The communicator or the person who communicates is always physically available.
6. It can develop a close relationship between the speaker and the listener.

Limitations of oral communication are as follows:

1. Words spoken disappear into thin air and therefore, words are temporary.
2. Words are not permanent unlike written communication.
3. What is heard is often forgotten.
4. Non-verbal communication that supports oral communication may not be understood by people from other cultures.

Written Communication

In written communication, written signs and symbols, both in printed or handwritten form can be used. Pictures, graphs, etc., are used to compliment the written text. The communicator's writing skills, style and knowledge of grammar affect the quality of message. In written communication, message can be transmitted through email, letter, report, memo, etc.

This is the most commonly used communication in a business organization.

The organization needs to communicate with different stakeholders, both in internal and external environments to meet its objectives. Thus, written communication can further have two dimensions, such as internal and external.

The internal written communication is in the form of memos, reports, bulletins, job descriptions, employee manuals and emails specifically for internal communication, i.e., within the organization.

Emails, internet, websites (URLs), letters, proposals, telegrams, faxes, postcards, contracts, advertisements, brochures and news releases are used for external communication.

Even the oral communication is used for both internal as well external communication.

Advantages of written communication are as follows:

1. Messages can be edited and revised many times before being sent, so it minimizes the chances of error.
2. Written communication provides an automatic record for every message sent and can be saved for later study or references.
3. A written message enables the receiver to fully understand it and send appropriate feedback. It brings in the element of impersonality and more objectivity.

Limitations of written communication are as follows:

1. Written communication may not provide prompt and spontaneous feedback.
2. Written communication may take more time.
3. Usually communication is a mix of both oral and written formats.

Table 4.1 Types of Verbal Communication

	Oral	Written
Small Group	Conversation	Letters/Memos
	Telephone	Telex
Large Group	Lectures	Circulars
	Meetings	Newsletters
	Radio	Handbooks/Manuals
	Short Circuit	Posters/Bulletin Board

Mnemonics

This is somewhat in different context, mainly about learning and recalling of words, numbers, facts, etc.

Mnemonics are memory devices that help learners recall larger pieces of information, especially in the form of lists, like characteristics, steps, stages, parts, phases, etc. A study conducted by Gerald R. Miller in 1967 found that mnemonics increased recall. Mnemonics can even be used to recall words or remember numbers. For example, BRASS is an acronym for how to shoot a rifle—Breath, Relax, Aim, Sight, Squeeze. They help in taking notes also.

Non-verbal Communication

It is the process of communication through sending and receiving wordless messages. There is a famous quote, 'actions speak louder than words'. Here, action stands for our body movements. Non-verbal communication is all about the body language of the speaker and does not make use of words. Communication, other than oral and written, such as body gesture, eye contact, body language, posture, tone of voice or facial expressions is called non-verbal communication. Non-verbal communication helps the receiver in better interpretation of the message.

Non-verbal communication has the following three elements:

1. **Appearance:** It includes both the speaker and the surrounding. Clothing, hairstyle, neatness of the speaker, etc., are taken into account. Surrounding

is ambience of the place where communication takes place. It includes a room, lighting, decorations, furnishings, etc.

2. **Body language:** It includes facial expressions, gestures and postures.
3. **Sounds:** It includes voice tone, volume and speech rate.

Classification Based on Purpose and Style

Based on style and purpose, there are two main categories of communication and they both have their own characteristics.

Formal Communication

In formal communication, certain rules, regulations, conventions and protocols are followed while formulating and communicating message. It follows an organizational structure. It can be upwards or downwards across hierarchy or authority lines.

In formal communication, the use of right language and correct pronunciation is required.

For example, in case an Assistant Professor has to communicate with College Principal, it is usually through the Head of Department (HoD).

Informal Communication

Informal communication channels exist along with formal communication channels in any organization. It mainly addresses the social needs of the employees. It is interpersonal and mainly face-to-face and with use of body gestures. It happens among friends and family. In informal communication, there are no formal rules and regulations for communication.

A lot of distortion or filtering may take place in informal communication and it is termed as grapevine.

Concept of Kinesics

Kinesics is a major form of non-verbal communication. It is defined as 'the study of non-linguistic body movements, such as facial expressions and gestures'. Kinesics is the interpretation of body language, such as facial expressions and gestures or, more formally, non-verbal behaviour related to body movement, either any part of the body or the body as a whole.

According to Mehrabian, 'Words account for 7%, Tone of voice accounts for 38%, and our Body Language accounts for 55% of communication'. This has become the 7/38/55 rule. They are abbreviated as the 3 V's, i.e., Verbal, Vocal and Visual.

Thus, in practice, it is always a mix of verbal as well as non-verbal communication.

Classification on the Basis of Direction

Vertical Communication

1. This is basically formal communication.
2. This can be upwards (bottom up) and downwards (top bottom).

Lateral or Horizontal Communication

1. Communication with people at same level in hierarchy that are peers and colleagues is termed as lateral communication.
2. This may combine both formal and informal communications.

This is the most effective communication, as it is generally not stalled by a chain of command methods. This can help in building teams in an organization.

3. The amount of horizontal communication depends upon the interdependence of different departments.

Diagonal Communication

1. Diagonal communication is effective as hierarchical bindings are removed and there is a free flow of information, cutting across positions or status.
2. It facilitates in building relationships and bonding between the superior and the subordinate.

Communication Networks

Communication network shows all communication patterns or relationships that may exist in the organization. The various types of communication networks are represented diagrammatically in Figure 4.9.

Figure 4.9 Types of Communication Networks

1. **Chain network:** It follows a formal chain of command, as is the case with a typical bureaucratic organization. Here, members communicate with each other in a pre-planned sequence.
2. **Wheel network:** It is also known as 'STAR' network. Here, information flows from one central

member of the group to the rest of the members. Other group members may not have to communicate with each other to perform well and all communication is channelized through the supervisor. For examples, one-to-one interactions of Heads of Departments (HoDs) with the college Principal, but little or no interaction of HoDs among themselves. It is not very effective in teams.

3. **Circle network:** Here, members communicate informally with adjoining members generally on

the basis of shared experiences, beliefs, areas of expertise, background, or office location. It may have a formal leader as well, but interaction is still lateral. It works in an autonomous team.

4. **All-channel network:** An all-channel network is found in teams. Both the intensity and frequency of interaction is high among members. Information flows in all directions. There is no formal leader and communication may be started by any member.

Intercultural Communication

Culture is the way of life of a people. It is also defined as human part of environment. It is a non-biological aspect of life. Culture is mostly learnt with communication only. To accept yourself as a cultural being means embracing a cultural identity composed of ethnicity, culture, gender, age, life stage, beliefs, values and assumptions. A cultural identity is learned, varies in its strength and varies in its content as well.

When two or more people with different cultural backgrounds interact and communicate with each other or one another, intercultural communication is said to have taken place.

The main five reasons to study intercultural communication includes the following factors.

1. Better understanding your own identity.
2. Enhancing your personal and social interactions.
3. Helping solve cultural misunderstandings, miscommunication and mistrusts.
4. Valuing the ways it enriches the quality of our civilization.
5. Becoming effective citizens of our national communities.

Intercultural communication influences the communication model first by its effect on the values, traditions, social and political relationships, and worldview of senders and receivers. Secondly, by its effect on verbal and non-verbal messages and thirdly, by the influences it has on the historical setting, relational setting and a person's position within a speech community.

Power distance relates to social inequality. Individualism versus collectivism relates to the degree of integration and orientation of individuals. Femininity versus masculinity pertains to the division of roles between women and men. Uncertainty avoidance describes the degree of tolerance for the unknown. Long-term orientation relates to trade-offs between long-term and short-term gratification of needs. Finally, high versus low context refers to the amount of information already contained in the person or context versus the amount in the coded, explicit and transmitted part of the message.

The four barriers to intercultural communication include ethnocentrism, stereotyping, prejudice and discrimination. To deal with barriers, non-dominant group members use one or more of three main strategies to get what they want from dominant group members, such as assimilation, accommodation or separation.

The five ways to improve intercultural communication are as follows.

1. Pay attention to your own words and actions.
2. Control your assumptions.
3. Engage in transpection—the process of empathizing across cultures.
4. Gain knowledge.
5. Gain experience.

The internet offers a vehicle for searching common values, understandings and approaches to managing a world of different cultures.

CHARACTERISTICS OF COMMUNICATION

The nature of communication can be explained using the following characteristics:

1. **Communication is continuous:** Communication is not a static act, but it is a dynamic process of action and interaction towards a desired goal. Sharing or exchanging information is a continuous process.
2. **Communication is all-pervasive:** Lower levels provide information to the middle level. It is further processed to the top level in the desired format that helps in decision-making. Top level issues instructions to the middle and lower levels. This happens in an educational organization as well.
3. **Effective communication is a two-way process:** Communication is deemed to be effective when there is some kind of feedback mechanism. This basic aspect has been taken into account in Cole and Chan Model as well as given in other Models.
4. **Communication is always with a context and a relationship aspect:** Both in terms of (i) what you say and (ii) how you say the matter. Same message can be communicated authoritatively or politely. For example, while asking for a glass of water, one can say:
 - (a) Please bring me a glass of water
 - (b) Give me a glass of water
 - (c) Can I have a glass of water?
 - (d) Could you please give me a glass of water?
 Each message will have a different effect on the person you are talking to.
5. **Communication exchanges are based on symmetry and complementary:** Symmetry refers to similarity and complimentary refers to the differences in characteristics. For example, two students who are very good in Mathematics will have a good communication relationship. This will be termed as *symmetry*. On the other hand, suppose there are two students, one is good in Mathematics but poor in English and the other is good in English but poor in Mathematics. They may have good complementary communication relationship with each other because they can compensate each other's weakness.
6. **Common language:** This helps developing better understanding between the sender and the receiver of a message and thus, making communication more effective.
7. **Meeting of minds is necessary:** The receiver must comprehend the intended meaning of the message that the sender wants him/her to understand.
8. **The message must have substance:** The gist of the message holds importance only until the

receiver shows interest in the subject matter. For example, any discussion about cricket will be well received by a cricket fanatic.

9. **Communication can also be conducted through gestures:** Communication should not necessarily be verbal or written. Nodding of heads, rolling of eyes, movement of lips, etc., are some of the gestures used to convey certain basic ideas.
10. **Communication is of different types:** It can be formal or informal, verbal or non-verbal. The different types have been discussed in detail in the ensuing discussion.
11. **Communication always has a context:** Communication always takes place within a context. According to Bateson, 'Without context, words and actions do not carry any meaning at all'. At times, this context may not be obvious and at times, it may stand out boldly. The context of communication has four dimensions and they are as follows.
 - (a) **Physical context:** It refers to the place where communication is taking place, such as in public, conference room, classroom, etc. It refers to the ambience of the place as well.
 - (b) **Social context:** Social context is mainly about (i) role and status relationship between the sender and the receiver of messages and (ii) norms and culture of the society. For example, the social context of friends attending a party will be different from the people attending a meeting in an organization or a doctor attending a patient.

Adjacency Pairs

One way in which meanings are communicated and interpreted in conversation is through the use of what have been called adjacency pairs. Adjacency pairs are utterances produced by two successive speakers such that the second utterance is identified as related to the first as an expected follow-up. The two form a pair, the first utterance constituting a first pair part and the next utterance constituting a second pair part. Adjacency pair is described as the basic structural unit in conversation, consider the following examples of adjacency pairs.

- (a) Greeting-Greeting
 - A: Hi
 - B: Hi
- (b) Compliment-Acceptance
 - A: That's a nice cap.
 - B: Thanks.

- (c) **Psychological context:** It refers to the environment characterized by formality or informality, friendliness or unfriendliness.
- (d) **Temporal context:** It refers to the time factor in communication, such as at what time of the day communication is taking place. In morning, we usually talk about religious and spiritual aspects of life and during day time, it is usually about professional aspects, and so on.

FUNCTIONS OF COMMUNICATION

During recent times, communication by mass media and through social media is the underlying force for changes taking place in society. People communicate to learn what they need and want to cope with their physical and social reality. Successful people are usually effective communicators.

The different objectives of communication are discussed as follows:

1. Information to keep oneself updated and for decision-making
2. Education and instruction
3. Smooth functioning of groups
4. Motivation and morale
5. Control
6. Cultural promotion
7. Integration
8. Communication skills are of four types, such as listening, speaking, writing and reading.

Listening is termed as a good skill and hence, it is said that one has to learn 'how to listen so that others will talk'. Listening is a whole range of other aspects of communication.

Macro Functions of Communication

As per changing exam pattern, in question statements, there is increasing use of technical words. Thus, we need to discuss some functions. The macro functions of communication are listed below.

1. **Emotive function:** To communicate the inner state of mind and emotions. For example, Oh My God! Oh no!
2. **Directive function:** This function seeks to affect the behaviour of others. For example, Fetch me a glass of water, please.
3. **Phatic function:** This is to open the channel of communication or checking that it is working. For example, Hello, is it Ram? or can you hear me, Mrs Girdhar? This function establishes, acknowledges or reinforces social relations
4. **Poetic function:** This refers to the aesthetic function of language and focuses on 'the message for

its own sake'. Thus, it is basically the essence of the message. For example, euphony (pleasantness of sounds in speech and pronunciation) is an application of this function. This poetic function of language can be used when one says 'Asoka the Great', instead of 'the great Asoka', which essentially has the same meaning.

5. **Referential function:** Referential function refers to any message that is constructed to convey information.
6. **Metalinguistic function:** This function focuses attention on the code of language itself. When language is used to speak about language, for example in a grammar or a dictionary, the metalingual function has been employed. Metalinguistic activity may be unconscious. For example, 'The use of both will or shall is correct in modern usage.'
7. **Contextual function:** It facilitates the creation of a particular kind of context. It sets the tone. For example, Right! Let's start the meeting now.
8. **Heuristic function:** Here, we use language to gain knowledge, learn and explore the environment. A child uses language to learn. This may be in the form of questions and answers or the kind of running commentary that frequently accompanies children's play.

In addition, there can be some more functions.

1. **Denotation** refers to the literal meaning of a word, the 'dictionary definition'. For example, if you look up the word snake in a dictionary, you will discover that one of its denotative meanings is 'any of numerous scaly, legless, sometimes venomous reptiles, having a long, tapering, cylindrical body and found in most tropical and temperate regions'.
2. **Connotation**, on the other hand, refers to the associations that are connected to a certain word or the emotional suggestions related to that word. The connotative meanings of a word exist together with the denotative meanings. The connotations for the word snake could include evil or danger.
3. A **simile** is a comparison between two dissimilar objects using a word like as or like to connect them. For example, if you say, 'my boyfriend is like a watermelon in the summer', you are creating a simile that compares your boyfriend with a watermelon. If on the other hand you are angry at him and say, 'he's like a typhoon in the house', then you are comparing your boyfriend with a typhoon.
4. A **metaphor** is similar to a simile, except that a metaphor compares two dissimilar objects without using a word like as or like. If you write, 'my boyfriend is an angel' or 'my motorcycle is a bomb on wheels', you are creating metaphors.

CLASSROOM COMMUNICATION PROCESS – COLE AND CHAN MODEL

Classroom teaching still dominates the scene of formal education system where face-to-face instructions are given to students. The primary objective of classroom teaching is to achieve instructional objectives in the cognitive domain, namely those concerned with developing knowledge, comprehension, application, analysis, synthesis and evaluation abilities.

Communication is an integral part of any teaching–learning process and its effectiveness is one of the factors that determine the degree to which the intended learning outcomes are achieved. The process of classroom communication is affected by multiple factors pertaining to teachers, students, message, instructional methods and media, and learning environment. However, very few of us understand the nature of communication and make deliberate attempts to improve its effectiveness. Communication skills are acquired through training and it can be improved with practice and it requires conscious knowledge and strategic judgement. Evidences indicate that by improving communication skills, individuals can have more effective and satisfying communication experiences.

All communication is based upon symbols. It is a process that involves organizing, selecting and transmitting symbols in an appropriate manner to ensure that the receiver perceives in his/her thought process, the intended meaning of the communicator.

According to Cole and Chan, a typical process of classroom communication (and communication in general as well) includes the following five distinct stages.

1. Formulation of message
2. Message encoding
3. Message transmission
4. Message decoding and interpretation
5. Feedback and evaluation

The process of an effective two-way communication is shown in Figure 4.10.

Formulation of Message

The success of communication, therefore, depends on what we say and how we say it.

1. All communication starts with an idea or a message that is to be transmitted to the target audience (individual) with a motive to get a positive response. Communicator (sender or encoder) is the one who initiates the communication process.
2. A message is a set of verbal or non-verbal cues sent by a source. Messages can be spoken or written

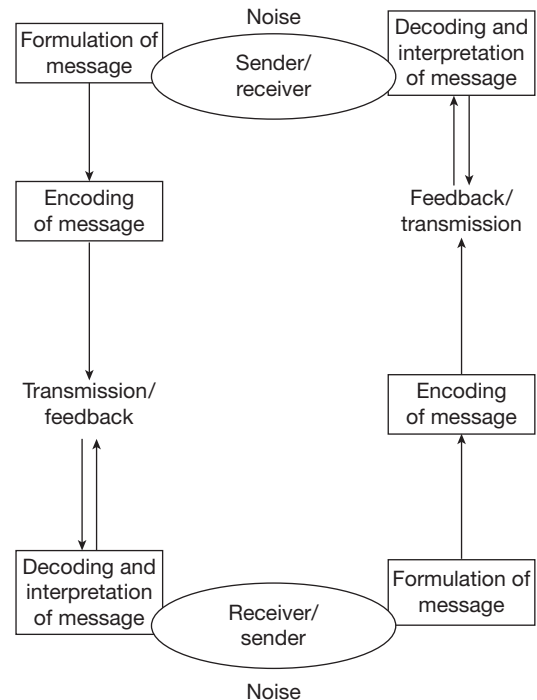

Figure 4.10 Process of Effective Communication

words, gestures, movements, etc. They cannot have a meaning apart from the person involved in the sending and receiving process.

3. An effective communication depends on the communication skill, knowledge level and attitude of the communicator and how he/she desires to affect his/her receiver. Ability to think, organize thoughts quickly and express himself/herself effectively are some of the attributes of a good communicator.
4. Teachers concerned, they conceptualize ideas to be conveyed to students by arranging them in coherent and meaningful sequence. In most of the instances, they will draw on content from curricula. Teachers interpret those ideas and determine the appropriate organization of the content.

Message Encoding

1. The internal shaping, sorting and sifting of ideas for clarification and organization is called message formulation. Its purpose is to create a clear and meaningful message.
2. Encoding involves converting an idea into a form that can be transmitted to receivers.
3. The communicator not only translates his/her purpose (ideas, thoughts, or information) into a message but also decides on the medium to communicate his/her planned message.

4. The communicator must choose the media (speech, writing, signalling, or gestures) that the receiver can comprehend well. For instance, an illiterate receiver may fail to understand a written message but can understand it well if told orally.
5. Teachers encode their ideas in different ways according to the demands of various curricula. It is the teacher's responsibility to use appropriate symbolic forms for each subject and to teach students to use these forms.

Message Transmission

1. It is a critical stage in the communication process and it answers how a message is delivered. The sender selects an appropriate channel or mode of presentation.
2. A 'channel' is the vehicle or means through which a message or stimulus is carried from the communicator to the receiver. There are various options available as channels, like written, spoken, verbal, non-verbal, mass media, etc.

For example, a teacher may use a film or physical demonstration to convey the same idea. Teachers are usually able to use more than one channel in ways that allow for an integrated presentation.

Message Decoding and Interpretation

1. Decoding is interpretation of the message by the receiver. Actually, the receiver looks for meaning in the message that is common to both the receiver and the communicator.

The process of decoding by the receiver is not passive, but active one. Language does not have meaning, it has the potential for meaning and it is the decoder who is actively engaged in making meaning on the basis of his/her background knowledge and the context of communication.

2. If the receiver possesses the background information and is familiar with the form of language used, then it becomes easier for him/her to decode and comprehend the message.
3. If the receiver does not have the ability to listen, read and think, he/she will not be able to receive and decode the messages in the manner the communicator wants him/her to.
4. For effective communication, the receiver is the most important link in the communication process.

Feedback and Evaluation

1. Feedback is the response or acknowledgement of the receiver to the communicator's message. The exchange is possible only if the receiver responds.
2. It involves the receiver reacting to the transmitted messages and conveying the response to the sender.

3. Most effective communicators encourage feedback and adjust the content and presentation of their messages as per the feedback received.
4. Teachers need to be aware of the subtle and direct ways of students for conveying reactions to the messages received. Skilled teachers can also control feedback so as to avoid unnecessary interference in the ongoing communication process.
5. Even by fluttering eyelids, raising an eyebrow, making facial expressions, organizing a point and asking for explanation. Thus, the message is shaped and reshaped by the communicator, and the receiver until the meaning becomes clear. In this way, both the participants in communication interact and constantly exchange roles. In face-to-face communication, the receiver responds naturally, directly and immediately. This provides the communicator an opportunity to improve and make his/her communication effective.
6. Therefore, feedback provides an opportunity to evaluate what is right or wrong about a particular communication. It helps to regulate the conversation among two or more individuals and also stimulates and reinforces an idea that is desired to be communicated.
7. An interactive model of communication (Cole and Chan) has a specific application for classroom teaching and learning. In most classroom interactions, there are constant role changes and many times the communication process is reversed.

Noise

Noise is an interruption that can creep in at any point of time in the communication process and make it ineffective. Environment is one major cause that interferes with message reception like noises from the roadside, constant chattering of individuals, blaring loudspeaker, faulty transmission, etc. Noise can also occur in other forms, like poor handwriting, heavy accent or soft speech, communication in a poorly lit room, etc. In fact, these are barriers to effective communication. For smooth and effective communication, it is necessary to eliminate or reduce noise as far as possible.

Noise can be mainly divided into the following categories:

1. **Physiological noise:** It is the distraction caused by hunger, fatigue, headache, medication, etc.
2. **Physical noise:** It is the most direct form of interference in our physical environment, for example, traffic horns and poor lighting.
3. **Psychological noise:** It refers to the qualities in us that affect how we communicate and interpret others. For instance, if a manager is preoccupied with a very intense problem, then he/she may be inattentive in the meeting. Similarly, prejudice

and defensive feelings can also interfere with communication.

4. **Semantic noise:** It occurs when words themselves are not mutually understood. Authors sometimes create semantic noise by using jargon or avoidable technical language.

Tiffin and Rajasingham discuss education as a communication system that also shares the characteristics of an open system:

1. **Negative-entropy:** Open systems resist the trend towards disorder and more towards increased organization. For this purpose, they depend on feedback system and the environmental supra system.
2. **Feedback:** Feedback enables the system to take corrective steps to adjust its malfunctioning, if there is any.
3. **Steady state:** It is a condition of dynamic equilibrium. Here, the system maintains its structure as stable, despite fluctuation in environmental conditions.
4. **Differentiation:** Open systems adapt to the changing environment. They also move in the direction of higher level of organization or growth.
5. **Equifinality:** It is the ability of open systems to reach a given state or condition by several different paths.
6. **Teleology:** It is a characteristic of open system that indicates the purposefulness of the system and works according to its objectives.
7. **Hierarchy:** Open systems are hierarchical, i.e., they are both independent framework consisting of a number of integral lower level sub-systems and each one is a dependent member of the higher level system.

PRINCIPLES OF EFFECTIVE CLASSROOM COMMUNICATION

Effectiveness of classroom communication depends on five major factors, namely teacher, student, message, instructional methods and media, and learning environment. The principles of effective classroom communication have been discussed under the following four headings.

1. Principles for teacher.
2. Principles for message design.
3. Principles for selection of instructional methods and media.
4. Principles for creating conducive learning environment.

Principles for Teachers

A teacher should have the following qualities.

1. **Develop a realistic self-concept and a perception about surrounding:** This requires analysis of one's strengths and weaknesses, acceptance of the reality and efforts to realize one's potential.
2. **Develop proficiency in the subject matter:** Desire to acquire knowledge is a must for the teacher. In the words of Mahatma Gandhi,

*'Live as if you were to die tomorrow
Learn as if you were to live forever'.*

A teacher should make every effort to remain updated in his/her subject area by independent reading, participation in short-term courses, attending classes of proficient teachers/experts, discussing subject-related issues and problems with other colleagues or seniors, etc. This helps in boosting the confidence of the teacher.

3. **Understand the learners:** A teacher should try to collect as much information about the learners' characteristics as he/she can. Information needs to be collected about the previous knowledge, learning styles, cognitive styles, motivation and interests. A teacher should accept the fact that no two individuals are alike and thus cannot be treated in the same manner.
4. **Develop effective communication skills (both verbal and non-verbal):** Communication skills can be acquired through training and practice. A teacher can record his/her own audio and analyse the same for identifying the strengths and weaknesses in the spoken language. He/she should remain open to feedback from colleagues, superiors and students.
5. **Knowledge about pedagogy and andragogy:** This enables the teacher to plan, organize, deliver and evaluate instructions based upon the sound principles of teaching, learning and thereby, promote learning among students.
6. **Adopt flexible approach:** This helps in modifying instructions as per the needs of the students.
7. **Being objective and unbiased:** A teacher should treat students as equal and not give any preferences to students on the basis of sex, caste or creed.

Principles for Message Design

The message should have the following characteristics:

1. **Clear and specified objectives:** Objectives should satisfy the criterion of being SMART.
 - (a) Specific
 - (b) Measurable
 - (c) Achievable
 - (d) Realistic
 - (e) Time framed

2. **Relevant to the objectives:** Contents should be relevant to cover all the objectives.
3. **Properly sequenced:** This is covered in Unit I under the maxims and principles of teaching. It should be seen that the content is organized based on the following parameters.
 - (a) Simple to complex
 - (b) Easy to difficult
 - (c) Concrete to abstract
 - (d) Known to unknown
 - (e) Observation to reasoning
4. **Use language comprehensible to the learners:** The language of the message should be simple and comprehensible to the learners. Technical jargon should be avoided.
5. **Use appropriate symbols:** Symbols used in the message should be technically correct and standardized.
6. **Include relevant exercises:** The exercises selected should be of varying difficulty level and should involve the learners meaningfully.
7. **Make generous use of examples and non-examples:** Examples from daily life and world of work should be used to facilitate understanding of the applicability of content in different settings and thus, it ensures greater transferability of the learnt materials.

Principles for Selection of Instructional Methods and Media

1. **Select relevant and appropriate methods and media:** The methods and media should be relevant to the objectives, content and context, and should be appropriate to the level of learners. Instructional methods and teaching methods have been discussed in Unit I.
2. **Use variety of methods and media:** In order to cater to the individual differences among learners and to avoid monotony, a variety of methods and media should be used by the teacher.
3. **Use good quality media:** The quality of media in terms of its visibility, legibility, finish, colours and printing should be judged before its use.
4. **Integrate media in teaching-learning:** Media should not be used in isolation. For example, if a video film is being used at the end of a lesson to reinforce what has been taught in the class, then it should either be followed by a discussion or some quick assessment of students' understanding.

Principles for Creating Conducive Learning Environment

1. **Classes should not be overcrowded:** It really becomes difficult for the teacher to manage a big class and pay attention to each learner, which is

the main reason that student-teacher ratio is prescribed by various regulatory bodies.

2. **Ensure proper seating arrangement in the class:** Minimum essential distance should be maintained between the teacher and the students, and among students. Each student should be able to interact with the teacher and other students. Furniture should be comfortable and in proper condition. In addition, there should be proper lighting and ventilation arrangement in the class.
3. **Build rapport with the students:** A teacher should know each and every student in the class by name and be friendly with the students. He/she should try to give due respect to the individuality of students. He/she should have a positive attitude towards the students.
4. **Encourage cooperation and healthy competition among students:** This can be achieved by assigning group activities and pairing bright students with average or poor students.
5. **Feedback mechanism:** It should work both ways.
6. **Encourage experimentation:** A teacher should encourage experimentation with new ideas and techniques by the students. Creativity should be encouraged rather than curbed. Problems having more than one solution need to be posed in the class.
7. **Provide reinforcement:** A teacher should reinforce the desired communication behaviour of learners through praise, appreciation, rewards, social recognition, etc.
8. **Provide non-threatening environment:** There should not be fear of punishment. Prior information regarding schedule of activities, tests, assignments, etc., should be provided to learners in order to avoid any unnecessary anxiety on the part of the learners.

Paraphrasing

Paraphrasing is a skill that is absolutely necessary for good listening. It means stating in your own words, your understanding of what has just been said. It gives the speaker the opportunity to find out what message he/she is getting across to you. He/she can then make any corrections needed. To begin paraphrasing, you might start by saying, 'What I hear you saying is ...' or 'It sounds like ...' or 'Let me see if I'm understanding you ...'

Advantages of Paraphrasing

1. It helps the students know that they are understood by the instructor.
2. It prevents misunderstandings from occurring.
3. It helps to avoid impulsive or angry reactions.
4. It will prevent you from getting distracted easily.
5. It helps to remember what was said frequently.

SOME IMPORTANT TERMS

1. **Synchronous media:** Media that takes place in real time, such as live television or radio and that requires the audience to be present when the media is being broadcasted or performed is called synchronous media.
2. **Asynchronous media:** Media that does not require the audience to assemble at a given time in order to use it is called asynchronous media. Examples of asynchronous media are printed materials or recorded audio or video.
3. **Time shift:** The recording of an audio or video event, usually by the audience, to be watched later at a time other than when it was originally broadcasted is called time shift. Setting a VCR to record a favourite program is an example of time-shifting.
4. **Surveillance:** Primarily the function of mass communication is to provide information about the processes, issues, events and other developments in the society.
5. **Convergence:** It is the combination of computing, telecommunications and media in a digital environment. Convergence and the changes that it is bringing are fundamentally changing many aspects of mass media and communication.

TEN COMMANDMENTS OF COMMUNICATION

Though we have studied them earlier, in order to make communication effective let us observe some important aspects which make the communication effective:

1. Clarify ideas before communicating.
2. Examine the true purpose of communication.
3. Take the entire environment, physical and human, into consideration.
4. When valuable, take advice from others while planning communication.
5. Be careful of the overtones and the basic content of the message.
6. Use crisp language and be clear.
7. Follow-up on communication.
8. Communicate with the future as well as the present in mind.
9. Be a good listener.
10. Exhibit congruency.

COMMUNICATION BARRIERS

Effective communication can face multiple barriers.

Organizational Barriers

These barriers develop when an organization evolves. They can be attributed to the following conditions:

The 7 Cs provide a checklist for making sure that communication in the form of teaching, instructions, meetings, emails, conference calls, reports and presentation is well constructed and clear so that the audience gets the message.

According to the 7 Cs, communication needs to be:

1. Clear
2. Concise
3. Concrete
4. Correct
5. Coherent
6. Complete
7. Courteous

1. Size of organization.
2. Physical distance between employees.
3. Specialization of jobs and activities.
4. Organizational culture—it impacts freedom and trust.
5. Organizational rules and regulations.
6. Power structure in the organization.
7. Complexity in organizational structure.
8. Inadequate facilities and opportunities.
9. Lack of cooperation between senior and subordinate.

Physical Barriers

The geographic distance between the sender and receiver(s) can be taken as the most pertinent example of physical barrier in communication.

Communication is generally easier over shorter distances as more communication channels are available and less or no technology is required. The ideal communication is face-to-face.

Although modern technology often helps to reduce the impact of physical barriers, the advantages and disadvantages of each communication channel should be understood so that an appropriate channel can be used to overcome the physical barriers.

There are four kinds of physical barriers and they are explained as follows.

1. **Competing stimulus:** There can be some other conversation going on in the surrounding area, traffic noise in the background and so on.
2. **Environmental stress:** High temperature, poor ventilation and so on.
3. **Subjective stress:** Sleeplessness, ill health, effects of drugs, mood variations and so on.
4. **Receiver's unfamiliarity with medium:** The use of medium with which the recipient is unfamiliar is also a communication barrier.

Psychological Barriers

- 1. Frame of reference:** Each person has a frame of reference, a kind of a window to view the world, people, events and situations. A frame of reference is shaped by our cultural environment (norms, values, and beliefs), childhood experiences and heredity. All these factors are usually implicit. No two people will have same frame of reference. Our frames of reference modify with passage of time as our needs and experience also change. Here, it is important to mention the concept of reference groups whom we espouse as our own and try to follow in our routine behaviour.
- 2. Self-image:** Self-image or self-concept is closely related to frame of reference. People establish their point of view and interpret messages in accordance with their self-concepts. They respond favourably those messages that reinforce their self-concept and reject those messages that are perceived to be threatening self image.
- 3. Stereotyping:** It perhaps emerges from ego, it becomes a barrier to communication when people act as if they already know the message that is coming from the sender or worse, as if no message is necessary because everybody already known. But senders and listeners should continuously look for and address thinking, conclusions and actions based on stereotypes.
- 4. Field of experience:** This barrier occurs when the field of experience is not common to both the sender and the receiver. If a teacher is teaching Einstein's equation to commerce students, he/she will not get any response but if it is taught to science students, his/her communication is likely to be more effective.
- 5. Cognitive dissonance:** Cognitive means thinking and dissonance means conflict. Thus, it means conflict in thinking. Although a smoker accepts the truthfulness of drug de-addiction in advertisement messages by the Department of Social Welfare, he is not able to react favourably.
- 6. Defensiveness and fear:** This is closely related to the desire to maintain status quo and a person always justifies his/her viewpoint or idea.
Along with the feelings of nervousness, anxiety and tension, fear is the most restricting of all effects, resulting in narrow thinking, which selects and distorts communication. However, a little fear and anxiety can be turned into a source of energy and enhance confidence as it motivates to perform better.
- 7. Selective perception:** It is also characterized as 'I-know-it syndrome'. If somebody says, 'It is a

waste of time', is also exhibiting selective perception when one does not apply full mind on communication situation.

- 8. Filtering:** A sender's manipulation of information can be seen as more favourable by the receiver.

Linguistic and Cultural Barriers

Language, both verbal or non-verbal, makes use of words. Words are mere symbols. Symbols can be comprehended differently by participants in communication. The communication message might not use vocabulary that is understood by the receiver. For example, excessive use of technical, financial, medical or psychological terms and jargon.

Most of the native languages are culture specific. When languages are distinct, communication is carried out through translation, which increases the probability of misunderstandings.

Although languages are meant to improve understanding, different cultural contexts and languages can also prove to be a barrier to communication across different cultures.

- 1. Semantic barriers:** Semantic barriers occur when there is disagreement about the words being used, which is based on individuals being from different cultures. Thus, disallowing the parties involved to determine a common meaning of the words used. This frequently occurs when the parties involved speak different languages.
- 2. High-context and low-context cultures:** High-context culture is the culture that relies heavily on non-verbal and subtle situational cues to communicate. A lot of things are left unsaid, but it is already understood by the members that constitute the group. Asiatic societies such as India, Saudi Arabia and Japan are prominent examples of high-context culture.
Low-context culture relies heavily on words to convey meanings in a communication. A few words can communicate a complex message very effectively to an in-group (in-group is one's own culture) but less effectively outside that group. In a lower context culture, the communicator needs to be much more explicit. Western societies are usually low-context societies.
- 3. Cross-cultural communication:** Cross-cultural communication is a field of study that analyse how people from varying cultural contexts communicate in similar ways and also in different ways among themselves. How do they endeavour to communicate across cultures?

Mechanical Barriers

Mechanical barriers can exist in both interpersonal or mass communication. There can be difficulty in reception or some elements of the message may not reach the destination or both. It can be in the form of absence of communication facilities.

Channel noise is a technical term used for such mechanical barriers that includes any disturbance in physical transmission of a message. Some examples of mechanical barriers are disturbances in radio transmissions, blurriness on TV screens, spreading of ink on a newspaper, inaudibility in telephone devices, a barely readable point size or any kind of improper functioning of a device. They can also be associated with cultural or social issues, language, customs, beliefs, motives or simply illiteracy.

The various communication barriers at workplaces are as follows:

1. **Language:** The same message can be interpreted differently by different people. Several factors affect how an individual attributes meaning to particular words.
2. **Perpetual biases:** It prevents us to look at reality in a truthful manner. The most common perceptual biases are stereotyping, projection and self-fulfilling prophecies.
Stereotyping comes into play when we assume that a person belonging to a certain group will display specific characteristics. However, the person may not actually exhibit those characteristics. This is specifically true in case of traditional societies.
3. **Impersonal relationships:** Our perception is also based on the past experiences with the communicator. The same communication from the highest authority may be perceived differently than that from a subordinate or a colleague.
4. **Cultural differences:** Effective communication requires deciphering the basic motives, values, assumptions and aspirations that operate across different cultures.

Overcoming Barriers of Communication

To make communication more effective, Supervisors/Managers must try to attempt to remove the barriers.

1. Regulate the flow of information.
2. **Feedback:** Acknowledgment of message.
3. Human resources should use simple language.
4. **Level of knowledge:** It is always advantageous to speak in the subordinate's language (level of knowledge, his educational qualification and fluency of language of the receiver). It is best to communicate in the mother tongue of subordinate.
5. **Listen carefully:** Hearing is passive, whereas listening is an active and intellectual process. While listening, one should stop talking, should be patient, hold his temper, ask questions, remove distractions, should immensely concentrate on what the speaker is saying.
6. **Control emotions:** Emotion can be in any form, like anger, disgust and upset. Emotions severely cloud and distort the meaning. The best thing is to defer or postpone further communication until calmness and coolness is established.
7. **Watch for non-verbal cues or body language:** In case of oral communication, the sender should observe the actions of receiver and find whether they go along with the understanding. A supervisor should watch the non-verbal cues or body language carefully.

Conceptual Filters

An individual's particular psychological characteristics are basically termed as Conceptual Filters. They can also put a limit on the encoding process of an individual. Communication skills, knowledge of the topic, and personality factors such as attitudes, values interests, and motivational needs are some of the traits or mental conditions that combine to limit, screen or filter what is encoded. They also add to the quality of message.

Practice Exercises

COMMUNICATION: CONCEPT, NATURE, AND PROCESS

- When we say that communication is intentional, it means that
 - Sender consciously intends to affect the behaviour of receiver of the message.
 - Effective communication is a process of acting on information.
 - Through speech communication, people make sense of the world.
 - None of the above
- Communication is the transfer and understanding of
 - Ideas
 - Concepts
 - Meaning
 - Words
- Which of the following can be termed as the 'context' of communication?
 - An interference with message reception.
 - Effective communication.
 - Verbal and non-verbal responses to messages.
 - A physical and psychological environment for conversation.
- Which of the following is Berlo's Linear Model of communication?
 - S-M-R-C
 - S-M-C-R
 - S-R-M-C
 - S-R-C-M
- Who among the following has stated that people know each other and themselves only through communication?
 - George Herbert Mead
 - Mahatma Gandhi
 - Martin Luther King
 - None of the above
- The ability to communicate effectively
 - Depends on the education level.
 - Is a natural talent that cannot be learned.
 - Always depends upon the use of technology.
 - Can be learned
- If it is assumed that communication has no beginning or end, then it is termed as
 - Mediation
 - Process
 - Interaction
 - Transaction
- The essential components of communication are
 - Source, message, interference, channel, receiver, feedback and context.
 - Sign, source, destination, interaction and correlation.
 - Signs, symbols, understanding, communication and communicant.
 - Symbols, understanding, purpose, ideas, opinions, non-verbal and reaction.
- Which of the following feature is applicable in the context of interpersonal communication?
 - Forgivable
 - Forgettable
 - Reversible
 - Irreversible
- A message can only be deemed effective when
 - Good communication skills are used.
 - Repeated back as proof of understanding.
 - Understood by receiver and produces the desired response.
 - Delivered in interpersonal communication.
- Learning to communicate with others is key to
 - Eliminating listeners' all physiological noises.
 - Never being misunderstood.
 - Establishing rewarding relationships.
 - All the above
- During the communication process, the message is converted to a symbolic form called
 - Decoding
 - Encoding
 - Deciphering
 - Expanding
- One's own description as a person is
 - Self-concept
 - Self-perception
 - Self-awareness
 - Self-respect
- Which of the following term describes the communication between two people that involves sending and receiving of messages?
 - Decoding
 - Encoding
 - Transaction
 - Dyadic
- Which of the following is the essence of effective communication?
 - Message
 - Feedback
 - Encoding
 - Decoding
- People who engage in frank and open expression of their feelings are considered
 - Aggressive
 - Rude
 - Assertive
 - Inconsiderate
- A low context culture is one where
 - Most of the information is unspoken.
 - Most of the information is explicitly stated in a verbal message.
 - Most of the information is apparent.
 - Most of the information is non-existent.
- A high-context culture is one where
 - Much of the information is about the context or about the person.
 - Much of the information is spoken.
 - Most people use sign language.
 - Much of the information is unspoken.
- The primary channels used by individuals to communicate with others are
 - Radio and television
 - E-mail
 - Tone of voice
 - Sight and sound

20. Encoding is important to
(a) Encourage feedback
(b) Eliminate noise
(c) Produce messages
(d) Ensure decoding of message
21. Which of the three components are parts of the human communication process?
(a) Message, recording and feedback.
(b) Noise, feedback and jargon.
(c) Message, noise and feedback.
(d) Feedback, message and critiquing.
22. Words are
(a) Connotative (b) Denotative
(c) Symbols (d) Unnecessary
23. Emoticons are
(a) Emotional conference
(b) Specifically expressive bodily gestures
(c) Emotional queries
(d) Typed symbols that communicate facial expressions
24. In the communication process, 'to encode' means to
(a) Translate ideas into a code.
(b) Interpret a code.
(c) Block a pathway between the sender and receiver of a message.
(d) Speak to large groups of people.
25. A person is more likely to use eye contact while
(a) Listening
(b) Uninterested in communication
(c) Speaking
(d) Interpreting
26. Feedback is
(a) A situation in which the sender and the receiver exchange information.
(b) Confined to the verbal form of communication.
(c) Confined to the written form of communication.
(d) None of the above
27. Listening is said to be adversely affected by
(a) Speaker's fast speed of delivery of words.
(b) Message loaded with too much of information.
(c) Improper selection and use of media.
(d) All the above
28. Which of the following terms is closely related to feedback?
(a) Brainstorming (b) Heuristics
(c) Cybernetics (d) None of the above
29. Feedback is a listener's
(a) Verbal critique of your message.
(b) Acceptance of a message.
(c) Verbal or non-verbal responses to a message.
(d) Aversion to a message.
30. When we try to organize details in our minds, we are seeking to
(a) Produce new ideas in our mind.
(b) Process complex information and then categorize it.
(c) Categorize difficult and easy pieces of information.
(d) Process simple information and categorize.
31. To decode a message is to
(a) Evaluate a message (b) Translate ideas into code
(c) Reject a message (d) Interpret a message
32. A message is a signal that serves as
(a) Stimuli for a sender
(b) Stimuli for a receiver
(c) Stimuli for a mass audience
(d) Noise reduction
33. The objective definition of a word is its
(a) Indirect meaning
(b) Connotative meaning
(c) Denotative meaning
(d) Direct meaning
34. The subjective meaning of a word is its
(a) Denotative meaning
(b) Indirect meaning
(c) Antonym
(d) Connotative meaning
35. Which of the following explains feedback?
(a) Non-verbal communication only
(b) Environmental noise
(c) Verbal and non-verbal receiver responses
(d) Verbal communication only
36. For which of the following word/s, the term 'chronemics' is used for interpretation of messages?
(a) Smell (b) Taste
(c) Time (d) All of the above
37. In the communication process, a receiver
(a) Is a channel.
(b) Decodes a message.
(c) Is the person who encodes an idea.
(d) Responsible for message interference.
38. An example of a communication channel is
(a) Noise
(b) Context
(c) Face-to-face conversation
(d) Feedback
39. The way one interprets information around oneself is
(a) Always negative
(b) Always positive
(c) Related to one's values, beliefs and past experiences.
(d) None of the above
40. Listening
(a) May be a complex process involving many steps.
(b) Is always reflexive.
(c) A natural habit.
(d) A physiological process occurring in a spontaneous manner.
41. The responding step of listening
(a) Is non-verbal.
(b) Depends upon human memory.
(c) Can be verbal or non-verbal.
(d) Is always verbal.
42. One of the most important communication skills is
(a) Active listening (b) Objective listening
(c) Passive listening (d) Inactive listening

43. A technique that might be used by an active listener is to
 (a) Paraphrase the speaker's meaning.
 (b) Express concern.
 (c) Explain the speaker's meaning.
 (d) Offer a view point when in conversation.
44. Effective listening includes
 (a) Filtering out points of disagreement.
 (b) Detailed analysis.
 (c) Attaching subjective meaning to a message.
 (d) Confirming one's understanding of a message.
45. A classification of body movements is called
 (a) Emblems (b) Non-verbal
 (c) Displays (d) Kinesics
46. Movements of the face that convey emotional meanings are called
 (a) Displays (b) Emblems
 (c) Eye contact (d) None of the above
47. Touch is an important element in
 (a) Business communication
 (b) Interpersonal communication
 (c) Intrapersonal communication
 (d) None of the above
48. Which of the following are parts of active listening?
 (a) Eye contact (b) Nodding
 (c) Seeking clarification (d) All the above
49. Evaluative listening is successful when we
 (a) Accurately distinguish stimuli in a message.
 (b) Infer the meaning of a message.
 (c) Critically assess the accuracy of facts stated in a message.
 (d) None of the above
50. An effective communication does not require
 [June 1997, June 2001]
 (a) Change in speech pattern
 (b) Appropriate gestures
 (c) Mastery of content
 (d) Handsome personality
51. One will be an effective communicator if one
 [December 1997]
 (a) Is a humorous speaker.
 (b) Has histrionic talents.
 (c) Is very clear about what one communicates.
 (d) Communicates in one's mother tongue.
52. Effective communication will make the receivers
 [December 1997]
 (a) Enjoy it (b) Accept it
 (c) Pass it on to others (d) Think about it
53. Communication will be effective [June 1998]
 (a) If it is delivered slowly and clearly.
 (b) If it is delivered in a calm situation.
 (c) If it reaches the receiver completely.
 (d) If it reaches the receiver as intended by the sender.
54. Which of the following steps would you consider first for an effective communication? [December 1999]
 (a) Select the channel of communication.
 (b) Plan the evaluation procedure.
 (c) Specify the objectives of communication.
 (d) Identify various media for communication.
55. Which is 'feedback' in newspaper's communication?
 [December 1999]
 (a) Articles (b) Editorials
 (c) Letters to the Editor (d) News
56. Which of the following is not a successful communication?
 [June 2002]
 (a) One who presents material in a precise and clear way.
 (b) One who is able to adopt himself/herself according to the language of the communicatee.
 (c) One who knows a lot but is somewhat reserve in his/her attitude.
 (d) One who sometimes becomes informal before the receiver and develops rapport.
57. The most important aspect of communication, i.e., listening can be improved by [June 2003]
 (a) Making the attention fully paid.
 (b) Making the communicated material novel-interesting and need based.
 (c) Making voice effective and impressive.
 (d) All the above
58. The process of communication is enhanced through [June 2003]
 (a) Belongingness
 (b) Security and freedom to make choices
 (c) Information of meeting and avoidance of pressure
 (d) All the above
59. Two-way communication becomes effective
 [December 2003]
 (a) Never (b) Always
 (c) Rarely (d) None of the above
60. Effective communication takes place when
 (a) Source is attractive and authoritarian.
 (b) Message design incorporates audience.
 (c) Modern communication technologies are used.
 (d) Receivers are passive components.
61. Which of the following is less important in the context of effective communication? [June 2004]
 (a) Total control over language.
 (b) Good vocabulary.
 (c) Attractive personality of the speaker.
 (d) Total control on the content to be transacted.
62. A good communicator is one who offers his/her audience
 [December 2005]
 (a) Plentiful of information
 (b) A good amount of statistics
 (c) Concise proof
 (d) Repetition of facts
63. Which of the following statements is correct?
 [December 2005]
 (a) Communicator should have fine senses.
 (b) Communicator should have tolerance power.
 (c) Communicator should be soft spoken.
 (d) Communicator should have good personality.

64. Which of the following can help the most in enhancing the effectiveness of active listening?
 (a) Developing apathy with the sender.
 (b) Developing a system to minimize noise in the area.
 (c) Paying attention to the body language of the sender.
 (d) Developing empathy with the sender.
65. Which of the following statements is not connected with communication?
 (a) Medium is the message
 (b) The world is an electronic cocoon
 (c) Information is power
 (d) Telepathy is technological
66. Postmodernism is associated with
 (a) Newspapers (b) Magazines
 (c) Radio (d) Television
67. In communication, the language is
 (a) The non-verbal code (b) The verbal code
 (c) The symbolic code (d) The iconic code
68. Media that exist in an interconnected series of communication points are referred to as
 (a) Networked media (b) Connective media
 (c) Nodal media (d) Multimedia

TYPES OF COMMUNICATION

69. Writing in a personal diary or otherwise recording one's thoughts and feelings are examples of
 (a) Mediated intrapersonal communication
 (b) Mediated interpersonal communication
 (c) Mediated mass communication
 (d) None of the above
70. Interpersonal communication occurs only when
 (a) A person exchanges idea with another one as a unique individual.
 (b) A large number of people are communicating with each other at the same time.
 (c) Only friends are talking.
 (d) None of the above
71. Non-verbal messages are
 (a) Overestimated in importance.
 (b) Attempts at manipulation and should be ignored.
 (c) Generally irrelevant to overall message meaning.
 (d) Important for a listener to understand.
72. Intrapersonal communication helps one
 (a) Learn about oneself.
 (b) To know what others are thinking.
 (c) Communicate with the general public.
 (d) To become a talented public speaker.
73. Communication between two or more people is called
 (a) Organizational communication
 (b) Interpersonal communication
 (c) Extrapersonal communication
 (d) Intrapersonal communication
74. In interpersonal communication, ethics are
 (a) Important
 (b) Communication barriers
 (c) Ineffective
 (d) None of the above
75. Which of the following is also termed as mediated communication?
 (a) Intrapersonal communication
 (b) Interpersonal communication
 (c) Group communication
 (d) Mass communication
76. Communication becomes circular when
 (a) The decoder becomes an encoder.
 (b) The feedback is absent.
 (c) The source is credible.
 (d) The channel is clear.
77. Non-verbal communication includes
 (a) Delivering a speech
 (b) Telephonic conversation
 (c) Singing a song
 (d) Shaking hands
78. Leadership roles first emerge in which of the following kinds of communication?
 (a) Intrapersonal communication
 (b) Small group communication
 (c) Face-to-face public communication
 (d) Media-like cell phones and instant messenger
79. Four conditions influence the effectiveness of an encoded message, such as the skills, attitudes, knowledge of the sender and _____.
 (a) Social cultural system
 (b) Knowledge of the receiver
 (c) Age of the sender
 (d) Environmental issues
80. Another term used for interpersonal communication is
 (a) Group communication
 (b) Face-to-face public communication
 (c) Dyadic communication
 (d) Traditional communication
81. Non-verbal message interpretation largely
 (a) Depends upon cultural context.
 (b) Depends upon physical context.
 (c) Depends upon noise level.
 (d) Varies from person to person.
82. Audio-conferencing may be classified among which of the following types of communication? [June 2004]
 (a) One-sided verbal
 (b) Two-sided verbal
 (c) One-sided non-verbal
 (d) Two-sided non-verbal
83. Recording a television programme on a VCR is an example of [December 2005]
 (a) Time-shifting
 (b) Content reference
 (c) Mechanical clarity
 (d) Media synchronization

84. A negative reaction to a mediated communication is described as [December 2005]
 (a) Flak
 (b) Fragmented feedback
 (c) Passive response
 (d) Non-conformity
85. In communication, chatting in internet is [June 2009]
 (a) Verbal communication
 (b) Non-verbal communication
 (c) Parallel communication
 (d) Grapevine communication
86. Public communication tends to occur within a more [June 2011]
 (a) Complex structure
 (b) Political structure
 (c) Convenient structure
 (d) Formal structure
87. The information function of mass communication is described as
 (a) Diffusion
 (b) Publicity
 (c) Surveillance
 (d) Diversion

COMMUNICATION BARRIERS

88. Disturbances that interfere with the transmission, receipt or feedback of a message are called
 (a) Feedback
 (b) Feed forward
 (c) The channel
 (d) Noise
89. The most powerful barrier of communication in the class is [June 1997 and June 2001]
 (a) Noise in the classroom.
 (b) Confusion on the part of teacher.
 (c) More outside disturbance in the classroom.
 (d) Lack of teaching aids.
90. A disruption in the communication process is called [June 2004]
 (a) Transgression (b) Feedback
 (c) Noise (d) Interaction
91. Which of the following is not true about the grapevine?
 (a) It is faster than formal communication network.
 (b) It is less accurate than formal network.
 (c) It is found in almost all organizations.
 (d) It is preferred over formal communication.
92. Level C of the effectiveness of communication is defined as [December 2005]
 (a) Channel noise (b) Semantic noise
 (c) Psychological noise (d) Source noise
93. All of the following are barriers to effective communication except
 (a) Absence of noise
 (b) Distortion of information
 (c) Information overloads
 (d) None of the above
94. Informal transmission of information or filtered information is called
 (a) Gossip
 (b) Grapevine
 (c) Vertical communication
 (d) Horizontal communication
95. An example of physiological noise is
 (a) Feeling hungry
 (b) A humming air conditioner unit
 (c) A lawn mower
 (d) A speaker using complex terms
96. A speaker using complex terms is an example of
 (a) Physiological noise
 (b) Psychological noise
 (c) Semantic noise
 (d) Physical noise
97. A noise in the communication process
 (a) Causes listeners to listen to messages more carefully.
 (b) Interferes with a message.
 (c) Focuses wandering thoughts.
 (d) Enhances a message.
98. A fixed and categorized impression of a group of people based on a predetermined set of qualities is called
 (a) Generalizing
 (b) Consistency
 (c) Stereotyping
 (d) Oversimplification
99. The goal of perception checking is
 (a) Confirmation
 (b) Cultural sensitivity
 (c) To further explore the thoughts and feelings of others
 (d) Control
100. Which is a characteristic of prejudice?
 (a) Generalized evaluation, specifically of out-group members
 (b) Negativity
 (c) Biased perceptions
 (d) All the above
101. The main assumption of 'primacy effect' is
 (a) The most information is always that comes first.
 (b) The most important piece of information comes in the last.
 (c) The degree of importance depends upon the situation.
 (d) All pieces of information carry the same weight.
102. In communication, a major barrier to reception of messages is
 (a) Audience attitude
 (b) Audience knowledge
 (c) Audience education
 (d) Audience income

CLASSROOM COMMUNICATION

- 103.** A teacher will become an effective communicator if
[December 1997]
- He/she uses instructional aids.
 - He/she helps students get meaning out of what he/she teaches.
 - He/she asks question in between teaching.
 - He/she helps students get correct answer to the questions on the topic.
- 104.** The psychological aspects of the classroom are best managed by
[December 1998]
- The class teacher
 - The subject teacher
 - The principal
 - The student themselves
- 105.** Books can be powerful source of communication, provided
- Content is abstract.
 - Content is illustrative.
 - Medium is Hindi.
 - Content is presented through good print.
- 106.** Which of the following statements is not correct?
- A good communicator cannot be a good teacher.
 - A good communicator has good sense of humour.
 - A good communicator has wide reading.
 - A good communicator has command over language.
- 107.** Which of the following are the main constituents of paralanguage?
- Tone
 - Pitch
 - Quality of voice
 - Rate of speaking
- I, II and III
 - II, III and IV
 - I, II and IV
 - All the above
- 108.** If a student raises a hand to speak in class, the person is using
- Modifier
 - Emblem
 - Regulator
 - Display
- 109.** Communication in the class fails because
[June 1998]
- The students are inattentive.
 - The teacher is monotonous in delivering the message.
 - The students have no interest in the lesson being taught.
 - There is very much noise in and around the classroom.
- 110.** Which of the following will make communication more effective?
[June 1998]
- Cracking jokes in between.
 - Using multi-sensory appeal.
 - Speaking with high authority.
 - Telling what is useful to the listeners.
- 111.** The facial expression of students relate to which element of the communication process?
[December 1998]
- Message
 - Receiver
 - Channel
 - Sender
- 112.** Which group of communication aspects does not disrupt the communication process in the class?
[December 2001]
- Reversing–evaluating–focussing
 - Evaluating–focussing–illustrating
 - Evaluating–focussing–exaggerating
 - Focussing–illustrating–exaggerating
- 113.** Which of the following will not hamper effective communication in the classroom?
[June 2002]
- A lengthy statement.
 - An ambiguous statement.
 - A precise statement.
 - A statement that allows the listener to draw his/her own conclusions.
- 114.** Which of the following cannot be a good way in promoting literacy among villagers?
[June 2003]
- Demonstration
 - Reading and writing
 - Providing material on TV and film projector
 - Large group discussion

MISCELLANEOUS

- 115.** Journal-like entries written by individuals and posted on the internet that sometimes can generate many online discussions.
- Weblogs
 - Simple posting
 - E-journals
 - None of the above
- 116.** According to Mehrabian, the respective contributions of (i) words, (ii) tone of voice and (iii) body language in overall communication are
- 38%, 7% and 55%
 - 7%, 38% and 55%
 - 55%, 38% and 7%
 - None of the above
- 117.** Paraphrasing is a skill that is absolutely necessary to effective
- Listening
 - Hearing
 - Speaking
 - None of the above
- 118.** The transmission of culture from one generation to another is called
- Acculturation
 - Enculturation
 - Interculturation
 - None of the above
- 119.** Leakage cues refer to
- Facial expressions that people have misread.
 - One of the characteristic styles of facial expressions.
 - Unintended signs of how a person really feels.
 - A technique employed by professional actors.

120. A person has a very advanced sense of what is socially appropriate and always knows what to say in every social context. The person has which kind of linguistic competence?
 (a) Phonemic (b) Cognitive
 (c) Syntactic (d) Pragmatic
121. A sender in communication process has very good grammar. This competence is basically
 (a) Phonemic (b) Semantic
 (c) Syntactic (d) Pragmatic
122. A location where the internet users can gain wireless access to the internet is
 (a) Extranet (b) Intranet
 (c) Web conference (d) Wi-Fi hotspot
123. Which of the following statement(s) is/are true in the context of paraphrasing?
 (A) It is basically about stating in your own words, your understanding of what has just been said.
 (B) It gives speaker opportunity to find out what message he/she is getting across to you.
- (a) Only A (b) Only B
 (c) Both A and B (d) Neither A nor B
124. An example of asynchronous medium is
 (a) Radio (b) Television
 (c) Film (d) Newspaper
125. In communication, connotative words are
 (a) Explicit (b) Abstract
 (c) Simple (d) Cultural
126. A message beneath a message is labelled as
 (a) Embedded text (b) Internal text
 (c) Intertext (d) Subtext
127. In analogue mass communication, stories are
 (a) Static (b) Dynamic
 (c) Interactive (d) Exploratory
128. The ability to understand, communicate with, motivate, and support other people, both individually and in groups, defines which of the following organizational skills?
 (a) Hard skills (b) Soft skills
 (c) Conceptual skills (d) Political skills

ANSWER KEYS

Communication: Concept, Nature, and Process

1. (a) 2. (c) 3. (d) 4. (b) 5. (a) 6. (d) 7. (b) 8. (a) 9. (d) 10. (c)
 11. (c) 12. (b) 13. (a) 14. (d) 15. (b) 16. (c) 17. (b) 18. (d) 19. (d) 20. (c)

Mathematical Reasoning and Aptitude

CHAPTER 5

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- Types of Reasoning
- Number Series, Letter Series, Codes and Relationships
- Mathematical Aptitude (Fraction, Time and Distance, Ratio, Proportion and Percentage, Profit and Loss, Interest and Discounting, Averages, etc.)

REASONING AND ITS TYPES

Reasoning is one of the highest order of thinking, it is stepwise thinking and mental recognition of cause and effect relationships. Reasoning is a productive thinking in which insight and past experiences are required. Reasoning is a factor of intelligence. Reasoning is a process in which pre-knowledge, experiences, insight and understanding of relationship are used to solve the problem. The ability to reason is closely related to intelligence. It goes in the direction given to the learner, i.e., it is always goal-oriented. It is creative and reflective in nature. Reasoning ability develops gradually. It means that experiences are also helpful in developing reasoning power along with intelligence. There may be more than one logic to draw an inference, i.e., reasoning is multi-dimensional.

Reasoning entails the following steps. Numerous philosophical mathematicians and psychologists have given the following six steps for reasoning.

1. Identification of the problem
2. Defining the problem
3. Formation of hypothesis
4. Collection of data
5. Tabulating and systematizing data
6. Verification/evaluation of hypothesis

TYPES OF REASONING

Aristotle had given an extended, systematic treatment of the methods of human reasoning. The three methods were deductive, inductive and abductive reasonings.

1. **Deductive reasoning:** It is also known as analytical reasoning as it deals with objects by looking at its component parts. This type of reasoning can also be called deductive reasoning. Formal logic has been described as the science of deduction. The concepts of syllogism has been explained in Chapter 6.
2. **Inductive reasoning:** It is also known as 'synthetically reasoning' that deals with a class of objects by looking at the common properties of each object in the class. The method is called inductive reasoning. The study of inductive reasoning is generally carried out within the field known as 'informal logic' or 'critical thinking'.
3. **Abductive reasoning:** Abductive reasoning is considered as the third form of reasoning. It is somewhat similar to inductive reasoning. It takes its clues from the term 'guessing', since conclusions drawn here are based on probabilities. Here, it is presumed that the most plausible conclusion is also the correct one.

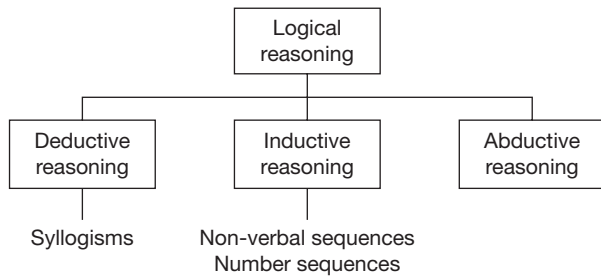

Figure 5.1

Example:

Major premise: The container is filled with yellow pebbles.

Minor premise: Bobby has a yellow pebble in his hand.

Conclusion: The yellow pebble in Bobby hand was taken out of the container.

By abductive reasoning, the possibility that Bobby took the yellow pebble from the container is reasonable, though it is purely based on the speculation. Anyone could have given the yellow pebble to Bobby, or probably Bobby could have bought a yellow pebble at a retail store. Therefore, abducting that Bobby took the yellow pebble, from the observation of ‘the yellow pebble filled container’ may lead to a false conclusion. Unlike deductive and inductive reasoning, abductive reasoning is not commonly used for psychometric testing.

Here, we can discuss other forms of reasoning as well.

Hypothetical Syllogism (Modus Ponens)

A syllogism is simply a three line argument that consists of exactly two premises and a conclusion. A hypothetical syllogism is a syllogism that conations at least one hypothetical or conditional (if-then) premise. So that such type of deductive reasoning is also known as conditional reasoning. This pattern of reasoning is also known as *modus ponens*. The four varieties of *modus ponens* are as under.

Chain Argument

Chain argument consists of three conditional statements that link together. Here is an example of a chain argument.

If I do not appear in exam, then I will fail in graduation.

If I fail in graduation, then I will lose my time and money.

Therefore, if I do not appear in exam, then I will lose my time and money.

Modus Tollens

These are sometimes called ‘denying the consequences’ because they consist of one conditional premise, a second premise that denies (asserts to be false) the consequences of the conditional and a conclusion that denies to be antecedent of the conditional.

Here is an example of modus tollens argument.

If we are in Manchester, then we are in Gujarat.

We are not in Gujarat.

Therefore, we are not in Manchester.

Denying the Antecedent Argument

In such argument, first premise that denies (i.e., asserts to be false) the antecedent of the conditional and a conclusion that denies the consequent of the conditional.

Here, is an example.

If we are in Chandigarh, then we are in North.

We are not in Chandigarh.

Therefore, we are not in North.

We can notice that the premises in above examples are true and the conclusion is false. The pattern of reasoning of this argument is not logically reliable.

Affirming the Consequent

This pattern of reasoning is also faulty and affirming the consequent.

For example, if we are on Venus, then we are in solar system.

We are in the solar system.

Therefore, we are on Venus.

Such pattern of reasoning has true premises and a false conclusion; it is clear that affirming the consequent is not logically reliable.

Categorical Syllogism

They have been discussed in Unit 6 also. Here, the statements of the premises begin typically with ‘all’, ‘none’ or ‘some’ and conclusion start with ‘therefore’ or ‘hence’.

Argument from Definition

An argument from definition, the conclusion is presented as being true by definition.

Nand is a cardiologist. Therefore, Nand is a doctor.

A straightforward relationship among cardiologist and doctor (two elements) is observed here. The conclusion of valid deductive reasoning contains no more information than the premises.

Argument by Elimination

An argument by elimination seeks to logically rule out various possibilities until only a single possibility remains. It is like attempting questions in an examination.

Argument Based on Mathematics

The main aim of Mathematics is to develop reasoning power of humanity.

Here, the conclusion is claimed to depend largely or entirely on some mathematical calculation or measurement (perhaps in conjunction with one or more non-mathematical premises).

Here, is an example.

Twelve is greater than eight.

Eight is greater than four.

Therefore, twelve is greater than four.

INDUCTIVE REASONING

Let's discuss inductive reasoning in more detail. The statement or proposition is based on general observations and experiences; such reasoning is called inductive reasoning. There is a strong contrast with deductive reasoning. Even in the strongest cases of inductive reasoning, the truth of the premises does not guarantee the truth of the conclusion. Rather, the conclusion of an inductive argument follows with some degree of probability. There may be more information in the conclusion of an inductive reasoning than that is already containing in the premises. Thus, this method of reasoning is applicative.

In inductive reasoning, a statement in one particular case will be true in all other cases in same serial order. It may be applied generally to all such cases. Here, one can formulate generalized statement or principle and conclusions on the basis of certain facts and specific examples.

Once we have discussed inductive reasoning, now we can discuss six common patterns of inductive reasoning.

- 1. Inductive generalization:** It is an argument in which a generalization is claimed to be probably true based on the information about some members of a class. All inductive generalization claims that their conclusions are probable rather than certain.
- 2. Predictive argument:** It is a statement about what may or will happen in the future, here a prediction is defended with reasons. They are among the most common patterns of inductive reasoning. Here is an example, it has rained in Mumbai every June since weather records have been kept. Therefore, it will probably rain in Mumbai next June.

Nothing in the future is absolutely certain; argument containing predictions are usually inductive.

- 3. Argument from authority:** The conclusion is supported by presumed authority or witness who has said that the conclusion is true. We can never be absolutely certain that a presumed authority or witness is accurate or reliable.

- 4. Causal argument:** One of the most basic, most common and most important kinds of knowledge, we seek is knowledge of cause and effect. A causal argument asserts or denies that something is the cause of something else.
- 5. Statistical argument:** A statistical argument rests on statistical evidence, i.e, evidence that some percentage of some group has some particular characteristics.
- 6. Argument from analogy:** An analogy is a comparison of two or more things that are claimed to be alike in some relevant respect.

Towards the end, we can say that inductive reasoning is informative because the conclusion of an inductive reasoning contains more information than is already contained in the premises.

Other Reasoning Types

We are using verbal and non-verbal symbols to communicate with others. There are four types of reasoning, which are explained as under.

- 1. Verbal reasoning:** Normally, we communicate with others by language and the language is a vehicle for reasoning. So reasoning without language or words-symbols is not possible. In verbal reasoning, we use linguistic symbols like words. Some verbal reasoning ability tests are available.
- 2. Non-verbal reasoning:** In competitive examinations, we observe that there is a part of reasoning in written paper containing some figures, graphs, drawings which can measure the non-verbal reasoning ability of the contestant.
- 3. Reasoning as propositions:** It is often difficult to determine whether a long and complex argument is valid or invalid just by reading. To analyse the parts of whole arguments and symbolize it to determine the validity of arguments, this logical process is known as propositional reasoning.
Here, is an example.
If $a = 4$ and $b = 7$ $c = ?$ and $a + c = b$
Then $4 + c = 7$
Therefore, $c = 3$.
- 4. Automated reasoning:** It is basically an area of computer science. It understands different aspects of reasoning to allow the creation of computer software to reason completely or almost completely automatically. Sometimes, it is usually considered a subfield of artificial intelligence, but it also has strong connections to theoretical computer science and even philosophy.
- 5. Brain's centre of reasoning:** The left hemisphere is dominant for most of the people; it controls written and spoken languages and mathematical calculations. Prefrontal cortex is a farthest forward

area in head and it is the associated area of frontal lobe. The left brain is said to be analytical, logical, mathematical hemisphere, concerned with cause and effect scientific thinking.

SERIES COMPLETION

A series may consist of a number series or a letter series. There are several such series, such as finding the missing numbers, replacing the wrong numbers, finding the missing letters, finding the wrong group of numbers or letters, to name a few.

Number Series

Prime Number Series

Example 1

2, 3, 5, 7, 11, 13, 17, ...

- (a) 15 (b) 17 (c) 18 (d) 19

Solution

The given series is a prime number series. The next prime number is 19.

Answer: (d)

Example 2

2, 5, 11, 17, 23, 31, ...

- (a) 33 (b) 37 (c) 41 (d) 43

Solution

The prime numbers in this range are 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43, ...

Prime numbers have been written alternatively. Thus, after 31, the prime numbers are 37, 41, ... Ignoring 37, the answer is 41.

Answer: (c)

Difference Series

Example 3

2, 5, 8, 11, 14, 17, ..., 23, 26,

- (a) 19 (b) 21 (c) 20 (d) 18

Solution

The difference between the numbers is 3 ($17 + 3 = 20$).

Answer: (c)

Example 4

45, 38, ..., 24, 17, 10, 3

- (a) 31 (b) 34 (c) 38 (d) 29

Solution

The difference between the consecutive numbers is 7 ($38 - 7 = 31$).

Answer: (a)

Multiplication Series

Example 5

2, 6, 18, 54, ..., 486, 1,458

- (a) 152 (b) 182
(c) 162 (d) 108

Solution

The numbers are multiplied by 3 to get the next number ($54 \times 3 = 162$).

Answer: (c)

Example 6

3, 12, 48, ..., 768, 3,072

- (a) 192 (b) 216
(c) 512 (d) 72

Solution

The numbers are multiplied by 4 to get the next number ($48 \times 4 = 192$).

Answer: (a)

Division Series

Example 7

720, 120, 24, 6, ..., 1

- (a) 1 (b) 2 (c) 3 (d) 4

Solution

720 divided by 6 = 120

120 divided by 5 = 24

24 divided by 4 = 6

6 divided by 3 = 2

2 divided by 2 = 1

Answer: (b)

Example 8

32, 48, 72, ..., 162, 243

- (a) 84 (b) 96 (c) 108 (d) 132

Solution

Each number is being multiplied by $3/2$ to get the next number.

Answer: (c)

N^2 Series

Example 9

1, 4, 9, 16, 25, 36, ..., 64

- (a) 42 (b) 44 (c) 45 (d) 49

Solution

The series is squares of 1, 2, 3, 4 and so on.

Answer: (d)

Example 10

0, 4, 16, 36, 64, ..., 144

- (a) 100 (b) 84 (c) 96 (d) 120

Solution

 The series is squares of even numbers, such as 2, 4, 6, 8, 10 and 12. Hence, the answer is $10^2 = 100$.

Answer: (a)

 $N^2 - 1$ Series
Example 11

0, 3, 8, 15, 24, 35, 48, 63, ...

- (a) 80 (b) 82
-
- (c) 83 (d) None of the above

Solution

 The series is $1^2 - 1$, $2^2 - 1$, $3^2 - 1$ and so on. The next number is $9^2 - 1 = 80$.

Answer: (a)

Alternative solution

 The differences between the numbers across the series are 3, 5, 7, 9, 11, 13, 15 and 17. The next number is $63 + 17 = 80$.

 $N^2 + 1$ Series
Example 12

2, 5, 10, 17, 26, 37, ..., 65

- (a) 50 (b) 48 (c) 49 (d) 51

Solution

 The series is $1^2 + 1$, $2^2 + 1$, $3^2 + 1$ and so on. The next number is $7^2 + 1 = 50$.

Answer: (a)

 $N^2 + N$ Series and $N^2 - N$ Series
Example 13

0, 2, 6, 12, 20, 30, ..., 56

- (a) 36 (b) 40
-
- (c) 42 (d) None of the above

Solution

 The series is $0^2 + 0$, $1^2 + 1$, $2^2 + 2$, $3^2 + 3$ and so on. The missing number is $6^2 + 6 = 42$. The next number is $6^2 + 6 = 42$.

Answer: (c)

First alternative solution

 The series is 0×1 , 1×2 , 1×2 , 2×3 , 3×4 , 4×5 and $5 \times 6 = 30$. The next number is $6 \times 7 = 42$.

Second alternative solution

 The series is $1^2 - 1$, $2^2 - 2$, $3^2 - 3$, $4^2 - 4$, $5^2 - 5$, $6^2 - 6$, $7^2 - 7$, $8^2 - 8$ and so on.

 N^3 Series
Example 14

1, 8, 27, 64, 125, 216, ...

- (a) 256 (b) 343 (c) 365 (d) 400

Solution

 The series is 1^3 , 2^3 , 3^3 , etc. The missing number is $7^3 = 343$.

Answer: (b)

 $N^3 + 1$ Series
Example 15

2, 9, 28, 65, 126, 217, 344, ...

- (a) 513 (b) 362 (c) 369 (d) 361

Solution

 The series is $1^3 + 1$, $2^3 + 1$, $3^3 + 1$ and so on. Thus, the missing number is $8^3 + 1 = 513$.

Answer: (a)

Letter Series

In this type of problem, a series of letters of English alphabet will be given, which follow a pattern or a sequence. The letter series mainly consists of skipping the letters.

To solve these types of problems, assign numbers 1 to 26 to the letters of English alphabet as shown below. In some cases, it is useful to assign the numbers in a reverse order.

Concept of 'EJOTY'

Letters	E	J	O	T	Y
Position	5	10	15	20	25

The candidates can determine the relative positions of various alphabets by just remembering the word 'EJOTY'. Various types of letter series are given below.

 First alphabetical half: A to M \rightarrow 1 to 13 and second alphabetical half: N to Z \rightarrow 14 to 26

 Tables 5.1 and 5.2 below show both the forward as well as the backward place value of English alphabet. A very important fact about the position of any letter is that the sum of forward position and reverse position for any letter is always constant and equal to 27. For example, the sum of both positions of H is ($8 + 19 = 27$), for W is ($23 + 4 = 27$).

Table 5.1 English Alphabet–Position Left to Right

A	B	C	D	E	F	G	H	I	J	K	L	M
1	2	3	4	5	6	7	8	9	10	11	12	13
N	O	P	Q	R	S	T	U	V	W	X	Y	Z
14	15	16	17	18	19	20	21	22	23	24	25	26

Table 5.2 English Alphabet–Position Right to Left

Z	Y	X	W	V	U	T	S	R	Q	P	O	N
1	2	3	4	5	6	7	8	9	10	11	12	13
M	L	K	J	I	H	G	F	E	D	C	B	A
14	15	16	17	18	19	20	21	22	23	24	25	26

Table 5.3 Series of Opposite English Alphabet

A	B	C	D	E	F	G	H	I	J	K	L	M
Z	Y	X	W	V	U	T	S	R	Q	P	O	N

One Letter Series**Example 16**

A, C, E, G, ..., K

(a) I (b) H (c) J (d) M

Solution

The series is $A + 2 = C$, $C + 2 = E$, $E + 2 = G$; $G + 2 = I$, $I + 2 = K$. The missing letter is I.

Answer: (a)**Example 17**

A, B, D, G, ..., P

(a) K (b) L (c) M (d) N

Solution

The series is $+1$, $+2$, $+3$, $+4$, $+5$ and so on. $A + 1 = B$; $B + 2 = D$; $D + 3 = G$; $G + 4 = K$; $K + 5 = P$. The missing letter is K.

Answer: (a)**Example 18**

B, E, H, K, N, ...

(a) P (b) O (c) Q (d) R

Solution

The series is $+3$. The missing letter is $N + 3 = Q$.

Answer: (c)**Alternative solution**

Skip two letters to get the next letter, i.e., skip O and P after N to get Q. The missing letter is Q.

Example 19

B, D, G, I, L, N, ...

(a) N (b) O (c) P (d) Q

Solution

This series is formed by moving $+2$ and $+3$ for each pair of letters starting from left. Thus, the missing letter is $N + 3 = Q$.

Answer: (d)**Alternative solution**

Skip one and two letters alternately to get the next letter, i.e., skip two letters O and P after N to get Q.

Example 20

B, C, E, G, K, ...

(a) M (b) N (c) O (d) P

Solution

$B = 2$, ... $K = 11$ according to alphabet series (Table 5.1). Thus, alphabet series have been constructed according to the prime numbers. The next prime number is 13 and the corresponding letter is M.

Answer: (a)**Example 21**

A, E, I, O, ...

(a) Q (b) R (c) U (d) S

Solution

These are all vowels.

Answer: (c)**Example 22**

A, D, I, P, ...

(a) U (b) V (c) X (d) Y

Solution

According to alphabet series, the positions are 1, 4, 9, 16 and so on, which are $(1)^2$, $(2)^2$, $(3)^2$, $(4)^2$ and so on. The next number is $5^2 = 25$ and the corresponding letter is Y.

Answer: (d)**Example 23**

D, F, H, I, J, L, ...

(a) K (b) O (c) M (d) P

Solution

If the numbers are assigned, the series becomes 4, 6, 8, 9, 10, 12 and so on, i.e., composite number series. The next composite number is 14 and the corresponding letter is N.

Answer: (c)

Example 24

A, Z, B, Y, C, X, D, ...

- (a) U (b) V (c) W (d) X

Solution

The sequence consists of two series, Where one is ascending (A, B, C, D, etc.) and the other is the descending series (Z, Y, X, W, etc.).

Answer: (c)**Combined Two Letter Series**

The first letters of the series follow one logic and the second letters follow another logic, and then they pair with each other.

Example 25

AM, BN, CO, DP, ..., FR

- (a) EQ (b) FT (c) GR (d) ER

Solution

The first letters are A, B, C, D, E and F, and the second letters are M, N, O, P, Q and R.

Answer: (a)**Example 26**

AB, DE, GH, ..., MN

- (a) HI (b) JK
-
- (c) KL (d) None of the above

Solution

After every pair, one letter is skipped.

Answer: (b)**Example 27**

AA, CE, EI, GO, ...

- (a) IU (b) IQ (c) IR (d) IT

Solution

The first letters of all pairs given in the question follow a sequence of $A + 2 = C$, $C + 2 = E$ and so on. The second letters are vowels.

Answer: (a)**Three Letter Series**

This sequence consists of three letters in each term. The first letters follow one logic, Where the second letters follow another logic and the third letters follow some other logic (or the same logic in all the three cases).

Example 28

ABD, CDF, ..., GHJ, IJL

- (a) EFH (b) IJL (c) HIJ (d) HIK

Solution

The first letter of each triplet follows a sequence of A, C, E, G, I and so on. The second letter of each triplet follows a sequence of B, D, F, H, J and so on, and the third letter forms a sequence of D, F, H, J, L and so on.

Answer: (a)**Example 29**

CKZ, DLY, ... , FNW, GOV

- (a) EMX (b) ENY
-
- (c) ENX (d) None of the above

Solution

The first letters form a series of C, D, E, F, G and so on. The second letters form a series of K, L, M, N, O and so on. The third letters form a series of Z, Y, X, W, V and so on.

Answer: (a)**Example 30**

NAB, OEC, PIE, QOG, ...

- (a) QPH (b) QUH (c) QUI (d) RUK

Solution

The first letters form a series of N, O, P, Q, R and so on. The second letters form a vowel series and the third letters form prime number series according to their number position.

Answer: (d)**Example 31**

ABC, CBA, DEF, ... , GHI, IHG

- (a) JKL (b) FED (c) DFE (d) LJK

Solution

The second term is the reverse order of the first term. In addition to the above types, a number of other types can also be identified.

Answer: (b)**CODING AND DECODING**

The codes are based on various principles or patterns such that the message can be easily deciphered at the other end. They have become almost a regular feature of NET Paper I Exam to judge the candidates' intelligence and mental abilities. They are required to encode and decode words and sentences after observing the pattern and principles involved. These questions can be broadly classified as alphabetical coding, numerical coding and mixed coding.

Alphabetical Coding

Remembering the positions of different letters is necessary to solve any question on alphabetical series. The English language contains 26 alphabets, and their varied positions are discussed in Tables 5.1–5.3.

In these types of questions, the letters of the alphabet are exclusively used. These letters do not stand for themselves but are allotted some artificial values based on some logical patterns or analogies. By applying those principles or observing the pattern involved, the candidates are required to decode a coded word or encode a word. This can be further classified into the following categories.

Simple Analogical Letter Coding

These are also called arbitrary codes. There are two definite principles or patterns involved. Codes are based on the analogy of one example from which different codes are to be formed.

Example 32

If 'BELONGINGS' is coded as 'TABLESTESF', then how will you code 'LINEN'?

- (a) BTEAE (b) BTAEA
(c) BATEA (d) None of the above

Solution

The coding is done as follows:

Letters	B	E	L	O	N	G	I	N	G	S
↓	↓	↓	↓	↓	↓	↓	↓	↓	↓	↓
Codes	T	A	B	L	E	S	T	E	S	F

Accordingly, the code for LINEN is BTEAE.

Letter Coding on Specific Pattern

First, the candidates are required to observe the specific pattern involved and then proceed with encoding or decoding as the case may be.

Example 33

If 'POSTED' is coded as 'DETSOP', then how will you code 'SPEED'?

- (a) DEEPS (b) DEESP
(c) DESEP (d) SPEDE

Solution

By careful observation, we can say that the letters have been written in the reverse order. Hence, SPEED will be written DEEPS and therefore, (a) is the answer.

Example 34

If 'GREET' is coded as 'FQDD S', then 'CDDO' stands for

- (a) EDDP (b) DEEP (c) PEED (d) EPED

Solution

Here, it is -1 for each letter of the word 'GREET'.

Word	G	R	E	E	T
	-1	-1	-1	-1	-1
Code	F	Q	D	D	S

CDDO itself is a code. To find out what it stands for, we have to add $+1$ to the alphabets to get back the original word.

Code	C	D	D	O
	$+1$	$+1$	$+1$	$+1$
Word	D	E	E	P

Example 35

If 'PAT' is coded as 'QRBCUV', then how will you code 'GRACE'?

- (a) HISTBCDEFG (b) HISTBCDEGF
(c) HISBTCDEFG (d) HISTBCEDFG

Solution

The pattern of coding is such that each letter has been allotted the value of 2 letters following the sequence, i.e., $A = BC$, $B = CD$, $C = DE$, etc. Hence, the word GRACE will be coded as 'HISTBCDEFG'. Therefore, option (a) is the answer.

Example 36

If 'EGHJKMKM' is the code for 'FILL', then how will you decode 'EGDFDFKM'?

- (a) LEEF (b) FEEL (c) DEAL (d) REEL

Solution

Refer to alphabet series in Table 5.1 starting from the L.H.S. pair, E is the antecedent of F and G is the precedent of F. We get EG as code for F; HJ as code for I; and so on.

Similarly, EGDFDFKM is the code for FEEL. F is coded as EG with its precedent and antecedent letters. Similarly, 'I' is coded as HJ and L as KM. Hence, EGDFDFKM stands for FEEL. Therefore, option (b) is the correct answer.

Coding with Numerical Digits

Here, the numerical values (not necessarily according to rank of letters in the alphabet series) can be assigned to letters. The values are allotted based on some specific pattern that has to be discerned by the candidate in order to solve the problem.

Example 37

If 'TRAIN' is coded as 23456, then how will you code 'RAIN'?

- (a) 3456 (b) 3546 (c) 2345 (d) 2456

Solution

Word	T	R	A	I	N
Code	2	3	4	5	6

These values have been assigned arbitrarily. The question can be solved on the basis of the relationship established. For RAIN, the code is 3456, so (a) is the answer.

Analogical Coding with Numerical Digits

Here, the letters are assigned numerical values on the basis of analogy of the example given in the question. There is no set of principles or patterns involved. The candidates are required to study the given examples before getting started with the exercise.

Example 38

If 'SELDOM' is coded as '1 2 4 3 6 5', then how will you code 'MODE'?

- (a) 3 6 2 1 (b) 6 2 3 1
 (c) 5 6 3 2 (d) 6 2 1 3

Solution

Word	S	E	L	D	O	M
	↓	↓	↓	↓	↓	↓
Code	1	2	4	3	6	5

On the basis of the analogical relationship established between the letters and the numbers, we can code 'MODE' as 5632.

Answer: (c)

Coding with Specific Pattern

This is the pattern of coding that exhibits the natural correlation of Arabic numbers with alphabetical letters. For instance, alphabets A to Z are assigned the numeric codes from 1 to 26, where each letter gets the assignment in the pattern as follows A = 1, B = 2, C = 3, etc.

The sequence is classified as follows:

- 1. Forward sequence:** For example, A = 1, B = 2, ...
 Y = 25, Z = 26

Example 39

If 'PACE' is code as 16-1-3-5, then how will you code 'RACE'?

- (a) 18-1-3-5 (b) 16-1-3-5
 (c) 16-3-5-1 (d) None of the above

Answer: (a)

- 2. Backward sequence:** For example, Z = 1, Y = 2, ...
 B = 25, A = 26

Example 40

If 'GREAT' is coded as 20-9-22-26-7, then how will you code 'GATE'?

- (a) 20-26-7-22 (b) 20-26-6-22
 (c) 26-20-7-22 (d) 26-20-22-7

Answer: (a)

- 3. Random sequence:** The pattern can be established in alternative ways, but in every case, a set pattern is involved, which has to be discovered by careful examination of the example given in the question.

Example: If A = 3, B = 4, Z = 28; If A = 5, B = 7, C = 9 and so on.

Example 41

If 'FRANCE' is coded as 10-22-5-18-7-9, then how will you code 'INDIA'?

Based on the above pattern, the answers will be as follows:

- (a) 13-18-8-13-5
 (b) 13-17-6-12-4
 (c) 12-17-7-12-5
 (d) None of the above

Solution

The pattern of assignment is read as given in the following table.

A	B	C	D	E	F	G	H	I	J
5	6	7	8	9	10	11	12	13	14
K	L	M	N	O	P	Q	R	S	T
15	16	17	18	19	20	21	22	23	24
U	V	W	X	Y	Z				
25	26	27	28	29	30				

Answer: (a)

Mixed Coding (Letters + Digits)

Mixed coding takes the pattern of coding with both the letters of the alphabet and numerical assignment. The candidates are required to study the analogy given in the question.

Example 42

If 'A3T15R' stands for 'ACTOR' and 'D1T5' stands for 'DATE', then how will you code 'ROTATE'?

- (a) R15T1T5 (b) R16T1T5
 (c) R15T1T6 (d) L15C1T7

Explanation

While coding for ACTOR, first, third and fifth letters have been put without any change. C and O are placed at 3rd and 15th position in alphabetical series

(Table 5.1). Hence, the code for ACTOR is A3T15R. Similar exercise for DATE. Thus, the code for ROTATE is R15T1T5. Thus, option (a) is the answer.

Example 43

If 'MISSION' is coded as '!??!φ\$' and 'LENS' is coded as '@#\$?', then how will you code 'LION'?

- (a) @!φ\$
 (b) @!\$#
 (c) ??##
 (d) None of the above

Explanation

$$\text{LION} = \text{L} + \text{ION}$$

Pick L from LENS and ION from MISSION. By careful observation, we can identify that the code for L is @ and the code for ION is !φ\$. Hence, option (a) is the answer.

Coded Statements

1. In a certain code language, 'do re me' means 'he is late'; 'fa me la' means 'she is early', and 'so ti do' means 'he leaves soon'. Which word in that language means 'late'?
- (a) la (b) do
 (c) me (d) re

Explanation

do re me – he is late (i)
 fa me la – she is early (ii)
 so ti do – he leaves soon (iii)

Comparing (i) and (ii), we can say that 'me' stands for 'is'.

Comparing (i) and (iii), we can say that 'do' stands for 'he'.

Substituting them in sentence (i), we can say that 're' stands for 'late'.

The following arrangement also helps in the solution.

Hence, the code for 'late' is 're'.

2. In a certain code, 'jo ka ra' means 'go for walk'; 'ma fo ka' means 'do not walk', and 'sa ta jo' means 'good for you'. What is the code for 'go'?
- (a) ra (b) ka
 (c) ta (d) jo

Explanation

Hence, the code for 'go' is 'ra'.

3. If rain is water, water is road, road is cloud, cloud is sky, sky is sea and sea is path, where do aeroplanes fly?
- (a) Road (b) Sea
 (c) Cloud (d) Water

Explanation

The aeroplanes fly in the 'sky' and the 'sky' is called 'sea'. Hence, the aeroplanes fly in the 'sea'.

Answer: (b)

4. In a certain code, '247' means 'spread red carpet'; '256' means 'dust one carpet', and '236' means 'one red carpet'. Which digit in that code means 'dust'?
- (a) 2 (b) 3 (c) 5 (d) 6

Answer: (c)

Explanation

In the first statement, the common code digit is '2'. In the second statement, the common word is 'carpet'. Thus, '2' means 'carpet'. In the second and third statements, the common code digit is '6' and the common word is 'one'. Thus, '6' means 'one'. Therefore, in the second statement, '5' means 'dust'.

5. In a certain code language, 'Siberia is a cold place' is written as 'a cold is place Siberia'. In the same code, 'Water freezes to ice here' is written as 'freezes here ice to water'. How 'covers ten per cent of earth' will be written?
- (a) Covers earth ten per cent of
 (b) Covers earth of per cent ten
 (c) Earth covers ten per cent of
 (d) None of the above

Answer: (b)

Explanation

The first alphabet of the words is to be picked and then written as they appear in the alphabetic series.

CLASSIFICATION

The questions based on classification are based on similarity or dissimilarity between a number of items or objects. Some objects are grouped together on the

basis of some common characteristics. The candidate has to identify that characteristic and separate out the object that does not belong to the group. This test is also known as 'Odd Man Out'.

Choosing the Odd Word

In these types of problems, some words belong to the real world. They have certain common features except the odd one.

Example 44

Choose the word that is least like the other words in a group?

- (a) Calendar (b) Date
(c) Day (d) Month

Answer: (a)

Explanation

All other words are parts of a calendar.

Example 45

Choose the word that is least like the other words in a group?

- (a) Peacock (b) Vulture
(c) Sparrow (d) Swan

Answer: (c)

Explanation

Swan is the only water bird in the group.

Choosing the Odd Pair of Words

In each of the following questions, five pairs of words are given, out of which the words in five pairs bear a certain common relationship. Choose the pair in which the words are differently related.

Example 46

Choose the pair in which the words are differently related?

- (a) Man : Crowd (b) Cow : Herd
(c) Sheep : Flock (d) Fish : Shoal

Answer: (a)

Explanation

In all other pairs, the second word is a collective group of the first.

Example 47

Choose the pair in which the words are differently related?

- (a) Joule : Energy (b) Ampere : Current
(c) Angle : Degree (d) Pascal : Pressure

Answer: (c)

Explanation

In all other pairs, first is a unit to measure the second.

Choosing the Odd Numeral

In each of the following questions, four numbers are given. Out of these, three are alike in a certain way except one.

Example 48

Choose the number that is different from others in the group?

- (a) 139 (b) 177 (c) 144 (d) 183

Answer: (c)

Explanation

Number 144 is the only perfect square number in the group.

Example 49

Choose the number that is different from others in the group?

- (a) 127 (b) 345 (c) 361 (d) 514

Answer: (b)

Explanation

All other numbers except 361 are two more than the cube of a certain number.

Choosing the Odd Numeral Pair or Group

Choose the odd numeral pair or group in each of the following questions.

Example 50

Choose the number pair or group that is different from others?

- (a) 15 : 46 (b) 12 : 37
(c) 9 : 28 (d) 8 : 33

Answer: (d)

Explanation

In all other pairs, second number = (first number \times 3) + 1.

Example 51

Choose the number pair or group that is different from others?

- (a) 3, 5 (b) 7, 2 (c) 6, 2 (d) 1, 7

Answer: (b)

Explanation

In all other pairs, the sum of two numbers is 8.

Choosing the Odd Letter Group

In each of the following questions, some groups of letters are given, where all of which, except one, share a common similarity.

Example 52

Choose or find the odd letter group.

- (a) BCD (b) NPR (c) KLM (d) RQP

Answer: (b)

Explanation

All other groups contain three consecutive letters of the alphabet series.

Example 53

Choose the group of letters that is different from others.

- (a) KLM (b) LJK (c) PQR (d) RST

Answer: (b)

Explanation

No other group contains a vowel.

ANALOGY

The meaning of analogy is correspondence. In the questions based on analogy, a particular relationship is given and another similar relationship has to be identified from the alternatives provided to us. Therefore, analogy tests are meant to test a candidate for the overall knowledge, power of reasoning and the ability to think concisely and accurately. Questions on analogy test the ability of a candidate to understand the relationship between two given objects and apply the same relationship to find what was asked in the question. Some common relationships are given below, which will help you detect most analogies better.

Different types of analogy are given below.

Direct/Simple Analogy

In these types of questions, the first two words have a definite relationship. According to the relationship, we have to choose one word out of the given four alternatives that have the same relationship with the third word as between the first two.

Example 54

Apparel is related to cloth in the same way as footwear is related to

- (a) Laces (b) Cobbler
(c) Leather (d) Shoes

Answer: (c)

Explanation

The first is made by the other.

Example 55

As delicious is related to taste, melodious is related to

- (a) Voice (b) Speak
(c) Music (d) Highness

Answer: (a)

Explanation

Delicious represents good taste. Similarly, melody describes pleasant voice.

Completion of Analogous Pair

Example 56

Giant : Dwarf : : Genius : ?

- (a) Wicked (b) Gentle
(c) Idiot (d) Cunning

Answer: (c)

Explanation

As dwarf is the antonym of giant, idiot is the antonym of genius.

Example 57

Fruit : Banana : : Mammal : ?

- (a) Cow (b) Snake
(c) Fish (d) Sparrow

Answer: (a)

Explanation

As banana is a type of fruit, cow is a type of mammal.

Selecting the Right Analogous Pair

In these types of questions, a pair of word is given that is followed by four pairs of words as alternatives. The candidate is required to choose the pair in which the words bear the same relationship to each other as in the case of the words of the given pair.

Example 58

Lamp : Darkness

- (a) Fatigue : Exercise
(b) Water : Thirst
(c) Medicine : Illness
(d) Study : Classroom

Answer: (b)

Explanation

Just as a lamp eliminates darkness, water quenches thirst.

Example 59

Weight : Kilograms

- (a) Axe : Grind (b) Ammeter : Current
 (c) Power : Ampere (d) Energy : Joule

Answer: (d)

Explanation

As weight can be measured in kilogram, joule is the unit of measuring energy.

Choosing a Similar Word

In this type of questions, a group of three or four words is given, followed by four other words as alternatives. The candidate is required to choose the alternative, which is similar to the given words.

Example 60

Iron : Copper : Zinc

- (a) Ceramic (b) Carbon
 (c) Nickel (d) Mercury

Solution

All are solid metals.

Answer: (c)

Example 61

Potato : Carrot : Radish

- (a) Tomato (b) Spinach
 (c) Sesame (d) Groundnut

Solution

All of these crops/vegetables grow underground.

Answer: (d)

Alphabet Analogy

In this type of questions, two groups of letters are related to each other in some way as given. The candidate is required to find out this relationship and then choose either a letter-group that is related in the same way to a third group provided in the questions or a pair consisting of similarly related letter-groups.

Example 62

BEGK is related to ADFJ in the same way as PSVM is related to

- (a) LOQT (b) ROUX
 (c) OTUZ (d) ORUL

Solution

Clearly, each letter of the first group in a pair is moved one step backward to obtain the corresponding letter of the second group.

B	E	G	K
-1	-1	-1	-1
A	D	F	J

Similarly,

P	S	V	M
-1	-1	-1	-1
Q	R	U	L

Answer: (d).

Example 63

ABCD : LNPR :: FGHI : ?

Solution

Clearly, the first, second, third and fourth letters of the first group are moved 11, 12, 13 and 14 steps forward, respectively, to obtain the corresponding letters of the second group.

A	B	C	D
+11	+12	+13	+14
L	N	P	R

Similarly,

F	G	H	I
+11	+12	+13	+14
Q	S	U	W

Number Based

Under this category, the following types of questions can be asked.

1. Choosing a number related to a given number in the same manner as the two numbers of another given pair are related to each other.
2. Choosing a similarly related pair as the given number pair on the basis of relationship between the numbers in each pair.
3. Choosing a number similar to a group of numbers on the basis of certain common properties that they possess.
4. Choosing a number set similar to a given number set.

Example 64

9 : 14 :: 26 : ?

- (a) 2 (b) 13 (c) 15 (d) 31

Solution

The relationship is $x : (x + 5)$.

Answer: (d)

Example 65

8 : 28 :: 27 : ?

(a) 55 (b) 63 (c) 64 (d) 85

SolutionThe relationship is $x : (3x + 4)$.**Answer:** (d)**Example 66**

42 : 56 :: 72 : ?

(a) 81 (b) 90 (c) 96 (d) 100

Solution

The ratio between 42 and 56 is 3 : 4. Similarly, 72 : 96 depicts the ratio 3 : 4.

Answer: (c)**BLOOD RELATIONS**

The questions that are asked in this section depend upon relation. The candidate should have a sound knowledge of the blood relations in order to solve the questions.

To remember easily, the relations may be divided onto two sides as given below in Table 5.4.

Table 5.4 Blood Relations of Paternal and Maternal Sides

Relations of paternal side	
Father's father	Grandfather
Father's mother	Grandmother
Father's brother	Uncle
Grandfather's Son	Father or Uncle
Grandfather's only son	Father
Father's sister	Aunt
Children of uncle	Cousin
Wife of uncle	Aunt
Children of aunt	Cousin
Husband of aunt	Uncle
Sister's husband	Brother-in-law
Wife's brother	Brother-in-law
Brother's son	Nephew
Brother's wife	Sister-in-law
Brother's daughter	Niece
Grandson's or granddaughter's daughter	Great granddaughter
Mother's or father's son/daughter	Brother/sister
Son's wife	Daughter-in-law

Relations of maternal side

Mother's father	Maternal grandfather
Mother's mother	Maternal grandmother
Mother's brother	Maternal uncle
Mother's sister	Aunt
Children of maternal uncle	Cousin
Wife of maternal uncle	Maternal aunt

Others

Children of same parents	Siblings
Common term for husband and wife	Spouse

Developing a Family Relationship Tree

To develop a blood relation tree, some standard symbols may be used to tell about the relationships among the family members.

Suppose M is male and N is female. Some authors use the sign of + and – for indicating male and female. Cousin is a common gender; it means that this relationship can be used for both male and female.

Condition	Sign
When M is male.	+M
When N is female.	–N
M and N are married to each other.	M = N
P and Q are siblings.	P \longleftrightarrow Q
A is the child of B.	$\begin{array}{c} A \\ \downarrow \\ B \end{array}$
When A has two children B and C.	$\begin{array}{c} A \\ \swarrow \quad \searrow \\ B \quad \quad C \end{array}$

Approach to Draw the Family Relations Diagram

To draw a family tree,

1. First of all identify the males and the females, then according to generation, try to put each member at the appropriate position in the tree.
2. Draw the diagram with relationships among family members using notations.
3. Once the diagram is filled, the candidate can answer the given questions.

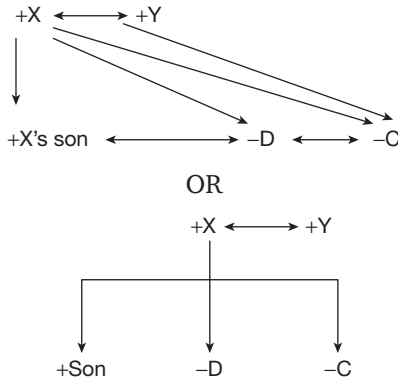

Example 67

X and Y are brothers. C and D are sisters. X's son is D's brother. How is Y related to C?

- (a) Uncle
- (b) Grandfather
- (c) Father
- (d) None of the above

Explanation

Y is the brother of X and X's son is D's brother. This implies that D is the daughter of X. As C and D are sisters, C is also the daughter of X. Hence, Y is the uncle of C.

As per the statement and family tree, X's son, D, and C are siblings. Y is the uncle of C.

Example 68

'A' is the father of 'C', and 'D' is the son of 'B'. 'E' is the brother of 'A'. If 'C' is the sister of 'D', then how is 'B' related to 'E'?

[NET June 2007]

- (a) Daughter
- (b) Husband
- (c) Sister-in-law
- (d) Brother-in-law

Answer: (c)

Explanation

Thus, B is the sister-in-law of E.

Example 69

E is the son of A; D is the son of B, E is married to C, C is the daughter of B. How is D related to E?

[NET June 2010]

- (a) Brother
- (b) Uncle
- (c) Father-in-law
- (d) Brother-in-law

Answer: (d)

Explanation

Family tree:

Hence, D is the brother-in-law of E.

Example 70

If B is the only child of C's grandfather's only daughter, then how is C's father related to B?

- (a) Maternal uncle
- (b) Father
- (c) Paternal uncle
- (d) Cannot be determined

Answer: (a)

Explanation

As B is the only child, C cannot be the sister of B. On the other hand, B's mother is the only daughter of her parents, so she can have a brother. Hence, C's father is the maternal uncle of B.

DIRECTION SENSE

There are four main directions: East, West, North and South as shown below.

There are four cardinal directions, such as north-east (NE), north-west (NW), south-east (SE) and south-west (SW) as shown below.

Few Important Points

1. At the time of sunrise, if a man stands facing the east, then his shadow will be towards west.
2. At the time of sunset, the shadow of an object is always in the east.
3. If a man stands facing north, at the time of sunrise his shadow will be towards his left, and at the time of sunset, then it will be towards his right.
4. At 12 p.m., the rays of the sun are vertically downward. Hence, there will be no shadow.

Example 71

Prakash walked 30 m towards west, took a left turn, and walked 20 m. He again took a left turn and walked 30 m. Then, he took right turn and stopped. He is now facing

- (a) South (b) North (c) East (d) West

Answer: (a)

Example 72

If south-east direction becomes north, north-east direction becomes west, and so on, then what will west become?

- (a) North-west (b) North-east
(c) South-east (d) South-west

Answer: (c)

Example 73

Atul walks 20 m towards south turning to the left, he walks 30 m. Then, turning right, he walks 10 m and then, turning right, he walks 40 m. Then, turning right, he walks 30 m and stopped. In which direction is he standing with respect to his starting point?

- (a) East (b) West (c) North (d) South

Explanation

Answer: (c)

SEATING ARRANGEMENT

Example 74

Among six members P, Q, R, G, S and M sitting along a circle facing the centre.

I R is between G and P.

II M is between P and S.

What is the position of Q?

- (a) To the immediate left of G.
(b) To the immediate right of S.
(c) Cannot be determined.
(d) None of the above

Explanation

Here, Q is between G and S, this is 100%; whether right or left, it requires more information. Therefore, the position of Q cannot be determined with the available information. Hence, (c) is the right option.

Answer: (c)

Example 75

Among M, N, T, R and D, each has a different height. T is taller than D, but shorter than M. R is taller than N but shorter than D. Who among them is the tallest?

- (a) R (b) M
(c) D (d) None of the above

Solution

$$M > T > D > R > N$$

Hence, M is the tallest.

Answer: (b)

Example 76

A, B, C, D, E and F are sitting in a row facing north. A is the neighbour of B and D. E is the neighbour of C and F, and D is the neighbour of C. How many members are there between A and E?

- (a) Two (b) One
(c) Three (d) Four

Answer: (a)

Explanation

The sitting arrangement is **B A D C E F**. Between A and E, there are two members D and C.

MATHEMATICAL APTITUDE

Fractions

Basically, a fraction describes how a part of a group relates to the whole group. Fractions represent complete groups that have been fractured or broken apart in some way. Fractions help us understand how those pieces fit into the original group.

When we look at a fraction, we look at the number that represents the pieces (the fractured section) on the top of the division line. Such number on the top is called as the numerator. The number on the bottom of line represents how many total parts are in the group and this number is called as the denominator. To easily tell these two parts of the fraction apart, just remember that denominator and down both start with the letter d.

$$\text{Fraction} = \text{Part/Whole} = \text{Numerator/Denominator}$$

If there are 5 apples in a cartoon of 12 apples, then the fraction of apples for the whole would be represented as $= \frac{5}{12}$.

There can be various types of fractions:

- Common fraction:** A common fraction is a number written with a numerator and a denominator, in which both are natural numbers. For example, $\frac{5}{12}$, $\frac{17}{12}$, etc.
- Proper fraction:** A proper fraction that is less than 1 is known as proper fraction, such as $\frac{1}{2}$, $\frac{3}{4}$. A proper fraction has the same name as that ratio.
- Mixed number fraction:** It is basically a whole number plus a proper fraction. For example.

$$2\frac{1}{3} = 2 + \frac{1}{3}$$

- Improper fractions:** If we divide each whole unit into thirds, say, and keep counting them, then we will come to $\frac{3}{3}$, $\frac{4}{3}$, $\frac{5}{3}$ and so on. That is, we will come to fractions that are equal to or greater than 1. We call those improper fractions.

How to convert an improper fraction to a mixed number or a whole number?

For example: $\frac{9}{2} = 4\frac{1}{2}$

Divide the numerator by the denominator. Write the quotient (4) and write the remainder (1) as the numerator of the fraction, do not change the denominator.

Fractions can be added, subtracted, multiplied or divided also.

A fraction in which there is no common factor, except 1, in its numerator and denominator is called a fraction in the simplest or lowest form.

Fractions with same denominators are called like fractions and if the denominators are different, then they are called unlike fractions.

- Fractions can be compared by converting them into like fractions and then arranging them in ascending or descending order.
- Addition (or subtraction) of like fractions is mostly done by adding (or subtracting) their numerators. Addition (or subtraction) of unlike fractions can be done by converting them into like fractions.
- Fractions with denominators 10,100, etc., can be written in a form, using a decimal point called decimal numbers or decimals.
- Place value of the place immediately after the decimal point (i.e., tenth place) is $\frac{1}{10}$, that of next place (i.e., hundredths place) is $\frac{1}{100}$ and so on.
- Fractions can be converted into decimals by writing them in the form with denominators 10,100 and so on. Similarly, decimals can be converted into fractions by removing their decimal points and writing 10,100, etc., in the denominators depending upon the number of decimal places in the decimals.
- Decimal numbers can be compared by using the idea of place value, then they can be arranged in ascending or descending order.
- Decimals can be added (or subtracted) by writing them with equal number of decimal places.
- Many of our daily life problems can be solved by converting different units of measurements, such as money, length, weight, etc., in the decimal form and then adding (or subtracting) them.

1. In a class, $\frac{3}{4}$ th of the students do not know either English or Hindi. But $\frac{1}{6}$ th of the students know English. How many students know both English and Hindi if students who know Hindi are $\frac{1}{8}$ th of total students in the class?
- (a) $\frac{1}{24}$ (b) $\frac{100}{24}$ (c) $\frac{10}{12}$ (d) $\frac{1}{4}$

Explanation

$\frac{3}{4}$ th do not know English or Hindi

So $\frac{1}{4}$ th know English or Hindi or both

$\frac{1}{6}$ th know English and $\frac{1}{8}$ th know Hindi

Now, $\frac{1}{4} - \frac{1}{6} - \frac{1}{8} = \frac{1}{24}$

Answer: $\frac{1}{24}$

2. $\frac{3}{5}$ of a group of children were girls. If there were 24 girls, then how many children were there in the group?
- (a) 32 (b) 36 (c) 40 (d) 42

Solution

$$3 \text{ units} = 24$$

$$1 \text{ unit} = 24 \div 3 = 8$$

$$5 \text{ units} = 5 \times 8 = 40$$

There were 40 children in the group.

3. Sham had 120 teddy bears in his retail store. He sold $\frac{2}{3}$ of them at ₹12 each. How much did he receive?
- (a) 80 (b) 85 (c) 90 (d) 92

Solution

Step 1: Find the number of teddy bears sold.

$$\frac{2}{3} \times 120 = \frac{2 \times 120}{3} = 80$$

He sold 80 teddy bears.

Step 2: Find how much money he received.

$$80 \times 12 = 960$$

He received ₹960.

4. A fraction is divided by reciprocal of itself. It is then multiplied by the original fraction. What is the fraction if the answer obtained is $11\frac{25}{64}$?
- (a) $\frac{9}{4}$ (b) $\frac{27}{8}$
 (c) $\frac{9}{8}$ (d) $\frac{2}{3}$

Explanation

Let the fraction be A .

As per given condition,

$$\frac{A}{\frac{1}{A}} \times A = 11\frac{25}{64}$$

$$A^3 = \frac{729}{64}$$

$$A = \frac{9}{4}$$

Answer: $\frac{9}{4}$

5. Which of the following is in descending order?

- (a) $\frac{5}{8}; \frac{9}{13}; \frac{11}{17}$ (b) $\frac{5}{8}; \frac{11}{17}; \frac{9}{13}$
 (c) $\frac{9}{13}; \frac{11}{17}; \frac{5}{8}$ (d) $\frac{11}{17}; \frac{9}{13}; \frac{5}{8}$

Explanation

In such fractions, you can either divide directly or you can use the following way.

Tip:

In two fractions, $\frac{a}{b}$ and $\frac{c}{d}$.

If $ad > cb$, then $\frac{a}{b} > \frac{c}{d}$; $ad < cb$, then $\frac{a}{b} < \frac{c}{d}$ and

$ad = cb$, then $\frac{a}{b} = \frac{c}{d}$

First let's compare $\frac{5}{8}$ with $\frac{9}{13}$ and $\frac{5}{8}$ with $\frac{11}{17}$

$$\begin{aligned} ad &= 5 \times 13 = 65 \\ bc &= 8 \times 9 = 72 \\ 65 &< 72 \end{aligned}$$

$$\therefore \frac{5}{8} < \frac{9}{13}$$

$$\therefore \text{Smallest is } \frac{5}{8}$$

Now let's compare $\frac{9}{13}$ with $\frac{11}{17}$

$$\begin{aligned} ad &= 9 \times 17 = 153 \\ bc &= 13 \times 11 = 143 \\ 153 &> 143 \end{aligned}$$

$$\therefore \frac{9}{13} \text{ is largest}$$

So, the descending order is $\frac{9}{13} > \frac{11}{17} > \frac{5}{8}$.

$$\text{Answer: } \frac{9}{13}, \frac{11}{17}, \frac{5}{8}$$

6. Eiffel tower's $\frac{1}{5}$ th part is painted bronze. $\frac{1}{4}$ th of the remaining part is painted maroon. Rest of the Eiffel tower has golden color. If the height of this golden colored part is 450m, then what is Eiffel towers' height?
- (a) 2250 m (b) 1250 m
(c) 1000 m (d) 750 m

Explanation

Let the Eiffel tower be of 100 m.

$$\frac{1}{5} \text{ th of } 100 = 20 \text{ m is bronze}$$

$$\frac{1}{4} \text{ th of the remaining} = \frac{1}{4} \text{ th of } (100 - 20) = 20 \text{ m is maroon.}$$

$$\text{Rest} = 100 - 20 - 20 = 60 \text{ m is golden}$$

$$\therefore ? = 750\text{m} = \text{Height of Eiffel tower}$$

Answer: 750 m

Time and Distance

If speed, time and distance are denoted by S , T , and D , respectively, then $S = D/T$; $D = S \times T$ and $T = D/S$.

To convert from km/h to metre/second (m/s), multiply by $5/18$.

To convert m/s to km/h, multiply by $18/5$.

If the ratio of the speeds of A and B be $a : b$, then the ratio of the time taken by them to cover the same distance is $1/a : 1/b$ or $b : a$.

Suppose a man covers a certain distance at x kmph and an equal distance at y kmph. Then, the average speed during the whole journey = $2xy/(x + y)$ kmph (also covered under the section arithmetic mean).

Example 77

A man covers 60 km in 4 hours. Find the speed.

Solution

$$\text{Speed} = \text{Distance/Time} = 60/4 = 15 \text{ kmph}$$

Note: Depending upon the answer choices, the kmph can also be converted into m/s by multiplying by $5/18$.

$$\text{Speed (in m/s)} = 15 \times 5/18 = 4 \frac{3}{18} \text{ m/s}$$

Example 78

A man covers 20 km in $2\frac{1}{2}$ hours. Find the distance covered in 9 hours.

Solution

$$\text{Speed} = D/T = 20 \text{ km}/2\frac{1}{2} \text{ hours} = 8 \text{ kmph}$$

$$\text{Distance covered in 9 hours} = S \times T = 8 \times 9 = 72 \text{ km}$$

Example 79

A car completes a journey in 4 hours, the first half at a speed of 40 kmph and second at 60 kmph. Find the total distance covered.

Solution

As the total journey is divided into equal parts, the average speed can be calculated by the formula $2xy/(x + y) = 2 \times 40 \times 60/(40 + 60) = 48$ kmph.

$$\text{Distance} = S \times T = 48 \times 4 = 192 \text{ km.}$$

Example 80

A student walks from his house at a speed of 3 kmph and reaches the school 10 minutes late. If he walks at a speed of 4 kmph, then he reaches the school 10 minutes earlier. What is the distance between his school and his house?

Solution

Let the distance = x km

Difference between timings of reaching the school at different speeds = $10 + 10 = 20$ minutes or $20/60$ or $1/3$ hours.

$$\text{Now the difference between timings} = x/3 - x/4 = 1/3$$

$$= \frac{4x - 3x}{12}$$

$$x = 4 \text{ km}$$

Ratio, Proportion, and Percentage

Ratios can also be expressed as fractions. They represent the basic relationship between two quantities. Proportions are in comparison to the whole.

In a mixture of 20 l of milk and 30 l of water, the ratio of milk and water is 2 : 3. This can be converted to fraction of milk in the solution as 2 : 5 or $\frac{2}{5}$ th.

As seen, $\frac{2}{5}$ is nothing but $\frac{2}{5} \times 100 = 40\%$.

Example 81

What percentage of 180.50 is 36.1?

- (a) 20 (b) 25
(c) 20.50 (d) None of the above

Solution

Lets $x\%$ of 180.5 = 36.1

$$x\% = 36.1/180.5$$

$$x = 36.1/180.5 \times 100 = 20\%$$

Concept of Base in Percentage Calculations

If it is said that India won 50% of the matches it played, then neither does it means that India won 50 matches nor does it means that India won 0.5 matches. It means that India played 100 matches, it won 50 matches.

Now assume that India won 40% of matches that it played in 2015. We have to calculate how many matches it actually won, and for that, we ought to know the total matches played, say, for example, 25 matches. Thus, if India had played a total of 25 matches, then it would have won 40% of $25 = \frac{40}{100} \times 25 = 10$ matches.

Basic Examples

A candidate needs to be familiar with following basics of percentage.

Examples	
Express 12% as a fraction	$x\% = \frac{x}{100} = \frac{12}{100} = \frac{3}{25}$
Express $\frac{3}{8}$ as percentage	Multiply the fraction by 100 to convert it to percentage. $= \frac{3}{8} \times 100 = 37.5\%$
A's income is 60% of B's income. If B's income is ₹ 15,000, then what is A's income?	$A = \frac{x}{100} \times B$ $= \frac{60}{100} \times 15,000 = ₹9000$

(Continued)

Examples

X's income is 25% more than Y's. By how much % is Y's income less than X's income? As comparison is with X's income, it will be taken as a base.
Difference = $\frac{r}{100+r} \times 100$ (Here r is the percentage difference)
 $= \frac{25}{125} \times 100 = 20\%$

X's income is 20% less than Y's. By how much % is Y's income more than X's income? Again as compared with X's income, it should be taken as base. Difference = $\frac{r}{100+r} \times 100$
 $= \frac{20}{80} \times 100 = 25\%$

The price of petrol increases by 50%. By how much %, its consumption should be reduced so as to keep the expenditure same? Expenditure = Price \times Consumption
Decrease = $\frac{r}{100+r} \times 100 =$
 $\left(\frac{50}{150}\right) \times 100 = 33.33\%$

Calculation of Change in Quantities in Percentage

Terms-Direct Formula

Suppose a quantity (such as price or salary) increases or decreases first by $x\%$, and then by $y\%$, what is the net increase or decrease in the price?

Net increase = $x + y + xy/100$. This formula is used where 'two' quantities are to be multiplied as per formula or requirement of the question and one or both of these quantities may increase or decrease.

Example 82

The price of a commodity increases first by 20% and then by 10%. What is the net increase in the price?

Solution

Let original price = 100

Price after 1st increase = $100 + 20 = 120$

Price after 2nd increase = $120 + (10\% \text{ of } 120) = 132$.

Net increase = $132 - 100 = 32\%$

Direct formula = $20 + 10 + (20 \times 10)/100 = 32\%$

Example 83

A retailer offers two successive discounts of 20% and 30%. What is the net decrease in the price?

Solution

Let original price = 100

Price after 1st discount = $100 - 20 = 80$

Price after 2nd discount = $80 - (30\% \text{ of } 80) = 56$

Net discount = Original price - Discount = $100 - 56 = 44$

Direct formula = $(-20) + (-30) + (-20) \times (-30)/100 = -50 + 6 = -44\%$. Negative sign shows the decrease.

Example 84

The price of a commodity is first increased by 40% and then reduced by 20%. What is the net increase or decrease in the price?

Solution

Let the original price = 100
 Price after increase = $100 + 40 = 140$
 Price after decrease = $140 - (20\% \text{ of } 140) = 112$
 Net increase in price = $112 - 100 = 12\%$
Direct formula = $40 - 20 + (40 \times -20)/100 = 12\%$

Example 85

A's income is 70% of B's. B's income is 50% of C's. If C's income is ₹1,00,000, then what is A's income?

Solution

$$\text{B's income} = \left(\frac{50}{100}\right) \times 1,00,000 = ₹50,000$$

$$\text{A's income} = \left(\frac{70}{100}\right) \times 50,000 = ₹35,000$$

Alternative method

A's income = 70% of 50% of 1,00,000 = ₹35,000

Example 86

In an exam, a student scored 50% of the maximum marks and yet failed by 15 marks. If he had scored 10% more than what he scored, then he would have just managed to get the pass percentage. What are the maximum marks of the paper?

Solution

Let maximum passing marks = 100
 Actual marks obtained = 50
 Had he scored 50 + 10% of 50, i.e., 55 marks, then he would have scored passing marks. In this situation, the difference between actual and passing marks is 5.
 Actual difference = 15
 5% of maximum marks = 15
 Maximum marks = $15 \times 100/5 = 300$

Example 87

In a basket of fruits, 60% are mangoes and remaining are apples. In that, 25% of the apples are green and the rest are red. Of the mangoes, 80% are red and the rest of the mangoes are green. What percentage of the green fruits are mangoes?

Solution

Let us assume that total number of fruits is 100, 60 are mangoes and 40 are apples.

Green apples = 25% of 40 = 10

Green mangoes = 20% of 60 = 12

Total number of green fruits = 10 + 12 = 22

Thus, required percentage = $12/22 \times 100 = 54.5\%$

Example 88

If the milk to water ratio in a mixture is 2 : 3, then what is the percentage of milk in the mixture?

Solution

There are 5 parts in total, i.e., 2 parts of milk and 3 parts of water.

Percentage of milk in the mixture
 = $2/5 \times 100 = 40\%$

Example 89

If two-third of residents in a housing society own cars, and furthermore, one-half of car owners own a Swift car, then what percentage of residents own Swift cars?

Solution

The fraction of residents owning a Swift car = $1/2$ of $2/3 = 1/2 \times 2/3 = 1/3$

Converting it into percentage $1/3 \times 100 = 33.33\%$

Example 90

Neeru's expenditure and savings are in the ratio 3 : 2. Her income increases by 10%. Her expenditure increases by 12%. By what percentage does her savings increase?

Solution

Let Neeru's income = 100

Expenditure = $3/(2+3) \times 100 = 60$

Saving = $100 - 60 = 40$

New income after 10% increase = 110

New expenditure after 12% increase = $60 + 12\% \text{ of } 60 = 67.2\%$

New savings = $110 - 67.2 = 42.8$

Percentage increase in savings

= $(42.8 - 40)/40 \times 100 = 2.8/40 \times 100 = 7\%$

Per cent of a per cent = 20% of 30% will be nothing but

$$\frac{20}{100} \times \frac{30}{100} = 6/100$$

6/100 is equal to 6%.

Example 91

What is 20% of 30% of 40%?

Solution

The value is = $\left(\frac{20}{100}\right) \times \left(\frac{30}{100}\right) \times 40\% = 2.4\%$

PROFIT AND LOSS ACCOUNT

Whenever an article is sold or purchased, there are some commercial terms involved. Sometimes there is a profit, sometimes a loss and in other cases neither of the two. This difference is calculated and then converted to percentage to make comparison easier.

Let's have a look at the different formulas:

Cost Price (C.P.): The price at which an article is purchased by the seller.

Selling Price (S.P.): The price at which an article is sold.

Profit or Gain (P): If the difference between S.P. and C.P. is positive, then the amount is called profit or gain.

Loss: If the difference between C.P. and S.P. is positive, then the amount is called loss.

1. Profit percentage: (Profit %)

$$\text{Profit\%} = \left[\frac{\text{Profit} \times 100}{\text{C.P.}} \right]$$

2. Loss percentage: (Loss %)

$$\text{Loss\%} = \left[\frac{\text{Loss} \times 100}{\text{C.P.}} \right]$$

3. Selling price: (S.P.)

$$\text{S.P.} = \left[\frac{(100 + \text{Profit\%})}{100} \times \text{C.P.} \right]$$

4. Selling price: (S.P.)

$$\text{S.P.} = \left[\frac{(100 - \text{Loss\%})}{100} \times \text{C.P.} \right]$$

5. Cost price (C.P.)

$$\text{C.P.} = \left[\frac{100}{(100 + \text{Profit\%})} \times \text{S.P.} \right]$$

6. Cost price (C.P.)

$$\text{C.P.} = \left[\frac{100}{(100 - \text{Loss\%})} \times \text{S.P.} \right]$$

Example 92

An umbrella was sold at a profit of 20%. What is the selling price of the umbrella if the shopkeeper procured it at a cost of ₹180?

- (a) 210 (b) 216 (c) 230 (d) 236

Solution

Substituting values in the formula above, we get:

$$\text{Selling price} = [(100 + 20)/100] \times 180$$

$$\text{Selling price} = 12 \times 18$$

$$\text{Selling price} = 216$$

Therefore, the selling price of this umbrella is ₹216.

Example 93

An article is sold for ₹2400 at a profit of 25%. What would have been the actual profit or loss if it had been sold at ₹1800?

Solution

Initially, let us find the cost price of the same. C.P. = $2400 \times 100/125 = 1920$.

$$\text{New selling price} = ₹1800 \Rightarrow \text{Loss} = 1920 - 1800 = 120$$

$$\therefore \text{Loss percentage} = 100 \times 120/1920 = 6.25\%$$

Example 94

Ram buys some paper wind fans at 4 per rupee. He then buys the same number of paper wind fans from another shop at 5 per rupee. He puts them all together and sells them at 4 per rupee. Will he make a profit or incur a loss? How much?

$$(a) \text{ Profit} = 115/9\% \quad (b) \text{ Loss} = 115/9\%$$

$$(c) \text{ Profit} = 100/9\% \quad (d) \text{ Loss} = 100/9\%$$

Solution:

1 wind fan C.P. in 1st shop = ₹ $\frac{1}{4}$ and 1 wind fan C.P. in 2nd shop = ₹ $\frac{1}{5}$

On mixing these 2 wind fans, the cost price of these 2 will be = $\frac{1}{4} + \frac{1}{5} = ₹ \frac{9}{20}$

$$\text{So, C.P. of 1 wind fan} = \frac{9/20}{2} = ₹ \frac{9}{40}$$

Actual price at which 1 wind fan is sold after combining = ₹ $\frac{1}{4}$

$$\text{S.P.} - \text{C.P.} = \frac{1}{4} - \frac{9}{40} = \frac{1}{40} = \text{It is positive; so it is profit}$$

Example 95

Romit sold his old TV and earned a profit of 10%. If he could have managed to sell it for ₹8100 more, then his profit would have been 37%. Find the price at which he bought the TV?

$$(a) ₹30000 \quad (b) ₹41000$$

$$(c) ₹44500 \quad (d) ₹55000$$

Solution:

1st profit = 10%

If Romit sells TV for ₹8100 more, then profit = 37%

$$\text{S.P.} = (100 + \text{Profit\%})\% \text{ of C.P.}$$

$$\therefore \text{SP1} + 8100 = \text{SP2}$$

$$\therefore (110)\% \text{ C.P.} + 8100 = (137)\% \text{ C.P.}$$

$$\therefore 27\% \text{ of C.P.} = 8100$$

$$\therefore \text{C.P.} = \frac{8100 \times 100}{27} = ₹30000$$

Answer: (a)

Example 96

A man bought a horse for a certain sum and sold it, at a loss of 8% on his outlay. If he had received ₹1800 more, then he would have gained $14\frac{1}{2}$ % on his outlay. What did the horse cost?

- (a) ₹3500 (b) ₹5000
 (c) ₹6000 (d) ₹8000
 (e) ₹6500

Solution

C.P. = (Difference in S.P.) ÷ (% Difference in profit)
 C.P. of the horse = $1800 \times 100 / 14.5 - (-8) = 1800 \times 100 / 22.5 \Rightarrow$ C.P. = 8000.

Answer: (d)

Example 97

A man purchases two pens for ₹740. He sells one at 12% profit and the other at a 8% loss. Then he neither gains nor loses. Find the cost price of each pen (in ₹).

- (a) 324, 416 (b) 296, 444
 (c) 288, 452 (d) 365, 375
 (e) 272, 468

Solution

C.P. of 2 pens = 740. Let C.P. of 1st pen be x and C.P. of 2nd pen be y .

Since there is no profit and loss in the whole transaction, so 12% of $x = 8\%$ of y
 $\Rightarrow x : y = 2 : 3$

Hence the cost of first pen = $(2/3) \times 740 = ₹296$ and that of the second pen = $(3/5) \times 740 = ₹444$.

Answer: (b)

Example 98

A merchant buys 30 kg of rice at ₹40/kg and another 20 kg of rice at ₹30/kg. He mixes them and sells half of the mixture at ₹36/kg. At what price should he sell the remaining mixture to get an overall profit of 30%?

Solution

Total cost for the entire quantity of rice = $(30 \times 40) + (20 \times 30) = ₹1800$.

If his profit is 30%, then the sales realization = $1.3 \times 1800 = ₹2340$.

He sells 25 kg at ₹36/kg = ₹900. Therefore, to make the said amount of profit, he should sell the remaining 25 kg of rice at $₹2340 - ₹900 = ₹1440$.

\therefore The selling price of a kg of rice for the remaining 25 kg = $1440 / 25 = ₹57.6$.

Example 99

A dealer paid a car manufacturer ₹1,35,000 for a car. What should be the selling price of the car, if after

allowing a buyer 10 % discount on the selling price, he made a profit of 8% on his outlay?

- (a) ₹1,50,000 (b) ₹1,60,000
 (c) ₹1,62,000 (d) ₹1,52,500
 (e) ₹1,40,000

Solution

Profit and loss formula is given by,

Let S.P. of the car = x

Discount of 10%.

Profit = 8%.

$\therefore ((90/100)x - 135000 / 135000) \times 100 = 8$

$\Rightarrow (90/100)x - 135000 = 8 \times 1350 \Rightarrow (90/100)x$

$\Rightarrow x = 162000$

Answer: (c)

Example 100

A man sells an article at a profit of 8 per cent. If the cost price were 10 per cent less and the selling price ₹18 less, then his profit would have been 15 per cent. Find the cost price of the article.

- (a) ₹430 (b) ₹450
 (c) ₹220 (d) ₹
 (e) ₹400

Solution

Let C.P. of the article = 100

\therefore Old S.P. = 108. New C.P. = 90. As the profit is 15%, so the new S.P. = $90 \times 115 / 100 = 103.5$. The difference in the two selling prices = $108 - 103.5 = ₹4.5$ If difference in S.P. is 4.5 then C.P. = 100. If difference in S.P. is 18, then C.P. = $(100 / 4.5) \times 18 = ₹400$.

Answer: (e)

INTEREST AND DISCOUNTING

Simple Interest

When we give some house for a rent, we get rent on it. Similarly, when we lend money to a borrower, the borrower is to pay an extra amount of money to the lender. This extra money is known as the interest. If the interest on a sum borrowed for a certain period is reckoned uniformly, then it is called simple interest or the flat rate.

Principal

The money borrowed or lent out for a certain period is called the principal or the sum. It is denoted by P.

Simple Interest Calculations

Interest is the extra money that the borrower pays for using the lender's money. Simple interest is denoted by S.I.

Simple interest (S.I.) = $P \times R \times T / 100$. Here, R and T are basically rate of interest and time.

$$\text{Principal amount as } P = 100 \times \text{S.I.} / (R \times T)$$

$$T = 100 \times \text{S.I.} / P \times R$$

$$R = 100 \times \text{S.I.} / P \times T$$

Compound Interest

Here, we are exploring some simple questions on compound interest as per NTA-NET Exam pattern. Compound interest is basically an amount paid not only on the principal amount but also on whatever interest has been paid already. In other words, interest amount is also added to the original principal amount and earns interest on total investment.

Interest accumulated over one period is applied to the principal before calculating the interest for the next period. Typical intervals are quarterly (4 times a year), monthly, daily and continuously.

Compound Interest Formula

The formula for compound interest is given below:

Compound interests = $A - P$, where A is the amount to be available at the end of $A = P \left(1 + \frac{R}{100} \right)^N$ period.

Example 101

How much time will it take for an amount of ₹900 to yield ₹81 as interest at 4.5% per annum of simple interest?

- (a) 2 years (b) 3 years
(c) 1 year (d) 4 years

Solution

$$P = ₹900$$

$$\text{S.I.} = ₹81$$

$$T = ?$$

$$R = 4.5\%$$

$$T = \frac{100 \times \text{S.I.}}{PR} = \frac{100 \times 81}{900 \times 4.5} = 2 \text{ years}$$

Example 102

Find S.I. on ₹6250 at 14% per annum for 146 days.

- (a) ₹350 (b) ₹450
(c) ₹550 (d) ₹650

Explanation

$P = ₹6250$, $R = 14\%$ and $T = (146/365)$ years = $2/5$ years.

$$\text{S.I.} = \left[\frac{6250 \times 14 \times \frac{2}{5}}{100} \right] = ₹350$$

Answer: (a)

Example 103

A certain sum of money amounts to ₹1008 in 2 years and to ₹1164 in $3\frac{1}{2}$ years. Find the sum and the rate of interest.

- (a) 800,14% (b) 800,13%
(c) 800,12% (d) 800,19%

Explanation

S.I. for $1\frac{1}{2}$ years = ₹(1164 - 1008) = ₹156.

$$\text{S.I. for 2 years} = ₹ \left(156 \times \frac{2}{3} \times 2 \right) = ₹208.$$

Therefore, principal = ₹(1008 - 208) = ₹800.

Now, $P = 800$, $T = 2$ and S.I. = 208.

Therefore, rate = $(100 \times \text{S.I.}) / (P \times T) = [(100 \times 208) / (800 \times 2)]\% = 13\%$

Answer: (b)

Example 104

The simple interest on a certain sum of money for $2\frac{1}{2}$ years at 12% per annum is ₹40 less than the simple interest on the same sum for $3\frac{1}{2}$ years at 10% per annum. Find the sum.

- (a) ₹600 (b) ₹666 (c) ₹780 (d) ₹800

Explanation

Let the sum be ₹ a .

Then we can write: $[\{x \times 10 \times 7\} / \{100 \times 2\}] - [\{x \times 12 \times 5\} / \{100 \times 2\}] = 40$. This can be written as: $7x/20 - 3x/10 = 40$.

Therefore, we have $x = ₹800$.

Answer: (d)

Example 105

A man took a loan from a bank at the rate of 12% p.a. simple interest. After three years, he had to pay ₹5400 interest only for the period. The principal amount borrowed by him was

- (a) ₹12,000 (b) ₹11,000
(c) ₹14,000 (d) ₹15,000

Explanation

Here, we have, the principal = ₹ $[\{100 \times 5400\} / \{12 \times 3\}] = ₹15000$.

Thus, the correct option is (D).

Answer: (d)

Example 106

The compound interest on ₹30,000 at 7% per annum is ₹4347. The period (in years) is

- (a) 2 (b) $2\frac{1}{2}$
(c) 3 (d) 4

Explanation

Amount = ₹ (30000 + 4347) = ₹ 34347

Let the time be n years.

$$\text{Then, } 30000 \left(1 + \frac{7}{100}\right)^n = 34347$$

$$\Rightarrow \left(\frac{107}{100}\right)^n = \frac{34347}{30000} = \frac{11449}{10000} = \left(\frac{107}{100}\right)^2$$

$\therefore n = 2$ years.

Example 107

Simple interest on a certain sum of money for 3 years at 8% per annum is half the compound interest on ₹ 4000 for 2 years at 10% per annum. The sum placed on simple interest is

- (a) ₹ 1550 (b) ₹ 1650
(c) ₹ 1750 (d) ₹ 2000

Explanation

$$\text{C.I.} = ₹ \left[4000 \times \left(1 + \frac{10}{100}\right)^2 - 4000 \right]$$

$$= ₹ \left[4000 \times \frac{11}{10} \times \frac{11}{10} - 4000 \right]$$

$$= ₹ 840.$$

$$\therefore \text{Sum} = ₹ \left(\frac{420 \times 100}{3 \times 8} \right) = ₹ 1750$$

Answer: (c)

Example 108

The compound interest on a certain sum for 2 years at 10% per annum is ₹ 525. The simple interest on the same sum for double the time at half the rate per cent per annum is

- (a) ₹ 400 (b) ₹ 500
(c) ₹ 600 (d) ₹ 800

Explanation

Let the sum be ₹ P .

$$\text{Then, } \left[P \left(1 + \frac{10}{100}\right)^2 - P \right] = 525$$

$$\Rightarrow P \left[\left(\frac{11}{10}\right)^2 - 1 \right] = 525$$

$$\Rightarrow P = \left(\frac{525 \times 100}{21} \right) = 2500$$

\therefore Sum = ₹ 2500

$$\text{So, S.I.} = ₹ \left(\frac{2500 \times 5 \times 4}{100} \right) = ₹ 500$$

Answer: (b)

Example 109

An amount doubles itself in 15 years, what is the rate of interest?

- (a) 7.85% (b) 9.41%
(c) 6.66% (d) 4.21%

Explanation

Let the principle be ₹ P .

As the amount doubles itself the interest is ₹ P too.

$$\text{So } P = P \times r \times 15/100$$

$$\Rightarrow r = 100/15 = 20/3\% = 6.66\%$$

Answer: (c)

Example 110

A certain sum of money amounts to ₹ 2500 in a span of 5 years and further to ₹ 3000 in a span of 7 years at simple interest. The sum is

- (a) ₹ 1800 (b) ₹ 2000
(c) ₹ 1400 (d) ₹ 1250

Explanation

2500 in 5th year and 3000 in 7th year.

So in between 2 years, ₹ 500 is increased.

$$\Rightarrow \text{For a year } 500/2 = 250$$

So, per year it is increasing ₹ 250, then in 5 years

$$\Rightarrow 250 \times 5 = 1250$$

Hence, the initial amount must be 2500 – 1250

$$= ₹ 1250.$$

Answer: (d)

Arithmetic Mean

The arithmetic mean or simply 'average' or 'mean' of a group of values is the sum of the values divided by the total number of values. It is one of the measures of central tendencies. It is denoted by \bar{X} , where X is the variable, such as height, weight, score, etc.

Average of n observations = Sum of observations/
 $n = \sum x/n$

Combined average: $N_1X_1 + N_2X_2 + \dots + N_nX_n / (N_1 + N_2 + \dots + N_n)$ where N_1, N_2, \dots, N_n are the respective numbers of observations in different groups and X_1, X_2, \dots, X_n are the averages.

Suppose a man covers a certain distance at x kmph and an equal distance at y kmph or x and y are the speeds in going to a station and coming back, then the average speed during the whole journey is

$$\frac{2xy}{x+y} \text{ kmph}$$

Example 111

If a candidate scores 5, 15, 25, 10, and 15 marks in different subjects, then calculate the mean marks scored by the candidate.

Solution

$$\text{Mean marks} = \frac{5+15+25+10+15}{5} = \frac{70}{5} = 14$$

Example 112

The average age of 30 boys in a class is 15 years. If the age of teacher is also included, then the new average age becomes 16 years. What is the age of teacher?

Solution

Here, average age = total age/number

$$\text{Total age} = \text{average age} \times \text{number}$$

$$\text{Total age} = 15 \times 30 = 450 \text{ years}$$

$$\text{New total age} = 16 \times 31 = 496$$

The new total age is higher because the age of the teacher is also included in it.

$$\text{Age of teacher} = 496 - 450 = 46 \text{ years}$$

Example 113

India scores 52 runs in first 10 overs in a 50-over one-day cricket match against Pakistan. What should be the run rate in the remaining 40 overs to reach the target of 252 runs?

Solution

The score required in 40 overs = $252 - 52 = 200$ runs

$$\text{Average required run rate in 40 overs} = 200/40 = 5$$

Example 114

The average monthly income of A and B is ₹5050. The average monthly income of B and C is ₹6250 and the average monthly income of A and C is ₹5200. The monthly income of A is

- (a) 3500 (b) 4000
(c) 4050 (d) 5000

Solution

$$\text{Total of A and B} = (5,050 \times 2) = 10,100 \quad \text{(i)}$$

$$\text{Similarly, total income of B and C} = (6250 \times 2) = 12,500 \quad \text{(ii)}$$

$$\text{And total of A and C} = (5200 \times 2) = 10,400 \quad \text{(iii)}$$

$$\text{Adding (i), (ii), and (iii), we get, } 2(A + B + C) = 33,000$$

$$\text{Or } A + B + C = 16,500$$

$$\text{But } B + C = 12,500 \text{ from Equation (ii)}$$

$$\text{Hence, } A = 16,500 - 12,500 = 4000$$

Answer: (b)

CALENDAR QUESTIONS

In NET examination, usually one calendar question is asked and that is usually simple. We need to be familiar with few concepts.

It is necessary to know the concept of 'odd days' to solve calendar problems. We are supposed to find the day of the week on a given date.

Odd days: In a given period, the number of days more than the complete weeks is called odd days.

Leap year: A leap year has 366 days. Every year divisible by 4 is a leap year, if it is not a century. Only every 4th century is a leap year and no other century is a leap year.

Examples

Each of the years, such as 1880, 1988, 2004, 2012, and so on is a leap year.

Each of the years, such as 400, 800, 1200, 1600, 2000 and so on is a leap year, but 1700, 1800, 1900, and so on are not leap years.

Ordinary year: The year that is not a leap year is called an ordinary year. An ordinary year has 365 days.

Counting of Odd Days

01 January 0001 is assumed to be Monday.

1 ordinary year = 365 days = 52 weeks + '1 day'. That one extra day is counted as odd day.

$$1 \text{ leap year} = 366 \text{ days} = (52 \text{ weeks} + 2 \text{ days})$$

1 leap year has 2 odd days.

$$100 \text{ years} = 76 \text{ ordinary years} + 24 \text{ leap years}$$

$$= (76 \times 1 + 24 \times 2) \text{ odd days} = 124 \text{ odd days}$$

$$= (17 \text{ weeks} + 5 \text{ days}). \text{ It means 5 odd days.}$$

Therefore, the number of odd days in 100 years is 5.

$$\text{Number of odd days in 200 years} = (5 \times 2) = 10 \text{ days.}$$

If further divided by 7, then it gives us 3 odd days.

Number of odd days in 300 years = $(5 \times 3) = 15$ days, which means '1 odd day'.

Number of odd days in 400 years = $(5 \times 4 + 1) = 0$ odd days

Similarly, each one of 800th year, 1200th year, 1600th year, 2000th year, 2400th year, and so on has 0 odd days.

Day of the Week Related to Odd Days

We usually count days from Sunday.

For example, if as per our calculation, the number of 'odd days' is 2, then it means that the answer will be Tuesday.

Day	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
Number	0	1	2	3	4	5	6

Example 115

What was the day of the week on January 1, 2001?
[June 2009]

- (a) Friday (b) Tuesday
(c) Sunday (d) Wednesday

Answer: (b)

Explanation

By the end of centuries 400, 800, 1200, 1600, 2000, 2400, and so on, there are no extra days left. It means that the last year 2000 was Sunday. As per convention, the week starts with Monday and hence, the next day after last day of year 2000, i.e., January 1, 2001, is Monday.

Example 116

January 1, 1995 was a Sunday. What would be the day of the week on January 1, 1996? [December 2009]

- (a) Sunday (b) Monday
(c) Wednesday (d) Saturday

Answer: (b)

Explanation

There is increase of 1 day (odd day) in the subsequent year. In case of leap year (if the day is after February), then there will be increase of two days.

Although 1996 is a leap year, the day in question is in January month, so there will be increase of one day. Thus, January 1, 1996 is Monday.

Example 117

On January 12, 1980, it was a Saturday. The day of week on January 12, 1979 was

- (a) Thursday (b) Friday
(c) Saturday (d) Sunday

Answer: (b)

Explanation

Although 1980 is a leap year, it would not have any impact on the calculation as the date in the question is in January month (and before 28th February). Thus, it is assumed as a normal year. There is a gain of one day in the next year. However, here, we will do backward calculation, subtract 1 day from the year 1980. If it was Saturday, then the same day in the previous year was to be Friday.

Example 118

If 1st October is Monday, then 1st November will be

- (a) Thursday (b) Friday
(c) Sunday (d) Monday

Answer: (a)

Explanation

October has 31 days. 1st, 8th, 15th, 22nd and 29th dates of October will be Mondays. Thus, 1st November will be Thursday.

Example 119

If the first day of the month is Sunday, then what date will be three days after the fourth Wednesday in the month?

[June 1998]

- (a) 24 (b) 29 (c) 27 (d) 30

Answer: (b)

Explanation

First Wednesday of the month will be on 4th day of the month, 2nd will be on 11th; 3rd Wednesday on 18th; and 4th Wednesday on 25th. Now three days after 25th means $25 + 4 = 29$ th day of the month.

Example 120

If the first day of the ordinary year (other than the leap year) was Friday, then which was the last day of that year?

- (a) Wednesday (b) Thursday
(c) Friday (d) Sunday

Answer: (c)

Explanation

An ordinary year has 365 days. Week starting with Friday will end in Thursday. Hence, the 364th day (end of complete 52 weeks) will be Thursday. The 365th day will be Friday. Thus, the first and last day of an ordinary year are same.

Example 121

It was Monday on January 1, 2007. What was the day of the week on January 1, 2011?

- (a) Sunday (b) Saturday
(c) Friday (d) Wednesday

Answer: (b)

Explanation

Odd days in 2007 = 1 (2007 is an ordinary year and we are doing calculation from January 1)

Odd days in 2008 = 2 (2008 is a leap year)

Odd days in 2009 = 1 (ordinary year)

Odd days in 2010 = 1 (ordinary year)

Thus, January 1, 2011, will be Monday plus 5 days, i.e., Saturday.

Example 122

If the fourth Saturday of a month is the 22nd day, then what day is the 13th day of the month?

- (a) Tuesday (b) Wednesday
(c) Thursday (d) Friday

Answer: (c)

Explanation

The earlier three Saturdays are on 15th, 8th and 1st. If 15th is Saturday and hence, Thursday falls on 13th. Thus, 13th is Thursday.

VENN DIAGRAMS

In NET Paper I examinations, one or two questions are asked about Venn diagrams almost every time. While the circles or figures (also called sets) deal with individual data items, the number shown in rectangle is the total number (rectangle is also known as universal set).

There can be other shapes like triangles, squares, etc., to represent data. The following examples will help in better understanding on how to solve the questions on Venn diagrams.

VENN DIAGRAMS AND RELATIONSHIPS

The main aim of this section is to test your ability about the relation between some items of a group by diagrams. In these questions, some figures of circles and some words are given. You have to choose a figure that represents the given words.

Some critical examples are given below.

1. If all the words are of different groups, then they will be shown by the diagram as given below.

Dog, Cow and Horse

All these three are animals but of different groups and there is no relation between them. Hence, they will be represented by three different circles.

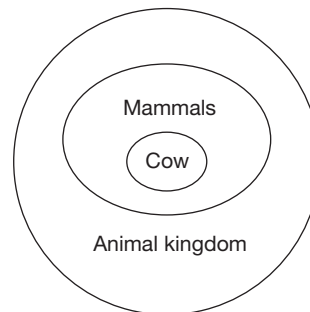

2. If few words belong to a common group.

Cow, Horse and Mammals

3. If one word belongs to a second group that further belongs to the third group.

Cow, Mammals and Animal Kingdom

4. If there is some relation between two items and these two items are completely related to a third item, then they will be shown as given below.

Men, Brother and Father

Some brothers may be fathers and vice versa. Similarly, some fathers may not be brothers and vice versa. But all the fathers and all the brothers belong to men group.

5. Two items are related to a third item to some extent but not completely and the first two items are totally different.

Students, Boys and Girls

The boys and girls are different genders while some boys may be students. Similarly, among girls, some may be students.

6. All the three items are related to one another but to some extent and not completely.

Boys, Students and Athletes

Some boys may be students and vice versa. Similarly, some boys may be athletes and vice versa. Some students may be athletes and vice versa.

7. Two items are related to each other completely and the third item is entirely different from the first two.

Lions, Carnivorous and Cows

All lions are carnivorous but no cow is a lion or a carnivore.

8. The first item is partially related to second, but the third is entirely different from the first two.

Dogs, Flesh eaters and Cows

Some dogs are flesh eaters but not all, whereas any dog or any flesh eater cannot be cow.

There can be many other situations too.

Now, we discuss Venn diagram to solve mathematical problems. This can be used as an easier approach to solve problems, which can be practised by students from non-mathematical background also.

Example 123

In a class, there are:

- (a) 8 students who play football and hockey.
- (b) 7 students who do not play football or hockey.
- (c) 13 students who play hockey.
- (d) 19 students who play football.

How many students are there in the class?

Solution

Step I

The 8 students who play both hockey and football should go inside the intersection because they need to be in both circles. The 7 students who do not play either of the two games should go outside because they should not be in either of the circles.

Step II

There are 13 students who play hockey game, so the numbers in the hockey circle should add up to 13.

There are 8 students in the intersection, so there are 5 who play hockey but not football.

Similarly, there are 19 students who play football.

The students who play football but not hockey must be $19 - 8 = 11$.

Thus, the total number of students in the class = $11 + 8 + 5 + 7 = 31$.

There are 31 students in the class.

Example 124

In a class, there are 30 students.

- (a) 21 students like Maths.
- (b) 16 students like English.
- (c) 6 students don't like Maths or English.

How many students like both Maths and English?

Step I

The 6 students who do not like either of the two subjects go outside because they should not be in either circles. We know that the total in the maths circle needs to be 21, but we cannot put this in because we don't know how many should go inside the intersection (if they like both subjects) and how many should go on the left (if they like only Maths).

Step II

There are 30 students in the class, and if there are 6 students outside the circles, then the other three sections must add up to 24.

Furthermore, there are 21 students who like Maths, so the middle and left section must add up to 21. This leaves 3 on the right as $24 - 21 = 3$.

Step III

There are 16 students who like English. Hence, the two parts of the English circle should add up to 16 and so we can find the number in the intersection by doing $16 - 3 = 13$.

There are 21 students who like Maths. There are 8 (got by $21 - 13$) who like Maths but not English. If we check all the four facts given to us, then we can see that they are all true.

There are 13 students who like both Maths and English.

Practice Exercises

NUMBER SERIES COMPLETION

- Find the missing number in the following series.
512, 256, 128, ?, 32, 16, 8 [June 1997]
(a) 52 (b) 61 (c) 64 (d) 56
 - Find the missing number in the following series.
2, 7, 17, 32, 52, 77, ? [June 1997]
(a) 107 (b) 91 (c) 101 (d) 92
 - Find the missing number in the following series.
15, 18, 24, ?, 45 [June 1997]
(a) 27 (b) 30 (c) 33 (d) 36
 - Fill in the missing number in the following arrangement based on some principle. [June 2002]
- | | | |
|----|----|----|
| 8 | 6 | 4 |
| 3 | ? | 7 |
| 14 | 16 | 18 |
- Find the missing number in the following series.
8, 24, 12, ?, 18, 54 [December 2005]
(a) 26 (b) 24 (c) 36 (d) 32
 - What is the number that comes next in the sequence?
12, 20, 100, ?, 8,900, 88,900, 8,88,900 [June 2007]
(a) 1,000 (b) 900 (c) 800 (d) 400
 - Find the missing number in the following series.
28, 33, 31, 36, ?, 39
(a) 30 (b) 32 (c) 33 (d) 34
 - Find the missing number in the following series.
1, 3, 4, 8, 15, 27, ?
(a) 45 (b) 50 (c) 55 (d) 60
 - Find the missing number in the following series.
4, 16, 8, 64, ?, 256 [June 2008]
(a) 16 (b) 24 (c) 32 (d) 20
 - Find the missing number in the following series.
 $\frac{2}{3}, \frac{4}{7}, ?, \frac{11}{21}, \frac{16}{31}$ [December 2008]
(a) $\frac{10}{8}$ (b) $\frac{6}{10}$ (c) $\frac{5}{10}$ (d) $\frac{7}{13}$
- (a) 4 (b) 5 (c) 6 (d) 8

11. Find the wrong number in the sequence.
125, 127, 130, 135, 142, 153, 165
(a) 130 (b) 142 (c) 153 (d) 165
12. Find the missing number in the following series.
3, 10, 101, ?
(a) 10,101 (b) 10,201
(c) 10,202 (d) 11,012
13. Find the missing number in the following series.
1, 1, 4, 8, 9, 27, 16, ?
(a) 32 (b) 64 (c) 81 (d) 256
14. Find the missing number in the following series.
3, 5, 13, 43, 177, ?
(a) 891 (b) 713 (c) 885 (d) 899
15. Find the missing number in the following series.
3, 4, 7, 7, 13, 13, 21, 22, 31, 34, ?
(a) 41 (b) 43 (c) 45 (d) 47
16. Find the missing number in the following series.
10, 24, 52, ?, 220, 44, 892
(a) 104 (b) 98 (c) 112 (d) 108
17. Which of the following will not be a number of the series
1, 8, 27, 64, 125, ?
(a) 256 (b) 512 (c) 729 (d) 1,000
18. Find the missing number in the following series.
13, 32, 24, 43, 35, ?, 46, 65, 57, 76
(a) 45 (b) 52 (c) 54 (d) 55
19. Find the missing number in the following series.
23, 33, 46, 62, 81, 103, ?
(a) 126 (b) 130 (c) 133 (d) 128
20. Find the wrong number in the sequence.
10, 26, 74, 218, 654, 1,946
(a) 26 (b) 74 (c) 218 (d) 650

LETTER SERIES COMPLETION

21. Find the missing letters in the following series.
QAR, RAS, SAT, TAU, _____
(a) UAV (b) TAS (c) UAT (d) TAT
22. Find the missing letters in the following series.
FTG, GTF, HTI, ITH, _____
(a) JTK (b) HTL (c) HTK (d) JTI
23. Find the missing letters in the following series.
SCD, TEF, UGH, _____, WKL
(a) CMN (b) UJI (c) VIJ (d) IJT
24. Find the missing letters in the following series.
JAK, KBL, LCM, MDN, _____
(a) OEP (b) NEO (c) MEN (d) PFQ
25. Find the missing letters in the following series.
AK, EO, IS, _____, QA, UE
[December 2002]
(a) LV (b) MW (c) NX (d) LW
26. Find the missing letters in the following series.
ELFT, GLHT, ILJT, _____, MLNT
- (a) OLPT (b) LLMT
(c) KLMT (d) KLLT
27. Find the missing letters in the following series.
WE, SG, PJ, LN, _____
(a) IS (b) SI (c) PT (d) QT
28. Find the missing letters and numbers in the following series.
C2A, E5D, G8G, I11J, _____
(a) K14M (b) M14K
(c) L14M (d) M14L
29. Find the missing letters in the following series.
QAR, RAS, SAT, TAU, _____
(a) UAV (b) UAT (c) TAS (d) TAT
30. Find the next pair in the sequence.
C - 3, E - 6, G - 12, I - 24, K - 48, _____
(a) S - 48 (b) M - 96
(c) L - 96 (d) O - 48

CODING AND DECODING

31. If 'CERTAIN' is coded as 'XVIGZRM' in a particular code language, then how 'MUNDANE' be coded in that language?
[December 2000]
(a) NFMWZMX (b) VMZWFMN
(c) NFMWZMV (d) MIMXZMV
32. If 'EDUCATION' is coded as NOITACUDE, then 'RED FORT' will be coded as
(a) TROFDER (b) FORTRED
(c) TROFRED (d) FORTDER
33. In a certain code, 'MOTHER' is written as 'OMHURF'. How will 'ANSWER' be written in that code?
(a) NBWRRF (b) MAVSPE
(c) NBWTRD (d) NAWTRF
34. In a certain code, 'COMPUTER' is written as 'RFUVQNPC'. How is 'PRINTER' written in the same code?
(a) RFUOJSP (b) PFUOJSR
(c) PSJOUFP (d) RSJOUFP
35. BF is related to DH in the same way as PS is related to
(a) SU (b) SV (c) RV (d) RU
36. CLAIM : DNDMR :: CHARGE : ? [December 2000]
(a) DJDVLK (b) DIDWLL
(c) DJCVMK (d) DIDWKL
37. COLD : FSQJ :: HEAT : ? [December 2000]
(a) XJFY (b) KIGZ
(c) KIFZ (d) YIGY
38. In a certain code, 'PAPER' is written as 'SCTGW'. How is 'MOTHER' written in that code?
(a) POXJJT (b) ORVLGW
(c) PQXKJV (d) PQVJGT

39. If HE = 13 and MOVER = 73, then BASIC = ?
 (a) 55 (b) 34 (c) 50 (d) 49
40. In a certain code, 15789 is written as XTZAL and 2346 is written as NPSU. How is 235491 written in that code?
 (a) NPTSL (b) NPTUL
 (c) NBTSL (d) PNTSL
41. If A stands for 5, B for 6, C for 7, D for 8, and so on, what do the following numbers stand for 22, 25, 8, 22 and 5?
[December 2004]
 (a) PRIYA (b) NEEMA
 (c) MEENA (d) RUDRA
42. If 'CALENDAR' is coded as 'CLANAEDR', then the code for CIRCULAR is
 (a) LACANDER (b) CRIUCALR
 (c) CLANADER (d) None of the above
43. In a code sign, 'DRLAL' is coded as 62014314. How is 'CAMEL' coded?
 (a) 5315714 (b) 35729310
 (c) 5313613 (d) None of the above
44. If 'LIGHT' is coded as 'GILTH', then find the code for 'RAINY'.
 (a) IARYN (b) ARINY
 (c) NAIRY (d) RINAY
45. If all the letters in the word 'ARGUMENT' are rearranged in alphabetical order and substituted by the letter immediately following it in English alphabet, then what will be the new arrangement of letters?
 (a) BFHNOSUV (b) BFHONSWV
 (c) BFHNOUSV (d) BFHNOQUV
46. Which of the following pairs have the same relationship as OFTEN : FOTNE?
 (a) HEART : TRAHE (b) OPENS : SNEOP
 (c) RISKY : IRSYK (d) FIRST : IFRST
47. If water is called food, food is called tree, tree is called sky, and sky is called wall, then on which of the following a fruit grows?
 (a) Water (b) Food (c) Sky (d) Tree
48. If red means blue, blue means green, green means orange, orange means pink, and pink means black, then what is the colour of clear sky?
 (a) Orange (b) Green
 (c) Blue (d) None of the above
49. In a certain code, 'bi nie pie' means 'some good jokes', 'nie bat lik' means 'some real stories', and 'pie lik tol' means 'many good stories'. Which word in that code means 'jokes'?
 (a) bi (b) nie
 (c) pie (d) None of the above
50. If 'table' is called 'chair', 'chair' is called 'cupboard', 'cupboard' is called 'chalk', 'chalk' is called 'book', 'book' is called 'duster', and 'duster' is called 'table', then what does the teacher use to write on the black board?
 (a) Book (b) Cupboard
 (c) Table (d) Duster
51. In a certain code language,
 (A) 'pit dar na' means 'you are good'.
 (B) 'dar tok pa' means 'good and bad'.
 (C) 'tim na tok' means 'they are bad'.
 In that language, which word stands for 'they'?
 (a) na (b) tok (c) tim (d) pit
52. In a certain code language, '743' means 'mangoes are good', '657' means 'eat good food', and '934' means 'mangoes are ripe'. Which of the following digit in that code means 'ripe'?
 (a) 9 (b) 4 (c) 5 (d) 7
53. In a certain code, '256' means 'you are good', '637' means 'we are bad', and '358' means 'good and bad'. Which of the following digit in that code means 'and'?
 (a) 2 (b) 5 (c) 8 (d) 3
54. In a certain code language, '526' means 'sky is blue', '24' means 'blue colour', and '436' means 'colour is fun'. Which of the following digit in that language means 'fun'?
 (a) 5 (b) 4
 (c) 3 (d) 2
 (e) None of the above
55. In a certain code language, '123' means 'hot filtered coffee', '356' means 'very hot day', and '589' means 'day and night'. Which of the following digit in that language means 'very'?
 (a) 9 (b) 5 (c) 8 (d) 6

CHOOSE ODD WORD

56. Choose the word that is least like the other words in a group.
 (a) Moon (b) Sun
 (c) Universe (d) Planets
57. Choose the word that is least like the other words in a group.
 (a) Chemistry (b) Geography
 (c) Zoology (d) Botany
58. Choose the word that is least like the other words in a group.
 (a) Mechanic (b) Mason
 (c) Blacksmith (d) Architect
59. Choose the word that is least like the other words in a group.
 (a) Sister (b) Friend
 (c) Brother (d) Father
60. Choose the word that is least like the other words in a group.
 (a) Zinc (b) Aluminium
 (c) Copper (d) Mercury
61. Choose the word that is least like the other words in a group.
 (a) Lion (b) Cheetah
 (c) Bear (d) Tiger

62. Choose the word that is least like the other words in a group.
 (a) Sheet (b) Cot
 (c) Spain (d) Pillow
63. Find the odd word among the following:
 (a) Kiwi (b) Eagle
 (c) Penguin (d) Ostrich
64. Find the odd word among the following:
 (a) Lake (b) Sea
 (c) River (d) Pool
65. Find the odd word among the following:
 (a) Arrow (b) Axe
 (c) Knife (d) Dagger

ODD PAIRS

66. Find the odd pair of words.
 (a) Mason : Wall (b) Cobbler : Shoe
 (c) Farmer : Crop (d) Chef : Cook
67. Find the odd pair of words.
 (a) Bottle : Wine (b) Cup : Tea
 (c) Pitcher : Water (d) Racket : Shuttle
68. Find the odd pair of words.
 (a) Lion : Roar (b) Snake : Hiss
 (c) Frog : Bleat (d) Bees : Hum
69. Find the odd pair of words.
 (a) Daring : Timid
 (b) Beautiful : Pretty
 (c) Clarity : Ambiguity
 (d) Youth : Adult
70. Find the odd pair of words.
 (a) Room : House (b) Atom : Electron
 (c) Car : Engine (d) Milk : Water
71. Find the odd number.
 (a) 13 (b) 53 (c) 63 (d) 23
72. Find the odd number.
 (a) 51 (b) 144 (c) 64 (d) 121
73. Find the odd number.
 (a) 15 (b) 21 (c) 24 (d) 28
 (e) 30
74. Find the odd number.
 (a) 324 (b) 244 (c) 136 (d) 352
75. Find the odd number.
 (a) 25 (b) 27 (c) 125 (d) 343

CHOOSE THE ODD NUMBER PAIR OR GROUP

76. Find the odd number pair.
 (a) 95 : 82 (b) 69 : 56
 (c) 55 : 42 (d) 48 : 34
77. Find the odd number pair.
 (a) 2 : 8 (b) 3 : 27
 (c) 4 : 32 (d) 5 : 125
78. Find the odd number pair.
 (a) 80 : 9 (b) 64 : 8
 (c) 36 : 6 (d) 7 : 49
79. Find the odd number pair.
 (a) 3 : 5 (b) 5 : 3 (c) 6 : 2 (d) 7 : 3
80. Find the odd number pair.
 (a) 1 : 0 (b) 3 : 8
 (c) 6 : 35 (d) 7 : 50
81. Find the odd number pair.
 (a) 23 : 29 (b) 19 : 25
 (c) 13 : 17 (d) 3 : 5
82. Find the odd number pair.
 (a) 343 : 7 (b) 243 : 9
 (c) 512 : 8 (d) 216 : 6
83. Find the odd number pair.
 (a) 13 : 21 (b) 19 : 27
 (c) 15 : 23 (d) 16 : 24
84. Find the odd number pair.
 (a) 14 : 56 (b) 12 : 36
 (c) 23 : 92 (d) 15 : 35
85. Find the odd number pair.
 (a) 5 : 26 (b) 6 : 37
 (c) 7 : 49 (d) 8 : 65

CHOOSE THE ODD LETTER GROUP

86. Find the odd letter group.
 (a) ACE (b) PRT
 (c) UWY (d) MNO
87. Find the odd letter group.
 (a) RTW (b) QOM
 (c) IKG (d) BDF
88. Find the odd letter group.
 (a) KOM (b) LPN
 (c) BFD (d) GLI
89. Find the odd letter group.
 (a) BHE (b) DJG
 (c) SYV (d) JPM
90. Find the odd letter group.
 (a) BCD (b) MNO
 (c) KLM (d) PQR
91. Find the odd letter group.
 (a) BYX (b) LPO
 (c) EVU (d) FUT

92. Find the odd letter group.
 (a) CHM (b) HMR
 (c) DIN (d) LPU
93. Find the odd letter group.
 (a) XUW (b) DAC
 (c) PMN (d) HEG
 (e) TQS
94. Find the odd letter group.
 (a) RAT (b) SAT
 (c) CAT (d) MAT
 (e) GET
95. Find the odd letter group.
 (a) OTP (b) ABA
 (c) SZX (d) UVB
 (e) YQR

ANALOGY

It is important to note that the analogy questions also cover many aspects of 'relationships'. Relationships have been specifically mentioned in NET Paper 1 syllabus.

Direct or Simple Analogy

96. As boxing is to 'Ring', 'Tennis' is to
 (a) Pool (b) Court
 (c) Arena (d) Ground
97. 'Doctor' is related to 'Patient' in the same way as 'Consultant' is related to
 (a) Customer (b) Accused
 (c) Magistrate (d) Client
98. 'Easiness' is related to 'Difficulty' in the same way as 'Comfort' is related to
 (a) Hardship (b) Rest
 (c) Poverty (d) Difficulty
99. As 'Pen' is related to 'Ink', 'Needle' is related to
 (a) Thread (b) Cloth
 (c) Stitching (d) Art
100. 'Chef' is related to 'Kitchen' in the same way as 'Scientist' is related to
 (a) Medicine (b) Pharmacy
 (c) Laboratory (d) Chemist
101. 'Engineer' is related to 'Production' in the same way as 'Doctor' is related to
 (a) Cure (b) Hospital
 (c) Body (d) Surgery
102. As 'Design' is related to a 'Structure', 'Rhythm' is related to
 (a) Music (b) Art
 (c) Kathak (d) Dance
103. 'Drama' is related to 'Director' in the same way as 'Magazine' is related to
 (a) Story (b) Editor
 (c) Reader (d) Printer
104. 'Demonstrator' is related to 'Laboratory' in the same way as 'Leader' is related to
 (a) Podium (b) Assembly
 (c) Parliament (d) State
105. 'Author' is related to 'Book' in the same way as 'Choreographer' is related to
 (a) Drama (b) Dance
 (c) Masque (d) Opera
106. 'Starvation' is related to 'Nutrition' in the same way as 'Exhaustion' is related to
 (a) Energy (b) Bravery
 (c) Freshness (d) Courage
107. 'Science' is related to 'Laboratory' in the same way as 'Astronomy' is related to
 (a) Observatory (b) Telescope
 (c) Space (d) Station
108. 'Bibliophile' is related to 'Books' in the same way as 'Patriot' is related to
 (a) Defence (b) Country
 (c) Mankind (d) Society
109. 'Ancestor' is related to 'Descendant' in the same way as 'Beautiful' is related to
 (a) Gloomy (b) Handsome
 (c) Girl (d) Ugly
110. 'Bee' is related to 'Hive' in the same way as 'Rat' is related to
 (a) Burrow (b) Nest
 (c) Hole (d) Stab

Completing the Analogous Pair

In each of the following questions, there is a certain relationship between two given words on the left side of ::, one word is given on the right side of ::, whereas another word is to be found from the given alternatives having the same relation with this word as the words of the given pair. Now choose the correct alternatives for the questions given below.

111. Terrible : Serene :: Roof : ?
 (a) Door (b) Floor
 (c) Walls (d) Pillars
112. Man : Biography :: Nation : ?
 (a) Democracy (b) Constitution
 (c) Geography (d) History
113. Victory : Encouragement :: Failure : ?
 (a) Bad (b) Defeat
 (c) Anger (d) Frustration
114. Dilatory : Expeditious :: Direct : ?
 (a) Tortuous (b) Circumlocutory
 (c) Straight (d) Curved
115. Foundation : Edifice :: Constitution : ?
 (a) Government (b) State
 (c) Nation (d) Cabinet

116. Taxonomy : Classification : : Pedology : ?
 (a) Nature (b) Farming
 (c) Soil (d) Mountain
117. Monotony : Variety : : Crudeness : ?
 (a) Refinement (b) Raw
 (c) Sobriety (d) Simplicity
118. Interview : Job : : Armistice : ?
 (a) War (b) Treaty
 (c) Amnesty (d) Agreement
119. Wizard : Witch : : Monk : ?
 (a) Madam (b) Widow
 (c) Nun (d) Virgin
120. Burglar : House : : Pirate : ?
 (a) Sea (b) Ship
 (c) Sailor (d) Crew
121. Bird : Chirp : : Horse : ?
 (a) Bray (b) Neigh
 (c) Race (d) Stable
122. Insert : Extract : : Mighty : ?
 (a) Thin (b) Strong
 (c) Frail (d) Feeble
123. Ornithologist : Birds : : Anthropologist : ?
 (a) Plants (b) Animals
 (c) Mankind (d) Environment
124. Oxygen : Burn : : Carbon dioxide : ?
 (a) Isolate (b) Foam
 (c) Extinguish (d) Explode
125. Seismograph : Earthquake : : Tachometer : ?
 (a) Volcanoes (b) Resistance
 (c) Landslides (d) Strains

BLOOD RELATIONS

126. If F is the brother of A, C is the daughter of A, K is the sister of F, and G is the brother of C, then who is the uncle of G?
 (a) F (b) K
 (c) C (d) None of the above
127. Ravi said to Seeta, 'Your mother is the daughter of my grandmother'. How are Ravi and Seeta related?
 (a) Uncle-niece (b) Father-daughter
 (c) Cousin (d) None of the above
128. A has three children. B is the brother of C, and C is the sister of D; E, who is the wife of A, is the mother of D. There is only one daughter of the husband of E. What is the relation between D and B?
 (a) B is brother of D (b) B is not related to D
 (c) D is sister of B (d) None of the above
129. Dinesh said to Naveen, 'The person playing this game is the youngest of the two brothers of the daughter of my father's wife'. How is the person playing the game related to Dinesh?
 (a) Cousin (b) Brother
 (c) Son (d) Brother-in-law
130. Pointing to a picture of a boy, Somesh said, 'He is the son of the only son of my mother'. How is Somesh related to that boy?
 (a) Brother (b) Uncle
 (c) Cousin (d) Father
131. Introducing a woman, Namrata said, 'She is the daughter-in-law of the grandmother of my father's only son'. How is the woman related to Namrata?
 (a) Grandmother (b) Sister-in-law
 (c) Sister (d) Mother
132. Pointing to a photograph Raveena says, 'He is the son of the only son of my grandfather'. How is the man in the photograph related to Raveena?
 (a) Uncle (b) Brother
 (c) Cousin (d) None of the above
133. Vinita, who is the sister-in-law of Amit, is the daughter-in-law of Kamni. Deepak is the father of Sandy who is the only brother of Amit. How is Kalyani related to Ashok?
 (a) Mother-in-law (b) Aunt
 (c) Wife (d) None of the above
134. Pointing to a woman in a picture, Amit said, 'Her granddaughter is the only daughter of my brother'. How is the woman related to Amit?
 (a) Sister (b) Grandmother
 (c) Mother-in-law (d) Mother
135. X and Y are siblings. C and D are wife and husband, respectively; X is the only son of C. F is the sister of D. How is Y related to F?
 (a) Niece (b) Nephew
 (c) Uncle (d) Cousin

DIRECTION SENSE

136. Raman travels a distance of 5 km in south direction. He turns to his right. After walking 3 km, he turns to the left and walks 5 km. Now in which direction is he from the starting place?
 (a) West (b) South
 (c) South-west (d) North-east
137. Ravi left home and cycled 10 km towards south. He, then, turned right and cycled 5 km, and then again turned right and cycled 10 km. After this, he turned left and cycled 10 km. How many kilometres will he have to cycle to reach his home straight?
 (a) 15 (b) 20 (c) 25 (d) 30
138. Chintan walked 15 km towards west, and then, he turned left and walked for 20 km. Then, he moved towards east and walked 25 km, and finally, turning left, he covered 20 km. How far was he from his starting point?
 (a) 20 km (b) 30 km
 (c) 10 km (d) None of the above

139. Vijay starts walking towards north. After walking some distance, he turns to his right. Then, walking for a while, he turns to his left and walks for one kilometre, and then, he turns to his left again. In which direction is he moving now?
 (a) North (b) South
 (c) West (d) East
140. Rashi travelled 20 km towards north. Then, she turned right and travels 30 km. Then, she turns right and travels a distance of 35 km. Then, she turns left and walks 15 km. Finally, she turns left and walks 15 km. In which direction and how many metres is she from the starting position?
 (a) 5 km west (b) 30 km east
 (c) 30 km west (d) 45 km east
141. Kumar walked 5 m towards north; took a left turn and walked for 10 m. He then took a right turn and walked for 20 m, and again took right turn and walked 10 m. How far is he from the starting point?
 (a) 20 m (b) 15 m (c) 25 m (d) 30 m
142. Shalini walked 15 m towards south, took right turn, and walked 3 m. She took a right turn again and walked 15 m before stopping. Which direction did Shalini face after stopping?
 (a) West (b) South
 (c) East (d) North
143. Town D is 12 km towards the north of town A. Town C is 15 km towards the west of town D. Town B is 15 km towards the west of town A. How far and in which direction is town B from C?
 (a) 15 km towards north (b) 12 km towards south
 (c) 3 km towards south (d) 12 km towards south
144. Read the following carefully and answer the question given below.
 I. Point B is 4 m towards the north of Point A.
 II. Point E is 8 m towards the east of Point B.
 III. Point C is 5 m towards the east of Point A
 IV. Point D is 9 m towards the west of Point C.
 How far should one walk from Point A in order to reach Point D.
 (a) 4 m (b) 9 m
 (c) 5 m (d) 14 m
145. Rahul started from Point A and travelled 8 km towards the north to Point B; he then turned right and travelled 7 km to Point C, and from Point C, he took the first right and drove 5 km to Point D. Then, he took another right and travelled 7 km to Point E, and finally, he turned right and travelled for another 3 km to Point F. What is the distance between Points F and B?
 (a) 1 km (b) 2 km (c) 3 km (d) 4 km

Seating Arrangement

146. A, P, R, X, S and Z are sitting in a row. S and Z are in the centre. A and P are at the ends. R is sitting to the left of A. Who is to the right of P?
 (a) S (b) X
 (c) Z (d) None of the above
147. A, B, C, D and E are sitting on a bench. A is sitting next to B; C is sitting next to D, and D is not sitting with E who is on the left end of the bench. C is on the second position from the right. A is to the right of B and E. A and C are sitting together. In which position A is sitting?
 (a) Between B and D (b) Between B and C
 (c) Between E and D (d) Between C and E
148. P, Q, R, S, T, U, V and W are sitting around a circle and are facing the centre.
 I. P is second to the right of T who is the neighbour of R and V.
 II. S is not the neighbour of P.
 III. V is the neighbour of U.
 IV. Q is not between S and W. W is not between U and S.
 Which two of the following are not neighbours?
 (a) R and V (b) U and V
 (c) R and P (d) Q and W
149. J, D, L, H and F are travelling to a station; each one reaches at a different time. L reaches only after J and D reaches only before F. Who among them is third to reach?
 (a) F (b) L (c) D (d) H
150. P, Q, R, S and T are sitting in a straight line facing north. P sits next to S but not to T. Q is sitting next to R, who sits on the extreme left corner. T does not sit next to Q. Who sits to the left of S?
 (a) P (b) Q (c) R (d) S

BASIC PERCENTAGE CALCULATIONS

151. The price of cooking oil has increased by 25%. The percentage of reduction that a family should effect in the use of cooking oil so not to increase the expenditure on this account is
 (a) 25 (b) 30%
 (c) 20% (d) 15%
152. In an organization, 40% of the employees are matriculates, 50% of the remaining employees are graduates, and the remaining 180 are postgraduates. How many employees are graduates?
 (a) 360 (b) 240
 (c) 300 (d) 180
153. In a town, 96% of the population is 23,040. The total population of the town is
 (a) 32,256 (b) 24,000
 (c) 24,936 (d) 25,640
154. If 75% of the students in a school are boys and the number of girls is 420, then the number of boys is
 (a) 1176 (b) 1350 (c) 1260 (d) 1125
155. A man spends ₹3500 and saves $12\frac{1}{2}\%$ of his income. His monthly income (in rupees) is
 (a) 3937.50 (b) 4000
 (c) 4250 (d) 4160

156. The price of an item is increased by 20% and then decreased by 20%. The final price as compared to the original price is
 (a) 20% less (b) 20% more
 (c) 4% more (d) 4% less
157. X's salary is half that of Y. If X got a 50% rise in his salary and Y got a 25% rise in his salary, then the percentage increase in combined salaries of both is
 (a) 30% (b) 33.33%
 (c) 37.5% (d) 75%
158. A mixture of 40 l of milk and water contains 10% water. How much water should be added to it so that water may be 20% in the new mixture?
 (a) 5 l (b) 4 l
 (c) 6.5 l (d) 7.5 l
159. A man spends 75% of his income. His income is increased by 20% and he increased his expenditure by 10%. His savings are increased by
 (a) 10% (b) 25%
 (c) 37.5% (d) 50%
160. If A's income is 25% more than B's and B's income is 20% more than C's, then by what per cent is A's income more than C's?
 (a) 15% (b) 25%
 (c) 33.5% (d) 50%
161. If the price of a television set is increased by 25%, then by what percentage should the new price be reduced to bring the price back to the original level?
 (a) 15% (b) 20%
 (c) 25% (d) 30%
162. A dealer marks his goods 20% above cost price. He then allows some discount on it and makes a profit of 8%. The rate of discount is
 (a) 4% (b) 6%
 (c) 10% (d) 12%
163. As the price of mangoes decreased by 25%, I can purchase 4 mangoes more for ₹60. What is the new price of one mango?
 (a) ₹5 (b) ₹4
 (c) ₹3.75 (d) None of the above
164. If the length of a rectangle increases by 10%, then by what per cent should the breadth decrease to maintain the same area?
 (a) 10 (b) 20
 (c) 9.11 (d) 5
165. If the price of potatoes increased first by 20% and subsequently by 40%, then what is the final price per kilogram, if the original price was ₹25 per kg?
 (a) 40 (b) 42
 (c) 45 (d) 48
166. The radius of a circle has increased by 20%. By what percentage does the circumference increase?
 (a) 20% (b) 40%
 (c) 44% (d) 48%
167. The radius of a circle has increased by 20%. By what percentage does its area increase?
 (a) 33% (b) 44%
 (c) 55% (d) None of the above
168. If the side of a square is increased by 25%, then its area is increased by how much per cent?
 (a) 25% (b) 50%
 (c) 62.5% (d) None of the above
169. The length and breadth of a rectangle are 20 cm and 10 cm, respectively. The length is increased by 10% and the breadth is increased by 20%. What is the new area of the rectangle?
 (a) 240 (b) 254
 (c) 264 (d) 280
170. The number of seats in an auditorium are increased by 25%. The price on a ticket is also increased by 12%. What is the effect on the revenue collected?
 (a) 37
 (b) 40
 (c) 42
 (d) None of the above

ARITHMETIC MEAN

171. The average weight of 8 persons increases by 2.5 kg when a person weighing 60 kg is replaced by a new person. What might be the weight of the new person?
 (a) 76 kg (b) 76.5 kg
 (c) 80 kg (d) Data inadequate
172. The average weight of 8 articles is 25 kg. If the average weight of 3 of them is 20 kg, then what is the average weight of rest of the 5 articles?
 (a) 26 kg (b) 27 kg
 (c) 28 kg (d) None of the above
173. The average speed of a taxi car from Town A to Town B is 35 kmph and return journey is 42 kmph. What is the average speed of the whole journey?
 (a) 35.5 kmph (b) 36 kmph
 (c) 38.17 kmph (d) Cannot be determined
174. A car owner buys petrol at ₹8 and ₹10 for two successive years. What approximately is the average cost per litre of petrol if he spends ₹4000 each year?
 (a) ₹9 (b) ₹9.90
 (c) ₹8.88 (d) None of the above
175. A question is followed by two statements I and II that contain certain data. Tell by selecting one of the answer choices given, whether the data given in the statements are sufficient for answering the question.
 (a) If statement I alone is sufficient.
 (b) If statement II alone is sufficient.
 (c) If both statements I and II taken together are sufficient.
 (d) If none of the statements is sufficient.

Question: A horse ran 100 miles without stopping. What was the average speed in miles per hour?

Statements

- I. The horse ran 20 miles per hour for the first 50 miles.
 II. The entire journey starts from 8 pm on day one to 4 am the following day. [June 1997]

176. A and B start from the same destination and take the same route. A starts at 8 a.m. and drives at a speed of 40 kmph. B starts at 9 a.m. and drives at a speed of 50 kmph. If the destination is 350 km away from the starting point, then how far will A be from the destination when B reaches there? [December 1997]
 (a) 20 km (b) 30 km
 (c) 50 km (d) 70 km
177. A train runs for 2 hours at a speed of 35 kmph. It runs for $3\frac{1}{2}$ hours at the speed of 60 kmph and then runs for $2\frac{1}{2}$ hours at the speed of 70 kmph. Find the average speed of the train. [June 2002]
- (a) 50 kmph (b) 55 kmph
 (c) 80 kmph (d) 56.87 kmph
178. The average age of a husband and wife was 22 years when they were married five years back. What is the present average age of the family if they have a three-year-old child? [December 2002]
 (a) 19 years (b) 25 years
 (c) 27 years (d) 28.5 years
179. A man's monthly income is ₹1400. What should be his average monthly expenditure so that he is able to save 3600 in a year?
 (a) 1000 (b) 1100
 (c) 1150 (d) 1200
180. The average of A, B and C is 50. If D is 10, then what is the average of A, B, C and D?
 (a) 15 (b) 40 (c) 30 (d) 60

TIME AND DISTANCE

181. A person crosses a 1200 m long street in 10 minutes. What is his speed in kmph?
 (a) 7.2 kmph (b) 8 kmph
 (c) 9 kmph (d) None of the above
182. A person completes a journey of 48 km in 2 hours. How much time will he take to cover a distance of 252 km?
 (a) 10 hours (b) 11 hours
 (c) $10\frac{1}{2}$ hours (d) None of the above
183. A train completed half a trip at 30 miles per hour and the other half at 60 miles per hour. If the whole trip was 20 miles, then how much time did the train take to complete the trip? [June 2002]
 (a) 90 minutes (b) 60 minutes
 (c) 45 minutes (d) 30 minutes
184. A person performs half of his journey by train, one-third by bus and the rest 5 km by auto rickshaw. Find his total journey.
 (a) 30 (b) 36
 (c) 40 (d) 45
185. Excluding stoppages, the speed of a bus is 54 kmph, and including stoppages, it is 45 kmph. For how many minutes does the bus stop per hour?
 (a) 9 (b) 10
 (c) 12 (d) 20
186. A man completes a journey in 10 hours. The first-half of the journey is covered at the speed of 21 km per hour and second-half at 24 km per hour. The total distance covered during the journey is
 (a) 220 km (b) 224 km
 (c) 230 km (d) 234 km
187. A man on tour travels first 320 km at 64 kmph and the rest at 80 kmph. The average speed for the entire 640 km of the tour is
 (a) 35.55 kmph (b) 36 kmph
 (c) 71.11 kmph (d) 71 kmph
188. A person travelled a distance of 610 km in 9 hours. He travelled the first phase at a speed of 40 kmph and the rest at 90 kmph. The distance travelled during the first phase is
 (a) 140 km (b) 150 km
 (c) 160 km (d) 170 km
189. A train whose length is 320 m is running at a speed of 36 kmph. How much time will it take to pass a pole?
 (a) 30 s (b) 32 s (c) 36 s (d) 40 s
190. A 280 m train is moving at a speed of 80 kmph. How much time will it take to pass a bridge that is 120 m long?
 (a) 30 s (b) 32 s (c) 36 s (d) 40 s

CALENDAR

191. The year next to 1991 will have the same calendar as that of the year 1991.
 (a) 1992 (b) 1995
 (c) 1996 (d) 1997
192. What was the day of the week on May 28, 2007?
 (a) Thursday (b) Friday
 (c) Saturday (d) Monday
193. What was the day of the week on 16 June, 1999?
 (a) Monday (b) Tuesday
 (c) Wednesday (d) Thursday
194. What will be the day of the week on 16 August, 2010?
 (a) Sunday (b) Monday
 (c) Tuesday (d) Friday
195. It was Wednesday on 15 August 2012. What should be the day on November 15, 2013?
 (a) Wednesday (b) Thursday
 (c) Friday (d) None of the above
196. If it is Sunday today, then what will be the day after 60 days?
 (a) Sunday (b) Thursday
 (c) Tuesday (d) Friday

197. If 22 April 2013 is Monday, then what was the day of the week on April 22, 2012?
 (a) Sunday (b) Saturday
 (c) Tuesday (d) Wednesday
198. What was the day of week on 1 April, 2001?
 (a) Sunday (b) Saturday
 (c) Tuesday (d) Friday

199. The last day of a century cannot be
 (a) Monday (b) Wednesday
 (c) Tuesday (d) Friday
200. 10 February, 2005 was Thursday. What was the day of the week on 8 February, 2004?
 (a) Tuesday (b) Monday
 (c) Sunday (d) Wednesday

VENN DIAGRAMS

201. Out of 40 students, 14 are taking English composition and 29 are taking Chemistry. If 5 students are in both classes, then how many students are in neither class? How many are in either class?
 (a) 2 (b) 3
 (c) 4 (d) 5
202. How many numbers are there between 1 and 100 that are not divisible by 3 and 5?
 (a) 47 (b) 43
 (c) 53 (d) 58
203. In an examination, 52% of the candidates failed in English, 42% in Mathematics and 17% in both. The number of those who passed in both the subjects is
 (a) 83% (b) 23%
 (c) 64% (d) 55.5%
204. In a group of 40 people, 25 speak English and 20 speak both Hindi and English. All the people speak at least one of the two languages. How many people speak Hindi?
 (a) 15 (b) 20
 (c) 25 (d) 30
205. If 40% of the people read newspaper X, 50% read newspaper Y, and 10% read both the papers, then what percentage of the people read neither of the newspaper?
 (a) 10% (b) 15%
 (c) 20% (d) 25%

206. Which of the following diagrams indicate the best relation between a teacher, writer and an artist?

207. Which of the following diagrams indicate the best relation between travellers, train and taxi?

208. Which of the following diagrams indicate the best relation between teacher, parents and guardians?

209. Which of the following diagrams indicate the best relation between professors, doctors and men?

210. Which of the following diagrams indicate the best relation between mercury, zinc and metal?

Questions 211–215: Study the diagram given below and answer each of the following questions.

211. How many doctors are neither artists nor players?
 (a) 17 (b) 5 (c) 10 (d) 30
212. How many doctors are both players and artists?
 (a) 22 (b) 8 (c) 3 (d) 30
213. How many artists are players?
 (a) 5 (b) 8 (c) 25 (d) 16
214. How many players are neither artists nor doctors?
 (a) 25 (b) 17 (c) 5 (d) 10
215. How many artists are neither players nor doctors?
 (a) 10 (b) 17 (c) 30 (d) 15

ANSWER KEYS**Number Series Completion**

1. (c) 2. (a) 3. (c) 4. (b) 5. (c) 6. (b) 7. (d) 8. (b) 9. (a) 10. (d)

 211. (a) 212. (c) 213. (c) 214. (a) 215. (c)

SOLUTION
Number Series Completion

1. (c): Each number is half of its preceding number.
2. (a): +5, +10, +15, +20, +25, +30
3. (c): +3, +6, +9, +12
4. (b): In first row, it is -2 ; in second row, it is $+2$, and in third row, it is $+2$.
5. (c): Multiply first by 3 and divide the number so obtained by 2. This is to be done alternatively for all other numbers.
6. (b): $\times 10 - 100, \times 10 - 100$ and so on.
7. (d): The pattern is $+5, -2, +5, -2, \dots$. Hence, the missing term = $36 - 2 = 34$.
8. (b): The sum of any three consecutive terms of the series is given to the next term. Hence, missing number = $8 + 15 + 27 = 50$.
9. (a): The second number is the square of the first number; fourth number is the square of third number. Similarly, the sixth number should be the square of fifth. Hence, the answer is 16, i.e., square root of 256.
10. (d): The numerator increases by addition of 2, 3, 4 and 5. The denominator increases by addition of 4, 6, 8 and 10.
11. (d): Prime number (numbers that are divisible by 1 and themselves only) starting with 2 are being added to each number to get the subsequent numbers.
Thus, the sequence of numbers can be read as 125, $125 + 2$, $127 + 3$, $130 + 5$, $135 + 7$, $142 + 11$, and $153 + 13$. Hence, the last number should be 166.
12. (c): Each term in the series is obtained by adding 1 to the square of the preceding term.
Hence, the missing term = $(101)^2 + 1 = 10,202$.
13. (b): It is a question of mixed series.
(i) Numbers at 1st, 3rd, 5th, and 7th places are squares of 1, 2, 3 and 4.
(ii) Numbers at 2nd, 4th, 6th, and 8th places are cubes of 1, 2, 3, 4 and 5. Hence, the answer is $4^3 = 64$.
14. (a): The pattern is
 $3 \times 1 + 2 = 5$
 $5 \times 2 + 3 = 13$
 $13 \times 3 + 4 = 43$
 $43 \times 4 + 5 = 177$
 $177 \times 5 + 6 = 891$
 Hence, (a) is the answer.
15. (b): The given sequence is a combination of two series:
 (i) 3, 7, 13, 21, 31, ? and (ii) 4, 7, 13, 22, 34
 The pattern in (i) is $+4, +6, +8, +10, \dots$
 The pattern in (ii) is $+3, +6, +9, +12, \dots$
 Hence, the missing term = $31 + 12 = 43$.
16. (d): $10 \times 2 + 4 = 24$;
 $24 \times 2 + 4 = 52$;
 $52 \times 2 + 4 = 108$;
 and so on.
17. (a): The given series consists of cubes of natural numbers only. The number 256 is not the cube of any natural number.
18. (c): The given sequence is a combination of two series.
 Ist Series: 13, 24, 35, 46 and 57
 IInd Series: 32, 43, ?, 65 and 76
 The pattern in both series is $+11$. Hence, the missing term = $43 + 11 = 54$.
19. (d): $23 + 10 = 33$, $33 + 13 = 46$, $46 + 16 = 62$ and so on
20. (d): $10 \times 3 - 4 = 26$
 $26 \times 3 - 4 = 74$
 $74 \times 3 - 4 = 218$
 $218 \times 3 - 4 = 650$
 $650 \times 3 - 4 = 1946$

Letter Series Completion

21. (a): The third letter is repeated as the first letter of the next segment. The middle letter, A, remains static. The third letters are in alphabetical order beginning with R.
22. The middle letter T is fixed. First and third letters are swapping their position in second and fourth terms. The first letters are in alphabetical order: F, G, H, I, and J. The missing segment begins with a new letter J.
23. (c): For first letter of each triplet, the series is STUVW. The remaining two letters of the series goes like CD, EF, GH, IJ, KL.
24. (b): This is an alternating series in alphabetical order. The middle letters follow the order ABCDE. The first and third letters of the triplets are in alphabetical order beginning with J. The third letter is repeated as a first letter in each subsequent three-letter segment.
25. (b): If we look at the alphabetic series given in Table 5.1, the difference between first letters of all pairs is three. Moreover, the difference between two letters in each pair is ten. Hence, MW is the answer.

26. (d): The second and fourth letters in the series, L and T are static. The first and third letters consist of an alphabetical order beginning with the letter E.
27. For 1st Letter: $W - 4 = S$; ...I
For 2nd Letter: $E + 2 = G$; ... S
28. (a): This series is just like the above series. However, the middle letter of each term is replaced by a number.
29. (a): The third letter is repeated as the first letter of the next segment. The middle letter, A, remains static. The third letters are in alphabetical order beginning with R.
30. (b): There is a gap of one letter in the successive terms. Numbers are doubled.

Coding and Decoding

31. (c): Refer to Tables 5.1 and 5.2.
For example, C is ranked 3 in Table 5.1. The same rank denotes 'X' in Table 5.2. Thus, X is coded for C.
Thus, CERTAIN has been coded as XVIGZRM. Similarly, MUNDANE can be coded as NFMWZMV.
32. (a): Here, the code is the reverse of the given word. The answer is TROFDER, which is the reverse of RED FORT.
33. (d)

M	O	T	H	E	R
↘		+1 ↘		+1 ↘	
O	M	H	U	R	F

Similarly,

A	N	S	W	E	R
↘		+1 ↘		+1 ↘	
N	A	W	T	R	F

34. (a): The first and the last letters of the word swap their positions. All other letters are moved one place and get placed in the reverse manner.
35. (d)
36. (a)

C	L	A	I	M
+1	+2	+3	+4	+5
D	N	D	M	R

C	H	A	R	G	E
+1	+2	+3	+4	+5	+6
D	J	D	V	L	K

37. (c)

C	+3	F
O	+4	S
L	+5	Q
D	+6	J

Similarly,

H	+3	K
E	+4	I
A	+5	F
T	+6	Z

38. (c): The letters at the odd positions are moved three, four, and five steps forward, whereas the letters at the even positions are each moved two steps forward to get the corresponding letters of the code.
39. (b): Please refer to alphabetic series table and add the number of alphabets in the given word.
40. (a): The numbers are coded as follows.

1	3	7	8	9
X	T	Z	A	L

2	3	4	6
N	P	S	U

That is, 2 as N, 3 as P, 5 as T, 4 as S, and 9 as L. Thus, 23549 is coded as NPTSL.

41. (d)

A	B	C	D	E	F	G	H	I	J	K
5	6	7	8	9	10	11	12	13	14	15

L	M	N	O	P	Q	R	S	T	U
16	17	18	19	20	21	22	23	24	25

Now,

22	25	8	22	5
R	U	D	R	A

42. (b)

C	A	L	A	N	D	E	R
↓	↘	↘	↘	↘	↘	↘	↓
C	L	A	N	A	E	D	R

C	I	R	C	U	L	A	R
↓	↘	↘	↘	↘	↘	↘	↓
C	R	I	U	C	A	L	R

43. (a)

Letters	D	R	L	A	L
Position	4	18	12	1	12
Change	+2	+2	+2	+2	+2
Code	6	20	14	3	14

Hence, the code for DRLAL is 62014314.

Letters	C	A	M	E	L
Position	3	1	13	5	12
Change	+2	+2	+2	+2	+2
Code	5	3	15	7	14

Hence, the code for CAMEL is 5315714.

44. (a)

L	I	G	H	T
G	I	L	T	H

R	A	I	N	Y
I	A	R	Y	N

45. (a): First rearrange the letters of the word 'ARGUMENT' in alphabetical order and then substitute each letter by the letter immediately following it.

A	E	G	M	N	R	T	U
+1	+1	+1	+1	+1	+1	+1	+1
B	F	H	N	O	S	U	V

46. (c): All words in the answer choices consist of five letters. The first two and last two letters interchange their positions.

O	F	T	E	N
F	O	T	N	E

Similarly,

R	I	S	K	Y
I	R	S	Y	K

47. (c): The fruits grow on a 'tree', and 'tree' is called 'sky'. Hence, the fruits grow on the 'sky'.
48. (b): The colour of sky is blue; here, blue is called Green.
49. (a): In the first and second statements, the common code word is 'nie' and the common word is 'some'. Thus, 'nie' means 'some'.
In the first and third statements, the common code word is 'pie' and the common word is 'good'. Thus, 'pie' means 'good'. Hence, 'jokes' is denoted by 'bi'.
50. (a): Teacher uses chalk to write on the blackboard. Here, chalk has been called book.
51. (c): In the first and third statements, the common word is 'na' and the common word is 'are'. Hence, 'na' means 'are'.

In the second and third statements, the common code word is 'tok' and the common word is 'bad'. Hence, 'tok' means 'bad'. Thus, in the third statements, 'tim' stands for 'they'.

52. (a): In the first and third statements, the common code digits are '4' and '3' and the common words are 'mangoes' and 'are'. Hence, '4' and '3' are the codes for 'mangoes' and 'are', respectively. Thus, in the third statements, '9' means 'ripe'.
53. (c): In the first and third statements, the common code digit is '5' and the common word is 'good'. Hence, '5' means 'good'.
In the second and third statements, the common code digit is '3' and the common word is 'bad'. Thus, '3' means 'bad'.
Thus, in third statement, '8' means 'and'.
54. (c): In the first and third statements, the common code digit is '6' and the common word is 'is'. Thus, '6' means 'is'.
In the second and third statements, the common code digit is '4' and the common word is 'colour'. Thus, '4' means 'colour'.
Thus, in the statement, '3' means 'fun'.
55. (d): In the first and second statements, the common code digit is '3' and the common word is 'hot'. Thus, '3' means 'hot'.
In the second and third statements, the common code digit '5' and the common word is 'day'. Thus, '5' means 'day'.
Thus, in the second statements, '6' means 'very'.

Choose the Odd Word

56. (c): All, except universe form a part of the universe.
57. (b): All, except Geography are branches of science.
58. (a): All, except mechanic help in building a house.
59. (b): All others denote blood relations.
60. (d): Mercury is the only liquid metal in the group.
61. (c): All, except bear belong to the cat family.
62. (b): All others are parts of bed spread.
63. (b): All, except eagle are flightless birds.
64. (c): All, except river contain stagnant water.
65. (a): All, except arrow are used while holding hand.

Odd Pairs

66. (d): In all other pairs, second is prepared by the first.
67. (d): In all other pairs, first is used to contain the second.
68. (a): In all other pairs, second is the noise produced by the first.
69. (b): In all other pairs, the two words are antonyms of each other.
70. (a): In all other pairs, second is a part of the first.
71. (c): Each of the numbers except 63 is a prime number.
72. (a): Each of the number except 51 is a perfect square.

73. (d): Each of the numbers except 28 is divisible by 3.
 74. (a): Sum of the digits in each other number is 10.
 75. (a): All other numbers are cubes of odd numbers.

Choose the Odd Number Pair or Group

76. (d): In all other pairs, first number is 13 more than the second.
 77. (c): In all other pairs, second number is the cube of the first.
 78. (a): In all other pairs, one number is the square of the other.
 79. (d): In all other pairs, the sum of two numbers is 8.
 80. (d): In all other pairs, the second number is one less than the square of the first number.
 81. (b): All other pairs consist of prime numbers only.
 82. (b): In all other pairs, first number is the cube of the second.
 83. (d): All other pairs consist of odd numbers only.
 84. (d): In all other pairs, second is the multiple of first.
 85. (c): In all other pairs, it is the square of first term + 1.

Choose the Odd Letter Group

86. (d): All other groups contain alternate letters from left or right.
 87. (a): All other groups contain alternate letters of the alphabet.
 88. (d): First letter is moved two places forward to obtain the third letter. Then third letter is moved two positions forward to obtain the middle letter.
 89. (d): In all other groups, the third and second letters are 3 steps ahead of the first and third letters, respectively.
 90. (b): Only (b) contains a vowel.
 91. (b): In all other groups, the first and second letters occupy the same position in the alphabet from the beginning and the end, respectively. The second letter is moved one step backward to obtain the third letter.
 92. (d): In all other groups, four intervening letters are skipped.
 93. (c): In all other groups, the second letter is moved 2 steps forward to obtain the third letter, which then is moved 1 step forward to obtain the first.
 94. (d): All other groups end with AT.
 95. (b): There is no repetition of any letter in any other group.

Analogy

Direct or Simple Analogy

96. (b): Second word denotes the place where the sport is held.
 97. (d): First works for and earns from the second.

98. (a): The words in each pair are antonyms of each pair.
 99. (a): Second is required by the first to function.
 100. (c): Second is the working place of the first.
 101. (a): The prime job of the first is to do the second.
 102. (a): Second is made according to the first.
 103. (b): First is prepared as per the directions of the second.
 104. (a): Second is the place for the first to perform on.
 105. (b): First composes the second.
 106. (a): First denotes the lack of second.
 107. (a): Scientific experiments are conducted in a laboratory. Similarly, astronomical observations are made in an observatory.
 108. (b): Bibliophile is a lover of books. Similarly, patriot is a lover of one's country.
 109. (d): The words in each pair are antonyms of each other.
 110. (d): Second is the dwelling place of the first.

Completing the Analogous Pair

111. (b): The words in each pair are antonyms of each other.
 112. (d): Second contains the story of the first.
 113. (d): First causes the second.
 114. (b): The words in each pair are antonyms of each other.
 115. (c): First forms the basis of the second.
 116. (c): Taxonomy is the science dealing with classification. Similarly, pedology deals with study of soils.
 117. (a): The words in each pair are antonyms of each other.
 118. (b): First is followed by the second.
 119. (c): Second is the feminine gender of the first.
 120. (b): First robs the second.
 121. (b): Second is the sound produced by the first.
 122. (d): The words in each pair are antonyms of each other.
 123. (b): Ornithologist specializes in the study of birds. Similarly, anthropologist specializes in the study of mankind.
 124. (c): Oxygen supports burning, whereas carbon dioxide extinguishes fire.
 125. (d): Seismograph measures the intensity of earthquakes. Tachometer measures strains.

Blood Relations

126. (a)

Hence, F is the uncle of G.

127. (c)

The maternal grandmother of Seeta and grandmother of Ravi is the same person. Hence, Seeta and Ravi are cousins.

128.

Therefore, D is a boy because there is only one daughter of E (or husband of E as given in the question statement).

Here, + and - has been used for male and female, respectively. = sign has been used to show husband–wife relationship and for \leftrightarrow sibling relationship. Hence, B is the brother of D.

129. (b)

As per the question, the person playing game is different from Dinesh. The person playing the game is the brother of Dinesh.

130. (d)

131. (d)

132. (b)

The man in the photograph is the son of the only son of Raveena's grandfather. Thus, the man is the son of Raveena's father. Hence, he is the brother of Raveena.

133. (d)

Amit is the only brother of Sandy, and Vinita is the sister-in-law of Amit. Hence, Vinita is the wife of Sandy. Kamni is the mother-in-law of Vinita. Kamni is the mother of Amit.

134. (d)

Hence, the woman in the picture is the mother of Amit.

135. (a)

As X is the only son of C (and D), Y is the female. Looking at the family tree, we can say that Y is the niece of F.

Direction Sense

136. (c)

137. (a)

138. (c)

139. (c)

He is moving in the west direction now.

140. (d)

Required distance = AF
 = 30 + 15
 = 45 km

141. (c)

142. (d)

143. (d)

144. (a)

145. (b)

Seating Arrangements

146. (b)

The seating arrangement is as follows:

Therefore, the right of P is X.

147. (b)

Therefore, A is sitting in between B and C.

148. (a)

149. (d)

$J > L$ and $D > F$. Hence, $J > L > H > D > F$.
 Hence, H is the third to reach.

150. (a)

North
 R Q P S T

Basic Percentage Calculations

151. (c): Let original price = 100
 Original quantity = 100
 Total expenditure = 100×100
 New price = $100 + 25 = 125$
 New quantity = Q
 As expenditure is to be kept same,
 $100 \times 100 = 125 \times Q$
 $Q = (100 \times 100)/125 = 80$.
 % reduction in quantity = $100 - 80 = 20$.

152. (d): Let total employees = 100
 Matriculates = 40
 Remaining = $100 - 40 = 60$
 Graduates = 50% of remaining $60 = 30$
 Postgraduates = $100 - 40 - 30 = 30$
 Graduates = Postgraduates
 Hence, graduates are also 180.

153. (b): 96% of total population = 23,040
 Hence, total population = $23,040 \times 100/96 = 24,000$

154. (c): Ratio between boys: girls = 75%: 25% = 3 : 1
 Hence, number of boys = $3 \times 420 = 1,260$

155. (b): $(100 - 12.5)\%$, i.e., 87.5% of total income = 3500,
 total income = $3,500 \times 100/87.5 = 4000$

156. (d): $+20 - 20 + (-20) \times (+20)/100 = -4\%$.

157. (b): Let Y's salary = 100, then X's salary = 50
 X's new salary = $50 \times 3/2 = 75$
 Y's new salary = $100 \times 5/4 = 125$
 Combined old salary = $100 + 50 = 150$
 New combined salary = $75 + 125 = 200$
 Increase in combined salary = 50
 Percentage increase = $50/150 \times 100 = 33.33\%$

158. (a): Let x water to be added to make water 20% of new mixture.

Water in old mixture = 10% of 40 = 4 l
 Water in new mixture to make it 20% = $(4 + x) l$
 Now 20% of $(40 + x) l = 4 + x$
 Solving equation, we get $x = 5 l$.

159. (d): Let income = 100
 New income = 120
 New expenditure = $75 + 10\%$ of 75 = 82.5%
 New savings = $120 - 82.5 = 37.5$
 Old saving = 25,
 Percentage increase in savings
 = $(37.5 - 25)/25 \times 100$
 = $12.5/25 \times 100 = 50\%$

160. (d): Let C's income = 100
 B's income = $100 + 20 = 120$
 A's income = 125% of 120 = 150
 Thus, A's income is 50% higher than that of C.

161. (b): Let original price = 100
 Increased price = $100 + 25 = 125$

Now 125 is to be brought to 100; Say it is multiplied by x .
 $125 \times x = 100$
 $x = 100/125 = 4/5$ that is equivalent to 80%.
 Hence, the price should be reduced by 20%.

162. (c): Let cost price = 100
 Net selling price = $100 + 8 = 108$
 Now $120 - (x\% \text{ of } 120) = 108$
 $x = 10$
163. (c): Discount on ₹60 = 25% of ₹60 = ₹15
 Assume that the retailer offers a discount of ₹15 or 4 extra mangoes.
 New purchase price of 4 mangoes = ₹15
 Purchase price of one mango = $15/4 = ₹3.75$
164. (c): Suppose both length and breadth are 100.
 Hence, area = 100×100
 New length = $100 + 10 \text{ m} = 110$
 As area is to be kept same,
 $110 \times \text{new breadth} = 100 \times 100$
 New breadth = $100 \times 100/110 = 1000/11$
 Decrease in breadth = $100 - 1,000/11 = 100/11 = 9.11\%$
 As breadth was assumed to be 100, no additional calculation is required for percentage figure.
165. (b): Using the formula: $x + y + xy/100$, net percentage increase = $20 + 40 + (20 \times 40)/100 = 68\%$
 Increased price = ₹25 + 68% of 25 = $25 + 17 = ₹42$
Alternatively: Using the multiplier factor concept, we get the final price as $25 \times \left(\frac{6}{5}\right) \times \left(\frac{7}{5}\right) = ₹42$
166. (a): Circumference of a circle = $2\pi r$. As r increase by 20%, the circumference also increases by 20%.
167. (b): Area of a circle = πr^2
 As $r^2 = r \times r$ and as r increases by 20%, r^2 increases by $20 + 20 + \frac{(20 \times 20)}{100} = 44\%$
168. (d): Let side of square = 100
 Area = $100 \times 100 = 10,000$
 New side = $100 + 25 = 125$
 New area = $125 \times 125 = 15,625$
 Percentage increase = $\{(15,625 - 10,000)/10,000\} \times 100 = 56.25$
 Alternatively = $x + x + x^2/100 = 25 + 25 + 25 \times 25/100 = 56.25\%$
169. (c): Increased length = $20 \times \frac{11}{10} = 22 \text{ cm}$
 Increased breadth = $10 \times \frac{120}{100} = 10 \times \frac{6}{5} = 12 \text{ cm}$
 The new area = $22 \times 12 = 264 \text{ sq. cm}$
 As there is multiplication of two quantities in the area formula, we can use the method $a + b + \frac{ab}{100}$ to calculate the percentage increase in area also.

170. (b): We can use the formula $x + y + \frac{xy}{100}$ to calculate the net increase.
 $25 + 12 + (25 \times 12)/100 = 40\%$

Arithmetic Mean

171. (c): Total increase in weight = $(8 \times 2.5) \text{ kg} = 20 \text{ kg}$
 Weight of new person = $(60 + 20) \text{ kg} = 80 \text{ kg}$
172. (c): Total weight of 8 articles = 200 kg
 Total weight of 3 articles = $3 \times 20 = 60 \text{ kg}$
 Total weight of rest of 5 articles = $200 - 60 = 140 \text{ kg}$
 Average weight of 5 articles = $140/5 = 28 \text{ kg}$
173. (c): As the distance is not mentioned, L.C.M. of 35 and 42, that is, 210 can be assumed to be the total distance.
 Time taken from A to B = $210/35 = 6 \text{ hours}$
 Time taken from B to A = $210/42 = 5 \text{ hours}$
 Total Time taken = 11 hours
 Average speed = $(210 + 210)/(6 + 5) = 420/11 = 38.17 \text{ kmph}$
 Alternatively, by applying direct formula

$$= \frac{2xy}{x + y}$$

$$= (2 \times 35 \times 42) / 35 + 42 = 38.17 \text{ kmph}$$
174. (c): Petrol consumed during 1st year = $4000/8 = 500$
 Petrol consumed during 2nd year = $4000/10 = 400$
 Total expenditure = $4000 \times 2 = 8000$
 Total petrol consumed = $500 + 400 = 900$
 Average cost per litre = $8000/900 = ₹8.88$
Note: The answer won't be ₹9 as many have thought because calculation of average also depends upon quantity consumed.
175. (b): First statement is not sufficient to answer the question because the speed of the second half of the distance is not given here but statement II can answer as information to calculate average speed = distance/time is given in the statement.
176. (b): Time taken by B to reach destination = $350/50 = 7 \text{ hours}$
 If A has a head start of 1 hour then the distance travelled by A when B reaches the destination = $40 \times (7 + 1) = 320 \text{ km}$
 Hence, A has to still travel 30 km while B has reached the destination.
177. (d): Distance travelled in 2 hours = $35 \times 2 = 70 \text{ km}$
 Distance travelled in next $3\frac{1}{2}$ hours = $60 \times 3.5 = 210 \text{ km}$
 Distance travelled in next $2\frac{1}{2}$ hours = $70 \times 2.5 = 175 \text{ km}$
 Total distance = $70 + 210 + 175 = 455 \text{ km}$
 Average speed = Total distance/Total time taken = $(70 + 210 + 175)/(2 + 3.5 + 2.5) = 455/8 = 56.87 \text{ kmph}$
178. (a): The present total age of husband and wife = $2 \times (22 + 5) = 54 \text{ years}$
 Total age of family (including child) = $54 + 3 = 57 \text{ years}$
 Average age of family = $57/3 = 19 \text{ years}$

179. (b): Monthly saving = $3600/12 = ₹300$
Hence, monthly expenditure = income – saving = $1400 - 300 = ₹1100$
180. (b): The total of a, b, and c = $3 \times 50 = 150$
 $d = 10$
Total of a, b, c, and d = $150 + 10 = 160$
Average of a, b, c and d = $160/4 = 40$

Speed, Time, and Distance

181. (a): Speed = Distance/Time = $1,200 \text{ m}/600 \text{ s} = 2 \text{ m/s}$.
Speed in kmph = $2 \times 18/5 = 7.2 \text{ kmph}$
182. (c): Here, Speed = $48/2 = 24 \text{ kmph}$
Time taken = $252/24 = 10\frac{1}{2} \text{ hrs}$
183. (d): Average speed = $2 \times 30 \times 60/(30 + 60) = 2 \times 30 \times 60/90 = 40 \text{ mph}$
Time taken by train to complete the trip = Distance/Speed = $20/40 = \frac{1}{2} \text{ hr} = 30 \text{ min}$.
184. (a): The distance covered by auto-rickshaw = $1 - (1/2 + 1/3) = 1/6$
 $1/6$ of total journey = 5 km
Total journey = $6 \times 5 = 30 \text{ km}$
185. (b): Due to stoppages, it covers 9 km less.
Time taken to cover $9 \text{ km} = 9/54 \times 60 \text{ min} = 10 \text{ min}$
186. (b): Average speed = $(2 \times 21 \times 24)/(21 + 24) = 22.4 \text{ kmph}$
Distance = Time \times Speed = $22.4 \times 10 = 224$
187. (c): As the distance in both ways is same, we can apply the formula $2xy/x+y$.
Average speed = $(2 \times 64 \times 80)/(64 + 80) = 71.11 \text{ kmph}$
188. (c): Let the distance travelled in first phase be $x \text{ km}$.
Then, distance travelled in second phase = $(610 - x) \text{ km}$.
Hence, $x/40 + (610 - x)/90 = 9 \text{ hours}$
 $\Rightarrow x = 160 \text{ km}$
189. (b): Distance to be travelled = 320 m
Speed = $36 \text{ kmph} = 36 \times 5/18 = 10 \text{ m/s}$
Time taken = $D/S = 320/10 = 32 \text{ s}$
190. (c): Total distance to be travelled = $280 + 120 = 400 \text{ m}$
Speed should be converted into m/s.
Speed = $40 \text{ kmph} = 40 \times 5/18 = 100/9 \text{ m/s}$
Time = $D/S = 400/100/9 = 36 \text{ s}$
191. (d): There are two conditions for two years having the same calendar: both having same length in terms of number of days and first day starting with same day of the week.
The year 1991 has 365 days, that is, 1 odd day, year 1992 has 366 days, that is, 2 odd days, year 1993 has 365 days, that is, 1 odd day. The years 1994, 1995, and 1996 have 1 odd day each.
The sum of odd days so calculated from year 1991 to 1996.
 $(1 + 2 + 1 + 1 + 1 + 1) = 7$ odd days.
Hence, the year 1997 will have the same calendar as that of the year 1991.
192. (d): 28th May, 2007 = (2000 years + 6 years + period from 1.1.2007 to 28.5.2007)
Odd days in 2000 years = 0
Odd days till 2006 = (5 ordinary years + 1 leap year) = $(5 \times 1 + 1 \times 2) = 7$ odd days

Jan	Feb	March	April	May	Total
31	28	31	30	28	148

$148 \text{ days} = (21 \text{ weeks} + 1 \text{ day}) \Rightarrow 1 \text{ odd day}$
Total number of odd days = (2000 years + 6 years + period from 1.1.2007 to 28.5.2007)
 $= (0 + 7 + 1) = 8$ odd days, i.e., again 1 odd day. Hence, Monday is the answer.

193. (c) 16th June, 1999 = (1900 years + 98 years + period from 1.1.1999 to 16.6.1999)
Now first deal with 1998 complete years; then how many odd days are there in 1998 years?
Odd days in 1600 years = 0
Odd days in 300 years = $(5 \times 3) = 1$
98 years have 24 leap years + 74 ordinary years.
Number of odd days in 98 years $(24 \times 2 + 74) = 122 = 3$ odd days.
Now come to calculation of odd days in period from 1.1.1999 to 16.6.1999.

Months	Jan	Feb	March	April	May	June	Total
Odd days	31	28	31	30	31	16	167

$167 \text{ days} = 23 \text{ complete weeks plus } 6 \text{ odd days}$ (this result is obtained by dividing 167 days by 7).
Total number of odd days = $(0 + 1 + 3 + 6) = 10 \Rightarrow 3$ odd days
Thus, the day asked in the question is Wednesday.

194. (b): 16 August, 2010 = (2000 + 9 years + period 1.1.2010 to 16.8.2010)
Odd days in 2000 years = 0
9 years = (2 leap years + 7 ordinary years) = $(2 \times 2 + 7 \times 1) = 11$ odd days
11 can be divided by 7 $\Rightarrow 4$ odd days

Months	Jan	Feb	March	April	May	June	July	Aug	Total
Odd days	31	28	31	30	31	16	31	16	228

The odd days can be calculated for each month separately and then added up. This can save some time in calculation. Such as January has 3 odd days (31 divided by 7 gives remainder of 3 and so on).

Calendar

191. (d): There are two conditions for two years having the same calendar: both having same length in terms of number of days and first day starting with same day of the week.
The year 1991 has 365 days, that is, 1 odd day, year 1992 has 366 days, that is, 2 odd days, year 1993 has 365 days, that is, 1 odd day. The years 1994, 1995, and 1996 have 1 odd day each.
The sum of odd days so calculated from year 1991 to 1996.
 $(1 + 2 + 1 + 1 + 1 + 1) = 7$ odd days.
Hence, the year 1997 will have the same calendar as that of the year 1991.

Now, 228 days = 32 complete weeks + 3 extra days, it means 3 odd days.

Total number of odd days = $(0 + 0 + 4 + 4) = 8$; it means 1 odd day.

Thus, 16 August, 2010 was Monday.

195. (c): From August 15, 2012, till August 15, 2013, there is one extra day. In the rest of 16 days of August, there are 2 odd days. In September, there are 2 odd days, and in October, 3 odd days. In first 15 days of November, there will be 1 odd day. Thus, the total number of odd days is $1 + 2 + 2 + 3 + 1 = 9$; it means 2 extra (odd) days. Hence, November 15, 2013 was Friday.

196. (b): Each day of the week is repeated after 7 days. Assuming that first day is Sunday, 8, 15, 22, 29, 36, 43, 50 and 57 days will be Sundays. Hence, 58 day is Monday, 59 is Tuesday, 60 is Wednesday. Hence, day after 60 days will be Thursday.

197. (a): The year 2012 is a leap year. Thus, it has 2 odd days.

But as calculation is to be done from April 22, 2012, till April 22, 2013, so it has 1 odd day only. As the calculation is to be done backwards, thus April 22nd was one day less. Thus, it was Sunday.

Note: Had the question been about April 22, 2014, the answer would have been Tuesday. If the same question is framed for April 22, 2016, the answer would have been Friday as 2016 is a leap year.

198. (a): 1st April, 2001 = (2000 years + period from 1.1.2001 to 1.4.2001)

Odd days in 2000 years = 0

Now, calculate the odd days for the year 2001.

Jan	Feb	March	April	Total
31	28	31	1	91

91 divided by 7 gives 0 as remainder, so, odd days can be counted as 0.

Total number of odd days = $(0 + 0) = 0$

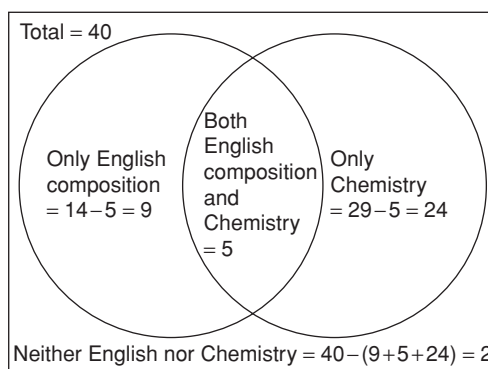

On 1st April, 2001, it was Sunday.

199. (c): 100 years contain 5 odd days.
 Last day of 1st century is Friday.
 200 years contain $(5 \times 2) = 3$ odd days
 Last day of 2nd century is Wednesday.
 300 years contain $(5 \times 3) = 15$ odd days that is, equal to 1 odd day.
 Last day of 3rd century is Monday.
 400 years contain 0 odd days.
 Last day of 4th century is Sunday.
 This cycle is repeated.
 Last day of a century cannot be Tuesday or Thursday or Saturday.

200. (c): The year 2004 is a leap year. It has 2 odd days. Hence, February 10, 2004, was Tuesday and February 8, 2004, must be Sunday.

Venn Diagrams

201. (a)

Alternatively: Students taking either English composition or Chemistry = $14 + 29 - 5 = 38$

Hence, students not taking any class = $40 - 38 = 2$

202. (c): Let us draw a Venn diagram with the information given in the question.

Numbers divisible by 3 (3, 6, 9 and so on) = 33

Numbers divisible by 5 (5, 10, 15 and so on) = 20

Numbers which are divisible by both 3 and 5 (15, 30, 45, 60, 75 and 90) = 6

Numbers divisible by 3 or 5 or both 3 and 5 = $27 + 6 + 14 = 47$ (alternatively, $33 + 20 - 6 = 47$)

Numbers neither divisible by 3 nor by 5 = $100 - 47 = 53$

203. (b)

Number of candidates failed in English = 52%

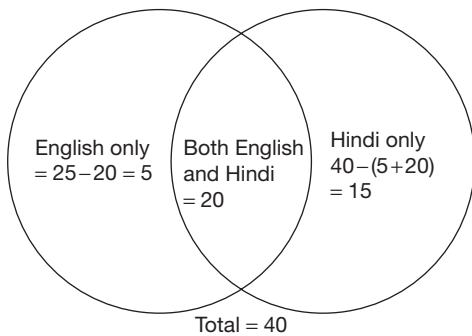

Number of candidates failed in Mathematics = 42%

Number of candidates failed in both = 17%

Total failed = $52 + 42 - 17 = 77\%$

Passed in both the subjects = $100 - 77 = 23\%$

204. (a)

205. (c): People studying newspaper X or Y = $40 + 50 - 10 = 80$.
Hence, people studying neither X nor Y = $100 - 80 = 20$.

(Candidates can try to solve this question with Venn diagram also.)

206. (a): A teacher can be an author; an author can be an artist, and so on. Some person can be a teacher, an author, and artist also.

207. (d): A traveller can travel by both taxi and train.

208. (b): Same explanation as in 6.

209. (c): Same explanation as in 6.

210. (b): Mercury is also a metal, although it exists in liquid state.

211. (a)

212. (c)

213. (c)

214. (a)

215. (c)

Logical Reasoning

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- Understanding the structure of arguments: argument forms, structure of categorical propositions, Mood and Figure, Formal and Informal fallacies, Uses of language, Connotations and denotations of terms, Classical square of opposition.
- Evaluating and distinguishing deductive and inductive reasoning.
- Analogies
- Venn diagram: Simple and multiple use for establishing validity of arguments.
- Indian Logic: Means of knowledge.
- Pramanas: Pratyaksha (Perception), Anumana (Inference), Upamana (Comparison), Shabda (Verbal testimony), Arthapatti (Implication) and Anupalabdhi (Non-apprehension).
- Structure and kinds of Anumana (inference), Vyapti (invariable relation), Hetvabhasas (fallacies of inference)

INTRODUCTION

Reasoning is an important section in aptitude tests and students need to master it necessarily. They aim to check our thinking capability. We always seek explanation of objects, events, subjects and phenomena that occur around us. To seek accurate explanation, we have to apply logic. Then, what is logic? Logic is applying principles of reasoning to obtain valid inferences. Logical reasoning is largely about adopting complete rational approach to solve a problem, with no chance for ambiguity.

On the contrary, analytical reasoning is the act of carefully considering a problem, claim, question, or situation in order to determine the best solution. Applying analytical reasoning also means seeing things from your view point, and there may be some subjectivity also.

The purpose of using reasoning skills is to always justify your decisions and actions.

The first part of the unit deals with logical reasoning and the second part deals with analytical reasoning.

In Unit II, on research aptitude, we have seen that there are basically two approaches to solve a problem, such as inductive and deductive. Continuing with the same idea, reasoning is basically of two types, such as deductive and inductive.

Let's look at some of the following concepts. They are important to be understood by us.

In the study of logic we come to recognize our own native capacities, and practice to sharpen them. It helps us to reason well by becoming aware about the principles of correct reasoning.

The word 'logic' comes from the Greek word logos, literally meaning, word, thought, speech, reason, energy and fire. Logic is the science that evaluates arguments. Ancient Indians, Arabs and Chinese made significant contributions to the growth and development of logic. However, our study is restricted logic developed by Europeans over several centuries.

An argument is a group of statements including one or more premises and one and only one conclusion. Traditionally arguments have been classified into two types, namely deductive and inductive arguments.

A statement is a sentence that is either true or false, such as 'The cat is on the floor'.

Many sentences are not statements, such as 'Kindly close the window'.

A premise is an argument that provides some basic reason or support to get the conclusion. There can be one, two or many premises in a single argument.

A conclusion is an argument that indicates - what the arguer is trying to convince the reader or listener. What is the argument trying to prove? There can be only one

conclusion in a single argument. Inference can be valid or invalid. If inference has its basis in implication, then it is valid. On the other hand, if it does not enjoy the support of implication, then it is invalid.

Deductive Reasoning

Premise: All dogs have long ears.

Premise: Hound is a dog.

Conclusion: Therefore, Hound has long ears.

In deductive reasoning, conclusion is guaranteed to be true if the premises are true. Therefore, in the deductive inference, the conclusion cannot be more general than premise(s). Given the premises that all dogs have long ears and Hound is a dog, it is logical to assume that Hound has long ears. After all, in this example, having long ears are an inherent quality of dogs. This argument is valid. Does it mean it is also true?

The conclusions are based on the premises and one of the premises is not true, it follows that the conclusion is not true, even though it is valid. If one of the premises is not true, then the conclusion is also not true.

Deductive inference is further categorized into immediate (where conclusion is drawn from a single statement) and mediate (where conclusion is drawn from two statements, called syllogism). Syllogism has been discussed further in this unit.

Deductive is akin to analysis (separating any material or abstract entity into its constituent elements).

Inductive Reasoning

Inductive reasoning is the process of making generalized decisions after observing, or witnessing, repeated specific instances of something. Inductive reasoning, while not 100% accurate 100% of the time, is still a relatively quick way to make decisions. Sometimes, saving time is as important as being accurate.

Over the course of our lifetime, we have witnessed hundreds of instances when animals eat, whether it is a cow, an elephant, or a horse. Inductive reasoning tells us that all animals must eat to survive. Have we ever witnessed every animal on earth eat? Of course, the answer is no.

However, by basic biology and common experience, we know that all animals must eat to survive. That is called inductive reasoning. Inductive is akin to synthesis (combining parts to form a whole).

The following example also help in differentiating between deductive and inductive reasonings.

Deductive Reasoning

Statement I: All vegetables contain vitamins.

Statement II: Carrot is a vegetable.

Conclusion: So carrot contains vitamins.

Types of syllogism: On the basis of proposition, syllogism is of four types and they are as follows.

1. **Categorical:** Here, the relationship between the subject and the predicate is without any condition.

Example: I. All trains are planes. II. All dogs are animals.

Within syllogism, our focus is on categorical syllogism.

2. **Hypothetical:** The relationship between the subject and the predicate is asserted conditionally. For example, if it rains he will not attend.

3. **Disjunctive:** In a disjunctive proposition, the assertion is of alteration.

Example: I. Either he is courageous or he is strong.

4. **Relational:** Here, the relation between the various terms is shown in an order:

Example: $a > b > c > d$; so $a > d$ (conclusion).

Inductive Reasoning

Statement I: Most vegetables contain vitamins.

Statement II: Carrot is a vegetable.

Conclusion: So carrot contains vitamins.

Following types of questions appear regularly in the NET Exam. Candidates need to go through Previous Years' Papers section for more such questions.

- In a deductive argument, conclusion is
 - Summing up of the premises.
 - Not necessarily based on premises.
 - Entailed by the premises.
 - Additional to the premises.

Option (c) is the correct one.

- Inductive reasoning is based on or presupposes
 - Uniformity of nature
 - God created the world
 - Unity of nature
 - Laws of nature

Option (a) is the correct one.

The analytical method to solve syllogism problems has been discussed in the later part of the chapter.

STRUCTURE OF ARGUMENTS

An argument, in general, is a form of communication that tries to persuade its audience to adopt a particular position about a topic. Arguments have three main parts, such as a claim that states the position to be argued; reasons that logically explain why the claim should be accepted and evidence that supports the reasons with facts, anecdotes, statistics, expert testimony, and examples.

Reasoning has to be systematic and logical. There are two main components of reasoning, such as arguments (also known as premises, statements, or propositions) and conclusion. Structure of arguments deals with basic terms, validity of arguments, converting sentences into their logical form depending on the requirement, and then application of rules follows so as to arrive at a conclusion. In previous NET examinations, many questions have been asked about basic concepts and terms relating to structure of arguments, so candidates should be well versed with these concepts and terms before they attempt practical problems.

Validity of Arguments

Deductive arguments may be either valid or invalid. If an argument is valid, it is a valid deduction, and if its premises are true, the conclusion must be true. *A valid argument cannot have true premises and a false conclusion.*

The validity of an argument depends, however, not on the actual truth or falsity of its premises and conclusion, but solely on whether the argument has a valid logical form or not. The validity of an argument is not a guarantee of the truth of its conclusion. Under a given interpretation, a valid argument may have false premises that render it inconclusive. The conclusion of a valid argument with one or more false premises may be either true or false.

The following question was asked in June 2009 NET Exam.

A deductive argument is valid if

- Premises are false and conclusion is true.
- Premises are false and conclusion is also false.
- Premises are true and conclusion is false.
- Premises are true and conclusion is also true.

The answer is (d).

Logic seeks to discover the valid forms, the forms that make arguments valid. A form of argument is valid if and only if the conclusion is true under all interpretations of that argument in which the premises are true. Since the validity of an argument depends solely on its form, an argument can be shown to be invalid by showing that its form is invalid. This can be effected by giving a counterexample of the same form of argument with the given premises that are true under a given interpretation, but a conclusion is false under that interpretation. In informal logic, this is also called a counterargument.

Certain examples would help in better clarification about validity of arguments.

- Some Indians are logicians and therefore, some logicians are Indians.*

Valid argument: It would be *self-contradictory* to admit that some Indians are logicians but deny that some (any) logicians are Indians.

- All Indians are human and all humans are mortal and therefore, all Indians are mortal.*

Valid argument: If the premises are true, the conclusion must be true.

- Some Indians are logicians and some logicians are tiresome and therefore, some Indians are tiresome.*

Invalid argument: For example, the tiresome logicians might all be Chinese.

- Either we are all doomed or we are all saved; we are not all saved and therefore, we are all doomed.*

Valid argument: The premises entail the conclusion.

Remember that this does not mean the conclusion has to be true; it is only true if the premises are true, which they may not be.

The following examples would help to clarify this aspect about structure of arguments.

Premises

I: Some men are lawyers.

II: Some lawyers are rich.

Conclusion: Some men are rich.

This argument is invalid. There is a way where you can determine whether an argument is valid and give a counterexample with the same argument form.

Note: Logical strength and soundness are properties of arguments. Truth (or falsity) is a property of statements (or premises or conclusions). Never say that 'argument is false' or that 'premise is logically strong'.

What is a counterexample? *In logic, a counterexample is an exception to a proposed general rule. For example, 'All students are lazy' makes the claim that a certain property (laziness) holds for all students, even a single example of a diligent student will prove it false. Thus, any hardworking student is a counterexample to 'all students are lazy'. More precisely, a counterexample is a specific instance of the falsity of a universal quantification.*

Structure of logical argument is based on

- Formal validity
- Material truth
- Linguistic expression
- Aptness of examples

The correct answer is (a). As discussed, an argument is valid if and only if truth of its premises entails the truth of its conclusion, and each step, sub-argument, or logical operation in the argument is valid.

Analogous arguments: These are basically inductive reasoning. The analogies are not the arguments. However, analogies are mostly used in those arguments. To argue by analogy is to argue that because two things are similar - what is true of one is also true of the other also. Such arguments are called 'analogical arguments'

or 'arguments by analogy'. For example, like the Earth, Europa has an atmosphere containing oxygen; it means that there might be life on Europa because it has an atmosphere that contains oxygen just like the Earth.

In December 2009 Exam, the following question has been asked.

Which of the following is an analogous statement?

- Man is like God.
- God is great.
- Gandhi is the father of the nation.
- Man is a rational being.

Proposition

A proposition is a sentence that makes a statement and gives a relation between two or more terms. In logical reasoning, any statement is termed as a proposition.

A proposition is assumed to be true and from which a conclusion can be drawn. The statement, 'All cats are lemons' is assumed to be true as a proposition (or premise), but actually we all know that cats and lemons are entirely different entities.

Proposition consists of the following four parts:

- Quantifier:** All, no, and some. They specify a quantity. 'All' and 'no' are universal quantifiers and 'some' is a particular quantifier.
- Subject (S):** About which something is being said.
- Predicate (P):** Something that affirms or denies about the subject.
- Copula:** Relation between subject and predicate.

Quantifier + Subject + Copula + Predicate

Examples:

All bats are boys

Some players are doctors.

Quality: Categorical propositions can have one of the two qualities, such as affirmative or negative that has been clarified through 'classification of proposition'.

Classification of Propositions

Propositions are basically of two types, namely universal and particular. Universal proposition is further divided into two parts.

- Universal positive or affirmative (A):** It denotes inclusion.
Form: All S is P, where S is the subject and P is the predicate.
Example: 'All cats are animals'. It is basically about inclusion.
Distribution: It distributes the subject only. In the above statement, cats are distributed in animals.

Predicate is not interchangeable with the subject while maintaining the validity of a proposition. We cannot say that all animals are cats.

Figure 6.1

- Universal negative (E):** It denotes exclusion.

Form: No S is P.

Example: 'No fish are birds' would be a universal negative.

Distribution: Both subject and predicate. Here, an entire class of predicate term is denied to the entire class of the subject term.

Figure 6.2

Particular proposition: A particular proposition can also be divided into two parts.

- Particular positive (I):** It denotes 'partial inclusion'.

Form: Some S is P.

Example: Some men are foolish.

Distribution: Neither the subject nor the predicate. In the example, subject term, men is used not for all but only for some men and similarly, the predicate term, foolish is affirmed for a part of subject class. So, both are undistributed.

Figure 6.3

- Particular negative (O):** It denotes partial exclusion.

Form: Some S is not P or not every S is P.

Example: 'Some birds are not carnivores'.

Distribution: Only of predicate.

Table 6.1 will help the candidates in comparing major aspects of different forms of a proposition.

Table 6.1 Types and Main Characteristics of Propositions

Sign	Statement form	Examples	Quantity	Quality	Distributed
A	All S are P	All politicians are liars	Universal	Positive	Only subject
E	No S are P	No politicians are liars	Universal	Negative	Both subject and predicate
I	Some S are P	Some politicians are liars	Particular	Positive	Neither subject nor predicate
O	Some S are not P	Some politicians are not liars	Particular	Negative	Only predicate

PARTS OF CATEGORICAL PROPOSITIONS

There are three parts of statements in categorical syllogism, such as major premise, minor premise and conclusion. Each of the premise has one term in common with the conclusion.

Parts	Example
Major premise	All humans are mortal
Minor premise	All Greeks are humans
Conclusion	All Greeks are mortal

- 1. Major premise:** Predicate of the conclusion is called as the major term. The premise containing major term is called major premise. In the example, mortal is the major term.
- 2. Minor premise:** Subject of the conclusion is called minor term. The premise containing minor term is

called minor premise. In the example, Greeks is the minor term.

- 3. Middle term:** One term common in both the premises is called middle term. It is not a part of conclusion. In the example, humans is the middle term.

For practical purpose, we can put the statements in the following form.

Statement 1:

$$A - - \rightarrow B$$

$$B - - \rightarrow C$$

Conclusion:

$$A - - \rightarrow C$$

According to our above discussion, A is the minor term, C is the major term and B is the middle term.

- 4. Conclusion:** In conclusion statement, first term or (subject) is the subject of the first proposition and second term (or predicate) is the predicate of the second proposition.

Converting Common Language Statements into their Logical Forms

In logical reasoning or syllogism problems, the common language sentences may have to be converted into their logical form before we apply logic rules on them to draw a conclusion. For example, in a previous NET examination, statements (i) 'only graduates are eligible for this post' and (ii) 'most rickshaw pullers are graduates' were given. These types of statements need to be converted to their logical form, i.e., quantifier + subject + copula + predicate, as discussed earlier. The rules of reduction help in solving these problems.

The rules of reduction can help in solving these types of questions.

- 1. A-type propositions:** Statements starting with words 'each', 'every', 'any', etc., are to be treated as A-type propositions (starting with all).

Original sentence	Logical form
Every man is liable to commit error	All men are persons who are liable to commit mistakes
Each student participated in the event	All students are persons who participated in the event
Any one of the Indians is laborious	All Indians are laborious
Only Indians are students of this college	All students of this college are Indians
The honest alone are successful	All successful persons are honest

Note: Sentences with singular term or definite singular term without the sign of negation are also to be treated as A-type proposition. For example, Ram is mortal.

(Continued)

2. **E-type propositions:** Sentences with singular term or definite singular term with the sign of negation are to be treated as E-type propositions. Sentences beginning with the words like 'no', 'never', and 'none' are to be treated as E-type propositions.

'Never men are perfect' is 'No men are perfect' in its logical form.

3. **I-type propositions:** Affirmative sentences with words like 'a few', 'certain', 'most', and 'many' are to be treated as I-type propositions.

Sentence	Logical form
A few men are present	Some men are present
Most of the students are laborious	Some students are laborious
Few men are not selfish	Some men are selfish
Certain books are good	Some books are good
Many Indians are religious	Some Indians are religious
All students of my class, except a few, are well prepared	Some students of my class are well prepared
The poor may be happy	Some poor people are happy

4. **O-type propositions:** A negative sentence that begins with a word like 'every', 'any', 'each', or 'all' is to be treated as an O-type proposition.

Sentence	Logical form
Every man is not rich	Some men are not rich
Certain books are not readable	Some books are not readable
Most of the students are not rich	Some students are not rich
Some men are not above temptation	Few men are above temptation

5. Exclusive proposition

- (a) In exclusive propositions, the subject is qualified with words like 'only', 'alone', 'none but', or 'no one else but'.
- (b) Here, the quantity is not explicitly stated.
- (c) They can be reduced to A, E, or I types by first interchanging the subject and the predicate, and then replacing the words like 'only' or 'alone' with 'all'.

If the exception is definitely specified as in case of, 'All metals except mercury are solid', then the proposition is to be treated as universal (All non-mercury metals are solid.). In case, the exception is indefinite, as in case of, 'All metals except one is solid', the proposition is to be treated as particular.

The nature of proposition depends upon context also. For example, 'Students are present' is reduced to, 'Some students are present' (I type).

In certain cases, the predicates are qualified by words like 'hardly', 'scarcely', 'seldom', but quantity is not specified. Such propositions should be treated as particular negative. For example, 'Businessmen are seldom honest' is an irregular proposition. It is reduced to, 'Some businessmen are not honest'.

If such a proposition contains the sign of negation, then this proposition is to be treated as an I-type proposition.

For example, 'Businessmen are not seldom honest' is to be reduced to 'Some businessmen are honest', which is an I type proposition. This is so because it involves a double negation which is equivalent to affirmation.

DEDUCTIVE INFERENCE AND SYLLOGISM

As we discussed earlier, deductive inference problems are basically of two types, namely immediate inference and mediate inference.

Immediate Inference

Here, the conclusion is drawn only from one given proposition. Two important cases of immediate inference have been discussed as given below.

- 1. By implication:** If a given proposition is A type, then it also implies that I type conclusion must be true.

Statement	Implication of statement
All chairs are tables (A type).	Some chairs are tables (I type).
No chair is table (E type).	Some chairs are not tables (O type).

Looking at the proposition again, when we say that 'All chairs are tables', it implies that 'Some chairs (we are presently concerned with) are tables'. This is based on our knowledge that some is a part of all.

Similarly, we can say that an E-type proposition also implies an O-type conclusion. If we say that 'No chair is table', we are absolutely sure that 'Some chairs are not tables'.

The immediate inferencing by implication is quite similar to the concept of sub alternation also discussed under Squares of Opposition.

- 2. By conversion:** First of all, let us be familiar with few terms.

Convertend: The original proposition

Converse: The new proposition

Conversion: The process itself

The process consists of two steps. The first step is interchanging the subject and predicate, the subject will become the predicate, and predicate will become the subject.

The second step is to change the type of the given proposition to the pattern given in Table 6.2.

These conversion rules are helpful not only for immediate inference but also for mediate inference, depending on the nature of the problem and answer choices. Thus, candidates are expected to learn the conversion rules by heart.

Important note: In NET examination, many times the question is asked only about conversion.

Table 6.2 Conversion Table

Types of Statements	Valid Conversion
Universal Positive (A) All chairs are tables.	Only Particular Positive (I) Some tables are chairs. Some chairs are tables.
Universal Negative (E) No chairs are tables.	Universal Negative (E) No tables are chairs.
Particular Positive (I) Some chairs are tables.	Only Particular Positive (I) Some tables are chairs.
Particular Negative (O) Some chairs are not tables.	No conversion

For example, what can be concluded from the given statement, 'Some men are honest'. Which of the following is true?

- Some honest people are not men.
- All honest people are not men.
- Some honest people are men.
- None of the above

Solution: This statement is particular positive statement. Hence, according to Table 6.3, it can be converted into PP only.

Table 6.3 Answer Choices and Justification as per Conversion Table

Answer choices	Justification
(a) Some honest people are not men.	Particular Negative, hence eliminate.
(b) No honest people are men.	Universal Negative, hence eliminate.
(c) Some honest people are men.	PP, hence this is correct answer.
(d) None of the above	Not applicable because C is the correct answer.

Mediate Inference

There are basically two approaches to solve a syllogism problem, namely (i) analytical method and (ii) Venn diagram.

Most of the candidates prefer Venn diagram method to analytical method as they find it easier. In this book, there are many illustrations using both the methods. As many times the questions are asked from analytical method in NET examination, the candidates should be well versed with analytical method as well. Here, we have focused mainly on the analytical method with Venn diagram just as a supplementary solution.

Candidates are advised not to rely exclusively on Venn diagrams as they can be ambiguous at times. As many questions based on theory are expected, analytical method can reinforce our understanding about the concepts.

Analytical Method for Mediate Inference Problems

The basic steps to solve syllogism problem are (i) the alignment of statements and (ii) drawing conclusions. Depending on the nature of the problem, it can entail two additional steps also. Table 6.4 shows the steps needed in analytical method for mediate inference.

Table 6.4 Steps in Analytical Method for Mediate Inference Problems

Step I	Alignment of the propositions— standard format
Step II	Draw conclusion by use of table
Step III	Check for immediate inferences
Step IV	Check for complementary pair if steps II and III fail

The requirement of steps I, III and IV depends upon the question.

Step I: Alignment of the Propositions

It consists of two steps, so initially, make sure that there are exactly three terms given in both the statements. In case, the number of terms is different, we need not go further, as there will be no conclusion. Secondly, we check whether the propositions are in standard form or not.

For practical purposes, the following format can be used as a standard.

Minor (or first) term	A→B
Middle term (major or third) term	B→C

A, B and C used above denote the first, second and the third term, just for quick representation of terms while solving practical questions. Please note that this A (used for first term) is different from A used for universal affirmative.

As discussed earlier, in the conclusion statement, first term (subject) is the subject of the first proposition and second term (predicate) is the predicate of the second proposition. This fact becomes the basis for the alignment of propositions.

In case, the problem is in the standard form, we can directly move to Step II.

If one or both propositions are not given in the standard format, align them by (i) converting the first or second statement or both and (ii) changing the order as will be clear through the following examples.

Note: It is important to remind at this stage that sometimes the words ‘mostly’, ‘generally’, ‘only’, and so on are mentioned in one or both the statements. Initially, we convert them into logical form before doing their alignment, if required. This has been discussed separately under ‘Converting common language statements into their logical Form’ on Page 6.5.

Example 1 Statements

1. Intelligent alone are laborious.
2. Most of the girls are smart.

These statements should first be converted into logical forms according to the rules for logical form.

1. All smart are laborious. This is in the form B to C.
2. Some girls are intelligent. This is in the form A to B.

Just by changing their order, we can align them. After alignment is done, we move to Step II.

Example 2 Statements

1. Some pens are books.
2. Some stationery are books.

As books are the common term, they are in the form A to B and C to B. The first statement does not require any change. As the second statement is in particular positive (I type), this can be changed to I type only according to conversion table given earlier. The second statement will become, ‘Some books are stationery’.

Now, propositions are properly aligned, i.e., ‘Some pens are books’ and ‘Some books are stationery’. We now move to Step II.

Example 3 Statements

1. No van is house.
2. All boxes are house.

Here, the common term, house, is the predicate in both propositions. Here, we have to alter the first proposition and also change the order to bring it to the form A to B and B to C.

1. All boxes are house.
2. No house is van.

Now, the predicate of first proposition is the subject of the second statement.

Example 4
Statements

1. All boys are tigers.
2. Some tigers are coward.

Solution: Here, the middle term, tiger, is the predicate in first proposition and the subject of the second proposition. No alignment is required.

After aligning the statements among themselves, we can move to Step II.

 **IEA Rule**

There can be confusion while aligning a pair of statements, where the statement should be given priority in terms of conversion. For example, if there are two statements, A type and I type, which should be converted so that our purpose of getting the standard form is achieved. The IEA rule helps in such decision-making.

If first statement given is of A type and second is of I type, then as per IEA rule, I type statement should be given priority for conversion. Similarly, in case of confusion between E type and A type, E type should be given priority over A type.

Step II: Applying Syllogism Rules

After ensuring that propositions are in a standard format, we apply syllogism rules to draw conclusions.

After aligning the statements, as per our discussion in Step I, conclusion may be drawn by using Table 6.5 where the rules of syllogism are mentioned.

No definite conclusion can be drawn for other combinations like A + I or O + A, which have not been mentioned in the above table. In general, we can say that two negatives (E + E, E + O, O + E, or O + O) do not lead to any conclusion.

Two particulars also do not lead to any conclusion.

Statements:

- I. All chairs are tables. (A type)
- II. All tables are furniture (A type)

Conclusion:

All chairs are furniture. (A + A = A).

Now, consider Example I as discussed in Step I.

1. Some pens are books. (I type)
2. Some books are stationery. (I type)

No conclusion as I + I = No conclusion.

Now, consider some examples from NET previous years' exams. In each of the following questions (1–3), two statements are followed by two conclusions, A and B. Assuming that the given statements are true even if they are at variance with commonly known facts, pick up one of the following answer choices which you think is correct.

- (a) If only conclusion A follows.
- (b) If only conclusion B follows.
- (c) If both A and B follows.
- (d) If neither A nor B follows.

Question 1

Statements

1. Some doctors are fool.
2. He is a doctor.

Conclusions

- A. He is a fool.
- B. Some fools are doctors.

Solution

No conclusion can be drawn from the two particular affirmative propositions. So (A) does not follow. Second conclusion is the converse of first statement, so (B) follows. Hence, (B) is the answer.

Question 2

Statements

1. All birds are men.
2. All crows are birds.

Table 6.5 Rules of Syllogism

Proposition I (A to B)	Proposition II (B to C)	Conclusion	Summarized form
Universal Positive (A)	Universal Positive (A)	Universal Positive (A)	A + A = A
	Universal Negative (E)	Universal Negative (E)	A + E = E
Universal Negative (E)	Universal Positive (A)	Particular Negative (O)	E + A = O*
	Particular Positive (I)	Particular Negative (O)	E + I = O*
Particular Positive (I)	Universal Positive (A)	Particular Positive (I)	I + A = I
	Universal Negative (E)	Particular Negative (O)	I + E = O

*In this case, the flow is from C to A, and not from A to C as in all other cases. (Please refer Table 6.5. A, B, and C stand for first, middle, and second terms, respectively.)

Conclusions

- A. All crows are not men.
 B. Some men are not crows.

[June 1997 and June 2001]

Explanation

Step I: The middle term is birds. A close observation reflects that the statements are in the form B to C and A to B. After swapping, the statements will be 'All crows are birds' and 'All birds are men'.

Step II: The conclusion should be $A + A = A$ (universal positive). The conclusion is 'All crows are men'. So (d) is the answer.

Question 3**Statements**

1. All boats are boys.
 2. All boys are lamps.

Conclusions

- A. All lamps are boats.
 B. All boats are lamps. (December 2002)

Solution

Step I: Statements are in the standard form A to B and B to C. The common term, boys, is the predicate of the first proposition and subject of the second proposition. So no alignment is required.

Step II: $A + A \Rightarrow A$

The subject of the conclusion will be the subject of first statement, and predicate of the conclusion will be the predicate of second statement. The common terms will disappear. So, the conclusion is 'All boats are lamps'. Thus, only conclusion 2 follows and (B) is the answer.

Now solving the problem through Venn diagram solution.

According to Statement I, 'All boats are boys'.

Figure 6.4

According to Statement I and Statement II, the Venn diagram looks as given below.

Figure 6.5

Looking at the Venn diagram, we can say that second conclusion, 'All boats are lamps' is correct.

Question 4**Statements**

1. All lemons are balls.
 2. No bats are lemons.

Conclusions

- A. Some balls are not bats.
 B. Some bats are lemons.

Solution

By changing the order of the statements itself, we can align the sentences. The aligned pair is

No bats are lemons. So (a) is the answer

All lemons are balls.

$E + A = O^*$. So the conclusion is, 'Some balls are not bats'.

Note: In all the questions discussed previously, Step III and Step IV are not required as per the answer choices.

Step III: Checking for Immediate Inferences (If Required)

We can check the conclusion (or even statements) for immediate inference as per answer choices. Usually, in this case, there are more than two conclusions. Even in case of two conclusion questions, we can go for this step.

Let us discuss one comprehensive example.

Statements

1. Some tables are chairs.
 2. Some chairs are furniture.

Conclusions

- I. Some chairs are tables.
 II. Some furniture is chair.
 III. All tables are furniture.

Choices

- (a) I and II are valid.
 (b) II and III are valid.
 (c) I and III are valid.
 (d) None of the above.

Solution

$I + I =$ No conclusion

(two particulars do not lead to any conclusion), but after immediate inference, we find that (i) and (ii) are valid. So, option (a) is the answer.

Step IV: Checking for Complementary Pair (If Required)

Check for complementary pair if Steps II and III fail. Complementary pair is a pair of contradictory statements, both cannot be true simultaneously.

We can call a pair as a complementary pair if

1. The subject and predicate of both the sentences are the same.
2. They are I + O or A + O or I + E type pairs which have been discussed below.

I + O type	A + O type	I + E type
Some chairs are tables.	All chairs are tables.	Some chairs are tables.
Some chairs are not tables.	Some chairs are not tables.	No chair is a table.

Note: Sometimes, the converse of the derived conclusions is among answer choices.

A Snap Shot—Golden Rules of Syllogism

To sum up all the discussion, some golden rules have emerged to solve the syllogism problems. These are in continuity with the earlier discussion.

1. Every deduction should contain exactly three terms.
2. The middle term (present in both the premises) must be distributed at least once.
3. If one of the premises is negative, then the conclusion must be negative (will have the word 'no' or 'not').
4. If one of the premises is particular, then the conclusion must be particular (will have the words 'some', 'few', 'many', etc.).
5. If both the premises are particular, then no conclusion can be drawn from the given premises.
6. If both the premises are negative, then no conclusion can be drawn from the given premises.
7. A term that is not distributed in the premises cannot be distributed in the conclusion.

Comprehensive Example of Mediate and Immediate Inference as per the CBSE UGC-NET Exam Pattern

Statements

1. All movies are stories.
2. All stories are surprises.

Conclusions

- A. All movies are surprises.
- B. Some surprises are movies.

First, let us consider only the statements. The sentences are already aligned.

Since $A + A = A$, the conclusion will be 'All movies are surprises'. Till this point, it is a question of mediate inference.

If we convert this conclusion (immediate inference), we get, 'Some surprises are movies'. Hence, both the conclusions given in the question are true.

Statements

1. Some rooms are lamps.
2. Some lamps are tubes.

Conclusions

- A. Some rooms are tubes.
- B. Some lamps are rooms.

We know that from a combination of I + I, no conclusion can be drawn.

On converting the first statement, we get 'Some lamps are rooms', i.e., conclusion (B).

Also, on converting the second statement, we get 'Some tubes are lamps'. This proposition is not given in the conclusion part. So in this example, conclusion (B) alone is true.

Thus, we can see the importance of immediate inferences in solving syllogism problems.

STRUCTURE OF ARGUMENTS: ADDITIONAL CONCEPTS

There are other perspectives or dimensions of structure of arguments (relational arguments, symmetry, transitivity, reflexiveness and connexity), squares of opposition (contradictions, contraries, sub contraries, and sub alternations), definitions (stipulative, lexical, precisising, operational, etc.), and other terms such as prejudices, facts, opinions and advice that suggest more about the structure of arguments. The questions have been asked regularly in NET paper examination. The types of questions have been mentioned during the course of discussion as well as in practice questions theory. Candidates are expected to go through these topics. There is one example taken from NET previous years' paper.

Example

In the expression, 'Nothing is larger than itself', the relation 'is larger than' is

- (a) Antisymmetric
- (b) Asymmetrical
- (c) Intransitive
- (d) Irreflexive

Relational Arguments

In relationship arguments, both premises and their conclusions are relational proposition. There are two characteristics of a relation—relation to itself and to others. Deductive reasoning is also sometimes

Classical Square of Opposition

The categorical propositions having same subject and predicate terms may differ in quality and quantity or in both. This differing is called opposition.

There were few questions in previous years' exams, where understanding terms, such as contradictory, contrary, subalternation and subcontrary may help in finding solutions.

By which of the following propositions, the proposition, 'Some men are not honest' is contradicted?

- (a) All men are honest.
 (b) Some men are honest.
 (c) No men are honest.
 (d) All the above
1. Two propositions that have the same subject and predicate terms but different in quality are
 (a) Contradictory
 (b) Contrary
 (c) Subaltern
 (d) Subalternation
2. 'No men are mortal' is contradictory to
 (a) Some men are mortal.
 (b) Some men are not mortal.
 (c) All men are mortal.
 (d) No mortal is man.

[June 2008]

The understanding of squares of opposition can help candidates in attempting these types of questions.

1. **Contradictories:** Contradictory opposition is the relation between two propositions having the same subject but differing in both quality and quantity.

The relation between A and O and E and I is called contradictory.

A type	O type
All diamonds are precious stones.	Some diamonds are not precious stones.
All men are honest.	Some men are not honest.

E type	I type
No diamonds are precious stones.	Some diamonds are precious stones.
No men are honest.	Some men are honest.

In order to refute the truth of the proposition 'All men are honest', it would be enough to show that some men (or even one man) are not honest. One exception would disprove the truth of the universal affirmative proposition.

(Continued)

2. **Contraries:** Contrary opposition exists between two propositions when both have universal quantity but one affirms and the other denies its predicate of the subject. The relationship between A and E is called contraries.

Examples

(A) All men are honest. (E) No men are honest.
 (A) All judges are lawyers. (E) No judge is lawyer.

3. **Sub contraries:** The relation between two particular propositions having the same subject and predicate but differing in quality is subcontrary opposition. The relation between particular affirmative (I) and particular negative (O) is called subcontraries.

Example: I: Some judges are lawyers. O: Some judges are not lawyers.

4. **Sub alternation:** Sub alternation opposition is the relation between two propositions having the same subject and predicate but differing in quantity only.

If universal is true, then particular must be true. What is true about the whole population, is true about its part also. If universal is false, then particular may be undecided. The relation between 'A and I' and 'E and O' is called subalternation.

A: All Indians are spiritual. I: Some Indians are spiritual.
 E: No Indians are spiritual. O: Some Indians are not spiritual.

Contradictory	Contrary
(a) If one is true, then the other will be false definitely.	(a) Its always between universal.
(b) If one is false, then the other will be true definitely.	(b) Both statements cannot be true at the same time but both can be false.
(c) Both cannot be true or false at the same time.	(c) If one is true, then the other will be false definitely.
	(d) If one is false, then the other will be doubtful.
Sub-Contrary	Subalternation
(a) Its always between particular.	(a) Between universal and particular.
(b) Opposite to contrary.	(b) If universal is true, then particular will be true definitely.
(c) Both statements cannot be false at the same time but both can be true.	(c) If universal is false, then particular will be doubtful.
(d) If one is false, then the other will be true definitely.	(d) If particular is false, then universal will be false definitely.
(e) If one is true, then the other will be doubtful.	(e) If particular is true, then universal will be doubtful.
	(f) Truth downward, false upward.

dependent on the validity of relational arguments. In NET examination, questions have been asked on relational arguments. These are quite easy to understand.

Symmetry

1. Symmetrical relationship

Example

A is equal to B.

So, B is equal to A—valid.

It is a 'symmetrical relationship'.

2. Asymmetrical relationship

Example

A is greater than B.

So, B is greater than A—invalid.

3. Non-symmetrical relationship

Example

A is the sister of B.

So, B is the sister of A—may or may not be valid.

B may be the brother of A.

Transitivity

1. **Transitive relation:** It implies that a relation travels from A to C through B.

Example

A is equal to B.

B is equal to C.

So, A is equal to C—valid.

In transitive relations, the premises are true and conclusion is also valid. 'Younger to', 'precedes', 'succeeds', and 'ancestor of' are other examples of transitive relationships.

2. **Intransitive relation:** Here, relation does not travel from A to C through B.

Example

A is the father of B.

B is the father of C.

So A is the father of C—invalid (false conclusion)

Relations such as 'son of' also fall in the category of intransitive relations.

3. **Non-transitive relation:**

Example

A is an enemy of B.

B is an enemy of C.

So, A is an enemy of C—invalid or false conclusion.

The relations such as 'friend of' and 'neighbour of' are examples of non-transitive relationships.

Reflexiveness

1. Reflexive relationship is between a term and itself. Some examples are, 'is equal to itself', 'resembles itself', 'as old as', and 'as young as'.
2. Partial reflexiveness means establishing a relationship with some other thing. Its examples are, 'A is as tall as B; B is as tall as C'. Hence, A is as tall as B.

3. **Irreflexive:** This type of relationship cannot be held between a term and itself. A is smaller (or greater) than itself. A is west (or east) of itself, and so on.

4. **Non-reflexive:** This may or may not be held between a term and itself. An example is, 'A loves itself'. This may or may not happen.

Connexity

This type of relationship is valid between any two terms. For example, 3 is greater than 2 but less than 4.

Types of Definition

A definition is a comprehensive description of a concept by means of known concepts expressed mainly by verbal means. The purpose of a definition is as follows.

1. To describe a concept at a given level of abstraction.
2. To distinguish a concept from related concepts.
3. To establish a relationship between the concept in question and the other concept in order to determine the position of the concept in the system.
4. To delimit a concept for the purpose of normative terminological work.

The definition should be the starting point for selecting and analysing the term. When selecting or seeking an appropriate term for a concept, it is necessary to start with a clear definition of the concept. For clarifying the concept, its intension and its extension have to be determined.

In NET examination, many times questions have been asked on the definition of the following terms.

1. **Intensional definition:** Specifying the properties or features and also the meaning of a term. For example, water in chemistry is defined as a compound of hydrogen and oxygen and in physics as a liquid with freezing point of 0°C and boiling point of 100°C.
2. **Extensional definition:** Specifying the class members of the term. For example, the planets of the solar system are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto.
3. **Lexical definition:** It is also termed as reportive definition. Lexical definition is the dictionary meaning of a term, the common vocabulary of a given language, for example, defining book, chair and so on.
4. **Stipulative definition:** It is an arbitrary, specified definition. It is not used to explain the existing meaning of a term. It is used to assign a new meaning to a term, whether or not the term has already got a meaning. Some examples are idioms and slangs used in English language.

5. **Precising definition:** A definition developed to clarify a vague or ambiguous term. It is often used in legal, scientific or medical settings. For example, a virus is an infectious agent that causes small pox.
6. **Persuasive definition:** A persuasive definition is any definition that attaches an emotive, positive or derogatory meaning to a term where it has none. This may be used as a rhetoric tool in a debate or discussion. For example, someone against abortion might offer the definition of 'abortion' as the murder of an innocent person during pregnancy. This definition carries a negative connotation, as the term murder suggests that abortion is wrongful killing and it also assumes that the aborted foetus is already a person. Such a definition is surely not appropriate in a fair debate on the moral legitimacy of abortion, even though it might be useful as a rhetorical tool.
7. **Operational definition:** A definition that provides a meaning to a term by specifying a measurement procedure.
8. **Functional definition:** A definition that specifies the purpose or use of the items denoted by the term.
9. **Ostensive definition:** A definition developed by showing someone an object and attaching a word to it.
This type of definition is often used where the term is difficult to define verbally, either because the words will not be understood (as with children and new speakers of a language) or because of the nature of the term (such as colours or sensations). For example, defining red by pointing out red objects—apples, stop signs, roses, etc.—is giving ostensive definition, as is naming.
10. **Analogous definition:** This definition has analogy; corresponding in some particular. A brain and a computer are analogous.

In biology, there is corresponding in function but of different origins and having evolved separately, as the wings of birds and insects.

Connotative and Denotative Meanings

Words are not limited to one single meaning. Most of the words do have multiple meanings, which are either categorized as denotative or connotative. The denotation of a word is its explicit definition as listed in a dictionary. Let us consider the word home as an example. The denotative or literal meaning of home is 'a place where one lives; a residence'. The expressiveness of a language, however, comes from the other type of word meaning, such as connotation or the association or set of associations that a word usually brings to

mind. The connotative meaning of home is a place of security, comfort and family. The quote 'East or west, home is the best' does not refer to denotative meaning of home, but the emotions the word home evokes in most of us. By definition, synonyms have the same denotation or literal meaning, but almost always have different connotations.

Fact, Opinion, Belief, and Prejudice

In these types of questions, a statement is given, where the candidate has to answer whether the statement is a fact, a prejudice, a belief or just an opinion.

In the past, many questions have been based upon the understanding of these terms.

Statement

English is an invaluable asset in international communication.

Mark

- (a) If the statement is a fact.
- (b) If the statement is an advice.
- (c) If the statement is an opinion.
- (d) If the statement is a prejudice.

Similarly, there were statements

- (i) Decline of the British Empire should have resulted in the decline of English.
- (ii) Persons educated through a foreign language are sure to be unpatriotic.

Facts

A fact is verifiable. We can determine whether it is true by researching the evidence. The facts are as follows.

1. Things known for certain to have happened.
2. Things known for certain to be true.
3. Things known for certain to exist.

This may involve numbers, dates, testimony and so on. For example, India got independent on 15 August, 1947. Facts provide crucial support for the assertion of an argument.

Opinion

An opinion is a judgment based on facts, an honest attempt to draw a reasonable conclusion from factual evidence. Opinions are as follows.

1. Things believed to have happened.
2. Things believed to be true.
3. Things believed to exist.

For example, we know that lakhs of people go without proper medical care in India, and so someone forms the opinion that the country should institute national health insurance even though it would cost few thousand

crores of rupees. An opinion is potentially changeable, depending on how the evidence is interpreted. Opinions are debatable, but facts usually are not.

Prejudice

Another kind of assertion that has no place in serious argumentation is prejudice, a half-baked opinion based on insufficient or unexamined evidence (For example, women are bad drivers). Unlike a belief, a prejudice is testable, it can be contested and disapproved on the basis of facts. We often form prejudices or accept them from others, such as family, friends, media, and so on without questioning their meaning or testing their truth.

Belief

Unlike an opinion, a belief is a conviction based on cultural or personal faith, morality or values. Statements such as 'capital punishment is a legalized murder' are often called opinions because they express viewpoints, but are not based on facts or other evidence. They cannot be disapproved or even contested in a rational or logical manner. Since beliefs are inarguable, they cannot serve as the thesis of a formal argument.

ANALYTICAL REASONING

Analytical reasoning is considered to be the recent form of logic in which almost all classical terms are covered. Here, a sentence, a group of sentences, a short argumentative paragraph covering concepts, facts, theories, figures and so on may be given and questions are asked with regard to arguments, conclusion, inferences, implications and so on. In dealing with these questions, the methods generally used include inductive reasoning, deductive reasoning, quoting authorities, and facts, findings and illustrations.

Solution Approach

1. Underline the important assumptions in the case of passage. Note the inferences which are both inductive and deductive.
2. Identify the supporting arguments.
3. Note the premises of supporting argument.
4. See the nature of questions.

Nature of Questions

Based on the given information, the types of questions to be asked include the following.

1. Assumptions and statements
2. Force of argument
3. Assertion and reasoning
4. Statements (situation) and course of action

Various concepts of analytical reasoning have been discussed below.

Assumptions and Statements

Assumptions are unstated or even unknown, but implied by the associated theory or argument. Thus, an assumption can be termed as an implied premise. An assumption is defined as something which is assumed, supposed or taken for granted. In practical life, if something is to be conveyed, it is not put in words. Many things may not be said, but are taken for granted which may be defined as an assumption. Implicit means hidden and therefore, implicit assumptions are those assumptions which are hidden. A typical question on implicit assumptions goes like:

Directions (Questions 1–5): In each of the questions below, a statement is followed by two assumptions numbered as I and II. An assumption is something that is supposed or taken for granted. You have to consider the statement and the following assumptions and decide which of the assumptions is implicit in the statement.

- (a) Only assumption I is implicit.
- (b) Only assumption II is implicit.
- (c) Both I and II are implicit.
- (d) Neither I nor II is implicit.

Example 1

Statement

A to B – 'In my opinion, you should undergo a training under an expert in order to be successful in your career'.

Assumptions

- I. B sought advice from A.
- II. Experts are more competent to guide a person to be successful in their career.

Explanation

There are many instances in life when we get an advice from a person without asking it. I is not definitely valid.

Only assumption II is implicit. Otherwise, A would not have advised B to get training from an expert. Therefore, it is correct to assume that experienced people make better guides.

Example 2

Statement

'This multimedia CD-ROM offers you active help as you learn yoga without an instructor' says a newspaper advertisement.

Assumptions

- I. Everyone may not be able to get active help from a yoga instructor.
- II. Aerobic exercises can be learnt with the help of a CD-ROM.

Explanation

In the above, both I and II are valid. The multimedia CD-ROM intends to teach yoga in the absence of an instructor. This means that the absence of an instructor is a distinct possibility for many people. Therefore, I is valid. The advertiser has come out with a CD-ROM on yoga. It definitely implies that aerobic exercises can be learnt by CD-ROMs. Hence, II is also valid.

Example 3**Statement**

'If you keep creating indiscipline in class, I will have to take a strict action against you'. A teacher warns his student.

Assumptions

- I. With the warning, the student may stop creating indiscipline in the class.
- II. All students are basically naughty.

Explanation

The teacher warns his students in anticipation that he would stop troubling him. So I is implicit. The general nature of children cannot be derived from the statement. So II is not implicit.

Example 4**Statement**

Of all the newspapers published in India, 'The Hindu' has the largest number of readers.

Assumptions

- I. The volume of readership of all newspapers in India is known.
- II. No newspaper in India other than 'The Hindu' has a large readership.

Explanation

It is on the basis of data that we can say that 'The Hindu' has the largest number of readers. So assumption I is implied. But it is not possible to say that no other newspaper in India has a large readership. We need to define large readership as well. So assumption II is not implicit.

Such decisions as given in the statement are taken only after taking the existing vacancies into consideration. So I is implicit while II is not.

Force of Arguments

Argument: Earlier also we discussed about the validity of arguments. An argument is a set of two or more premises leading to a conclusion. An argument can be said to be valid if the premises, if true, definitely lead to a conclusion.

All scientists are intelligent people. Raman is a scientist. So, Raman is an intelligent person (valid).

All scientists are genius. Raman is an intelligent person. So Raman is a scientist (invalid).

The second argument is invalid as there is no premise which states that all intelligent persons are scientists.

Validity is the property of an argument.

Assertion and Reasoning

Introduction: Assertion and reasoning-type questions have one assertion (A) and one reason (R). We must first determine whether the statement is true. If statement is true, we must next determine whether the reason correctly explains the assertion. There is one option for each possible outcome. These types of questions are followed by four options.

- (a) A is true but R is false.
- (b) A is false but R is true.
- (c) Both A and R are true and R is not the correct explanation of A.
- (d) Both A and R are true and R is the correct explanation of A.

Few examples have been discussed as given below.

Example 1

Assertion (A): Most of the prominent places in ancient civilizations grew near rivers.

Reason (R): Rivers provide water for irrigation and also work as means of transportation.

Explanation: Here, we can use our basic general knowledge or commonly known facts. We know that most of the ancient civilizations grew near rivers, so A is correct. In the example, R is also simple and true. So, option (a) is the answer.

Example 2

Assertion (A): Tides indicate the regular and periodic rise and fall in sea level.

Reason (R): Tides are caused by the gravitational pull of the moon and sea level.

Explanation: In this case also, the concept of tides is the reason for their origination. Both A and R are true, so, option (c) is the answer.

Example 3

Assertion (A): Mercury is the farthest planet from the sun.

Reason (R): Mercury is the smallest planet in the entire solar system.

Explanation: Here, A is false as mercury is the closet to sun. Hence, R is the correct option.

Example 4

Assertion (A): Carbon monoxide when inhaled causes death.

Reason (R): Carbon monoxide combines with haemoglobin.

Explanation: The chemical composition of oxygen and carbon monoxide is the same. Carbon monoxide combines with haemoglobin and reaches different parts of the body and causes death. Hence, (a) is the correct answer.

Statements and Courses of Action

Introduction: A course of action is a step or administrative decision to be taken for improvement, follow-up, or further action in regard to the problem, policy and so on. On the basis of the information given in the statement or situation, the candidate has to assume everything in the statement to be true and then decide which of the suggested courses of action logically follow for pursuing.

Example 1

Situation: The incessant rains that have been continuing for past several days have created the problem of deluge, i.e., because the river bed is full of silt and mud.

Courses of actions

- I. The people living close to the river should be transferred to a safer place.
- II. People should be given information about the imminent danger on radio or television.
- III. Immediately after the reduction of water level of the river, the silt and mud should be removed from the river body.
 - (a) Only I and II follows.
 - (b) Only II and III follows.
 - (c) None of these follow
 - (d) All of these follow

Explanation: Actions I and II are immediately required as they are crucial in saving precious lives of the people. It may not be practicable for authorities to remove silt and mud from the river body. So only I and II follow, and hence, (a) is the answer.

Example 2

Indicate which of the following actions are the most appropriate in the situation given below.

Situation: Two to three students in the class of a sincere and devoted teacher frequently disturb him in the class while teaching. He is fed up with them.

Courses of actions

- (a) He tells the students of the class that he will not hold the classes if the disturbing students continue doing that.
- (b) He suspends the disturbing students from attending his class in the interest of the whole class.

(c) He talks to the disturbing students to find out what makes them behave that way and what could become about them.

(d) He reports against them to the principal with the recommendation to take strong action against them.

Explanation: (c) suggests long-term approach to deal with the issue of indiscipline in the class.

MOOD AND FIGURE

As we discussed earlier in chapter, a categorical syllogism meets the following strict qualifications to be in a standard form.

1. It is an argument with two premises and one conclusion.
2. All three statements are categorical propositions.
3. It contains exactly three different terms.
4. Each term is used exactly twice.

We can again see that the following notes apply to standard form categorical syllogisms.

Major term (P): Predicate of conclusion

Minor term (S): Subject of conclusion

Middle term (M): Term that occurs in both premises

S and P stand for 'minor term' and 'major term', and also stood for 'subject term' and 'predicate term' confuse you. It would have been good to use different letters, but, sadly, Major, Minor and Middle all start with 'M'. Just remember that they now mean something somewhat different.

Major Premise: Premise containing major term.

Minor Premise: Premise containing minor term.

We need to bring in 'standard form', as per rules given in earlier pages, for categorical syllogism purpose. Then we can determine its mood and figure. The form of the syllogism is named by listing the mood first, then the figure.

Mood depends upon the type of propositions (A, E, I or O). It is a list of the types beginning with the major premise and ending with the conclusion. The 'mood' of a syllogism is determined by the 'quantity' and 'quality' of the three propositions.

The 'figure' of a categorical syllogism is determined by 'middle term'.

A detailed analysis of syllogism reveals the hidden complexities of the same. Such a study consists in the discussion of the structure of syllogism which leads to figures and moods. It is not possible to fully appreciate the role played by moods in the study of syllogism without prior discussion of what is known as figure. Figure and mood together determines the structure of syllogism. In deductive inference is a prerequisite to

the classification of arguments into good (valid) and bad (invalid).

The following example illustrates what standard-form means.

All humans are mortal.
 Jatin is a human.
 ∴ Jatin is mortal.

Suppose that only O proposition comprises of an argument, then the mood of the argument is said to be OOO. Similarly, a syllogistic argument with a mood of OAO has an O proposition as its major premise, an A proposition as its minor premise, and another O proposition as its conclusion and EIO has an E as its major premise and an I as the minor premise, and an O as the conclusion, etc.

1 Major premise:	All H are M.	HAM
Minor premise:	J is H.	JAH
Conclusion	∴ J is M.	JAM

3 Major premise:	No W is Y.	WEY
Minor premise:	All Y is B.	YAB
Conclusion	∴ Some B is not W.	∴ BOW

Accordingly, we can list 64 Moods. (At this stage, let us not restrict ourselves to valid Moods). There is no need to list all these 64 Moods. When we compute all possible arrangements, we arrive at 64. There are two important aspects. First, we have discovered a certain number of structures in which syllogistic arguments can be constructed and secondly, which we notice later, not all structures to which arguments subscribe are valid. It is in this sense that the logical status of an argument is determined by the structure of that particular argument.

FIGURES OF SYLLOGISM

Figure 1	Figure 2	Figure 3	Figure 4
M – P	P – M	M – P	P – M
S – M	S – M	M – S	M – S
S – P	S – P	S – P	S – P

The ‘figure’ of a syllogism is determined by the position of ‘middle term’ as it appears both in the major and in the minor premises.

From this scheme, it is clear that neither P nor S determines the figure of syllogism. History has recorded that Aristotle accepted only the first three figures. The origin of the fourth figure is disputed, but this dispute is not very significant. Aristotle regarded the first figure as most ‘scientific’ (or scientific). Aristotle believed that only universal affirmative conclusion can provide complete knowledge and universal affirmative conclusion is possible only in the first figure. Aristotle

Let us consider another example.

A: All rocks are hard things.
 E: No rocks are liquid. I:
 ∴ Some liquid things are not hard.

The mood of this argument is AEI. This shows that every letter states symbolically the quantity and quality of propositions and every letter occurs in the very same order in which the propositions occur in the argument. Therefore, the order in which the three letters occur specifies the mood of the syllogism.

While symbolizing the propositions, let us use the first letter of the term. The letter which appears in the middle stands for the quality and quantity of propositions. Consider the following syllogistic arguments as well,

2 All R are H.	RAH
No R are L.	REL
∴ Some L are not H.	∴ LOH

quotes the fundamental principle of syllogism. ‘One kind of syllogism serves to prove that A inheres in C by showing that A inheres in B and B in C’.

This principle can be expressed in this form.

Minor: A inheres in B Major:
 B inheres in C
 A inheres in C

Evidently, this argument satisfies transitive relation. This is made clear with the help of this diagram.

1.		P	M	
Major premise:	No soldiers are traitors			SET
		M	S	
Minor premise:	All traitors are sinners			TAS
Conclusion:	∴ Some sinners are not soldiers			SOS
		S	P	

2.		P	M	
Major premise:	All saints are pious			SAP
		S	M	
Minor premise:	No criminals are pious			CEP
Conclusion:	∴ No criminals are saints			CES
		S	P	

Only knowledge of the ‘figure of syllogism’ permits us to compute the total number of possible moods. Mood is determined by the quality and quantity of propositions, which constitute syllogism. Since there are

four figures, in all two hundred and fifty six ways of arranging categorical propositions is possible. These are exactly what we mean by moods. However, out of two hundred and fifty-six, two hundred and forty-five moods can be shown to be invalid by applying the rules and corollaries. So we have only eleven valid moods. Even this is not sufficient to have a clear picture. There is no figure in which all eleven moods are valid. Within the framework of traditional logic, in any given figure only six moods are valid and they are as follows.

- I. AAA, *AAI*, EAE, *EAO*, EIO and AII
- II. AEE, *AEO*, EAE, *EAO*, EIO and AOO
- III. *AAI*, AII, IAI, *EAO*, EIO and OAO
- IV. *AAI*, IAI, AEE, *AEO*, *EAO* and EIO

Moods are represented above in three ways. Moods in italics and bold form are called strengthened moods, and moods in mere italics are called weakened moods. All other moods are represented in normal form. It is important to know the difference between the first two types. When the laws of syllogism permit two universal premises to yield logically only particular conclusion, then such moods are called strengthened moods. On the other hand, if we deduce particular conclusion from two universal premises, even when the laws of syllogism permit two universal premises to yield logically a universal conclusion, then such moods are called weakened moods. In this scheme, we notice that EIO is valid in all the figures. Interestingly, IEO is invalid in all the figures.

Pope John XXI, devised a technique to remember the method of reducing arguments from other figures to the first figure. This technique is known as mnemonic verses. Accordingly, each mood, excluding weakened moods, was given a special name.

I. Fig:	AAA BARBARA	III. Fig:	AAI DARAPTI
	EAE CELARENT		IAI DISAMIS
	AII DARII		AII DATISI
	EIO FERIO		EAO FELAPTON
			OAO BOCARDO
			EIO FERISON
II. Fig:	EAE CESARE	IV. Fig:	AAI BRAMANTIP
	AEE CAMESTRES		AEE CAMENES
	EIO FESTINO		IAI DIMARIS
	AOO BAROCO		EAO FESAPO
			EIO FRESISON

We need not to remember anyone of these. They are just for representation.

A 'Dilemma' in logic means an argument that presents an antagonist with a choice of two or more alternatives, each of which appears to contradict the original contention and is inconclusive. The dilemma

is a powerful instrument of persuasion and a devastating weapon in controversy.

Formal and Informal Fallacies

Fallacies are errors but can be tricks of reasoning. Fallacy is an *error* of reasoning if it occurs accidentally; it is a *trick* of reasoning if a speaker or writer uses it in order to deceive or manipulate his audience.

A fallacy is 'an argument, or an apparent argument, which professes to be decisive of the matter at the issue, while in reality or it is not'. Fallacies weaken arguments and in doing so, weaken the overall strength of our paragraph or assignment.

Usually, there are five common categories of fallacies and they are listed below.

1. Using feelings
2. Distracting from the argument
3. Misinformation
4. Generalisations (to make a powerful statement).
5. Irrelevant connections

According to NET syllabus, fallacies are mainly of two types, such as **formal** or **informal**.

Whatever its type is, its use undercuts the validity and soundness of any argument, but fallacious reasoning may damage the credibility of the originator of message and play with the emotions of the receiver.

Formal Fallacies

Most **formal fallacies** are errors of logic, where the conclusion is not supported by the premises, so it does not really 'follow from'. Either the premises are untrue or the argument is invalid. Given below is an example of an invalid deductive argument.

Premise: All black bugs are carnivores.

Premise: All rats are carnivores.

Conclusion: All rats are black bugs.

Bugs are a subset of carnivores. Rats also are a subset of carnivores. But these two subsets do not overlap, and that fact makes the conclusion illogical. The argument is invalid, i.e., the relationship between the premises doesn't support the conclusion.

But Then How to Recognizing the Formal Fallacies?

'Rats are black bugs' is instantaneously recognizable as fallacious, it sounds illogical also. However, that and other forms of poor logic play out on a daily basis, and they have real world consequences. Below is an example of a fallacious argument.

Premise: All Europeans are Christians.

Premise: All Russians are Christians.

Conclusion: All Russians are Europeans.

This argument fails on two levels.

1. The premises are untrue because although many Europeans and Russians are Christians, not all are.
2. The two ethnic groups are sets that do not overlap but the two groups are confused because they (largely) share one common quality.

Informal Fallacies

Informal fallacies take many forms. They are widespread in our routine lives.

Informal fallacies develop when

1. The relationship between premises and conclusion does not hold up.
2. When premises are unsound.
3. Informal fallacies are more dependent on misuse of language and of evidence.

Frequently, they may bring irrelevant information into an argument or they are based on assumptions that, when examined, prove to be incorrect, but it may not always be easy to spot them. Some moves are always fallacious and others may be allowable on the basis of context.

Use of Ethos, Logos, and Pathos to Test Arguments for Fallacies

To test an argument for fallacies is to return to the concepts of ethos, logos and pathos.

- **Ethos:** For ethics, authority and/or credibility.
- **Logos:** An appeal to logic.
- **Pathos:** An appeal to emotion.

Ethos, logos and pathos can be used to strengthen our argument or inappropriately to manipulate an audience through the use of fallacies. Some fallacies may fit into multiple categories. Thus, we can see that both formal and informal fallacies are errors of reasoning, and if speaker or writer relies on such fallacies, even unintentionally, he/she undercuts their argument.

INDIAN LOGIC: MEANS OF KNOWLEDGE

After asking, ‘Can I know?’, the next question is obviously ‘How do I know?’ or the sources of knowledge. Epistemology is the study of the origin, nature and limits of human knowledge.

Logic is the study of inference and argument. The logic and theory of knowledge of Indian systems are largely coloured by their metaphysical tenets. Philosophy basically deals with interpretation of man and nature. It is the analysis, assessment and exposition of the process of knowledge.

As per Indian logic system, knowledge is first received through perception (*pratyakṣa*) or comparison (*upamāna*), or words of sacred authority. We will discuss them.

Here, the aim is to study Indian logic by means of knowledge.

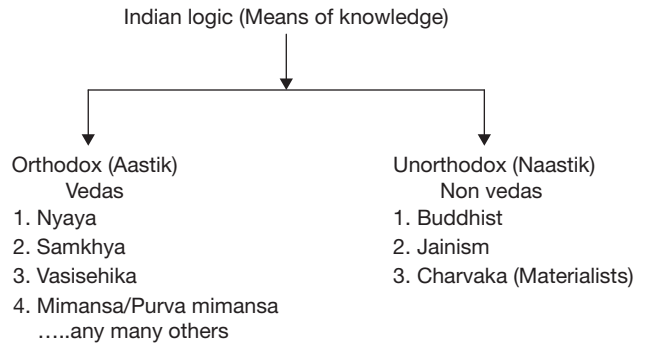

Figure 6.6

In India, there are six orthodox schools of philosophy which recognize the authority of Vedas as divine revelation. Those who did not recognize this authority were the Jains, Buddhists (both heterodox) and Charvaka (materialists).

There is much divergence of opinion among Indian philosophers concerning the nature and scope of Pramana (source of knowledge).

Indian Philosophy divides itself into three periods

1. Vedic period
2. Upanishadic period
3. Post-Vedic period

The post-Vedic period is a systematic period which saw the development of ‘orthodox systems’. Currently, we are starting with Charvaka system.

Charvaka Materialist School’s Views of Knowledge

Rishi Brihaspati probably was the founder of this school.

Charvaka is also called *Lokayata*, the Sanskrit word for it is ‘**Worldly Ones**’, which is the view held by the common people.

As we discussed ‘*pratyakṣa*’, it is the only source of valid knowledge. Only direct perception (*anubhava*) is recognized. What we cannot perceive through senses must be treated as non-existent. They refute all other sources of knowledge, such as no mind, no consciousness, and then no soul. Only physical body is real.

There are four traditional elements of earth, water, fire and air.

The validity of inference is also rejected by *Charvakas*. Inference is considered to be a mere leap into the dark.

We proceed from the known to the unknown and there is no certainty in this, though some inferences may turn out to be accidentally true. Induction is uncertain, and deduction is argument in a circle. Deductive inference is vitiated by the fallacy of *petition principia*.

Though we consider invariable association or *Vyapti* as the nerve of all inference, *Charvakas* challenges this guess work and regards it just as a guess work. Perception does not approve this *Vyapati*. Inference and testimony does not approve it.

Charvaka review perception is valid and inference is invalid itself is the result of inference.

The creations such as Kautilya's *Arthashastra* (Science of material gain) are based on it as it is considered to be an hedonist opportunist approach.

Orthodox Views of Knowledge

The *Nyaya* and *Vaishesika* schools are primarily analytic and are therefore, more concerned with logic and epistemology than ethics.

The Nyaya School

As per NTA-NET syllabus we actually focus on *Nyaya* system.

It was formed during 4th Century BCE by Gautama.

Here, the knowledge comes from perception, inference, comparison and verbal testimony.

Objects of learning are self, body, sense organs, sense objects, intellect, mind and activity.

It is an orthodox system of atomistic pluralism and logical realism. It invented a science of knowledge (*Pramanasastra*). If a means of knowledge is impossible, then denial of it would also be impossible. If denial is based on a means of knowledge, then the validity of means have to be acknowledged.

It has explored remarkably the domain of cognitive consciousness and determined the process by which it enters into a connection with the world of physical objects.

The outside world is known to us through the senses and the mind. It believes in the external things as reflecting their real nature when knowledge is true, and their unreal nature when knowledge is false.

Knowledge is the knowledge of things, and it constitutes the expression of reality (*arthhubhava*). Whatever its type, it is a natural response to the disposition present in human mind.

In the *Nyaya* philosophy, knowledge is termed as the manifestation of object. Knowledge lights its objects as does a lamp. Knowledge may be valid or invalid. Valid knowledge (*prama*) is defined as the right

apprehension of an object. It is the manifestation of an object as it is.

Nyaya maintains the theory of correspondence. While *Nyaya* system recognizes all the four *Pramanas*, namely perception, inference, verbal testimony and comparison, *Vaisesika* recognizes only two *Pramanas*-perception and inference and reduces comparison and verbal testimony to inference.

The Vaishesika Philosophy

Nyaya system is allied to the *Vaishessika* systems, which developed metaphysics and ontology. The *Vaishesika sutras* are the oldest ones, and by Kannada were written shortly before Gautama's *Nyaya Sutras*.

The word *Vishesa* means particularity and emphasizes the significance of individuals. It recognizes three real objects of experience as substance, quality and activity.

There are three products of intellectual discrimination, which are generality, particularity and combination.

Like the *Nyaya* School, this School also acknowledges perception, inference, comparison and verbal testimony as the valid sources of knowledge.

Mimamsa

Mimamsa literally means 'revered thought' and was originally applied to the interpretation of the Vedic rituals, which commanded highest reverence.

It is also very ancient and *Mimamsa Sutra* by Jamini was written during 4th century B.C.

A cognition, which apprehends an object, cannot be intrinsically invalid. Memory arises from the impression of a priori cognition.

Kumarila defines valid knowledge is free from causes from defects and which is not contradicted by subsequent knowledge.

A valid cognition must fulfill four conditions.

1. It must not arise from defective causes.
2. It must be free from contradiction. It must be self-consistent and should not be set aside by subsequent knowledge.
3. Novelty is an essential feature of knowledge (*agrhitagrahi*). Memory is excluded from valid acknowledge.
4. It must **truly** represent the object.

Here, all knowledge is valid by itself. It is not validated by any other knowledge. It is not due to any extraneous conditions. A need for explanation is felt only when knowledge fails.

If a rope is mistaken for a snake, the knowledge of the rope snake is invalidated by the subsequent knowledge of the rope.

Truth is normal and error is abnormal. Belief is natural and disbelief is an exception.

According to Badrayana, (*Uttara Mimiimsa* and *Vedanta*) knowledge comes from the scriptures (*Sruti*) and other authorities (*Smriti*). Scripture refers to the *Vedas* and *Smriti* to the Bhagavad Gita, Mahabharata and Laws of Manu.

According to *Samkya*, both the validity (*Pramanya*) and the invalidity (*Apramanya*) of knowledge are self-evident. Whatever manifests itself at any time has all along been hidden there.

Heterodox School's Views of Knowledge

As we discussed earlier, Jainism and Buddhism did not recognize the authority of *Vedas* as the orthodox system of philosophy, they are considered as the heterodox schools of philosophy.

Jainism

Jains has critically examined the valid sources of knowledge. Here, knowledge is of two kinds and they are as follows.

1. **Pramana:** It refers to the knowledge of a thing as it is.
2. **Naya** or knowledge of a thing in its reflection. It means the standpoint of thought from which we make a statement about a thing. All truth is relative to our standpoint. Partial knowledge of one of the innumerable aspects of a thing is called 'naya'.

Both *Pramana* and *Naya* are essential for the full and true knowledge of a thing.

Jains classify knowledge gained through *Pramana* into direct (*aparoksa*) and indirect (*paroksa*).

1. **Immediate (Aparoksa):** *Avadhi*, *Manahparyiyya* and *Kevala*.
2. **Mediate (Paroksa):** *Mati* and *Shruta*.

In immediate knowledge, *Avadhi* is clairvoyance, *Manah-paryaya* is telepathy and *kevala* is omniscience. *Avadhi* and *manah-paryaya* are immediate and limited forms of knowledge, while *kevala* is unlimited and absolute knowledge.

Mediate knowledge is divided into *mati* and *shruta*. *Mati* includes both perceptual and inferential knowledge. *Shruta jnana* means knowledge derived from authority. It is to be gained from authoritative books and words of great sages. Perusal of authoritative books and listening to the sermons of saints are essential for this kind of knowledge.

Perceptual knowledge is ordinarily called as 'immediate', thus admitted to be relatively so by Jainism. Therefore, it is included in mediate knowledge. Pure perception in the sense of mere sensation cannot rank the title of knowledge. It must be given meaning and arranged into order by conception or thought.

Perceptual knowledge is therefore regarded as mediate since it presupposes the activity of thought. Mediate knowledge is divided into *mati* and *shruta*. *Mati* includes both perceptual and inferential knowledge.

According to Jaina epistemology indirect knowledge is of five kinds-*Smrti* (valid knowledge), *Pratyabhijna* (Recognition), *Tarka* (logic), *Anumana* (inference) and *Agama* (words of reliable people).

Here, we can discuss two important aspects. *Naya vada* means a standpoint of thought from which we make a statement about a thing. All truth is relative to our standpoints. Partial knowledge of one of the innumerable aspects of a thing is called 'Naya'.

Syad vada or *saptabhangi Naya* is the most important part of Jaina logic. According to this, we can know only some aspects of reality and so all our judgements are relative. It is a theory of the relativity of knowledge.

Buddhism

In epistemological ideas also we can see the different opinions among the four schools of Buddhism.

1. Yogacara
2. Madhyamika
3. Sautrantika and
4. Vaibhasika

Sautrantika says that the external objects are not known through perception. According to Vaibhasika says that the knowledge of the external objects can also be gained through perception.

According to Vaibhasika, the inference of things external to knowledge is self-contradictory. If all the external objects are inferred by their knowledge, then nothing can be known by perception. In the absence of perception there can be no relation of concomitance between the major and the minor premise without which no inference is possible. This is opposed to actual experience.

The Vaibhasikas accept the presence of the external things and conceive them as subject to perception. To them by *Pramana* only direct knowledge is possible. The *Pramanas* are two types, namely *Pratyaksa* (perception) and *anumana* (inferential). Both these *Pramanas* are known as *samyaginana* (right knowledge) and it is by these that all the *purusharthas* are attained. *Pratyaksa* is the knowledge devoid of imagination and error. This knowledge is of four types and they are as follows.

1. **Indriya jnana:** Knowledge through senses.
2. **Mano vijnana:** Sensual knowledge in the form of *samanantara pratyaya* after the knowledge through senses.
3. **Atma samvedana:** It is the manifestation of *chitta* and its *dharmas* are like pleasure and pain in their real form.

4. **Yogic jnana:** It is the ultimate knowledge of the things perceptible through various Pramanas.

Inference is of two types, such as *Svartha* (for the self) and *parartha* (for others). In the former, the *linga* is inferential, i.e., in the inference there is fire on the hill, the hill is *linga* and the fire is inferential. In it the *linga* remains in self side (*svapaksa*), just as the kitchen. The *linga* does not remain in the opposite side (*vipaksa*), e.g., a pool of water, etc.

In fact, Buddhism and Jainism movements were started to reform the Hinduism. The languages spoken by the masses, such as Prakrit and Pali started getting prominence over Sanskrit, a language which was limited to priestly and aristocratic class. The source of both the religion is vedic religion and both are indebted to Upanishads.

Buddhism is centered upon the life and teachings of Gautama Buddha, whereas **Jainism** is centered on the life and teachings of Mahavira. Buddhism is a polytheistic religion and its main goal is to gain enlightenment. Jainism is also a polytheistic religion and its goals are based on non-violence and liberation the soul.

Buddhism says that This life is suffering and the only way to escape from this suffering is to dispel one's cravings and ignorance by practising the Eightfold Path.

Jainism suggests to respect all living things. Attain liberation by avoiding and shedding of bad karma which is the cause of rebirths and all sufferings.

PRAMANA (SOURCE OF KNOWLEDGE)

The general science of inference is logic and its aim is to make explicit the rules by which inferences are drawn. Inferences are rule-governed steps from one or more propositions known as premises, to another proposition called conclusion. A deductive inference is one that is intended to be valid, where a valid inference is one in which the conclusion must be true if the premises are true. All other inferences are inductive.

Our discussion is primarily based upon *nyaya* system. Vatsayana defines a *Pramana* as a source or means of valid knowledge. Gautama's Nyaya Sutra defines perception as an awareness which is (i) produced from the connection between the sense organ and object; (ii) not produced by words; (iii) not deviating from its object, i.e., it is always true and (iv) is of the nature of certainty.

There are four factors involved in any knowledge and they are listed below.

1. The subject who knows (*Pramata*)
2. The object of knowledge (*Prameya*)
3. The means of valid knowledge (*Pramana*)
4. The resultant of valid knowledge (*Prama*)

Knowledge can be termed as *prama* (valid) and *aprama* (invalid).

Hence, *pramana* is valid means of knowledge. It has four important means and they are listed below.

1. *Pratyaksa* (Perception)
2. *Anumana* (Inference)
3. *Upamana* (Comparison)
4. *Shabda* (Verbal testimony)

Here, a causal relation is discerned and ascertained between *Prama* and *pramana* on the basis of uniform agreement in presence and absence between the two. The former cannot arise without the latter and hence, it is maintained that the latter is the source or cause of the former.

Different schools of knowledge accept or reject different ones of these methods.

1. All methods are accepted by Mimamsa.
2. Only perception, inference and testimony by *Samkhya* and *Yoga*.
3. Only perception and inference by Buddhism and *Vaisesika*.
4. Only perception by Charvaka.

Pratyaksha (Perception)

It is basically which is before one's eyes, '*aksa*' means sense organ and '*prati*' means the function of each sense organ. Perception is a valid form of knowledge produced by the contact of an object with a sense organ.

It is the first of the five means of knowledge or *pramanas*, that enable a person to have correct cognitions of the world.

Pratyaksha is of two kinds and they are as follows.

1. **Anubhava:** Direct perception
2. **Smriti:** Remembered perception

Some schools make a further distinction between indiscriminate perception (*nirvikalpaka*), the object is perceived without its distinguishing features. Indiscriminate perception is important to the followers of the *Advaita* (Non-dualist) school of *Vedanta*, for it allows for the liberating perception of *brahman* (ultimate reality), which is without features. Discriminate perception (*savikalpaka*), in which the distinguishing features are both observed and recognized.

The knowledge arises by contact of sense organs (*indriya*) with an object. Such contact is not the sole condition of perception, but it is its distinctive feature or extraordinary cause (*karana*) of perception. The actual process is given below:

1. The self comes into contact with mind (*manas*)
2. The *manas* with the senses
3. The senses with the object

The function of a sense organ in respect to its own object is described in two ways, such as nature of contact and nature of knowledge.

Sense-object is also the instrumental cause of perception, as it immediately gives rise to the perceptual knowledge of that particular object.

The modern school of Nyaya gives a new definition of perception as it is direct or immediate cognition that is not derived through the instrumentality of any other cognition. It applies to all cases of perception, human or divine. Even God's omniscience has the highest degree of immediacy conceivable.

It excludes inference, analogy and verbal testimony. They have been discussed later as NTA-NET Exam pattern. It excludes 'memory' as well.

Perception is divided into the following two categories.

1. Ordinary (*Laukika*)
2. Extraordinary (*Alaukika*)

According to later logicians, there are two kinds of verbal testimony as given below.

1. **Vaidika or Alukika:** It is also known as divine or scripture.
2. **Laukika or secular**

The former relates to the words of God. The *Vedas* are created by God and therefore, valid perfectly. The latter relates to the words of trustworthy people.

According to *Nyayikas*, since human beings are not perfect, only the words of trustworthy people can be considered as *Laukika Shabda*.

In ordinary perception, knowledge results from the contact of the sense organs with the external objects (*bahya*). Extraordinary perception has three distinctions, such as perception of classes (*samanyalakshna*), complication (*jnana lakshana*) and intuition (*yogaja*).

Anumana (Inference)

Etymologically the word '*Anumana*' indicates after knowledge (*anu*—after, *mana*—knowledge). It is second source of valid knowledge. The term *anumana* literally means 'after-knowledge', i.e., knowledge that follows other knowledge. Inference is defined as the knowledge of an object (*lingi*) due to a previous knowledge of some sign or mark (*linga*).

Gautama defines it as a specific form of knowledge preceded by perception. The perception of the invariable relation between the proban (*linga*) and the probandum (*lingi*) is a previous perception of such a relation somewhere else. Again, there is a perception of the proban as invariably related to probandum as it exists in the locus.

According to NTA-NET Exam, the structure and kinds of '*anumana*' have been discussed further also.

Shabda (Verbal Testimony)

According to *Nyaya* Philosophy, *Shabda* is the fourth and last valid source of knowledge. *Shabda* literally means verbal knowledge. The mere combination of words does not provide a valid knowledge.

All verbal statements are not valid. Hence, Gautama defines *Shabda Pramana* as the statement of a reliable person. In other words, verbal testimony is the communication from a trustworthy person—Who is a trustworthy person (*apta*) and why is assertion (*upadesa*) is a testimony (*prambna*)?

Analysing the process of verbal testimony we get the following steps.

First, there is the perception of the words of a sentence uttered by a trustworthy person.

Second, there is the understanding of the meaning of words. This is called the *Karana* or the special cause of the verbal knowledge.

The knowledge of words (*padajnana*) leads to the knowledge of objects through the function (*vyapara*) of recalling the meaning of words.

Gautama and Vatsyayana stated in *Nyaya* school that verbal knowledge is of two kinds:

1. *Drustartha* or one relating to perceptible objects, that means the sensible object attainable in this world.
2. *Adrustartha* or that relating to imperceptible objects, that means the super-sensible object, which is attainable to the other world.

This is the division of words of the ordinary people and the seers.

Upamana (Comparison)

Upamana is the combination of '*upa*' and '*mana*'. '*upa*' means similarity or '*sadrusya*' and '*mana*' means cognition. Thus, *upamana* is the knowledge derived from similarity. It has been defined as the knowledge of relation between a person and its denotation. *Upamana* is the third source of valid knowledge.

For example, when we tell a city man that a wild cow is an animal like a cow and later on, in a forest, when he sees a wild cow he recognizes it as the wild cow. Then, his knowledge of the wild cow is the outcome of conjunction with the knowledge of the cow. Hence, the '*upamana*' is just the knowledge of the relation between a name (here it is the wild cow and the object denoted by that name (the actual wild cow seen in the forest).

Mimansa treats *Upamana* as analogy. Buddhism does accept comparison as an independent source of valid knowledge.

According to *Mimansa*, the following two schools have also been identified.

Arthapatti (Presumption)

It is an independent source of knowledge. It is admitted as a distinct *pramana* which cannot be brought under *anumana* or *sabda*.

It consists in the assumption of some unperceived fact in order to explain apparently inconsistent facts. Let's take an example of *arthapati*. Devadatta is alive and he is not present in his house, we presume that he is elsewhere. The essential element in presumption is that a certain fact like Devadatta's 'being alive' and 'not being present in his house' is unaccountable without presuming another fact like being outside his house. In presumption, we proceed from the knowledge of something to be explained to the knowledge of that which explains it. The means of presumption (*karana*) is the knowledge of the inner contradiction (*anupatti*) and its result is the reconciliation of the contradiction (*upapatti*). If Devadatta is fat and he does not eat during day, we presume that he must be eating during night, otherwise the inconsistency between 'being fat' and 'not eating during day' cannot be resolved.

Anupalabdhi (Non-apprehension - Mimamsa)

According to Kumarila Bhatta and others, non-apprehension as sixth independent source of knowledge consists in the presentative knowledge of negative facts. In other words, negative facts are cognized by a special instrument (*karana*) called non-apprehension.

Only positive facts are apprehended through positive sources like perception, inference, etc, but negative facts are apprehended through non-apprehension. For example, the absence of jar on the ground is apprehended through *anupalabdhi*.

Kumarila argues that the concept of the emptiness of the container inevitably presupposes non-existence. He also refutes the *Nyaya* view that non-apprehension is the same as perception or inference.

Negation is never perceived, for there is no sense-object contact in it.

STRUCTURE AND KINDS OF ANUMANA (INFERENCE)

Knowledge that comes after perception is inferential or relational and it is called inference. *Anumana*, etymologically means 'secondary proof'. The data for inference are derived from perception and verbal testimony.

There are two main groups of inference and they are as follows.

1. **Vyapti:** It is when universal relation such as between fire and smoke is known.
2. **Paksadharmata:** Fire is inferred on the hill, where smoke is perceived in it.

Inference is mediate and indirect. That is arranged through the medium of some mark which is called '*hetu*'. This may be explained with the help of the typical example of inference, the presence of fire on the perception of smoke. When one sees smoke on distant hill one remembers one's experience of the universal concomitance (*Vyapti*) between smoke and fire and concludes that there is fire on the distant hill.

Thus, we can say that

1. This hill has fire (*pratijna*)
2. Because it has smoke (*hetu*)
3. Whatever has smoke has fire, for example, an oven (*udaharana*)
4. This hill has smoke which is invariably associated with fire (*upanaya*)
5. Therefore, this hill has fire (*nigamana*)

The first, the *pratijna*, is the logical statement which is to be proved. The second is *hetu* or reason which states the reason for the establishment of the proposition. The third is *udaharana* which the universal concomitance together with example. The fourth is *upanaya* or application of the universal concomitance to the present case. The fifth is *nigamana* or conclusion drawn from the preceding propositions. These five members of Indian syllogism are called *Avayavas*.

In the Aristotelian syllogism, the character which is inferred (fire) is called *sadhya*; the mark on the strength of which the character is inferred is the *hetu* (smoke); the subject where the character is inferred is *paksa* (hill). The three terms correspond to the major, the middle and the minor terms

Linga paramarsa: The *Nyaya* syllogism has five terms. Among them, middle term works as a bridge between the major and the minor terms. Therefore, the middle term has main responsibility to prove a syllogism valid or invalid. How a middle term is related to major term is *linga-paramarsha*. There are five characteristics of a middle term.

Vyapati (Invariable Relation)

The word '*vyapti*' literally means 'the state of pervasion.' It implies a correlation between two facts, of which one is pervaded (*vyâpya*), and the other pervades (*vyâpaka*). A fact is said to pervade another when it always accompanies the other. A fact is said to be pervaded by another when it is accompanied by the other. In the given example, smoke is pervaded by fire, since it is always accompanied by fire. But while all smoky objects are fiery, all fiery objects are not smoky, e. g., the red hot iron ball. Thus, *vyâpti* is a relation of invariable concomitance between middle term and the major term. Without the definite knowledge of such a relation, our inference of fire is impossible in spite of the perception of smoke.

A *vyâpti* may be of two types and they are as follows.

1. *Samavyâpti*
2. *Asamavyâpti*

A *vyâpti* between terms of equal extension is called *samavyâpti* or equipollent concomitance, for example 'nameable' and 'knowable'. Whatever is nameable is knowable and again whatever is knowable is nameable. Here, we can infer either of the term from the other.

On the other hand a *vyâpti* between terms of unequal extension is called *asamavyâpti*. Fire is present in all cases wherever smoke is present, but the reverse is not true.

The *Naiyayikas* maintain that there are five ways or methods for the establishment of *vyâpti*. They are the following:

1. **Anvaya or agreement in presence:** *Vyâpti* is a relation of agreement in presence (*anvaya*) between two things.
2. **Vyatireka or agreement in absence:** The *hetu* and the *sâdhya* should agree in being absent together.
3. **Vyabhicaragraha:** We do not observe any contrary instance in which one of them is present and the other is absent. That is, they must be related to each other.
4. **Upâdhinirasa or elimination of condition:** *Vyâpti* is an unconditional relationship which is universal and necessary. An adventitious condition may vitiate the natural and invariable relation between *hetu* and *sâdhya*.
5. **Tarka or hypothetical reasoning:** *Tarka* is an indirect method to get the *vyâpti*. All the methods

mentioned above are direct methods. Ratiocination is the process of thinking about something in a logical way for the to establish the *vyâpti*.

6. **Sâmânyalakaa pratyaka:** *Sâmânyalakaa pratyaka* is an extraordinary perception. They maintain that when we perceive an individual case, we also perceive all the actual and possible instances of fire and smoke.

Hetvabhas (Fallacies of Inference)

In Indian logic a fallacy is called *hetvabhasa*. It means that middle term appears to be a reason but is not a valid reason. All fallacies are material fallacies. We have mentioned the five characteristics of a valid middle term. When these are violated, we have fallacies. Five kinds of fallacies are recognized and they are as follows.

1. **Assiddha or sadhyasama:** This is the fallacy of unproved middle.
2. **Savyabhicara:** This is the fallacy of irregular middle.
3. **Satpratipaksa:** Here, the middle term is contradicted by another middle term.
4. **Badhita:** It is the non-inferentially contradicted middle.
5. **Viruddha:** It is the contradictory middle.

Though there is a variance between the six orthodox schools regarding the sources of knowledge, it is a well-accepted fact that all schools have acknowledged *Pratyaksa*, *Anumana* and *Shabda* as valid sources of knowledge. The knowledge through sense experience is considered to be the basic source even in other *pramnas* for further evidences and validation.

Practice Exercises

THEORY QUESTIONS

1. The process by which conclusion is arrived at on the basis of other propositions is termed as
 - (a) Concept
 - (b) Inference
 - (c) Connotation
 - (d) Conference
2. Propositions that support the conclusion of an argument are called
 - (a) Inferences
 - (b) Premises
 - (c) Concepts
 - (d) None of the above
3. That proposition which is affirmed on the basis of premises is called
 - (a) Major term
 - (b) Concept
 - (c) Conclusion
 - (d) Syllogism
4. Deduction and induction are two main forms of
 - (a) Beliefs
 - (b) Concepts
 - (c) Reasoning
 - (d) Assumptions
5. A reasoning where we start with certain particular statement and conclude with a universal statement is called a
 - (a) Deductive reasoning
 - (b) Inductive reasoning
 - (c) Abnormal reasoning
 - (d) Transcendental reasoning

6. With which of the following terms, deduction inference can be identified?
 (a) Synthetic (b) Analytic
 (c) Both (a) and (b) (d) None of the above
7. Which of the following can be defined as a group of statements that have common conclusion?
 (a) Proposition (b) Argument
 (c) Concept (d) Fallacy
8. The premises provide conclusive grounds for conclusion in
 (a) Inductive reasoning (b) Deductive reasoning
 (c) Intuitive reasoning (d) None of the above
9. The defining feature of a valid deduction is its
 (a) Vagueness (b) Uncertainty
 (c) Indefiniteness (d) Certainty
10. Inductive arguments are typically
 (a) Analytic (b) Synthetic
 (c) Intuitive (d) Aesthetic
11. The relationship between premises and conclusion in a deductive argument is basically of
 (a) Cause-effect (b) Analytic-synthetic
 (c) Implication-entailment (d) None of the above
12. In inductive reasoning, the conclusion is
 (a) Probable (b) Certain
 (c) Definite (d) Predictable
13. Inductive arguments are properly characterized as
 (a) Valid-invalid (b) Strong-weak
 (c) Definite-indefinite (d) Certain-uncertain
14. In logical reasoning, truth or falsehood is usually associated with
 (a) Arguments (b) Inferences
 (c) Propositions (d) Syllogism
15. Validity or invalidity may be predicted of
 (a) Deductive arguments (b) Propositions
 (c) Terms (d) Concepts
16. The falsehood of a valid deductive argument's conclusion guarantees that
 (a) The argument is sound
 (b) At least one of the premise is false
 (c) Premises are true
 (d) The validity is uncertain
17. To be critical, thinking must be
 (a) Practical (b) Socially relevant
 (c) Individually satisfying (d) Analytical
18. Deductive argument involves
 (a) Sufficient evidence
 (b) Critical thinking
 (c) Seeing logical relation
 (d) Repeated observation
19. A fallacy is a
 (a) True argument (b) False argument
 (c) Valid argument (d) Invalid argument
20. Inductive reasoning is based on
 (a) Uniformity of nature
 (b) God created the world
 (c) Unity of nature
 (d) Laws of nature
21. If it is possible for the premises of a deductive argument to be true and its conclusion to be false that argument is
 (a) Valid (b) Invalid
 (c) Indescribable (d) Sound
22. Consider the following propositions:
 A is human and mortal.
 B is human and mortal.
 C is human and mortal.
 D is human and mortal.
 Therefore, 'All humans are mortal' is an example of
 (a) Deductive argument (b) Inductive argument
 (c) Syllogistic argument (d) None of the above
23. Which of the following describes a valid deductive argument with true premises?
 (a) Sound (b) Unsound
 (c) Fallacious (d) Ambiguity
24. A deductive argument is sound if and only if it is
 (a) Valid and all its premises are true
 (b) Invalid and all its premises are true
 (c) Is valid and one of the premise is false
 (d) Is valid and its conclusion is false
25. Lakshmana is a morally good person because
 (a) He is religious. (b) He is educated.
 (c) He is rich. (d) He is rational.
26. In terms of nature, both the premises and conclusion of an argument are
 (a) Commands (b) Propositions
 (c) Exclamations (d) Questions
27. Which of the following denotes a statement of relation between two terms?
 (a) Proposition (b) Denotation
 (c) Syllogism (d) None of the above
28. Structure of a logical argument is based on
 (a) Formal validity
 (b) Material truth
 (c) Linguistic expression
 (d) Aptness of examples
29. In a deductive argument, conclusion is
 (a) Summing up of the premises
 (b) Not necessarily based on premises
 (c) Entailed by the premises
 (d) Additional to the premises
30. Syllogistic reasoning is
 (a) Deductive (b) Inductive
 (c) Experimental (d) Hypothetical
31. A syllogism must have
 (a) Three terms (b) Four terms
 (c) Six terms (d) Five terms
32. The two kinds of propositions are
 (a) Connotative-denotative
 (b) Categorical-conditional
 (c) Both (a) and (b)
 (d) None of the above
33. Which of the following denotes relation between two terms?
 (a) Subject (b) Predicate
 (c) Object (d) Copula

34. A deductive argument is valid if
 (a) Premises are false and conclusion is true.
 (b) Premises are false and conclusion is also false.
 (c) Premises are true and conclusion is false.
 (d) Premises are true and conclusion is true.
35. Which of the following statements are false?
 I. Inductive arguments always proceed from the particular to the general.
 II. A cogent argument must be inductively strong.
 III. A valid argument may have a false premise and a false conclusion.
 IV. An argument may legitimately be spoken of as true or false.
- Codes:**
 (a) II, III and IV (b) I and III
 (c) II and IV (d) I and II
36. The sum total of the objects to which the term can be applied is its
 (a) Connotation (b) Denotation
 (c) Meaning (d) Function
37. Denotation is the same as
 (a) Extension (b) Intension
 (c) Value (d) Dictionary
38. The function of suggesting qualities possessed by the objects is known as
 (a) Evaluating (b) Denoting
 (c) Connoting (d) Meaning
39. Connotation is the same as
 (a) Intension (b) Extension
 (c) Value (d) Meaning
40. In a categorical proposition, the predicate is either affirmed or denied of the subject
 (a) Unconditionally (b) Conditionally
 (c) Emotionally (d) None of the above
41. The proposition 'if you work hard you will succeed' is an example of
 (a) Categorical proposition
 (b) Conditional proposition
 (c) Negative proposition
 (d) Pre-emptive proposition
42. A disjunctive proposition is a type of
 (a) Conditional proposition
 (b) Unconditional proposition
 (c) Categorical proposition
 (d) Imperative proposition
43. Which of the following statements are true?
 I. Some arguments while not completely valid are almost valid.
 II. A sound argument may be invalid.
 III. A cogent argument may have a probably false conclusion.
 IV. A statement may be true or false.
- Codes:**
 (a) I and II (b) I, III and IV
 (c) IV alone (d) III and IV
44. Affirmative or negative is the classification of propositions on the basis of
 (a) Quantity (b) Quality
 (c) Validity (d) Truth
45. Universal or particular is the classification of the propositions on the basis of
 (a) Quantity (b) Quality
 (c) Validity (d) Truth
46. A proposition in which the predicate refers to all individual objects denoted by the subject is called
 (a) Particular (b) Negative
 (c) Disjunctive (d) Universal
47. A proposition in which the predicate belongs only to a part of the denotation of the subject is called
 (a) Particular (b) Negative
 (c) Disjunctive (d) Universal
48. Individual propositions are to be regarded as
 (a) Universal (b) Particular
 (c) Negative (d) None of the above
49. The proposition 'all men are mortal' is an example of
 (a) Universal affirmative
 (b) Universal negative
 (c) Particular affirmative
 (d) Particular negative
50. The proposition 'no men are perfect' is an example of
 (a) Universal affirmative (b) Universal negative
 (c) Particular affirmative (d) Particular negative
51. 'Some flowers are green' is an example of
 (a) Universal affirmative (b) Universal negative
 (c) Particular affirmative (d) Particular negative
52. The proposition 'some Indians are not spiritual' is an example for
 (a) Universal affirmative (b) Universal negative
 (c) Particular affirmative (d) Particular negative
53. When a term is used in its entire extent, referring to the objects denoted by the term, it is said to be
 (a) Undistributed (b) Excluded
 (c) Distributed (d) Verified
54. When a term refers only to a part of the class of things denoted by the term that term is said to be
 (a) Undistributed (b) Unexcluded
 (c) Distributed (d) Verified
55. Universal affirmative proposition distributes
 (a) Subject
 (b) Predicate
 (c) Both subject and predicate
 (d) Neither subject nor predicate
56. Universal negative proposition distributes
 (a) Subject
 (b) Predicate
 (c) Both subject and predicate
 (d) Neither subject nor predicate
57. Particular affirmative proposition distributes
 (a) Subject
 (b) Predicate
 (c) Both subject and predicate
 (d) Neither subject nor predicate

58. Particular negative proposition distributes
 (a) Subject
 (b) Predicate
 (c) Both subject and predicate
 (d) Neither subject nor predicate
59. The process of passing directly from a single proposition to a conclusion is
 (a) Immediate inference (b) Mediate inference
 (c) Definition (d) Classification
60. Which of the following asserts the agreement or disagreement of a subject and predicate after having compared each with middle term?
 (a) Immediate inference (b) Mediate inference
 (c) Definition (d) Classification
61. Which of the following shows the relationship between two universal propositions having the same subject but differing in quality only?
 (a) Contrary opposition
 (b) Contradictory opposition
 (c) Subaltern
 (d) Sub contrary
62. Which of the following terms show the relationship between two propositions having the same subject, but differing in both quality and quantity?
 (a) Contrary opposition
 (b) Contradictory opposition
 (c) Sub alternation
 (d) Sub contrary
63. The relation between two particular propositions having the same subject and predicate but differing in quality is
 (a) Contrary (b) Contradictory
 (c) Sub alternation (d) Sub contrary
64. Which of the following shows that an opposition is the relation between two propositions having the same subject and predicate but differing in quantity only?
 (a) Contrary (b) Contradictory
 (c) Subalternation (d) Subcontrary
65. If one of the contraries is true, then the truth value of the other is
 (a) True (b) Partially true
 (c) False (d) Neither true nor false
66. If one of the contraries is false, then the truth value of the other is
 (a) True (b) False
 (c) Neither true nor false (d) Doubtful
67. If one of the contradictories is true, then the other must be
 (a) True (b) False
 (c) Doubtful (d) Neither true nor false
68. Both the contrary propositions cannot be
 (a) True (b) False
 (c) True and false (d) Doubtful
69. Of the two sub contraries if one is false, the other is necessarily
 (a) True (b) False
 (c) Doubtful (d) Neither true nor false
70. If one of the two sub contraries is true, then the other one is
 (a) True (b) False
 (c) Doubtful (d) Neither true nor false
71. Between subalternations, if the universal is true, then the particular is
 (a) True (b) False
 (c) Doubtful (d) Both true and false
72. If the particular proposition of a subalternation relation is false, then its corresponding universal proposition will be
 (a) True (b) False
 (c) Both true and false (d) Doubtful
73. If the particular proposition of a subalternation relation is true, then the truth value of the universal proposition is
 (a) True (b) False
 (c) Both true and false (d) Doubtful
74. The proposition, 'Chanakya is wise', is an example of
 (a) Negative proposition (b) Singular proposition
 (c) Emotive proposition (d) Invalid proposition
75. The quantity of the proposition is determined by the extension of the
 (a) Subject
 (b) Predicate
 (c) Both subject and predicate
 (d) Copula
76. In a conditional proposition, the part which expresses the condition by 'if' or its equivalent is
 (a) Antecedent (b) Consequent
 (c) Opposite (d) Meaning
77. Which of the following terms describe the syllogism?
 (a) Mediate and deductive
 (b) Immediate and deductive
 (c) Mediate and inductive
 (d) Immediate inductive
78. The major term is the
 (a) Subject of the conclusion
 (b) Copula
 (c) Predicate of the conclusion
 (d) Predicate of the minor premise
79. The minor term is the
 (a) Subject of the conclusion
 (b) Predicate of the conclusion
 (c) Subject of the major premise
 (d) Predicate of the major premise
80. That term which occurs in the premises and not in the conclusion is
 (a) Major term (b) Minor term
 (c) Middle term (d) None of the above
81. Which of the following performs the function of an intermediary?
 (a) Major term (b) Middle term
 (c) Minor term (d) Copula
82. How many times each term occurs in the syllogism?
 (a) Once (b) Twice
 (c) Thrice (d) Four times
83. All Indians are hardworking. All Punjabis are Indians. Therefore, all Punjabis are hardworking. The above argument is
 (a) Invalid (b) False (c) Valid (d) True

84. If one premise is negative, then the conclusion must be
 (a) Negative
 (b) Positive
 (c) Both negative and positive
 (d) Neither negative nor positive
85. Combination of which of the following two types of premises yields no valid conclusion?
 (a) Universal (b) Particular
 (c) Affirmative (d) Categorical
86. No conclusion is possible from two
 (a) Universal premises (b) Affirmative premises
 (c) Negative premises (d) Categorical premises
87. If one premise is particular, then the conclusion must be
 (a) Universal (b) Negative
 (c) Affirmative (d) Particular
88. Which one of the following is not an argument?
 (a) If today is Tuesday, tomorrow will be Wednesday.
 (b) Since today is Tuesday, tomorrow will be Wednesday.
 (c) Ram insulted me, so I punched him in the nose.
 (d) Ram is not at home so he must have gone to town.
89. Which one of the following statements is completely nonsensical?
 (a) He was a bachelor but he married recently.
 (b) He is a bachelor but he married recently.
 (c) When he married, he was not a bachelor.
 (d) When he was a bachelor, he was not married.
90. Venn diagram is a kind of diagram to
 (a) Represent and assess the truth of elementary inferences with the help of Boolean Algebra of classes.
 (b) Represent and assess the validity of elementary inferences with the help of Boolean Algebra of classes.
 (c) Represent but not assess the validity of elementary inferences with the help of Boolean Algebra of classes.
 (d) Assess but not represent the validity of elementary inferences with the help of Boolean Algebra of classes.
91. 'A is true because B is true; B is true because A is true'. This type of argument is termed as
 (a) Inductive argument (b) Deductive argument
 (c) Circular argument (d) None of the above
92. Which of the following is an example of circular argument?
 (a) God created man in his image and man created God in his own image.
 (b) God is the source of scripture and the scripture is the source of our knowledge of God.
 (c) Some of the Indians are great because India is great.
 (d) Rama is great because he is Rama.
93. Determine the nature of the following definition, 'poor' means having an annual income of ₹1000.
 (a) Persuasive (b) Precising
 (c) Lexical (d) Stipulative
94. In the expression, 'Nothing is larger than itself', the relation 'is larger than' is
 (a) Antisymmetric (b) Asymmetrical
 (c) Intransitive (d) Irreflexive
95. Determine the nature of the following definition, 'Abortion means the ruthless murdering of innocent beings'.
 (a) Lexical (b) Persuasive
 (c) Stipulative (d) Theoretical
96. Which one of the following is not an argument?
 (a) Abhimanyu does not eat in the day so he must be eating at night.
 (b) If Abhimanyu is growing fat and if he does not eat during the day, he will be eating at night.
 (c) Abhimanyu eats in the night so he does not eat during the day.
 (d) Since Abhimanyu does not eat in the day, he must be eating in the night.
97. If P is true, Q is true. If P is false, Q is false. The relation of this proposition is
 (a) Independent (b) Equivalent
 (c) Subcontrary (d) Contradictory
98. Two propositions with the same subject and predicate terms but different in quality are
 (a) Contradictory (b) Contrary
 (c) Subalternation (d) Subcontraries
99. Which of the following statements are always true?
 I. A wooden table is a table.
 II. Now, it is raining or not raining.
 III. The sun rises in the East every day.
 IV. A chicken comes out of hen's egg.
Codes:
 (a) I and III (b) I, III and IV
 (c) I and II (d) II and III
100. Persons educated through a foreign language are sure to be unpatriotic. Mark the answer as follows.
 (a) If the statement is a fact.
 (b) If the statement is an advice.
 (c) If the statement is an opinion.
 (d) If the statement is a prejudice.
101. Statement: 'Decline of British Empire should have resulted in decline of English language'. Mark the answer as follows.
 (a) If the statement is a fact.
 (b) If the statement is an advice.
 (c) If the statement is an opinion.
 (d) If the statement is a prejudice.
102. If 'X loves Y', then what can be inferred about 'Y loves X'? It is
 (a) True (b) False
 (c) May be true (d) None of the above
103. 'Honesty is the best policy' because
 (a) God rewards those who follow this maxim.
 (b) It leads to recognition in the society.
 (c) It facilitates cohesiveness in society.
 (d) It leads to material prosperity and spiritual awakening.
104. Consider the following statements.
 I. The sunset is beautiful.
 II. Mahatma Gandhi believed in non-violence.
 III. Do not tell the world what you can do, just do it.
 IV. Those who own a car are rich.

Which one of the following is correct?

	Fact	Opinion	Advice	Assumption
--	-------------	----------------	---------------	-------------------

- | | | | | |
|-----|----|-----|-----|-----|
| (a) | I | IV | III | II |
| (b) | II | III | IV | I |
| (c) | IV | II | I | III |
| (d) | II | I | III | IV |
105. Education and socio-economic development are
- Related in a direct proportion.
 - Related in an indirect proportion.
 - Sometimes related and sometimes not related.
 - Not related
106. Bats are mammals because bats suckle their young and
- All those who suckle their young are mammals.
 - All mammals suckle their young.
 - Some of those who suckle their young are mammals.
 - All the above
107. 'A single shelf of a good European Library is worth the whole native literature of India and Arabia'. This statement is
- Factual
 - Logical
 - Opinion
 - Reactionary
108. Consider the following statements:
I think
Thinking things exist
Therefore, I am (i.e., I exist as a thinking thing)
This argument is
- Valid
 - Invalid
 - Doubtful
 - Cannot be said
109. Which one of the following statements follow from the statement 'only goods trains stop at this station'?
- Some goods trains stop at this station.
 - All goods trains stop at this station.
 - Some goods trains do not stop at this station.
 - All trains that stop at this station are goods trains.
110. Evaluate the following statements in terms of whether each is a fact, opinion, prejudice, or advice.
- Women are not suitable for police service.
 - In a democracy no party should be in power for too long.
 - Have proper rest, even during the examination time.
 - Obesity is a risk factor for coronary heart disease.
- Which one of the following is correct?
- | | | | | |
|--|----------------|------------------|-------------|---------------|
| | Opinion | Prejudice | Fact | Advice |
|--|----------------|------------------|-------------|---------------|
- | | | | | |
|-----|-----|-----|-----|-----|
| (a) | II | III | IV | I |
| (b) | II | I | IV | III |
| (c) | III | I | IV | II |
| (d) | II | IV | III | I |
111. **Information:** NET test is conducted for postgraduates.
Inferences:
- Kumar is a postgraduate, so she should have undertaken the test.
 - Kamal is a graduate. She cannot take the NET examination.
 - All postgraduates can take the NET examination.
 - No other agency can take the NET examination.

112. For a proposition to be true, it is necessary that it should have all the following characteristics EXCEPT
- It must be objective.
 - It must be in tune with accepted beliefs.
 - It must be consistent.
 - It must be testable.

113. Four inferences are drawn from the statement given below, which one can be the correct inference?
[December 1998]

Statement

People in Australia generally speak English.

Inferences

- Rosy speaks English. So she is from Australia.
- Rahim knows English. That is why he is going to Australia next month.
- Rahul has been living in Australia, most probably he can speak English.
- Ramesh does not know English. He cannot talk to anyone if he goes to Australia.

Directions (Questions 114–135): In each of the questions below, a proposition is followed by four answer choices. Match the proposition with one of the choices that seems to be the most justified or applicable.

114. The spread of the Internet for higher education is premised on [June 2000]
- Research and development is vital.
 - Browsing encourages critical thinking.
 - Easy management and dissemination of knowledge.
 - India should be second to none in the world.
115. World Trade Organization believes in Intellectual Property and Liberalized Trade Regime [June 2000]
Their belief is based on the assumption that
- Modern economy bestows equal benefits.
 - Knowledge-based economy and globalization is a reality.
 - All countries are well suited for modern trade.
 - Rich countries will always help the poor countries.
116. The essence and justification to beauty contests is that [June 2000]
- Women have standard features on which they can be rated.
 - Beautiful women have a vision and role to play in social upliftment.
 - They symbolize eternal freedom for women.
 - They provide an opportunity for beautiful women of the world to come on one platform.
117. This worker is a graduate. No one else in the factory is a graduate.
- All workers in the factory are graduates.
 - Everybody in the factory has a graduation certificate.
 - Some of the factory workers have higher qualification.
 - Only one worker in the factory is a graduate.
118. All that glitters is not gold [June 2003]
- Many things that shine are other than gold.
 - Whatever shines is other than gold.
 - Gold is not the only glittering substance.
 - All the above

119. All students are not geniuses [June 2003]
 (a) Many students are not genius.
 (b) All geniuses are students.
 (c) No student is a genius.
 (d) None of the above
120. Which of the following statements say the same thing? [December 2006]
 I. 'I am a teacher' (said by Arvind).
 II. 'I am a teacher' (said by Binod).
 III. My son is a teacher (said by Binod's father).
 IV. My brother is a teacher (said by Binod's sister).
 V. My brother is a teacher (said by Binod's only sister).
 VI. My sole enemy is a teacher (said by Binod's only enemy).
Codes:
 (a) I and II (b) II, III, IV and V
 (c) II and VI (d) V and VI
121. Which of the following are the correct ways of arguing? [December 2006]
 I. There can be no second husband without a second wife.
 II. Anil is a friend of Bob, Bob is a friend of Raj, hence Anil is a friend of Raj.
 III. A is equal to B, B is equal to C and hence, A is equal to C.
 IV. If everyone is a liar, then we cannot prove it.
Codes:
 (a) III and IV (b) I, III, and IV
 (c) II, III and IV (d) I, II, III and IV
122. Which of the following is an analogous statement? [December 2009]
 (a) Man is like God.
 (b) God is great.
 (c) Gandhi is the father of the nation.
 (d) Man is a rational being.
123. 'No men are mortal' is contradictory to [June 2009]
 (a) Some men are mortal.
 (b) Some men are not mortal.
 (c) All men are mortal.
 (d) No mortal is man.
124. Certainty is [June 2010]
 (a) An objective fact (b) Emotionally satisfying
 (c) Logical (d) Ontological
125. Inductive logic studies the way in which a premise may [December 2011]
 (a) Support and entail a conclusion.
 (b) Not support but entail a conclusion.
 (c) Neither support nor entail a conclusion.
 (d) Support a conclusion without entailing it.
126. Most dresses in that market are expensive means
 (a) There are no cheap dresses available in that market.
 (b) There are some cheap dresses also in that market.
 (c) Some dresses in that market are expensive.
 (d) None of the above
127. Every library has books
 (a) Books are only in library.
 (b) Libraries are meant for books only.
 (c) No library is without books.
 (d) Some libraries do not have readers.
128. The electronic media convinces its viewers that the likelihood of their becoming the victim of a violent crime is extremely high; at the same time by its very nature, it persuades viewers to passively accept whatever happens to them
 (a) Exposure to electronic media promotes criminal behaviour.
 (b) The users of electronic media are more vulnerable to become victims of violence than others.
 (c) Electronic media promotes a feeling of helpless vulnerability in viewers.
 (d) None of the above.
129. This book can help because all good books help
 (a) This is not a good book.
 (b) This is a good book.
 (c) No good book helps.
 (d) Some good books help.
130. Soldiers serve their country
 (a) Men mostly serve their country.
 (b) The persons who serve their country are soldiers.
 (c) Some people who are soldiers serve their country.
 (d) Women usually do not serve their country as they are not soldiers.
131. To pass any competitive exam, one must work hard
 (a) Getting good grades in exam needs hard work.
 (b) All those who work hard, pass.
 (c) The candidates who work hard overcome anxiety in the competitive exam.
 (d) Without hard work, one does not pass the competitive exams.
132. All the books written by Professor Bhardwaj are textbooks. Some of his books are published by India Publishing House.
 (a) India Publishing House publishes textbooks only.
 (b) Some textbooks written by Professor Bhardwaj are published by publishers other than M/s India Publishing House.
 (c) All the books published by M/s India Publishing House have been written by Professor Bhardwaj.
 (d) None of the above
133. All students in my class are bright. Mehtab is not bright
 (a) Some students are not bright.
 (b) Mehtab is not a student of my class.
 (c) Mehtab must change the school.
 (d) No student is dull.
134. Which one of the following is not correct? A belief becomes a scientific truth when it
 (a) Is established experimentally
 (b) Is arrived logically
 (c) Is accepted by many people
 (d) Can be replicated
135. Child labour can best be eradicated if the following is done for the concerned children
 (a) Schools are opened and free lunch is provided.
 (b) Employment is provided to parents and free education is given to children.
 (c) Appropriate laws are enacted and enforced.
 (d) Employers of child labourers are punished and children are sent to school.

PRACTICAL PROBLEMS

Directions (Questions 136–150): In each of the questions below, two statements are followed by two conclusions I and II. Assuming that the given statements are true even if they are at variance with the commonly known facts, pick up one of the following answer choice which you think is correct.

- (a) If only conclusion I follows.
 (b) If only conclusion II follows.
 (c) If both I and II follows.
 (d) If neither I nor II follows.

136. Statements

Some tables are golden.
 All teaks are tables.

Conclusions

- I. Some teaks are golden.
 II. Some golden are teak.

137. Statements

No man is a tiger.
 Karan is a man.

Conclusions

- I. Karan is not a tiger.
 II. All men are not Karan.

138. Statements

All boys are men.
 All men are fathers.

Conclusions

- I. Some men are boys.
 II. All boys are fathers.

139. Statements

All teachers are girls.
 No girl is dull.

Conclusions

- I. No boy is a teacher.
 II. No teacher is dull.

140. Statements

All poets are inspiring.
 All artists are inspiring.

Conclusions

- I. All artists are poets.
 II. Some inspiring persons are not artists.

141. Statements [NET June 1997 and June 2001]

No tree is bottle.
 No bottle is unbreakable.

Conclusions

- I. No tree is unbreakable.
 II. Nothing unbreakable is tree.

142. Statements

All horses are donkeys.
 All donkeys are monkeys.

[December 1998]

Conclusions

- I. All horses are monkeys.
 II. All monkeys are horses.

143. Statements

No villagers own a car.
 Shankar owns a car.

[December 2002]

Conclusions

- I. Shankar lives in a town.
 II. Shankar owns a car.

144. Statements

Some teachers are women.
 No teacher is absent.

Conclusions

- I. There are no male teachers.
 II. All women teachers are present.

145. Statements

Some benches are chairs.
 Hammer is a bench.

Conclusions

- I. Some chairs are benches.
 II. Hammer is not a chair.

146. Statements

All books are stones.
 All stones are papers.

[December 2002]

Conclusions

- I. Some papers are books.
 II. Some papers are stones.

147. Statements

Only graduates are eligible for this post.
 Most rickshaw pullers are graduates.

Conclusions

- I. Some rickshaw pullers are eligible for this post.
 II. All those eligible for this post are graduates.

148. Statements

All grapes are oranges.
 Some apples are not oranges.

Conclusions

- I. All apples are grapes.
 II. Some apples are grapes.

149. Statements

All students are ambitious.
 All ambitious persons are hardworking.

Conclusions

- I. All students are hardworking.
 II. All hardly working people are not ambitious.

150. Statements

All garden are schools.
 All schools are colleges.

Conclusions

- I. All gardens are colleges.
 II. Some gardens are not colleges.

Directions (Questions 151–167): In each of the questions below, there are two statements followed by three to four conclusions numbered as I, II, III, and IV. You have to take the given statements to be true even if they seem to be at variance with commonly known facts and then decide which of the given conclusions logically follow from the given statements.

151. Statements

All magic are women.
 All women are crazy.

Conclusions

- I. All magic are crazy.
 II. All crazy are magic.
 III. Some crazy are magic.
 IV. Some crazy are women.

Choices

- (a) Only I, III, and IV follows.
- (b) Only II and III follows.
- (c) All conclusions follow
- (d) None of the conclusions follow.

152. Statements

All cats are mammals.
No tigers are cats.

Conclusions

- (a) No tiger is a mammal.
- (b) No mammals are tigers.
- (c) Cats are tigers.
- (d) None of the above

153. Statements

Some boxes are round.
All rounds are spheres.

Conclusions

- I. Some boxes are spheres.
- II. Some spheres are boxes.
- III. Some spheres are round.
- IV. All spheres are round.

Choices

- (a) I, II and III follows.
- (b) II, III and IV follows.
- (c) I, III and IV follows.
- (d) I, II and IV follows.

154. Statements

All books are clocks.
Some clocks are chips.

Conclusions

- I. Some clocks are books.
- II. No clocks are books.
- III. Some books are chips.
- IV. No books are chips.

Choices

- (a) I and III follows.
- (b) Only I follows.
- (c) Either I or II follows.
- (d) Either III or IV and I follows.

155. Statements

Some tables are TVs.
Some TVs are radios.

Conclusions

- I. Some tables are radios.
- II. Some radios are tables.
- III. All radios are TVs.
- IV. All TVs are tables.

Choices

- (a) Only I and III follows.
- (b) Only II and IV follows.
- (c) All follow
- (d) None follows

156. Statements

Some rabbits are bears.
No goats are bears.

Conclusions

- I. Some rabbits are not goats.
- II. All rabbits are goats.
- III. Some goats are not rabbits.
- IV. All goats are rabbits.

Choices

- (a) Only I follows.
- (b) Only III follows.
- (c) Either I or II follows.
- (d) Either III or IV and I follows.

157. Statements

No systems are desks.
All desks are books.

Conclusions

- I. Some systems are books.
- II. Some systems are not books.
- III. Some books are systems.
- IV. Some books are not systems.

Choices

- (a) Only II follows.
- (b) Only IV follows.
- (c) I and IV follows.
- (d) Either I or II and IV follows.

158. Statements

All branches are flowers.
All flowers are trees.

Conclusions

- I. All branches are trees.
- II. All trees are branches.
- III. All flowers are branches.
- IV. Some trees are branches.

Choices

- (a) Only I and IV follows.
- (b) Only II and III follows.
- (c) All follow
- (d) None follows

159. Statements

Some bags are pockets.
No pocket is a pouch.

Conclusions

- I. No bag is a pouch.
- II. Some bags are not pouches.
- III. Some pockets are bags.
- IV. No pocket is a bag.

Choices

- (a) Only I and III follows.
- (b) Only II and III follows.
- (c) Only either I or IV follows.
- (d) None follows

160. Statements

All politicians are honest.
All honest are fair.

Conclusions

- I. Some honest are politicians.
- II. No honest is politician.
- III. Some fair are politicians.
- IV. All fair are politicians.

Choices

- (a) None follows
- (b) Only I follows
- (c) Only I and II follows.
- (d) Only I and III follows.

161. Statements

All the students passed the examination.
Some students are girls.

Conclusions

- I. Some boys passed the examination.
- II. All the girls failed the examination.
- III. None of the boys passed the examination.
- IV. None of the girl students failed the examination.

Choices

- (a) Only I and II follows.
- (b) Only II and III follows.
- (c) Only I, II and III follows.
- (d) None of the above

162. Statement

Most of the Indian states existed before independence

Conclusions

- I. Some Indian states existed before independence.
- II. All Indian states did not exist before independence.

Choices

- (a) Only I is implied.
- (b) Only II is implied.
- (c) Both I and II are implied.
- (d) Neither I nor II is implied.

163. Proposition

No teacher is on time for the class. [June 2002]

Conclusions

- I. No persons who are on time for their classes are teachers.
- II. Some teachers are not late for their classes.
- III. Most teachers come to their classes on time.
- IV. Few teachers come on time for their classes.

164. Statement

Necessity is the mother of all inventions.

Conclusions

- I. There can be no invention without there being a mother.
- II. Mother is a necessity. [June 2002]

Choices

- (a) Only I is implied.
- (b) Only II is implied.

- (c) Both I and II are implied.
- (d) Neither I nor II is implied.

165. Statement

Most teachers are hardworking. [June 2006]

Conclusions

- I. Some teachers are hardworking.
- II. Some teachers are not hardworking.

Choices

- (a) Only I is implied.
- (b) Only II is implied.
- (c) Both I and II are implied.
- (d) Neither I nor II is implied.

166. Statement

No man is infallible.

Conclusions

- I. All men are fallible.
- II. No infallible persons are men.

Choices

- (a) Only inference I is correct.
- (b) Only inference II is correct.
- (c) Both inferences I and II are correct.
- (d) Neither inference I nor inference II is correct.

167. Statements

All aeroplanes are trains.

Some trains are chairs.

Conclusions

- I. Some aeroplanes are chairs.
- II. Some chairs are aeroplanes.
- III. Some chairs are trains.
- IV. Some trains are aeroplanes.

Codes:

- (a) None follows
- (b) Only I and II follows.
- (c) Only II and III follows.
- (d) Only III and IV follows.

STATEMENTS AND ASSUMPTIONS

Directions (Questions 168–187): In each of the questions below, a statement is followed by two assumptions I and II. An assumption is something that is supposed or taken for granted. You have to consider the statement and the following assumptions and decide which of the assumptions is implicit in the statement.

- (a) Only assumption I is implicit.
- (b) Only assumption II is implicit.
- (c) Both I and II are implicit.
- (d) Neither I nor II is implicit.

168. Statement: Apartment building owners argue that rent control should be abolished as it will increase housing supply in the long run.

Assumptions

- I. Abolishing rent control will increase investment in housing sector.
- II. Greater supply leads to lower prices.

169. Statement: The government has decided to discontinue the telegram services which were provided at post offices across country.

Assumptions

- I. There were hardly any users of this service to keep it financially viable.
- II. The government wanted to force people to switch to alternative means of communication.

170. Statement: An appointment letter was issued to a recently passed out engineering graduate, 'You are hereby appointed as a Network Engineer with a probation period of one year. The confirmation is subjected to performance review at the end of the year'.

Assumptions

- I. This will help to manipulate the behaviour of the employee more effectively.
- II. This acts as a motivational factor to perform better.

- 171. Statement:** The automobile companies decreased prices of their products, besides offering many attractive financing schemes.
Assumptions
 I. This will boost the market demand that is now sluggish.
 II. There is high competition in the market.
- 172. Statement:** The new environmental law has been passed in our parliament with two-third majority.
Assumptions
 I. Protecting the environment has become a very important issue in our society.
 II. This will absolve the government of its responsibility for any further damage to the environment.
- 173. Statement:** The Delhi government has made it mandatory for all commercial vehicles to switch over to CNG in order to improve air quality.
Assumptions
 I. There is sufficient domestic supply of CNG.
 II. This will reduce carbon emissions in the air which are the major pollutants.
- 174. Statement:** Government started the Mid-day Meal Scheme across states in the country in order to reduce absenteeism and dropout ratio in the schools.
Assumptions
 I. Many poor parents are not able to afford food for their school-going children.
 II. This will help the government in making optimum use of food grains stored in warehouses.
- 175. Statement:** The government has decided to disinvest large chunks of its equity in select public sector undertakings to reduce fiscal deficit that is well above the targeted figure.
Assumptions
 I. The money generated out of the disinvestment process may reduce substantially the mounting fiscal deficits.
 II. There is a large public demand in the market for the shares of these undertakings.
- 176. Statement:** The government has enacted anti-rape laws in the Parliament in wake of rise in such incidents in the recent years.
Assumptions
 I. Strict law is the only and only way to deal with such incidents.
 II. This will help to strengthen the vote bank of the ruling party in the centre.
- 177. Statement:** An advertisement by a bank—We offer higher deposit rate in comparison to other banks.
Assumptions
 I. The different banks offer different deposit rates.
 II. There is competition in the market to attract customers.
- 178. Statement:** As a result of climate change and global warming, there has been an increase in the number and intensity of hurricanes, flash floods and so on, which cause extensive damage.
Assumptions
 I. We ought to know the causes so as to minimize the damage.
 II. There should be public awareness about the complete inevitability of impending dangers as a consequence of climate change and global warming.
- 179. Statement:** His recent investment in the shares of Company A is very risky.
Assumptions
 I. More risk more gain.
 II. He may incur huge losses on his investment.
- 180. Statement:** To maintain law and order in India, police works under high pressure and tension.
Assumptions
 I. The police of other countries works without any interferences.
 II. We expect that functions of the police should be free from any interferences.
- 181. Statement:** The new education policy envisages major changes in the educational system to meet our national objectives.
Assumptions
 I. The present education system needs improvement as it is not meeting our objectives.
 II. The present education system is not consistent with the manifesto of the ruling political party.
- 182. Statement:** The 'Right to Information Act (2005)' has been implemented almost in all departments dealing with the public.
Assumptions
 I. The government felt that employees in various departments can be made more accountable by providing services to public.
 II. This was required to keep the government employees busy.
- 183. Statement:** Teaching through TV is to help the students learn without a teacher.
Assumptions
 I. Students want to study without a teacher.
 II. Teachers are incapable of teaching.
- 184. Statement:** If you lose after competing hard, that is fine. If you lose without trying hard, that is what disappoints me.
Assumptions
 I. Losing after trying hard is excusable.
 II. Losing without effort is regrettable.
- 185. Statement:** Trade union leadership is in the hands of politicians.
Assumptions
 I. Trade unions have leaders.
 II. Leaders are generally politicians.
- 186. Statement:** A prominent university has started the practice of putting results on its website rather than in newspapers.
Assumptions
 I. Most of the students have access to the Internet these days.

- II. Students use both website and newspapers to see their results.

187. Statement: The state government has decided to appoint 4000 primary school teachers during the next financial year.

FORCE OF ARGUMENTS

188. Statement: Should there be a common entrance exam for admissions into medical colleges in India?

Arguments

- I. Yes, this will help candidates in focussing on a single test in the best possible manner and also save lot of hassle and cost of appearing in many examinations.
- II. No, this will deny candidates the opportunities to try their luck in other entrance exams, in case they are not able to perform in one particular exam.

189. Statement: Should there be a world government?

[June 2003]

Arguments

- I. Yes, it will help in eliminating tension among nations.
- II. No, then also the developed countries will dominate the government.

190. Statement: Should political parties be banned?

[June 2003]

Arguments

- I. Yes, it is necessary to teach a lesson to the politicians.
- II. No, it will lead to an end of democracy.

191. Statement: Should India's foreign trade policy focus on increasing exports, when India has limited supplies for domestic market.

Arguments

- I. Yes, through exports we can earn foreign exchange to pay for our imports.
- II. No, even export of selective commodities would lead to shortages.

192. Statement: Should our government allow medicines patented and manufactured in other countries for sale to general public only after conducting field trials?

Arguments

- I. Yes, the genetic make-up and physical and geographical conditions of Indian population are different from other parts of the world.
- II. No, this is just not feasible and hence cannot be implemented.

193. Statement: Should government focus on spending money on research to develop technologies to harness alternative energy resources to fulfil its energy requirements?

Arguments

- I. Yes, most of the energy resources such as fossil fuels are exhaustible in near future at the present rate of consumption.

Assumptions

- I. There are enough schools in the state to accommodate 4000 additional primary school teachers.
- II. The eligible candidates may not be interested to apply as the government may not finally appoint such a large number of primary school teachers.

- II. No, the outcome of research is always uncertain, so spending money on research may be a wasteful expenditure.

194. Statement: Is nuclear family system better than joint family system?

Arguments

- I. Yes, nuclear families enjoy greater freedom.
- II. No, joint families offer physical, psychological, and financial security and better division of work.

195. Statement: Should government stop spending huge amounts of money on international sports?

Arguments

- I. Yes, this money can be utilized for the socio-economic development of the country.
- II. No, lack of sports infrastructure will discourage players and they will not get international exposure.

196. Statement: Should there be compulsory medical examination of both the men and the women before they marry each other?

Arguments

- I. Yes, this will substantially reduce the risk of giving birth to children with serious ailments.
- II. No, this is an intrusion into the privacy of an individual and hence cannot be tolerated.

197. Statement: Should there be a ban on product advertising?

Arguments

- I. Yes, the money spent on advertising is very huge and it inflates the cost of the product.
- II. No, it is an age of advertising; unless your advertisement is better than your other competitors, the product will not be sold.

198. Statement: Should sex determination test during pregnancy be completely banned?

Arguments

- I. Yes, this leads to indiscriminate female foeticide and eventually leads to social imbalance.
- II. No, people have a right to know about their unborn child.

199. Statement: Should persons convicted of criminal offences in the past be allowed to contest elections in India?

Arguments

- I. Yes, it is a democracy—let people decide whom to vote.
- II. No, such persons cannot serve the cause of the people and the country.

- 200. Statement:** Should cutting of trees be banned altogether?
Arguments
 I. Yes, it is very much necessary to do so to restore ecological balance.
 II. No, a total ban would harm timber-based industries.
Explanation
 Clearly, trees play a vital role in maintaining ecological balance and so must be preserved. So argument I holds true. Also, trees form the basic source of timber and a complete ban on cutting of trees would harm the timber-based industries. So only a controlled cutting of trees should be allowed and the loss replenished by planting more trees. So, argument II is also valid.
- 201. Statement:** Should there be a restriction on the migration of people from one state to another in India?
Arguments
 I. Yes, this is the way to effect an equitable distribution of resources across the states in India.
 II. No, any Indian citizen has the basic right to stay at any place of his/her choice and hence they cannot be stopped.
Explanation
 Clearly, argument I holds strong, while argument II is vague.
- 202. Statement:** Should India create a huge oil reserve like some Western countries to face difficult situations in future?
Arguments
 I. Yes, this will help India withstand shocks of sudden rise in oil prices due to unforeseen circumstances.
 II. No, there is no need to block huge amount of foreign exchange and keep the money idle.
Explanation
 Oil, being an essential commodity, must be kept in reserve in our country. So argument I is vague, while argument II holds true as it provides a substantial reason for the same.
- 203. Statement:** Should there be more than one High Court in each state in India?
Arguments
 I. Yes, this will help reduce the backlog of cases pending for a very long time.
 II. No, this will be a sheer wastage of taxpayers' money.
- 204. Statement:** Should an open book examination system be introduced in India?
Arguments
 I. Yes, this will help in eliminating rote memory method.
 II. No, the students may not take the study seriously.
- 205. Statement:** Should an advisory be issued to women in metropolitan cities that they should not travel alone at night in view of increasing incidences of rape and sexual abuse?
Arguments
 I. Yes, providing security at every place is not possible.
 II. No, this may send a wrong message to the people that government is not able to provide security to women.
- 206. Statement:** Should there be a restriction on number of limited matches in India so as to fix the problem of match fixing?
Arguments
 I. Yes, the high number of such matches offers more opportunities to anti-social elements to indulge in match fixing.
 II. No, these will discourage sports culture in the country.
- 207. Statement:** Should the teenagers be denied access to social media sites?
Arguments
 I. Yes, they waste a lot of precious time that can be used for studies.
 II. No, this will deny them of the useful information.
- 208. Statement:** Should there be a ban on the use of plastic bags in metro cities?
Arguments
 I. Yes, the excessive use of plastic bags chokes drainage system and causes water logging.
 II. No, instead, the thickness of plastic bags should be specified that will cause minimal damage to the environment.
- 209. Statement:** Should smoking be completely banned in India?
Arguments
 I. Yes, this will improve the health of the nation.
 II. No, this will drive thousands of people out of jobs.
- 210. Statement:** Should social media sites be banned by the Government?
Arguments
 I. Yes, this will check the misuse of social media against government.
 II. No, this will curtail the expression of power.
- 211. Statement:** Should there be capital punishment for persons found guilty of committing heinous crimes against women and children?
Arguments
 I. Yes, this kind of exemplary punishment can work as deterrence against committing such type of crimes.
 II. No, this can also lead to misuse of law by miscreants.
- 212. Statement:** We should privatize higher education.
 [June 2004]
Arguments
 I. Yes, because the government institutes are not working properly.
 II. No, as this will deprive the poor of education.
 III. Yes, because education in private institutions is of high quality.
 Which of these arguments is weighty and correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Both II and III

ASSERTION AND REASON

Directions (Questions 213–232): Assertion and reasoning type questions have one assertion and one reason. The question is followed by four options.

- (a) A is true but R is false.
 (b) A is false but R is true.
 (c) Both A and R are true and R is not the correct explanation of A.
 (d) Both A and R are true and R is the correct explanation of A.
- 213. Assertion (A):** Hindi should be the official language of India.
Reason (R): Majority of people living in India are Hindus. [December 1998]
- 214. Assertion (A):** In India, people elect their own representatives for Parliament and State Assemblies.
Reason (R): India is a democratic country.
- 215. Assertion (A):** In India, cotton crop is grown mainly in alluvial soils.
Reason (R): Alluvial soils are very fertile.
- 216. Assertion (A):** The Indian Constitution came into force with effect from 26 January 1950.
Reason (R): 26 January is celebrated as Republic Day.
- 217. Assertion (A):** Robert Clive defeated Siraj-ud-daulah in the Battle of Plassey.
Reason (R): The army of Clive was the best and it followed the best strategic policy. [December 2000]
- 218. Assertion (A):** The Hoysala sculptures have highly detailed descriptions and ornamentation.
Reason (R): Hoysala sculptures are soft; these have been created in Chloristic Schism.
- 219. Assertion (A):** Akbar abolished jizya in 1564 but reimposed it subsequently.
Reason (R): As a young man he was quite liberal and tolerant but became orthodox and reactionary as he matured.
- 220. Assertion (A):** Gupta period is described as the Golden Age of Indian History.
Reason (R): Guptas issued a large number of gold coins.
- 221. Assertion (A):** Most of the Himalayan rivers are perennial.
Reason (R): They are fed by melting snow.
- 222. Assertion (A):** Earthworms are not good for agriculture.
Reason (R): Earthworms break down the soil into fine particles and make it soft.
- 223. Assertion (A):** The Greek influence on the Indian art manifested itself in the form of Gandhara School of Art and moved from Taxila to Mathura and Sarnath.
Reason (R): During Gupta period, art became entirely and truly Indian.
- 224. Assertion (A):** Heavy water is used as a moderator in nuclear reactor.
Reason (R): Thermal neutrons are used for fission reactions in a reactor.
- 225. Assertion (A):** The 'Green Belt' represents a planning concept for controlling the physical expansion of large cities.
Reason (R): 'Green Belt' is an integral component of a planned city.
- 226. Assertion (A):** The import of Chinese toys was recently banned by the Government of India.
Reason (R): The plastic materials used to make the toys are not biodegradable.
- 227. Assertion (A):** Conversion of coal to diamond is a physical change.
Reason (R): Physical change does not change the composition of materials.
- 228. Assertion (A):** Caste involves a system consisting of many castes arranged in a hierarchy of rank and status.
Reason (R): The hierarchical ordering of castes is based on the distinction between purity and pollution as per ancient literature.
- 229. Assertion (A):** Seasonal employment results in large-scale migration of agricultural labourers from agriculturally backward regions to that of developed regions.
Reason (R): In seasonal unemployment, once the seasons are over, the agricultural workers, especially landless labourers and marginal farmers, remain unemployed.
- 230. Assertion (A):** Intensive cultivation accelerates land degradation.
Reason (R): Second Green revolution emphasizes on the improvement of mechanism to stop land degradation.
- 231. Assertion (A):** Division of work is the separation of work processes into a number of tasks with each task performed by a separate person or a group of persons.
Reason (R): Division of labour is a complex web of independent and isolated work.
- 232. Assertion (A):** One of the important decisions of the framers of the constitution of India was to guarantee every adult citizen in India the right to vote.
Reason (R): The universal adult franchise is not consistent with the principle of equality.

STATEMENTS AND COURSES OF ACTIONS

In each of the questions below (233–242), a statement followed by two courses of action numbered I and II. Mark the answer as follows.

- (a) If only course of action I follows.
 (b) If only course of action II follows.
 (c) If both courses of action I and II follows.
 (d) If neither course of action I nor course of action II follows.

- 233. Statement:** According to a report, not even a single institution of higher learning in India has appeared in the top 200 institutions of the world.
Courses of action
- I. Government should privatize higher education.
 - II. The regulatory agencies must do introspection and work hard to raise the standard of education in higher learning institutions.
- 234. Statement:** Mobile phone users have found that billing is not done according to advertised tariff plans by telecom companies and complained to regulatory authority about the same.
Courses of action
- I. The regulatory authority should direct telecom companies to be transparent on the tariff structure of all plans.
 - II. The government should restrict the number of foreign telecom companies operating in the country.
- 235. Statement:** A report states—an increasing number of engineering graduates produced by Indian universities are not employable in the industry.
Courses of action
- I. The engineering colleges should be given greater autonomy to decide the course content as per the demand of the industry.
 - II. World-class foreign universities should be encouraged to set up campuses in India.
- 236. Statement:** Most of them who passed from premier engineering colleges in India have migrated to developed nations for better career prospects.
Courses of action
- I. It should be made mandatory for students to sign the bond at the time of admission to the effect that they will serve in India at least for 10 years after they complete their graduation.
 - II. The government should take measures to provide suitable opportunities within the country that motivates them to stay in the country.
- 237. Statement:** A number of school children in the local schools have fallen ill after consumption of subsidized meals provided by the school authorities.
Courses of action
- I. This kind of government scheme should be discontinued with immediate effect.
 - II. The government should put in place a more effective system to check the quality of meal provided to the students.
- 238. Statement:** According to the latest census report, the gender ratio has fallen further in India.
Courses of action
- I. Government should conduct another census to verify the results.
 - II. Government should immediately start an awareness campaign through its public relations department about the effects of low gender ratio and encourage them to improve it.
- 239. Statement:** According to a survey report—majority of school teachers are not familiar with the need and importance of environmental education and also of their role in its promotion.
Courses of action
- I. Environmental education programme should be included in the college curriculum.
 - II. Orientation programme should be conducted for teachers on population education.
- 240. Statement:** The frequency of natural disasters such as hurricanes and flash floods has increased during the past two decades due to global warming.
Courses of action
- I. Action should be taken at the community levels.
 - II. The governments of the world should work together as factors and its effects are not confined to a single nation.
- 241. Statement:** India is facing continuous military threats from its neighbouring countries.
Courses of action
- I. India should strengthen military presence at the border.
 - II. India should engage its neighbours into a serious dialogue to reduce the tension at its borders.
- 242. Statement:** The users of social media sites have expressed their anguish at government's inability to deal with cases of violence against women in a prompt manner.
Courses of action
- I. Government should ban the use of social media websites.
 - II. Government should try to devise measures to ensure the safety of women.

Previous Year's Questions

One interrogative sentence is followed by two arguments, one beginning with 'yes' and other with 'no'. Pick up the correct answer choice from the answer choices given below for each of the questions from 243 to 245.

Directions (Questions 243–245): One interrogative sentence is followed by two arguments, one beginning with 'yes' and the other with 'no'. Pick up the correct answer choice from the answer choices given below for each of the questions from 243 to 245.

- (a) If only argument I is forceful.
 - (b) If only argument II is forceful.
 - (c) If both arguments are forceful.
 - (d) If neither argument I nor II is forceful.
- 243.** Should old age pension be introduced in India?
- I. Yes, because it is the most important social necessity.
 - II. No, because it will increase financial burden on the state

Explanation

Old age pension is still not considered as the most important social necessity in India; family support system is still intact. If it is introduced in India, it will increase the financial burden on the state. So, only II is more forceful.

244. Should free education be imparted in Indian schools?
 I. Yes, because India is a democratic country.
 II. No, because free education will lead to unemployment of educated people.

Explanation

Argument I is not strong as it is not incumbent on a democratic setup to provide free education to its populace. Argument II is also not strong because in the

statement, there is nothing to link free education with the employment of people.

245. Should reservation of seats for SC/ST candidates be discontinued?
 I. Yes, because reservation serves no purpose except for support to the political parties.
 II. No, because the backward sections of the society must be helped.

Explanation

Argument I is not forceful because reservation is not being extended to SC/ST candidates to gain support from political parties. Argument II is strong as SCs/STs need reservation so that they get some help in this manner.

MISCELLANEOUS

246. Which of the following statements are mutually inconsistent?
 I. Mostly poets are not egoistic.
 II. Mostly poets are humble.
 III. Some poets are egoistic.
 IV. Some poets are not non-egoistic.

Codes:

- (a) I and IV (b) II and III
 (c) I and III (d) III and IV

247. **Statement:** If all men are mortal, and if Rama is a man, Rama is also mortal
 (a) The premise is true and the conclusion is true.
 (b) The premise is false and the conclusion is false.
 (c) The premise is false and the conclusion is true.
 (d) The premise is true and the conclusion is false.

248. If 'no politician is dishonest' is false, then the statement 'some politicians are dishonest' shall be
 (a) True (b) False
 (c) May be true (d) None of the above

249. If the statement 'some men are cruel' is false, which of the following statement/s is/are true?
 I. All men are cruel.
 II. No men are cruel.
 III. Some men are not cruel.

Codes:

- (a) I and III (b) I and II
 (c) II and III (d) III only

250. **Proposition**
 No teacher is on time for the class. [June 2000]

Conclusions

- (a) No persons who are on time for their classes are teachers.

- (b) Some teachers are not late for their classes.
 (c) Most teachers come to their classes on time.
 (d) Few teachers come on time for their classes.

251. Which of the following statements are mutually contradictory? [December 2006]

- I. All flowers are not fragrant.
 II. Most flowers are not fragrant.
 III. None of the flowers are fragrant.
 IV. Most flowers are fragrant.

Codes:

- (a) I and II (b) I and III
 (c) II and III (d) III and IV

Directions (Questions 252 and 253): In each of the questions below, two statements are given followed by an inference. Mark (A) if the inference is definitely true, mark (B) if the inference is definitely false, mark (C) if the inference is probably false or true, and mark (D) if the inference cannot be drawn.

252. Statements

1. Glass is brittle.
 2. This substance is not brittle.

Inference

This substance is not glass.

253. **Statements** [June 2003]

1. Some intelligent people are happy.
 2. Some intelligent people are rich.

Inference

Some who are rich are happy.

ANSWER KEYS

Theory Questions

1. (b) 2. (b) 3. (c) 4. (c) 5. (b) 6. (b) 7. (a) 8. (b) 9. (d) 10. (b)
 11. (c) 12. (a) 13. (b) 14. (c) 15. (a) 16. (b) 17. (d) 18. (c) 19. (b) 20. (a)

SOLUTION

Practical Problems

136. (d): **Step I:** First, we check that there are three terms, such as tables, golden and teak. Here, **table** is the middle term.
 Then, we see whether it is in the form: A to B and B to C. It is not; so alignment is required. For alignment, we just need to change the order in this case.
 After alignment:
 All teak are **tables**.
 Some **tables** are golden.
Step II: This is 'A + I'. (Please refer to 'syllogism rule table'. No conclusion can be drawn.
 So, option (d) is the answer.
Venn diagram solution:

Conclusion I: Some teak may or may not be golden, ambiguity is there. Conclusion I does not follow.
Conclusion II: Similarly, some golden may or may not be teak.
 As there is ambiguity in both cases, none follows. Thus, option (d) is the answer.

137. (a): First check the number of terms. It is three. Ok. Now look at alignment.
 Now, the common term 'man' is not in the form A to B and B to C. So alignment is required.
 Align this pair as 'Karan is a man' and 'No man is a Tiger'. Here, it is important to mention that statement 'Karan is a Tiger' is considered as A type.
 Now, A + E = E. So conclusion I 'Karan is not a Tiger' follows.

Alternative solution:

Venn diagram solution:

138. (c): There are three terms. No alignment is required as it is in the standard format.
 $A + A = A$. The conclusion is 'all boys are fathers'. Conclusion II follows.
 By applying immediate reference to (converting) statement I, we can say that all some men are boys. Conclusion I also follows. Both I and II follows.
Venn diagram solution:

139. (b): Three terms—Teacher, girls, and dull. Next, it is in proper format. No alignment is required.
 Now, $A + E = E$. That is 'No Teacher is dull'. Conclusion II follows. Boys is not mentioned as a term. So nothing can be said about conclusion I.
Venn diagram solution:

140. (d): There are three terms—poets, inspiring, and artists.
 All poets (A) are inspiring (B).
 All artists (C) are inspiring (B).
 A to B.
 C to B.
 So alignment is required as it should be in the form A to B and B to C.
 After converting second statement.
 All poets are inspiring (A type).
 Some inspiring persons are artists (I type). It contradicts second conclusion also.
 A + I = No conclusion.
 So, option (d) is the answer.
Venn diagram solution:

141. (d): E + E = No conclusion. So, option (d) is the answer.
 142. (a): A + A = A, only statement I follows, so option (a) is the answer.
 143. (d): Town is not mentioned in statements. So conclusion I cannot follow. Premise and conclusion cannot be the same. So, option (d) is the answer.
 144. (d): If we look at conclusions directly, the term 'male teacher' in the first conclusion and 'women teachers' and 'present' in the second conclusion are not mentioned in statements.
 So, option (d) is the answer. Here, it is important to mention the syllogism propositions—the opposite of 'absent' is not 'present'.
 145. (a): The aligned pair is 'Hammer is a bench' and 'Some benches are chairs'. There is no definite conclusion for A + I-type pair. But conversion of statement I implies conclusion I.
 146. (c): The condition of three terms is satisfied. No alignment is required.
 A + A = A, conclusion is 'All books are papers'. The immediate inference of conclusion is 'Some papers are books'. So conclusion I follows.
 The immediate inference of second statement is 'some papers are stones'; that is also conclusion 2. So, option (c) is the answer.
Venn diagram solution:

147. (c): This is a comprehensive question, covering all major aspects of syllogism. Please look at the solution carefully.
 We need to bring the statements to their logical form before checking them for alignment.
 All those eligible for the post are graduates.
 Some rickshaw pullers are graduates.
 There are three terms—eligible, graduates, and rickshaw pullers. 'Graduates' is the common term.
 The statements are not in the form: A to B and A to B.
 According to IEA, second statement should be given priority for conversion:
 'Some graduates are rickshaw pullers'.
 Now the statements are to be brought to A to B and B to C form.
 'All those eligible for the post are graduates' (A type)
 'Some graduates are rickshaw pullers' (I type)
 A + I = No conclusion.

148. (d): there are three terms—grapes, oranges, and apples.
 A + O = No conclusion.
 We do not get any conclusion through immediate inference (conversion) also. So, option (d) is the answer.
 149. (a): A + A = A, so conclusion I follows.
 In conclusion II, the term 'hardly working' is not mentioned in the statements. So it does not need any consideration.
 150. (a) Since, both the premises are affirmative, the conclusion must be affirmative, conclusion II cannot follow.
 151. (c) Only three terms (magic, women, and crazy). No alignment is required as they are in the standard format.
 Now A + A = A.
Conclusion: All magic are crazy. So statement I is correct. Its immediate inference is 'Some crazy are magic'. It means third statement is true.
 The converse of second statement 'All women are crazy' is 'Some crazy are women'. So fourth conclusion is also true. Thus, option (c) is the answer.
 152. (d): There are three terms. After alignment, Some mammals are cats.
 No cats are tigers.
 If we look at conclusions directly, the term 'male teacher' in the first conclusion and 'women teachers' and 'present' in the second conclusion are not mentioned in statements. So, option (d) is the answer.
 153. (a): I + A = I. The conclusion is some boxes are spheres which is I. This can be converted to some spheres are boxes, which is II. Conclusion III follows after converting all rounds are spheres. So, option (a) is the answer.
Venn diagram solution:

154. (b): They are in desired format A to B and B to C.
 All books are clocks (A-type)
 Some clocks are chips (I-type)
 $A + I =$ No conclusion.
 Now, we can check first statement after immediate inference—Some clocks are books.
 Second statement after immediate inference—Some chips are clocks.
 So only conclusion I follows. Thus, option (b) is the answer.
155. (d): Since both the premises are particular, no definite conclusion follows.
156. (d): It has three terms.
 After alignment—‘no goats are bears’ and ‘some bears are rabbits’.
 $E + I = O$. So the conclusion is Some rabbits are not goats. Hence, I follows. III and IV also make a complementary pair.
157. (d): $E + A = O^*$. Hence, the conclusion is ‘Some books are not systems’. Again, I and II are complementary pair.
158. $A + A = A$, ‘All branches are trees’. Conclusion I follows. The immediate inference of ‘All branches are trees’ is ‘Some trees are branches’, that is, conclusion IV. So, option (a) is valid.
159. (b)
160. (c)
161. ‘d’. The opposites of ‘passed’ and ‘girls’ are not ‘failed’ and ‘boys’. Failed and boys are not mentioned in the statements. So, no conclusion is valid.
162. (d): The logical form of ‘Most of Indian states existed before independence’ is ‘Some Indian states existed before independence’. It is same as conclusion I. Statement and conclusion cannot be the same. Conclusion II is also not implied. So, (d) is the answer.
163. (a): After converting statement I, we can say that ‘a’ is true. ‘On time’ does not mean ‘not late’ in case of propositions. Thus, options (c) and (d) also not converse of (a).
164. (d): The contextual meaning and logical meanings are different for both the terms. So, option (d) is the answer.
165. (b): ‘Most teachers are hardworking’ is ‘Some teachers are hardworking’ in its logical form. Both statement and conclusion cannot be the same. So conclusion I is not implied. However, conclusion II ‘Some teachers are not hardworking’ is complimentary of I, so only II is implied. Thus, option (b) is the answer.
166. (a): The immediate inference of ‘No man is infallible’ is ‘No infallible (persons) are men’. So conclusion II is right. In logical form, the opposite of infallible may not be fallible. So inference may not apply. So, option (a) is the answer.
167. (d): Since the middle term ‘trains’ is not distributed even once in the premises, no definite conclusion follows. However, III is the converse of the second premise while IV is the converse of the first premise. So, both of them hold.

Statements and Assumptions

168. (c)
169. (a)
170. (b)
171. (c)
172. (a): Absolving government could never be the motive of any legislation.
173. (c): Even if there is no sufficient domestic supply, the import can be an option as India already is importing fossil fuels.
174. (a)
175. (c)
176. (d): Despite enactment of strict laws, their implementation and changes in psychology of people are other aspects. So I does not follow. Assumption II seems to be a narrow approach. This also does not follow. So (d) is the answer.
177. (c)
178. (c)
179. (c): The investment is being stated to be risky as it may incur huge losses.
180. (b)
181. (a)
182. (a)
183. (d): Students want to learn, sometimes this may be without any teacher. So assumption I is not implicit. Assumption II is not implicit; teaching through TV may be required because of other reasons.
184. (c)
185. (a): Leadership does not always mean political leadership. There can be leaders from religious, social, and business entities also.
186. (c)
187. (a): The government will appoint teachers only if has requisite vacancies.

Force of Arguments

188. (c): Both
189. (c): As we can see from our experience of United Nations, that is also a semblance of world government and that is dominated by developed countries.
190. (b)
191. (a): Mostly, countries export their surplus production. Recently, exports include intangible items also, such as software. Resources generated through exports pay for imports. So, only argument I holds.
192. (a): Health of the citizens is an issue of major concern for any government. So drugs must be first studied and tested in the Indian context before giving licence for its sale. So, only argument I holds strong.

193. (a): Developing alternative sources of energy helps us in long run. Argument II is invalid as research is crucial for finding solution to existing problem.
194. (c): There is more security in joint family system, as many responsibilities shared. So argument I holds. In nuclear families, with lesser number of people, there are lesser responsibilities and more freedom. Thus, II also holds.
195. (b): Argument I does not hold. Clearly, spending money on sports cannot be avoided merely because it can be spent on socio-economic problems. Also, sports culture helps in better health and will help in reducing medical expenses, and rather help in socio-economic development of nation. Argument II holds as with the lack of sports facilities, our country will lag behind in the international sports competitions.
196. (b): Such a step would help to prevent the growth of diseases such as AIDS. So, only argument II is strong.
197. (b): It is the advertisement that helps company to generate higher sales which means economies of scale actually may bring down the cost of production. It also makes customer aware of the qualities of the product. So argument I is not valid. Only argument II holds strong.
198. (a): Sex determination tests have led to skewed gender ratio. So argument I holds. People have a right to know only about the health aspect of unborn child. So, argument II does not hold strong.
199. (b): There should be a check on these kinds of elements at first place itself.
200. (c): Both I and II are valid. Only a limited ban should be imposed.
201. (b): Clearly, argument I holds strong, while argument II is vague.
202. (a): Oil, being an essential commodity, must be kept in reserve in our country; even for war-like situations.
203. (b): Creating more than one High Court may make sense only for big states. The number of pending cases should be dealt with more number of judges in existing high courts, not with increased number of high courts. Only argument II holds.
204. (c): Both I and II are valid arguments. So, option (c) is the answer.
205. (b): The government cannot absolve itself of the responsibility of providing security to its citizens—men or women, though women may need to be more cautious while moving at night. Argument II is more forceful.
206. (c): Both I and II are forceful.
207. (c): Both are strong.
208. (c): Both I and II are equally strong.
209. (a): Health is more important than any other issues. So, I is more forceful.
210. In a democratic society like ours, everybody has the right of expression, even if it is against government. So, argument I is not valid. Argument II is valid.
211. (c)
212. (b): The private institutions usually charge higher fees which poor people in India might not be able to afford.

Assertion and Reason

213. (c): Hindi should be the official language, but not on the basis of religion. There are many Hindu-dominated areas where Hindi is not being spoken, though Hindi is being spoken by almost half of our population.
214. (d): Only in democratic setup, people elect their own representatives.
215. (b): In India, cotton is mainly raised in the black soil that is found in Maharashtra. Alluvial soil is very fertile, found in Northern plains.
216. (d): Republic Day celebrates the coming into force of its constitution.
217. (a): The army of Clive won the battle of Plassey; he bribed Mir Jafar, Siraj-ud-daulah's Army Chief.
218. (a)
219. (c)
220. (c)
221. (d)
222. (b)
223. (c)
224. (c): Basically heavy water is used as a moderator in a nuclear reactor. It is used to slow down the neutrons being directed at the fissionable material.
225. (c): The idea is for a ring of countryside where urbanization will be resisted for the foreseeable future, maintaining an area where agriculture, forestry, and outdoor leisure can be expected to prevail.
226. (c): The Chinese toys were banned for other concerns. The plastic used in toys made in India or for that matter anywhere else is not biodegradable. Thus, though reason statement is right but not in support of assertion.
227. (c)
228. (d)
229. (d)
230. (d)
231. (a)
232. (a): The words universal and equality conform to each other.
Statements and Courses of Action
233. (b)
234. (a)
235. (c)
236. (b): First course of action is not desirable as an individual is free to take any decision about one's career. Even if there is mandatory signing of bond, one cannot be forced to give productive work. The second course of action is a long-term solution.
237. (b)

238. (b): Census is a very detailed survey; it leaves very little scope for any kind of error. Second course of action is a pragmatic approach.
239. (c)
240. (c): Both I and II represent—think global and act local.
241. (c): For the protection of our nation, we have to adopt a combination of proactive and defensive approaches.
242. (b): The second approach is a solution-oriented approach. The first measure will be perceived as suppression of power of expression.

Miscellaneous

246. The logical form of statement I is 'some poets are not egoistic'.
The opposite of egoistic is not 'humble' or 'not egoistic'.
So I and III are mutually inconsistent.
247. (a)
248. (a): Please refer to 'square of opposition'. If a statement is false, its contradictory is taken to be true. The contradictory of 'No politician is dishonest' (E type) is 'Some politicians are dishonest' (I type). So it is true.
249. (d)
250. (a): As there is single proposition, we can apply immediate inference to draw conclusion. This is an E type proposition with 'teacher' as subject and '(persons) on time for the class' as the predicate which can conclude only E type. After conversion 'persons who are on time' becomes subject and teacher becomes predicate. So, option (a) is the answer.
251. (d): According to squares of opposition: The logical form of 'None of the flowers is fragrant' is 'No flower is fragrant' (i.e., E type). It can be converted only to I type, that is statement IV (the logical form of 'Most flowers are fragrant' is 'Some flowers are fragrant').
252. (a)
253. (d): There are three terms. Both are I type, even after conversion for alignment purpose, they will be of I type as shown below.
'Some intelligent people are happy', we get
Some who are happy are intelligent (I type)—first statement.
Some intelligent people are rich (I type)—second statement.
I + I = No inference. So, option (d) is the answer.

This page is intentionally left blank

Data Interpretation

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- Sources, Acquisition and Classification of Data
- Quantitative and Qualitative Data
- Graphical Representation (Bar-chart, Histograms, Pie-chart, Table-chart and Line-chart)
- Mapping of Data
- Data Interpretation
- Data and Governance

DATA INTERPRETATION

Data interpretation is one of the easiest sections of NET Paper I. It is basically about drawing conclusions and inferences from a comprehensive data presented numerically in a tabular or graphical form by means of an illustration, namely, graphs, pie charts and so on. Therefore, the act of organizing and interpreting data to get meaningful information is known as data interpretation. The important aspects of data sources, their acquisitions and interpretation have been covered in Unit II on Research Aptitude. In this unit, the main focus is on solving practical problems as per questions asked in the NET pattern.

Data interpretation needs some mathematical and statistical skills. It needs good knowledge of concepts of percentage, ratio, proportion, average, etc. The other main input required is to practice a few problems.

Familiarity with graphical representation of data, such as Venn diagrams, graphs, pie charts, histogram and polygon is helpful. Once the data is grasped well, questions based on tables and graphs take little time.

Sometimes, data is presented in more than one table or graph. The aim is to test not only the quantitative skills but also relative, comparative and analytical abilities.

While the terms 'data' and 'statistics' are often used interchangeably, in scholarly research there is an important distinction between them.

Data are individual pieces of factual information recorded and used for the purpose of analysis. It is the raw information from which statistics are created. Statistics are the results of data analysis with its interpretation and presentation.

Data is usually collected for research purposes and it is closely related with sampling as well. Data sources, acquisition and classification have been taken care of in the second unit of research. Acquisition basically means how to collect data, how is it to be collected, with the help of interviews, questionnaires, etc. Primary and secondary sources, quantitative and qualitative data have also been explained there.

GRAPHICAL REPRESENTATION

Basically, it is a graphic representation of data. It is one of the important ways of analysing the numerical data. A graph is a kind of chart through which statistical data are represented in the form of lines or curves drawn across the coordinated points that have been plotted on its surface. Graphs are also easy to understand and eye catching.

It helps us to studying the cause and effect relationship between two variables, to measure the extent of change in one variable when another variable changes by a certain amount.

They enable us to studying both the time series and frequency distribution. They give clear account and precise picture of problem.

General Principles of Graphic Representation

Some basic algebraic principles apply to all types of graphic representation of data.

1. There are two lines called coordinate axes, where one is vertical known as Y-axis and the other is horizontal called X-axis.

- These two lines are perpendicular to each other. Where these two lines intersect each other is called point 'O' or origin.
- On the X-axis, the distances right to the origin have positive value and distances left to the origin have negative value. On the Y-axis, distances above the origin have a positive value and below the origin have a negative value.

Figure 7.1

Graphical representation of data may have many formats. According to NTA-NET syllabus, graphic representation of data has been divided into the bar chart, histograms, pie chart, table chart and line chart. Here, we are discussing their brief description and some numerical problems.

Bar-Chart

It is also known as a column graph, a bar graph or a bar diagram. It is basically a pictorial representation of data. It is shown as rectangles spaced out with equal spaces between them and having equal width. Here, the height (or length) of each bar corresponds to the frequency of a particular observation. We can draw

bar graphs both vertically or horizontally depending on whether we take the frequency along the vertical or horizontal axes respectively. We can take the following example.

Bar charts are one of the easiest, graphically attractive and hence, most commonly used methods of presenting all types of data. Given quantities can be compared by the height or length of a bar graph. A bar graph can either have vertical or horizontal bars. The width of the bars is largely inessential and is used only for clarity of presentation. We can compare different quantities or the same quantity at different times.

In bar graphs, the data is discrete. Presentation of data in this form makes comparative evaluation easier.

Table 7.1

Sports	Number of Participants
Cricket	15
Volleyball	25
Football	10
Total	50

In bar chart, by taking sports along with the x-axis and 5 as the common representation on y-axis, it can be represented in the following form.

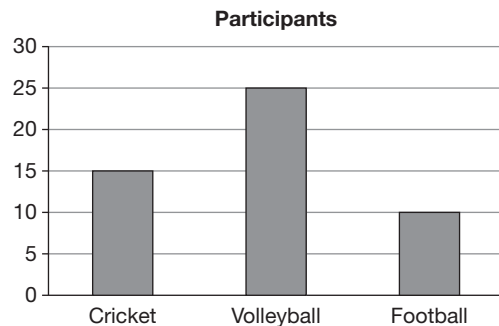

Figure 7.2

SOLVED EXAMPLES ON SIMPLE BAR GRAPHS (QUESTIONS 1-10)

Directions: Study the bar graph given below and answer the questions 1-5. It consists of data on sales of cellular phones during 2007-2012.

- The difference in the sales of cellular phones for the years 2007 and 2009 is
 (a) 500 units (b) 1000 units
 (c) 5000 units (d) 18,000 units

Ans: (d) The difference = 48,000 - 30,000 = 18,000 units

- The two years between which the rate of change of cellular phones is minimum are
 (a) 2007 and 2008
 (b) 2009 and 2010
 (c) Both option (a) and (b)
 (d) 2011 and 2012

Ans: (c) Percentage changes over years
 2007 and 08 = $8,000/48,000 \times 100 = 16.66\%$
 2008 and 09 = $10,000/40,000 \times 100 = 25\%$
 2009 and 10 = $5,000/30,000 \times 100 = 16.66\%$
 2010 and 11 = $7,000/25,000 \times 100 = 28\%$
 2011 and 12 = $22,000/18,000 \times 100 = 122.22\%$

3. The sum of sales of cellular phones in the years 2009 and 2011 is equal to that in
 (a) 2007 (b) 2008
 (c) 2010 (d) 2012

Ans: (a) Combined sales of 2009 and 2011 = $30,000 + 18,000 = 48,000$
 It tallies with the sales figure of 2007.

4. The percentage increase in sales from 2011 to 2012 was
 (a) 115% (b) 128%
 (c) 122% (d) 118%

Ans: (c) It has been calculated in question 32.

5. What is the average sales figure of all the years?
 (a) 32,000 units (b) 33,500 units
 (c) 34,500 units (d) 35,000 units

Ans: (b) Average = $2,01,000/6 = 33,500$ units

Directions: Study the bar graph given below and answer questions 6 to 10. It consists of data on number of students passed (in thousands) from two universities from years 2003 to 2008.

6. What is the sum of students passing from University B in 2003, 2005 and 2006 together?
 (a) 75,000 (b) 80,000
 (c) 88,000 (d) 90,000

Ans: (b) Required number of students = $(30 + 10 + 40)$ thousands = 80,000

7. What is the ratio of students passed from University A in year 2007 and the number of students passed from University B in year 2004?
 (a) 7 : 10 (b) 10 : 7
 (c) 4 : 5 (d) 5 : 4

Ans: (b) Required ratio = $50 : 35 = 10 : 7$

8. The number of students from University B in the year 2008 is approximately what percentage of total number of students passed from University A over the years?

- (a) 20 (b) 22
 (c) 28 (d) 30

Ans: (b) Required percentage = $50/225 \times 100 = 22.22\% \sim 22\%$ approximately

9. What is the ratio between the number of students passed in the years 2007, 2008 and 2005 from University A?
 (a) 3 : 5 : 5 (b) 5 : 3 : 3
 (c) 5 : 3 : 2 (d) 5 : 2 : 2

Ans: (b) Required ratio = $50 : 30 : 30 = 5 : 3 : 3$

10. What is the difference between the total number of students passed from both the universities together in 2007 and the total number of students passed from both the universities together in the year 2005?
 (a) 70,000 (b) 80,000
 (c) 85,000 (d) 90,000

Ans: (a) Total number of students passed in 2007 = 110 (in thousands)
 Total number of students passed in 2005 = 40 (in thousands)
 Required difference = $110 - 40 = 70$ (in thousands)

HISTOGRAMS

As we could see, the bar chart graph depicts discrete data, while histograms depicts continuous data. The continuous data can take the shape of class intervals. Thus, a histogram is a graphical representation with class intervals or attributes as the base and frequency as the height.

Histograms have bars without any spaces between them and the rectangles need not be of equal width. Thus, it could be understood with the following example.

Figure 7.3

Class intervals such as 0-5, 5-10, 10-15 and 15-20 are continuous data. We may ignore the values on the right vertical axis. Thus, for the class interval 0-5, the corresponding frequency is 3. Again, for 5-10, the frequency is 7 and so on.

Importance of Histograms

Histogram provides a visual representation of data distribution, it displays a large amount of data and the frequency of the data values. The median and distribution of the data can be determined by a histogram. In addition, it can show any outliers or gaps in the data.

Distributions of a Histogram

1. **A normal distribution:** Here, points on one side of the average are as likely to occur as on the other side of the average.

Figure 7.4

2. **A bimodal distribution:** In a bimodal distribution, the data should be separated and analysed as separate normal distributions.

Figure 7.5

3. **A right-skewed distribution:** A right-skewed distribution is also called a positively skewed distribution. In a right-skewed distribution, a large number of data values occur on the left side with a fewer number of data values on the right side.

Figure 7.6

4. **A left-skewed distribution:** A left-skewed distribution is also called a negatively skewed distribution. A large number of the data values occur on the right side with a fewer number of data values on the left side.

Figure 7.7

A random distribution: A random distribution lacks an apparent pattern and has several peaks. Here, the different data properties were combined. Therefore, the data should be separated and analysed separately.

Figure 7.8

In case the class intervals are not even in size, the following type of diagram emerges.

Figure 7.9

$$\text{For 1998} = \left[\frac{(35-35)}{35} \times 100 \right] \% = 0\%$$

$$\text{For 1999} = \left[\frac{(40-35)}{35} \times 100 \right] \% = 14.29\%$$

$$\text{For 2000} = \left[\frac{(50-40)}{40} \times 100 \right] \% = 25\%$$

Hence, the maximum percentage rise/fall in the production of Company Y is for 1997.

12. What is the ratio of the average production of Company X in the period 1998–2000 to the average production of Company Y in the same period?

- (a) 1:1 (b) 15:17
(c) 23:25 (d) 27:29

Ans: (c) Average production of Company X in the period 1998–2000

$$= \left[\frac{1}{3} \times (25 + 50 + 40) \right] = \left(\frac{115}{3} \right) \text{ lakh tons.}$$

Average production of Company Y in the period 1998–2000

$$= \left[\frac{1}{3} \times (35 + 40 + 50) \right] = \left(\frac{125}{3} \right) \text{ lakh tons.}$$

$$\therefore \text{Required ratio} = \frac{\left(\frac{115}{3} \right)}{\left(\frac{125}{3} \right)} = \frac{115}{125} = \frac{23}{25}$$

13. The average production for five years was maximum for which company?

- (a) X (b) Y
(c) Z (d) X and Z both

Ans: (d) Average production (in lakh tons) in five years for the three companies are:

For Company X

$$= \left[\frac{1}{5} \times (30 + 45 + 25 + 50 + 40) \right] = \frac{190}{5} = 38$$

For Company Y

$$= \left[\frac{1}{5} \times (25 + 35 + 35 + 40 + 50) \right] = \frac{185}{5} = 37$$

For Company Z

$$= \left[\frac{1}{5} \times (35 + 40 + 45 + 35 + 35) \right] = \frac{190}{5} = 38$$

\therefore Average production of five years is maximum for both the Companies X and Z.

14. In which year was the percentage of production of Company Z to the production of Company Y the maximum?

- (a) 1996 (b) 1997
(c) 1998 (d) 1999

Ans: (a) The percentages of production of Company Z to the production of Company Y for various years are:

$$\text{For 1996} = \left(\frac{35}{25} \times 100 \right) \% = 140\%$$

$$\text{For 1997} = \left(\frac{40}{35} \times 100 \right) \% = 114.29\%$$

$$\text{For 1998} = \left(\frac{45}{35} \times 100 \right) \% = 128.57\%$$

$$\text{For 1999} = \left(\frac{35}{40} \times 100 \right) \% = 87.5\%$$

$$\text{For 2000} = \left(\frac{35}{50} \times 100 \right) \% = 70\%$$

Clearly, this percentage is highest for 1996.

15. What is the percentage increase in the production of Company Y from 1996 to 1999?

- (a) 30% (b) 45%
(c) 50% (d) 60%

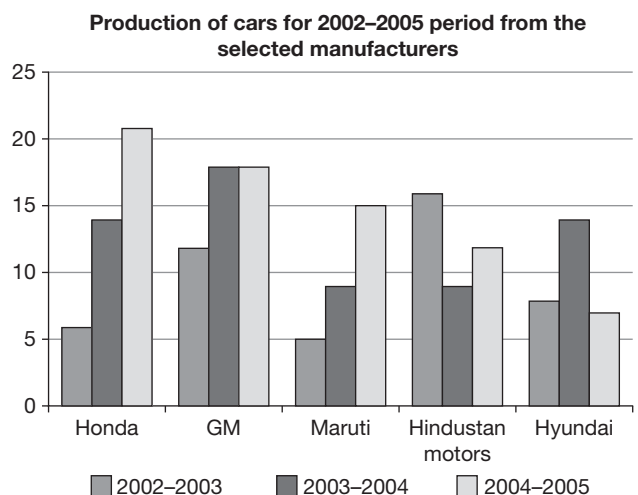

Ans: (d) Percentage increase in the production of Company Y from 1996 to 1999

$$= \left[\frac{(40-25)}{25} \times 100 \right] \%$$

$$= \left[\frac{15}{25} \times 100 \right] \%$$

$$= 60\%.$$

Directions: The following chart shows the production of cars in thousands.

16. How many companies have shown production below their average production in 2002–2003, but have showed above the average production in 2003–2004?

- (a) One (b) Two
(c) Three (d) Four

Ans: (c) Average sales of company:
 Honda = $(6 + 14 + 21)/3 = 13.66$
 GM = $(12 + 18 + 18)/3 = 16$
 Maruti = $(5 + 9 + 15)/3 = 9.66$
 Hindustan Motors = $(16 + 9 + 12)/3 = 12.33$
 Hyundai = $(8 + 14 + 7)/3 = 9.66$

17. The ratio of Hindustan Motors production in 2003–2004 to Honda’s production in 2002–2003 is?
 (a) 0.66 (b) 1.5
 (c) 2 (d) None of these

Ans: (b) The required ratio is $(9/6) = 1.5$.

18. For how many companies has there been no decrease in production in any year from the previous year?
 (a) One (b) Two
 (c) Three (d) Four

Ans: (c) By visual inspection we can say that Honda, GM and Maruti have not shown a decrease.

19. Which of the following companies have shown the consistent growth during the period?
 (a) Maruti (b) Honda
 (c) Hindustan Motors (d) both (a) and (c)

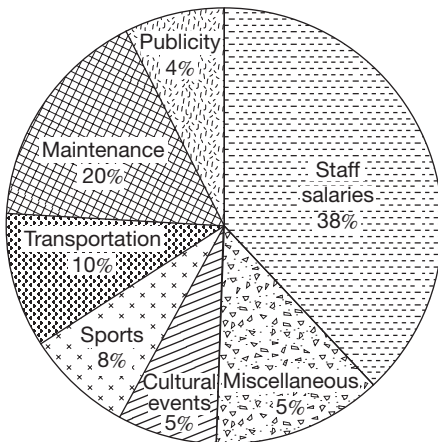

Ans: (d) By simple observation we can say that (d) is the right answer.

20. Which of companies have shown highest and lowest growth rates?
 (a) Honda and Hyundai (b) Honda and Maruti
 (c) GM and Hyundai (d) GM and Honda

Ans: (b) By simple observation we can say that (b) is the right answer.

SOLVED EXAMPLES ON PIE CHARTS (QUESTIONS 21–30)

Directions: Study the pie chart given below and answer questions 21 to 25. It gives the breakup of expenses of an educational institute.

21. If total expenditure during a year is ₹65 lakhs, then what are the expenses on cultural events (in lakhs)?
 (a) 1.67 (b) 2.65
 (c) 3.25 (d) 4.25

Ans: (c) 5% of ₹65 lakhs = ₹3.25 lakhs

22. What is the approximate angle extended by staff salaries at the centre (in degrees)?
 (a) 132 (b) 137
 (c) 142 (d) 145

Ans: (b) Angle extended by staff salaries at the centre = $38 \times 3.6 = 137^\circ$

23. The total of which of the following heads is equal to salary expenses?
 (a) Miscellaneous, transportation and cultural events.
 (b) Maintenance, transportation and sports.
 (c) Maintenance, publicity and miscellaneous.
 (d) None of the above

Ans: (b) Maintenance + Transportation + Sports = 38%

24. If the teachers’ salaries are increased by 20%, then what will be the new angle extended at the centre (in degrees)?
 (a) 45.6 (b) 43.6
 (c) 56 (d) Cannot be determined

Ans: (d) No separate data is given for teachers’ salary. Hence, it cannot be determined. So, new angle extended may not be determined.

25. What is the angle extended at the centre by a combination of miscellaneous and cultural events expenses at the centre (in degrees)?
 (a) 65 (b) 72
 (c) 78 (d) 84

Ans: (b) Total of miscellaneous and cultural percentages = $15 + 5 = 20\%$. Hence, angle extended by them at the centre = $20/100 \times 360 = 72^\circ$

Directions: Study the pie chart given below and answer questions 26 to 30. It gives the breakup of expenses incurred in publishing a book.

Expenditure Incurred in Publishing a Book

26. If the publisher has to pay ₹61,200 as the printing cost for production of a certain quantity of books, then what will be the amount of royalty to be paid for these books?
 (a) ₹22,950 (b) ₹45,000
 (c) ₹45,900 (d) ₹48,900

Ans: (c) The ratio between printing cost and royalty = 20 : 15 or 4 : 3.
 Let royalty be denoted by R.
 Then 4 : 3 = 61,200 : R
 $R \times 4 = 61,200 \times 3$
 $R = (61,200 \times 3) / 4 = ₹45,900$

27. If the cost price of the book is ₹150, then what is the combined printing and binding cost for a single copy of the book?
 (a) 60 (b) 75
 (c) 80 (d) None of the above

Ans: (a) Total printing and binding cost = 20 + 20 = 40%
 Printing and binding cost = 40% of cost price = 40% of 150 = ₹60

28. What is the central angle of the sector corresponding to the expenditure incurred on royalty?
 (a) 48 (b) 54
 (c) 60 (d) 72

Ans: (b) Central angle corresponding to royalty = $(15\% \text{ of } 360)^\circ = 15/100 \times 360 = 54^\circ$

29. What is the difference between promotion and printing cost if we assume that total cost is ₹200?
 (a) ₹10 (b) ₹20
 (c) ₹30 (d) None of the above

Ans: (b) Difference in percentage terms = 20 - 10 = 10%
 10% of ₹200 = ₹20

30. If 1000 copies are published and the transportation cost on them amounts to ₹15,000, then what should be the selling price per book so that the publisher can earn a profit of 20%?
 (a) 150 (b) 160
 (c) 180 (d) 200

Ans: (c) To calculate the selling price of a single book, we need to total the cost. Let us calculate it first.
 Transportation cost per book = $15,000 / 1000 = ₹15$
 As transportation cost is 10% of total cost, thus ₹15 = 10% of total cost
 Total cost of printing a copy = $15 \times 100 / 10 = ₹150$
 Now selling price = Total cost + Profit
 $150 + 20\% \text{ of } 150 = 150 + 30 = ₹180$

The Title

PREFATORY NOTES

Footnotes:

Source notes:

Example

Tables

A table is a systematic arrangement of data into vertical columns and horizontal rows. The process of arranging data into rows and columns is called tabulation.

Purpose

The purpose of tabulation is to present the data in such a way that it becomes more meaningful and can be easily understood by a common man. However, in case of voluminous data, it may require closer reading than graphs of charts and hence, it is difficult and time consuming to interpret.

Essential Parts of a Table

A statistical table is divided into following eight parts.

- Title of the table:** A title is a heading at the top of the table describing its contents. It mainly reflects upon the nature of the data, where the data is, what time period the data covers and how the data is classified.
- Caption:** The headings for various columns and rows are called column captions and row captions, respectively.
- Box head:** The portion of the table containing column caption is called box head.
- Stub:** The portion of the table containing row caption is called stub.
- Body of the table:** The body of the table contains the statistical data that has to be presented in different rows and columns.
- Prefatory notes or head notes:** Prefatory notes appear between the title and the body of the table and are enclosed in brackets. They may throw some light on units of measurements.
- Footnote:** A footnote is always given at the bottom of the table but above the source note. A footnote is a statement about something which is not clear from headings, title, stubs, captions and so on.
- Source note:** A source note is placed immediately below the table but after the footnote. It refers to the source from where information has been taken.

POPULATION (BOX HEAD)

Census (Stub)	State A			State B		
	Male	Female	Total	Male	Female	Total
2001	1,550	1,450	3,000	640	620	1,260
2011	1,900	2,000	3,900	780	750	1,530

Footnote: All areas including Union Territory

Source note: Census report 2001 and 2011

$$= \left[\frac{(780 + \dots)}{(5,200 + \dots)} \times 100 \right]$$

$$= \left[\frac{5,820}{38,800} \times 100 \right] = 15\%$$

If we look at all the figures for individual years, we can see that the result has been consistent at 15% for all these years.

38. What is the average number of candidates who appeared from State Q during the given years?

- (a) 8,660 (b) 9,260
(c) 9,560 (d) 9,660

Ans: (b) Average number of candidates appeared

$$= \left[\frac{(8,100 + 9,000 + 9,200 + 10,000 + 10,000)}{5} \right]$$

$$= \left[\frac{46,300}{5} \right] = 9,260$$

Number of Candidates Who Appeared and Qualified in a Competitive Examination

State	Year									
	2007		2008		2009		2010		2011	
	App.	Qual.	App.	Qual.	App.	Qual.	App.	Qual.	App.	Qual.
M	5200	780	7800	1170	8000	1200	8800	1320	9000	1350
N	7500	750	8500	850	8600	860	9200	920	8800	880
P	6400	960	8800	1100	9000	900	9200	920	10,000	1100
Q	8100	850	9000	1350	9200	1480	10,000	1200	10,000	1280
R	7800	1560	7600	760	9800	700	10,000	1250	11,200	1650

39. What is the average number of candidates who qualified from State N during all these years?

- (a) 702 (b) 852
(c) 862 (d) 902

Ans: (b)

$$\text{Average} = \left[\frac{(750 + 850 + 860 + 920 + 880)}{5} \right]$$

$$= \left[\frac{4,260}{5} \right] = 852.$$

40. What is the percentage increase in candidates who appeared between 2007 and 2011?

- (a) 35% (b) 40%
(c) 45% (d) 50%

Ans: (b) Total number of candidates in 2007 = 35,000 (as calculated in Question 6)
Total number of candidates in 2011 = 9000 + 8800 + 10,000 + 10,000 + 11,200 = 49,000
Increase = 49,000 – 35,000 = 14,000
Percentage increase = 14,000/35,000 × 100 = 40%

DATA MAPPING

Data mapping is the process of mapping data fields from a source file to their related target fields. The accessibility to required data can make some organization more successful. Somehow, data is easier to use when it can be visualized as well.

Visual data help people to understand how different concepts originate and their relation with each other.

Data mapping helps in all these. For example, 'Name,' 'Email,' and 'Phone' fields from an Excel source are mapped to the relevant fields in a delimited file, which is our destination.

Data mapping helps by providing organizations with procedure links to show how certain tasks are to be utilized. Forty per cent of our nerve fibres linking to the brain are in the retina only. Data mapping helps us to see what makes different pieces of data useful and helpful.

The customer trends can be traced in the real time. The causes of trends and past data numbers can be analysed and other calculations of information and variables can be done. We can also use data mapping software to compare our date with that of competitors. This should make it easier for your business to grow when chosen right.

They also work by establishing larger maps. Sales-force of any organization has a particularly strong data mapping software program that can be put to use. This helps in real time also. We can get connected to a cloud network to get information in real time.

Data mapping works for all businesses. For example, if we were in the retail sector, then we can use data mapping to calculate how discount sales can influence the overall sales totals in our business. Similarly, financing, investment type decisions can also be made.

Data may be internal or external, but it is getting more dispersed and voluminous, then its data leverage is important and actionable insights are developed.

There are array of data points to collect information. Their language may be quite different. We can develop separate data models.

Data mapping tasks vary in complexity, depending on the hierarchy or disparity between the structure of the source and the target. Every application, on-premise or cloud basis uses metadata to explain data fields.

Microsoft SharePoint, InetSoft Style Intelligence and IBM Congos Business Intelligence help us to review information by generating simple charts and graphs. Depending on the number and schema of the data sources, database mappings can have a varying degree of complexity.

In general, data mapping helps with the following activities.

Data Integration

Data mapping tools to cover differences in the schemas of data source and destination, allowing businesses to consolidate information from different data points easily.

Data Migration

It is moving data from one database to another. Here, using a code-free data mapping solution that can automate the process is important to migrate data to the destination successfully.

Data Warehousing

Data mapping in a data warehouse is the process of creating a connection between the source and target tables or attributes.

Data Transformation

It is essential to break information silos and draw insights. Data mapping is the first step in data transformation.

Data Mapping Techniques

Although an essential step in any data management process, data mapping can be complex and time-consuming. Based on the level of automation, data mapping techniques can be divided into two types and they are as follows.

1. **Manual data mapping:** Although hand-coded, manual data mapping process offers unlimited flexibility.
2. **Semi-automated data mapping:** Schema mapping is often classified as a semi-automated data mapping technique. The process involves identifying two data objects that are semantically related and then building mappings between them.

DATA INTERPRETATION

The interpretation of data assigns a meaning to the information analysed and determines its signification and implications. It refers to the implementation of processes through which data is reviewed for the purpose of arriving at an informed conclusion.

Keeping in view, its importance should be done properly. Data is obtained from multiple sources, so it needs to enter the analysis process with haphazard ordering. Data analysis is usually subjective and thus, the goals of interpretation may vary from one business to another. Basically, there are two main types of analysis, such as quantitative and qualitative.

A good decision is to be made regarding scales of measurement. The varying scales include the following.

- **Nominal scale:** It is non-numeric categories that cannot be ranked or compared quantitatively. Variables are exclusive and exhaustive.
- **Ordinal scale:** It consists of categories that are exclusive and exhaustive but with a logical order. Quality ratings and agreement ratings are examples of ordinal scales (i.e., good, very good, fair, etc., OR agree, strongly agree, disagree, etc.).
- **Interval:** It is a measurement scale where data is grouped into categories with orderly and equal distances between the categories. There is always an arbitrary zero point.
- **Ratio:** It contains features of all three.

When interpreting data, an analyst must try to discern the differences between correlation, causation and coincidences, etc., in addition to some other factors. In this part, we will look at the two main methods of interpretation of data with a qualitative and a quantitative analysis.

Qualitative Data Interpretation

Narrative data is mostly collected by employing a wide variety of person-to-person techniques. It is basically described as 'categorical'. The description is not through numerical values or patterns, but through descriptive context or text. These techniques include the following parameters.

- **Observations:** Here, behavior patterns may be amount of type and time spent in an activity and communication used.
- **Documents:** Here, different types of documentation resources can be coded and divided based on the type of material they contain.
- **Interviews:** It is described as the best collection method for narrative data. Enquiry responses can be grouped by theme, topic or category. The interview approach helps in highly-focused data segmentation.

A person to person data collection technique can lead to three basic principles, such as notice things, collect things think about things. Qualitative data much open to interpretation must be ‘coded’ so as to facilitate the grouping and labeling of data into identifiable themes.

Quantitative Data Interpretation

The key word in quantitative is ‘numerical.’ It is a set of processes by which numerical data is analysed. It involves the use of statistical modeling, such as standard deviation, mean and median. Let’s quickly review the most common statistical terms that are as follows.

- **Mean:** A mean represents a numerical average for a set of responses.
- **Standard deviation:** It reveals the distribution of the responses around the mean, the degree of consistency within the responses and then insight into data sets.
- **Frequency distribution:** This is a measurement of gauging the rate of a response appearance within a data set. It is extremely keen in determining the degree of consensus among data points.

It entails correlation tests between two or more variables. The different processes can be used together or separately, and comparisons can be made to ultimately arrive at a conclusion. Other signature interpretation processes of quantitative data include the following.

- Regression analysis
- Cohort analysis
- Predictive and prescriptive analysis

Importance of Data Interpretation

The purpose of collection and interpretation is to acquire useful and usable information and to make the most informed decisions possible. Data interpretation includes the following characteristics.

- Data identification and explanation
- Comparing and contrasting of data
- Identification of data outliers
- Future predictions

There are some common issues with data interpretation:

1. **Informed decision-making:** Data analysis should include identification, thesis development and data collection followed by data communication.
2. **Anticipating needs with trends identification:** Data insights provide knowledge and knowledge is power.
3. **Cost efficiency:** Proper implementation of data analysis processes can provide businesses with profound cost advantages within their industries.

4. **Clear foresight:** Companies that collect and analyse their data gain better knowledge about themselves, their processes and performance.

In Addition There Are Certain Problems with the Data Interpretation

It is usually said that ‘big data equals big trouble’ where some ‘pitfalls’ do exist and can occur when analysing data, especially at the speed of thought. Let’s identify three of the most common data misinterpretation risks and shed some light on how they can be avoided.

1. **Correlation mistaken for causation:** It is the tendency of data analysts to mix the cause of a phenomenon with correlation. When two actions occurred together, one caused the other. This is not accurate as actions can occur together. The remedy is to attempt to eliminate the variable you believe to be causing the phenomenon.
2. **Confirmation bias:** It occurs when we have a theory or hypothesis in mind, but are intent on only discovering data patterns that provide support, while rejecting those that do not. This pitfall is often based on subjective desires. Thus it always remember to try to disprove a hypothesis, not prove it.
3. **Irrelevant data:** As large data is no longer centrally stored and as it continues to be analysed at the speed of thought, it is inevitable that analysts will focus on data that is irrelevant to the problem they are trying to correct. The remedy is to proactively and clearly frame any data analysis variables and key performance indicators prior to engaging in a data review.

Keeping in view all these aspects, we need to be careful about the following factors.

1. Collect your data and make it as clean as possible.
2. We need to be careful about the type of analysis to perform be it qualitative or quantitative and apply the methods respectively to each. We have already discussed qualitative and quantitative aspects.
3. We may need to take a step back and think about data from various perspectives and what it means for various participants or actors of the project.
4. We need to reflect on your own thinking and reasoning, such as correlation versus causation, subjective bias, false information and inaccurate data, etc.

DATA AND GOVERNANCE

Data governance is a requirement in today’s fast-moving and highly competitive enterprise environment. Now that organizations have the opportunity

to capture massive amounts of diverse internal and external data, they need a discipline to maximize their value, manage risks and reduce cost.

Data governance is a collection of processes, roles, policies, standards, and metrics that ensure the effective and efficient use of information in enabling an organization to achieve its goals. Data governance defines who can take what action, upon what data, in what situations, using what methods.

Data governance ensures that roles related to data are clearly defined, and that responsibility and accountability are agreed upon across the enterprise. A well-planned data governance framework covers strategic, tactical, and operational roles and responsibilities.

While crafting data and governance strategy, we need to be careful.

Data Governance is not data management: Data management refers to the management of the full data lifecycle needs of an organization. Data governance is the core component of data management such as data warehousing.

- 1. Data Governance is not master data management:** Master data management focuses on identifying an organization's key entities and then improving the quality of this data.
- 2. Data Governance is not data stewardship:** Data stewards take care of data assets, making certain that the actual data is consistent with the data governance plan, linked with other data assets and in control in terms of data quality, compliance, or security.

Benefits of Data Governance

An effective data governance strategy provides many benefits to an organization, where it includes the following.

- **There is a common understanding of data.**
- **There is improved quality of data**, such as data accuracy, completeness and consistency.
- **Data map is available.**
- **Holistic view:** A 360-degree view of each customer and other business entities basically 'a single version of the truth'.
- **Consistent compliance:** Data governance provides a platform for meeting the demands of government regulations.
- **Improved data management:** It brings the human dimension into a highly automated and data-driven world.

We can use technology as the enabler for the same.

Open source and cloud are the basic strategies for data governance tools. iPaas is also closely linked with them. These tools also help us achieve the following.

- 1. Capture and understand our data.**
- 2. Improve the quality of our data.**
- 3. Managing data:** With metadata-driven ETL and ELT, and data integration applications.
- 4. Controlling data.**
- 5. Document our data.**
- 6. Empower the people that know the data best:** To contribute to the data stewardship.
- 7. Protecting sensitive data.**

We need to understand that data governance is not optional.

The implementation known as a 'data lake' necessarily requires processes that allow you to keep the data you need in a way that eliminates technical barriers and gives new capabilities to process that data.

SOLVED EXAMPLES ON SIMPLE LINE GRAPH (QUESTIONS 41–50)

Directions: Study the following graph carefully and answer questions 41 to 45 given below it. It depicts profits earned by a company during various years. Profit earned in lakhs.

(Profit = Revenue – Expenditure)

- What is the average profit earned by the company over the years?
 (a) ₹26 lakhs (b) ₹28 lakhs
 (c) ₹30 lakhs (d) ₹32 lakhs
Ans: (c) Total profit earned over 5 years = $(25 + 35 + 22.5 + 30 + 37.5) = 150$ lakhs
 Average profit = $150/5 = ₹30$ lakhs
- If the expenditure of the company in 2009 was ₹28 lakhs, then what was the revenue of the company in that year?
 (a) ₹65.5 lakhs (b) ₹72.5 lakhs
 (c) ₹75 lakhs (d) None of the above
Ans: (a) Revenue in 2009 = Profit + Expenditure = ₹65.5 lakhs
- What is the approximate per cent increase in the profit of the company in 2008 in comparison to the previous year?
 (a) 28 (b) 30
 (c) 36 (d) 40

Ans: (b) Percentage increase = $(30 - 23)/23 \times 100 = 30.43 \sim 30\%$

44. What is the ratio of profit earned by the company in 2005 to the profit earned in 2009?

(a) 1 : 3 (b) 2 : 3
(c) 3 : 5 (d) 1 : 2

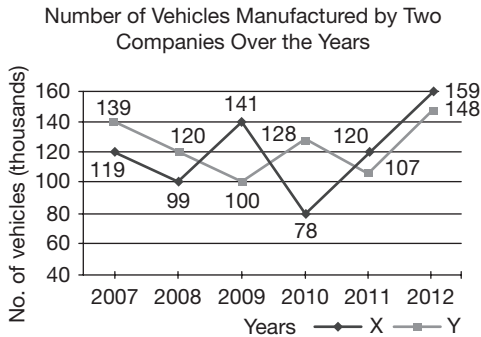

Ans: (b) The required ratio = $25 : 37.5 = 2 : 3$

45. If the revenue of the company in 2007 was ₹45 lakhs, then what was the expenditure of the company in that year?

(a) ₹20.5 lakhs (b) ₹22.5 lakhs
(c) ₹24.5 lakhs (d) ₹25.5 lakhs

Ans: (b) Expenditure in 2007 = $45 - 22.5 = ₹22.5$ lakhs

Directions: Study the following graph carefully and answer questions 46 to 50. The graph consists of data about the number of vehicles manufactured by two companies over the years.

46. What is the difference between the number of vehicles manufactured by Company Y in 2010 and 2011?

(a) 50,000 (b) 42,000
(c) 33,000 (d) 21,000

Ans: (d) Difference = $1,28,000 - 1,07,000 = 21,000$

47. What is the difference between the total production of the two companies in the given years?

(a) 19,000 (b) 22,000
(c) 26,000 (d) 28,000

Ans: (c): Total production of Company X from 2007 to 2012 (in thousands) = $119 + 99 + 141 + 78 + 12 + 159 = 716$.

Total production of Company Y from 2007 to 2012 (in thousands) = $139 + 120 + 100 + 128 + 107 + 148 = 742$.

Difference = $(742 - 716)$ thousands = 26,000.

48. What is the average numbers of vehicles manufactured by Company X over the given period?

(a) 1,19,333 (b) 1,17,166
(c) 1,12,778 (d) 1,11,223

Ans: (b) Average number of vehicles manufactured by Company X = $(119 + 99 + 141 + 78 + 107 + 159)/6 = 1,17,166$ (in thousands) = 1,17,166

49. In which of the following years, the difference between the productions of Companies X and Y was the maximum?

(a) 2007 (b) 2008
(c) 2009 (d) 2010

Ans: (d) The differences between the productions of Companies X and Y in various years are as follows (all figures in thousands).

For 2007 $(139 - 119) = 20$

For 2008 $(120 - 99) = 21$

For 2009 $(141 - 100) = 41$

For 2010 $(128 - 78) = 50$

For 2011 $(120 - 107) = 13$

For 2012 $(159 - 148) = 11$

Hence, maximum difference was in 2010.

50. The production of Company Y in 2010 was approximately what per cent of the production of Company X in the same year?

(a) 173 (b) 164
(c) 132 (d) 97

Ans: (b) As the comparison is with Company X, its production figure will appear as denominator.

Required percentage = $(1,28,000/78,000) \times 100 = 164\%$

Practice Exercises

Directions: Study the table given below and answer questions 1 to 5. The table shows the populations of three states over the years 2002 to 2007.

Population (in Lakhs) of three states over the years						
State/ Year	2002	2003	2004	2005	2006	2007
A	4.5	4.8	5.2	5.4	5.8	6.2
B	3.2	3.6	3.4	3.8	4.1	4.4
C	5.6	5.5	5.8	6.3	6.6	6.9

- What is the average population of State B for all the years together (in lakhs)?
(a) 3.5 (b) 3.6
(c) 3.75 (d) 3.8
- What is the percentage increase in population of State A between 2002 and 2003?
(a) 5 (b) 5.25
(c) 6.67 (d) 7.5
- What was the difference between combined populations of all the three states for the years 2004 and 2005?
(a) 90,000
(b) 1,00,000
(c) 1,10,000
(d) None of the above
- What was the average population of all the three states in 2006?
(a) 5.5 (b) 5.8
(c) 6.1 (d) 6.3
- What is the ratio between combined populations of all the three states in 2004 and 2005?
(a) 155 : 144 (b) 144 : 155
(c) 144 : 165 (d) 165 : 144

Directions: Study the following table carefully and answer questions 6 to 10. It consists of data on the number of candidates who appeared from five schools in the board exams from 2004 to 2008.

Year	Schools				
	A	B	C	D	E
2004	650	760	820	800	780
2005	700	740	860	780	740
2006	800	820	940	750	730
2007	750	880	920	840	790
2008	850	840	900	860	770

- The number of students who appeared from School E in 2004 is approximately what per cent of total number of students who appeared from all the schools together in that year?
(a) 16% (b) 18%
(c) 20% (d) 25%
- What is the average number of students who appeared from School B for all the years?
(a) 676 (b) 787
(c) 808 (d) 818
- The number of students who appeared in 2006 from School A is what per cent of the total number of students who appeared from School A for all the years together?
(a) 25.25 (b) 21.33
(c) 22.45 (d) 23.45
- What is the ratio between the total numbers of students who appeared in 2004 and 2005 from Schools C and D, respectively?
(a) 84 : 79 (b) 79 : 84
(c) 84 : 89 (d) 89 : 84

- What is the average number of students who appeared from the given schools in 2007?
(a) 825 (b) 836 (c) 845 (d) 863

Directions: Study the following table carefully and answer questions 11 to 15. It consists of data on the graduates and postgraduates living in various towns.

Towns	Graduates	Postgraduates
A	10,200	8000
B	25,250	18,000
C	15,150	10,500
D	20,200	16,250
E	24,000	20,000
F	16,500	18,450

- What is the difference between the number of graduates and the number of postgraduates in town C?
(a) 4500 (b) 4600
(c) 4650 (d) 4560
- What is the average number of postgraduates in all the towns together?
(a) 15,000 (b) 15,500
(c) 16,250 (d) 15,200
- What is the ratio of the number of graduates from towns A and B together to the number of postgraduates from towns A and E together?
(a) 709 : 580 (b) 709 : 560
(c) 560 : 709 (d) None of the above
- What is the total number of graduates and postgraduates in towns A, D and F together?
(a) 85,500 (b) 88,600
(c) 89,600 (d) 90,600
- The number of graduates in town F is approximately what per cent of the number of postgraduates in the same town?
(a) 84 (b) 89
(c) 92 (d) 95

Directions: Study the following bar graph carefully and answer questions 16 to 20. It consists of data on exports and imports of IT and electronics industry over a period.

16. For how many years, the exports are at least 10% higher than the imports?
 (a) 1 (b) 2
 (c) 3 (d) 4
17. In which year, the exports have shown the highest growth in percentage terms in comparison to preceding year?
 (a) 2005 (b) 2006
 (c) 2007 (d) 2008
18. What are the average exports (in billion ₹) for the period 2004 to 2009?
 (a) 60.35 (b) 65.83
 (c) 70.20 (d) 75.36
19. By how much percentage, the total exports are higher than total imports from 2004 to 2009?
 (a) 4.15 (b) 5.33
 (c) 6.33 (d) 7.58
20. What is the percentage increase in imports between the years 2004 and 2009?
 (a) 110 (b) 114
 (c) 125 (d) 135

Directions: Study the following bar graph carefully and answer questions 21 to 25. It consists of data on student enrolment in different states.

21. What is the ratio of the total enrolment of State B for years 2010 and 2011 to the total enrolment of State D for both the years combined?
 (a) 7 : 9 (b) 4 : 5
 (c) 3 : 5 (d) 2 : 3
22. What is the percentage of total enrolment of State C in comparison to enrolment of State E for years 2010 and 2011?
 (a) 73 (b) 126
 (c) 137 (d) 145
23. By what per cent the enrolment in the year 2011 is higher than that of 2010 for all the states combined?
 (a) 12 (b) 15
 (c) 18 (d) 20
24. Which of the following states has shown the highest increase in student enrolment from years 2010 to 2011?
 (a) A (b) C
 (c) E (d) F

25. What is the average enrolment for all the states for the year 2010?
 (a) 80 (b) 85
 (c) 90 (d) 95

Directions: The bar graph given below shows the percentage distribution of the total expenditures of a company under various expense heads during 2003. Study it and answer questions 26 to 30.

26. The total amount of expenditure of the company is how many times the expenditure on research and development?
 (a) 27 (b) 20
 (c) 18 (d) 8
27. If the expenditure on advertisement is 2.10 crore, then the difference between the expenditure on transport and taxes is
 (a) ₹1.25 crore
 (b) ₹95 lakhs
 (c) ₹65 lakhs
 (d) ₹35 lakhs
28. What is the ratio of the total expenditure on infrastructure and transport to the total expenditure on taxes and interest on loans?
 (a) 5 : 4 (b) 8 : 7
 (c) 9 : 7 (d) 13 : 11
29. If the interest on loans amounted to ₹2.45 crore, then the total amount of expenditure on advertisement, taxes and research and development is
 (a) ₹7 crore
 (b) ₹5.4 crore
 (c) ₹4.2 crore
 (d) ₹3 crore
30. The expenditure on the interest on loans is by what per cent more than the expenditure on transport?
 (a) 5% (b) 10%
 (c) 20% (d) 40%

Directions: Study the following pie chart carefully and answer questions 31 to 35. It consists of data about subscription from different sources for Bharat Bonds issued by Government of India.

31. If the investments by NRIs is ₹8,000 crore, then the combined investment of companies and FIIs into Bharat Bonds is
 - (a) ₹48,726 crore
 - (b) ₹48,000 crore
 - (c) ₹50,827 crore
 - (d) Insufficient information
32. If the total investment is 55,000 crore, then the combined investment by pension funds and public is
 - (a) ₹10,000 crore
 - (b) ₹10,200 crore
 - (c) ₹10,500 crore
 - (d) ₹11,000 crore
33. If the funds contributed by FIIs is 33,000 crore, then the funds contributed towards subscription of Bharat Bonds by NRIs is
 - (a) ₹10,000 crore
 - (b) ₹11,000 crore
 - (c) ₹12,000 crore
 - (d) ₹12,500 crore
34. If total subscription is ₹55,000, then the difference between funds invested by banks and public is
 - (a) ₹550 crore
 - (b) ₹1,100 crore
 - (c) ₹1,050 crore
 - (d) ₹1,650 crore
35. If the difference between funds contributed by public and banks on one hand and pension funds on the other is ₹5,000 crore, then the total funds subscribed for Bharat Bonds are
 - (a) ₹25,000 crore
 - (b) ₹50,000 crore
 - (c) ₹55,000 crore
 - (d) ₹1,10,000 crore

Directions: Study the following pie chart carefully and answer questions 36 to 40. It consists of data on tourist arrival from different countries.

36. The difference between tourist numbers from USA and Japan is
 - (a) 2 lakhs
 - (b) 3 lakhs
 - (c) 4 lakhs
 - (d) 5 lakhs
37. The angle extended at the centre by sector of tourists from USA is
 - (a) 108°
 - (b) 118°
 - (c) 144°
 - (d) 165°
38. If the number of tourists from UK doubles up while the total remains the same, then the new angle extended by tourists from UK will be
 - (a) 60°
 - (b) 72°
 - (c) 90°
 - (d) 120°
39. If the total number of tourists doubles up while the absolute number of tourists from 'others' remains the same, then the new angle extended by 'others' at the centre will be
 - (a) 36°
 - (b) 72°
 - (c) 108°
 - (d) None of the above
40. If the tourist traffic from USA shows a growth of 50% while the total number of tourists remains the same, then the new percentage from USA is
 - (a) 40%
 - (b) 45%
 - (c) 50%
 - (d) None of the above

Directions: Study the following table carefully and answer questions 41 to 45. It consists of breakup of expenses of a company over different years.

Year	Items of Expenditure ₹(in lakhs)				
	Salary	Fuel and Transport	Bonus	Interest on Loans	Taxes
1998	288	98	3.00	23.4	83
1999	342	112	2.52	32.5	108
2000	324	101	3.84	41.6	74
2001	336	133	3.68	36.4	88
2002	420	142	3.96	49.4	98

41. What is the average amount of interest per year which the company had to pay during this period?
 - (a) ₹32.43 lakhs
 - (b) ₹33.72 lakhs
 - (c) ₹34.18 lakhs
 - (d) ₹36.66 lakhs
42. The total amount of bonus paid by the company during the given period is approximately what per cent of the total amount of salary paid during this period?
 - (a) 0.1%
 - (b) 0.5%
 - (c) 1%
 - (d) 1.25%
43. Total expenditure on all these items in 1998 was approximately what per cent of the total expenditure in 2002?
 - (a) 62%
 - (b) 66%
 - (c) 69%
 - (d) 71%
44. The total expenditure of the company over these items during year 2000 is

- (a) ₹544.44 lakhs
- (b) ₹501.11 lakhs
- (c) ₹446.46 lakhs
- (d) ₹478.87 lakhs

45. The ratio between the total expenditure on taxes for all the years and the total expenditure on fuel and transport for all the years, respectively is approximately
- (a) 4 : 7
 - (b) 10 : 13
 - (c) 15 : 18
 - (d) 5 : 8

Directions: Study the following bar graph carefully and answer questions 46 to 50. It consists of data on students' enrolment in different vocational courses in A, B, C, D and E institutes.

46. What is the respective ratio of the total number of girls enrolled in painting in Institutes A and C together to those enrolled in stitching in Institutes D and E together?
- (a) 14 : 23
 - (b) 16 : 23
 - (c) 18 : 23
 - (d) 8 : 12
47. The number of girls enrolled in stitching in Institute B forms approximately what per cent of the total number of girls enrolled in stitching in all the institutes put together?
- (a) 19
 - (b) 21
 - (c) 23
 - (d) 25
48. What is the respective ratio of the total number of girls enrolled in painting and stitching from all the institutes put together?
- (a) 11 : 12
 - (b) 12 : 11
 - (c) 11 : 14
 - (d) 12 : 17
49. The number of girls enrolled in dancing in Institute A forms what per cent of the total number of girls enrolled in all the vocational courses together in that institute?
- (a) 20.7
 - (b) 25.5
 - (c) 28.2
 - (d) 29.5
50. What is the total number of girls enrolled in painting from all the institutes together?
- (a) 1050
 - (b) 1100
 - (c) 1150
 - (d) 1200

Directions: Study the following line graph carefully and answer questions 51 to 55. It consists of profit data of a company for 2003 and 2004.

Profit (₹ in crores) Earned by Companies During 2003 and 2004 (Profit = income – expenditure)

51. What is the ratio between the profits earned by Company A in 2004 and Company B in 2003?
- (a) 4 : 3
 - (b) 3 : 2
 - (c) 3 : 4
 - (d) 1 : 1
52. What is the difference between the total profit earned by Companies E, F and G together in 2003 and 2004 (₹ in crores)?
- (a) 70
 - (b) 72
 - (c) 78
 - (d) 80
53. What is the ratio between the profit earned by Company C in 2003 and 2004 together and the profit earned by Company E in the same two years mentioned above?
- (a) 11 : 9
 - (b) 10 : 11
 - (c) 9 : 11
 - (d) None of the above
54. What is the approximate average profit earned by all the companies in year 2003 (₹ in crores)?
- (a) 53
 - (b) 58
 - (c) 62
 - (d) 68
55. The profit earned by Company B in 2004 is what per cent of the profit earned by the same company in 2003?
- (a) 60
 - (b) 75
 - (c) 125
 - (d) 133.33

Directions: Study the following pie charts carefully and answer questions 56 to 60. It consists of data on admission in graduate and postgraduate courses in different institutions.

56. What are the total admissions in College B for both graduate and postgraduate courses?
 (a) 9600
 (b) 9800
 (c) 10,200
 (d) 10,500
57. What is the difference in graduate and postgraduate courses in College A?
 (a) 1400
 (b) 1600
 (c) 1800
 (d) 2000
58. By what per cent are admissions in graduate courses higher than postgraduate courses in case of College F?
 (a) 31.25
 (b) 25.50
 (c) 33.33
 (d) 35.50
59. What is the difference between the highest admissions in graduate and the highest admissions in postgraduate courses in any combination of the colleges?
 (a) 1200
 (b) 1500
 (c) 1600
 (d) 2000
60. By what per cent are postgraduate admissions lower than graduate admissions in case of College D?
 (a) 45
 (b) 55
 (c) 70
 (d) 80

Directions: The bar graph given below shows the foreign exchange reserves of a country (in million USD) from 1991–1992 to 1998–1999.

Foreign Exchange Reserves of a Country (in Million USD)

61. The ratio of the number of years, in which the foreign exchange reserves are above the average reserves, to those in which the reserves are below the average reserves is
 (a) 2 : 6
 (b) 3 : 4
 (c) 3 : 5
 (d) 4 : 4
62. The foreign exchange reserves in 1997–1998 were how many times of that in 1994–1995?
 (a) 0.7
 (b) 1.2
 (c) 1.4
 (d) 1.5
63. For which year the per cent increase in foreign exchange reserves over the previous year is the highest?
 (a) 1992–1993
 (b) 1993–1994
 (c) 1994–1995
 (d) 1996–1997
64. The foreign exchange reserves in 1996–1997 were approximately what per cent of the average foreign exchange reserves over the period under review?
 (a) 95%
 (b) 110%
 (c) 115%
 (d) 125%
65. What was the percentage increase in the foreign exchange reserves in 1997–1998 over 1993–1994?
 (a) 100
 (b) 150
 (c) 200
 (d) 250

Directions: Study the bar graph given below and answer questions 66 to 70.

66. Which year witnessed the maximum growth in sales turnover in absolute terms?
 (a) 2008
 (b) 2009
 (c) 2010
 (d) 2011
67. Which year witnessed the maximum growth in sales turnover in percentage terms?
 (a) 2008
 (b) 2009
 (c) 2010
 (d) 2011
68. What is the average sales turnover during all the years (₹ in crores)?
 (a) 17,000
 (b) 18,000
 (c) 19,000
 (d) None of the above
69. What is the approximate percentage growth between 2007 and 2011?
 (a) 400
 (b) 500
 (c) 525
 (d) 600
70. How many years witnessed more than average growth?
 (a) 1
 (b) 2
 (c) 3
 (d) None of the above

MISCELLANEOUS

71. Census is conducted after every
 (a) 5 years (b) 10 years
 (c) 11 years (d) 15 years
72. Match List-I with List-II.
- | List-I
(Event) | List-II
(Year) |
|--|-------------------|
| A Statistical abstract of British India | I 1868 |
| B Agricultural statistics of British India | II 1886 |
| C First census | III 1881 |
| D Central Statistical Organization | IV 1952 |
- Codes:**
 (a) A-I, B-II, C-III, D-IV
 (b) A-I, B-III, C-II, D-IV
 (c) A-IV, B-III, C-II, D-I
 (d) A-IV, B-II, C-III, D-I
73. National Sample Survey (NSS) came into being to collect information through sample surveys on a variety of socioeconomic aspects in the year
 (a) 1950 (b) 1952
 (c) 1956 (d) 1962
74. Indian Statistical Institute is located in
 (a) New Delhi (b) Kolkata
 (c) Mumbai (d) Hyderabad
75. How many divisions are there in Central Statistical Organization?
 (a) 2 (b) 3
 (c) 4 (d) 5
76. National Statistical Commission was set up in the year
 (a) 2000 (b) 2003
 (c) 2005 (d) 2008
77. Which of the following methods is best suited to show on map the types of crops grown in a region?
 (a) Choropleth (b) Chorochromatic
 (c) Choroschematic (d) Isopleth
78. Which of the following sources of data is not based on primary data collection?
 (a) Census of India
 (b) National Sample Survey
 (c) Statistical Abstracts of India
 (d) National Family Health Survey
79. Which of the following is not a source of data?
 (a) Administrative records
 (b) Population census
 (c) GIS
 (d) Sample survey
80. Which of the following is the oldest archival source of data in India?
 (a) National sample survey
 (b) Agricultural statistics
 (c) Census
 (d) Vital statistics

Miscellaneous

71. (b) 72. (a) 73. (a) 74. (b) 75. (d) 76. (c) 77. (a) 78. (c) 79. (d) 80. (b)

SOLUTION

- (c): Required average

$$= \left[\frac{3.2+3.6+3.4+3.8+4.1+4.4}{6} \right]$$

$$= \left[\frac{22.5}{6} \right] = 3.75 \text{ lakhs}$$
- (c): Required percentage = $(4.8 - 4.5) / 4.5 \times 100 = 0.3/4.5 \times 100 = 6.67\%$
- (c): Combined population in 2004 = $5.2 + 3.4 + 5.8 = 14.4$ lakhs
 Combined population in 2005 = $5.4 + 3.8 + 6.3 = 15.5$ lakhs
 Difference = $15.5 - 14.4 = 1.1$ lakhs = 1,10,000
- (a): Average population in 2006 = $(5.8 + 4.1 + 6.6) / 3 = 16.5/3 = 5.5$ lakhs
- (b): Total population in 2004 = $5.2 + 3.4 + 5.8 = 14.4$ lakhs
 Total population in 2005 = $5.4 + 3.8 + 6.3 = 15.5$ lakhs
 Required ratio = $14.4 : 15.5 = 144 : 155$
- (c): Total candidates appeared in 2004 = 3,810
 Percentage of students from School E = $780/3810 \times 100 = 20.47 \sim 20\%$
- (c): Required average = $(760 + 740 + 820 + 880 + 840) / 5 = 4040/5 = 808$
- (b): Total number of students appeared from School A during 2004–2008 = $(650 + 700 + 800 + 750 + 850) = 3750$
 Required percentage = $800/3750 \times 100 = 21.33\%$
- (a): Required ratio = $(820 + 860) : (800 + 780) = 1680 : 1580 = 84 : 79$
- (b): Required average

$$= \left[\frac{750+880+920+840+790}{5} \right] = \left[\frac{4,180}{5} \right]$$

$$= 836$$
- (c): Number of graduates in C = 15,150
 Number of postgraduates in C = 10,500
 Difference = $15,150 - 10,500 = 4650$
- (d): Required average

$$= \left[\frac{(8,000+18,000+10,500 + 16,250+20,000+18,450)}{6} \right]$$

$$= \left[\frac{91,200}{6} \right] = 15,200$$
- (b): Total number of graduates from A and B = $10,200 + 25,250 = 35,450$
 Total number of postgraduates from A and E = $8000 + 20,000 = 28,000$
 Required ratio = $35,450 : 28,000 = 709 : 560$
- (c): Total number of graduates in A, D and F = 46,900
 Total number of postgraduates in A, D and F = 42,700
 Required total = $46,900 + 42,700 = 89,600$
- (b): Required percentage = $16,500/18,450 \times 100 = 89.43 \sim 89\%$
- (b): As the comparison is with the imports, the imports will appear as denominator.
 The formula to calculate the percentage figure for higher exports with regard to imports is
 Difference/imports $\times 100$
 In 2004, exports = $40 > 35$
 Required percentage figure = $5/35 \times 100 \sim 14\%$
 Similarly, for the year 2005, required percentage = $[(65 - 60)/60] \times 100 = 8.33\%$
 For 2006, imports > exports, so no calculation is required.
 For 2007, $5/50 \times 100 = 10\%$
 For 2008, $5/80 \times 100 = 6.25\%$
 For 2009, $5/75 \times 100 = 6.66\%$
 Thus, for years 2004 and 2007, the exports are at least 10% higher than imports.
- (a): The required formula = increase/exports in preceding year $\times 100$
 In 2005, percentage increase in exports = $(65 - 40)/40 \times 100 = 25/40 \times 100 = 62.5\%$
 In 2006, percentage increase in exports = $5/65 \times 100 = 7.69\%$
 In 2007, exports have actually declined over preceding year, so no calculation is required.
 In 2008, percentage increase in exports = $[(85 - 55)/55] \times 100 = 54.54\%$
 In 2009, exports declined in comparison to 2008, again no calculation is required.
- (b): Average export = $(40 + 65 + 70 + 55 + 85 + 80) / 6 = 395/6 = 65.83$ billion ₹
- (b): Total exports = 395 billion ₹
 Total imports = 375 billion ₹
 Difference = 20 billion ₹
 Percentage difference = $20/375 \times 100 = 5.33\%$
 As the comparison is with imports, imports will appear as denominator.
- (b): The imports have increased from 35 in 2004 to 75 in 2009. Hence, %age increase in imports is to be calculated by taking 2004 as base year.
 Required %age = $[(75 - 35)/35] \times 100 = 114.28 \sim 114\%$
- (a): The required ratio is
 $(65 + 75) / (85 + 95) = 140/180 = 7 : 9$
- (c): As the comparison is with State E, it will appear as denominator.
 The required ratio = $[(95 + 110) / (70 + 80)] \times 100 = 136.66\% \sim 137\%$
- (b): Total enrolments for the year 2010 = $80 + 75 + 95 + 85 + 75 + 70 = 480$
 Total enrolments for the year 2011 = $105 + 65 + 110 + 95 + 95 + 80 = 550$
 Percentage difference = $[(550 - 480) / 480] \times 100 = 14.58\% \sim 15\%$

24. (a): For State A, percentage increase = $[(105 - 80)/80] \times 100 = 31.25\%$
 For State C, percentage increase = $[(110 - 95)/95] \times 100 = 15.78\%$
 For State E, percentage increase = $[(95 - 75)/75] \times 100 = 26.66\%$
 For State F, percentage increase = $[(80 - 70)/70] \times 100 = 14.28\%$
25. (a): Average enrolments for 2010 = $480/6 = 80$
26. (b): Expenditure on R & D is 5% of total expenditure. It means it is 1/20th of total expenditure.
27. (d): Advt. expenditure is 15% of total expenditure. Given, 15% of total Expenditure = 2.10 cr
 Hence, total expenditure = $2.10 \times 100/15 = 14$ cr
 Transport cost = 12.5% of 14 cr = 1.75 cr
 And taxes = 10% of 14 cr = 1.4 cr
 So, the difference between transport and taxes = $1.75 - 1.40 = 0.35$ cr = 35 lakhs
28. (d): Total of infrastructure and transport:total of taxes and interest on loans
 = $(20 + 12.5) : (10 + 17.5)$
 = $32.5 : 27.5$
 = $13 : 11$
29. (c): As interest on loan is 10% of total expenses, 17.5% of total expenditure = ₹2.45 cr
 Total expenditure = $(2.45 \times 100)/17.5 = 14$ cr
 Advertisement + Taxes + R&D = $15 + 10 + 5 = 30\%$
 30% of ₹14 cr = ₹4.2 cr
30. (a): Difference = $17.5 - 12.5 = 5\%$
31. (a): Combined investment by companies and FIIs = $67/11 \times 8,000 = ₹48,726$ crore
32. (d): $(16 + 4)/100 \times 55,000 = ₹11,000$ cr.
33. (b): FIIs contribute 33% and NRIs contribute 11% of total funds.
 Hence, funds contributed by NRIs = $11/33 \times 33,000 = ₹11,000$ crore
34. (b): Percentage difference = $4 - 2 = 2\%$
 Given that 2% of ₹55,000 cr = $(2/100) \times 55,000 = ₹1,100$ crore
35. (b): Difference in percentage terms = $16 - (2 + 4) = 10\%$
 10% of total funds = ₹5,000 crore
 Hence, total funds = $5,000/10\% = 5,000 \times 100/10 = ₹50,000$ crore
36. (a): Difference = $40 - 30 = 10$
 Now 10% of 20 lakhs = 2 lakhs
 Hence, option (a) is the answer.
37. (c): $40/100 \times 360 = 144^\circ$
38. (b): Old number = $(10/100) \times 20 = 2$ lakhs
 New number = $2 \times 2 = 4$ lakhs
 New angle extended at centre = $4/20 \times 360 = 72^\circ$
39. (a): Old number from 'others' = 20% of 20 lakhs = 4 lakhs
 New total of tourists = $20 \times 2 = 40$ lakhs
 So, new angle extended at centre by 'others' = $4/40 \times 360 = 36^\circ$
40. (c): Old number of tourists from USA = 40% of 20 lakhs = 8 lakhs
 Increase of 50% = 50% of 8 lakhs = 4 lakhs
 New traffic figure from USA = $8 + 4 = 12$ lakhs
 New total number from all countries = $20 + 4 = 24$ lakhs
 Revised percentage of tourist traffic from USA = $12/24 \times 100 = 50\%$
41. (d): Average interest =
 = ₹ $\left[\frac{23.4 + 32.5 + 41.6 + 36.4 + 49.4}{5} \right]$ lakhs
 = ₹ $\left[\frac{183.3}{5} \right]$ lakhs = ₹36.66 lakhs
42. (c): Required percentage
 = $\left[\frac{(3.00 + 2.52 + 3.84 + 3.68 + 3.96)}{(288 + 342 + 324 + 336 + 420)} \times 100 \right] \%$
 = $\left[\frac{17}{1710} \times 100 \right] \%$ = 1%
43. (c): Required percentage
 = $\left[\frac{(288 + 98 + 3.00 + 23.4 + 83)}{(420 + 142 + 3.96 + 49.4 + 98)} \times 100 \right] \%$
 = $\left[\frac{495.4}{713.36} \times 100 \right] \%$ = 69.45%
44. (a): Total expenditure during 2000
 = ₹ $(324 + 101 + 3.84 + 41.6 + 74)$ lakhs
 = ₹ 544.44 lakhs
45. (b): Required ratio
 = $\left[\frac{(83 + 108 + 74 + 88 + 98)}{(98 + 112 + 101 + 133 + 142)} \right]$
 = $\left[\frac{451}{586} \right] = \frac{10}{13} = 10 : 13$
46. (b): Total number of girls enrolled in painting in A and C = $250 + 150 = 400$
 Total number of girls enrolled in stitching in D and E = $250 + 325 = 575$
 Required ratio = $400 : 575 = 16 : 23$
47. (b): Total number of girls enrolled in stitching in all institutes = $325 + 250 + 50 + 250 + 325 = 1200$
 Number of girls enrolled in stitching in B = 250
 Required percentage = $250/1200 \times 100 = 21\%$
48. (a): Total girls enrolled in painting = $250 + 225 + 150 + 175 + 300 = 1100$
 Total enrolment in stitching course stitching = 1200 (calculated in earlier question)
 And in dancing = $150 + 200 + 75 + 400 + 350 = 1175$
 Required ratio = $1100 : 1200 = 11 : 12$
49. (a): Total enrolments of girls in A = $250 + 325 + 150 = 725$
 Number of girls enrolled in dancing in A = 150
 Required percentage = $150/725 \times 100 = 20.69 \sim 20.7\%$

50. (b): Solution is done as in Question 48.
51. (d): Profit earned by Company A in 2004 = ₹40 crore
Profit earned by Company B in 2003 = ₹40 crore
Required ratio = 40 : 40 = 1 : 1
52. (d): Total profits earned by Companies E, F and G in 2003 = 50 + 80 + 60 = ₹190 crore
Total profit earned by Companies E, F and G in 2004 = 40 + 20 + 50 = ₹110 crore
Required difference = 190 - 110 = ₹80 crore
53. (a): The profit earned by Company C in 2003 and 2004 = 50 + 60 = ₹110 crore
Profit earned by Company E in 2003 and 2004 = 40 + 50 = ₹90 crore
Required ratio = 110 : 90 = 11 : 9
54. (a): Required average = $(20 + 40 + 50 + 70 + 50 + 80 + 60)/7 = 370/7 = 52.86 \sim ₹53$ crore
55. (b): Profit earned by Company B in 2004 = ₹30 crore
Profit earned by Company B in 2003 = ₹40 crore
Required ratio = $30/40 \times 100 = 75\%$.
56. (a): Postgraduate admissions in College B = 18% of 20,000 = 3,600
Graduate admissions in College B = 20% of 30,000 = 6,000
Total admissions = 3600 + 6000 = 9600
57. (a): Admissions in postgraduate courses in College A = 20% of 20,000 = 4000
Admissions in graduate course = 18% of 30,000 = 5400
Required difference = 5400 - 4000 = 1400
58. (a): Admissions in postgraduate courses in College F = 16% of 20,000 = 3200
Admissions in graduate courses in College F = 14% of 30,000 = 4200
Difference = 4200 - 3200 = 1000
Percentage difference = $1000/3200 \times 100 = 31.25\%$
59. (c): The highest admissions were in College C for graduate as well postgraduate college.
Admission in postgraduate courses in College C = 22% of 20,000 = 4400
Admission in graduate courses in College C = 20% of 30,000 = 6000
Difference = 6000 - 4400 = 1600
60. (d): Admission in postgraduate courses in College D = 10% of 20,000 = 2000
Admission in graduate courses in College C = 12% of 30,000 = 3600
Difference = 3600 - 2000 = 1600
As the comparison is with admissions in graduate courses, 3600 will be taken as denominator.
Percentage difference = $1600/3600 \times 100 = 44.5\% \sim 45\%$
61. (c): Average Foreign Exchange Reserves (FER) over the given period = 3480 million USD.
The country had reserves above 3480 million USD during the years 1992–1993, 1996–1997, and 1997–1998, that is for 3 years and below 3480 million USD during the years 1991–1992, 1993–1994, 1994–1995, 1995–1996 and 1998–1999, i.e., for 5 years. Hence, required ratio = 3 : 5.
62. (d): Required ratio = $5040/3360 = 1.5$
63. (a): There is an increase in foreign exchange reserves during the years 1992–1993, 1994–1995, 1996–1997 and 1997–1998 as compared to previous year (as shown by bar graph).
The percentage increases in reserves during these years compared to previous years are as follows.
For 1992–1993:

$$= \left[\frac{(3,720 - 2,640)}{2,640} \times 100 \right] \% = 40.91\%$$
For 1994–1995:

$$= \left[\frac{(3,360 - 2,520)}{2,520} \times 100 \right] \% = 33.33\%$$
For 1996–1997:

$$= \left[\frac{(4,320 - 3,120)}{3,120} \times 100 \right] \% = 38.46\%$$
For 1997–1998:

$$= \left[\frac{(5,040 - 4,320)}{4,320} \times 100 \right] \% = 16.67\%$$
Clearly, the percentage increase over previous years is highest for 1992–1993.
64. (d): Average FER over the given period

$$= (2640 + 3720 + 2520 + 3360 + 3120 + 4320 + 5040 + 3120)/8$$

$$= 3480 \text{ million USD}$$
FER in 1996–1997 = 4320 million USD
According to question, let's assume
FER for 1996–1997 = $x\%$ of average FER
Thus, $4320 = x\%$ of 3480
 $x\% = 4320/3480 \times 100 = 124.1\% \sim 125\%$
65. (a): As the FER doubled from 2520 in 1993–1994 to 5040 in 1997–1998, there is an increase of 100%.
Alternatively, it can be calculated very easily.
Increase = 5040 - 2520 = 2520
Increase percentage = $(2520/2520) \times 100 = 100\%$
66. (d): Growth in 2008 = 10,500 - 6300 = 4200 crore
Growth in 2009 = 15,000 - 10,500 = 4500 crore
Growth in 2010 = 25,300 - 15,000 = 10,300 crore
Growth in 2011 = 37,900 - 25,300 = 12,600 crore
67. (d): Percentage growth in 2008 = $(4200/6300) \times 100 = 66.66\%$
Percentage growth in 2009 = $(4500/10,500) \times 100 \sim 43\%$
Percentage growth in 2010 = $(10,300/15,000) \times 100 \sim 69\%$
Percentage growth in 2011 = $(12,600/25,300) \times 100 \sim 50\%$
68. (c): Total turnover = 6300 + 10,500 + 15,000 + 25,300 + 37,900 = 95,000 crore
Average = $95,000/5 = 19,000$ crore
69. (b): Increase between 2007 and 2011 = 37,900 - 6300 = 31,600 crore
Percentage growth = $31,600/6300 \times 100 = 500\%$
70. (b): Years 2010 and 2011 witnessed higher than average sales turnover figures.

Information and Communication Technology (ICT)

CHAPTER 8

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- ICT: General Abbreviations and Terminology
- Basics of Internet, Intranet, E-mail, Audio and Video-conferencing
- Digital Initiatives in Higher Education
- ICT and Governance

INTRODUCTION

Information and Communication Technology is a very wide topic. General abbreviations and terminology includes basic computer terms, print media, satellites and terms such as internet, intranet etc. For general abbreviations, the basic terms have been explained as parts of system such as computers.

In India, the education sector is facing many challenges because of two main factors. The first factor is a continuous increase in population. The population is increasing by geometric progression and every year, more and more students are seeking admissions in educational institutions to educate themselves. Hence, more institutes are required. There is an additional challenge to appoint more trained teachers. All these require more financial resources. The second dimension is knowledge explosion. In almost every subject, the knowledge is accumulative. This actually turns out to be a challenge for teachers as more knowledge is to be imparted within the available time, though the curriculum may remain unchanged.

Today, from the time we wake up in the morning until the time we sleep, we are surrounded by media, such as newspapers, radio, television (TV) and computers. Sometimes, we are not even aware that we are surrounded by these media. Gaining comprehensive knowledge in using information and communication technology tools (ICT) is important in today's fast changing society. However, we are very often confused about what these media are.

The optimum use of ICTs in India's higher education system can propel the country to become a knowledge

superpower. The innovative use of information technology (IT) in higher education addresses the three fundamental challenges, such as access, equity and quality.

MEANING OF INFORMATION AND COMMUNICATION TECHNOLOGIES

According to United Nations Development Programme (UNDP) definition, ICTs are basically information-handling tools, such as a varied set of goods, applications, and services that are used to produce, store, process, distribute and exchange information.

ICT includes both old and new tools. Old ICT tools mainly include radio, TV and telephone. New ICT tools mainly include computers, satellite, wireless technology and the internet. These different tools are now able to work together and combine to form our networked world, where we have a massive infrastructure of interconnected telephone services, standardized computing hardware, the internet, radio and TV, which reaches into every nook and corner of the globe.

ICTs not only refer to the latest computer and the internet-based technologies, but also refer to the simple audio-visual aids, such as transparencies, slides, cassette and video recorders, radio, television and film.

These conventional and more familiar technologies are referred under the collective heading of analogue media, while the newer computer and internet-based technologies are called the digital media. The differentiation between the old ICT and new ICT is subjective to some extent.

ICT AND EDUCATION

Liberalization, privatization and globalization (LPG) coupled with the advancement in IT have opened up a new demand for skilled manpower, especially in the services sector. In this kind of scenario, education has been identified as one of the 12 main services under General Agreement on Trade in Services (GATS), which needs to be opened up for free flow of trade between countries. Knowledge is expected to become a tradable commodity and it will be essential that Indian educators keep pace with the change or else perish in the face of competition from multinational forces in all fields of education and learning, including adult learning.

According to Cross and Adam, the four basic rationales behind introducing ICT in education are as follows.

Table 8.1 Basic Rationales for Introducing IT in Education

Rationale	Basis
Social	Keeping in view the role that technology now plays in society, students need to learn technology.
Vocational	Now, most of the jobs require technological orientation.
Catalytic	To enhance teaching effectiveness with the help of technology.
Pedagogical	To make use of technology in enhancing learning, flexibility and efficiency in the course of delivery.

The various kinds of ICT products available is relevant to education, such as teleconferencing, e-mail, audio conferencing, TV lessons, radio broadcasts, interactive radio counselling, interactive voice response system, audiocassettes, and compact disc read-only memory (CD-ROM) have been used in education for different purposes.

The objective must be clear while deciding to use ICTs. There are three ways in which ICT in education is considered in current thinking. There is ICT education, ICT-supported education and ICT-enabled education.

1. ICT education: It refers to the creation of trained manpower to meet the IT needs of knowledge society. The motivation is to train people in order to meet the manpower requirements of IT industry in both software and hardware. The role of ICT in the education policy of a government is to equip students with IT skills.

2. ICT-supported education: It is sometimes termed as multimedia education. Nowadays, many distance education universities and institutions use ICT to supplement printed study materials. Here, ICT mainly includes broadcast media, such as radio and TV programmes, audio and video tapes. Multimedia contents such as lessons are offered on CDs.

3. ICT-enabled education: In this case, a comprehensive educational programme is purely delivered through ICTs, i.e., using them as the basic medium for the teaching–learning process as it requires ICT access.

Target Community of IT in India

As far as India's demographic profile is concerned, almost half of India's population is below 25 years of age, 70% people live in rural areas, the literacy rate is around 60%, and people speak 15 major languages. The demand for education outstrips the conventional system's ability to provide it, leaving no alternative for the use of technology in education.

Urban-rural divide (sometimes termed as digital divide) still exists in terms of access, equity and resources.

In the new educational system, there are four levels of learners.

- 1. First level:** The learners in this category can afford high cost of education for the sake of its quality.
- 2. Second level:** It consists of intelligent and competent students, who are not able to afford the cost of education, so they prefer the existing public institutions and would soon be competing with the first level.
- 3. Third level:** It consists of the academically and financially poor students, who seek access to education from not so qualitative institutions of higher learning.
- 4. Fourth level:** It consists of the illiterate and the poor.

Objectives of Using ICT in Higher Education

The objectives of using ICT are as follows.

- Improving access to the system through online education.
- Improving the quality of teaching, especially across remote locations.
- Increasing transparency and strengthening systems, processes and compliance norms in higher education institutes.

4. Measuring the students' learning participation and effectiveness.
5. Analysing students' behaviour to maximize students' involvement, optimizing retentions and improving placements.
6. Analysing students' performance, placement, application volume, website analytics and social media metrics for brand audit.

Strengths and Limitations of ICTs

Strengths of ICT

Some of the strengths of ICTs are as follows.

1. **Individualization of learning:** Individualization of learning means that people learn as individuals and not as a homogenous group. ICTs may offer flexibility to each individual to relate to the medium and its content. The concept of self-paced learning helps in this process.
2. **Interactivity:** Through interactivity feature, the learner can relate to the content more effectively, go forward and backward in the content and start at any point, depending upon prior knowledge and experience. It is not always necessary that the learner should move in a sequential manner.
3. **Distance and climate insensitive:** Teaching and learning could be taken out of the conventional education system of schools and colleges. Teaching can be individualized and geo-climatic conditions (a combination of geographical distances and climatic conditions) can be overcome as a result of ICT.
4. **More economical, higher speed of delivery and wider reach:** With increase in number of learners, the unit overhead cost comes down even though when the initial investment may be higher. The speed of delivery of contents is instantaneous.
5. **Multiple teaching functions and diverse audiences:** In using ICTs, especially the computer and internet-based technologies can be useful in drills and practices to help diagnose and solve problems, for accessing information and knowledge about various related themes.
6. **Uniform quality:** If content is well produced and is of good quality, then the same quality can be delivered to the rich and the poor, the urban and the rural equally at the same low cost. This way of using ICTs can be a great equalizer.

Limitations of ICT

ICTs also have certain weaknesses that we must understand. Some of the weaknesses depend upon the use of ICTs. and it includes the following.

1. **High infrastructure and start-up costs:** It costs money to build ICT systems and to maintain them. The cost of hardware and software can be very high.
2. **Little attention towards individual differences in order to achieve economies of scale:** The higher the quantity, the lower will be the cost. To keep the cost low, we make the content common. We do not take into account the individual differences among students.
It may create a digital divide within the class as students who are more familiar with ICT reap more benefits and learn faster than those who are not familiar with the technological aspects.
3. **Accessibility issue:** Not everyone has equal access. Therefore, not everyone benefits equally from the use of ICTs. A 100% reach of radio or a 90% reach of TV does not mean that all the listeners or viewers have access to the medium. Timing of broadcast, electricity supply, socio-cultural factors, poverty, illiteracy, time constraints, mobility and relevance are the key factors influencing access.
4. **ICT is basically a delivery system:** A medium is different from the content, where ICTs are essentially meant only to deliver content and they are not expected to major attitudinal or behavioural changes.
5. **Difficulty in performance evaluation:** Learning from ICTs is usually multidimensional in nature and with long-term perspective. Thus, it may take longer time to assess performance in comparison to classroom assessment which is spontaneous.
6. **Continuous training requirement:** As technologies change, there is a continuous need to train the trainers which may sometimes be resisted by them. Also, since not all teachers are experts with ICT, they may lack knowledge in updating the course content online which can slow down the learning among students. In fact, there is a need to train all stakeholders in ICT.
7. **Call for attitudinal change to understanding of teaching and learning:** These are different media and have a different way of teaching from what we are accustomed to. Therefore, they need different ways of understanding what teaching and learning is all about. It may shift attention from the primary goal of the learning process to developing ICT skills, which is the secondary goal. Higher dependence on ICTs affects the bonding process between the teacher and the student as ICTs become a communication tool rather than face-to-face conversation and thus, the transactional distance increases.

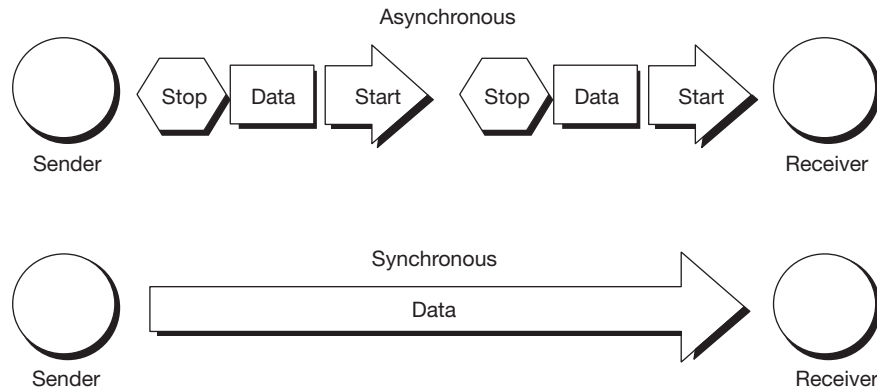

Figure 8.1 Asynchronous and Synchronous Media

The potential threat of plagiarism is high as students can copy information rather than learning and developing their own skills.

Synchronous and Asynchronous Media

Based upon their characteristics, media technologies can be grouped into two categories, namely synchronous and asynchronous.

Synchronous media requires all participants to be together at the same time even though when they are in different locations. Asynchronous media allows participants in the learning process to be at different times and at different places.

Major ICT Learning Categories

In view of ICT, education can be classified into three main categories as follows.

1. E-learning
2. Blended learning
3. Distance learning

In addition, there are face-to-face, self-paced and online collaborative learning under major ICT learning categories.

E-learning or Electronic Learning

It is also known as online learning and is commonly associated with the field of advanced learning technology (ALT), which deals with both the technologies and associated methodologies in learning using networked and/or multimedia technologies. Distance education provided the base for e-learning's development. E-learning can be 'on demand'. It overcomes timing, attendance and travel difficulties. It also allows higher participation and greater interaction.

Blended Learning

It is a combination of multiple approaches to learning. It is usually used to define a situation where different

delivery methods are combined together to deliver a particular course. These methods may include a mixture of face-to-face learning, self-paced learning and online classrooms.

Face-to-Face Learning

It refers to learning that occurs in a traditional classroom setting where a faculty member delivers instructions to a group of learners. This could include lectures, workshops, presentations, tutoring, conferences and so on.

Self-paced Learning

It provides the flexibility to learn according to the availability of learners' own time and pace. It occurs in a variety of ways, such as reading specific chapters from the text book, studying the course material presented through web-based or CD-based courses, attending pre-recorded classes or sessions, reading articles referred by the faculty members, working on assignments and projects, and searching and browsing the internet.

Online Collaborative Learning

It involves interaction between the learners and the faculty members through the web. This interaction can occur in one of the following modes, such as through 1. synchronous interaction and 2. asynchronous interaction, which have been discussed earlier.

Distance Learning

It is a type of education, where students work on their own at home or at office and communicate with the faculty and other students through e-mail, electronic forums, video conferencing, chat rooms, instant messaging and other forms of computer-based communication. It is also known as open learning. Most distance learning programmes include a computer-based training (CBT) system and communications tools to produce a virtual classroom. As the Internet and World

Wide Web (WWW) are accessible from virtually all computer platforms, they are increasingly serving as the foundation for many distance learning systems.

ICTs also allow for the creation of digital resources, like digital libraries where the students, teachers and professionals can access research material and course material from any place at any time. Such facilities allow the networking of academics and researchers. Hence, sharing of scholarly material leads to quality enhancement in teaching and learning.

Digital Initiatives in Higher Education

Digital revolution has brought many changes in the Higher Education. In fact, every institute is taking various initiatives in promoting digital education. Various initiatives have been taken up such as SWAYAM (India's own MOOCs), Swayam Prabha, National Digital Library (containing more than 6.5 million books), and National Academic Depository. UGC is in the process of developing Online Education Regulation.

MHRD has also taken measures such as "Cashless Campus" and Digital Financial Literacy of community by students. The aim to raise the Gross Enrolment Ratio (GER) in the higher education is to be taken to 30 by 2020. The physical expansion of facilities requires both infrastructural and human resource limitations. The technology can be leveraged to address twin concerns of enhancing access and quality. The use of technology becomes imperative due to the following factors:

1. Affordable
2. High Quality
3. Inclusive – specifically to cover up rural-urban and gender bias issues.
4. Employability
5. Uses internet
6. Smart Phones
7. Higher spend
8. Skilling the unskilled - The Skill India Mission

To democratise the opportunities of quality education, the Government has launched the National Mission on Education through ICT (NMEICT) to translate the power of IT into expanded learning opportunities. Over a period of time, NMEICT has made significant gains by developing IT interventions that have potential to change the higher education scenario.

Now we can discuss various points for discussion of other points:

1. **National Mission on Education through Information and Communication Technology (NMEICT):** NMEICT is a centrally sponsored scheme to realize the potential of ICT in teaching learning process for the benefit of all the learners

in higher education institutions anytime and anywhere. Content generation and connectivity along with provision for access devices for institutions and learners are the main objectives. Now many universities have been provided 1 Gbps connectivity and more than 14,000 colleges have also been provided VPN (Virtual Private Network) connectivity.

A-view software has been developed under the NMEICT for teacher training. This could become the basis for successful implementation of the proposed National Mission on Teachers.

Under the N-list program of INFLIBNET (under NMEICT), lakhs of e-books and thousands of high quality paid e-journals have been made available to colleges and universities with a view to inculcate research culture in teachers and students. The model needs to be scaled up for maximizing coverage and for productive usage of the available resources.

2. **National Programme on Technology Enhanced Learning (NPTEL):** NPTEL was initiated by seven Indian Institutes of Technology (Bombay, Delhi, Kanpur, Kharagpur, Madras, Guwahati and Roorkee) along with the Indian Institute of Science, Bangalore in 2003. Five core disciplines were identified, namely, civil engineering, computer science and engineering, electrical engineering, electronics and communication engineering and mechanical engineering and 235 courses in web/video format were developed in this phase.

The main goal of NPTEL Phase II (2009-14) was to build on the engineering and core science courses launched previously in NPTEL Phase I. An additional 600 web and video courses were created in all major branches of engineering, physical sciences at the undergraduate and postgraduate levels and management courses at the postgraduate level. Several improvements such as indexing of all video and web courses and keyword search were implemented.

3. **SWAYAM:** It is an indigenous (Made in India) IT Massive Open Online Courses (MOOCs) Platform for providing best quality education that can be accessed by anyone, anytime and anywhere using the IT system. It was launched by Government of India to achieve the three cardinal principles of Education - access, equity and quality. Access means to take the best teaching learning even to the most disadvantaged. It seeks to bridge the digital divide for the economically disadvantaged students, at all levels. It is taught in classrooms from 9th class till post-graduation to be accessed by anyone, anywhere at any time. The sessions

are developed by best faculty and available free of cost. There are more than 1,000 specially chosen faculty members.

The courses hosted on SWAYAM are in 4 quadrants:

- (a) Video tutorials covering a whole course – normally of 20 hours, each lecture not exceeding 30 minutes.
- (b) **E-Content:** added to the learning imparted through the video tutorials.
- (c) **Self Assessment:** Quizzes/assignments that intersperse the course
- (d) Discussion forum for posting queries

Features of SWAYAM

- (a) High quality learning experience using multimedia on anytime, anywhere basis.
- (b) One-stop web location for interactive e-content for all courses from School to University level.
- (c) State of the art system that allows easy access, monitoring and certification.
- (d) Peer group interaction and discussion forum to clarify doubts
- (e) Hybrid model that adds to the quality of class room teaching.

Thus all this happens through by using audio-video, multi-media and state of the art pedagogy / technology. Nine National Coordinators have been appointed: They are AICTE for self-paced and international courses, NPTEL for engineering, UGC for non technical post-graduation education, CEC for under-graduate education, NCERT & NIOS for school education, IGNOU for out of the school students, IIMB for management studies and NITTTR for Teacher Training programme.

Students looking for certifications shall be registered and be offered a certificate on successful completion of the course, with a little fee. The assessment takes place through proctored examination and the marks/grades secured in this exam could be transferred to the academic record of the students. UGC has already issued the UGC (Credit Framework for online learning courses through SWAYAM) Regulation 2016 advising the Universities to identify courses where credits can be transferred on to the academic record of the students.

SWAYAM platform is indigenously developed by MHRD and AICTE with the help of Microsoft and would be ultimately capable of hosting 2000 courses and 80000 hours of learning: covering school, under-graduate, post-graduate, engineering, law and other professional courses.

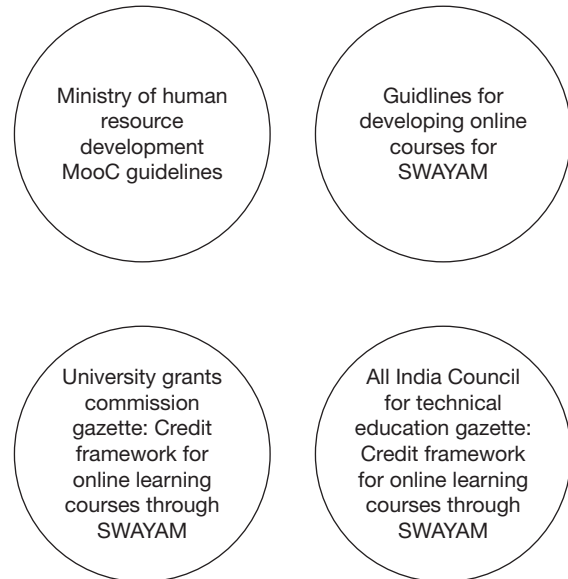

Figure 8.2

Source: Ministry of Human Resources Development

4. SWAYAM Prabha - The 32 educational DTH channels: The SWAYAM PRABHA has been conceived as the project for telecasting high quality educational programmes through 32 DTH channels on 24X7 basis. Every day, there will be new content of at least (4) hours which would be repeated 6 times a day, allowing the student to choose the time of his convenience. The DTH Channels cover:-

- (a) Curriculum based course contents covering diverse disciplines such as arts, science, commerce, performing arts, social sciences and humanities subjects, engineering, technology, law, medicine, agriculture etc. in higher education domain (all courses would be certification-ready in their detailed offering).
- (b) School education (9-12 levels) modules
- (c) Curricula and courses that can meet the needs of life-long learners or Indian citizens in India and abroad.
- (d) IIT-PAL - to assist the students in the Classes 11 and 12 aspiring to join IITs - The four channels under this would be on Mathematics, Physics, Chemistry and Biology.

The project was conceived and completed within 3 months with the active participation of the Bhaskaracharya Satellite Application Centre and Geoinformatics (BISAG) Gandhinagar and ECIL Hyderabad.

5. **National Digital Library (NDL):** A Project titled “Development of National Digital Library of India, Towards Building a National Asset” has been sanctioned to IIT, Kharagpur under NMEICT by MHRD. NDL project aims to develop

- (a) overall framework to collate large number of e-contents, virtual library, covering needs of learners with differing abilities for different levels of education
- (b) Design & development of “OAI-PMH” Server for Metadata Harvesting, Indexed etc.
- (c) Pan-India virtual teaching-learning-evaluation-knowledge platform and for key national asset and
- (d) Collect resources from other Ministries.

There are more than 72 lakh digital books available through the NDL and available through mobile also.

6. **National Academic Depository (NAD):** It is an initiative of MHRD to facilitate digital issuance, storage, access and verification of Academic Awards issued by Academic Institutions. NAD is a Unique, Innovative and Progressive initiative under “Digital India” theme towards achieving Digital enablement of the Education Records. NAD aspires to make the vision of Digital Academic Certificates for every Indian a reality.

7. **e-Shodh sindhu:** More than 15,000 international electronic journals and e-books are made available to all the higher educational institutions through the e shodh Sindhu initiative. This allows access to be best education resources in the world using digital mode. The INFLIBNET, Gandhinagar, Gujarat is implementing the Scheme.

8. **Virtual labs:** The physical distances and lack of other resources make us unable to perform experiments, especially when they involve sophisticated instruments. Good teachers are always a scarce resource. Web-based and video-based courses address the issue of teaching to some extent. They learn basic and advanced concepts through remote experimentation. Now it is possible to design good experiments around some of these equipments, which would enhance the learning of a student. Internet-based experimentation further permits use of resources – knowledge, software, and data available on the web, apart from encouraging skillful experiments being simultaneously performed at points separated in space (and possibly, time).

9. **e-Yantra:** An MHRD initiative under NMEICT Programme, named “e-Yantra” is implemented to incorporate Robotics into engineering education with the objective of engaging students. This needs

exciting skills of mathematics, computer science, and engineering principles.

eYantra creates projects that are based to train teachers. MHRD sees the core skills developed by IITB. All the projects and code are available on the e-Yantra web-site www.eyantra.org as open source content.

10. **Campus connectivity:** Establishment of 1 GBPS Connectivity to universities and 20 512 Kbps broadband connectivity to colleges has been provisioned under NMEICT.

On guidelines from ‘Digital India’ initiative of PMO, now the MHRD has now decided that campuses of Universities, (having 1 Gbps bandwidth) shall be made WiFi enabled campus. All IITs, IIMs, and NITs have established WiFi campuses. The process of laying the optical fibre and provision of the WiFi in Central Universities is currently underway.

11. **Talk to a teacher:** Talk to a Teacher developed by IIT Bombay, is an initiative of the National Mission on Education through ICT. It has been funded by MHRD to provide free access to a few selected graduate and postgraduate courses, taught at IIT Bombay by distinguished faculty members and scholars at large. It uses A-View collaboration tool developed by Amrita University for providing virtual classrooms to the faculty across the country. These courses can be viewed absolutely free of charge at lower bandwidths on a personal computer/laptop having a headphone and Internet connection.

12. **e-Acharya:** e-Acharya also called ‘Integrated e-Content Portal’ of NMEICT, is the official repository of NMEICT e-content and all content produced under NMEICT is being put at this Repository platform at INFILIBNET Centre Gandhinagar. The basic tenets of preservation for digital content, implement standard Metadata schema are provided. Contents are mostly provided by NCERT.

13. **e-Kalpa:** It’s another MHRD/ NMEICT initiative named as “e-Kalpa”. It creates Digital-Learning Environment for Design in India. It has successfully achieved following objectives:

- (a) Digital online content for learning Design with e-Learning programs on Design
- (b) Digital Design Resource Database including the craft sector
- (c) Social networking for Higher Learning with collaborative Learning Space for Design
- (d) Design inputs for products of National Mission in Education through ICT

14. **The Free and Open Source Software for Education (FOSSEE):** FOSSEE project sanctioned

to IIT Bombay has been promoting use of open source software in educational institutions (<http://fossee.in>). It does through instructional material, such as spoken tutorials, documentation, such as textbook companions, awareness programmes, such as conferences, training workshops, and Internships. Textbook Companion (TBC) is a collection of code for solved examples of standard textbooks. Scilab and Python TBCs are also on the cloud.

15. **e-Vidwan:** The ‘Information and Library Network’ (INFLIBNET) Centre took the initiative called “Vidwan: Expert Database and National Researcher’s Network” with the financial support from NMEICT. The objectives of VIDWAN is to
 - (a) collect academic and research profiles of scientists, faculty and research scientists working in leading academic and R&D organizations in India and abroad;
 - (b) quickly and conveniently provide information about experts to peers, prospective collaborators, funding agencies, policy makers and research scholars in the country;
 - (c) establish communication directly with the experts who possess the expertise needed by research scholars;
 - (d) identify peer reviewers for review of articles and research proposals; and
 - (e) create information exchanges and networking opportunities among scientist.
16. **Central cloud infrastructure:** The MHRD under NMEICT has awarded a project to IIT Delhi, to set up a robust 24x7 backed Data Centre and the activities have been put up at NIC / NKN Data Centre, and the cloud is called ‘Baadal’. The IIT Delhi cloud is hosting e-content and video content of e-Acharya.

Other Major Digital Initiatives in Higher Education

1. **Lekhika 2007:** It was developed by the Centre for the Development of Advanced Computing (C-DAC) under India’s IT Ministry and Israel’s FTK Technologies. The objective of this project is to spread computer literacy to the masses in India who do not know English.
2. **National Programme on Technology Enhanced Learning (NPTEL):** It is a joint initiative of the IITs (Indian Institute of Technology and IISc (Indian Institute of Science) to provide e-learning through online web and video courses in engineering, science and humanities streams, which is aiming to enhance the quality of engineering education in the country by providing free online courseware.
3. **National Knowledge Network (NKN) and Connected Digital:** An initiative has been undertaken to cover 1000 institutions besides providing digital campuses, video-conference classrooms, wireless hotspots, laptops/desktops to all students of professional/science courses and Wi-Fi connectivity in hostels.
4. **Centre for Distance Engineering Education Program (CDEEP):** CDEEP is an emulated classroom interaction programme by using real-time interactive satellite technology. This was launched by the Indian Institute of Technology (IIT)-Bombay.
5. **EDUSAT:** The launch of EDUSAT brought satellite connectivity to large parts of rural India. Indira Gandhi National Open University (IGNOU) is leveraging satellite, TV and internet technologies to offer online courses.
6. **IIMs:** IIM-C, IIM-B, IIM-K, XLRI and other management institutes have started offering courses (in association with private players like Hughes Global Education, Reliance, NIIT and so on.) after the Distance Education Council (DEC) allowed them to do so in 2007.
7. **Brihaspati:** This open source e-learning platform has been developed by IIT-Kanpur.
8. **Private players:** An increasing number of private players, like Hughes Global Education, Manipal Education Group, Centum Learning, UEI Global, Shiv Nadar University and so on are offering online education courses in association with leading central and state universities having with good ICT infrastructure.
9. **Digitization of books (e-text books):** There is an increased trend towards creation of a digital repository of books to create a digital learning environment for students. The digital version of the books embedded with text, pictures along with video, simulations and visualizations help the students to learn the concepts in an interactive way. The National Mission on Education, through ICT, plans to generate a new online course content for UG, PG and doctoral education. Efforts are already underway to prepare the course content for 130 courses (UG and PG).
10. **Content delivery using IT/ICT:** Higher education is purely a content-driven play where educational content is delivered through innovative use of ICT. There is an increased trend in higher education institutes to render content through radio, TV, and satellite.
11. **Open education resources:** Many Indian universities are contemplating technology-enabled

free access to educational resources. All India Council for Technical Education-Indian National Digital Library in Engineering and Technology (AICTE-INDEST) is a consortium set up by the Ministry of Human Resource to enhance greater access and generate annual savings in access of bibliographic databases. UGC has also launched its Digital Library Consortium to provide access to peer reviewed journals and bibliographic databases covering subjects, such as arts, humanities, technology and sciences.

12. **Virtual Technical University (VTU):** The National Mission on Education through ICT is working hard to establish a VTU to impart training to UG/PG students along with new teachers. It focuses on science, technology, management and other related areas.
13. **Gyan darshan:** Launched in 2000, Gyan Darshan is a joint effort of IGNOU and the IITs. It is a bouquet of channels that broadcasts educational programmes for school kids, university students and adults. The courses are contributed by IGNOU, UGC Consortium for Educational Communication (UGC – CEC), IITs and so on. CEC is an inter-university centre of UGC.
14. **Gyan vani:** It is a bouquet of frequency modulation (FM) radio channels which broadcast programs contributed by institutions, such as IGNOU and IITs. Under UGC Countrywide Classroom initiative, education programmes are telecast on Gyan Darshan and Doordarshan's National Channel (DD1) every day.
15. **e-Gyankosh:** It is a knowledge repository launched by IGNOU in 2005 which aims at storing and preserving digital learning resources. Almost 95% of IGNOU's printed material has been digitized and uploaded on the repository.
16. **Education and Research Network (ERNET):** It is promoted by the Department of Information Technology, Government of India. It provides communication infrastructure and services to academic research institutions in India. It is undertaking networking projects, such as AICTE-Net, Indian Council of Agricultural Research (ICAR)-Net and UGC-Infonet to provide internet and intranet facilities.
17. **Sakshat portal:** Launched in 2006, Sakshat is a one-stop education portal for addressing all the education and learning related needs of students, scholars, teachers and lifelong learners. It has been developed at IGNOU. The portal was developed by NIC and it provides links to vast knowledge resources, educational news, examination alerts, sample papers and other useful links are available on the web. It has an in-built repository of educational resources and online testing facility.

18. **GRID GARUDA:** It is India's first national grid bringing together the academic, scientific and research communities for developing their data and other applications. It is connected with National Knowledge Network (NKN).
19. **Shruti-drishti:** It is basically created for visually impaired women empowerment (VIWE).
20. **IIT Madras:** It has been assigned the task to develop e-content for 996 courses. These courses belong to engineering, sciences, technology, humanities and management.
21. **Consortium for educational communication:** It has been tasked with the creation of e-content for 87 undergraduate courses (UGC). UGC has cleared a proposal to publish e-content for 77 post-graduate courses (PGC).

Mobility

Nowadays, mobile phones play a crucial part for its unique feature as they provide more than just voice calls. Technical gadgets such as Smartphones, iPhones, Kindle, etc., have internet access and it allows students and faculty to perform a wide range of assignments. Tasks like administration, sharing class notes, downloading lectures, instant messaging and so on are possible wherever cell phone services are available.

Mobile phones can now access computer files from remote locations. With services like Soonr, students who forget to bring an assignment to class can use their cell phone to access the completed work on their home computer and show it to the professor.

Concept of Social Learning

Web 2.0, social networking such as blogs and Wikis, YouTube, iTunes and Big Think are influencing a new trend in higher education. The emergence of Smartphones, such as the iPhone and other intelligent devices has enhanced mobile learning (referred to as m-learning). These technologies create new channels for content delivery, online video expansion and podcasting. The adoption of virtual reality websites, such as Second Life has provided higher education institutions with new venues for virtual class learning.

A combination of Web 2.0 tools, such as blogs, Wikis, podcasts, mashups and social networking communities have made traditional learning more social and personalized. To begin with, the initial learning management systems (LMS) like Blackboard, Sakai, Moodle or Web CT (Course tool) were course-centred and teacher-driven. In the recent past, it is becoming more and more learner-centric.

E-journal Consortia

1. AICTE-INDEST is a consortium set up by the Ministry of Human Resource to enhance greater access and generate annual savings in the access of bibliographic databases.
2. UGC has also launched its Digital Library Consortium to provide access to peer reviewed journals and bibliographic databases covering subjects, such as arts, humanities and sciences.

Key Challenges in IT/ICT Adoption in Indian Universities

The key challenges affecting the utilization of IT/ICT in Indian Higher Education falls broadly into the following categories.

1. Lack of desired level of knowledge and technology readiness. Low technology and people's readiness in order to realize the true potential of ICT in higher education with the penetration of computers and the internet, especially in the rural areas being extremely poor.
2. Poor implementation.
3. Linguistic barriers.

PAL, NTSC and SECAM

There are three video formats used in the world, where each one is incompatible with the other and these are PAL, NTSC and SECAM.

1. **Phase Alternating Line (PAL):** PAL is a video signal standard. Its increased bandwidth allows for better picture quality. It is the analogue TV format which is used in majority of western Europe and other major areas, such as China, India, Australia and South America.
2. **National Television System Committee (NTSC):** It is mainly used in North American countries, such as USA and Canada. This was the first coloured TV broadcast system. NTSC is also used in Asia, including Japan.
3. **Sequential Couleur Avec Memoire (SECAM):** It is also known as sequential colour with memory. It is used mainly in France and many other western European countries. SECAM uses the same bandwidth as PAL but transmits the colour information sequentially.

Frequency Modulation

Frequency Modulation (FM) is a form of modulation that conveys information over a carrier wave by varying its frequency (contrast this with amplitude modulation, in which the amplitude of the carrier is varied while its frequency remains constant).

Prasar Bharati

It is a statutory autonomous body established under the Prasar Bharati Act. The board came into existence in 1997. Prasar Bharati is the public service broadcaster of the country. The objective of public service broadcasting is achieved through All India Radio (AIR) and DD which were earlier working as independent media units under the Ministry of Information and Broadcasting (MoIB).

All India Radio (AIR)

Broadcasting started in India during 1927 with two privately owned transmitters, one at Bombay and the other at Calcutta, which were taken over by the Government in 1930. These operated under the name Indian Broadcasting Service until 1936 when it was given the present name AIR. It came to be known as Akashvani from 1957 onwards.

The AIR network comprises of national channels, regional stations, local radio stations, Vividh Bharati centres, FM stereo services, external services and north-eastern services.

Doordarshan

The experimental telecast started in Delhi in September 1959 with a small transmitter and a makeshift studio. The regular daily transmission started in 1965. The TV service was extended to a second city, Bombay, only in 1972. Till 1975, only seven cities were covered by the TV.

TV was separated from radio in 1976 and DD came into existence, National programme was introduced in 1982 and from then onwards, there has been a steady progress in DD. Swasth Bharat is the world's biggest health communication initiative launched on DD.

Indian Space Programme

Indian Space Research Organization (ISRO) has established two major space systems. Firstly, it is Indian National Satellite System (INSAT), i.e., Geo-stationary satellites for communication, TV broadcasting. Secondly, it is Indian Remote Sensing Satellites used for resource monitoring. A transponder is a wireless communication device that picks up and responds to incoming signals. India's first EDUSAT (GSAT-3) was launched in 2004. Ku bandwidth (12-18 Ghz) is mostly used for satellite TV and VSAT systems. Ka bandwidth (26.5-40 GHz) is used in high-definition satellite TV. D band has the highest bandwidth and L band has the lowest bandwidth. India's first moon mission Chandrayan-I was launched in the year 2003. Meteorological satellites (METSAT-I, II, etc.) have been named after Kalpana Chawla (Kalpana-I, Kalpana-II).

Community Radio Stations

In December 2002, the Government of India approved a policy for the grant of licenses for setting up of community radio stations to well-established educational institutions including the IITs and IIMs.

eduroam®

It is a global service that enables students, researchers and staff from the participating institutions to obtain internet connectivity across campuses and when visiting other participating institutions by simply opening their laptop or activating their smartphone or other portable device through Wi-Fi.

The Internet Protocol Television (IPTV)

It is a digital TV (and not PC) that is delivered through high-speed internet (broadband) connection. In this service, channels are encoded in IP format and delivered to the TV through a set-top box that is required at the customer's location.

IPTV services also include video on demand (similar to watching video CDs/DVDs using a VCD/DVD player).

The quality of digital video and audio is much better compared to the traditional analogue TV. With additional features, it can become interactive as well.

1. **Doordarshan:** Being one of the largest TV networks, it started its services in 1959 in Delhi with the transmission of educational and developmental programmes. The second TV centre was started in 1972. DD is presently operating 31 TV channels besides free direct-to-home (DTH) services. DD National is the largest terrestrial network in the world and also the flagship channel of DD. Satellite transmission of all 31 DD channels is in digital mode. DD's DTH service called DD Direct Plus was started in 2004. DD also started its mobile TV service (DVB-H transmission) at Delhi in 2007.
2. **Headend in the Sky (HITS):** It is Comcast's satellite multiplex service that provides cable channels for cable TV operations. At a traditional cable TV headend, multitudes of satellite dishes and antennas are used to grab cable stations from dozens of communication satellites. In contrast, HITS combines cable stations into multiplex signals on just a few satellites, where cable TV companies can then pull in hundreds of channels at the local headend with relatively little equipment. The HITS feed effectively replaces more complex traditional headend operations.

PRESS AND PRINT MEDIA

Registrar of Newspapers for India (RNI)

The office of RNI came into being in 1956. It is mandatory for all newspapers and magazines to get them registered with RNI. Its head office is in New Delhi.

Press Information Bureau (PIB)

It is the nodal agency of the Government of India to disseminate information to the print and electronic media on government policies, programme initiatives and achievements. It has its headquarters in New Delhi and has eight regional offices. Activities of PIB can be classified into three categories, such as Information, Education and Communication abbreviated as I.E.C. and mean publicity. Apart from these, feedback, accreditation, etc., are the other services dealt by PIB. The National Media Centre is located in New Delhi. PIB also has seven sister websites in seven different languages, such as in Tamil, Malayalam, Kannada, Telugu, Bengali, Marathi and Mizo.

Public Information Campaigns (PICs)

PICs are held to disseminate information directly to the target beneficiaries on the flagship programmes of the Union Government.

Main News Agencies in India

Questions have been asked earlier about the news agencies in UGC NET Paper I Exam.

Press Trust of India (PTI): PTI was founded in 1947 and started its services in 1949. PTI is a non-profit sharing cooperative owned by the country's newspapers with a mandate to provide efficient and unbiased news to all the subscribers.

United News of India (UNI): UNI was incorporated in 1959 and started its functioning in 1961. It started its first news agency in India, a full-fledged Hindi wire service called *Univarta* in 1982 and also started the first-ever service in Urdu. UNI distributes world news from Reuters, the world's largest information company.

Press Council of India (PCI): PCI is a quasi-judicial authority mandated by the Parliament to preserve the freedom of press and maintain and improve the standard of newspapers and news agencies in India. PCI Act, 1978, provides for the reconstitution of the council in every three years.

NAM News Network (NNN): NNN is the internet-based news and photograph-exchange arrangement of news agencies of non-aligned movement countries.

BASIC COMPUTER TERMS

A computer is a programmable machine. It allows the users to store all sorts of information and then process that information, or data, or carry out actions with the information, such as calculating numbers or organizing words.

A computer can be defined as an electronic device that is capable of (i) accepting, storing and logically manipulating data or text that is input and (ii) processing and producing output (results or decisions) on the basis of stored programs of instructions. Some computers are also capable of processing graphics, video and voice input. Most computers include a keyboard for text entry, a central processing unit (CPU), one or more disk drives, a display screen and a printer, where these components are referred to as the hardware.

Types of Computers

The computers are classified according to 1. generation, 2. functionality, and 3. size.

According to Generation

Generation refers to the time period during which a computer has been developed. The different generations of computer are as follows.

First Generation (1940–1956)

1. Used vacuum tubes for circuitry and magnetic drums for memory.
2. High electricity consumption.
3. Programming in machine language.

Examples

Mark 1, ENIAC

Second Generation (1956–1963)

1. Transistors were used.
2. First operating system and core memory were developed.
3. Programming was in machine language and assembly language.
4. Magnetic tapes and discs were used.
5. **Example:** Early versions of COBOL and FORTRAN, IBM 1401, IBM_1402, PDP-1, etc.

Third Generation Features (1964–1971)

1. Integrated circuits developed.
2. Low-power consumption.
3. Small-scale integration (SSI) and medium-scale technology (MSI) was used.
4. High-level languages (HLL) were used.
5. The main examples are PDP-8, ICL 2900, IBM-360 and IBM-370.

Fourth Generation (1971–Present)

1. Large-scale integration (LSI) and very large-scale integration (VLSI) technology is used.
2. Development of portable computers.
3. Use of RAID (Redundant Array of Inexpensive Disks) technology for data storage.
4. Used in virtual reality multimedia and simulation.
5. Computers started in use for data communication.

Examples

IBM PC, Apple Macintosh.

Fifth Generation (Present and Beyond)

These computers are used in parallel processing, speech recognition, intelligent robots and artificial intelligence.

According to Function

The computers are of the following types according to the function.

There are three different types of computers according to the principles of operation and they are as follows.

1. Analogue computers
2. Digital computers
3. Hybrid computers

Figure 8.3 Types of Computers According to Operations

Analogue Computers

Analogue computers are that in which data varies continuously, i.e., the movement of data is continuous. It is generally meant to measure the physical variables, such as voltage, pressure, temperature, speed and so on. It is mainly used for communication and broadcast transmission.

Digital Computers

Digital computers are those computers in which data flow in discrete form. These are high-speed programmable electronic devices that perform mathematical calculations, compare values and store the results. It uses binary number system in which there are only two digits 0 and 1 (each one called a bit). The digital computer is designed using digital circuits in which there are two levels for an input or output signal. These two levels are known as logic 0 and logic 1. Digital computers provide more accurate and faster results.

Digital computer is better suited for solving complex problems in science, engineering and technology. Hence, they are increasingly used in the field of design, research and data processing.

Based on the purpose, digital computers can be further classified as follows.

1. General-purpose computers
2. Special-purpose computers

General-purpose computers are used for any type of applications. Most of the computers are general-purpose computers. Special-purpose computer is one that is built for a specific application.

Hybrid Computers

A hybrid computer combines the desirable features of analogue and digital computers. They combine the speed of analogue computers and the accuracy of digital computers. Now, analogue-to-digital and digital-to-analogue converters are used for transforming data into suitable form for either type of computation.

For example, in a hospital's intensive care unit (ICU), analogue devices might measure a patient's temperature and blood pressure. These analogue measurements may then be converted into numbers and supplied to digital components in the system for better monitoring. Hybrid computers are mainly used for specialized tasks.

According to Size and Configuration

There are four different types of computers which is classified based on their size and configuration.

1. Supercomputers
2. Mainframe computers
3. Minicomputers
4. Microcomputers

Figure 8.4 Types of Computers According to Size and Configuration

Supercomputers

They are mostly used for applications that require intensive numerical computations, such as stock analysis, weather forecasting, nuclear energy research, electronic design and for analysing geological data. They can process billions of instructions per second. The best known supercomputer manufacturer is Cray Research.

Some of the companies which produce super computers are Cray, IBM, HP and so on. PARAM is India's first super computer. Tata's EKA is also an example of supercomputer.

Mainframe Computers

Mainframe computers can also process data at very high speed (in million instructions per second, shortly termed as 'MIPS'). Mainframe computers are large-sized, powerful, multi-user computers that can support concurrent programs. They can accommodate more than 1000 workstations simultaneously. Normally, they are used in banking, airlines, railways and so on for their applications.

The technique that allows many people at the terminals to access the same computer concurrently is called time sharing.

Minicomputers

Minicomputers have lesser speed and storage capacity in comparison to mainframe computers. Hence, their performance is also less than that of mainframes. They are mid-sized multiprocessing computers. They can perform several actions at the same time and can support 4 to 200 users simultaneously. Some of the features of mainframes are not available in minicomputers.

In recent years, the distinction between minicomputers and small mainframes has blurred. Often the distinction depends upon how the manufacturer wants to market his machines.

Workstations

Workstations are powerful, single-user computers. They have the capacity to store and process large quantities of data, but they can only be used by one person at a time. They are typically linked together to form a computer network called a local area network (LAN), which means that several people, such as staff in an office can communicate with each other and share electronic files and data. In terms of computing power, workstations lie in between personal computers and minicomputers. Workstations commonly support applications that require relatively high quality graphics capabilities and a lot of memory, such as desktop publishing, software development and engineering applications.

A workstation is similar to a personal computer but is more powerful and often comes with a higher quality monitor.

Microcomputers

A microcomputer is also called a personal computer (PC). It is a small and relatively inexpensive computer, where it commonly consists of a display screen, a keyboard, a CPU (central processing unit), one or more

disk drives and a printer with limited storage based upon a microprocessor. It is designed for an individual user.

The invention of microprocessor (single chip CPU) gave birth to the much cheaper microcomputers. They are further classified into the following processors.

1. Desktop computers
2. Laptop computers
3. Handheld computers (PDAs)

Computer Hardware

It is the physical equipment which is required to create, use, manipulate and store electronic data. The hardware of a computer system can be classified into CPU and peripherals.

Central Processing Unit

Central processing unit (CPU) is a microprocessor that controls the execution of program instructions (microprocessor is programmable while integrated circuits (ICs) perform predetermined tasks only). The CPU performs the following functions.

1. Arithmetic operations
2. Logical operations
3. Input/output operations
4. Data manipulations

Main CPU Components

To carry out the functions as mentioned earlier, the CPU has the following components.

1. **Arithmetic Logic Unit (ALU):** It performs various calculations, such as addition, subtraction, division, multiplication, comparison and so on.
2. **Control Unit (CU):** It coordinates the operation of hardware, the flow and execution of data and instructions that are fed into memory or main storage through CPU.

3. **Memory Unit (main storage):** It holds data instructions, intermediate results and final results that are ready for output. The data and instructions are passed from the main store into ALU or to and from the storage device under the control of CU.

Now computers hold megabytes or even gigabytes of data. A megabyte is a unit of one million bytes, a gigabyte is one billion bytes and a terabyte is one trillion bytes. If a computer has a memory of 64 megabytes, then it can hold 64 million bytes of information.

Set of Registers

Within a CPU, there are a number of high speed, special purpose, memory units called registers. These registers carry out critical functions in the execution of programmes. They are used for storing small information.

Motherboard

The computer's main circuit board contains the CPU, the memory and expansion slots for additional circuit boards known as adapters or cards.

Buses

It is a set of parallel wires for connecting the CPU of a computer to all other input-output devices. The data can be transmitted in two directions, from and to the CPU.

Peripheral Devices

A peripheral device is any device that can be connected to a computer. This term includes monitors, keyboards, mouse, webcams, drawing pads, joystick, modems, printers, scanners, interactive whiteboards, drive wheel and so on.

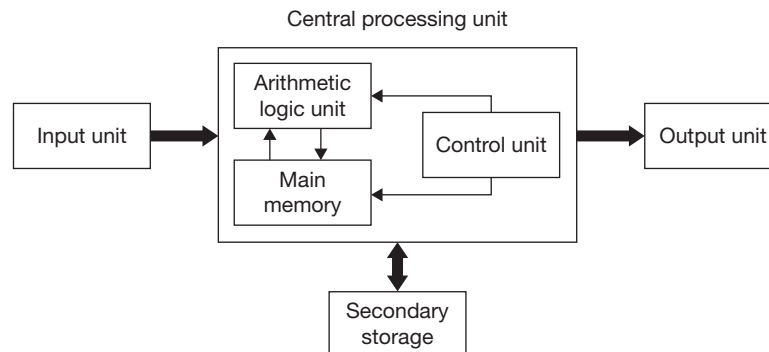

Figure 8.5 Main CPU Components

Input Devices

Any device that is capable of inputting information into a computer system, for example, keyboard, microphone, mouse, scanner, webcam and so on are known as input devices.

Output Devices

The output devices are basically meant for anything that comes out of a computer after being processed. It includes the monitor, headphone, printers, speakers, plotters and VDUs (visual display units).

Storage Devices

Computer data storage, often known as memory refers to the computer components and recording media which retains the digital data. Memory refers to the temporary internal storage areas within a computer. The term memory is usually used as a shorthand for physical memory and it refers to the actual chips capable of holding data. Some computers also use virtual memory, which expands physical memory onto a hard drive.

Memory

Memory is the part of a computer which stores information.

1. **Random Access Memory (RAM):** It is also termed as the main memory. It is the temporary memory (volatile) that allows information to be stored randomly and accessed quickly and directly (without the need to go through intervening data).
A computer can both write data into RAM and read data from RAM. Every time a user turns on his/her computer, a set of operating instructions is copied from the hard disk into RAM. These instructions, which help control the basic computer functions remain in RAM until the computer is turned off. As soon as the power is turned off, whatever data present in the RAM disappears.
2. **Read-only Memory (ROM):** It is the permanent memory of a computer. A set of instructions that has been built into the computer by the manufacturer and it cannot be accessed or changed by the user. It only permits the user to read data. Computers always contain a small amount of ROM that holds instructions for starting up the computer.
3. **Programmable Read-only Memory (PROM):** A PROM is a memory chip in which you can store a program. Once the PROM has been used, you cannot wipe it clean and use it to store something else. Like ROMs, PROMs are non-volatile.
4. **Erasable Programmable Read-only Memory (EPROM):** An EPROM is a special type of PROM that can be erased by exposing it to ultraviolet light.

5. **Electrically Erasable Programmable Read-only Memory (EEPROM):** An EEPROM is a special type of PROM that can be erased by exposing it to an electrical charge. It is also termed as flash memory.

Memory is also classified as (a) primary storage and (b) secondary storage.

- (a) **Primary storage:** It consists of RAM and ROM. In primary memory, the data is not stored permanently, but it is stored temporarily. After accessing the information, the data is erased from the memory of computer. Such types of data are considered as short-term memory.
- (b) **Secondary storage:** It is also termed as auxiliary storage. The secondary memory/storage is the slowest and the cheapest form of memory. It cannot be processed directly by the CPU and it must be copied first into primary storage (RAM).

The main secondary memory devices are magnetic disks, such as hard drives and floppy disks, optical disks such as CDs and CD-ROMs and magnetic tapes, they were actually the first forms of secondary memory. In computer disk storage, any sector is a subdivision of a track on a magnetic disk or optical disc. Each sector stores a fixed amount of user-accessible data, traditionally, it consists of 512 bytes for hard drives and 2048 bytes for CD-ROMs and DVD-ROMs.

The storage devices can be divided into two categories and they are listed as follows.

- (i) **Internal:** They reside within a computer. Hard disk is an example of a magnetic disk in which the computer data can be stored. They usually hold more data and are conventionally faster.
- (ii) **External:** They are portable and are usually used as removable storage devices. USB flash drive (commonly termed as pen drive), CD, digital video disk (DVD), Blu-ray disc are certain examples.

USB flash drives look like a small flat pen. They may have large storage capacity and they can be plugged into any computer with a USB socket. Flash drives are also commonly referred to as **pen drives or memory sticks**.

Computer Software

Software is a set of programs, procedures, algorithms and associated documents that provide instructions to computer by ordering what to do, when to do and how to do. It can also be defined as computerized instructions that operate a computer, manipulate the data and execute particular functions or tasks.

When software is stored in a hardware that cannot be easily modified (such as BIOS, ROM in a PC), then it is called a firmware to indicate that it falls into an area somewhere between the software and the hardware.

System Software

System software provides the basic functions for computer usage and helps to run the computer hardware and system.

It includes a combination of devices, drivers, operating systems, servers, utilities and Windows systems. It manages the hardware devices. It is also responsible for resource allocation. The operating system and utility software are the two major categories of system software.

Types of System Software

1. **Compilers:** It converts the source code (written in programming language) into another computer language called object code). The examples are ALGOL compilers, BASIC compilers, C++ compilers and FORTRAN compilers.
2. **Operating System (OS):** An operating system controls all other resources of a computer system. It can be 16-bit, 32-bit or 64-bit.

The main categories of operating system are as follows.

- (a) **Unix/BSD:** Unix system V, AIX, HP-UX, Solaris, IRIX, BSD distros.
- (b) **GNU/Linux:** Linux, Google Chrome OS.
- (c) **Windows:** 2000, XP, Vista, 7, CE.
- (d) **Mac OS:** Mac OS X
- (e) **Embedded and Real-Time OS**
- (f) **Experimental:** Oberon/Bluebottle, Amoeba, Plan 9 (Bell Labs).

Windows was developed in 1985 as an add-on to MS-DOS in response to the growing interest in graphical user interfaces (GUIs). Mac OS was the previous operating system that used a GUI. The most recent client version of Windows after Vista is Windows 8. Linux was developed by Linus Torvalds. It is a freely available multi-tasking and multi-user operating system. Since the very beginning, Linux was placed under General Public License (GPL).

Utility Software

It is a system software designed to help, analyse, monitor, configure and optimize the settings, and maintain the computer. Skins that customize the media player's looks and DVD burners are examples of utility software.

Some of the utility software which is frequently used is classified as follows.

1. **Anti-virus software:** Antivirus is a protective software designed to defend your computer against malicious software (malware).
2. **Desktop widgets:** Interactive virtual tools that provide single purpose vehicles showing the latest news, time, calendar, dictionary, map, calculator and so on.

3. **Backup software:** The backup software are backup files, cleaning up hard disk and shredding files. Examples are Windows backup and restore centre and Net Backup made by Symantec.

Application Software

It helps the user to perform singular or multiple related tasks. It can be further classified into productivity software (word processors, spreadsheets, schedulers, DBMS, desktop publishing, ERP, Mozilla Firefox) or collaborative software also referred to as groupware. Examples include Facebook application, Etherpad.

Software can be either proprietary (also called closed) or open. Proprietary software is privately owned and controlled. The specifications of such software are not divulged in order to prevent other companies from duplicating it.

The users usually prefer using open software, which is publicly accessible. Anyone can create add-on products for it because they can understand how it was designed. Freeware is the software that can be copied and used without payment to the author(s), although there may be some restrictions on distribution.

Programming Languages

These are the rules, conventions and specific commands that are used to write a computer program. Most programs must be converted into machine language or binary code so that the instructions can be performed on a specific computer platform.

1. **Machine language:** Machine language is the only language understood by a computer. Each statement in a machine language program is a sequence of bits. Each bit may be set to 0 or 1. The series of bits represent instructions that a computer can understand. While easily understood by computers, machine languages are the most difficult for humans to put into use. It is entirely compiled by binary numbers. Programmers, therefore, use either a high-level programming language or an assembly language. Machine language is also known as first-generation language.
2. **Assembly language:** An assembly language is also known as second-generation language. It contains the same instructions as a machine language, but the instructions and variables have names instead of being just numbers. The advantage of assembly language is that its instructions are readable. For example, assembly language statements like MOV and ADD are more recognizable than sequences of 0's and 1's.
3. **High-level language (HLL):** High-level languages are what most programmers use. Languages such as C++ and Java are all HLLs. One advantage of

HLLs is that they are very readable. The statements in these languages are in English. Programs written in HLLs are translated into assembly language or machine language by a compiler. Assembly language programs are translated into machine language by a program called an assembler.

Every CPU has its own unique machine language. Programs must be rewritten or recompiled to run on different types of computers.

Program

A program is a set of instructions for performing a particular task. These instructions are just like English words. The computer interprets the instructions as 1's and 0's. A program can be written in assembly language as well as in HLL. This written program is called the source program. The source program is to be converted into machine language, which is called an object program. A translator is required for such translation.

Language Processors

1. **Assembler:** This language processor converts the program written in assembly language into machine language.
2. **Interpreter:** This language processor converts a HLL program into machine language by converting it line-by-line. If there is any error in any line, then it reports it at the same time and program execution cannot resume until the error is rectified.
3. **Compiler:** It also converts the HLL program into machine language. It converts the entire HLL program in one go and reports all the errors of the program along with the line numbers. After all the

errors are removed, the program is recompiled and after that, the compiler is not needed in the memory as the object program is available.

HOW DOES A COMPUTER PROCESS INFORMATION?

When data is entered into a computer, the numbers or words we understand are translated into a binary number system. Binary language is the language of computers.

Everything you type, input, output, send, retrieve, draw and so on in the end is converted to the computer's native language, i.e., binary.

Binary Number System

Formally, we all know that Base-10 system is a positional system.

In decimal notation, we write a number as a string of symbols, where each symbol is one of these ten digits, and to interpret a decimal number, we multiply each digit by the power of 10 associated with that digit's position.

It is a numerical system wherein each digit stands for a power of two. The binary system uses only two symbols, such as 0 and 1 to represent values. In decimal system, which is commonly used in most countries, each digit represents a value of 10. For example, the number 107 would break down as follows.

$$1 \times 100 = 100, 0 \times 10 = 0, 7 \times 1 = 7$$

For example, consider a decimal number '6249'. The unit position of this number is illustrated below.

Figure 8.6

Computers are built from transistors and an individual transistor can only be ON or OFF (two options). Similarly, data storage devices can be optical or magnetic. Optical storage devices store data in a specific location by controlling whether light is reflected off that location or is not reflected off that location (two options). Likewise, magnetic storage devices store data in a specific location by magnetizing the particles in that location with a specific orientation.

Thus, the values in a binary system, such as 0's and 1's are called binary digits or bits. Computers use base 2 because they can only recognize two values, 1 or 0.

It is the reason why everything in computers seems to come in 8s (2 to the 3rd power), 64s (2 to the 6th power), 128s (2 to the 7th power) and 256s (2 to the 8th power). Therefore, in the binary system, the number 103 would break down as follows.

$$1 \times 64 = 64, 1 \times 32 = 32, 0 \times 16 = 0, 0 \times 8 = 0, 1 \times 4 = 4, 1 \times 2 = 2, 1 \times 1 = 1 \text{ and } (1100111)_2 = 103$$

Take another example by considering a binary number '1101'. The unit position of this number is illustrated as follows.

Figure 8.7

When data is typed into a computer, the keyboard converts each keystroke into a binary character code as given below.

8 bits = 1 byte

1024 bytes = 1 kilobyte

1024 kilobytes = 1 megabyte

1024 megabytes = 1 gigabyte

1024 gigabytes = 1 terabyte

In large computers, the number of bits can be 16, 32 or 40 bits.

Now you should be comfortable going back and forth between binary and decimal representations.

Figure 8.8

You should 'memorize' the binary representation of the decimal digits 0 to 15 as given below.

Decimal Number	Binary Number
0	0000
1	0001
2	0010
3	0011
4	0100
5	0101
6	0110
7	0111
8	1000
9	1001
10	1010
11	1011
12	1100
13	1101
14	1110
15	1111

Binary Digit (Bit)

It is a digit within the binary number system. A bit is the smallest unit of information held in a computer. In order to make the bits useful, they are combined into bytes of information.

Byte

A combination of bits that represent one character. A byte is usually composed of 8 bits.

ASCII (American Standard Code for Information Interchange)

It assigns a specific pattern of bits to each character as described earlier. Another code that may be found, especially in IBM brand mainframe computers is EBCDIC.

EBCDIC (Extended Binary Coded Decimal Interchange Code)

The important points to remember about these codes is that their main value is to store information so that it is readable by other computers. By using ASCII or EBCDIC, it is possible for people to retrieve and use someone else's data using a different type of hardware or software. The main disadvantage of using ASCII is that the formatting or other special qualities of computerized information may be lost.

COMPUTER NETWORKS

1. **Network:** A network is a system of interconnected computers. There are a number of types of computer networks.
2. **Local Area Networks (LANs):** LANs use cable to connect a number of computers within the same location or in close proximity.
3. **Wide Area Networks (WANs):** WANs use telephone lines or other telecommunication devices to link computers in widely separated locations.
4. **Wireless Local Area Network (WLAN):** WLAN links two or more devices using some wireless distribution method and provides connection through an access point to the wider internet.
5. **Personal Area Network (PAN):** PAN is a computer network used for communication among computers and different IT devices which is close to one person.
6. **Metropolitan Area Network (MAN):** MAN is a network of computers located at different sites within a large fixed area such as a city.
7. **Campus Area Network (CAN):** CAN is a network of multiple interconnected local area networks (LAN) in a limited geographical area. A CAN is smaller than a WAN or MAN.
8. **Storage Area Network (SAN):** Is also known as storage area network or server area network.
9. **Internet:** The internet is a system that links existing networks into a worldwide network.
10. **Intranet:** It is a private network inside a company or an educational organization and used over its LAN. This can be taken as akin to local internet and it is under single administrative set-up.
11. **Extranet:** It is a technology that permits users of an organization's intranet to enter portions of another organization's intranet in order to conduct business transactions or collaborate on joint projects.
12. **Virtual Private Network (VPN):** It is a computer network in which some of the links between the nodes are carried out by open connections or virtual circuits in some larger network (For example, the internet) instead of physical wires.

Intranet

Intranet is a private network. It was created only for the employees from one company to improve their communication. An intranet is an ideal way to communicate in a secure environment. Internet is a collection of resources to which only internal users have access. Intranets are often separated from the internet by using a firewall. Intranets help to overcome some of the limitations of existing local and wide area networks LAN's and WANs).

An intranet provides a way to communicate with a common technology. While an intranet allows all kinds of internet connections, from telnet to FTP to Gopher, it is the web that is most commonly used on an intranet. The web and its browsers offer a common interface that is comfortable and well known to most of an intranet's intended users.

Intranet as technology enabler brings the resources to the users in a specific domain of interest. **The ways to authenticate users are as follows.**

1. Server Permissions based Authentication
2. Database-based Authentication
3. Firewall
4. IP-based Authentication or Some combination of the above
5. Database(s) - Access, SQL Server, MySQL
6. XML
7. HTML or XHTML based forms
8. Web scripting (ASP, PHP, ColdFusion)

The basic knowledge of computers is very useful here. Basic intranet is usually made up of a simple shared folder connected to a network. All files in the folder will be visible to other intranet members. It depends upon their permission levels also.

Intranets offer several facilities that aid knowledge sharing and they are as follows.

1. **Easy-to-access and use:** The use of www browsers give a low cost and easy-to-use interface to information and applications.
2. **Universal access to information:** Information can be kept on any 'server' on the network, and can be accessed from anywhere within the intranet.
3. **Person-to-person interaction:** Intranets simplify interaction between people in different locations, through electronic mail and computer conferencing.
4. **Informal networks:** Publishing information and making contact is quick and informal on an intranet.

Now the price issue has been overcome. The companies may get more private space by spending less. The intranet market has expanded to smaller businesses and organizations.

The benefits of such intranet would be very limited. They would not leverage any other productivity gain from internal messaging, project management, to task assignment and shared calendars.

An extranet is conceptually the same thing, but technically, it is used when the members (in our case – company employees) are located in different places and cannot access the same local server.

The Internet Basics

Sometimes questions regarding the history of internet is separately asked. The word internet is derived from internetworking which is a collection of individual networks connected by intermediate networking devices that function as a single large network. Network is a collection of terminals, computer servers and components which allow for the easy flow of data and use of resources between one another. In simple words, a network is a group of two or more computer systems linked together.

Internet is a global system of interconnected computer networks that use the standard Internet protocol suite (TCP/IP) to serve millions of users worldwide. It is probably the largest WAN in the world.

The Department of Defence of USA created Advanced Research Projects Agency (ARPA) in response to the Soviet Union's launching Sputnik in 1957.

This network is popularly known as ARPANET. The complete network, including the backbone and the regional networks was called NSFNET.

Topology: The physical topology of a network refers to the configuration of cables, computers and other peripherals or simply as arrangement of computers. Here, the workstation or node refers to computer systems which are in the network. The topology can be classified as follows.

1. **Bus topology:** Here, every computer is connected to a main (single) cable like a bus.
2. **Star topology:** There is a hub or switch box to which all workstations are directly connected.
3. **Ring topology:** Here, every device has exactly two neighbours.
4. **Mesh topology:** Every computer is connected to another, so messages can take any path.
5. **Tree topology:** It is a combination of two or more star networks.

Computer virus: These are the programs that spread across computers by attaching a copy of itself to the files on the infected computer. Thus, they spread from one computer to another by attaching itself to other programs. When the user runs the infected file, the virus gets into action. A virus is usually harmful and it can corrupt data, overwrite files or use up system resources. They are usually written by programmers to cause trouble. Some viruses act to cause a humorous message to appear on the screen, some cause minor glitches but others may cause serious damage to a computer's memory or disks, some flood an organization's website, interrupt or entirely prevent access to the organization's customers.

The number of networks, machines and users connected to the ARPANET grew rapidly after TCP/IP became the only official protocol on 1st January 1983.

Finally, a global network was created, which connected all the types of networks around the globe and it is popularly known as the internet.

Technically, a machine is on the internet if it runs the TCP/IP protocol stack. It has an

IP address and has the ability to send IP packets to all other machines on the internet.

The software resources exist in the form of files of data, which needs to be moved between two specific computer systems for the purpose of sharing. For such type of communication, we may require two things and they are as follows.

1. Address for communication.
2. A secure means for moving data in the form of electronic signals. We need rules (protocols) for sending and receiving files. There are basically two sets of rules (protocols) for the purpose, such as transmission control protocol (TCP) and internet protocol (IP).

TCP divides the data into data packets for the purpose of sending and receiving data. In addition, the rules for reassembling data and damage-free delivery are also specified.

The role of IP here is to put destination—addressing information on such packets. The address can be typically written as user@host.domain. The user is the name of the internet account holder.

The name must be the same which is used by the user while logging in. The hosts are individual machines at a particular location. Resources of host machine are normally shared and used by any internet user.

Now discuss about an IP address. An IP Address consists of four sets of numbers that are separated by dots. These addresses are organized from left to right.

A portion of number separated by the dot is known as an Octet, i.e., 8 bits of information. Thus, IP addresses have four octets that are equal to 32 bits. Just like our telephone numbers which include country code, city code, exchange code and the user code, the IP addresses consist of sequence of domain code and sub-domain code from left to right. Computers termed as name servers contain databases of internet host addresses. They translate word addresses or person understandable addresses into numeric equivalents.

Every host and router on the internet has an IP address, which encodes its network number and host number. Each IP Address is 32 bits long and it is used in the source address and destination address fields of IP packets. Network's number is assigned by Network Information Centre (NIC) to avoid possibility of any conflict. The lowest IP address is 0.0.0.0 and the highest is

255.255.255.255. The IP address specifies a computer where the information is present, i.e., the physical domain on the internet.

The web server placed over internet are registered to a domain. An IP address registered to a domain is also known by the alias name. For example, a host with IP address like 212.15.20.4 can have host name as xyz and if this IP address is registered in the domain called ac.in, then the host can be identified in the network as xyz.ac.in.

One web server can serve multiple virtual web server and where each virtual server is mapped or registered to different or unique names. For example, in the web server xyz.ac.in, it is possible to defined virtual server abc.ac.in and klm.ac.in and both the server may point to different web container on the same physical system or can redirect to any server on the network. All the servers/systems on the network in different network ID communicate each other through a particular path called gateway.

The physical networks are called the Internet Backbone, which is called heterogeneous systems network.

Who Governs Internet?

Let us see who governs the internet. Internet has no president or chief operating officer and it is governed by a number of authorities. The ultimate authority of internet rests with Internet Society (ISOC) a voluntary membership organization with an objective to promote global interchange of information. Another authority is a group of invited volunteers' called Internet Architecture Board (IAB). The IAB sets standard and provides internet addresses. Internet Engineering Task Force (IETF) discusses the technical and operational problems in internet.

No one pays to use the internet, instead everyone pays for its part.

Main Applications of Internet

When internet started, it had five main applications and they are listed below.

1. E-mails
2. News
3. Remote login
4. File transfer
5. Research

Hardware Requirements for the Internet

1. **Modem (Modulator and Demodulator):** Modem is a device or program which converts computer data to a signal that can be transmitted over a telephone line. It can also reconvert a signal coming into a computer through a telephone line so that it can be understood by the computer. Modems are used to connect computers with the internet.

2. **Hub:** A hub is a place of convergence where data arrives from one or more directions and is forwarded out in one or more directions. A hub is a common connection point for networked computers and other devices. Hubs are used to connect devices in a LAN.

Figure 8.9

3. **Bridge:** A bridge is a network device that connects two or more networks, such as one LAN to another LAN that use the same protocol (ethernet or token ring).
4. **Router:** Router is a device (or software in some cases) that determines the next network point to which data packet should be forwarded towards its destination. It is a hardware device that connects computers to a network or that connects one network with another network. Routers are now available at low prices and can be used for connecting two or more computers together in home networks, so that the data can be exchanged between the computers and all the computers in the network can access the internet.
5. **Gateway:** A gateway is a node on a network that serves as an entrance to another network. The computers that control traffic within an organization or at the internet service provider (ISP) are gateway nodes. Apart from the above requirements, connector, cables, adapter, circuits, switches, leased lines are other hardware requirements. In transmission media, twisted wires, coaxial cables and fibre optics can be used.

Software Requirements for the Internet

The Internet protocol (IP) is the method or protocol by which data is sent from one computer to another through the Internet. It is classified into the following types.

1. **Hypertext Transfer Protocol (HTTP):** It defines the format for communication between web browsers (web clients) and web servers.

2. **Internet Message Access Protocol (IMAP):** It defines the format for communication between e-mail servers and clients.
3. **Secure Sockets Layer (SSL):** A protocol developed by Netscape for transmitting private documents through the internet.
4. **Transfer Control Protocol/Internet Protocol (TCP/IP):** It is the main data transfer protocol used in the internet. It manages all the information that moves across the internet. It consists of multiple protocols, each of which transfers data across the network in a different format and with different options.
5. **File Transfer Protocol (FTP):** A set of guidelines or standards that establish the format in which files can be transmitted from one computer to another.
6. **Trivial File Transfer Protocol (TFTP):** This protocol allows transferring of files between the network devices.
7. **Simple Mail Transfer Protocol (SMTP):** Network-based e-mail was initially exchanged on the ARPANET in extensions to the FTP, but it is now carried by the SMTP.
8. **Telnet:** A protocol that allows a computer to connect with a remote host computer on the internet. The use of Telnet has diminished as the web's HTTP has become a dominant protocol.
9. **Hypertext Markup Language (HTML):** It is a formatting language which is used to establish the appearance of a web page. Thus, it helps in creating pages on the World Wide Web. The HTML also enables us to insert hypertext links within one web page or to other pages anywhere on the web.
10. **Standardized General Markup Language (SGML):** A metalanguage that can be applied to documents in order to maintain their structure and context is called SGML.
11. **Uniform Resource Locator (URL):** It is an address for a specific document found on the web. It can also be termed as the location of a resource on the internet. A URL specifies the address of the computer where the resource is located, which may be the home page of a website. It is made up of several components, like a domain name, the directories and subdirectories of the site and the extension. It is also known as the web address.

Internet Service Provider (ISP)

A company that provides a subscription service to enable the user or organization to access the internet is ISP. An ISP has a network of computers permanently linked to the internet. Dedicated lines are also provided by some ISPs. ISPs also give you an e-mail address and space on the World Wide Web for setting up one's own website.

Main Internet Connection Options

To be specific, the following technological options are available to us in accessing the internet:

1. **Dial-up connection:** It uses an analogue telephone line for establishing a temporary communication. For this connection, the computer's digital signals must be converted into analogue signals. ISDN (integrated services digital network) is a type of digital telephone service, which is used for transferring large chunks of data to and from the internet without a modem. It is termed as wired ethernet.
2. **Cable TV connections:** Households with cable TVs have the option of cable modem internet access.
3. **Digital Subscriber Line (DSL):** It works over POTS (plain old telephone service), i.e., copper telephone lines. ADSL (asymmetric digital subscriber line) is the type of DSL that provides different bandwidths in the upstream and downstream directions, while SDSL (symmetric digital subscriber line) provides the same bandwidth in both the directions.
4. **Satellite connection:** It is akin to getting TV signals directly from the satellite.
5. **Bluetooth:** Bluetooth is an open wireless technology for data exchange over short distances. It is a protocol that permits wireless exchange of information between computers, cell phones and other electronic devices within a radius of about 30 feet.
6. **Broadband:** Broadband internet access is a high-speed internet access, which is typically contrasted with dial-up access over a modem. Broadband technologies supply a minimum speed of 256 Kbps. The term broadband refers to any type of transmission technique that carries several data channels over a common wire. In home networking, broadband constitutes any form of high-speed internet access using this transmission technique. Both DSL and cable modems are common broadband internet technologies. Wired ethernet/integrated service digital network (ISDN) is a high-speed digital access for the internet. The connection speed is usually measured in Kbps (kilobytes per second) and Mbps (megabytes per second). Typically, a home user will have a broadband connection using an ADSL telephone line running at 2 Mbps up to 8 Mbps.

Other Important Internet-related Terms

World Wide Web (www)

The component of the internet that combines audio, video and graphics with text is also called the web or simply the www. It is a subset of the internet and is a collection of documents and applications residing on the internet servers around the world.

The term 'www' was the brainchild of Tim Berners-Lee, who in 1989 invented the HTML coding language,

which is the basis of the web. Thereafter, www became a public service in 1993. It opened the internet to millions of people interested in finding information. It is a huge collection of resources of information, including learning materials, which is accessed by means of a computer program known as a browser. The acronym 'www' is only a part of the internet, but many people treat both the terms as synonyms.

www consists of documents called web pages that contain information on a particular topic. A web page might also contain one or more links that point to other web pages. A website is a location on the www.

Web Browsers

A web browser is a software that permits a user with the click of a mouse to locate, display and download text, video, audio and graphics stored in a host computer on the web.

A browser helps in opening up pages and in their navigation as well. It acts as an interface between the user and the inner working of the internet, especially the www. There are different browsers for different platforms with multiple features. Some popular browsers are enlisted as below.

1. Internet Explorer
2. Mozilla Firefox 3.5
3. Opera
4. Safari 4.0

Cross-platform Browsers

They can operate in more than one platform, such as Windows, Mac, Linux, etc. SeaMonkey, Flock, K-Meleon are different examples of cross-platform browsers. A browser can be (i) graphical or (ii) text based. The main examples of graphical browsers are Microsoft Internet Explorer, Netscape Navigator, Mosaic and Opera. Lynx can be taken as an example of text-based browser. Here, it is important to mention that web browsing or internet surfing is the process of visiting different websites on the internet.

The web browser can also store a list of favourite sites, often called bookmarks to permit the user to jump directly to the site they wish to see instead of having to enter its URL every time.

Domain Name

It is the unique name that identifies an internet site or website. Domain names always have two or more parts separated by dots. The part on the left is the most specific and the part on the right is the most general. A provided machine may have more than one domain name but a given domain name points to only one machine.

Domain names are the alphabetical names which are used to refer to computers on the internet. The suffix indicates what type of an organization is hosting the site. There are six main categories and they are as follows.

1. **.com:** Commercial institutions or organization
2. **.edu:** Educational institutions
3. **.gov:** Government sites
4. **.mil:** Military sites
5. **.net:** Gateways and administrative hosts
6. **.org:** Private organizations

There are geographic names as well.

Country	Domain Name
Australia	.au
China	.cn
Germany	.de
India	.in
Japan	.jp
United Kingdom	.uk
United States	.us

Domain Name Server

It is a special type of internet computer which converts a website's domain name into a unique numerical IP address that identifies the computer where the website is stored. When you try to connect to a website with a domain name such as **hull.ac.uk** (University of Hull), a request is first made to a name server to resolve this name into an IP address, which is then used to locate the computer where the website is stored and to establish a connection with it.

Internet Protocol Address (IP Address)

It is the unique numerical address of a computer on the internet and it is expressed as four sets of numbers (maximum 3 digits each) separated by dots, for example, **150.237.176.24**. Computers on the internet are nearly always referred to by more memorable domain names, which are mapped onto their IP addresses by special internet computers known as name servers.

Home Page

The main page of a website is its home page. Typically, the home page serves as an index or table of contents to other documents stored at the site (i.e., the address). A home page is similar to the title page and table of contents in a book. It identifies the site and contains links to other pages at the site called Microsoft Explorer.

Hyperlink

An element in a hypertext document is highlighted by means of underlining or with the use of a different colour. When the highlighted element is clicked, the user is connected with another element in the same document or another document.

Firewall

A firewall is a software package that sits between the computer and the internet connection keeping an eye on the traffic by going to and fro. If anything suspicious appears such as an unauthorized attempt from a remote computer to write information to the hard disc or to send information from one's computer to a remote computer, then it will block and warn the user. Firewalls have become essential these days because of the frequent attempts being made by hackers to grab confidential information from computers all around the world. For example, one's bank or credit card details, which may be stored in a file somewhere on one's computer. Any computer is vulnerable when connected to the internet.

Voice Over the Internet Protocol (VoIP)

It is another name for internet telephony.

Search Engine

It is a program that searches documents for specified keywords and returns a list of documents where the keywords were found.

The most popular search engines are Google and Yahoo. Baidu is a search engine developed by China. A meta search engine is a search tool that sends user requests to several other search engines and/or databases and aggregates the results into a single list or displays them according to their source.

The internet search system which locates documents that contain the keywords specified by the user is termed as wide area information server (WAIS).

Meta Search Engine

They automatically enters search queries into a number of other search engines and returns the results. Example of it includes All4one, MetaCrawler and start-point.

Some popular search engine URLs are given here:

Alta	Vista altavista.com
Excite	excite.com
LookSmart	looksmart.com
Yahoo	Yahoo.com
MSN	search.msn.com
Oingo	oingo.com

ELECTRONIC MAIL OR EMAIL

It is the transmission of text-based messages among networked computers. Email is one of the earliest and most basic messaging resources on the internet and in many ways it still acts as the lowest common denominator for computer communications.

The features of an email are as follows:

1. Faster and more secure than conventional mail that requires less physical effort to edit and send a letter of communication.
2. An internet is free, it does not require the attention of both parties at the same time.
3. It provides time-stamped proof of an interaction. Also, many email services (such as yahoo) collate the conversation on the same subject into single threads.
4. It is easy to archive for future recall. Most of the email services provide search facility through emails. An email can be edited and rephrased as much as it is desired before sending to the recipient(s).
5. It is easy to send the same piece of information to several people simultaneously, such as circulation of memos, agendas and minutes, or disseminate educational material.

Email address: An email address is a unique address, which identifies a location to send and receive email. It contains username, followed by an @ symbol and then domain name, i.e., username@domainname. For example: abc@yahoo.co.in.

An email address starts with a username (abc in this case) that refers to the recipient's mailbox. Then, sign @ followed by the host name (yahoo.co.in in this case) also known as domain name. Normally, the domain name has three parts (two parts in case of United States) separated by two period (.) symbols. Reading from the left of the domain name the first part is yahoo, is the name of a machine, which is a mail server or the computer where the recipient has an electronic mailbox. The first part of the domain name ends with period followed by rest of the part known as top-level domain (TLD). The TLD may have two parts, where the first part represents the type of organization and the second part represents country code (according to the name of the country). In the given example, co.in is the top-level domain, where .co qualifies that yahoo is a company. This part of the domain name indicates the type of organization (.com represents a commercial organization, whereas .gov refers to a governmental setup). The last part represents the country where yahoo has registered this machine or hosted. It is two characters long country code. In the given example, it is '.in' which represents that yahoo has registered/hosted this machine in India.

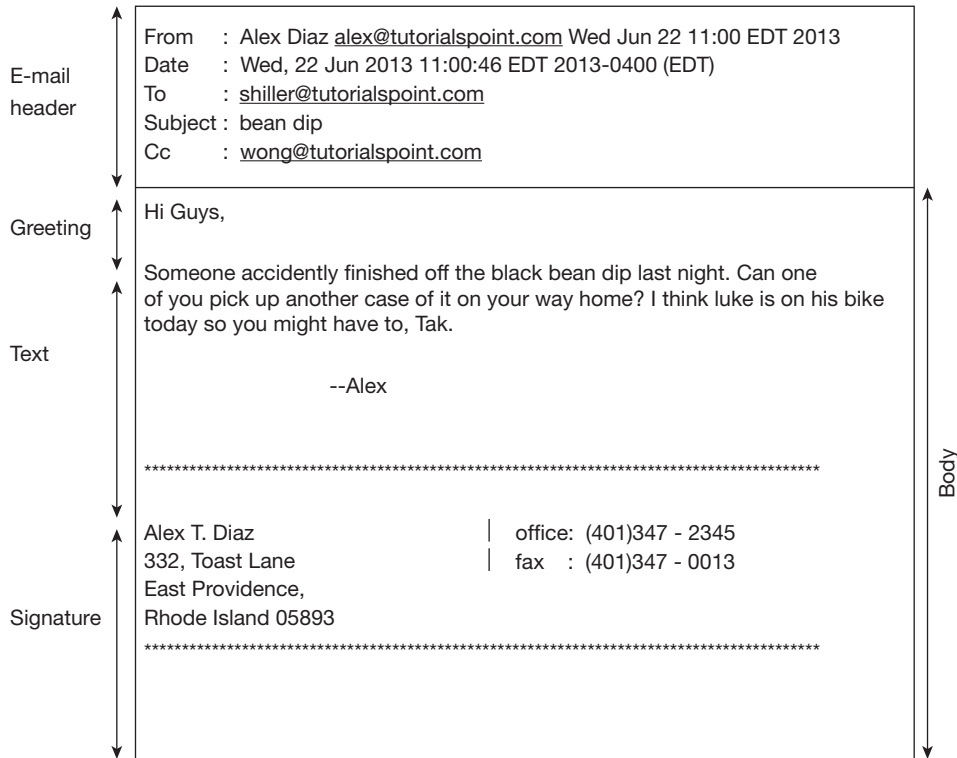

Figure 8.10

Types of Email Services

The email services are usually categorized into the following three parts.

- 1. Free web-based email services:** These are the commonly used email accounts accessible through web browser (such as Internet Explorer, Firefox, etc.). They generally use HTTP protocol for accessing mail. Example: Yahoo mail, Gmail. Almost all the major services provide secure login using HTTPS (Hypertext Transfer Protocol Secure). HTTPS can be identified in the URL line while signing into the account (<https://gmail.com> or <https://mail.yahoo.com>).
- 2. Priced web-based email services:** Many of the free web-based email service providers, such as Yahoo! And Hotmail do offer premium account on payment basis. The major advantages of more secured transaction of communication services are personalized email address, better spam filtration, increased storage space, etc.
- 3. Private email services:** Most of the institutions have their own dedicated mail server and offer mail account for free to their staff and other members of the institution. For example: abc@ugc.ac.in

Types of Email Account

- 1. POP/IMAP account:** A POP account is based on Post Office Protocol and it supports 'offline' email management. Here, the client retrieves all the messages from the server, stores them locally and marks them as new/unread messages. An IMAP account is based on internet message access protocol (IMAP). It allows their users to work with their messages in both online and offline modes.
- 2. Email forwarder:** This type of email accounts will forward any incoming mail to another email address.
- 3. Mailing list:** A mailing list consists of its subscribers/members' email addresses. Any email sent to a mailing list account will be distributed to all the subscribers of the mailing list.
- 4. Auto responder:** Within an email account, an auto responder can be set with a ready-made reply to any incoming email, such as message for successful receipt of mail, vacation email, etc.
- 5. Email blackhole:** To avoid spam mails from certain addresses, a blackhole for those addresses is created so as to avoid/discard any messages coming from those addresses.

6. **Email bounce:** An email bounce enables us to send a 'fake' bounce message to the sender.

Structure and Features of Email

Internet email messages consist of two major sections, such as the header and body.

Header: The header of an email is structured into various fields, such as summary, sender, receiver and other information about the email. The header of an email can be easily distinguished from the body of the email. Various fields included within the header are as follows.

1. **From:** Contains the email address and optionally, the name of the sender.
2. **To:** The email address(es) and optionally, the name(s) of the receiver(s) who receives the message.
3. **Subject:** A brief summary of the contents of the message.
4. **Date:** The local time and date when the message was originally sent.
5. **CC:** Stands for carbon copy. It contains email address(es) of those who will receive a copy of the message in addition to the receiver(s) mentioned in the 'To' field.
6. **Message-ID:** It shows the number assigned to the message by the mail program at the host machine.
7. **A series of received:** These are the lines, showing details of the systems through which the email has passed (useful for troubleshooting if the mail bounces back).
8. **A reply-to:** It gives the preferred address for replies (usually, but not always the same as the sender's address).

Blank spaces are not allowed in an email address. Also, an email address is not case-sensitive.

Body: The body of an email contains the message itself mostly in text form. An account may be configured to automatically assign a signature (of the user) at the end. Signature is the text appearing at the end of the body by default in each message. Normally, it is the name of the sender and other contact details.

Features

1. Email is based on push technology, i.e., email is delivered to the recipient so they don't have to work to get it and they just need to open their inbox to access the email.
2. Most of the email clients do offer to create MIME (Multipurpose Internet Mail Extensions) and HTML emails with colorful fonts, graphics and links.
3. The email account can be set to remind an upcoming event.
4. The accounts do offer facility for spell check while writing and email.
5. Any kind of document including multimedia objects can be sent through an email as attachments. However, the maximum size of the object, which can be attached or received is fixed and set by the service providers.
6. An email collates threads of communication on a single subject. Therefore, it sometimes acts as time stamped proof of communication. Gmail of Google offers this service.
7. A message can be saved or printed along with all communication details.
8. A list of contacts (along with other details, such as phone number, fax, etc.) can be created within an account with an ease to recall any nickname associated with each email address. Hence, the user only has to enter one word for an email, instead of the full address.
9. Web-based email programs usually have a virus scan function that scans attachments before they are sent along with the main email.
10. One common feature of all email programs is the use of folders. These folders include an inbox, drafts folder, sent items folder and deleted messages folder. The users can also create other folders to sort their email better. Filters are also included in email programs to define certain words or phrases that the program will look for in a message. The programs will then delete the message, forward it to a specified address or put it in a particular folder.

Functioning of Email Systems

1. **Protocols:** Protocol can be defined as a set of rules to perform a specific task. They have been discussed earlier also. For example, IMAP (Internet Message Access Protocol) is used by the client, which is used to read the email like Firebird, Outlook Express, Apple Mail, etc. (also known as Access Client). Then there are TCP/IP, SMTP, HTTP protocols, etc.
2. **Delivery agent:** The following parts have been mentioned here.
 - (a) **Mail Transfer Agent Mail:** Transfer Agent is a piece of software which transfers messages or mails from one host or machine to other. It is often referred as mail server.
 - (b) **Mail Delivery Agent:** A mail delivery agent or Message Delivery Agent (MDA) is a computer software used by the Mail Transfer Agent to deliver email to a particular user's mailbox.
 - (c) **Access Client:** It is an agent acting as a client towards an email server to access an email account. It is a kind of application software. Some of the examples of Access Client are Outlook Express, Outlook or Thunderbird.

Starting an Email Account

Then starting an email account has setting up an account option also. Most of the web-based mail services offer four standard email folders, such as the 'Inbox', 'Sent', 'Drafts' and 'Trash', where each of them are described below.

Inbox: It enlists all emails received from other email accounts. It highlights the newly received/unread mails.

Sent: A copies of messages sent are put into the 'Sent' folder provided that the mail account is set to save all the sent messages.

Drafts: A place for storing unfinished messages. If the writing of a message is not yet finished and needs to be stopped in between, clicking the 'Save' button puts the message into the 'Drafts' folder and it can be accessed later on.

Trash: It stores email that is deleted from other folders. The messages are not truly deleted until they are deleted from this folder.

A message can be opened by clicking its 'Subject'. Once the mail gets opened, at the top, various options are available to delete, print or forward a message. The messages in 'Trash' folder that are more than few days old will automatically be deleted.

Messaging

Messaging is a method of communication between two people or organizations. It could be done using the power of internet or through cell phones. There are two types of messaging and they are explained below.

1. **Asynchronous messaging:** It is a method of communication between programs in which a program places a message on a message queue and leaves. It really does not bother how the message will be delivered. It is the delivery agent or the kind of infrastructure ensures the delivery of message even if the recipient is offline. For example, delivery of emails.
2. **Synchronous messaging:** In this kind of communication, the sender and receiver both have to be in connectivity while transferring the message. For example, telephonic conversation. Hence, a program places a message in a message queue and then waits for a reply to its message before resuming further.

Instant Messaging

It is a form of real-time communication between two or more people based on typed text or using audio or video. The message is conveyed via devices connected over a network. Most IM messages provide these features.

1. **Instant messages/Chat:** Sending and receiving text/notes with an online friend.

2. **Chat rooms:** A common platform where two or more than two people can communicate.
3. **Files/Web links/Videos/Images:** It can be shared over network.
4. **Talk:** Instead of a phone, internet can be used to actually talk with friends. Example: Google+, Hangouts
5. **Mobile capabilities:** Instant messages can be sent to mobile/cell phones.

Unified Messaging

It is a combination of different media into one channel. A user can access information into different media using a single device. Normally, unified messaging is common in mobile communication, where voice, text and fax can be accessed using one mailbox. It provides power to reach people almost anywhere at any time and the flexibility to allow people to control when they can be reached.

The major issues with messaging are spamming, privacy and security. Spamming is a collection of unwanted mails which includes threats, promotional mails and so on. These messages are called spam. There are two kinds of spams, mail lists and individual mails.

Widgets

These are small programming code that users can add to their web page, personalized home page, web browser, desktop, blog or social network. Mostly, these codes are embedded within an image file and hence, it can be evoked through a mouse click or through a keyboard command by a computer or internet user. A widget is used to enhance the look and feel of a website, i.e., to make it look more fanciful. Widgets are considered as an offering by Web 2.0 to internet users.

Along with widgets, it is important to discuss utilities also. Utilities are useful for fixing minor problems or mis-configurations and it handles day-to-day chores associated with computers.

E-COMMERCE

Electronic commerce (e-commerce) has changed the lifestyle of the society. With the help of e-commerce, it is possible to buy, sell and exchange the products, services and information through computer networks, primarily through the internet. Though the definition of e-commerce is quite debatable, still it is very much useful for both individual and the corporate.

Types of E-commerce

Previously, it was assumed that e-commerce is applicable only to a business community. However, with the sufficient use of high-speed technology, the idea has

been changed. At present, five types of e-commerce can be summarized here basically.

1. Business-to-Consumer (B2C) e-commerce
2. Business-to-Business (B2B) e-commerce
3. Consumer-to-Consumer (C2C) e-commerce
4. Peer-to-Peer (P2P) e-commerce
5. Mobile Commerce or M-commerce

The characteristics of e-commerce platform has improved much after demonetization which came into existence in 2016.

Application of E-Commerce

E-commerce has various forms of applications.

1. **Electronic payments:** This is the best form of payment across the universe at present. Electronic payments can be done through various ways, such as through electronic credit cards, electronic cash, smart cards, electronic fund transfer (EFT) and e-wallets and purchasing cards.
2. **Banking gateway:** E-commerce plays a vital role in the banking sector for inter-bank transactions and building a separate gateway for the unified banking gateway.
3. **E-Governance:** Now the government of India has initiated total online transactions for tax payment, phone bill payment, loan EMI payment from banks, etc.

What is BHIM

Bharat Interface for Money (BHIM) is an initiative to enable fast, secure, reliable cashless payments through your mobile phone. BHIM is interoperable with other Unified Payments Interface (UPI) applications and bank accounts for quick money transfers online. BHIM is developed by the National Payment Corporation of India (NPCI) as a part of the Digital India initiative. BHIM is the only online payments app that you ought to have.

Security in Electronic Payment

There are two main issues which has to be considered under this topic, the foremost question is 'what is needed in order to make EC payment safe?' and secondly, 'which methods can be used for?'.

The security requirements needed for conducting e-commerce transactions are as follows.

1. Authentication for both the parties.
2. Integrity for unaltered transactions.
3. Non-repudiation for unjustified denial of placing orders.
4. Privacy for identity to be secured.

5. Safety for providing credit card number in the internet.

Mobile Apps

Mobile applications have invaded our society to an extent that we can't imagine living without them. To a common person, a mobile app is a function that simplifies some work just by a click of a button of their mobile. For some tech person, mobile apps are a computer generated program or software applications which are built to run on various mobile devices, such as iPhones, Smartphones and tablets.

Apps can be broadly classified into

1. Web and
2. Mobile apps

Mobile apps can further be divided into native and hybrid apps.

Web Apps

When an application is accessed using a web browser over a network like an internet, it is termed as web app. They are functional and interactive. They need not to be downloaded like mobile apps. They are loaded on browsers like Chrome or Firefox. They do not consume memory or storage space on the user's device. People can easily write, using cross-platform, standard web technologies like HTML, CSS or JavaScript, a web app.

As web app can be used on any mobile device that has a web browser, be it iOS, Android, or Windows.

On flipside, their interactions are not so neat and responsive when compared to other apps. Device-level features like push-notification, work offline and load on the home screen are not supported.

Mobile Apps

It has two types:

1. **Native App:** The Native Apps are created, designed and coded for specific platforms, like iOS, Android and Window phones. They are much more complex if compared to web apps. Hence, one native app created for one Operating System will not run on the other.

If such situation of developing native apps for iOS, Android and Windows is required, then we need to create separate apps. Unlike iOS devices, Android devices have the 'back button' and hence, they do not need separate User Interface element for this.

Native apps are released and distributed through 'App Store'. While the user gets access to hundreds of apps at a single location, which makes it easier to install. Each of these platforms has own publication procedure.

2. Hybrid Apps: As per the name itself, it is an amalgamation of native and web app. They get installed as native app and feel like web apps.

They are built on JavaScript, HTML or CSS and run on simplified browser within the app are termed as web view.

Audio Conferencing

A computer-based communications system allows a group of computer users at different locations to conduct a 'virtual conference'. Here, the participants hear one another as they were in the same room participating in a real conference. The audio conferencing systems do not allow the participants to see one another.

In audio conferencing, multiple callers are allowed to join in a conversation by dialing into an audio conferencing bridge. The participants are supplied with an access number, a conference ID and possibly a secure pin number to uniquely identify the participant. This also improves the security of the call. Call organizers provide the necessary information to participants through emails to provide background data or perhaps to review documents in the call.

Skype for Business includes the audio conferencing feature for just this situation. People call into Skype for business meetings using a phone, instead of using the Skype for Business app on a mobile device or PC. The organizers need to set up audio conferencing for people who plan to schedule or lead meetings.

The following can be termed as the advantages of audio conferencing.

1. Audio conferencing is a cost-effective communication tool.
2. Audio conferencing is easily accessible.
3. Audio conferencing can save you a lot of time.

Disadvantages of Audio Conferencing

The following are the three obvious disadvantages of audio conferencing and its possible solutions.

1. The communication is only verbal.
2. Audio conferencing cannot keep you focused on the meeting.
3. The quality of conference call is not reliable.

Audio conferencing has brought a lot of benefits to people, especially in the business world. When the technology grows to a certain degree, it comes across its bottleneck.

Videoconferencing or Video Conferencing

A computer-based communications system that allows a group of computer users at different locations to conduct a 'virtual conference'. Here, the participants can

see and hear each other as if they were in the same room participating in a real conference.

Video conferencing can occur between two participants in a peer-to-peer call, or between multiple participants via a video conferencing bridge, sometimes called a multipoint control unit. Here, the bridge can be located within a company network, can be made available from a service provider that can be on a subscription or metered basis, or for free of cost, it may depend on the intended use and service model. Video conferencing will also include an audio channel, and may include a document or screen sharing capability. Video conferencing can also exist on a company's internal network, although when external participants join, they generally connect over the internet using a specialized type of firewall.

Video conferencing can also be divided into three categories, that is to say, hardware-based video conferencing, software-based video conferencing and hybrid one.

Video conferencing system consists of endpoints (including main peripheral equipment for endpoints, such as cameras, microphones and other A/V processing equipment), MCU (multipoint control unit, equals to a server) and network connection. When a participant talks to the screen before us, our voice and image are going into the software in analog form. The server will transform it to the digital form when accepting the message you sent through the software and then transforms it back in analog form to the receiving end. This is the situation for point-to-point video call.

For multipoint video conference, it will be much more complicated. With the help of scalable video coding technology, the server can send each participant a set of video streams, so that every receiving ends in different locations can receive the optimized voices and images.

Teleconferencing

A 'virtual' conference with participants in different locations, either via telephone (audio-conferencing) or video (videoconferencing). UNHCR uses a number of teleconferencing tools, including Skype for Business (Microsoft Lync) and Cisco WebEx.

ICT and Governance

In 1954, W. Howard Gammon wrote e-government research paper for writing about the use of ICT for providing good governance. The Internet, SMS and different mobile apps help people to access information quickly. The data access has become very cheap due to cost competitiveness among companies. Now they are being used in education, banking services, railway and other governance issues. The government has started utilization of internet to serve common people through e-governance.

Now governance contains information from and to both public and private sectors. It is helpful to get knowledge and deliver information utilizing the Internet and World Wide Web instantly. The government in the developed country has already started new channels arbitrated by ICT for increasing the uses of internet among the common people. States are bound to provide information and timely services due to RTI Act, 2005. The state governments have also come with such legislations.

E-Government and E-Governance

In 1954, W. Howard Gammon wrote e-government research paper for writing about the use of ICT for providing good governance. The Internet, SMS and different mobile apps help people to access information quickly. The data access has become very cheap due to cost competitiveness among companies. Now they are being used in education, banking services, railway and other governance issues. Government has started utilization of internet to serve common people through e-governance.

Now governance contains information from and to both public and private sectors. It is helpful to get knowledge and deliver information utilizing the Internet and World Wide Web instantly. The government in the developed country has already started new channels arbitrated by ICT for increasing the uses of internet among the common people. States are bound to provide information and timely services due to RTI Act, 2005. The State governments have also come with such legislations.

E-Government and E-Governance

Within the researcher people, there is an issue on the correct use of the two terms. While e-governance is the use of ICT to support in the administration or management of government, there E-government is the use of ICT to provide services in maintaining of government operations correctly.

Figure 8.11 ICT's Value in E-Governance

ICT and Good Governance

The government uses ICT to make public administrations more efficient and effective by cutting red tape.

ICTs can remove unnecessary human involvement during the public service delivery processes from the government. Government websites are mainly classified into two categories and they are explained as follows.

1. One-way communication is a process where websites provide information regulations, policies and programs to the citizens, such as downloadable forms for government services and applications.
2. Two-way communication is a system which provides policies and programs with requesting and receiving inputs from their citizens.

Some functions of ICT based governance are as follows.

1. **Websites process non-financial transactions:** For the sake of e-voting, downloading and uploading forms, filing taxes online or applying for different types of certificates, licenses and permits.
2. They also handle all types of financial transactions, i.e., where money is transferred on a secure network to the government.
3. Direct Government Job-centres Plus is a job search service for people. Student loans or Jobseeker's allowance, etc., are also being easy and flexible through online transactional services.
4. ICTs take part a vital role in the routine lives of human beings for doing qualitative works with freedom. All technologies facilitate the processing and transfer of information and communication services. The main challenge by local government is its aptitude to utilize effectively technology for its daily performance.
5. E-Governance is the solution to the 'Good Governance' for India to minimize corruption, provides efficient and effective quality services to their citizens. World Wide Web is the most useful medium in E-Governance. People can make use of innovative technology in commercial online services all the times. ICT can be used in various applications to go faster information distribution, get the better effectiveness of public utilities.
6. It can increase the transparency of government administration, to reduce corruption, and assist citizen contribution in local governance. In India, public service centre name as 'Jan Suvidha Kendro, helps a lot. They started in every state of India, but till now common people suffer for doing even a simple work. All transactions such as issuing of Registration Certificate, Fitness certificate are completed by 'Vahan' and 'Sarathi' can be used to issue a Learner's License, Permanent Driving License and Conductor License to the applicant.

Using e-governance system reduces different direct cost.

By dial a specific number from any phone, citizens in some nations can find out how to get a loan facility from a government bank or how to get their ID cards back. They work on major festival seasons also.

On the flipside, a lot of people are unable to handle the proper way of ICT in the developing country like India; still they are dependent on the old manual process. They submit the application but don't know whether the request is processed or not. They may never know the actual cause of rejection. So, they have to submit the same form again and again and waste their time. Thus there are many such abnormalities as well. As a result, a simple task becomes more complicated. In some cases, inherent authority never looks into the types of ignorance and dishonesty. The proper tracking system has helped a lot to overcome such problems. Some people never know the proper office or proper unit for particular work. These types of problems are also faced by some highly educated people due to haphazard information.

Glossary of ICT and the Internet Terms

Address book: Usually, it is supplied as part of your e-mail software. An address book in this sense is used to keep a record of all the e-mail addresses of people whom you may wish to contact by e-mail.

Adware: Adware is a software that may have been installed on your computer by a remote computer, i.e., through the web.

AJAX (combination of asynchronous JavaScript and XML): It is a web programming tool (or rather a set of tools) which makes it possible to create interactive web applications. AJAX is a programming tool that is used extensively in what are known as web 2.0 applications.

Apache: It is the most popular web server software on the World Wide Web. Apache mainly runs on UNIX systems.

Applet: It is a small program written in the Java programming language and embedded in a web page. When you use your browser to access a web page, an applet may run inside the web page, as it were to perform an interactive animation and make a calculation or carry out another simple task.

Archive: It is used to describe the documents or files that are not immediately needed but it won't be completely discarded. An archive may be stored in an external hard disc, such as CD-ROM, DVD or other storage devices.

Archie: It allows the user to search files at FTP sites. It regularly monitors hundreds of FTP sites and updates

a database (called an Archie server) on software, documents and data files available for downloading. By clicking on a list of Archie server, it will take them to another computer system where relevant files are stored. The archie server may allow users to continue their searches for files until they locate what they need actually.

Attachment: It is a term used in connection with an e-mail. An attachment can be a file of almost any kind, such as a document file, an image file, a sound file or a video clip that you can add, i.e., attach to an e-mail.

Audio-conferencing: It is a computer-based communication system that allows a group of computer users at different locations to conduct a virtual conference in which the participants can hear one another, as if they were in the same room participating in a real conference. Unlike video-conferencing, audio-conferencing systems do not allow the participants to see one another.

Authoring package/Authoring program/Authoring tool: These terms specify the content free software packages that allows the teacher to develop interactive learning and teaching materials without having to hold a detailed knowledge about the computer programming languages. These terms may also be applied to software packages used for creating web pages, for example, FrontPage or Dreamweaver.

Bandwidth: It is the amount of data that can be sent from one computer to another through a particular connection in a certain amount of time. For example, it can be connected through a computer to the internet and vice versa. The more the bandwidth, the faster is the access to information. Bandwidth is usually measured in Kbps or Mbps.

Baud: It is a unit of measurement at which data can be transferred (i.e., the baud rate), for example, over a telephone line through a modem or from a computer to an external device, such as a printer. Baud is rarely used nowadays, as transfer rates are normally expressed in Kbps or Mbps.

Blog: A blog (short form for web log) is an online diary in which an individual records and publishes his/her thoughts on one or more subjects. A blog can contain news items, short essays, annotated links, documents, graphics and multimedia. These posts are usually in reverse chronological order and often take the form of a journal or diary. Blogger refers to someone who blogs, i.e., who regularly writes blogs.

Conferencing: Computer conferencing is a development of e-mail designed to support many-to-many

communication, whereby computer users in different locations can take part in a virtual conference. A conference usually consists of a group of participants who have a common interest in the conference subject matter. Computer conferencing software enables organizing, storing, structuring and retrieving of messages.

Cookie: It is a piece of information stored in a user's computer by a web browser, when the user visits a website for the first time. Websites use cookies to recognize users who have previously visited them. The next time the user visits that site, the information in the cookie is sent back to the site so that the site can tailor what it presents to the user, for example, tastes in music or shopping habits.

Course Management System (CMS): It is a type of virtual learning environment (VLE), for example, Moodle.

Crawler: A crawler is a program that searches the web for new links, new content and changes in order to keep the search engine results up to date. A crawler may also be called a bot (short form for robot) or spider. Crawlers within the search engines perform a useful indexing function but there are also crawlers or bots that have more sinister motives, such as gathering addresses to be targeted by spammers.

Executable: This describes a program which has been converted (compiled) into binary machine code. If you double-click an executable program name in Windows Explorer, then it will immediately execute itself, i.e., run. Executables usually have the extension `.exe` or `.com`.

Extension: In computer jargon, an extension is an optional addition. Usually, it consists of a dot plus three or four letters, to the name of a file. The extension to the filename helps the computer (and the user) recognize what type of file it is and what it may contain, for example, `.doc` is a Word document file, `.exe` is a computer program, `.jpg` or `.jpeg` is a picture file and `.htm` or `.html` is a web page file.

Finger: This command allows the display of the contents of the files that are associated with particular user identifier at a particular internet site.

Gophers: It is a computer client tool that enables the users to locate the information stored on the Internet gopher servers through a series of hierarchical menus. Most files and digital information that are accessible through FTP are also available through gophers. Each gopher server contains its own system of menus listing subject matter topics, local files and other relevant gopher sites. When the users access gopher software to search a specific topic and select an item from a

menu, the server will automatically transfer them to the appropriate file on that server or to the selected server wherever it is located. Once when that server is reached, the process goes on.

Here, it is important to discuss Veronica that stands for Very Easy Rodent-Oriented Netwide Index to Computer Archives. It provides the capability of searching for the text that appears in gopher menus that is searched through thousands of gopher sites. These files are placed in a temporary menu on the local server, so that the users can browse through them.

Gopher and the World Wide Web are easy to use and it is the most popular browsing mechanisms provided in the internet.

Host: It refers to a computer that provides services to other computers that are linked to it through a local network or through the internet.

Hypermedia: It is an extension of hypertext that integrates audio, video and graphics with text (like multimedia).

Hypertext: It is the technology that links text in one part of a document with its related text in other part of the document or in other documents. A user can quickly find the related text by clicking on the appropriate keyword, key phrase, icon or button.

Interactive Whiteboard (IWB): It is a touch sensitive projection screen that allows the teacher to control a computer directly by touching the screen, i.e., the whiteboard rather than using a keyboard or a mouse.

iPod: It is the name of a portable (mobile) media player designed and marketed by Apple.

Internet Relay Chat (IRC): This service allows each participant contribution displayed on the screens to all others taking part in the conversation.

Java: It is a programming language invented by Sun Microsystems that is specifically designed for writing programs which can be downloaded to one's computer through the internet and immediately executed. Java is a programming language designed for programs or Applets used through the internet.

JPEG (Joint Photographic Experts Group): It is a format for storing complex graphics in compressed form.

Mashup: A mashup is a web page that brings together the data from two or more web services and combines the data into a new application with added functionality.

Microblogging: It is an approach to blogging in which very short texts are posted and it contains snippets of information about events, websites and other sources.

Moodle: Moodle is an open source software, which means it is free to download, used, modified and even distribute it.

Netbook: A netbook is a small, lightweight computer that is smaller than a laptop computer with a long battery life and it is ideal for travelling. Netbook computers have built-in Wi-Fi and are optimized for browsing the web and e-mail.

Open Source: It is used to describe a software that is provided free of charge along with the original source code used to create it, so that anyone can modify, improve and work in ways that reflect their own preferences. Moodle is the typical example of an open source software.

Optical Character Recognition: Optical character recognition (OCR) software is used in conjunction with a scanner to convert the printed text into a digital format.

Personal Digital Assistant (PDA): It is a handheld device that combines computing, audio communication, browsing and networking features and serves as an organizer for personal information.

Portable Network Graphics: Portable network group (PNG) is a graphics format that is specifically designed for use on the www. PNG enables compression of images without any loss of quality, including high-resolution images.

Pixel: A contraction of picture element.

Podcast: The term podcast takes its name from a combination of iPod and broadcasting. Podcasts can simply be downloaded to a computer and played using a standard media player program.

Pop-up: It is a small window that appears within a program or over the top of a web page to deliver additional information. Pop-ups on the web can be annoying as they are often used for unwanted advertising material.

Portal: It is a web page, website or service that acts as a link or entrance to other websites on the internet. Typically, a portal includes an annotated catalogue of websites and it may also include a search engine, e-mail facilities, a forum and other services.

Public domain: It is a material that is either copyright free or whose copyright has expired or which cannot be copyrighted. Many people think that because something is on the web, it must be in the public domain. This is not so. A work is in the public domain only if it is explicitly stated to be so.

RSS: It is a development in the internet technology that enables the users to subscribe to websites that change

or add content regularly, for example, news sites (such as the BBC) and sites containing blogs, nings, podcasts and Wikis. RSS makes use of software that presents new additions.

Smiley: In e-mail messages, a facial expression constructed sideways (for the lateral-minded) with standard characters is called a smiley. It is also referred to as an emoticon (emotions with icons).

Server: It is a computer which provides services to other computers and it is known as clients.

Smartphone: A smartphone is an advanced mobile phone that offers a wide range of applications. In addition to functioning as a mobile phone, smartphones can be used as a media player, a camera, a GPS navigation device and a web browser and it can also be used in many other ways. Apple's iPhone is a typical example of a smartphone, it is used as a touchscreen for typing and to run applications.

Social Media: It is a term used to describe a variety of web 2.0 applications that enable people to share images, audio recordings and video recordings through the web and also initiate discussions about them.

Social Networking: It is a term applied to a type of website where people can seek other people who share their interests, find out what's going on in their areas of interest and share information with one another.

Spam: These are unsolicited e-mail advertisements, which is the internet equivalent of junk mail.

Splog: The splog site creator (i.e., a splogger) begins by finding a subject that attracts lot of visitors. Then, the splogger sets up a blog that plagiarizes content from other sites dealing with this subject. Splogs may consist of hundreds of blogs with plagiarized content, containing multiple links to selected websites.

Simultaneous Peripheral Operations Online (SPOOL): Using this technique, the output is not directly sent to the printer. It is first transferred to an intermediary storage medium such as a disk file. The output can be stored in separate files and printed at a later stage depending upon the availability of time and storage.

Spyware: It is a term that may be used synonymously with adware but implies more sinister motives on the part of the person who has dumped it onto your computer. For example, with a view to steal private information such as bank account numbers, credit card numbers, passwords and so on.

Tablet Computer: A tablet computer is a compact portable computer that makes use of a touchscreen instead

of a keyboard for typing and running applications. Apple's iPad is a typical example of a tablet computer.

Tag: Tagging has become more common in recent years as a result of widespread use of social media for sharing images, audio recordings, video recordings, website references and so on. Tags are labels that briefly describe what the media or references are all about and help other people find them quickly. Tags are also used in HTML, to define how the on-screen text is rendered by the browser.

Tandem Learning (Buddy Learning): It is a form of learning in which two language learners pair up in order to learn each other's language. This may take place face-to-face or through the internet and it includes using virtual worlds such as second life.

Text File: A data file consisting entirely of printable ASCII characters, i.e., plain unformatted text. Text files often have a .txt extension after the filename (for example, readme .txt) and their contents can be viewed using programs such as Windows Notepad. The term text file is also used to describe files, i.e., texts, created by authoring packages such as Fun with Texts, which then manipulates the texts into a set of activities for completion by the learner.

Video-conferencing: A computer-based communication system that allows a group of computer users at different locations to conduct a virtual conference in which the participants can see and hear one another as if they were in the same room participating in a real conference.

Vodcast: It is the short form of video podcast. This podcast incorporates video as well as audio features.

Voice over Internet Protocol (VoIP): It is an audio communication using the internet instead of telephones. Skype and Ventrilo are examples of VoIP.

Wireless Application Protocol (WAP): It is a system that enables users to browse online services, such as information about the weather, traffic conditions, shopping and so on through a special type of mobile phone. WAP is the mobile phone equivalent of www. Newer mobile phones include WAP browser software to allow users access to WAP sites.

Website: It is an area on the www where an organization or individual stores a collection of pages of material such as the web pages. The pages are usually interlinked with one another and with other websites. Every website has a unique web address or URL.

Wi-Fi: Wireless fidelity is also known as high frequency wireless local area network. Wi-Fi systems use high-frequency radio signals to transmit and receive data

over distances of several hundred feet. Many hotels, educational institutions, railways and airports offer Wi-Fi access to people using laptops.

Wiki: It is a website or a similar online resource which allows anyone to set up a resource in which the content can be created collectively. It allows anyone who views the Wiki to add or to edit the existing content. Wiki also refers to the software used to create such website.

Wikipedia: It is the best known example of a Wiki. It is a collaboratively written encyclopaedia.

Worldwide Web Consortium (W3C): It is an international non-profit organization which acts as a resource centre for the www and it is active in setting technical standards.

Zip Drive: A type of disc drive that accepts portable zip discs. Zip drives themselves are also portable and it can be connected to almost any computer.

Zip: It is used as a verb to describe the process of compacting files or programs in order to cut down the amount of storage space they require by compressing them into one tightly-packed file. Thus, it is compressed to make it easier for them to be transported on floppy discs or transmitted electronically to other locations, for example, through the internet. Proprietary programs such as WinZip or WinRar can be used to zip data and files. Zipped files are recognized by the extension .zip or .rar (for files created with WinRar) and it has to be unzipped before they can be used, again using proprietary programs.

Other General Abbreviations and Terminology

Absolute Link: It is used by web authors. In an HTML document, a relative link indicates the location of a file relative to the document, whereas an absolute link talks about the full URL.

Acceptable Use Policy (AUP): It is a set of rules that sets standards and defines the ways in which ICT facilities can and cannot be used in an institute.

Accessibility: Everyone should have access to the services provided by ICT, for example, computer programs, email and the World Wide Web, regardless of any visual, auditory, or other physical impairment they might have.

Analogue: 'something that corresponds to something else'. For example, in the context of equipment used for recording and playing back sound, analogue refers to the way in which the sound is recorded and reproduced.

Anchor: In context of HTML, the coding system used for creating web pages. An anchor is the main target of a Hyperlink.

Animation: The display of a sequence of images in a computer program or on a Web page to give the impression of movement.

App: Application

ASF: Advanced Streaming Format is a Microsoft's own file format that stores both audio and video information and is specially designed to run over the internet.

ASR - Automatic Speech Recognition: A branch of Human Language Technologies that helps in automatic processing of human speech.

Avatar: It is a graphical representation of a real person, it is used as MUVE or MMORPG, a kind of 'virtual world'.

AVI: Audio Video Interleave

Backup or Back Up: Used as a verb, to back up means to copy a file or folder from your computer to another storage device.

BIOS: Basic Input / Output System.

Bitmap (BMP): It is a computer graphic or image composed of thousands of individual dots or pixels, each pixel being stored as a number.

BGAN: They are short for 'Broadband Global Area Network' are portable terminals which provide internet connectivity and voice communications in remote locations.

Blackboard: It is a commercial Virtual Learning Environment (VLE) package.

Bookmark: It is a facility within a browser, it enables a person to keep a record of web pages visited and may be visited again. Bookmarks are stored in a subdirectory of the Windows directory on computer. In Internet Explorer bookmarks are known as Favorites.

Boot: It is a verb used to start up a computer by loading the operating system into memory.

Bot: It is short for Robot, we can look at 'Crawler', as well.

Branching: It is the process of interrupting a sequence of instructions in a computer program so as to go to a different point.

Bulletin Board: A type of forum on the internet or an intranet, where users can post messages by email or WWW for other users to read and respond to. BBS stands for Bulletin Board Systems stands.

Bug: Not a nasty insect but a logical fault in a computer program which causes it to malfunction.

Burn: When data is written to a CD, this process is often referred to as 'burning a CD'.

Cache: It contains the information stored by a Web Browser on hard disc, so that we don't have to download the same material repeatedly from a remote computer. The cache is normally stored under Windows in a folder called Temporary Internet Files.

CALI: Computer Assisted Language Instruction.

Camcorder: A portable video camera, capable of recording live motion video for later replay through a videocassette recorder (VCR), DVD player or computer.

Card: An electronic circuit board, usually one which can be slotted into your computer in order to fulfil a specialised function. Examples are Sound Card, Video Card.

Cascading Style Sheets (CSS): Cascading Style Sheets are a feature of HTML that enables a range of styles for headers, body text, bullet points, links, etc.

Case Sensitivity: It is used to describe how a computer program, for example, a browser, interprets upper and lower case letters.

Cathode Ray Tube (CRT): An older type of computer Display Screen or Monitor, in which beams of high-voltage electrons are fired at a screen causing thousands of Red, Green and Blue (RGB) dots to glow in different combinations and intensities. It produces full-colour image displayed on the screen.

CBT: Computer Based Training

CD-ROM: Compact Disc Read Only Memory. A CD-ROM looks much the same as an audio CD, but can contain text, sound, pictures and motion video. It can be fixed and rendered unalterable and hence, it is called 'read-only', modern computers are usually equipped with a read/write CD-ROM.

CELL: Computer Enhanced Language Learning

CERN: European Organization for Nuclear Research in Geneva. It is the largest particle physics laboratory. It is also the birthplace of the *World Wide Web*, which was invented there by Tim Berners-Lee.

CGI Script: Common Gateway Interface. A term used by Web authors, it processes data from an HTML form.

CUI - Character User Interface: A way in which a computer user communicates with a computer by entering commands as *text*.

Chat Room: A synchronous, mainly text-based communication facility, offering a web-based environment where people either drop into or arrange to meet and *chat* at specific times.

Client: A computer that receives services from another computer. We can refer to LAN, VAN in chapter.

Clipart or Clip Art: A collection of image files that can be embedded or inserted into web pages, word-processed documents, *PowerPoint* presentations, etc.

Clipboard: A temporary storage area in a computer's memory.

Clock Speed: The speed of a computer's CPU that is normally expressed in MegaHertz (one million cycles per second) or GigaHertz (1000 MegaHertz).

Cloze Procedure: It was invented by Wilson Taylor. It was originally conceived as a tool for measuring the readability of a text or a learner's reading comprehension level. It derives itself from the gestalt psychology term 'closure', whereby people tend to complete a familiar but incomplete pattern by 'closing' the gaps.

CMC: Computer Mediated Communication

CMY: Cyan Magenta Yellow, the scheme used in colour printing.

CODEC: Compressor/DECompressor or COder/DECoder. A CODEC is a software that is used to compress or decompress a digital audio or video file.

Collaborative Writing: A process that involves the creation and editing documents using Web 2.0 tools designed for use by multiple authors, for example, Google Documents or Zoho Writer.

Colour Depth: The number of colours that can be displayed at any one time on a computer display screen.

Combination Drive: A Disc Drive that is capable of reading and writing to CD-ROMs, audio CDs and DVDs.

Compatibility: Pieces of hardware and/or software which are capable of being used together are described as compatible.

Compression: A technique which reduces the amount of space required to store data.

Concordance Program: It operates on a body of texts (a corpus) and is commonly used for compiling glossaries and dictionaries.

Condenser Microphone: This type of microphone is probably the best type to use in multimedia CALL programs as it provides a stronger signal when the learner is recording his/her own voice.

CLIL - Content and Language Integrated Learning: If a foreign language is to be used.

Content-Free: Used to describe a computer program which is supplied as an 'empty shell', i.e., without content such as texts, images, audio recordings, or video recordings.

Continuing Professional Development (CPD): It can take the form of seminars, research, training courses, etc.

Copyright: New technologies have raised all kinds of new issues relating to copyright mainly because it has become so easy to copy materials from a variety of digital sources.

Crash: A term describing what happens to hardware or software when it suddenly fails to work properly. In 'frozen screen', the keyboard and/or mouse go dead with the result that nothing can be typed and the cursor cannot be moved around the screen.

DDL - Data Driven Learning: It was pioneered by Tim Johns, whereby learners of a foreign language gain insights into the language that they are learning by using concordance programs to locate authentic examples of language in use.

Debug: To test a program and remove all the bugs. Permanent bugs that defy eradication are often referred to ironically as 'features'.

Default: A setting or value automatically assigned to a computer program or device in the absence of a choice made by the user.

Defrag: Defragment.

Desktop Publishing (DTP): An application for laying out text, graphics and pictures in order to produce a professional-looking publication.

Diacritic: A mark such as an acute, grave or circumflex accent, a cedilla, or an umlaut, which is added to a letter to give it a special phonetic value.

Digital: It is 'based on numbers'. The modern computer is a typical example of digital technology, so are CD-ROMs, DVD-ROMs, audio CDs and video DVDs, on which numbers are coded as a string of tiny pits pressed into a plastic disc.

DVD: Digital Video Disc or Digital Versatile Disc

Directory: A group of files and subdirectories grouped together for organizational purposes. The term is used synonymously with Folder.

Discussion List: An electronic discussion list also known as a Forum is a way of sharing emails with the members of a group of people with a common interest.

Dithering: This technique of combining dots of primary colours is used to give the appearance of intermediate colour.

Dpi: Dots Per Inch

Dynamic Microphone: It is used when a learner has to record his/her own voice.

Encryption: A system of coding that helps prevent access to private information on computer networks or on the web.

EPS: Encapsulated Postscript

Error Diagnosis: A feature of CALL programs whereby the computer attempts to diagnose the nature of errors the learner makes and to branch to remedial exercises.

Favorites: A facility within the Internet Explorer browser that allows to keep a record of web pages that you have visited and may like to visit again. These are also known as bookmarks.

Feedback: Feedback is an automatic response from a computer, which may take the form of text, image, audio, video or any combination of these, to a learner's input.

Firewall: A firewall is a software package that sits between your computer and your internet connection, keeping an eye on the traffic going to and from. Otherwise hackers can use them to their benefits.

Firewire: It allows a person to transfer video recordings from one device to another in fast manner. That is from a camcorder to a computer, using a special cable.

Firmware: It is a software that has been written to a ROM (Read Only Memory) chip by the manufacturers.

Flame: When we use Discussion List, Forum or Blog, Flame is used to describe a language that is rude, sarcastic or condescending.

Flash Drive: A portable storage device. Their storage capacity is impressive.

Fuzzy Matching: A matching technique which is used in programs when allowances have to be made for inaccuracies in spelling on the part of the learner.

Gap-filler: It consists of two parts, such as (i) a teacher's program which allows him to input a text, then specify words, parts of words, or phrases that are to disappear, and (ii) a student's program which enables the learner to interact with the computer by filling in the gaps.

Geek: A term to describe someone obsessed with computers, it uses them at every opportunity in their free time, mainly for 'social' purposes.

Generic Software/Application: They may be used in many areas, but not specifically for use in a specific subject area, for example, a word-processor (Word), spreadsheet package (Excel), presentation software (PowerPoint) and database package (Access).

GIF: Graphic Interchange Format. It is a file format used for storing simple graphics.

GUI - Graphical User Interface: It consists of graphical elements known as icons and allows the user to run programs and also to carry out other operations. Icon is a small symbol or picture used in a GUI.

Hacker: A person who spends time to gain access to information stored on other people's computers all around the world. Some hackers are harmless and some harm others.

Hub: A common connection point for networked computers and other devices. Hubs are used to connect devices in a Local Area Network (LAN).

HF High Frequency: 'High Frequency' is the designated term for the range of radio waves between 3 and 30 MHz.

ICALL - Intelligent CALL: It mimics human intelligence.

ILS - Integrated Learning System: It is a computer-driven system of learning in which the content is presented in tutorial format and which monitors and records the progress of the learner.

IWB - Interactive Whiteboard: It is a touch-sensitive projection screen that allows the teacher to control a computer directly by touching the screen, i.e., whiteboard, rather than using a keyboard or mouse.

Interface: It is a connection between two systems. It can be Hardware or Software. It may take the form of a plug, cable or socket or all the three.

LCD: Liquid Crystal Display is a type of flat panel computer display screen.

Learning Object: It is capable of being reused in a variety of applications and may be described as a Reusable Learning Object (RLO).

Learning Platform: A term used to describe the software and systems that are used to deliver E-learning. Sometimes it is Virtual Learning Environment (VLE) and sometimes with Managed Learning Environment (MLE).

Leased Line: It is also known as a private circuit, is a dedicated communications link between two sites. It is separate from the public telephone network and reserved exclusively for the use of the owner, usually at a fixed tariff regardless of usage levels.

Linkrot: It describes the tendency of hypertext links from one website to another to die as other sites cease to exist or remove or restructure their Web pages.

Linux: A Unix-type Operating System, which is similar to Windows and the Apple Mac operating system.

Lurker: It is mainly used in connection with a Discussion List, Forum or Blog. This term describes someone who prefers to read other people's messages rather than posting their own views.

Machine Assisted Translation (MAT): They assist us in the process of translating natural language.

Maze: The maze is divided into action mazes and text mazes that have been used by language teachers for many years for reading and comprehension activities and to stimulate conversation in the classroom.

Menu: A list of options from which a computer user makes a selection in order to determine the course of events in a program. Menu bar helps in it.

MLAT: Modern Language Aptitude Testing

MLE: Managed Learning Environment

Moblog: A contraction of mobile and blog.

MOO: Multi-User-Domain Object Oriented

MP3: A file format for storing high-quality audio files.

MP4: There are two basic types, namely MP4 AAC (Advanced Audio Coding) and MP4 AVC (Advanced Video Coding).

MPEG or MPG: Motion Picture Expert Group

Multimedia: The integration of two or more types of information (text, images, audio, video, animation, etc.) in a single application.

Multitasking: This is the execution of more than one program, apparently at the same time, on a computer.

Narrowband: A term used to describe a slow-speed connection to the Internet, normally via a Modem and less than or equal to 64 Kbps.

NLP - Natural Language Processing: A general term used to describe the use of computers to process information expressed in natural human languages.

Navigation: This describes the process of finding your way, i.e., navigating, around a series of menus within a computer program or finding your way around the World Wide Web by means of a browser.

Netiquette: Etiquette on the Internet is a code of behaviour for people communicating by email via the internet.

Netizen: It is a term used to describe someone who uses networked resources.

Netscape: An early web browser, which first appeared in 1994, shortly after the World Wide Web went public.

Ning: A platform that enables you to create your own social network.

Online Learning: The use of the internet to follow a course that usually results in the award of a diploma or certificate.

Open and Integrated Learning System (OILS): A variant of Integrated Learning System. The word Open means extra dimension.

Pathname: The pathname of a file on a computer specifies exactly its position on disc and it consists of at least three parts: (i) drive letter, (ii) directory and (iii) filename, e.g. `c:\windows\user.exe`.

PDA: Personal Digital Assistant.

PDF: It is Portable Document Format, a file type created by Adobe that allows fully formatted, documents to be transmitted across the Internet and viewed on any computer that has Adobe Acrobat Reader software.

Phishing: An illicit attempt to trick individuals into handing over personal, confidential information. Phishing requests often seem legitimate. For example, they carry an official-looking logo of a known service like VISA and may be perpetrated by phone, email, or the internet.

Platform: Often used as an alternative term for a computer system, including both the hardware and the software. Platform-independent is used to describe software means that the software can be run on any computer.

Pointing Device: It is a device which allows to control the position of the cursor on a computer screen by physical manipulation of the device in different directions.

Presentation Practice Production (PPP): A long-established approach to language teaching, consisting of three main phases, such as (i) **presentation** phase (ii) **practice** phase (iii) **production** phase.

PVP: Portable Video Player

QR Code: Quick Response Code. It is a two-dimensional barcode that can store a variety of different types of information, such as a text, a website URL, a telephone number, an SMS message, an email address and so on.

Relative Link: A term used mainly by Web authors. In an HTML document a relative link indicates the loca-

tion of a file relative to the document, whereas an absolute link specifies the full URL.

Repurpose: To reuse content in a different way from that which was originally intended.

Response Analysis: A feature of CALL programs whereby the computer attempts to diagnose the nature of errors the learner makes and to branch to remedial exercises.

Rip: To extract or copy data from one format to another.

Root Directory: The topmost directory in the directory hierarchy, from which all other directories are descended.

RTF: Rich Text Format is an alternative way of storing a document created with a word-processor.

Sampling: This term refers to taking the value of a waveform (for example, a sound wave or video signal).

Scroll: To move up and down or from side to side through a document or a Window to view or access all of its contents.

Search Engine: A search facility provided at a number of sites on the World Wide Web.

Semantic Web: The Semantic Web allows the user to search the Web in a more sophisticated way

Server: A computer which provides services to other computers, which are known as clients.

Setup Program: A program that enables the user to set up a program.

Shockwave Player: Software developed by Adobe that helps in containing interactive multimedia materials to be played on the web.

Silicon Chip: An encased piece of extremely pure silicon on to which electronic circuits are etched.

Spambot: A spambot program is designed to collect email addresses from the internet in order to build mailing lists for sending spam.

SVGA: Super Video Graphics Adaptor. This is used to control the output on a computer display screen.

Task Based Learning (TBL): An approach to learning in which the learner acquires knowledge of the subject that is being studied by focusing on a specified task.

TELL: Technology Enhanced Language Learning.

Telnet: A program which allows you to log in to a remote Host computer and carry out the same commands as if you were using a terminal at the host site.

TIFF or TIF: Tag Image File Format

Toolbar: A toolbar is a kind of Menu Bar. It is mostly located at the top of a computer screen, that contains icons for the most commonly-used commands in an application, for example, in a word-processor or browser.

Total Cloze: An activity in which a complete text is reduced to sets of blanks.

Touchscreen: A display screen which enables a computer system to react to the touch of a finger, examples are smartphones and tablet computers.

Trainspotter: A colloquial term that is often used to describe someone who is fascinated by the technology of computers but not particularly interested in their applications.

Trojan: Usually, malicious programs that install themselves or run surreptitiously on a victim's machine.

Troll: A troll intentionally posts derogatory or provocative messages in an online community such as a Discussion List, Forum and Blog to bait other users into responding.

Thuraya IP+: These are portable terminals which provide internet connectivity and voice communications in remote locations, using satellite connections. They are similar to BGAN in many respects.

Unicode: The Unicode Worldwide Character Standard is a character coding system designed to support the interchange, processing and display of the written texts of the diverse languages of the modern world.

USB - Universal Serial Bus: It is a means of connecting a wide range of devices, such as Digital Cameras, Camcorders, iPods, mobile phones, Scanners and Printers, through a cable to a computer.

Unix: An Operating System widely used on large computer systems in institutions on which many web servers are hosted. A PC version of *Unix* is called *Linux*. It has become popular as an alternative to Windows.

URL: Uniform Resource Locator. It is also known as a web address. A URL contains the location of a resource on the internet.

Vector Graphic: It is a method of creating graphic images on a computer. It tells to draw lines in particular positions.

Video Memory: The dynamic memory available for the computer's display screen. The greater the amount of memory, the greater is the possible colour depth and resolution of the display.

Virtual Learning Environment (VLE): A VLE is a web-based package designed to help teachers create online courses, together with facilities for teacher-learner communication and peer-to-peer communication.

Virtual Reality: The simulation of an environment by presentation of 3D moving images and associated sounds, giving the user the impression of being able to move around with the simulated environment.

VHF Very High Frequency: 'Very High Frequency' is the designated term for the range of radio waves between 30 and 300 MHz. VHF radio covers short distances, extendable through VHF repeaters.

VPN Virtual private network: A VPN allows remote offices or users to enjoy secure access to their organization's network using the internet or other public telecommunications systems.

VSAT Very Small Aperture Terminal: Typically, 1.8 m to 3.8 m in diameter, a VSAT is a fixed satellite communication system or earth station with an antenna, that access satellites to provide internet connectivity in remote locations.

VRML: Virtual Reality Mark-up Language allows the display of 3D images

VSAT Calling: UNHCR maintains a global VSAT network that allows cost-effective voice communication between offices, from HQ to the field as well as between field offices.

W3C: It is the abbreviation for World Wide Web Consortium. An international non-profit organization which acts as a resource centre for the World Wide Web, and is active in setting technical standards.

Webmail: A facility for creating, sending and receiving messages through the internet.

Webquest: A webquest is a task-oriented activity. Here, the learner draws on material from different websites in order to achieve a specific goal.

Webserver: A computer or a software package running on a computer that delivers, i.e., server, web pages to its clients.

Web whacking: This involves saving entire websites for offline use.

Windows: The name of a range of several different Graphical User Interface (GUI) operating systems produced by the Microsoft Corporation.

Wizard: It is a software that guides the user step-by-step through a complex task, such as setting up software on a network or configuring a printer to output data in a special format.

WMA: Windows Media Audio

WorldCALL: It is basically the worldwide umbrella association for CALL (<http://www.worldcall.org>). It helps the countries that are currently not deserving in the applications of ICT.

Worldwide Web Consortium (W3C): An international non-profit organization which acts as a resource centre for the World Wide Web and is active in setting technical standards.

XML: The abbreviation for XML is eXtensible Markup Language. This specification is as per demand from the WWW Consortium (W3C). It allows web designers to create their own language for displaying documents on the web.

Practice Exercises

ICT BASICS

- ICT stands for [December 2004]
 - Information and communication technology
 - Information controlled technology
 - Information capable technology
 - None of the above
- Which of the following is the appropriate definition for Information Technology? [December 2004]
 - Information technology refers to the use of hardware and software for processing information.
 - Information technology refers to the use of hardware and software for distribution of useful information.
 - Information technology refers to the use of hardware and software for storage, retrieval, processing and distributing information of many kinds.
 - Information technology refers to the use of principles of physical sciences and social sciences for processing of information of many kinds.
- Which of the following is also termed as multimedia education?
 - ICT supported education
 - ICT enabled education
 - ICT education
 - None of the above
- CBT stands for
 - Central basic training
 - Computer-based training
 - Computer basic test
 - None of the above
- NPTEL stands for
 - National programme on technology enhanced learning
 - National programme on technology enabled learning
 - National programme on technology enhanced lessons
 - National programme on technology embedded learning
- The ERNET stands for
 - Engineering and research network
 - External and regulated network
 - Educational and research network
 - None of the above
- At which of the following institutions ERNET is used to connect computers?
 - IISCs
 - IITs
 - National Centre for Software Technology
 - All the above
- Which of the following is not included in the four basic dimensions of ICT?
 - Skills
 - Infrastructure
 - Attitude
 - Personnel
- Which of the following open source e-learning platform has been developed by IIT-Kanpur?
 - e-Gyan
 - e-Sarawati
 - Brihaspati
 - None of the above
- Recording a television programme on a VCR is an example of
 - Time-shifting
 - Content reference
 - Mechanical clarity
 - Media synchronization
- Which of the following is/are the main challenge/s in ICT adoption in Indian universities?
 - Lack of technological readiness
 - Poor implementation of ICT initiatives
 - Linguistic barrier
 - All the above
- Which of the following parameter is/are used for expansion of higher education?
 - Access
 - Equity
 - Resources
 - All of these
- TKDL stands for
 - Traditional knack digital library
 - Traditional knowledge digital library
 - Transfer knowledge desktop literature
 - Transfer knowledge digital library
- Sending and receiving messages/signals occurring at the same time is denoted by
 - Synchronous
 - Asynchronous
 - Both (a) and (b)
 - None of the above
- Video-conferencing is an example of
 - Synchronous technologies
 - Asynchronous technologies
 - Both synchronous and asynchronous
 - None of the above
- Which of the following terms can be used in the context of education through CDs?
 - Synchronous
 - Asynchronous
 - Both (a) and (b)
 - None of the above
- Digital divide is the term used in context of differentiation in use of IT/ICT?
 - Developed and developing nations
 - Urban and rural India
 - Both (a) and (b)
 - None of the above
- In the hypermedia database, information bits are stored in the form of [December 2005]
 - Signals
 - Cubes
 - Nodes
 - Symbols

19. Communication bandwidth that has the highest capacity and used by microwave, cable and fibre optics lines is known as [December 2005]
 (a) Hyperlink (b) Broadband
 (c) Bus width (d) Carrier wave
20. An electronic billboard that has a short text or graphical advertising message is referred to as [December 2005]
 (a) Bulletin (b) Strap
 (c) Bridge line (d) Banner
21. The concept of connect intelligence is derived from [June 2006]
 (a) Virtual reality
 (b) Fuzzy logic
 (c) Bluetooth technology
 (d) Value-added networks
22. The function of mass communication of applying information regarding the processes, issues, events and societal developments is known as [June 2006]
 (a) Content supply (b) Surveillance
 (c) Gratification (d) Correlation
23. Information and communication technology includes [December 2006]
 (a) Online learning
 (b) Learning through the use of EDUSAT
 (c) Web-based learning
 (d) All the above
24. Information that is a combination of graphics, text, sound, video and animation is called [December 2008]
 (a) Multiprogramme (b) Multifacet
 (c) Multimedia (d) Multiprocess
25. Which of the following institutions launched a knowledge repository e-Gyankosh in 2005 that aims at storing and preserving digital learning resources?
 (a) IIT-Kanpur
 (b) IGNOU
 (c) Allahabad University
 (d) Delhi University
26. The institution promoted by the Department of IT to provide communication infrastructure and services to academic research institutions in India is
 (a) INFLIBNET (b) UGC
 (c) ERNET (d) None of the above
27. The bouquet of FM radio channels which broadcast programs contributed by institutions such as IGNOU and IITs is
 (a) Gyan Vani (b) Gyan Darshan
 (c) EDUSAT (d) None of the above
28. Which of the following institutions has been working in the direction to develop a Virtual Technical University in India?
 (b) IGNOU (c) UGC
 (d) NMCEIT (e) AICTE
29. The joint initiative of the IITs and IISc to provide e-learning through online web and video courses in many streams, specifically engineering in the country, by providing free online courseware is
 (a) National Programme on Technology Enhanced Learning
 (b) AICTENET
 (c) NMCEIT
 (d) None of the above
30. Which organization has been assigned the task to develop e-content of 996 courses belonging to engineering, sciences, technology, humanities and management?
 (a) IIT-Madras (b) BITS Pilani
 (c) IIT Mumbai (d) None of the above
31. 'A-View', the software that has been developed under the NMEICT is basically developed for
 (a) Teacher's training (b) Technical training
 (c) Students' training (d) All the above
32. Web 2.0 tools have made traditional learning more social and personalized. Which of the following can be referred to as Web 2.0 tools?
 (a) Blogs and Wikis
 (b) Podcasts and Mashups
 (c) Social networking communities
 (d) All the above
33. Which of the following services can help students to access computer files from remote locations through mobile phones?
 (a) Facebook (b) Renren
 (c) Sooner (d) Twitter
34. The satellite communication works through
 (a) Transponder (b) Radar
 (c) TV (d) Fibre optics cable

COMPUTER TERMS

35. A computer consists of
 (a) A central processing unit
 (b) A memory
 (c) Input and output unit
 (d) All the above
36. A typical modern computer uses
 (a) LSI chips (b) Vacuum tubes
 (c) Valves (d) All the above
37. Which of the following is the correct statement? [December 2004]
 (a) Computers can be used for diagnosing the difficulty of a student in learning a subject.
 (b) Psychological testing can be done with the help of a computer, provided that a software is available.
 (c) A set of instructions is called a programme.
 (d) All the above

38. Which of the following statements is not correct?
[December 2004]
- Computer is capable of processing only digital signal.
 - Computer is capable of analysing both quantitative and qualitative data.
 - Appropriate software is required for processing the data.
 - Computer is capable of processing digital as well as analogue signals.
39. Which of the following statements is correct?
[December 2004]
- Virus improves the speed of processing information through the computer.
 - The internet does not allow a virus to spread.
 - Virus is a part of software.
 - Virus is an operating system.
40. Which of the following is not the characteristic of a computer?
[December 2005]
- Computer is an electrical machine.
 - Computer cannot think on its own.
 - Computer processes an information error free.
 - Computer can hold data for any length of time.
41. Which of the following is the appropriate definition of a computer?
[December 2006]
- Computer is a machine that can process the information.
 - Computer is an electronic device that can store, retrieve and quickly process both quantitative and qualitative data quickly and accurately.
 - Computer is an electronic device that can store, retrieve and quickly process only quantitative data.
 - Computer is an electronic device that can store, retrieve and quickly process only qualitative data.
42. The pioneer organization in personal computer industry is
- | | |
|------------|-------------|
| (a) IBM | (b) Apple |
| (c) Compaq | (d) Infosys |
43. Which of the following terms is the most closely related to main memory?
- | | |
|------------------|---------------|
| (a) Non-volatile | (b) Permanent |
| (c) Control unit | (d) Temporary |
44. Which of the following is used for manufacturing chips?
- | | |
|-----------------|-------------------|
| (a) Control bus | (b) Control unit |
| (c) Parity unit | (d) Semiconductor |
45. Group of instructions to direct the functioning of a computer is called
- | | |
|-------------|------------|
| (a) Storage | (b) Memory |
| (c) Program | (d) Byte |
46. The main component of first generation computer was
- Transistors
 - Vacuum tubes and valves
 - Integrated circuits
 - None of the above
47. FORTRAN is the acronym for
- | | |
|-------------------------|------------------------|
| (a) File translation | (b) Format translation |
| (c) Formula translation | (d) Floppy translation |
48. In analogue computer
- Input is first converted to digital form.
 - Input is never converted to digital form.
 - Output is displayed in digital form.
 - All the above
49. A hybrid computer
- Resembles a digital computer.
 - Resembles an analogue computer.
 - Resembles both a digital and analogue computer.
 - None of the above
50. In the latest generation computers, the instructions are executed
- Parallely only
 - Sequentially only
 - Both sequentially and parallely
 - All the above
51. Who designed the first electronics computer called ENIAC?
- John von Neumann
 - Joseph M. Jacquard
 - J. Presper Eckert and John W. Mauchly
 - None of the above
52. The hexadecimal number system consists of the symbols
- | | |
|--------------|-----------------------|
| (a) 0–7 | (b) 0–9, A–F |
| (c) 0–7, A–F | (d) None of the above |
53. The binary equivalent of $(-15)_{10}$ is (two's complement system is used)
- | | |
|--------------|-----------------------|
| (a) 11110001 | (b) 11110000 |
| (c) 10001111 | (d) None of the above |
54. 1 GB is equal to
- | | |
|-------------------|--------------------|
| (a) 2^{30} bits | (b) 2^{30} bytes |
| (c) 2^{20} bits | (d) 2^{20} bytes |
55. All computers such as big, medium or small must have
- | | |
|---------------------|------------------|
| (a) ALU | (b) Control unit |
| (c) Primary storage | (d) All of these |
56. A byte consists of
- | | |
|----------------|------------------|
| (a) One bit | (b) Four bits |
| (c) Eight bits | (d) Sixteen bits |
57. Which of the following is/are example/s of operating systems?
- Unix/BSD
 - GNU/Linux
 - Windows
 - Mac OS: Mac OS X
- | | |
|-------------------|--------------------|
| (a) I, II and III | (b) II, III and IV |
| (c) I, III and IV | (d) All of these |
58. System software designed to help in analysing, monitoring, configuring, optimizing settings and maintaining the computer are known as
- | | |
|--------------------------|-----------------------|
| (a) Application software | (b) Utility software |
| (c) Groupware | (d) None of the above |
59. The general term used for the software that can be copied and used without payment to the author(s), although there may be some restrictions on distribution is
- | | |
|-------------|-------------------|
| (a) Spyware | (b) Freeware |
| (c) Malware | (d) None of these |

60. The silicon chips used for data processing are called
 (a) RAM chips (b) ROM chips
 (c) Microprocessors (d) PROM chips
61. The metal disks, which are permanently housed in sealed and contamination free containers are called
 (a) Hard disks (b) Floppy disks
 (c) Winchester disks (d) Flexible disks
62. All modern computers operate on
 (a) Information (b) Floppies
 (c) Data (d) Word
63. Instructions and memory address are represented by
 (a) Character code (b) Binary codes
 (c) Binary word (d) Parity bit
64. The computer size was very large in
 (a) First generation (b) Second generation
 (c) Third generation (d) Fourth generation
65. Microprocessors as switching devices are for which generation computers
 (a) First generation (b) Second generation
 (c) Third generation (d) Fourth generation
66. UNIVAC is
 (a) Universal automatic computer
 (b) Universal array computer
 (c) Unique automatic computer
 (d) Unvalued automatic computer
67. Which of the following programming languages is widely used in computer science, engineering and also in business?
 (a) COBOL (b) FORTRAN
 (c) PASCAL (d) LISP
68. The first electronic digital computer contained
 (a) Electronic valves
 (b) Vacuum tube
 (c) Transistors
 (d) Semiconductor memory
69. The name of Centre for Development of Advanced Computing's (C-DAC's) next generation high performance, scalable, computing cluster, breaking the barrier of computing power of one teraflop is
 (a) PARAM (b) Chakra
 (c) Shri (d) None of the above
70. Normally, these computers are used in banking, airlines and railways, etc., for their applications. They can accommodate more than 1,000 workstations simultaneously and can process data at a very high speed and can support concurrent programmes. These are
 (a) Mainframe computers
 (b) Micro computers
 (c) Workstations
 (d) Super computers
71. Which of the following is used for manufacturing chips?
 (a) Bus (b) Control unit
 (c) Semiconductors (d) a and b only
72. Which of the following is the most powerful computer?
 (a) Minicomputer (b) Microcomputer
 (c) Mainframe computer (d) Supercomputer
73. In which of the following languages, a source programme is written?
 (a) English (b) Symbolic
 (c) High-level (d) Temporary
74. The set of computer programs that manage the hardware/software of a computer are called
 (a) Compiler system (b) Operation system
 (c) Operating system (d) None of the above
75. A software that converts a program in assembly language into machine language is called
 (a) Compiler (b) Assembler
 (c) Interpreter (d) None of these
76. A software which converts a high-level language program to machine language in one go is called
 (a) Compiler (b) Assembler
 (c) Interpreter (d) Loader
77. A computer program that converts an entire program into machine language is called a/an
 (a) Interpreter (b) Simulator
 (c) Compiler (d) Commander
78. A computer program that translates one program instructions at a time into machine language is called a/an
 (a) Interpreter (b) CPU
 (c) Compiler (d) Simulator
79. A small or intelligent device is so called because it contains within it a
 (a) Computer (b) Microcomputer
 (c) Programmable (d) Sensor
80. Which of the following belongs to the first generation of computers?
 (a) AC (b) IBM 1401
 (c) IBM 8090 (d) UNIVAC
81. A collection of eight bits is called
 (a) Byte (b) Word
 (c) File (d) Folder
82. The brain of a computer which keeps peripherals under its control is called **[December 2007]**
 (a) Common power unit
 (b) Common processing unit
 (c) Central power unit
 (d) Central processing unit
83. Central processing unit consists of
 (a) Input, output and processor.
 (b) Input, output, processor and browser.
 (c) Control unit, arithmetic logic unit and primary storage.
 (d) Control unit, processor and primary storage.
84. ALU stands for
 (a) Arithmetic Logic Unit (b) Array Logic Unit
 (c) Application Logic Unit (d) None of the above
85. The ALU of a computer responds to the commands coming from
 (a) Primary memory (b) Control section
 (c) External memory (d) Cache memory

86. It contains buttons and menus that provide quick access to commonly used commands. It is a
 (a) Menu bar (b) Toolbar
 (c) Window (d) None of these
87. The type of keys Ctrl, Shift and Alt belong to is
 (a) Adjustment (b) Function
 (c) Modifier (d) Alphanumeric
88. Which of the following is a part of the central processing unit?
 (a) Printer (b) Keyboard
 (c) Arithmetic logic unit (d) None of the above
89. The instructions for starting the computer are set up on
 (a) Random access memory
 (b) CD-ROM
 (c) Read-only memory chip
 (d) All the above
90. The ALU of a computer normally contains a number of high-speed storage elements called
 (a) Semiconductor memory
 (b) Registers
 (c) Hard disks
 (d) Magnetic disk
91. A factor which would strongly influence a business person to adopt a computer is its
 (a) Accuracy (b) Reliability
 (c) Speed (d) All of these
92. The keyboard of a computer is encoded in
 (a) Baudot code (b) ASCII code
 (c) BCDIC code (d) EBCDIC code
93. EBCDIC stands for
 (a) Extended Binary Coded Decimal Interchange Code
 (b) Extended Bit Code Decimal Interchange Code
 (c) Extended Bit Case Decimal Interchange Code
 (d) Extended Binary Case Decimal Inter-change Code
94. EBCDIC can code up to how many different characters?
 (a) 256 (b) 16
 (c) 32 (d) 64
95. BCD is
 (a) Binary Coded Decimal (b) Bit Coded Decimal
 (c) Binary Coded Digit (d) Bit Coded Digit
96. ASCII stands for
 (a) American Stable Code for International Interchange
 (b) American Standard Case for Institutional Interchange
 (c) American Standard Code for Information Interchange
 (d) American Standard Code for Interchange Information
97. CD ROM stands for [December 2007]
 (a) Computer Disk Read-only Memory
 (b) Compact Disk Read-over Memory
 (c) Compact Disk Read-only Memory
 (d) Computer Disk Read-over Memory
98. Data can be saved on backing storage medium known as [December 2007]
 (a) Compact disk recordable
 (b) Computer disk rewriteable
 (c) Compact disk rewritable
 (d) Computer data rewritable
99. RAM means [December 2007]
 (a) Random Access Memory
 (b) Rigid Access memory
 (c) Rapid Access Memory
 (d) Revolving Access memory
100. Microprocessing is made for [December 2008]
 (a) Computer (b) Digital system
 (c) Calculator (d) Electronic goods
101. Which is the largest unit of storage among the following? [December 2009]
 (a) Terabyte (b) Megabyte
 (c) Kilobyte (d) Gigabyte
102. In comparison to secondary storage, primary storage is
 (a) Slower and less expensive
 (b) Faster and more expensive
 (c) Faster and less expensive
 (d) Slower and more expensive
103. The two kinds of main memory are
 (a) ROM and RAM.
 (b) Primary and secondary.
 (c) Floppy diskette and compact diskette.
 (d) None of the above
104. The act of retrieving existing data from the memory is called
 (a) Read-out (b) Read from
 (c) Read (d) All of these
105. RAM is used as short memory as it is
 (a) Expensive (b) Small capacity
 (c) Programmable (d) Volatile
106. The computer memory used for temporary storage of data and program is called
 (a) ROM (b) RAM
 (c) EROM (d) EPROM
107. The memory which is programmed at the time of its manufacturing is
 (a) ROM (b) RAM
 (c) PROM (d) EPROM
108. Which of the following is a secondary memory device?
 (a) CPU (b) ALU
 (c) Floppy diskette (d) None of the above
109. The most important advantage of a video disk is
 (a) Compactness (b) Potential capacity
 (c) Durability (d) Cost effectiveness
110. Floppy disks which are made from flexible plastic material are also called?
 (a) Hard disks (b) High-density disks
 (c) Diskettes (d) Templates
111. What is the latest write-once optical storage media?
 (a) Digital paper
 (b) Magneto-optical disk
 (c) WORM disk
 (d) CD-ROM disk

112. Regarding a VDU, which statement is more correct?
(a) It is an output device.
(b) It is an input device.
(c) It is a peripheral device.
(d) It is a hardware item.
113. The two main memory types are
(a) Primary and secondary.
(b) Random and sequential.
(c) ROM and RAM.
(d) All the above
114. Which of the following will happen when data is entered into a memory location?
(a) It will add to the content of the location.
(b) It will change the address of the memory location.
(c) It will erase the previous content.
(d) It will not be fruitful if there is already some data at the location.
115. A storage area used to store data to compensate for the difference in speed at which the different units can handle data is
(a) Memory (b) Buffer
(c) Accumulator (d) Address
116. Which of the following memories allow simultaneous read and write operations?
(a) ROM (b) RAM
(c) EPROM (d) None of these
117. Which of the following memories has the shortest access times?
(a) Cache memory
(b) Magnetic bubble memory
(c) Magnetic core memory
(d) RAM
118. To locate a data item for storage is
(a) Field (b) Feed
(c) Database (d) Fetch
119. The magnetic storage chip used to provide non-volatile direct access storage of data and that has no moving parts is known as
(a) Magnetic core memory
(b) Magnetic tape memory
(c) Magnetic disk memory
(d) Magnetic bubble memory
120. The OCR stands for
(a) Operational Character Reader
(b) Optical Character Reader
(c) Only Character Reader
(d) None of the above
121. As compared to secondary memory, the primary memory of a computer is
(a) Large (b) Cheap
(c) Fast (d) Slow
122. Which of the following is a way to access secondary memory?
(a) Random access memory
(b) Action method
(c) Transfer method
(d) Density method
123. A CD-RW disk
(a) Has faster access than other disks.
(b) Is a type of optical disk.
(c) Can be written only once.
(d) Can be erased and rewritten.
124. EEPROM stands for
(a) Electrically Erasable Programmable Read-only Memory
(b) Easily Erasable Programmable Read-only Memory
(c) Electronic Erasable Programmable Read-only Memory
(d) None of the above
125. VGA denotes
(a) Video Graphics Array
(b) Visual Graphics Array
(c) Volatile Graphics Array
(d) Video Graphics Adapter
126. MSI stands for
(a) Medium Scale Integrated Circuits
(b) Medium System Integrated Circuits
(c) Medium Scale Intelligent Circuit
(d) Medium System Intelligent Circuit
127. WAN stands for
(a) WAP Area Network
(b) Wide Area Network
(c) Wide Array Net
(d) Wireless Area Network
128. MICR stands for
(a) Magnetic Ink Character Reader
(b) Magnetic Ink Code Reader
(c) Magnetic Ink Cases Reader
(d) None of the above
129. Which of the following devices can be used to directly image printed text?
(a) OCR (b) OMR
(c) MICR (d) All the above
130. The output quality of a printer is measured by
(a) Dot per inch
(b) Dot per square inch
(c) Dots printed per unit time
(d) All the above
131. Which printer is very commonly used for desktop publishing?
(a) Laser printer (b) Inkjet printer
(c) Daisywheel printer (d) Dot matrix printer
132. An output device that uses words or messages recorded on a magnetic medium to produce audio response is
(a) Magnetic tape (b) Voice response unit
(c) Voice recognition unit (d) Voice band
133. An error in the software or hardware is called a bug. What is the alternative computer jargon for it?
(a) Leech (b) Squid
(c) Slug (d) Glitch
134. Errors in computer programme are called
(a) Follies (b) Mistakes
(c) Bugs (d) Spam

135. Modern computers are very reliable but they are not
 (a) Fast (b) Powerful
 (c) Infallible (d) Cheap
136. Personal computers use a number of chips mounted on a main circuit board. What is the common name for such boards?
 (a) Daughter board (b) Motherboard
 (c) Father board (d) Dash board
137. What is meant by a dedicated computer?
 (a) Which is used by one person only.
 (b) Which is assigned one and only one task.
 (c) Which uses one kind of software.
 (d) Which is meant for application software.
138. The system unit of a personal computer typically contains all of the following except
 (a) Microprocessor (b) Disk controller
 (c) Serial interface (d) Modem
139. Programs designed to perform specific tasks are known as
 (a) System software (b) Application software
 (c) Utility programs (d) Operating system
140. The time during which a job is processed by the computer is
 (a) Delay time (b) Real time
 (c) Execution time (d) Down time
141. An approach that permits the computer to work on several programs instead of one is
 (a) Online thesaurus
 (b) Multiprogramming
 (c) Overlapped processing
 (d) Outline processor
142. The term gigabyte refers to
 (a) 1024 bytes (b) 1024 kilobytes
 (c) 1024 megabytes (d) 1024 gigabyte
143. The device that provides information, which is sent to the CPU is termed as
 (a) Input (b) Output
 (c) CPU (d) Memory
144. The type of media with varying capacities that is used in the storage subsystem in a microcomputer is
 (a) Memory or video (b) Magnetic or optical
 (c) Optical or memory (d) Video or magnetic
145. Which is considered a direct entry input device?
 (a) Optical scanner
 (b) Mouse and digitizer
 (c) Light pen
 (d) All the above
146. The computer code for interchange of information between terminals is
 (a) ASCII (b) BCD
 (c) EBCDIC (d) All of the above
147. On the keyboard of a computer, each character has an ASCII value which stands for
 (a) American Stock Code for Information Interchange
 (b) American Standard Code for Information Interchange
 (c) African Standard Code for Information Interchange
 (d) Adaptable Standard Code for Information Interchange
148. Which part of the CPU performs calculations and makes decisions?
 (a) Arithmetic logic unit
 (b) Alternating logic unit
 (c) Alternate local unit
 (d) American logic unit
149. Dpi stands for
 (a) Dots per inch (b) Digits per unit
 (c) Dots pixel inch (d) Diagrams per inch
150. The process of laying out a document with texts, graphics, headlines and photographs is involved in
 (a) Deck top publishing
 (b) Desktop printing
 (c) Desktop publishing
 (d) Deck top printing
151. The transfer of data from one application to another line is known as
 (a) Dynamic disk exchange
 (b) Dodgy data exchange
 (c) Dogmatic data exchange
 (d) Dynamic data exchange
152. An application program that helps the user to change any number and immediately see the result of that change is
 (a) Desktop publishing program
 (b) Database
 (c) Spreadsheet
 (d) All the above
153. CAD stands for
 (a) Computer Aided Design
 (b) Computer Algorithm for Design
 (c) Computer Application in Design
 (d) All the above
154. Which of the following is required when more than one person use a central computer at the same time?
 (a) Terminal (b) Light pen
 (c) Digitizer (d) Mouse
155. Which of the following is used only for data entry and storage, and never for processing?
 (a) Mouse
 (b) Dumb terminal
 (c) Microcomputer
 (d) Dedicated data entry system
156. Which of the following will be required to produce high quality graphics?
 (a) RGB monitor (b) Plotter
 (c) Inkjet printer (d) Laser printer
157. Magnetic tapes can serve as
 (a) Secondary storage media (b) Output media
 (c) Input media (d) All the above
158. If in a computer, 16 bits are used to specify address in a RAM, then the number of addresses will be

- (a) 216 (b) 65, 536
(c) 64K (d) Any of these
159. The two major types of computer chips are
(a) External memory chip
(b) Primary memory chip
(c) Microprocessor chip
(d) Both (b) and (c)
160. What is the responsibility of the logical unit in the CPU of a computer?
(a) To produce result.
(b) To compare numbers.
(c) To control the flow of information.
(d) To do mathematical works.
161. The secondary storage devices can only store data but they cannot perform
(a) Arithmetic operations
(b) Logical operation
(c) Fetch operations
(d) Either of the above
162. Which of the printers used in conjunction with computers use dry ink powder?
(a) Daisy wheel printer (b) Line printer
(c) Laser printer (d) Thermal printer
163. Which of the following produces the best quality graphics reproduction?
(a) Laser printer (b) Inkjet printer
(c) Plotter (d) Dot matrix printer
164. A 32-bit microprocessor has a word length equal to
(a) 2 byte (b) 32 byte
(c) 4 byte (d) 8 byte
165. An error in computer data is called
(a) Chip (b) Bug
(c) CPU (d) Storage device
166. A set of information that defines the status of resources allocated to a process is
(a) Process control (b) ALU
(c) Register unit (d) Process description
167. Any method for controlling access to or use of memory is known as
(a) Memory map (b) Memory protection
(c) Memory management (d) Memory instruction
168. The accounting software Tally was developed by
(a) HCL (b) TCS
(c) Infosys (d) Wipro

THE INTERNET AND E-MAIL

169. What is the 'Internet'?
(a) A hardware networking technique.
(b) World Wide Web
(c) Computers that are all linked together in a network.
(d) None of the above
170. Line access and avoidance of collision are main functions of [December 2005]
(a) CPU
(b) Monitor
(c) Network protocols
(d) Wide Area Networks
171. In web search, finding a large number of documents with very little relevant information is termed as [June 2006]
(a) Poor recall
(b) Web crawl
(c) Poor precision rate
(d) Poor web response
172. Use of an ordinary telephone as an internet appliance is called [June 2006]
(a) Voice net (b) Voice telephone
(c) Voice line (d) Voice portal
173. Using websites to pour out one's grievances is called [June 2006]
(a) Cyberventing (b) Cyber ranting
(c) Web hate (d) Web plea
174. Which of the following is the appropriate format of URL of e-mail? [December 2006]
(a) www_mail.com (b) www@mail.com
(c) WWW@mail.com (d) www.mail.com
175. Which of the following statements is correct? [December 2006]
(a) Modem is a software.
(b) Modem helps in stabilizing the voltage.
(c) Modem is an operating system.
(d) Modem converts analogue signals into digital and vice versa.
176. The term www represents [December 2007]
(a) Who What And Where (b) Weird Wide Web
(c) Word Wide Web (d) World Wide Web
177. HTML is basically used to design [December 2008]
(a) Web page (b) Website
(c) Graphics (d) Tables and frames
178. Which of the following protocols manages the assembling of a message or file into smaller packets that are transmitted over the Internet and received by a layer that reassembles the packets into the original message. It also handles the address part of each packet so that it gets to the right destination?
(a) HTTP (b) TCP/IP
(c) FTP (d) All of these
179. A set of guidelines or standards that establish the format in which files can be transmitted from one computer to another is
(a) TCP (b) IP
(c) FTP (d) All of these
180. The protocol used specifically for exchange of e-mails is
(a) SMTP (b) TCP
(c) IP (d) None of the above

181. SMTP stands for
(a) Simplest Mail Transfer Protocol
(b) Simple Mail Transfer Protocol
(c) Sample Mail Transfer Protocol
(d) Separate Mail Transfer Protocol
182. A word in a web page when clicked opens another document is
(a) Anchor (b) URL
(c) Hyperlink (d) Reference
183. Which of the following identifies a specific web page and its computer on the web?
(a) Website (b) Website address
(c) URL (d) Domain name
184. Which of the following terms applies to all the web pages for Amazon.com?
(a) Top-level domain (b) Website
(c) Website address (d) Web domain
185. Softwares such as Explorer and Firefox are referred to as
(a) Systems software
(b) Utility software
(c) Browsers
(d) The internet tools
186. Firewalls are used to protect a communication network against
(a) Unauthorized attacks (b) Virus attacks
(c) Data-driven attacks (d) Fire attacks
187. Which of the following ISP is free of cost?
(a) CompuServe (b) AOL
(c) NetZero (d) None of the above
188. Which of the following is virtual reality website?
(a) First Life (b) Second Life
(c) Gyan Life (d) None of the above
189. Which of the following refers to an educational website that allows its members to add or change its information?
(a) Educational or .edu
(b) Social networking site
(c) Wiki
(d) Web 2.0
190. If you want to create a broadcast that can be downloaded from the internet, then what would you create?
(a) IBroadcast (b) EShow
(c) Podcast (d) ICast
191. Video transmission over the internet that looks like delayed livecasting is called
(a) Virtual video (b) Direct broadcast
(c) Video shift (d) Real-time video
192. It is a very high-speed data transmission line that provides networking facilities to relatively small but high-speed internet service providers (including commercial, educational, military, government establishments) all around the world. It is known as
(a) Pathway
(b) Backbone
(c) Communication system
(d) Routers
193. What type of telecommunication hardware allows you to access the web?
(a) Browser (b) Modem
(c) FTP protocol (d) IRC
194. VoIP technology converts voice calls from
(a) Analogue to digital (b) Digital to analogue
(c) It depends (d) None of the above
195. What is the domain originally meant for non-profitable organizations?
(a) .gov (b) .org
(c) .net (d) .in
196. Which of the following is the internet connection option?
(a) Dial-up connection
(b) Digital Subscriber Line
(c) Broadband
(d) All the above
197. Which of the following is not related to information security on the internet? [December 2009]
(a) Data encryption (b) Water marking
(c) Data hiding (d) Information retrieval
198. Bit stands for [December 2009]
(a) Binary information term
(b) Binary tree
(c) Binary digit
(d) Bivariate theory
199. Which one of the following is not a linear data structure? [December 2009]
(a) Array (b) Binary tree
(c) Queue (d) CPU
200. A compiler is used to convert the following to object code which can be executed [December 2009]
(a) High level language
(b) Low level language
(c) Assembly language
(d) Natural language
201. Which of the following is not a network device? [December 2009]
(a) Router (b) Switch
(c) Hub (d) CPU
202. What is the full form of HTTP?
(a) Hypertext Transmission Protocol
(b) Hypertext Transfer Protocol
(c) Hyperterminal Transport Protocol
(d) Hyperterminal Transfer Protocol
203. The protocol dealing with transfer of hypertext between two or more computers is
(a) HTML (b) FTP
(c) HTTP (d) TCP
204. IRC stands for
(a) Internet Related Chat
(b) Internet Relay Chat
(c) Internet Related Content
(d) None of the above
205. Which of these are types of internet connections?
(a) SLIP (b) DIAS
(c) PPP (d) All of these

206. Internet's initial development was supported by
(a) ARPANET (b) Bill Rogers
(c) Bill Gates (d) Microsoft
207. The Internet Explorer was invented and released by
(a) Microsoft (b) WIPRO
(c) Sun Microsystems (d) Infosys
208. Gopher protocol is used to
(a) Distributing documents through the internet
(b) Searching documents through the internet
(c) Retrieving documents through the internet
(d) All the above
209. World Wide Web was proposed by
(a) Bill Gates (b) ARPANET
(c) Tim Berners-Lee (d) Bill Rogers
210. What are the uses of the internet?
(a) Communication
(b) Information retrieval
(c) Presentation of information
(d) All the above
211. .edu domain is used for
(a) Educational institution
(b) The internet infrastructure and service providers
(c) International organizations
(d) None of the above
212. What is the full form of URL?
(a) Uniform Resource Library
(b) Uniform Resource Locators
(c) United Resource Library
(d) United Resource Locators
213. The main advantages of an e-mail is/are
(a) Speed (b) Cost
(c) Record keeping (d) All the above
214. www provides standardized access to
(a) GOPHER (b) Telnet
(c) FTP (d) All of these
215. Which of these is not an internet browser?
(a) Netscape Navigator (b) Chrome
(c) Drupal (d) Opera
216. What is the World Wide Web?
(a) A computer game
(b) A software program
(c) Part of the internet that enables information sharing through interconnected pages.
(d) Another name for the internet.
217. Which one of the following is a search engine?
(a) Macromedia Flash
(b) Google
(c) Netscape
(d) Librarians' Index to the Internet
218. What is a URL?
(a) A computer software program.
(b) A type of UFO.
(c) Address of a document or page on the www.
(d) An acronym for unlimited resources for learning.
219. <http://www.classzone.com> is an example of what?
(a) URL (b) Access code
(c) Directory (d) Server
220. What is a browser?
(a) An HTML system
(b) A server
(c) Application software for accessing and viewing web pages
(d) None of the above
221. A chat program that allows people to communicate through the internet in real time is known as
(a) Distant messaging (b) Instant messaging
(c) Chatting room (d) All the above
222. The first page of a Website is called the
(a) Home page (b) Index
(c) Menu bar (d) None of the above
223. HTML is an acronym of
(a) High Tech Markup Language
(b) How To Markup Language
(c) Hypertext Markup Language
(d) HoT Meal
224. A machine that links two networks using two different protocols is known as
(a) Gateway (b) Protocol way
(c) e-way (d) Gate
225. E-mail is an abbreviation of
(a) Electronic mail (b) Extra mail
(c) Enhanced mail (d) None of the above
226. ISP is an acronym of
(a) Internal Service Provider
(b) Internet Service Procedure
(c) Internet Service Provider
(d) Instant Service Protocol
227. Web server is a software for
(a) Analysing web traffic
(b) Serving web page upon user's request
(c) Crawling the web
(d) Unix operating system
228. FTP stands for
(a) Full Text Processing
(b) File Transfer Program
(c) File Transfer Process
(d) File Transfer Protocol
229. Telnet is
(a) A telephone network
(b) A teller network
(c) Standard internet protocol for remote login
(d) Dialup program
230. LAN is an acronym of
(a) Local Area Network
(b) Logical Area Network
(c) Last Area Network
(d) None of the above
231. The term used to connect a number of computers within the same location or in close proximity is
(a) LAN (b) WAN
(c) PAN (d) All of these
232. Ethernet is a family of protocols used in
(a) LAN (b) The internet
(c) Extranet (d) None of the above

233. MAN is a network of computers located at different sites within a large fixed area, such as a city. It stands for
 (a) Metropolitan Area Network
 (b) Manual Area Network
 (c) Marginal Area Network
 (d) Maximum Area Network
234. A computer network in which some of the links between the nodes are carried by open connections or virtual circuits in some larger network, such as an internet instead of physical wires is a
 (a) Virtual private network
 (b) Virtual public network
 (c) Virtual private net
 (d) Virtual public net
235. This type of computer networking is accessible to computers that are not physically part of an organization's own private network but are also not accessible to the general public is
 (a) The internet (b) Intranet
 (c) Extranet (d) None of the above
236. The name of the protocol that supports linking from one web page to another page is
 (a) HTML (b) IP
 (c) HTTP (d) FTP
237. The first part of a complete URL that is required to access the web resource is
 (a) Address (b) Name
 (c) Location (d) Protocol
238. An address for a specific document found on the web is termed as
 (a) HTTP (b) URL
 (c) ISP (d) None of the above
239. Which of the following organizes the web into categories?
 (a) Search engine (b) Encyclopaedia
 (c) Archive (d) Directory
240. A large number of computers in a wide geographical area can be efficiently connected using
 (a) Twisted pair lines
 (b) Coaxial cables
 (c) Communications satellites
 (d) All the above
241. A computer network allows sharing of resources. The software resources exist in the form of files of data, which needs to be moved between two specific computer systems for the purpose of sharing
 (a) Address for communication
 (b) A secure means for moving data in the form of electronic signals.
 (c) Both (a) and (b)
 (d) Either (a) or (b)
242. The hardware and software combinations that connect devices running different native protocols are known as
 (a) Protocols (b) Models
 (c) Gateways (d) Ports
243. USB stands for
 (a) United Serial Bus
 (b) Universal Serial By-Pass
 (c) Universal Serial Bus
 (d) Universal System Bus
244. Which of the following denotes the internet hardware requirements?
 I. Modem
 II. Hub
 III. Bridge
 IV. Router
 V. Gateway
 (a) I, II and III (b) I, III, IV and V
 (c) I, IV and V (d) I, II, III, IV and V
245. Network-based e-mail was initially exchanged on the
 (a) ARPANET (b) SMTP
 (c) TCP/IP (d) None of the above
246. The type of digital telephone service used for transferring large chunks of data to and from the internet without a modem is
 (a) ISDN (b) MSDN
 (c) TSDN (d) None of these
247. The term/protocol used for open wireless technology for data exchange over short distances is
 (a) ISDN (b) Bluetooth
 (c) Wi-Fi (d) None of these
248. ISDN stands for
 (a) Integrated Services Digital Network
 (b) Intelligent Services Digital Network
 (c) Individual Services Digital Network
 (d) Image Services Digital Network
249. Wired ethernet is basically
 (a) ADSL (b) ISDN
 (c) Broadband (d) The internet
250. The software that permits a user with a click of mouse to locate, display and download text, video, audio and graphics stored in a host computer on the web is a
 (a) Web browser (b) Domain
 (c) URL (d) None of the above
251. Which of the following are web browsers?
 I. Internet Explorer
 II. Mozilla Firefox
 III. Opera
 IV. Safari
 (a) I, II and III (b) II, III and IV
 (c) I, III and IV (d) All of these
252. Which of the following domain name extension is used for gateways and administrative hosts?
 (a) .gov (b) .mil
 (c) .net (d) .org
253. .com, .org, .net are popular as
 (a) Top level domains
 (b) Tax level domains
 (c) Terrific level domains
 (d) None of the above

254. The unique numerical address of a computer on the internet (expressed as four sets of numbers and maximum 3 digits each, separated by dots, such as 150.237.176.24) is termed as
 (a) Internet protocol address
 (b) URL
 (c) ISP
 (d) None of the above
255. The term used for a search tool that sends user requests to several other search engines and/or databases and aggregates the results into a single list or displays them according to their source is
 (a) Metasearch engine
 (b) Google
 (c) Moodle
 (d) None of the above
256. An internet e-mail message consists of
 I. Message envelope
 II. Message header
 III. Message body
 (a) I and II (b) II and III
 (c) I and III (d) All of these
257. Which of the following symbols is in e-mail addresses to separate the username from the ISP?
 (a) \$ (b) @
 (c) % (d) *
258. The size of the IPv4 is
 (a) 16 bits (b) 32 bits
 (c) 64 bits (d) 128 bits
259. Which of the following can be used to send e-mails to a large group at one time?
 (a) LISTSERV (b) Group
 (c) Groupware (d) Mail server
260. Which of the following line gives an overview of message while sending an e-mail?
 (a) To (b) Subject
 (c) Contents (d) CC
261. Unsolicited commercial e-mail is usually referred to as
 (a) Junk (b) Hoaxes
 (c) Spam (d) Hypertext
262. Which of the following is used by news servers to distribute documents to readers?
 (a) Network News Transfer Protocol (NNTP)
 (b) Hypertext Transfer Protocol
 (c) File Transfer Protocol
 (d) None of the above
263. To search FTP archives in a file, the tool used is
 (a) Gophe (b) Jughead
 (c) Archie (d) Jalopy
264. Which of the following is often referred to as ‘The CB of the Internet’?
 (a) IRC (b) FTP
 (c) e-mail (d) HTTP
265. Which of the following monitors postings and enforces the site’s rules in context of discussion groups?
 (a) Judge (b) Sysop
 (c) Narrator (d) Censor
266. A message with replies in a newsgroup is often called a
 (a) List (b) Thread
 (c) Comment (d) Post
267. S/MIME in the internet technology stands for
 (a) Secure Multipurpose Internet Mail Extension
 (b) Secure Multimedia Internet Mail Extension
 (c) Simple Multipurpose Internet Mail Extension
 (d) Simple Multipurpose Internet Mail Extension
268. A small text file that a web server stores on a user hard drive when the user visits certain websites is called
 (a) Cookie (b) History
 (c) Logjam (d) None of the above
269. Which of the following software allows users to surf the internet?
 (a) Search engine (b) Internet service provider
 (c) Multimedia (d) Browser

MISC MCQS ON ICT

270. Which of the following pair is not correctly managed?
 [December 2004]
 (a) Aaj Tak—24 hours news channel
 (b) PM Stations—Radio
 (c) National Geographic Channel— Television
 (d) Vir Sanghvi—India Today
271. Which is the oldest soap opera telecasted in India?
 [December 2004]
 (a) *Kahani Ghar Ghar Ki*
 (b) *Buniyaad*
 (c) *Hum Log*
 (d) *Kyunki Saas Bhi Kabhi Bahu Thee*
272. Which satellite channel uses the ad line ‘knowing is everything’?
 [December 2004]
 (a) BBC World (b) Star
 (c) Sony (d) Zee
273. Which is the first ‘made in India’ kids channel of television?
 [December 2004]
 (a) Cartoon Network
 (b) Walt Disney
 (c) United Home Entertainment’s Hungama TV
 (d) Nick Jr.
274. The largest number of newspapers in India is published from the state of
 [December 2005]
 (a) Kerala
 (b) Maharashtra
 (c) West Bengal
 (d) Uttar Pradesh
275. The launch of satellite channel by IGNOU on 26th January 2003 for technological education for the growth and development of distance education is
 [December 2005]

- (a) Eklavya Technology channel
(b) Gyan Darshan channel
(c) Rajrishi channel
(d) None of the above
- 276.** Networked media exist in interconnected [June 2006]
(a) Social environment
(b) Economic environment
(c) Political environment
(d) Technological environment
- 277.** The combination of computing, telecommunication and media in a digital atmosphere is referred to as [June 2006]
(a) Online communication
(b) Integrated media
(c) Digital combine
(d) Convergence
- 278.** A dialogue between a human being and a computer programme that occurs simultaneously in various forms is described as
(a) Man-machine speak (b) Binary chat
(c) Digital talk (d) Interactivity
- 279.** Which of the following is the 24 hours English business news channel in India? [December 2006]
(a) Zee News (b) NDTV 24 · 7
(c) CNBC (d) India News
- 280.** Which of the following pair is not correctly matched? [December 2006]
(a) N. Ram : The Hindu
(b) Barkha Dutt : Zee News
(c) Prannoy Roy : NDTV 24 · 7
(d) Prabhu Chawla : Aaj Tak
- 281.** 'Because you deserve to know' is the punch line used by [December 2006]
(a) *The Times of India* (b) *The Hindu*
(c) *Indian Express* (d) *Hindustan Times*
- 282.** The Press Council of India is located in [June 2007]
(a) Chennai (b) Mumbai
(c) Kolkata (d) Delhi
- 283.** DTH service was started in India in the year [December 2007]
(a) 2000 (b) 2002
(c) 2004 (d) 2006
- 284.** National Press Day is celebrated on [December 2007]
(a) 16th November (b) 19th November
(c) 21st November (d) 30th November
- 285.** The total number of members in the Press Council of India is [December 2007]
(a) 28 (b) 14
(c) 17 (d) 20
- 286.** The right to impart and receive information is guaranteed in the Constitution of India by Article [December 2007]
(a) 19 (2) (a) (b) 19 (16)
(c) 19 (2) (d) 19 (1) (a)
- 287.** The use of radio for higher education is based on the presumption of [December 2007]
(a) Enriching curriculum-based instruction.
(b) Replacing a teacher in the long run.
(c) Everybody having access to a radio set.
(d) Other means of instruction getting outdated.
- 288.** The first Indian satellite for serving the education sector is known as
(a) SATEDU (b) INSAT B
(c) EDUSAT (d) INSAT C
- 289.** The exclusive educational channel of IGNOU is known as
(a) Gyan Darshan (b) Gyan Vani
(c) Doordarshan (d) Prasar Bharati
- 290.** Community radio is a type of radio service that caters to the interests of
(a) Local audience (b) Education
(c) Entertainment (d) News
- 291.** Orkut is a part of
(a) Intrapersonal communication
(b) Mass communication
(c) Group communication
(d) Interpersonal communication
- 292.** The biggest news agency of India is [June 2008]
(a) PTI (b) UNI
(c) NANAP (d) Samachar Bharti
- 293.** Which broadcasting system for TV is followed in India? [June 2008]
(a) NTSE (b) PAL
(c) SECAM (d) NTCS
- 294.** All India Radio, before 1936, was known as [June 2008]
(a) Indian Radio Broadcasting
(b) Broadcasting Service of India
(c) Indian State Broadcasting Service
(d) All Indian Broadcasting Service
- 295.** Prasar Bharti was launched in India in the year
(a) 1995 (b) 1997
(c) 1999 (d) 2001
- 296.** Eklavya Technology channel, started in 2003, is a distant-learning joint initiative between
(a) IIT and IGNOU (b) IIIT and IGNOU
(c) UGC and AICTE (d) IIT and AICTE
- 297.** Virtual education refers to imparting instructions in a learning environment where the teacher and the students are separated by
(a) Time only
(b) Space only
(c) Both (a) and (b)
(d) None of the above
- 298.** Which of the following technology is mostly used by a teacher in virtual education?
(a) Course management applications
(b) Multimedia resources
(c) The internet
(d) Video-conferencing

299. In which of the following years, community radio started in India?
(a) 2001 (b) 2002
(c) 2003 (d) 2004
300. The number of bits that makes one nibble is
(a) 8 (b) 16
(c) 4 (d) None of the above
301. Which of the following is the only flash memory?
(a) RAM (b) EEPROM
(c) PROM (d) EPROM
302. SIMM is
(a) Serial in Memory Module
(b) Serial Input Memory Module
(c) Synchronous In Memory Module
(d) Synchronous Input Memory Module
303. Which of the following is not an example of primary memory?
(a) RAM (b) ROM
(c) Cache memory (d) Magnetic tape
304. Which of the following memory has the highest capacity?
(a) USB (b) Virtual memory
(c) Hard disk (d) None of these
305. Which of the following figure depicts the normal size of cache memory?
(a) 8 KB (b) 8 MB
(c) 8 GB (d) None of the above
306. Central processing unit performs read or write operations directly with
(a) ROM (b) RAM
(c) Hard Disk (d) Registers
307. The algorithm is basically
(a) Solution of a program.
(b) Random idea about a program.
(c) The logical flow of a program.
(d) None of the above
308. The file extension of MS Window sound file is
(a) .m (b) .c
(c) .wav (d) None of these
309. The file extension of Excel spreadsheet is
(a) .doc (b) .txt
(c) .xls (d) .ppt
310. The XML stands for
(a) Extensible Markup Language
(b) External Makeup Language
(c) External Markup Logic
(d) External Magnitude Language
311. The standard size of IP address is
(a) 16 bits (b) 32 bits
(c) 48 bits (d) 64 bits
312. Multimedia is basically a/an
(a) Animation feature
(b) Programming language
(c) Technology
(d) All the above
313. What do you need to put your web pages on the www?
(a) A connection to the internet
(b) A web browser
(c) A web server
(d) All the above
314. Which is the largest unit of storage among the following?
(a) Terabyte (b) Megabyte
(c) Kilobyte (d) Gigabyte
315. Which of the following is not a linear data structure?
(a) Array (b) Binary tree
(c) Queue (d) Stack
316. Which of the following is not a network device?
(a) Router (b) Switch
(c) Hub (d) CPU
317. Which one of the following represents the binary equivalent of the decimal number 23?
(a) 01011 (b) 10111
(c) 10011 (d) None of the above
318. Computers on the internet are identified by
(a) E-mail address (b) Street address
(c) IP address (d) None of the above
319. An example of asynchronous medium is
(a) Radio (b) Television
(c) Film (d) Newspaper
320. A message beneath a message is labelled as
(a) Embedded text (b) Internal text
(c) Intertext (d) Subtext
321. In analogue mass communication, the stories are
(a) Static (b) Dynamic
(c) Interactive (d) Exploratory

People, Development and Environment

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- The concept of people.
- Development and environment: Millennium development and Sustainable development goals.
- Human and environment interaction: Anthropogenic activities and their impacts on environment.
- Environmental issues: Local, Regional and Global; Air pollution, Water pollution, Soil pollution, Noise pollution, Waste (solid, liquid, biomedical, hazardous, electronic), Climate change and its Socio-Economic and Political dimensions.
- Impacts of pollutants on human health.
- Natural and energy resources: Solar, Wind, Soil, Hydro, Geothermal, Biomass, Nuclear and Forests.
- Natural hazards and disasters: Mitigation strategies.
- Environmental Protection Act (1986), National Action Plan on Climate Change, International agreements/efforts -Montreal Protocol, Rio Summit, Convention on Biodiversity, Kyoto Protocol, Paris Agreement, International Solar Alliance.

THE CONCEPT OF PEOPLE

This unit deals with people, development and environment. Thus, the foremost thing is to get familiarized with the basic definitions. Population is a near permanent group of interbreeding individuals of a species found in a space or geographical area at a particular point. It is called local population or deme. Metapopulation is a complex of local populations connected by dispersing individuals.

The main factors affecting population are as follows.

1. Natality (birth rate)
2. Mortality (death rate)
3. Population dispersal (emigration, immigration and migration)
4. Age distribution (pre-reproductive, reproductive and post-reproductive)
5. Population growth rate
6. Carrying resources mainly food, water, space and there are limited resources to support all life forms.

Population density is the number of individuals divided by space (such as per square km).

The term environment is derived from the French word *environner*. It means 'to surround'. According to the Environment (Protection) Act, 1986, environment

includes all the physical and biological surroundings of an organism and their interactions. Environment is defined as the sum of water, air and land, and the interrelationships that exist among them and with the human beings, other living organisms and materials.

The flora, fauna, microorganisms and the man-made structures in our surroundings have a bidirectional interaction with us, either directly or indirectly. The totality of all these components and their interactions constitute the environment. Air, water and land constitute our environment and influence us directly. We too exert an influence on our environment due to overuse or over exploitation of resources or due to discharge of pollutants in air, water and land.

In context of relation between people and environment, the following concepts developed:

1. **Environmental determinism:** It developed in 19th century Europe, a belief that environment determines how a culture develops. For example, white European nations believed that people from warmer climates were lazier because they did not have to work as hard to survive.
2. **Environmental possibilism:** It developed in the first half of the 20th century. It is the belief that the environment puts limits on people, but it does not determine how they will behave.

ECOLOGY

The term ecology was coined by Ernst Haeckel in 1869. Ecology deals with the study of organisms in their natural home.

Ecology is the scientific study of the relations that living organisms have with respect to each other, their natural environments and ecosystems.

It is present at three levels, which are as follows:

1. The individual organism (how individuals are affected by the environment and how they, in turn, affect the environment)
2. The population
3. The community

Ecology is defined as the study of ecosystems.

Ecological Footprint: The ecological footprint measures human consumption of natural resources in comparison to Earth's ecological capacity to regenerate them. Calculation of the footprint takes into account our consumption habits both at (i) micro (individual) level and (ii) macro (area or nation) level. The objective of its calculation is also to educate people about the need to change our consumption behaviour to make it more sustainable. Ecological footprint is measured in global hectares (*gha*).

Species, Population and Community

The organisms in this world can be divided into different species, just as human beings are a species, so are the roses and neem trees.

A species is a set of organisms that resemble each other in certain features. The members of a species living together and interacting with each other are called a population. The members of a population live within a given area.

Species Diversity

- It is an important attribute of biotic community, which is determined by the total number of species and their relative abundance.
- Greater species diversity indicates higher number of niches and greater stability of the community.

Keystone Species

- It is a species that has a significant and disproportionately large influence on the community structure and characteristics.
- It has often considerably low abundance and biomass as compared to dominant species.

Critical Link Species

- These are the species that play an important role in supporting network species as pollinators, dispersal agents, absorption or circulation of nutrients, etc. Mycorrhizal fungi help the vascular plants in obtaining inorganic nutrients from soil and organic residues.

Community

A community is an assemblage of all the interacting populations of different species in a geographical area. It is a complex interacting network of plants, animals, and microorganisms. Each population has a defined role in the community.

ECOSYSTEM

The term ecosystem was defined by Arthur Tansley in 1935. Ecosystem is a self-regulating community of living organisms (populations of species), interacting with each other and their non-living, physical environment, for example, forest ecosystem and ocean ecosystem. Even a clump of bushes can be an ecosystem. All ecosystems on the planet are interconnected and interdependent, and together, they make up the biosphere.

There is also exchange of matter and energy with physical environment. In an open ecosystem, there is free exchange of energy and matter with the outside world. In a closed ecosystem, there is no or very limited exchange.

Ecotone

An ecotone is the transitional area of vegetation between two different plant communities, such as forest and grassland. The influence of the two bordering communities on each other is known as the edge effect.

Ecosystems show large variations in their size, structure, composition and so on. However, all the ecosystems are characterized by certain basic structural and functional features which are common. There can be different types of ecosystems, such as forest ecosystem, marine ecosystem and desert ecosystem.

The composition and organization of communities and physical components decide the structure of an ecosystem. Thus, ecosystems have basically two types of components, namely biotic and abiotic.

Biotic Components (Living Components)

Living components in an ecosystem are either producers or consumers and they are also called biotic

components. Producers produce organic components, for example, plants produce starch, carbohydrates and cellulose by a process called photosynthesis.

Different living organisms constitute the biotic component of an ecosystem and it belongs to the following categories.

1. **Producers (or Autotrophs):** These components produce their own food. Green plants produce food through photosynthesis by combining carbon dioxide and water with the help of energy in the form of sunlight.
2. **Consumers:** Consumers depend upon producers for their food, for example, human beings and other animals. These organisms get their food by feeding on other organisms and they are of the following types.
 - (a) Herbivores feed on plants, for example, rabbit and insects.
 - (b) Carnivores are those animals that eat other animals and they are of two types.
 - (i) Secondary carnivores feed on herbivores, for example, a frog and a small fish.
 - (ii) Tertiary carnivores feed on other carnivores, for example, a snake and a big fish.
 - (c) Omnivores feed both on plants and animals, for example, humans, rats and many species of birds.
 - (d) Detritivores feed on dead organisms, for example, earthworms, crabs and ants. The living beings that feed on dead or decayed organic matter are also called saprophytes. They are fungi and bacteria, which does not contain any chlorophyll and they are dependent on dead organisms for their food.

The parasites depend on living organisms for food. They can be (i) endoparasites, which live inside the body, such as liver flukes and tapeworms and (ii) ectoparasites, which live on the exterior, such as fleas and lice.
3. **Decomposers:** These are microorganisms that break down organic matter into inorganic compounds and in this process, derive their nutrition. They play a very important role in converting the essential nutrients from unavailable organic form to free inorganic form which is available for use by plants, for example, bacteria, fungi and so on.

Abiotic Components

In ecology, abiotic components are non-living chemical and physical factors in the environment that affect the ecosystems.

Some of the real time examples are water, light, wind, soil, humidity, minerals and gases. They affect the ability of organisms to survive and reproduce.

Figure 9.1

They also help determine the types and number of organisms able to exist in an environment.

Functions of Ecosystem

Every ecosystem performs the following important functions.

1. It has different food chains and food webs. Food chain is the sequence of eating and being eaten.

Figure 9.2

Food chains are generally found to be interlinked and interwoven as a network and hence, known as a food web. There are several options of eating and being eaten in a food web. Hence, these are more stable.

2. There is unidirectional flow of energy. It flows from sun and then after capture by primary producers (green plants), it flows through the food chain or the food web.
3. Materials (nutrients) in an ecosystem move in a cyclic manner. The cycling of nutrients takes place between biotic and abiotic components.
4. Every ecosystem functions to produce and sustain some primary production (plant biomass) and secondary production (animal biomass).
5. Every ecosystem regulates and maintains itself. This self-regulation or control system is known as cybernetic system.

Trophic Levels and Ecological Pyramids

The trophic levels form a pyramid with producers at the bottom, then primary consumers (herbivores), secondary consumers (carnivores) and tertiary carnivores.

Ecological Pyramids - Trophic Levels

The concept of ecological pyramid was developed by Charles Elton. All ecological pyramids begin with producers like plants at the bottom and proceed through

various trophic levels, such as herbivores (consume plants), carnivores (prey on herbivores) and so on. The highest level is at the top of the food chain.

Figure 9.3 Ecological Pyramid

There are three types of ecological pyramids and they are as follows.

- Pyramid of energy
- Pyramid of numbers
- Pyramid of biomass

1. Pyramid of Energy

The pyramid of energy or the energy pyramid describes the overall nature of the ecosystem. During the flow of energy from one organism to other, there is considerable loss of energy in the form of heat. In primary producers, like the autotrophs, large amount of energy is available. The least energy is available in the tertiary consumers. Therefore, shorter food chain has more amount of energy available even at the highest trophic level.

- The energy pyramid is always upright and vertical.
- This pyramid shows the flow of energy at different trophic levels.
- It depicts that the energy is minimum at the highest trophic level and is maximum at the lowest trophic level.
- At each trophic level, there is successive loss of energy in the form of heat, respiration, etc.

Figure 9.4 Pyramid of Energy

2. Pyramid of Numbers

The pyramid of numbers depicts the relationship in terms of the number of producers, herbivores and the carnivores at their successive trophic levels. There is a decrease in the number of individuals from the lower to the higher trophic levels. The number pyramid varies from ecosystem to ecosystem. There are three types of pyramid of numbers and they are as follows.

- Upright pyramid of number
- Partly upright pyramid of number
- Inverted pyramid of number

Upright Pyramid of Number

This type of pyramid number is found in the aquatic and grassland ecosystems. In these ecosystems, there are numerous small autotrophs that support lesser herbivores, which in turn support smaller number of carnivores, and hence, this pyramid is upright.

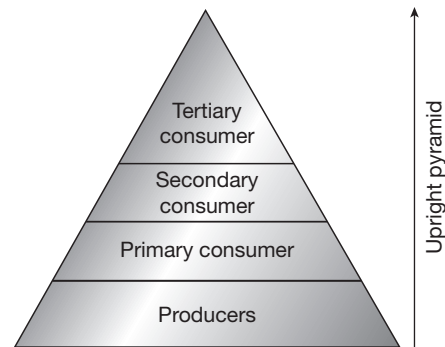

Figure 9.5 Pyramid of Number

Partly Upright Pyramid of Number

It is seen in the forest ecosystem where the number of producers are lesser in number and support a greater number of herbivores which in turn support a fewer number of carnivores.

Inverted Pyramid of Number

This type of ecological pyramid is seen in parasitic food chain where one primary producer supports numerous parasites, which in turn supports more hyperparasites.

3. Pyramid of Biomass

The pyramid of biomass is more fundamental. They represent the quantitative relationships of the standing crops. In this pyramid, there is a gradual decrease in the biomass from the producers to the higher trophic levels. In simple terms, biomass here represents the net aggregate weight of dried organisms collected from each feeding level. This dry weight is the biomass and it represents the amount of energy available in the form

Figure 9.6 Partly Upright Pyramid of Number

Figure 9.7 Inverted Pyramid of Number

of organic matter of the organisms. In this pyramid, the net dry weight is plotted to that of the producers, herbivores, carnivores, etc.

There are two types of pyramid of biomass and they are as follows.

- Upright pyramid of biomass
- Inverted pyramid of biomass

Upright Pyramid of Biomass

This occurs when the larger net biomass of producers support a smaller weight of consumers, for example, forest ecosystem.

Inverted Pyramid of Biomass

This happens when the smaller weight of producers support consumers of larger weight, for example, aquatic ecosystem.

Figure 9.8 Upright Pyramid of Biomass in a Terrestrial Ecosystem

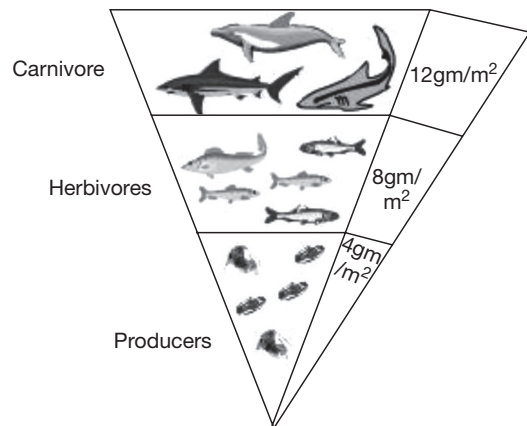

Figure 9.9 Inverted Pyramid in an Aquatic Ecosystem

The trophic levels are linked through food chains and these food chains form interlocking patterns called food webs.

Related to Ecological Pyramids: Trophic Levels

Eutrophic: Water bodies having good quantity of minerals and hence supra optimum growth of plants.

Oligotrophic: Water bodies deficient in minerals and organic growth.

Dystrophic: Water bodies rich in undecomposed organic matter, for example, bogs and marshy lakes.

Biosphere

There are different types of ecosystems around us, which involve living organisms and non-living things. If we combine all the ecosystems present on earth, then it is called biosphere.

Biomes

The terrestrial portion of biosphere is divided into biomes. They usually have distinct climates and life forms adapted to that climate. Deserts, grasslands, tropical forests and rain forests are the main examples of biomes.

Habitat

The area or natural environment in which an organism or population normally lives is called habitat. A habitat is made up of physical factors, such as soil, moisture, range of temperature and availability of light as well as biotic factors, such as availability of food and the presence of predators.

When organisms of different species live together, then it is called cohabitat.

A habitat is not necessarily a geographic area. If particular organism(s) live in a small and specific part(s) of a habitat, then it is known as microhabitat. For example, within the forest habitat, certain organisms live beneath the bark of a tree and a parasite may live in the body of the host.

Four Spheres of Earth

The area near the surface of the earth can be divided into four interconnected geospheres, namely the lithosphere, hydrosphere, biosphere and atmosphere. Scientists can classify life and material on or near the surface of the earth to be in any of these four spheres.

The names of the four spheres are derived from the Greek words for stone (*litho*), air (*atmo*), water (*hydro*) and life (*bio*).

Lithosphere

The lithosphere is a solid, rocky crust covering the entire planet. This crust is inorganic and is composed of minerals. It covers the entire surface of the earth from the top of Mount Everest to the bottom of the Mariana Trench.

Hydrosphere

The hydrosphere is composed of all the water on or near the earth. This includes the oceans, rivers, lakes and even the moisture in air. Evidently, 97 per cent of the earth's water is present in the oceans. The remaining 3 per cent is freshwater. Furthermore, three quarters of freshwater is in the form of ice sheets and glaciers, hardly one per cent is left for human consumption.

Biosphere

The biosphere is composed of all the living organisms. Plants, animals and one-celled organisms are all part of the biosphere. Most of the planet's life is found from 3 metres below the ground to 30 metres above it and in the top 200 metres of oceans and seas.

Atmosphere

We live at the bottom of an invisible ocean called the atmosphere, which is a layer of gases surrounding our planet. Nitrogen and oxygen account for 99 per cent of the gases in dry air, with argon, carbon dioxide, helium, neon and other gases making up minute portions. Water vapour and dust are also part of earth's atmosphere. Other planets and moons have very different atmospheres and some have no atmospheres at all. The different layers of atmosphere are discussed below.

Figure 9.10 Layers of Atmosphere

Troposphere

It is the lowest layer of atmosphere and contains about four-fifths of the earth's air, but extends only to a height of 18 km at equator and 8 km at poles during winter. Almost all weather developments occur in the troposphere. Air in the troposphere thins as altitude increases and the temperature also decreases. The rate at which temperature decreases is known as lapse rate and it is 6.4° per km. Fast-moving, high-altitude winds called jet streams occur at the top level of the troposphere that helps aeroplanes to fly at high speeds.

This layer also absorbs heat that is reflected back from the ground in a process called the greenhouse effect.

Stratosphere

The stratosphere extends from the tropopause, the upper boundary of the troposphere to about 50 km above the earth's surface. It is characterized by the following properties.

1. Strong horizontal winds blowing in the stratosphere that is ideal for planes that can fly in this part of the atmosphere.
2. The stratosphere is crucial to life on earth because it contains small amounts of ozone, a form of oxygen that prevents harmful UV rays from reaching the earth.

Mesosphere

The mesosphere extends up to 80 km above the surface of the earth. This layer is characterized by the following properties.

1. It has the coldest temperatures in the atmosphere, dipping as low as -100°C .
2. The phenomenon of 'shooting stars' also occur in this layer.

Ionosphere

It extends to about 690 kilometres and is extremely thin. It is generally considered as a part of outer space. This atmospheric layer conducts electricity. It is characterized by the following properties.

1. The ionosphere is a layer of free electrons and ions, reflecting radio waves.
2. It is broken into distinct layers, called the D, E, F1 and F2 layers. The lower D layer absorbs high frequency radio waves.
3. It also reflects particles from solar wind, which is a stream of highly charged particles called aurora ejected by sun in the polar regions.

Thermosphere

Temperatures in the thermosphere can rise well above 1000°C up to 1500°C . This layer is characterized by the following properties.

1. It is the thickest (most vertical expansion) layer in the atmosphere.
2. Hubble Space Telescope and the International Space Station (ISS) orbits the earth in the thermosphere.

Exosphere

The exosphere expands and contracts as it comes into contact with solar storms (solar flares and coronal mass ejections). Hydrogen and trace amounts of helium,

carbon dioxide, oxygen and other gases are present. Many weather satellites orbit earth in the exosphere.

DEVELOPMENT AND ENVIRONMENT: MILLENNIUM DEVELOPMENT AND SUSTAINABLE DEVELOPMENT GOALS

Development or say human development refers to the biological and psychological changes that occur in human beings between birth and the end of adolescent period as the individual progresses from dependency to increasing autonomy. These developmental changes may be strongly influenced by the genetic and environmental factors during prenatal life, these are part of the study of child development. Growth refers to the development of children from birth to adolescence.

There are four areas in which children grow, such as physical, psychological and cognitive, social and emotional and finally, it is sexuality and gender identity.

According to Educational Foundation (2001), lifespan development is a process beginning at conception that continues until death. The progression initiates with the emergence of a fetus from a one-celled organism. As the unborn child enters the world, the environment in which the child exists begins to influence the child's development.

There are four interactive forces that combine to shape human development

1. biological forces
2. psychological forces
3. socio-cultural forces and
4. life cycle forces.

To understand the pattern of development, certain fundamental facts must be taken into consideration. Each of these has important implications.

To know the developmental techniques we need to use some research methods, such as longitudinal method, cross-sectional method, sequential and time lag method. There are always some obstacles to apply the research methods as human beings as samples are not perfect representatives. There are many variations within human beings.

Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs. It contains two key concepts within it and it is as follows.

1. The concept of needs.
2. The idea of limitations imposed by the state of technology and social organization.

Sustainable development presupposes the existence of space and time. Human development is being incorporated in the development strategy of the

world. Now it is in the core of the UN's International Development Strategy. Apart from income, health and education, a good physical environment and freedom are important.

The concept of human development was largely developed by UNDP since 1990s. The National Human Development Report, 2001 was prepared by Planning Commission of India and many states follow them.

Human development is defined as a process of enlarging people's choices. If these choices are available, other opportunities will become accessible.

The term 'human development' refers to the process of widening people's choices and ensuring well-being. Thus, human development has two sides as listed below.

1. Formation of human capabilities, such as improved health, knowledge and skill.
2. To make use the acquired capabilities for productive purposes, leisure, and for being active in cultural, social and political affairs.

The major elements in concept of human development are as follows.

1. **Productivity:** People must be able to increase their productivity and they must be able to participate fully in the process of income generation and remunerative employment
2. **Equity:** People must have access to equal opportunities.
3. **Sustainability:** All forms of capital, such as physical, human and environmental should be replenished, including future generations.
4. **Empowerment:** People must participate fully in the decisions and processes that shape their lives.

UN Concepts of Human Development

HDI is a summary measure of average achievement in key dimensions of human development, where it emphasizes a long and healthy life, being knowledgeable and have a decent standard of living. The HDI is the geometric mean of normalized indices for each of the three dimensions. The HDI simplifies and captures only part of what human development entails. It does

not reflect on inequalities, poverty, human security, empowerment, etc.

Inequality-adjusted Human Development Index (IHDI)

The difference between the IHDI and HDI is the human development cost of inequality, also termed as the loss to human development due to inequality. The IHDI allows a direct link to inequalities in dimensions, it can inform policies towards inequality reduction and it leads to better understanding of inequalities across population and their contribution to the overall human development cost.

Gender Development Index (GDI)

The GDI measures gender gaps in human development achievements by accounting for disparities between women and men in three basic dimensions of human development, such as health, knowledge and living standards using the same component indicators as in the HDI. The GDI is the ratio of the HDIs calculated separately for females and males using the same methodology as in the HDI.

Gender Inequality Index (GII)

The GII is an inequality index. It shows the loss in potential human development due to disparity between female and male achievements in three dimensions:

1. reproductive health
2. empowerment and
3. economic status.

Overall, the GII reflects how women are disadvantaged in these dimensions.

The GII ranges between 0 and 1. Higher GII values indicate higher inequalities and thus higher loss to human development. There is no country with perfect gender equality. All countries suffer some loss in achievements in key aspects of human development when gender inequality is taken into account. The GII is similar in method to the Inequality-adjusted Human Development Index (IHDI).

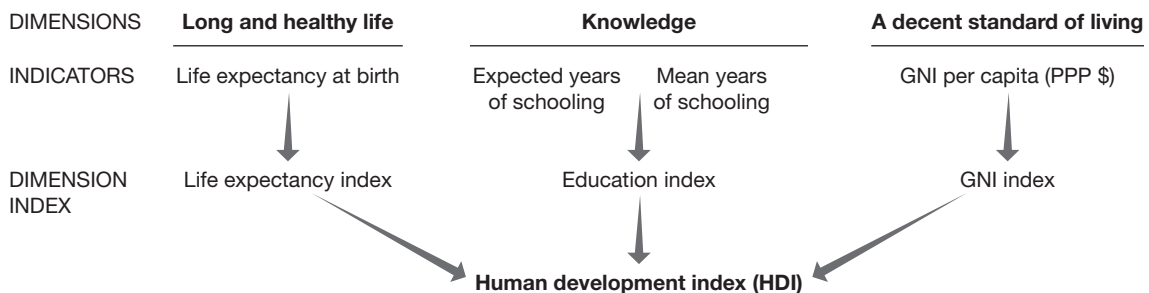

Figure 9.11 Human Development Index

Multidimensional Poverty Index (MPI)

The MPI is a very versatile methodology that can be readily adjusted to incorporate alternative indicators, cut-offs and weights that might be appropriate in regional national or subnational contexts. There are currently two broad categories of MPI measures, such as multidimensional poverty index and regional or national MPIs.

Today, people, nations and economies are more connected than ever, and so are the global development issues we are facing. These issues span borders, straddle social, economic and environmental realms.

Six Key Findings from the 2018 Analysis

1. The world has made impressive progress in human development.
2. Quality, not just quantity of human development is important and it reveals large deficits.
3. Progress is not linear or guaranteed, and crises and challenges can reverse gains. Countries experiencing conflict show HDI losses, which can be felt for generations.
4. Disparities between and within countries continue to stifle progress.
5. Gender gaps in early years are closing, but inequalities persist in adulthood.
6. Environmental degradation puts human development gains at risk.

MILLENNIUM DEVELOPMENT AND SUSTAINABLE DEVELOPMENT GOALS

The United Nations Millennium Development Goals are eight goals that all 191 UN member states have agreed to try to achieve by the year 2015. The United Nations Millennium Declaration, signed in September 2000 commits world leaders to combat poverty, hunger, disease, illiteracy, environmental degradation, and discrimination against women. The MDGs are derived from this declaration, and all have specific targets and indicators.

Key Achievements

The legacy and achievements of the MDGs provide us with valuable lessons and experience to begin work on the new goals. But for millions of people around the world, the job remains unfinished. We need to go the last mile on ending hunger, achieving full gender equality, improving health services and getting every child into school beyond primary. The SDGs are also an urgent call to shift the world onto a more sustainable path.

The SDGs build on decades of work by countries and the UN, including the UN Department of Economic and Social Affairs

1. In June 1992, at the Earth Summit in Rio de Janeiro, Brazil, Agenda 21 was adopted, a comprehensive plan of action to build a global partnership for sustainable development to improve human lives and protect the environment.
2. Member States unanimously adopted the Millennium Declaration at the Millennium Summit in September 2000 at UN Headquarters in New York. The Millennium Summit at UN Headquarters in New York led to eight Millennium Development Goals (MDGs) to reduce extreme poverty by 2015.
3. The Johannesburg Declaration on Sustainable Development and the Plan of Implementation, adopted at the World Summit on Sustainable Development in South Africa in 2002, reaffirmed the global community's commitments.
4. At the United Nations Conference on Sustainable Development (Rio+20) in Rio de Janeiro, Brazil, in June 2012, the member states adopted the outcome document *'The Future We Want'*.
5. In 2013, the General Assembly set up a 30-member open working group to develop a proposal on the SDGs that led to UN's General Assembly's post-2015 development agenda. The process culminated in the subsequent adoption of the 2030 agenda for sustainable development, with 17 SDGs at its core, at the UN Sustainable Development Summit in September 2015.
6. 2015 was a landmark year for multilateralism and international policy shaping, with the adoption of several major agreements.
 - (a) Sendai Framework for Disaster Risk Reduction (March 2015)
 - (b) Addis Ababa Action Agenda on Financing for Development (July 2015)
 - (c) Transforming our world: The 2030 Agenda for Sustainable Development with its 17 SDGs was adopted at the UN Sustainable Development Summit in New York on September 2015.
 - (d) Paris Agreement on Climate Change (December 2015)
7. Now, the annual High-level Political Forum on Sustainable Development serves as the central UN platform for the follow-up and review of the SDGs.

Today, the Division for Sustainable Development Goals (DSDG) in the United Nations Department of Economic and Social Affairs (UNDESA) provides substantive support and capacity-building for the SDGs and their related thematic issues, including water, energy, climate, oceans, urbanization, transport, science and technology, the Global Sustainable Development Report (GSDR), partnerships and Small Island Developing States. DSDG plays a key role in the evaluation of UN systemwide implementation of the

2030 Agenda and on advocacy and outreach activities relating to the SDGs. In order to make the 2030 Agenda a reality, broad ownership of the SDGs must translate into a strong commitment by all stakeholders to implement the global goals. DSDG aims to help facilitate this engagement.

The idea of UN sustainable development goals has mainly started by the UN. It needs support of nations, businesses, civil society and NGOs for its funding and implementation.

Sustainable development can be achieved through some of the following effective ways:

1. In present context, the use of natural resources is excessive. So, we must take a step to minimize the

excessive use of natural resources in order to preserve it from getting extinct forever.

2. It is a must to conserve the national, cultural and traditional heritages for its self dignity.
3. There must be an effective and strict governing system for smooth development and administration.
4. There must be almost zero corruption governing bodies for sustainable development.
5. Awareness programs must be conducted for the importance of sustainable development.
6. Having mutual and cooperative understanding among various people.
7. Providing formal as well as informal education to the illiterate people for better knowledge on sustainable development.

The Eight Millennium Development Goals (2000–2015) vs. The Seventeen Sustainable Development Goals (2015–2030)

Millennium Development Goals (2000–2015)	Sustainable Development Goals (2015–2030)
Reduce extreme hunger and poverty	End poverty End hunger
Achieve universal primary education	Ensure inclusive and equitable quality education.
Promote gender equality and empower women	Achieve gender equality. Reduce inequality within and among countries.
Reduce child mortality Improve maternal health Combat HIV/AIDS, malaria and other diseases	Ensure healthy lives and promote well-being
Ensure environmental sustainability	Ensure availability and sustainable management of water and sanitation for all. Ensure access to affordable, reliable, sustainable and modern energy for all. Promote sustained, inclusive and sustainable economic growth, full and productive employment, and decent work for all. Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation. Make cities and human settlements inclusive, safe, resilient and sustainable. Ensure sustainable consumption and production patterns. Take urgent action to combat climate change and its impacts (taking note of agreements made by the UNFCCC forum). Conserve and sustainably use the oceans, seas and marine resources for sustainable development. Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss.
Promote global partnership	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels. Strengthen the means of implementation and revitalize global partnership for sustainable development.

Here, as per comparison, we can see that maximum focus has been on the environmental issues.

Human and Environment Interaction: Anthropogenic Activities and their Impacts on Environment.

There are basically two types of activities, namely natural and man-made. Natural activities mean occurring in a natural manner. Man-made activities are also termed as anthropogenic activities. Their meaning is to improve human living conditions with human efforts. Once they reach a point, they can cause harm to the human life as well. Anthropogenic activities are opposed to those occurring in natural environments without human influences. The energy consumption and technical evolution related to these sources is one main cause of the man made pollution. For instance, it is widely believed that the production of carbon dioxide is the primary factor driving anthropogenic climate change.

When single celled life emerged 3000 million years ago, for which tiny oxygen concentration was an essential prerequisite. Then there was gradual increase in atmospheric oxygen concentration. Then O₃ (ozone) also developed as a necessary shield against Solar ultraviolet rays. There was sort of play between carbon dioxide and oxygen for millions of years.

Now the anthropogenic (man-induced) pollutants have overloaded the system, and the natural equilibrium is disturbed.

Perpetually aims to achieve better standard of living for all, it leads to certain problems such as climate change, loss of biodiversity, exploitation of resources etc. Despite technological constraints, there were issues relating to social sciences. Looking at environmental, economic and social aspects, interdisciplinary approaches were adopted that were spatial (local to global) and temporal (short term to long term).

Thus, the impact of anthropogenic activities on human health is very significant.

Industrialization is the period of social and economic change that transforms a human group from an agrarian society into an industrial society, involving the extensive reorganization of an economy for the purpose of manufacturing.

The Main Impacts on Traditional Type of Agriculture

The major impacts on agriculture are deforestation, soil erosion, depletion of nutrients, etc. There have been both positive and negative effects on environment in order to increase production. Among fertilizers related problems, it is mostly **micronutrient**

imbalance (nitrogen, phosphorus and potassium), **nitrate pollution** (leaching deep into the soil and contaminating ground water, when the concentration exceeds 25 mg/L, they cause blue baby syndrome or methaemoglobinemia), **eutrophication** (excessive use of N and P fertilizers in agriculture and leading to algal blooms). There can be pesticide related problems that includes herbicides, insecticides, fungicides, biocides, etc. Pesticides can also be classified as inorganic, synthetic, or biological (biopesticides), although the distinction can sometimes blur. Pesticides are usually classed as inorganic, synthetic or biological (biopesticides), although the distinction can sometimes blur.

Water logging (over irrigation of croplands) and salinity (increased concentration of soluble salts in the soil) are other major issues.

Impact of Housing Related Anthropogenic Activities on Environment

The poor housing cause directly measurable impact on physical and mental health of the citizens.

The high-tech modern buildings reduce spiralling energy costs but it may cause health problems due to indoor air pollution.

Several building materials, such as solvents, finishes and cleansers for maintenance and protection of building materials can cause 'sick building syndrome'.

Production of plastics causes generation of greenhouse gas, such as carbon dioxide, volatile organic compounds and polyvinyl chloride. Disposal of polyvinyl chloride is a major problem.

Manufacturing of metals from their ores has several environmental impacts some of which may be carcinogenic (cancer causing).

Some insulating materials are made from chlorofluorocarbons (CFCs), and their safe recovery is difficult. Their release of CFCs in the atmosphere would enhance the global warming problem.

Asbestos, which has been quite useful in buildings is now known to be very harmful for our health and not recommended now.

The indoor air pollution is a major source of public exposure to air pollutants having potential to cause chronic health problems.

The fumes, vapours or gases of indoor air pollutants cause the following issues:

1. **Formaldehyde, (specifically in modern buildings):** Pressed wood products use adhesives that contain urea-formaldehyde (UF) resins. Formaldehyde is also present in tobacco smoke, natural gas and kerosene.

2. Benzene is a solvent used in petrol, ink, oil, paint, plastic and rubber. Trichloroethylene is used in metal degreasers, dry cleaning solvents, inks, paints, lacquers, varnishes and adhesives. Ozone is produced from copying machines. Fumes are produced from cleaning solvents.
3. Air conditioning equipment harbours the disease-causing bacteria in air ducts and filters.
4. Some varieties of asbestos can cause a particular type of lung cancer.
5. Cockroach droppings trigger allergic asthma.

Effects of Anthropogenic Mining Activities on Environment

Mining is the extraction (removal) of minerals and metals from earth for better life. For example, tantalum is needed to make cell phones, pagers and laptops, copper and tin are required for pipes, cookware etc.

The environmental effects of mining depends upon factors such as ore quality, mining procedures, local hydrological conditions, development stage of resource etc.

The small scale mining is also devastating to the environment. It is mainly of two types – land dredging (doing a hole in land) and river dredging.

River dredging involves moving along a river on a platform or boat. The miners use a hydraulic suction hose and suction the gravel and mud as they move along the river.

Mining is one of the main causes of deforestation. In order to amalgamate (cluster) the extractions, they use chemicals, such as cyanide, mercury or methyl mercury.

The following can be defined as the major environmental damage caused by mining activities:

- **Devegetation and defacing of landscape**
- **Subsidence of land-tilting of buildings, cracks in houses, etc.**
- **Groundwater contamination:** With sulphur as the main element that gets converted into sulphuric acid, which makes the water acidic. Some heavy metals also get leached into the groundwater and contaminate it by posing health hazards.
- **Surface water pollution:** The acidic water is detrimental to many forms of aquatic life. Sometimes radioactive substances like uranium also contaminate the water bodies.
- **Air pollution:** It has been discussed separately in the chapter.
- **Occupational health hazards:** Miners working in different types of mines suffer from asbestosis, silicosis, black lung disease, etc.

Effects of Transportation Activities on Environment

The activities of the transport industry release several million tons of gases each year into the atmosphere. These include lead (Pb), carbon monoxide (CO), carbon dioxide (CO₂), methane (CH₄), nitrogen oxides (NO_x), nitrous oxide (N₂O), chlorofluorocarbons (CFCs), perfluorocarbons (PFCs), heavy metals (zinc, chrome, copper and cadmium) and particulate matters (ash, dust).

1. Nitrous oxide participate in depleting the stratospheric ozone (O₃) layer which naturally screens the earth's surface from ultraviolet radiation.
2. CO, CO₂ and CH₄ participate in green house effect, etc.

Carbon monoxide (CO), nitrogen dioxide (NO₂), sulphur dioxide (SO₂) and nitrogen oxides (NO_x) and ultimately it is the chemical causing acid rain. Acid precipitation affects construction, reduces agricultural crop yields and causes forest decline.

Long term exposure to noise levels above 75 dB seriously hampers human hearing and affects both physical and psychological well-being.

The main effects of marine transport operations on water quality predominantly arise from dredging, waste, ballast waters and oil spills. Dredging is the process of deepening harbour channels by removing sediments from the bed of a body of water.

The environmental impact of transportation on soil consists of soil erosion and soil contamination that occurs through the use of toxic materials by the transport industry.

ENVIRONMENTAL ISSUES

Earlier we discussed about 'sustainable development' that can be best realized by 'A Common Future' or 'Global Sharing' concept. The structural inequalities in the global economic system are also responsible for the hindrance in realizing the issue of sustainable development in totality. So we need to develop the concept of common focus as well, that can integrate the outlook and efforts of various participants in development, worldwide, realizing the diversity, in terms of geography, society, economics, level of science and technology (S&T) capabilities and capacities, education standards/levels.

In case, we look at the aspects of developing and developed nations, the following situation may emerge.

The issues may emanate from local level, regional level and global level. The 1972 UN World Conference

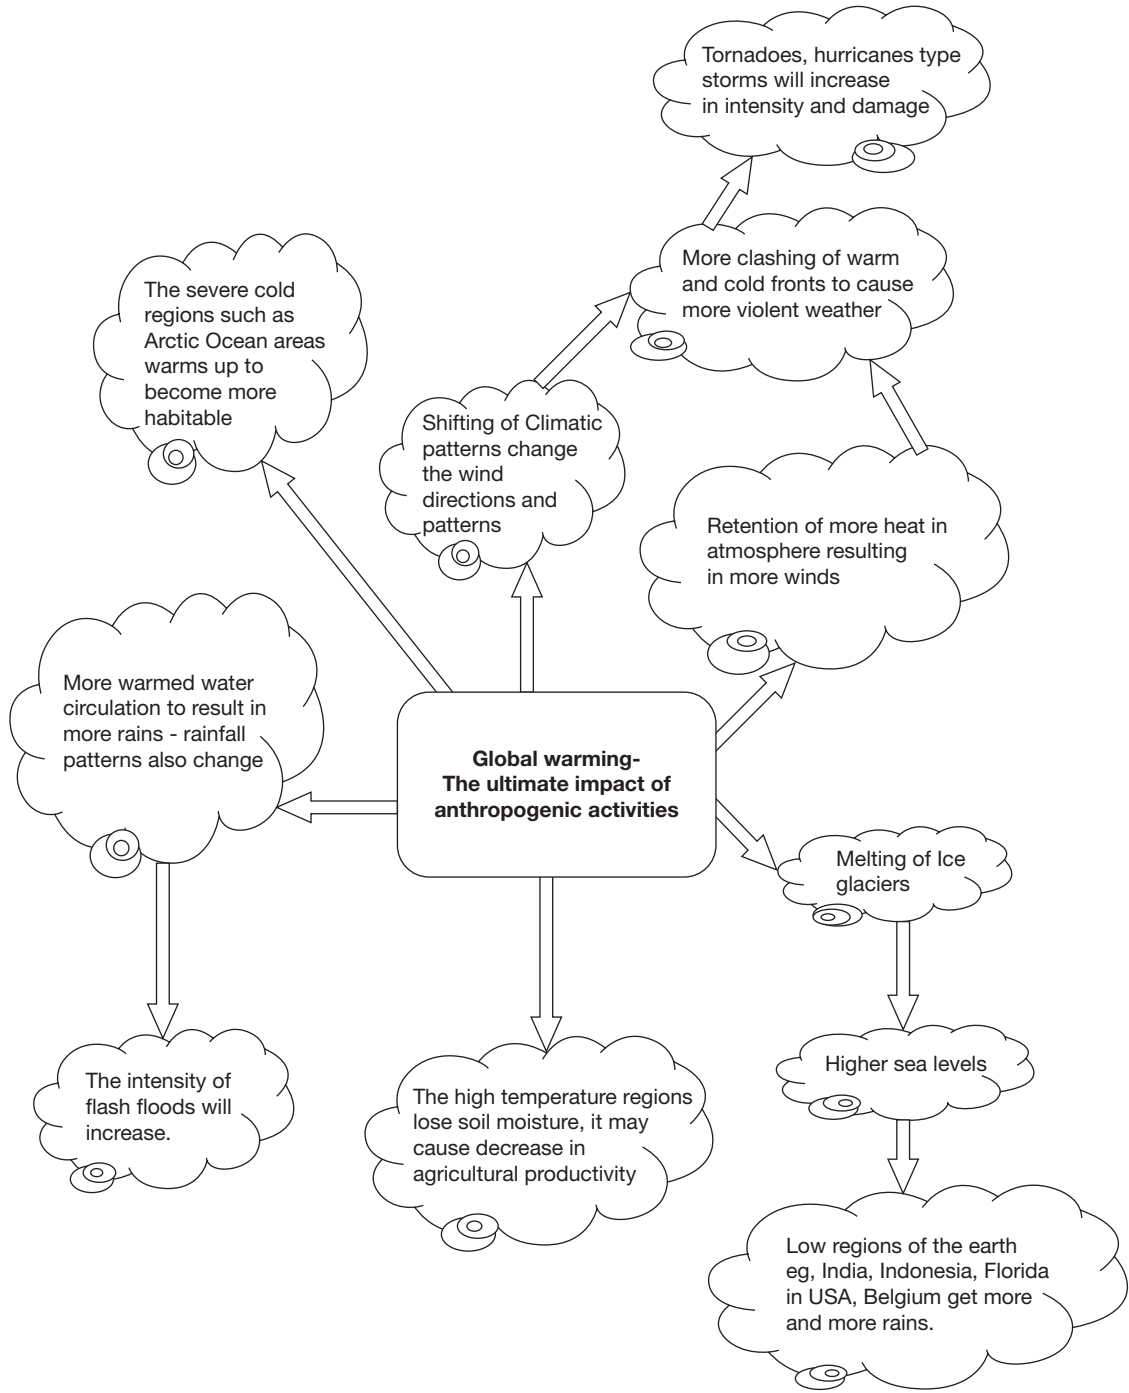

Figure 9.12 Impact of Anthropogenic Activities

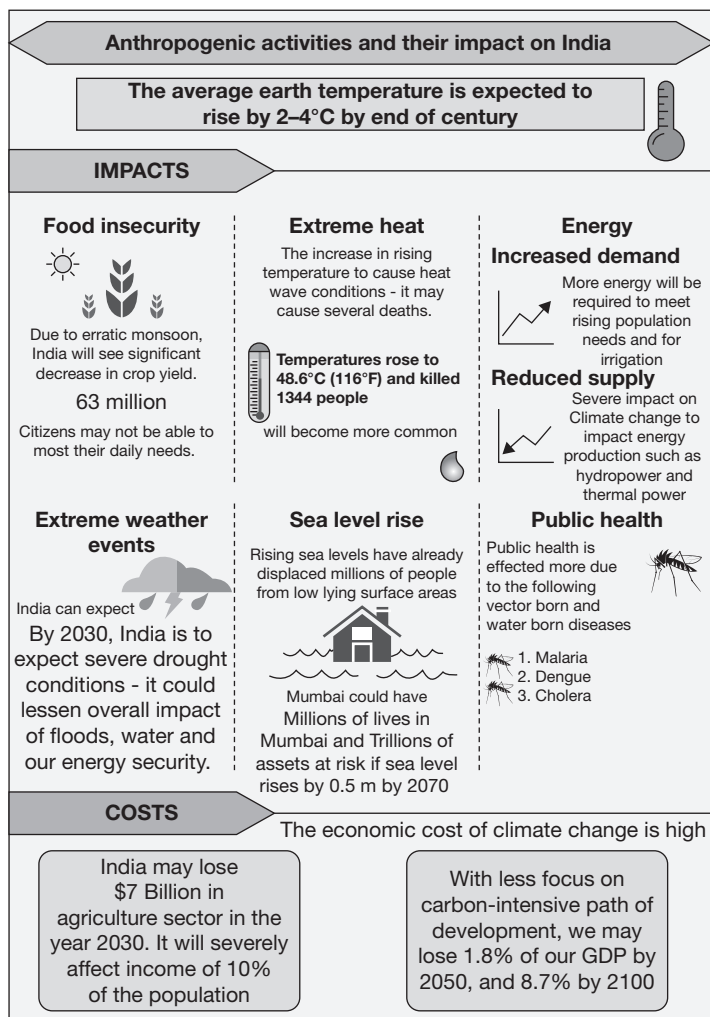

Figure 9.13

on the Human Environment held at Stockholm also highlighted the differences in the points of view of the developed and the developing countries regarding development and environment. The same kind of issues emerged in Rio summit as well. The issues can be divided into three levels as listed below.

1. **Local issues:** These relate to issues, such as water shortage in certain areas, soil erosion of some local forest, different pollution level in the same city, landslides, etc. They need to be tackled at the local level.
2. **Regional issues:** Some regional issues have been mentioned below.
 - (a) Desertification and droughts
 - (b) Floods and soil erosion

- (c) Rise in sea level, beach erosion, saltwater intrusion resulting in increased salinity, floods and flood damages, threats to coastal wetlands and threats to agriculture.
 - (d) Deforestation
3. **Global issues:** The global issues that has to be addressed are as follows.
 - (a) **Climate change and global warming:** Increasing drought and desertification, crop failures, melting of the polar ice caps, coastal flooding, displacement of major vegetation regimes, coral mortality, change in ocean behavior, natural disasters, infectious diseases, degradation of ecosystems, scarcity of food supply and rise in sea level.

Table 9.1 Environmental Concerns of the Developed and Developing Countries

Environmental countries	Developing countries aspect	Developed
Air	Air pollution in major cities.	Air pollution, global warming, ozone depletion.
Land and soil	Soil erosion, desertification and loss of arable land.	Soil loss, solid waste disposal and changing land use.
Water	Fresh water shortage.	Inland and marine water pollution
Flora and fauna	Deforestation and fuel wood shortage.	Loss of genetic diversity and loss of cropland.

- (b) **North-South divide:** This 'North' world has just over 20% of the world population but consumes 80% of the world's energy. On the other hand, the 'South' comprising of the developing nations of the world is still struggling to provide the basic needs, such as food, water, shelter, clothing, basic education and health for its population.
- (c) **Biodiversity:** Loss of diversity of life including both flora and fauna.

Geopolitics of Climate Change

Developed Nations

Industrially and historically, they are the biggest emitters of CO₂. They are also part of 'Common But Differentiated Principle' (CBDP), they need to provide technological access to developing for their economic development in a sustainable manner.

Developing Nations: These nations are developing economically and technologically but still burn fuel inefficiently. Countries such as China, India, Brazil have developed during recent times, and so their contribution to emission levels is also very high. They are also accused for the same. UN Environment Programme in 2002 highlighted Asian Brown Cloud (later as Atmospheric Brown Cloud due to shift patterns), it has many smog like features. There has been increase in population, shifts in rainfall patterns etc.

Specifically Green India mission has the following projects:

1. Green Highway Policy – 1,40,000 km long 'Tree Line' along both sides of national highways – 1% of the project cost to be earmarked for plantations.
2. Namami Gange – Plantation along rivers.

3. Under Compensatory Afforestation Fund Management and Planning Authority (CAMPA) – there allocation of 6 billion dollars to states.
4. Then there are provisions under REDD-Plus, National Agro-forestry Policy (NAP), Joint Forest Management etc.
5. Under Finance Commission incentives for creation of carbon sinks – centre attaches 7.5% weightage to 'area under forests' to states.

These topics have been dealt separately as per NTA-NET syllabus.

POLLUTION AND ITS TYPES

Pollution is a negative/undesirable change in the environment, which is usually the addition of something hazardous or detrimental. Generally, degradable or non-persistent pollutants, such as domestic sewage, discarded vegetables are broken down by natural processes. Some persistent or non-biodegradable pollutants do not get destroyed and are our source of worry. The different types of pollution, such as air pollution, water pollution, noise pollution and radiation pollution have been discussed in the ensuing paragraphs.

Air Pollution

Clean, dry air contains 78.09% nitrogen by volume and 20.94% oxygen. The remaining 0.97% is made of gaseous mixture of carbon dioxide, helium, krypton, argon, xenon, nitrous oxide and very small amounts of other organic and inorganic gases.

It is also known as atmospheric pollution. The degradation of air quality of natural atmospheric conditions due to pollutants is known as air pollution. World Health Organization defined it as the presence of materials in the air, which are harmful to the living beings once they cross their threshold concentration levels. The foreign bodies, gases and so on act as air pollutants. It is the most extensive and worst form of pollution.

Types of Air Pollution

There are two types of air pollutants, namely primary and secondary.

Primary Pollutants

Primary pollutants enter the atmosphere directly from the source. Some important primary pollutants are as follows.

1. Suspended particulate matter (SPM)
2. Oxides of carbon
3. Hydrocarbons (Methane)
4. Sulphur oxides (SO_x)
5. Nitrogen oxides (NO_x)
6. Chlorofluorocarbons (CFCs)
7. Lead

Secondary Pollutants

Secondary pollutants are not directly emitted from sources. These pollutants are formed as a result of chemical reactions between the primary pollutants and certain atmospheric constituents, in the presence of sunlight. Sulphates, nitrates and organic particles can be transported over large distances, such as hundreds and even thousands of kilometres. Some important secondary pollutants are as follows.

- Sulphur trioxide:** It is a compound formed when sulphur dioxide reacts with oxygen. It combines with water to form sulphuric acid.
- Smog formation:** Smog is an odd combination of smoke and fog. The effect of smog is maximum just before sunrise as smog particles that are entrapped between cold air are unable to rise. Two types of smog are prevalent as per records.
 - Sulphurous or London smog:** It affected London for a very long time and hence, its name. It is also termed as 'reducing smog' as its mixture of components is chemically reducing in nature. This is due to the presence of sulphur dioxide in air. It is more prevalent during the morning hours of winter season when the relative humidity is high and air near the ground is also cooler. London smog causes throat irritation and difficulty in breathing.
 - Photochemical or Los Angeles smog:** This type of smog is due to the presence of oxides of nitrogen in the atmosphere, formed as a result of vehicular exhaust. It is formed due to chemical reactions involving ozone, nitrogen oxide, hydrocarbons and peroxyacetyl nitrate (PAN) in the presence of sunlight. This phenomenon mainly occurs during warm sunny days as sunlight is required to carry out photochemical reaction in seasons when the sky is clear. Photochemical smog consists of brown hazy fumes. It irritates the eyes and lungs, causes cracking of rubber and extensive damage to plant life.
 - Ground level ozone:** Tropospheric or ground-level ozone is formed from photochemical reaction between two major classes of air pollutants, such as volatile organic compounds (VOCs) and nitrogen oxides.
- Acid rain:** Acid rain is caused by a chemical reaction that begins when compounds like sulphur dioxide and nitrogen oxides are released into the air. These substances can rise very high into the atmosphere, where they mix and react with water, oxygen and other chemicals to form more acidic pollutants known as acid rain.

Air Pollution and Aerosols

- Aerosols:** They are stable suspensions of solid or liquid particles in air. Aerosols affect the weather conditions by blocking solar radiations. Deposition of aerosols on leaves affects the process of photosynthesis.
- Mist:** Aerosols consisting of liquid droplets.
- Dust:** Aerosols consisting of solid particles.
- Fume:** Aerosols consisting of hot vapours of metals.
- Smoke** is also an aerosol, which is a mixture of liquid and solid particles as a result of burning.
- Plume:** It is a geometrical form of smoke.
- Smog** is the mixture of smoke and fog (discussed separately)

Effects

- Acid rain has many ecological effects, but none is greater than its impact on lakes, streams, wetlands and other aquatic environments. Acid rain makes water acidic and causes them to absorb aluminium.
- Acid rain also damages forests, especially those at higher elevations. It erodes the soil of essential nutrients and releases aluminium in the soil, which makes it hard for trees to take up water.
- The effects of acid rain combined with other environmental stressors, such as leaves, trees and plants are less able to withstand cold temperatures, insects and disease. The pollutants may also inhibit the trees' ability to reproduce.

The following are the major government initiatives to monitor air pollution.

- National Air Quality Monitoring Programme
 - National Ambient Air Quality Standards
 - System of Air Quality and Weather Forecasting
- National Air Quality Monitoring Programme:** The Central Pollution Control Board is executing a nation-wide programme of ambient air quality monitoring known as National Air Quality Monitoring Programme (NAMPP).

National Air Quality Index (NAQI) was launched on 17 October 2014 to disseminate information on air quality in an easily understandable form for the general public. The measurement of air quality is based on the pollutants mentioned below:

 - PM10 – Particulate matter (Size less than 10 μm)
 - PM2.5 – Particulate matter (Size less than 2.5 μm)

- (c) NO₂
- (d) SO₂
- (e) CO
- (f) Ozone
- (g) Ammonia
- (h) Lead

The unit of measurements in case of pollutants mentioned above is microgram per cubic metre except in the case of CO where it is milligram.

The AQI is classified along one of the six categories.

- (a) Good (0–50)
- (b) Satisfactory (51–100)
- (c) Moderately polluted (101–200)
- (d) Poor (201–300)
- (e) Very Poor (301–400)
- (f) Severe (401–500)

The formulation of the index was an initiative under Swachh Bharat Mission (Cleanliness Mission) based on the recommendations of IIT Kanpur and the expert group formed in this regard.

2. National Ambient Air Quality Standards: It may be noted that ambient air quality standards are specified separately in India for around 12 pollutants including the 8 that constitute the NAQI. The additional four pollutants are arsenic, nickel, benzene and benzopyrene. PM_{2.5} is particularly dangerous and can cause adverse health effects owing to its greater penetrability into the human respiratory system and eventual accumulation in human organs and blood. PM concentrations are higher in winter season and are lower during monsoon months.

SO₂ levels are within the prescribed National Ambient Air Quality Standards in residential areas of all the cities. Decreasing trend may be due to various interventions that have taken place in recent years, such as reduction of sulphur in diesel, use of cleaner fuel such as CNG in Delhi, implementation of Bharat Stage-III emission norms. In addition, there has been a change in the use of domestic fuel from coal to LPG, which may have contributed to reduction in ambient levels of SO₂.

Table 9.2 Major Air Pollution-Related Chemical Substances

Pollutants	Source	Pathological effect on human beings
Ozone (Ground level)	Vehicular exhaust	Lung function – aggravation of asthma, emphysema, and chronic bronchitis
Lead	Leaded petrol (used as anti-knocking agent)	Central Nervous System, interference with development of RBCs
Sulphur dioxide	Thermal power plant and industries	Severe respiratory problem, reduces exchange of gases from lung surface
Nitrogen oxides	Thermal power plant	Heart and lung problems, Bronchitis, asthma, and also carcinogenic issues
Carbon monoxide	Incomplete combustion of fossil fuels, wood stoves and cigarette smoking.	Reduces oxygen-carrying capacity of blood, breathing problems
Hydrogen sulphide	Oil refineries and chemical industries.	Nausea, irritation of eyes and throat
Hydrogen cyanide	Blast furnace, fumigation and chemical industry.	Headache, dry throat, indistinct vision, and dysfunction of nerve cells
Ammonia	Fertilizer industry, dye making, bleaching and explosives.	Acidification of water bodies at high level
Phosgene	Chemical and dye-making industry.	Pulmonary oedema
Volatile organic compounds	Vaporize easily and some examples are gasoline, benzene, etc.	Smog formation
Arsenic	Arsenic soldering	Damage red blood cells, kidneys, and cause jaundice
SPM*	Incinerators and basically manufacturing processes.	Emphysema, respiratory system problems-asthma, chronic bronchitis

*Suspended Particulate Matter (SPM) or Particulate Matter (PM) includes soot, smoke, dust, fibres, pesticides, metals (such as mercury, lead, and copper), dust mites, and pollen.

Some of the pollutants fall under categories of both air and water pollutants, such as heavy metal cadmium.

NO₂ levels are within the prescribed National Ambient Air Quality Standards in residential areas of most of the cities. The reasons for low levels of NO₂ may be various measures taken, such as banning of old vehicles, better traffic management, etc. Despite an increase in the number of vehicles, CO levels have reduced during last few years. The decrease may be attributed to measures, such as conversion of three-wheelers of CNG.

- 3. System of Air Quality and Weather Forecasting:** The Ministry of Earth Sciences (MoES), the Government of India has introduced a major national initiative, 'System of Air Quality and Weather Forecasting and Research' known as 'SAFAR' for greater metropolitan cities of India to provide location-specific information on air quality in near real-time and its forecast 1–3 days in advance for the first time in India. It has been combined with the early warning system on weather parameters. The SAFAR system is developed by Indian Institute of Tropical Meteorology, Pune.

WHO has its own standards. Across the globe, most of the emissions that reach the atmosphere come from coal (43%) followed by oil (33%).

Indoor Air Pollution

The major reasons for indoor air pollution are inefficient burning of inferior fuels during cooking or heating, such as cow dung, agricultural residue, and coal and fuel wood, along with poor ventilation systems inside the house. The problem aggravates during winters when the doors and windows of the houses, especially in rural areas are kept shut. The smokeless *chulhas* were introduced as a solution to the problem of indoor air pollution. However, they could not make much impact.

Water Pollution and Its Causes

Water covers about 70% of earth's surface. Water is an important resource for the people and the environment. Water is the basis of life and it makes up to 60–95% of the total weight of any functioning living cell.

Figure 9.14 Urban Pollution Origins

Odd Even Formula in Delhi

Pollution situation became so alarming in Delhi that it was declared as a 'gas chamber' by the Delhi High Court in 2015. The Delhi government started a pilot project 'Odd Even Formula' on 1 January 2016 to bring down the air pollution levels amidst reports that Delhi is the most polluted city in the world. Accordingly, odd number cars were to ply on city roads on odd dates and even numbered cars on even days for 15 days. Similar schemes have been tried at Mexico City, Bogota (Capital of Columbia) and Beijing.

The odd even scheme showed mixed results. Although the percentage effect could be small, but given the concentrations as high as in Delhi, the absolute reductions in PM 2.5 concentrations are 'significant' as it can help reduce health impacts. The scheme brought 'considerable' additional benefits including reduction on road congestion, increase of average car speeds, reduced fuel usage and made significant impact on public awareness levels on air pollution and its impacts on human health.

Although 70% of earth's surface is covered with water, only 0.00192% of the water is available for human consumption. Less than 3% of the world's water is fresh, where the rest is seawater and undrinkable. Of this 3%, over 2.5% is frozen as glaciers, which are locked up in the Arctic and Antarctica regions and they are not available to man. Thus, humanity must rely on the remaining 0.5% for all of man's and ecosystem's fresh water needs.

The sector-wise breakup of water withdrawal in India is

1. Agriculture and livestock—91%,
2. Municipalities—7%, and
3. Industry—2%.

Pollution of water affects drinking water, lakes, river and oceans all over the world.

Water pollution is the presence of harmful substances in a water body and thus, it makes water unfit for intended use.

Types of Water Pollution

According to the sources of pollution, there are two types of water pollution, namely point source and non-point source pollution.

Point Source Solution

The discharge of harmful substances by specific sources into a water body leads to point source pollution. Industrial wastewater and hot water from thermal power plants cause point source pollution. The discharge of pollutants into a water body from large areas leads to non-point source pollution. Construction runoff and acid rain cause non-point source pollution.

The major sources of this type of water pollution are as follows:

1. **Industrial wastewater:** Both small and large industrial units produce wastewater, which has a variety of organic and inorganic pollutants. This is the major reason for river pollution in India.
2. **Hot water:** Industries such as thermal power plants and oil refineries use water as coolant.

When this water discharged into the water body, its temperature is higher by 15°C. The warmer temperature decreases the solubility of oxygen and increases the metabolism of fish. This changes the ecological balance of the river.

Non-point Source Pollution

Non-point source pollution is caused by the following pollutants.

1. **Municipal wastewater:** Wastewaters from domestic sources, such as kitchen and toilet are sometimes discharged into a river or large water body nearby. This is the major reason for river pollution in India and across the globe.
2. **Surface run-off:** The practices followed in agriculture affect the groundwater quality. Intensive cultivation causes fertilizers and pesticides to seep into the groundwater, where this process is known as leaching. Irrigation run-off from agricultural fields causes high nitrate content in groundwater. The problem is aggravated if industries are located in that area.
3. **Oil spills:** An oil spill is the accidental discharge of petroleum into oceans or estuaries, leading to the pollution of marine ecosystem. Oil spills are caused due to capsized oil tankers or offshore oil mining and oil explorations.

Impact of Water Pollution on Life

Water pollution affects all types of organisms, from microorganism to humans. Let us take a look at the harmful effects of water pollution on various forms of life.

Oxygen Depletion in Water Bodies

High levels of organic wastes increase the rate of decomposition by bacteria, which use oxygen for this process. This causes a drop in dissolved oxygen in water. In other words, the biochemical oxygen demand (BOD) of water increases. A high BOD indicates a low level of dissolved oxygen in water. This destruction leads to the destruction of sensitive organisms, such as phytoplankton, molluscs and fish.

Biomagnification

The accumulation of a toxic chemical in the bodies of organisms as we move from producers, to primary consumers, to secondary consumers, etc., is called biomagnification. It occurs when a chemical becomes more and more concentrated as we move up a food chain. This is specifically true in case of non-biodegradable chemicals or pollutants. The classic example is DDT. It is first eaten by planktons, then by small fish and then by big fish. The fish are eaten by birds and so on. At each level, its concentration goes up. The consumption of DDT by birds causes thinning of their eggs, which rupture prematurely during their warming by birds and babies dying a premature death. The process of biomagnification is also called bioaccumulation.

Eutrophication

The inorganic nutrients in the run-off from agricultural fields reaching a water body increases the nutrient content of the water body. These nutrients causes the profuse growth of algae (algal bloom) in it. This growth eventually causes the death of small fish and organisms in them.

Effect of Water Pollution on Human Life

Water contamination due to domestic sewage containing pathogens, such as viruses, bacteria, parasitic protozoa and worms can cause diseases, such as jaundice, cholera, typhoid and amoebiasis. This type of contamination renders the water unfit for drinking, bathing, swimming and even irrigation.

Contamination of Water by Heavy Metals

Heavy metals are commonly defined as those having a specific density of more than 5 g/cm^3 . The main threats to human health from heavy metals are associated with exposure to lead, cadmium, mercury and arsenic (a metalloid). Heavy metal contamination of water bodies and groundwater due to industrial wastewater affects health in a number of ways. Industrial effluents containing lead, fluorides, nitrates and arsenic pose a grave danger to human beings.

1. **Mercury:** Mercury compounds in wastewater are converted by bacterial action into extremely toxic

methyl mercury. Fish accumulates this poison in their bodies. The consumption of such fish can cause numbness of limbs, lips and tongue, deafness, blurring of vision and mental derangement. This syndrome is called Minamata disease since it was first noticed in Japan in 1950s, where people developed it after consuming fish from the Minamata Bay. It can also cause gingivitis.

2. **Pesticides:** Organophosphates and carbonates present in pesticides that get washed off into water bodies damage the nervous system and can cause cancer.
3. **Fluoride:** Excess fluoride can cause yellowing of teeth and damage to the spinal cord.
4. **Nitrates:** Drinking water contaminated with nitrates can prove fatal, especially to infants feeding on formula milk made with this water. Nitrates restrict the amount of oxygen that reaches the brain causing blue baby syndrome.
5. **Chromium:** Chromium is a known carcinogen.
6. **Arsenic:** Earlier it was widely used as an insecticide, rodenticide, for wood preservation and medical preparation. It has many industrial applications. Different fungi and microorganisms convert arsenic to dimethyl arsenic in water, which gets detected in natural water, bird egg shells, sea shells, and human urine. Arsenic poisoning through water can cause damage to the liver, nervous system disorders, vascular disease, skin cancer (dermatitis) and bronchitis.
7. **Cadmium:** Cadmium compounds are mainly used in rechargeable nickel-cadmium batteries. Cadmium is also used in making fusible alloys, electroplating and as control rods in nuclear reactors.

Cigarette smoking is a major source of cadmium exposure. In non-smokers, food is the most important source of cadmium exposure. It damages the heart, liver, lungs, reproductive organs and also causes kidney damage. The itai-itai disease in Japan was due to cadmium pollution, where it causes bone defects and fractures.

8. **Cyanide:** It is used in extraction of gold and silver metals, metal painting and in pesticides. Its consumption leads to nausea and death.
9. **Manganese:** It is abundant in nature. Higher concentration of manganese causes cramps, tremors, hallucinations, manganic pneumonia and renal degeneration.
10. **Iron:** The excessive presence of iron in human body can aggravate thalassaemia that is basically a genetic disorder. This has an adverse impact on red blood corpuscles (RBCs) count and haemoglobin. Water bodies also become foul due to abundance of iron-oxidizing microbes.

More About the Effects of Chromium Intake on Human Health

Chromium is a mineral that aids in the body's ability to use insulin to convert carbohydrates to energy. It is used in many industries as well.

Naturally occurring trivalent chromium is essential for good health and the normal intake from eating foods is 70–80 µg per day and it is considered safe.

Hexavalent chromium does not occur naturally but is produced by certain industrial processes. It is the most toxic form of chromium and is shown to cause lung cancer when workers are exposed to high levels for longer time periods.

Breathing chromium dust or fume is the main route for exposure to chromium.

Plants can absorb chromium and it can be passed on to those who eat the plants.

Contact with contaminated soil can result in exposure to chromium.

Effect of Water Pollution on Marine Life

Marine oil spills is also a type of water pollutant and has direct impact on marine life. It is the accidental release of petroleum products into the ocean or coastal waters.

- 1. Tanker spills:** Even small amounts of oil spread across large areas of water prevents oxygen in the air from dissolving in water, thus making it difficult for organisms to breathe.
- 2. Oil coating:** Oil coating results in poisoning of marine birds such as seagull. The oil coating reduces their body temperature and makes it impossible for them to survive the cold temperature of the ocean.

Soil and Its Pollution Causes

The soil is a thin covering over the land consisting of a mixture of minerals, organic materials (carbon compounds, generally derived from organisms), living organisms, air and water.

Mature soil is arranged into a series of zones called soil horizons (Table 9.3).

Different types of soils vary in content of clay (very fine particles), silt (fine particles), sand (medium sized particles) and gravel (coarse particles). In combination, they determine the soil texture.

The following are the different causes of soil pollution:

- 1. Industrial waste:** Heavy metals and toxic chemicals.

Table 9.3 Layers of Soil

Layer	Description
O-Horizon	Freshly fallen leaves, twigs, animal waste, fungi and so on.
A-Horizon	Partially decomposed organic matter (humus) and some inorganic mineral particles.
B-Horizon	It is also called subsoil, where it has less organic matter and fewer organisms than A-Horizon soil.
C-Horizon	Helps to determine the pH of soil and it determines the soil's rate of water absorption and retention.

- 2. Municipal and medical wastes:** Some wastes are non-biodegradable.
- 3. Radioactive wastes**
- 4. Agrochemicals:** Pesticides, weedicides and excess inorganic fertilizers.
- 5. Opencast mining:** Digging the earth's surface for extraction of mineral ores degrades the top soil of earth.
- 6. e-waste:** Used computers, mobile phones, TV, etc., simply dumped into landfills. Since these are of toxic nature, they affect the quality of soil. The toxins may leach from landfills and also spoil the groundwater.
- 7. Pesticides and fertilizers:** Temperature, light and carbon dioxide levels affect photosynthesis. Farmers use fertilizers, pesticides and biological control to increase crop yields. Excessive use of fertilizers reduces the population of soil-born organisms, the crumb structure of the soil and productivity of the soil.
This can cause problem of water logging. The plant roots cannot respire due to excess water in soil profile. Nitrogen is lost from waterlogged soils due to leaching and denitrification (degassing). Denitrification leads to the gaseous loss of nitrous oxide (N₂O) into the atmosphere, which is the major greenhouse gas and adds to the phenomenon of global warming.
- 8. Other pollutants:** Many air pollutants (acid rain) and water pollutants ultimately become a part of soil pollution.

Soil Degradation

A good quality soil can support vegetation without which life on earth cannot be sustained. It may take up to 1000 years to form an inch of soil and building-up of organic matter can also take a very long time. Even soil makes a dynamic ecosystem to sustain itself. For example, though nitrogen is the major gas in the

Soil Types in India

Alluvial Soil

It is formed as a result of flooding of plain areas especially in lower courses of rivers. The alluvial soil is very fertile. These are basically sedimentary rocks. They lack humus and nitrogen. They have high potassium content. They are suitable to grow paddy, sugarcane and so on. In India, they are found in the Indo-Gangetic Plains.

Red Soil

They are rich in iron and hence, it is red in colour. They are formed as a result of breakdown of igneous and metamorphic rocks. The soil is found in areas of India with low rainfall, such as in Madhya Pradesh, South Karnataka, Maharashtra and Rajasthan. Crops such as red gram, groundnut and castor seed are grown in red soil.

Laterite Soil

Laterite soil is formed from a mixture of clay and red soil and also as a result of leaching process. They are rich in minerals, such as aluminium and iron and are found in hot and wet tropical areas. It has very low fertility and becomes hard when exposed to air, so it is used as a building material. Crops such as coffee, coconut and cashew are capable of growing in laterite soil.

Regur Soil

It is also known as black soil or cotton soil and found in the Deccan trap. Black soil is rich in nutrients, such as calcium, potassium and magnesium, but has poor nitrogen content. Black soil is appropriate for growing crops, such as cotton, tobacco, oil seeds and maize.

Apart from these, other varieties of soil are desert soil (coarse or sandy texture) and mountain soil (formed from deposition of organic matter from woodlands and forests).

atmosphere, it can be absorbed in the form of nitrates, which is carried out by nitrifying bacteria present in the soil. Soil exchanges gases with the environment. Here, the soil breaks down the organic wastes and recycles the nutrients back to the plants.

1. Soil ecosystem is disturbed by deforestation.
2. The use of heavy machinery results in soil compaction or pressing, which reduces the porosity of soil and also its water holding capacity.

3. Sewage water is used to irrigate the fields or sewage sludge is used as a fertilizer, which increases the heavy metal content in the soil.
4. With intensification of agriculture as a result of green revolution, the same type of crop is raised again and again, which deprives the soil of a particular type of nutrient. To prevent this, crop rotation should be followed as a regular process.
High-yielding varieties of food grains demand use of more water and fertilizers.
5. Use of water with high salt content to raise crops may result in high salinity of soil. Salt makes the layer at the top impermeable, which does not allow water to seep into the soil and thus, it results in the problem of water logging.
6. Excessive use of pesticides and fertilizers to increase land productivity also degrades the quality of soil and ultimately these fertilizers and pesticides enter into our ecological system.
7. The overexploitation of groundwater results in the fall of water table and ultimately in desertification.

Noise Pollution

Noise pollution may be defined as environmental noise that causes physiological or psychological damage if the volume is high or exposure is prolonged. Noise is also defined as unwanted sound, where it is an irritant and a source of stress. The hair cells in the ear are damaged to an extent that cannot be repaired or replaced. The intensity or loudness of sound is felt in the form of pressure waves and affects our eardrums. Just like any other form of pollution, noise pollution too has serious impact on the working of our vital organs.

Measurement of Sound

Sound is measured in decibel (dB). The unit was chosen in the honour of Alexander Graham Bell, who invented the telephone. It is not a linear scale but a logarithmic scale. For example, a change from 40 dB to 80 dB represents a 10,000-fold increase in loudness. A modified scale known as decibel-A takes into account the pitch as well. The permitted noise level is 125 dB as per the Environment Protection Rules, 1999.

Sources of Noise Pollution

The following are the common sources of noise pollution:

1. Industries
2. Vehicles
3. Sound amplifiers (music system and loudspeakers)
4. Crackers
5. Passenger aircrafts and fighter jets

The permissible sound levels and typical average decibel levels are provided in Tables 9.4 and 9.5.

Table 9.4 Permissible Sound Levels

Area	Day (dB)	Night (dB)
Industrial	75	65
Commercial	65	55
Residential	50	45
Silence zones	50	40

Table 9.5 Typical Average Decibel Levels

Source	dBA
Threshold of hearing	0
Quiet whisper	30
Normal conversation	60
Loud singing	75
Automobile	80
Jet plane	130

Effects of Noise Pollution on Human Health

WHO has included noise as one of the most hazardous factors that affect living conditions in crowded cities.

Hearing Loss

The intensity, frequency and duration of noise have a proportionate impact on our body. The threshold of human hearing is 0 dB. Persistent exposure to intensity of noise in the range of 71–85 dB or even below can cause permanent loss of hearing. When noise level reaches around 130 dB, it can even cause physical pain.

Masking

It is the inability to hear important environmental cues and animal signals.

Noise affects the heart rate, peripheral circulation and breathing patterns. Persistent noisy environment can cause irritability, headache and sleeplessness by decreasing productivity.

ENVIRONMENTAL WASTE

The Directive Principles of State Policy (Article 47) in the Indian Constitution requires not only that the state protects the environment but it also compels the state to seek improvement in polluted environments. The Ministry of Environment and Forests continuously monitors the progress made by various State governments and Union Territories with respect to the implementation of India's Hazardous Wastes Rules.

According to the Environment Protection Act, 1990, waste is defined as 'any substance which constitutes a scrap material, or an effluent or other unwanted

Radioactive Pollution

Radiation is defined as the transmission of energy in the form of waves through space or a material medium. Radiation is of two kinds, namely ionizing and non-ionizing. Ionizing radiation or high energy radiation like X-rays or gamma rays can alter DNA and can be harmful.

Non-ionizing radiation is low energy radiation as emitted by mobile phones or radio towers and tends to generate heat.

Radiation can be natural or can arise from human activities. Most radiation exposure is from natural sources, such as rocks, earth's crust and cosmic among other sources. Radon is the most prominent example of natural radiation. Human activities typically accounts for up to 20% of our radiation exposure on an average.

Radiation particularly associated with nuclear medicine and the use of nuclear energy, along with X-rays is 'ionizing' radiation, which means that the radiation has sufficient energy to interact with matter, especially the human body and produce ions.

Effects of Radioactive Pollution

Some of the ultraviolet (UV) radiations from the sun are considered as ionizing radiation and provide a starting point while considering its effects. UV from sunlight is important in producing vitamin D in humans, but too much exposure produces sunburn and potentially, skin cancer. The skin tissue gets damaged and the damage to DNA (though mutation) could not be repaired properly and hence, over time, cancer develops and could be fatal. The depletion of ozone layer may increase our exposure to UV rays and thus, it causes skin cancer.

Genetic abnormalities occur in children of parents who had significant exposure to radiation.

surplus substance arising from application of any process'.

With rapid urbanization, industrialization and an explosion in population in India, solid waste management will be a key challenge for State governments and local municipal bodies in the 21st century.

The waste is usually of the following types:

- 1. Biodegradable waste:** They degraded through microbial activity. The prominent examples are food residue and human excreta.
- 2. Non-biodegradable waste:** They do not degrade and the main examples are petroleum, plastic, glasses, etc.

3. **Biomedical:** Usually, the leftovers from medicine, such as needle, syringe, body parts are counted as biomedical wastes.
4. **e-waste:** Computer parts, batteries, CFL bulbs are some of the main examples.

Sources of Waste

1. **Domestic waste:** Polythene, bottles, food, cotton, etc.
2. **Industrial waste:** They originate from industrial activities and divided into the following.
 - (a) **Food processing:** Organic wastes, pathogens.
 - (b) **Paper industry:** Chlorine, sulphur dioxide, methyl mercaptan.
 - (c) **Textile industry:** From boiling and processing of fibres.
 - (d) **Petroleum:** Inorganic sulphur, hydrocarbons, organic acids, etc.
 - (e) **Chemical:** Phosphorus, fluorine, silica, etc.
 - (f) **Metal:** Copper, lead, chromium, cadmium.
 - (g) **Cement:** Particulate matter, dust.
 - (h) **Nuclear reactor:** Radioactive wastes such as plutonium.
 - (i) **Agricultural waste:** Fertilizer, crop residue, pesticides, fumigants.
 - (j) **Radioactive waste:** X-Ray machines, nuclear plants, laboratories, etc.
 - (k) **Municipal waste:** Waste produced by public offices, parks, shops, etc.

Now we can discuss the different types of wastes as mentioned in the NTA-NET syllabus.

Solid Waste

A solid waste is basically a solid or semi-solid domestic waste, sanitary waste, commercial waste, institutional waste, etc. There are many categories of solid waste, such as food waste, rubbish, commercial waste, institutional waste, street sweeping waste, industrial waste, construction and demolition waste and sanitation waste.

‘Swachh Bharat Abhiyan’ (Clean India Mission) was started on 2 October 2014 to deal with issues related to waste management, cleanliness and sanitation on a national level.

Presently about 960 million tons of solid waste is being generated annually in India. It is not only the amount of waste generated but it leads to health issues and environmental degradation. Only 68% of the garbage generated in the country is collected, of which 28% is treated by municipal authorities.

Untapped waste can generate more than thirty thousands of TPD of combustible waste. The amount of waste that is generated, if collected and treated well can be effectively used to generate energy.

World Health Organization says that 22 types of diseases can be prevented or controlled by improving solid waste management in India. Hence, the casual attitude towards waste management should change.

Now we can look at various options to deal with waste management.

Solid Waste Management

After the collection of municipal waste from households, there are three ways of disposal by municipal authorities

1. **Composting units:** It is the cycle of sustainable nutrient reuse by **turning waste into valuable organic input**. It helps to improve soil vitality, root growth and soil moisture retention. The main objective is to collect only organic waste.
2. **Bio-methanation** to produce bio-gas.
3. Recovering heat energy in the form of dry fuels from combustible fractions.

The composting units can further be categorized into the following.

- (a) **Aerobic composting:** The bacterial conversion of the organics present in solids under the presence of air under hot and moist conditions is called composting, where the final product is called compost (humus) that is used as fertilizer, non-odorous and free of pathogens. The waste volume can be reduced to 50–85%. The composting methods may use either manual or mechanical means.
- (b) **Vermicomposting:** It is basically the joint action of earthworms and aerobic microorganisms. The worm cast is a fine, odourless and granular product. This product can be used as a bio-fertilizer in agriculture.
- (c) **Anaerobic digestion:** If the organic waste is buried in pits under partially anaerobic conditions, then it will be acted upon by anaerobic microorganisms. The methane and carbon dioxide are released and the leftover organic residue is good manure. It is slower than aerobic composting and it occurs naturally in landfills. It may lead to energy recovery through biogas generation that has 55–60% methane, can be used directly as a fuel for power generation.

It is **not that attractive in India due to high moisture and organic content and low calorific value of the wastes**. The Lucknow biomethanation plant in 1990 failed because it was designed to handle only wet segregated waste but had to cope with mixed waste.

There is a need to provide appropriate incentives and regulatory framework needs to be provided.

There are other schemes as well to deal with solid wastes and they are discussed below.

- 1. Incineration:** One of the most attractive features of the incineration process is that it can be used to reduce the original volume of combustible solid waste by 80–90%. Incineration of solid waste under oxygen deficient conditions (incomplete combustion) is called gasification that replaces a large part of the carbon dioxide we get from combustion with carbon monoxide and hydrogen. Gasification also eliminates the threat from dioxins. The material to be treated is directly converted into SynGas (synthetic gas) which has hydrogen and carbon dioxide as its components. However, its installation is expensive (high cost of equipment and skilled operators), it generates ash and toxic gases (HCL, CO, SO₂).
- 2. Pyrolysis:** Here, the solid is converted into liquid state and liquid is converted into gas. These products of treatment can then be used for production of energy.
- 3. Landfill:** It is burying off the waste in vacant locations around the cities that should be covered with soil to prevent contamination. Suitable trees should be planted to hold the soil (of shallow roots). Though it is quite economical and sanitized for waste dumping but may result in the release of poisonous gases, secretion of toxic liquid and destruction of vegetation.
- 4. Methanogenesis:** It is biomethanation, that is the formation of methane by microbes known as methanogens. The main purpose of the refuse derived fuel (RDF) method is to produce an improved solid fuel or pellets from MSW (Management of Solid Waste).
- 5. Recycling** of items such as plastic, paper, glass, rubber, ferrous and non-ferrous metals.
- 6. Rag pickers:** They play a key role here, where the process of manual recycling cannot be scaled-up and at the same time, handling these wastes directly poses health and environmental risks. Further, all the work is done in informal sector.
- 7. Leachate:** A major problem arising from landfills is the discharge of leachate that moves into the surrounding soil, ground water or surface water could lead to severe pollution problems.
- 8. Sensitization** of citizens as well as government authorities, community participation, involvement of NGOs. Littering should be prohibited.
- 9. Bioremediation:** It is the use of living organisms, primarily microorganisms, to degrade environmental contaminants into less toxic forms. For example, Pseudonymous bacterium can decompose synthetic pesticides. Here, the pollutants can be treated on site and thus, it reduces exposure risks for personnel.

Segregation and community participation are the key factors. Plastic bags have been banned in a number of big cities.

Thus, we can see that waste reduction can be done in two ways, where one is through waste reduction and the second method is through recycling.

Government of India had notified the Municipal Solid Waste (Management and Handling) Rules in 2000, thereby making it mandatory for all urban local bodies in the country to engage in collection, segregation, secondary storage in covered bins, transportation in covered vehicles, processing through composting or waste-to-energy technologies and disposal of rejects in engineered/sanitary landfills.

CPCB report reveals that only 68% of the MSW generated in the country is collected of which 28% is treated by the municipal authorities. Thus, merely 19% of the total waste generated is currently treated. Processing and safe disposal are being attempted only in a few cases.

Some of the **major issues** concerning solid waste management are as follows.

- 1. Absence of segregation** of waste at source.
- 2. Lack of financing.**
- 3. Lack of technical expertise** and appropriate institutional arrangement.
- 4. There is some unwillingness** to introduce proper collection, segregation, transportation and treatment/disposal systems.

The indifference of citizens, lack of community participation and sewage management plan are some important issues.

Kasturirangan Report by erstwhile Planning Commission highlights the need for an integrated approach, that means that principle of Reduce, Reuse, Recover, Recycle and Remanufacture (5Rs) should be adopted. It emphasizes setting up centralized (for incineration, gasification, pyrolysis) or decentralized (for biomethanation, vermicomposting) waste processing facilities keeping in view the quantity and quality of waste generated and financial viability of the processing technology.

Liquid Waste

The liquid wastes are wastewater, fats, oils or grease, used oil, liquids, solids, gases or sludges and hazardous household liquids that are hazardous or potentially harmful to human health or the environment. They can also be discarded commercial products classified as 'Liquid Industrial Waste', such as cleaning fluids or pesticides or the byproducts of manufacturing processes. These are general regulatory requirements relating to waste, additional regulations apply to generating, storing, transporting, treating and disposing of hazardous and liquid wastes.

The composition of liquid waste depends on its source. The three main sources are residential, commercial and industrial areas. Storm water is also a source of liquid waste. Liquid waste from domestic sources can be classified as black water, which contains excreta and grey water. Liquid waste from commercial areas is broadly similar to wastewater from residential areas. Fats and oil from restaurants and cafes can be removed using a grease trap. The characteristics of industrial wastewaters depend on the type of industry. Some industrial wastewaters are hazardous.

The characteristics of wastewaters can be described in physical, chemical and biological terms. Physical characteristics include the amount of suspended solids, the temperature and odour. The amount of suspended solids is measured by filtering a known volume of wastewater and weighing the solids retained on the filter.

The quantity of organic matter in liquid waste is an important measure of its polluting potential. If discharged into a river or lake, the organic matter exerts an oxygen demand which can reduce the availability of oxygen for fish and other aquatic organisms. Organic matter is measured in terms of biochemical oxygen demand or chemical oxygen demand.

These are the following main ways to deal with the liquid wastes.

The sewage treatment includes the following methodology.

- 1. Dilution:** The dissolved oxygen in natural water decomposes the organic wastes completely, by reducing the turbidity that favours easier penetration of sunlight. Finally, the natural ecosystem is restored.
- 2. Mechanical treatments:** The sewage is allowed to pass through different screens, filters, grit chambers and sedimentation basins. The sewage is filtered first to remove the suspended particles and then the sewage is subjected to grinding, and then other chemical treatment.
- 3. Biological treatments:** The sewage is passed through trickling filters where aerobic bacteria degrade the sewage as it seeps through large vat beds filled with crossed stones covered with bacterial growth. Alternatively, the sewage is to decrease bacterial degradation of organic waste.
- 4. Chemical treatments:** The sewage obtained after mechanical or biological treatments is subjected to specific chemical treatment followed by some physical operation.
- 5. Precipitation:** Calcium oxide treatment to precipitate up to 90% of phosphates and suspended particles. The precipitate separates and settles at the bottom.
- 6. Adsorption:** The effluent is treated with activated charcoal.
- 7. Osmosis:** Both for separation of dissolved organic and inorganic substances can also be separated by the process of osmosis.
- 8. Chemical oxidation:** Here, it is oxidation in the presence of ozone or hydrogen peroxide to remove dissolved organic compounds.
- 9. Removal of ammonia:** After the first operation, the wastewater is introduced into a metal tower from which it trickles down over a series of plastic baffles plates and air is forced upwards which removes ammonia gas.

Biomedical Waste or Biological Management Waste (BMW)

It is the waste produced during the diagnosis, treatment or immunization of human or animal research activities pertaining thereto or in the production or testing of biological or in health camps.

The three basic principles of such good practice are 3Rs, such as Reduce, Recycle, and Reuse. It aims at avoiding the generation of waste or recovering as much as waste as possible rather than disposing. Hence, the waste should be tackled at source rather than 'end of pipe approach'.

Usually 10%–25% of BMW is hazardous (physical, chemical and/or microbiological) and the remaining 75%–95% is nonhazardous.

World Health Organization (WHO) in its 2007 meeting in Geneva defined the core principles for treatment of linked healthcare. The first edition of WHO handbook on safe management of wastes from healthcare activities known as 'The Blue Book' came out in 1999. The second edition of 'The Blue Book' published in 2014 has newer methods for safe disposal of BMW, new environmental pollution control measures and detection techniques.

International Agreement and Conventions

There are three international agreements and conventions which are particularly pertinent in biomedical waste management.

- 1. Basel convention on hazardous waste:** The most inclusive global environmental treaty on hazardous and other wastes.
- 2. Stockholm convention (2006):** On Persistent Organic Pollutants (POPs), the chemicals are formed by medical waste incinerators and other combustion processes.
- 3. Minamata convention on mercury (2014):** Phasing out of certain medical equipment in healthcare services, including mercury-containing medical items, such as thermometers and blood pressure devices.

Biomedical Waste (Management & Handling) Rules, 1998 notified under the **Environment (Protection) Act, 1986** needs requirement to segregate according to colour code and to treat and dispose.

Hazardous Waste

It means any waste which by reason of any of its physical, chemical, reactive, toxic, flammable, explosive or corrosive characteristics causes danger or is likely to cause danger to health or environment, whether alone or when in contact with other wastes or substances.

Hazardous substances mostly contain the following contaminants.

1. **Components of electronic waste:** Cadmium and lead and PVC sheathing on cables.
2. **Household chemicals:** Bleach, oven cleaners, turpentine and paints.
3. **Products incorporating nano particles:** Zinc and titanium oxide in sunscreen, cosmetics, skin gel, etc.
4. **Commercial and industrial waste stream:** Chemicals and heavy metal.
5. **Construction and demolition waste stream:** Asbestos
6. Outside those waste streams biosolids, particularly sewage sludge.

There is a fairly comprehensive legal and regulatory framework in place in India to deal with such issues that include a lack of financial resources, a shortage of staff, a lack of standardized protocols and a lack of legal authority.

Electronic Waste

The composition of electronic waste is well diversified. It falls under 'hazardous' and 'non-hazardous' categories. The ten states contribute to 70% of the total electronic waste generated in the country, while 65 cities generate more than 60 per cent of the total electronic waste in India. According to a UN report, India's electronic waste from old computers will jump five percent by 2020 when compared to 2007. Producers and consumers of electronic goods have a responsibility under the E-waste (Management and Handling) Rules 2011 to ensure proper disposal. Now the E-waste (Management) Rules 2016 provide several options to manufacturers, such as collection of a refundable deposit and paying for the return of goods to meet the requirements of law.

According to the UNEP Report, much of the 40 million tons of electronic waste produced around the world like old smartphones, TVs, laptops and obsolete kitchen appliances are sent abroad as it is much cheaper. China, India, Malaysia and Pakistan are the main destinations. The vast majority of illegal e-waste ends up in landfills, incinerators and in ill-equipped

recycling facilities, that have been described as a 'toxic time bombs.'

The onus on garbage management would continue to be the responsibility of municipal bodies, they would be allowed to charge user fees and levy spot fines for littering and non-segregation.

There is a short life span of electronic products. The availability of choices, affordability of products, changing pace of life, rapid urbanization and increased purchasing capacity of the middle class have all contributed to the growth of the electrical and consumer durable industry. The most potent risks of electronic wastes in India are the following.

1. **Environmental:** Toxic metals, like lead, cadmium, mercury, arsenic, chromium, PCBs, CFC, etc., can cause soil, water pollution, air pollution in the form of fumes due to burning (dioxins and furans).
2. **Health concerns:** For general populace as well as for those who handle it.
3. Electronic waste often ends up in landfills in India.

There are potential asset that must be recovered, for example, aluminium, copper, platinum, gold, silver, palladium, etc.

Electronic waste rules were notified by the Ministry of Environment Friendliness in 2011 for proper management and handling. The concept of Extended Producers Responsibility (EPR) has been enshrined in these rules.

Electronic waste recycling can be undertaken only in facilities authorized and registered with State Pollution Control Boards/Pollution Control Committee (PCCs). The wastes generated are required to be sold to a registered or authorized recycler or re-processor having environmentally sound facilities.

However, there are some limitations of electronic waste rules. There are no take-back targets for manufacturers and hence, there is no clear responsibility. There are no guidelines to set up an electronic waste collection system. The current law does not provide for any plan to rehabilitate those involved in informal recycling.

There are many other administer and certifying issue, such as declaring the end-of-life of a product, nor any legal format for issuing destruction certificate for an electronic item. It also ignores the unorganized and small and medium sectors where 90 per cent of the e-waste is generated.

CLIMATE CHANGE AND GLOBAL WARMING

Climate change is the most important issue of the 21st century with potential direct adverse impact on global economy and civilization. It is a long-term change

in the average weather patterns. It may occur over a period of time, which may range from a decade to millions of years. Climate change may be limited to a specific region or may occur across the whole earth.

Paleoclimatology or Palaeoclimatology is the study of climatic changes taken on a scale of the entire history of earth. It makes use of data from ice sheets, tree rings, sediments, corals, shells and rocks.

Global warming is the progressive increase in the average temperature of earth's near surface air and oceans during the last few decades and its likely continuation in future as well. This is mainly due to the emission of heat-retaining GHGs into the atmosphere, which results from human activities such as burning of fossil fuel and deforestation. One of its main effects is a shift in the global weather patterns, referred to as climate change. Here, it is important to mention that global warming is closely associated with climate change and both terms may be used interchangeably.

Causes of Climate Change

They can be divided into two types of factors, namely natural and anthropogenic.

Natural Causes

The main natural factors are as follows:

1. **Continental drift:** A glance at the map shows how South America fits snugly into Africa's Bight of Benin. Almost all continents on the globe appear to fit into each other like the components of a jigsaw puzzle. Continents were formed when parts of a large landmass called Pangaea began drifting apart gradually around 200 million years ago. There are many similarities between plant and animal fossils and rocks on the two continents.

2. **Volcanoes:** Large volumes of SO_2 , water vapour, dust and ash are thrown out into the atmosphere during volcanic eruption. SO_2 can reach the upper levels of atmosphere (called stratosphere) where they combine with water to form tiny droplets of sulphuric acid. These small droplets and dust particles reflect sunlight and partially block the incoming rays of the sun, leading to cooling in lower levels of atmosphere (troposphere). Winds in stratosphere carry the aerosols rapidly around the globe in either an easterly or a westerly direction. This gives some idea of cooling, which is brought about for a few years after a major volcanic eruption.

3. **Earth's tilt:** Earth makes one revolution around the sun in 365 days. It is tilted at an angle of 23.5° to the perpendicular plane of its orbit, which causes seasonal variations. Furthermore, earth's orbit is somewhat elliptical, which means that the distance between the earth and the sun varies during the course of a year.

4. **Ocean currents:** Oceans cover about 71% of the earth and absorb about twice as much of the sun's radiation as the atmosphere. Ocean currents transfer vast amounts of heat across the planet, which causes temperature difference and climatic changes.

Anthropogenic Causes (Human Causes)

Beyond a point, human activities and consumption styles are considered as human interference in nature. Urbanization and industrialization have been powered by fossil fuels and thus, contribute to global warming and climate change. All our gadgets run on electricity, which is generated mainly from thermal power plants that further run on fossil fuels (coal).

Anthropogenic Causes

The greenhouse effect like a greenhouse keeps things warm for us, here on earth. The greenhouse effect works hand-in-hand with the sun's radiation. Without greenhouse gases, the planet would be much colder. Greenhouse gases act like a blanket for earth and this blanket can be found in the troposphere layer of the atmosphere. Greenhouse gases have kept the planet warm by trapping radiation from the earth for billions of years. The only thing is greenhouse gases are very picky about which kind of radiation they will absorb.

The whole process begins when the sun heats the earth. Shortwave solar radiation passes through the atmosphere and this energy makes the atoms of the earth vibrate faster (heat up). The earth then radiates long-wave radiation or infrared radiation back into the space. This infrared radiation heats the atmosphere and some of it is trapped by the greenhouse gases. After the greenhouse gases trap the infrared radiation, it is re-radiated back to the earth, thereby warming the air.

Globally, carbon dioxide (CO_2) makes up about three-fourths of all human GHG emissions. The other one-fourth GHG emissions, such as methane, nitrogen oxides, ozone and synthetic industrial GHGs are gases that trap heat even more effectively than CO_2 . Greenhouse effect is linked with the carbon cycle.

(Continued)

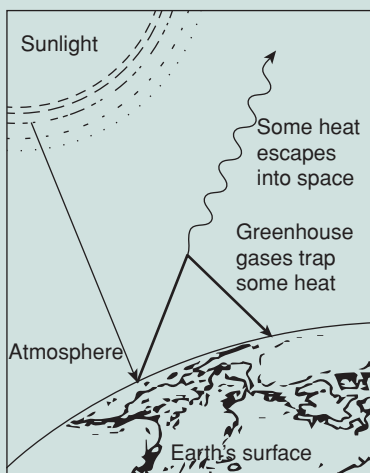

Figure 9.15

The following are all greenhouse gases in order from strongest to weakest. Notice how all of these gases contain three or more atoms.

1. Methane (CH_4) is the strongest greenhouse gas because it has the most atoms. This is why it is the best at trapping radiation and it has more atoms to do so. Even though it is the strongest greenhouse gas, it is one of the least abundant.
2. Carbon dioxide (CO_2) is the second strongest and one of the most abundant greenhouse gases. It is the second strongest because it has the most mass, which helps it to trap heat more efficiently.
3. Nitrous oxide (NO_2) is the third strongest greenhouse gas because it only has three atoms and does not have as much mass as CO_2 . It is not as efficient as CO_2 and CH_4 at trapping infrared radiation, but it is stronger than water vapour.
4. Water vapour (H_2O) is the weakest because it is the lightest of the greenhouse gases. It often changes into liquid and solid forms as well. Hence, it is the least effective at trapping infrared radiation.

Here, we need to get familiar with the term 'Global Warming Potential' (GWP). CO_2 is considered as the main GHG because of its volume; otherwise, its GWP is very less in comparison to methane and nitrous oxide. CO_2 is chosen as the reference gas because it has 100 year's GWP of 1 and all other gases' GWP is measured against this. The 100 year's GWP of methane and nitrous oxide is 21 and 310, respectively.

Because of industrialization, CO_2 has increased in the atmosphere from about 280 to more than 400 parts per million and the GHG emissions are increasing continuously and steadily.

Combustion of fossil fuels (coal, oil and natural gas) oxidizes carbon present in the long-buried ancient plants to form the greenhouse gas CO_2 . As our chief source of energy for generating electricity, heating buildings and operating vehicles, fossil fuels contribute most of the CO_2 we emit. Some ancient carbon has been sequestered chemically, for example, as calcium carbonate in limestone rock. These compounds convert to CO_2 when the rock is heated to make cement.

Deforestation and land use change releases the carbon stored more recently in trees and soils. Besides adding significant CO_2 to the atmosphere's GHG load, deforestation diminishes the biosphere's present and future capacity to remove CO_2 from the atmosphere.

Humans' massive infusion of CO_2 has unbalanced earth's carbon cycle by adding more carbon than natural processes can remove.

Effects of Climate Change and Global Warming

Cyclonic Storms

Both the intensity and frequency of tropical storms have increased in the past decade. They are caused by evaporation of water from oceans. Coriolis effect causes the storms to spin and a hurricane is declared when this spinning mass of storms attains a wind speed greater than 119 km per hour.

An ice storm is a particular weather event in which precipitation falls as ice due to atmospheric conditions.

Loss of Biodiversity

The most dramatic impact is the loss of habitat for millions of species.

1. Seventy per cent of earth's land animals and plants live in forests, and many cannot survive the loss of their natural habitat. Deforestation results in decline in biodiversity and in the extinction of many species.
2. Forests support biodiversity, providing habitat for wildlife. Moreover, forests foster medicinal conservation. With forest biotopes being an irreplaceable source of new drugs (such as taxol), deforestation can destroy genetic variations (such as crop resistance) irretrievably.
3. It was only during Earth Summit in 1992 that these figures came out, which equates to 50,000 species a year.

Sea-level Rise and Small Islands

The role of oceans in global warming is very complex. They serve as a sink for CO_2 , taking up much that would otherwise remain in the atmosphere, but increased levels of CO_2 have led to the acidification of oceans. Furthermore, as the ocean temperature rises, their ability to absorb excess CO_2 decreases. Global warming is projected to have a number of effects on the oceans. The on-going effects include rising sea levels due to thermal expansion and melting of glaciers and ice sheets, and warming of the ocean surface leading to increased temperature stratification. Other possible effects include large-scale changes in oceanic circulation.

Bleaching of Coral Reefs

Coral reefs are a collection of biological communities forming one of the most diverse ecosystems of the world (termed as rainforests of the oceans). Corals are important for a variety of reasons and some of these are as follows.

1. They provide habitat for a variety of organisms.
2. They prevent erosion of soil on beaches.
3. They function as carbon sink (helps in absorption of CO_2).

They are found in shallow coastal areas of tropical and sub-tropical regions, where light can penetrate for synthesis of food. They feed on small fish and live in colonies, where each coral is called a polyp. They enjoy a symbiotic relationship with algae. The increase in sea temperature, salinity of water, increased UV radiation and so on will result in decreased photosynthesis activity and this in turn leads to loss of algae. Ultimately, the reefs become dead and lose their colour. This is called coral bleaching.

Melting of polar ice and migration of fish are other effects of climate change on marine life.

Runaway Climate Changes and Tipping Point

Runaway climate change is what happens when global warming becomes self-sustaining and beyond control of human beings. This may upset the normal system of checks and balances that keep the climate in equilibrium.

A global warming spiral kicks in if the following possibilities occur.

1. **The environment absorbs less CO_2 :** About 50% of our current emissions are absorbed by the environment, i.e., roughly half of that by the oceans and the other half by the plants on land. The uptake of CO_2 by the environment may already be in decline.
2. **Reflection of sunlight drops:** As snow covers in the form of glaciers are retreating (means they are shrinking in terms of geographical extent), dark grounds and darker water are exposed, which absorb less sunlight and that has caused further increase in global warming.
3. **Emission of CO_2 and methane:** More CO_2 and methane are emitted from nature. Soils, forests, peat, seas, organic deposits in permafrost and methane clathrates, all emit some amount of CO_2 and methane. As the environment warms, natural emissions increase.

Tipping point is a small amount of warming that may set off unstoppable and irreversible changes. The best example is the melting of ice caps. Once the temperature goes up by certain degrees, then all ice caps may melt (even though, complete melting of ice at the Arctic and Antarctic may take thousands of years). The tipping point in many scientists' view is a 2°C rise in

temperature. European Union has adopted that as the maximum limit that mankind can risk. Beyond that point, there is a possibility of runaway climate change.

Key Developments in the Context of Climate Change and Global Warming

1. Jean Baptiste Joseph Fourier (1824) was the first to describe that without the presence of GHGs, the earth would have been cooler by 33°C. When radiations from the sun enter into earth's atmosphere, they are of short wavelength and when emitted by earth they are of longer wavelength. GHGs do not allow these radiations to escape into the outer atmosphere and hence, they are reflected back to the earth. This causes the heating of earth.
2. In 1896, Svante Arrhenius claimed that fossil fuel combustion may eventually result in enhanced global warming. As much as 25% of CO₂ emissions are naturally absorbed by the ocean and another 25% are absorbed by the biosphere, such as trees, plants and soil. It is evident that 50% of the CO₂ emissions are not absorbed by nature and accumulate in the atmosphere.
3. The World Meteorological Organization (WMO) was set up in 1950 in Geneva to promote international exchange of weather reports and other weather related services.
4. In the 1950s and 1960s, aerosol pollution called smog became a serious local problem in many cities, causing dimming and fall in temperature to such an extent that many scientists talked about the return of Ice Age. The phenomenon of London Smog in 1954 is a prominent example.
5. Keeling curve is a graph, which has been showing the variations in the concentration of atmospheric CO₂ since 1958. It is based on continuous measurements taken at the Mauna Loa Observatory in Hawaii.
6. Roger Randall Dougan Revelle suggested that earth's oceans would absorb excess CO₂ generated by humanity at a much slower rate, thereby contributing to the greenhouse effect and global warming. Revelle factor is a measure of resistance to the absorption of atmospheric CO₂ by ocean surface layer due to different factors.
7. The UN's first major initiative was the UN Conference on Human Environment (also known as the Stockholm Conference) held in Sweden in the year 1972. WMO sponsored a conference on the long-term climatic fluctuations at the University of East Anglia at Norwich in 1975.
8. Wallace S. Broecker was the first person to use the term global warming in 1975.
9. The first World Climate Conference took place in Geneva in 1979.
10. World Commission on Environment and Development was convened by the UN in 1983, named after its Chairman Gro Harlem Brundtland, also known as the Brundtland Commission. It was recognized by the UN that as environmental problems were global in nature, there was a need to decide common policies for sustainable development.
11. Intergovernmental Panel on Climate Change (IPCC) was set up in 1988 by two organizations of UN, i.e., the World Meteorological Organization (WMO) and the UN Environment Programme (UNEP) to assess the risk of human-induced climatic change, its impact and to suggest alternatives solutions. Its reports have generated good awareness about climate changes and forced the governments worldwide into action. IPCC shared the Nobel Peace Prize 2007 with the former US Vice President Al Gore who also wrote 'The Inconvenient Truth' about climatic changes and global warming. Five Assessment Reports have been presented by IPCC so far.
12. United Nations Framework Convention on Climate Change (UNFCCC) is an international environmental treaty produced at the UN Conference on Environment and Development (also known as the Earth Summit) held in Rio de Janeiro (Brazil) in June 1992. Its objective is to stabilize GHG concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with climate system.
13. UNFCCC was opened for signature on 9 May 1992. After having received over 50 countries' instruments of ratification, it entered into force on 21 March 1994. By December 2009, UNFCCC had 192 parties.
14. Agenda 21 is an action plan of the UN related to sustainable development and was an outcome of the Earth Summit. It is a comprehensive blueprint of the actions that need to be taken globally, nationally and locally by organizations of the UN, governments and major groups in every area in which humans directly affect the environment.

NATURAL AND ENERGY RESOURCES

There are basically two approaches in the context of man-environment interaction. The two approaches are environmental determinism and possibilism. According to determinism, our earth is the creation of nature and not just a matter of chance. It is the conditions in which the environment that tell us what we

are capable of doing. Man is subservient to nature. According to pragmatic possibilism, anything is possible. Man is intelligent and has the necessary knowledge, skills, technology and money to manage the environment.

The exploitation of natural resources is a key factor in economic growth and development, but it is not without serious negative environmental and socio-economic impacts.

In the last few decades, the developing nations are trying to develop a model which the developed countries did in the past. Deforestation is on going and is shaping the climate and geography. In fact, the demand for natural mineral and energy sources is coming from newly industrialized nations and emerging economies such as China and India.

The exploitation of natural resources has intensified during the last few decades because of the following reasons.

Rapid Industrialisation, Urbanisation, and Increase in Population

All our gadgets run on electricity, generated mainly from thermal power plants, which further run on fossil fuels (coal). Manufacturing industries are primarily located in urban areas, which create jobs and people have moved from rural areas to the cities over the years. This process is continuing even today.

During the twentieth century, world population increased by four and a half times, from 1.5 billion to 6.2 billion, but urban population grew 13 times from 225 million to 3.4 billion or 47% of the total population. By 2030, the figures are likely to increase to 4.9 billion or 60%. Urban areas cover just 3–4% of the world's land surface, and accommodate half of the world's population but consume around 80% of the global energy supply and thus, emit the bulk of greenhouse gases (GHGs).

Transport vehicles also run mainly on petrol or diesel, both of which are fossil fuels. Out of consumer cult, plastics, timber and other natural resources are being used in a big way.

Availability of Technology

Increase in sophistication of technology enables quick and efficient extraction of natural resources. For example, rates of deforestation have increased greatly due to electric saws.

Intensive Agricultural Practices

To meet the food requirements of large population, more and more land has been brought under cultivation.

Culture of Consumerism

Excessive demand leads to a mad scramble for resources and conflicts.

Non-equitable Distribution of Resources

The raw material for finished goods is available in underdeveloped or developing nations. To earn foreign exchange and taxes, the governments allow the exploitation of resources, however, without a long-term approach to replenish them or mitigate the after effects.

The natural resources around us provide a variety of sources of energy around us. During the Stone Age, it was wood. During the Iron Age, we had coal. In the modern age, we have petroleum and natural gas. In near future, solar energy, geothermal may dominate the scene.

Good sources of energy should have the following qualities.

- Optimum heat production per unit of volume/mass used
- Easy to transport
- Least Polluting
- Cost-effective

NATURAL AND ENERGY RESOURCES

A natural resource is something that is found in nature and can be used by people. Earth's natural resources include light, air, water, plants, animals, soil, stone, minerals, and fossil fuels. People need some natural resources to stay alive. They use others to make their lives better.

Energy is the capacity to do work. It is the basic requirement for a living being, machine and matter to move, function or perform any kind of work. The whole development of civilization is based on the availability of energy. Energy is present in different forms and it has been further modified from time to time to suit the requirements of mankind. The common forms of energy are as follows.

1. Mechanical energy of a body is the energy it possesses by virtue of its motion or its position. When a body is in motion, it possesses kinetic energy. Potential energy is the energy possessed by a body due to its position. For example, energy stored in a compressed spring is an example of potential energy.
2. Thermal energy is the energy a substance or system has in relation to its temperature, i.e., the energy of moving or vibrating molecules.
3. Chemical energy is stored in the form of molecular bonds.

4. Nuclear energy is the mass converted into energy.
5. There can be a few other forms of energy, such as radiant energy or light energy.

Law of Conservation of Energy

The total amount of energy in the universe remains constant. It changes from one form to another. For example, when water is stored in a dam at a height, it possesses potential energy. However, when water falls on the turbine, it possesses kinetic energy.

Energy Capacity in India as on May 31, 2018

(Total Capacity – 343898 MW)

Source	Share
Coal	57.27 %
Large hydro	13.20%
Other renewables	20.07%
Gas	7.23%
Diesel	0.24%
Nuclear	1.97%

Primary Energy and Secondary Energy

Primary energy form is directly found in nature, such as coal and sunlight. This energy can be renewable or non-renewable. When primary energy form is converted into some convenient form of energy, then it is known as secondary energy. For example, coal or sunlight is converted into electrical energy, which can be consumed in homes or industry.

Non-renewable Energy Sources

A non-renewable resource is a natural resource that cannot be reproduced, grown, generated or used on a scale, which can sustain its consumption rate. However, once it is depleted there is no more available for future needs. Resources that are consumed much faster than nature can create them are also considered as non-renewable. They basically consist of fossil fuels.

Fossil Fuels

Fossil fuels consist of oil and coal. They are preferred for the following main reasons.

1. They have high calorific value.
2. The technology is available to exploit these resources.

The market is well developed for trading of the fossil fuels. Our conventional infrastructure and transport systems, which are fitted with combustion engines, remain prominent throughout the globe.

The main disadvantages of using fossil fuels are in terms of harm to environment:

1. **Global warming:** The continued use of fossil fuels at the current rate will increase global warming and cause more severe climatic change. The SO₂ and CO₂ produced during the burning of fossil fuels contribute towards global warming and acid rains.
2. **Health hazards:** Fly ash and other particulate matter cause health hazards, such as asthma and tuberculosis.
3. **Oil spills:** They are a threat to marine life and our ecosystem.

Eventually, fossil-based resources will be expensive in the future to harvest and humanity will need to shift its reliance to other sources of energy.

As fossil fuels are non-renewable and thus finite, that it will eventually run out of stock, they have become too expensive or too environmentally damaging to retrieve. In contrast, many types of renewable energy resources, such as wind and solar energy are constantly replenished and will never run out. At present, the main energy source used by humans are non-renewable fossil fuels as they meet 80% of our energy needs.

Petroleum Oil

Oil occurs in rock formations in the earth, which before getting processed in refineries is called crude oil, which is a mixture of hydrocarbons. It is processed by fractional distillation and transported to points of consumption.

Coal

Coal is a black or brown carbonaceous sedimentary rock formed by combustion of partially decomposed plant material. It takes millions of years to form from decayed plants. The process of formation of coal is termed as coalification.

Coal provides 30.3% of global primary energy needs and generates 42% of the world's electricity. In India, 70–80% of electricity is produced by burning coal. The amount of energy in coal is expressed in British Thermal Units per pound (a BTU is the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit.) Higher the carbon content, higher is its calorific value and its quality.

The grading of coal is done on the basis of the carbon contents.

1. **Peat:** Peat is not a typical variety of coal. The carbon content is 50–60%. Under conditions of temperature and pressure, it converts into lignite, bituminous and subsequently into anthracite. The carbon contents increase in subsequent stages.

- Lignite or brown coal:** It contains 70% carbon and is found in geologically young mines, the lowest rank of coal with high moisture content.
- Bituminous coal:** It is also termed as soft coal and it contains around 80% carbon.
- Anthracite coal:** It is the best quality coal and contains 90–95% carbon and around 5% volatile matter.

Therefore, its burning gives very little smoke. When bituminous coal is heated at extremely high temperature, the residual matter is called coke. Different types of coal have different uses. Steam coal also known as thermal coal is mainly used in power generation. Coking coal also known as metallurgical coal is mainly used in steel production. It is composed primarily of carbon and hydrocarbons. Its extraction causes environmental hazards. Air pollution (mainly suspended particulate matter) due to burning of coal causes respiratory problems. Thermal power stations produce waste in the form of fly ash. Large dumps are required to dump this waste material. Burning coal causes smog, soot, acid rain, global warming and toxic air emissions.

Coal is the most abundantly available fossil fuel, which at current rate of consumption may last up to 200 years. China, USA, India, Australia, and Indonesia are the five major coal producers in the world. Coal deposits in India belong to Gondwana age. Nearly three-fourths of coal deposits are situated in Damodar Valley.

An unconventional form of gas formed during coalification process and found on the internal surfaces of coal is called ‘coal bed methane’.

Natural Gas

- Natural gas mainly comprises of methane, butane, ethane and propane, and it has very high calorific value.
- Some of the organic material was changed by heat and pressure into oil and coal while natural gas was trapped within the earth’s crust.
- It was formed from decaying plants and animals, millions of years ago

Renewable Energy Resources

Most renewable energy comes either directly or indirectly from the sun. Sunlight, or solar energy can be used directly for heating and lighting homes and other buildings, for generating electricity and for hot water heating, solar cooling, and a variety of commercial and industrial uses.

The sun’s heat also drives the winds, whose energy is captured with wind turbines. Then, the winds and the sun’s heat causes the water to evaporate. When this water vapour turns into rain or snow and flows

downhill into rivers or streams, its energy can be captured using hydroelectric power.

At least 40% of India’s total power capacity will come from renewable sources by 2030. This ambitious target will help India offer the global community a 35 per cent reduction in the greenhouse gas emission intensity of its economy below 2005 levels by 2030 as part of its Intended Nationally Determined Contributions (INDCs) under the Paris agreement.

Solar Energy

Solar energy is the ultimate source of energy for almost all living organisms. It is the heat and light energy produced as a result of nuclear fusion and fission reactions taking place inside the sun.

The producers (discussed earlier) produce food by photosynthesis. Energy from the sun is responsible for all the weather phenomena in nature, such as the wind, storms, rain and sea waves.

Now, scientists are devising methods to make optimum use of solar energy in routine lives in the form of solar cooker, water heater and solar cells, which can be used in multiple devices. Many advanced nations have come up with concepts such as energy-efficient green buildings.

Advantages

- Readily available, inexhaustible, clean, uninterrupted and continuous source of energy.
- Solar devices can be installed in remote, inaccessible areas, such as small villages in interior regions, forests, deserts, mountains, off-shore platforms and remote oceanic islands.
- It is possible to produce solar energy in large quantities across many regions in the world, especially tropical regions.

Limitations

- It can be produced in tropical and subtropical areas only that too in specific seasons.
- Technology is still expensive and involves high installation cost.
- Difficult to store and run heavy machines.
- Solar panels consume land, as power generation per square unit is low.
- Silicon used in the production of SPV (solar photovoltaic) cells is a pollutant.

National Solar Mission: National Solar Mission is one of the eight missions set up of National Action Plan on Climate Change (NAPCC) that was released on 30 June 2008.

Government stepped up India’s solar power capacity target under the Jawaharlal Nehru National Solar Mission (JNNSM) by five times, reaching 1,00,000

MW by 2022. The new targets were approved in June 2015. The target comprises 40 GW rooftop and 60 GW through large and medium scale grid connected solar power projects. With this ambitious target, India will become one of the largest green energy producers in

the world, surpassing several developed countries. During recent times, with improvements in technology and scaling up production capacities, solar energy has become cost competitive and targets seem to be more viable now.

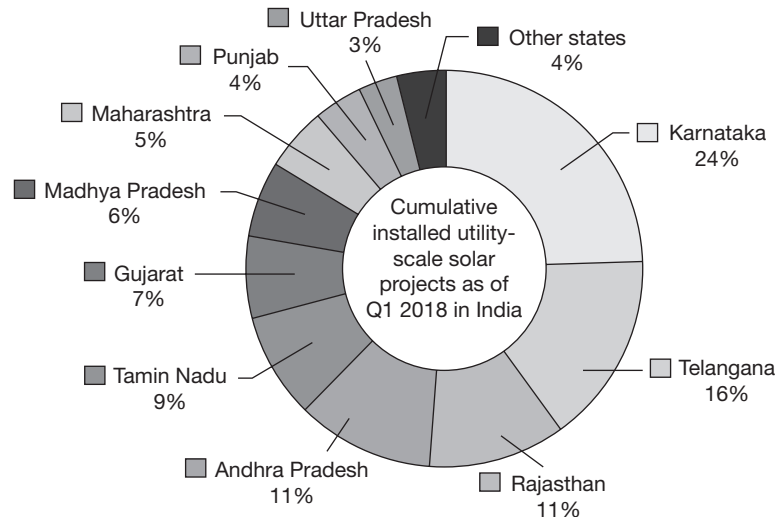

Figure 9.16 India: Top 10 Solar States with Cumulative Installations

Source: Mercom India Solar Project Tracker

Kamuthi Solar Power Project is the largest single location solar power plant in the world, located at Kamuthi in Tamil Nadu. This solar plant is the world's second largest solar park with a capacity of 648 MW, commissioned by Adani Power.

The total installed capacity of solar power in India crossed the milestone of 5000 MW on 15 January 2016, total being 5130 MW. The leading solar energy producing states are Rajasthan (1264 MW), Gujarat (1024 MW), Madhya Pradesh (679 MW), Tamil Nadu (419 MW), Maharashtra (379 MW) and Andhra Pradesh (357 MW).

Wind Energy

The wind energy possesses some kinetic energy due to its high speed. It can produce mechanical or electrical energy by using windmills. Wind is a result of solar energy, as heating of land results in the movement of air. Wind energy has been used for hundreds of years for sailing, grinding grains and for irrigation. Wind energy systems convert the kinetic energy of winds to other forms of energy or to generate electric power. Windmills for water pumping have been installed in many countries, particularly in the rural areas.

To generate electricity on a large scale, a number of windmills are set up over a large area called a wind energy farm. Such areas need a wind speed of 15 kmph.

Advantages

1. Inexhaustible source of energy.
2. No pollution and emission of GHGs.
3. Possibility of large-scale production.
4. Scope of direct use as mechanical energy.
5. Land around wind turbines can be used for other purposes, for example, farming.

Limitations

1. Requires expensive storage during peak production time.
2. Winds are uncertain and unpredictable.
3. The visual aesthetic impact is not good.
4. Large open areas are required for setting up wind farms.
5. Noise pollution.
6. Possible threat to wildlife.
7. High maintenance cost.

Tamil Nadu has become a leader in Wind Power in India. In Muppandal windfarm the total capacity is 1500 MW, the largest wind power plant in India. Maharashtra, Gujarat, Rajasthan and Karnataka are the other states in the sequence. India now ranks 5th in the world after China, USA, Germany and Spain in grid connected wind power installations.

The Netherlands is called 'The Land of Windmills'.

Major Renewable Energy Institutes in India

1. National Institute of Solar Energy – Gurgaon
2. National Institute of Wind Energy – Chennai
3. SSS National Institute for Renewable Energy – Kaputhala (Punjab)
4. Indian Renewable Energy Development Agency – New Delhi
5. Solar Energy Corporation of India – New Delhi

Hydroelectric Power

1. It is electricity generated using the force of running water from a height. The water may be stored in the form of dams. The potential energy is converted into kinetic energy.
2. It is the second largest source of electricity.
3. Heavily dependent on rainfall and melting of snow in the mountainous regions.
4. It entails heavy investment for construction of dams, but per unit cost of electricity is low.

Risk factors include the following:

1. As a huge water body is created, the release during heavy rainfall may cause floods and loss of biodiversity.
2. Dams impede the migration of fish along the river. The silt pile-up may threaten the structure and decrease the life of the dam.

Geothermal Energy

The core of the earth is very hot and so it is possible to make use of this geothermal energy. These are areas where water and steam gush out in the form of hot springs and geysers, which may be used to run turbines to produce electricity. The water can be pumped from underground hot water deposits and used to heat people's houses.

Biomass

Organic matter that makes up the plants is known as biomass. Biomass is derived from sources such as by-products from timber industry, agricultural crops, forest waste, household waste and municipal waste dumps. Biomass can be used to produce electricity, transportation fuels or chemicals. The use of biomass for any of these purposes is called bioenergy.

For example, Indian sugar mills are rapidly turning to bagasse, the leftover of cane after it is crushed and its juice extracted to generate electricity.

Advantages

1. It is renewable, cost-effective and less polluting source of energy.

2. It provides manure for agriculture and gardens.
3. There is tremendous potential to generate biogas energy.
4. Growing biomass crops use carbon dioxide and produce oxygen.

Limitations

1. Initial cost of construction of biogas plant is high.
2. Continuous supply of biomass is required to generate biomass energy.
3. Difficult storage and transportation.
4. Many food crops such as corn and wheat are being diverted to make ethanol, which may lead to high food inflation.

Biofuel

Biofuels are renewable liquid or gaseous fuels made from living organisms or the wastes that they produce. Bioethanol and biodiesel are the two main types of biofuel that are currently commercially produced. This oil is extracted and mixed with diesel and is used as fuel. Bioethanol is produced from sugar beet, sugarcane and corn. The biofuels are divided into two categories.

First-generation or Traditional Biofuels

Other source of biofuels is oil extracted from seeds of plants, such as *Jatropha* and *Pongamia* which have good calorific value. They are less sustainable as they have an adverse impact on the supply of food for the human population and hence, are less preferred. The food prices increase as a result.

Second- and Third-generation Biofuels

They are generated from non-food crops. Microbes play a key role in the development of these biofuels. They are more sustainable than first generation biofuels, as they produce higher yields, reduce GHG production, and do not compete with crops grown for food. Example is oil extracted from seeds of plants, such as *Jatropha* and *Pongamia*, which have good calorific value.

In the beginning of 2013, it was recommended that 5% ethanol blending is mandatory for petrol, whereas in 2007, it was recommended to be as low as 10% by the Group of Ministers.

Biogas

1. Bacterial action is introduced in digesters with sewage of human beings and animal (animal dung).
2. The decomposition of sewage produces methane, which is used for cooking and fuel.
3. The leftover matter called slurry is used as manure in agriculture fields.

Biomass fuels used in India account for about one-third of the total fuel used in the country, being the most

important fuel used in over 90% of the rural households and about 15% of the urban households.

Biomass can be used in briquettes form, which is used directly as fuel instead of coal in the traditional *chulhas* and furnaces. Alternatively, gasifier converts solid fuel into a more convenient-to-use gaseous form of fuel called producer gas.

Hydrogen

1. It is the most abundant element on the earth and has the highest calorific value.
2. It does not occur naturally as a gas.
3. As it is highly reactive, it combines with other elements such as oxygen to form water.
4. Once separated from other elements, hydrogen can be burned as a fuel or converted into electricity.
5. As it burns completely, it does not result in atmospheric pollution and in greenhouse effect.

Fuel Cells

Fuel cells use hydrogen as a fuel. Fuel cells convert the chemical energy of a fuel directly and efficiently into electricity and heat. Thus, they are electrochemical devices. There is no combustion as in the case of fossil fuels. Hydrogen or a mixture of compounds containing hydrogen is used as a fuel. It consists of two electrodes, with electrolyte in between. Oxygen passes over one electrode and hydrogen over the other and they react electrochemically to generate electricity, water and heat.

The fuel cells have been used in space flights as well. Electric vehicles using fuel cells for their energy requirements are the best options available to dramatically reduce urban air pollution. Not all renewable energy resources come from the sun.

A hybrid car is a petrol and electricity driven vehicle, a car starting with petrol engine and switching to electric motor at low speed.

Renewable Power Capacity (Ministry of Non-Renewable Energy) as of March 31, 2018

Source	Total installed capacity (MW)	2022 Target (MW)
Wind power	34,046	60,000
Solar power	21,651	1,00,000
BioMass power	8701	10,000
Waste-to-power	138	
Small hydropower	4486	5000
Total	69,022	1,75,000

Source: Ministry of Non-renewable Energy

Nuclear Energy

Earlier, we discussed about the law of conservation of energy in which energy can be changed from one form into another. The source of nuclear energy is the mass of the nucleus and energy generated during a nuclear reaction is due to conversion of mass into energy (Einstein's theory). The energy produced is given by $E = mc^2$, where m is the mass and c is the speed of light. This equation was developed by Einstein. There are two ways to obtain nuclear energy, namely nuclear fission and nuclear fusion.

In a **nuclear fission reaction**, the nucleus of a heavy radioactive element, such as uranium, plutonium, or thorium splits up into smaller nuclei, when bombarded with low-energy neutrons. A huge amount of heat is generated in this process. At this point, carbon dioxide in gas form is pumped into the reactors with uranium, removing heat from the system. The gas turns very hot and this heat is used to convert water into steam. The steam created from this process drives the turbines, which in turn drive the generators that produce nuclear energy.

Nuclear fusion reaction involves the combination or fusion of two light elements, such as hydrogen to form a heavier element resulting in the release of uncontrollable energy. Thus, it cannot be used to generate electricity and cannot be commercialized as is the case with fission reaction. Sun's energy is generated by nuclear fusion reaction. The heat and light that we receive from sun is all due to the continuous fusion reactions going on inside it.

The nuclear power reactor that creates all these reactions is controlled through rods of boron, known as control rods. These boron rods absorb the neutrons. The rods are lowered into the reactor to absorb neutrons and slow down the process of fission. To generate more power, the rods are raised again to allow even more neutrons to crash into the atoms of uranium.

Advantages

1. Nuclear energy is more cost-effective when compared to coal.
2. It does not use as much fuel in the process.
3. It produces less waste and does not produce carbon dioxide or smoke. Thus, nuclear energy does not contribute to environmental hazards or greenhouse effect.
4. Nuclear power stations are usually very compact when compared to the thermal stations. Although the initial capital cost of building a nuclear plant is high, the maintenance and running costs are relatively low.

Limitations

Creating nuclear energy is a complex chemical process that can be very dangerous.

1. There is a great deal of radiation danger associated with nuclear energy. It is capable of causing genetic disorders. Thus, if someone is once exposed to these radiations, then it can affect the generations to come adversely.
2. Storage of nuclear wastes can lead to disastrous effects if not disposed or stored in a proper manner.
3. Once it was assumed that the supply of nuclear fuel will not be a problem. However, that appears to be a fallacy now. Nuclear power is not a renewable source of energy. Uranium is a metal that is mined from the ground which is almost similar to coal mining. It is a scarce metal and the supply of uranium will run out one day, making all the nuclear power plants obsolete.
4. Radioactive minerals are unevenly distributed around the world and are found in limited quantities.
5. Starting a nuclear plant requires huge capital investment and advanced technology.
6. There have been instances of proliferation of nuclear technology and the number of restrictions by international community for use of nuclear technology. There are many moral groups opposing the production of nuclear energy in the wake of nuclear accidents.

There have been many nuclear accidents in the last five decades, such as Three Miles (1979, USA) and Chernobyl (1987, Ukraine). The most recent nuclear mishap was the Fukushima Accident in Japan in March 2011. It was caused by an earthquake-generated tsunami. Germany declared that it would phase out all the nuclear power plants in near future.

Fast Breeder Reactors (FBR): A breeder reactor is a nuclear reactor capable of generating more fissile material than it consumes. It uses uranium-238 or thorium-232 as fuel. Breeders were at first considered superior because of their superior fuel economy compared to the light water reactors. India is focusing on using thorium as an alternative fuel to uranium in nuclear reactors. There is a growing interest in developing a thorium-fuel cycle due to its safety benefits, absence of non-fertile isotopes and its higher occurrence and availability when compared to uranium. India has the world's largest reserves of thorium in the world.

Exploitation of Forest Resources

Deforestation is clearing the earth's forests on a massive scale, resulting in damage to the quality of land. The world's rain forests will completely vanish in about hundred years at the current rate of deforestation.

Expansion of Agriculture

The major direct cause of deforestation is agriculture, with subsistence farming responsible for 48% of deforestation, commercial agriculture for 32% and fuel wood for 5%.

Shifting Cultivation

Shifting cultivation is practiced in Assam and Madagascar (Indian Ocean) for subsistence farming.

Shifting cultivation has occurred due to poor fertility of soil. In this cultivation, a small patch of tropical forests is cleared, vegetation is destroyed and burned. Crops are grown as long as the soil is productive, after which the cultivation is abandoned and cultivations move on to fresh patch of land.

Timber Harvesting

Logging (for world's wood and paper products) is responsible for 14% of deforestation. Countries such as Myanmar, Malaysia, Indonesia, Brazil, Argentina and many African countries are examples.

Extension of Cultivation on Hill Slopes

This is termed as contour farming. Although agriculture has always been concentrated on planes and floors of valleys, farming on narrow flat steps cut one after another across the slope or terrace is an age old practice. There are many medicinal plants, which should better be raised in hilly areas.

Wild Fires

Not all deforestation is intentional. Some is caused by a combination of human and natural factors, such as wildfires and subsequent overgrazing, which may prevent the growth of young trees. However, in the last decade, the intensity and frequency of wild fires has increased due to global warming.

Negative Effects of Deforestation on the Environment

Globalization is viewed as another root cause of deforestation. The degradation of forest ecosystems has been traced to economic incentives that make forest conversion appear more profitable than forest conservation. The forest cover, which helps in absorbing Green House Gas has shrunk from 4.7 billion hectares in 1949 to 714.9 million hectares in 2015.

Climate Change

Deforestation is the main driver of climate change. Conventionally, trees play a critical role in absorbing Green House Gases (GHGs), which is the main cause of global warming.

Now, deforestation or less tree cover means more quantities of GHGs being released into the atmosphere. This has increased the severity of global warming (the concept of GHGs has been discussed separately).

Tropical deforestation is responsible for approximately 20% of world's GHG emissions. According to Intergovernmental Panel on Climate Change (IPCC) reports, deforestation accounts for up to one-third of total anthropogenic carbon dioxide emissions in tropical areas.

Other plants remove carbon (in the form of carbon dioxide) from the atmosphere during the process of photosynthesis and release oxygen back into the atmosphere during normal respiration. Only when actively growing, can a tree or forest remove carbon over an annual or longer time frame. Both the decay and burning of wood release much of this stored carbon back into the atmosphere.

A GHG is a gas in the atmosphere that absorbs and emits radiation within the thermal infrared range. This process is the fundamental cause of greenhouse effect. The primary GHGs in the earth's atmosphere are water vapour, carbon dioxide, methane, nitrous oxide and ozone. GHGs greatly affect the temperature of the earth and without them, the earth's surface average would be about 33°C colder than the present average of 14°C.

Forests are effective as carbon sinks or biodiversity reserves.

Reduced Moisture Content in the Environment

Forest soils are moist, but without protection from sun-blocking tree cover, they quickly dry out. Trees also help perpetuate the water cycle by returning water vapour back into the atmosphere. Without trees to fill these roles, many former forest lands can quickly become barren deserts.

Effects of Deforestation on Water Cycle

Deforestation changes the quantity of water on surface, in soil or in the atmosphere. This in turn changes the erosion rates and the availability of water, either for ecosystem functions or for human services.

Decrease in Water Precipitation

Trees extract groundwater through their roots and release it into the atmosphere. When trees are removed, there will not be any evaporation, resulting in a much drier climate. Thus, trees help in perpetuating the

water cycle by returning water vapour back into the atmosphere. Without trees to fill these roles, it would result in reduced rainfall and many former forest lands would quickly become barren deserts. Deforestation reduces the content of water in the soil and groundwater as well as the atmospheric moisture. 99% of the water absorbed by the roots moves up to the leaves and transpires. Forest cover brings down the temperature of the area, which is crucial for rainfall.

Soil Erosion

Tree roots bind soil together and if the soil is sufficiently shallow, they act to keep the soil in place by binding with the underlying bedrock. Tree removal on steep slopes with shallow soil increases the risk of landslides, which threatens the people living nearby. The quicker transport of surface water translates into flash flooding and more localized floods than those which would occur with the forest cover.

Deforestation generally increases the rate of soil erosion by increasing the amount of run off and reducing the protection of soil from tree litter. Yellow river is an example. Its yellow colour is caused by the downstream carriage of loess and causes flooding of river in lower reaches (hence, the river's nickname China's sorrow).

Desertification and deforestation are linked closely. Desertification is a systemic phenomenon resulting from excessive felling of trees. It is the degradation of land in any dry land. Dry land ecosystems are already very fragile and can rarely sustain the increased pressures that result from intense population growth. Many of these areas are inappropriately opened to development, when they cannot sustain human settlements.

1. The most common cause of desertification is the over cultivation of desert lands. Over-cultivation causes nutrients in the soil to be depleted faster than they are restored. Improper irrigation practices result in salinated soils and depletion of aquifers.
2. Vegetation plays a major role in determining the biological composition of soil. The soil erosion and water run off decreases with increased vegetation cover. Overgrazing removes vegetation, causing erosion and loss of topsoil.
3. Forests cause precipitation and maintain humidity of an area. Air humidity not only results in less penetration of solar heat to ground during the day but also checks heat escape to outer atmosphere during the night. Thus, forests tend to provide seasonal stability to the terrain.
4. As result of deforestation, there is higher wind velocity, which increases the rate of soil erosion.

Natural Resources—Our Mineral Assets

India is rich in metallic minerals of ferrous groups, such as iron, manganese, chromite and titanium. However, petroleum and some non-ferrous minerals, such as copper, lead, zinc, tin and graphite are not adequate.

Iron

Iron ores have been categorized into three grades, namely, (1) haematite, also known as red ore, which contains up to 68% iron, (2) magnetite (60%, known as black ore) and (3) lignite contains between 35 and 50% iron. Pure iron is soft, but it is hardened due to metallurgical processes. A certain proportion of carbon is required in ferrous to make it steel. Chromite is essential for the manufacture of stainless steel and high-temperature alloys.

India has deposits of high-grade iron ore, i.e., haematite and magnetite. India is the second largest producer of iron ore after Brazil. The mineral is found mainly in Jharkhand, Odisha, Chhattisgarh, Madhya Pradesh, Goa, Maharashtra and Karnataka. In Goa, there are open cast iron ore mines, which are mechanized.

Bauxite

Bauxite is an aluminium ore. Aluminium is used in manufacturing of aeroplanes, electrical gadgets and so on. India is the third largest producer of bauxite in the world. The major bauxite producing areas are Jharkhand, Odisha, Chhattisgarh, Madhya Pradesh, Gujarat, Maharashtra and Tamil Nadu.

Mica

India is the largest producer and exporter of mica in the world. Mica deposits mainly occur in Bihar, Jharkhand, Andhra Pradesh and Rajasthan. It is used for manufacturing of electrical fittings.

Copper

It is a ductile metal with very high thermal and electrical conductivity. Pure copper is soft and malleable. It is mainly produced in Rajasthan, Madhya Pradesh, Jharkhand, Karnataka and Andhra Pradesh.

Manganese

India is the third largest producer of manganese after Russia and South Africa. India's manganese deposits lie in Maharashtra, Madhya Pradesh, Chhattisgarh, Odisha, Karnataka and Andhra Pradesh.

Limestone

Limestone with high silica content is used for the manufacture of white cement. Major limestone producing states in India are Bihar, Jharkhand, Odisha, Madhya

Pradesh, Chhattisgarh, Rajasthan, Gujarat and Tamil Nadu.

Gold

Kolar in Karnataka has deposits of gold in India. These mines are among the deepest in the world which makes mining of this ore a very expensive process.

Salt

It is obtained from seas, lakes and rocks. India is one of the world's leading producers and exporters of salt.

Coal

Coal is used as a raw material in chemical and fertilizer industries. It is found in two regions, namely in (i) Gondwana and (ii) extra-peninsular areas, such as Assam and other north-east states. There are high lignite reserves in Tamil Nadu.

Petroleum

Petroleum exists in anticlines and fault traps. In India, it is found in sedimentary rocks.

Uranium and Thorium

Uranium is embedded in igneous and metamorphic rocks in Bihar (Jaduguda in Singhbhum district of Bihar), Rajasthan and Andhra Pradesh.

USA, Australia and India have particularly large reserves of thorium. In India, thorium is found in monazite sands across the coasts of Kerala.

NATURAL HAZARDS AND MITIGATION

Hazard may be defined as a dangerous condition or event, which threatens or has the potential for causing injury to life or damage to property or the environment.

Natural hazards are hazards that are caused by natural phenomena (hazards of meteorological, geological or even biological origin). Examples of natural hazards are cyclones, tsunamis, earthquakes and volcanic eruptions, which are exclusively of natural origin. Landslides, floods, drought, fires are socio-natural hazards since their causes are both natural and man-made. For example, flooding may be caused due to heavy rains, landslides or blocking of drains with human waste.

Earthquake

It is the sudden shaking of earth's crust. The impact of an earthquake is sudden and there is hardly any warning, making it impossible to predict. Seismology is the study of earthquakes and seismic waves that move through and around the earth.

Causes of Earthquake

Earth's crust is not one piece but consists of portions called plates, which vary in size from a few hundred to thousands of kilometres. According to the Theory of Plate Tectonics, when these plates contact each other, stress arises in the crust. The plates may pull away from each other, push against each other or slide sideways. If plates get locked together, they are unable to move. It results in stress in areas around the plate boundaries called faults. When this reaches a maximum point, the fault rupture generates vibration called seismic waves, which radiates in all directions from the focus (Figures 9.17 and 9.18). To put simply, the focus can also be defined as underground origin of an earthquake.

Seismic Waves

These are waves of energy that travel through the earth's layers and there are two main types of seismic waves

1. Body waves
2. Surface waves

Figure 9.17 Body Waves and Surface Waves

Figure 9.18 P (Primary) Waves and S (Secondary) Waves

Body Waves

These are called body waves as they pass through the body of earth and they are further categorized as follows.

1. Primary or compressional waves also popularly known as P waves.
2. Secondary or transverse waves also popularly known as S waves.

Primary waves travel faster than the secondary waves. Thus, they are the first to reach the seismograph stations.

Surface Waves

They travel along the earth's crust and vibrate the ground horizontally and vertically. They are more dangerous than the body waves and destroy buildings and highways, which come in their path. Their amplitude decreases with increasing depth into the earth. These are further categorized as (i) Love waves and (ii) Rayleigh waves.

Love waves move the ground from side-to-side. Confined to the surface of the crust, Love waves produce entirely horizontal motion.

Rayleigh moves the ground up and down, and side-to-side. Love waves are faster than Rayleigh waves.

The earthquakes can be shallow (less than 60 km), medium (60–300 km), and deep (300–600 km). Shallow-focus earthquakes are the most damaging because of the proximity to the surface.

Measurement of Intensity of Earthquakes

There are mainly two techniques available to measure the intensity of earthquakes and they are as follows.

1. **Richter scale:** Earthquake's magnitude or amount of energy released is determined by the use of a seismograph, which is an instrument that continuously records ground vibrations. An earthquake with a magnitude 7.5 on the Richter scale releases 30 times more energy than the one with 6.5 magnitude and will also have a shaking amplitude of 10 times higher. Similarly, an earthquake that measures 5.0 on the Richter scale has a shaking amplitude 10 times larger than one that measures 4.0 and corresponds to a 30 times larger release of energy. An earthquake of magnitude 3 is the smallest that is normally felt by humans.
2. **Modified Mercalli scale:** It expresses the intensity of earthquake's effect on people, structure and the earth's surface on scale from I to XII.

Mitigation of Earthquakes

Planning

The Bureau of Indian Standards has published certain building codes and guidelines for safe construction of buildings against earthquakes. Before the buildings are constructed, the building plans have to be checked by the municipality, according to the rules laid down by the law.

Earthquake Prone Zones in India

India has been recently divided into four seismic zones by Ministry of Earth Sciences, Government of India, on the basis of Modified Mercalli (MM) intensity scale.

Broadly, Zone-V comprises the entire north-eastern India, parts of Jammu and Kashmir, Himachal Pradesh, Uttaranchal, Rann of Kutch in Gujarat, parts of North Bihar and Andaman & Nicobar Islands.

Zone-IV covers the remaining parts of Jammu & Kashmir and Himachal Pradesh, Union Territory of Delhi, Sikkim, northern parts of Uttar Pradesh, Bihar, and West Bengal, parts of Gujarat and small portions of Maharashtra near the west coast and Rajasthan.

Zone-III comprises Kerala, Goa, Lakshadweep islands, and remaining parts of Uttar Pradesh, Gujarat, and West Bengal, parts of Punjab, Rajasthan, Madhya Pradesh, Bihar, Jharkhand, Chhattisgarh, Maharashtra, Orissa, Andhra Pradesh, Tamil Nadu, and Karnataka.

Zone-II covers the remaining parts of the country.

Furthermore, as a part of pre-disaster preparedness measure, the Government of India has also completed seismic microzonation studies of some of the major cities in the country, such as Jabalpur, Guwahati, Bangalore, greater Bharuch in Gujarat, Jammu in Jammu & Kashmir, Shillong in Meghalaya, Chennai in Tamil Nadu and Sikkim state.

Public Education

Educating the public on causes and characteristics of an earthquake and preparedness measures helps to a certain extent in mitigating the natural disaster.

Engineered Structures

Buildings need to be designed and constructed as per the laws to withstand ground shaking. Architectural and engineering inputs need to be put together to improve building design and construction practices. The soil type needs to be analysed before construction.

Tsunami

The term tsunami has been derived from a Japanese term *Tsu* meaning harbour and *nami* meaning waves.

A tsunami is a series of ocean waves with very long wavelengths (typically hundreds of kilometres) caused by large-scale disturbances of the ocean such as the following.

1. Earthquakes
2. Landslide
3. Volcanic eruptions
4. Explosions
5. Meteorites

These disturbances can either be from below (for example, underwater earthquakes with large vertical displacements and submarine landslides) or from above (for example, meteorite impacts).

Tsunamis can have wavelengths ranging from 10 to 500 km and wave periods of up to an hour. As a result of their long wavelengths, tsunamis act as shallow-water waves. A wave becomes a shallow-water wave when the wavelength is very large compared to the water depth. Tsunamis may reach a maximum vertical height onshore above sea level, often called a run-up height of tens of metres.

Tsunamis can result in massive destruction when they arrive onshore and it can cause severe coastal erosion, which is wearing away coastal land or beaches. The power of water can wash away vegetation, making it hard to establish the shoreline. As tsunamis are triggered by sudden events, there may be little time to warn coastal residents of its arrival.

This fact became evident in March of 2011 when Japan was struck by a large tsunami that was triggered by a 9.0 magnitude earthquake, which damaged several nuclear power plant reactors followed by massive radioactive pollution. Tsunami originated in Indian Ocean caused massive damage in Indonesia and India.

Volcanoes

A volcano is an opening or rupture in the earth's surface or crust, which allows hot magma, volcanic ash and gases from within the earth to reach the surface. Most volcanoes have a volcanic crater at the top. When they are active, materials pour out of it. This includes lava, steam, gaseous compounds of sulphur, ash and broken rock pieces.

Figure 9.19

Volcanoes are generally found where tectonic plates diverge or converge. Subduction zones are places where two plates, usually an oceanic plate and a continental plate, collide; as is the case with earthquakes as well. Volcanoes tend to exist along the edges between tectonic plates, massive rock slabs that make up earth's surface. About 90 per cent of all volcanoes exist within the 'Ring of Fire' along the edges of the Pacific Ocean.

Eruption of volcanoes away from the subduction zone is referred to as mantle plumes also known as 'hotspots'. These are columns taking out the magma from the deep interior of the earth.

Erupting volcanoes can pose many hazards. Volcanic ash can be a threat to aircraft, especially jet aircrafts.

Large eruptions can affect temperature as ash and droplets of sulphuric acid obscure the sun and cool the earth's lower atmosphere or troposphere.

Cyclone

Cyclone is a region of low atmospheric pressure surrounded by high atmospheric pressure, resulting in swirling atmospheric disturbances, accompanied by powerful winds blowing in anticlockwise direction in the northern hemisphere and in clockwise direction in the southern hemisphere. They occur mainly in the tropical and temperate regions of the world. Cyclones are called by various names in different parts of the world. Cyclones in India are moderate in nature. Some of the general features of a typical cyclone are as follows.

1. Strong winds
2. Exceptional rain
3. Storm surge

Cyclones are called by different names, such as typhoons and hurricanes (Caribbean and Gulf of Mexico), tropical cyclones (India), willie (Australia) and tornadoes (South America).

Damage by Cyclones

First, in a sudden, brief onslaught, high winds cause major damage to infrastructure and housing, particularly in fragile constructions. They are generally followed by heavy rains and floods and in flat coastal areas by storm surge riding on tidal waves and inundating the land over long distances of even up to 15 km inland. There can be loss of life due to flooding and flying elements and contamination of water supplies may lead to viral outbreaks, diarrhoea and malaria.

Mitigation of Cyclones

Green belt plantation along the coastal line in a scientific, interweaving pattern can reduce the effects of hazard. Providing a cover through green belt sustains

less damage. Forests act as a wide buffer zone against strong winds and flash floods. The roots of the plants and trees keep the soil intact and prevent erosion and slow run off to prevent or lessen flooding.

Flood

Flood is a state of high water level along a river channel or on the coast that leads to inundation of land, which is not usually submerged. There are different types of floods, namely flash flood, riverine flood and urban flood.

Flash Floods

These are rapid inland floods due to intense rainfall. A flash flood describes sudden flooding within a short duration. In sloped terrains, the water flows rapidly with a high destruction potential. In flat terrains, the rainwater cannot infiltrate into the ground or run off (due to small slope) as quickly as it falls. Flash floods are typically associated with thunderstorms. A flash flood can occur at virtually any place.

Causes of Flash Floods

1. Heavy rainfall in a short span of time.
2. Heavy siltation of the river bed reduces the water carrying capacity of the rivers or stream.
3. Blockage in the drains leads to flooding of the area.
4. Landslides blocking the flow of the stream.
5. Construction of dams and reservoirs.
6. In areas prone to cyclone, strong winds accompanied by heavy downpour along with storm surge leads to flooding.

The understanding of the concept of catabatic (also termed as katabatic) and anabatic winds can help further to understand the phenomenon of flash floods. The term catabatic wind is used for downslope winds flowing from high elevations of mountains, plateaus and hills, down their slopes to the valleys or planes below. This happens during the night time. The concept of anabatic winds is just opposite to catabatic winds, which flow up the hill, specifically during the daytime. The catabatic winds cause occurrence of flash floods.

Cloudbursts

A cloudburst is an extreme amount of precipitation sometimes with hail and thunder, which normally lasts no longer than a few minutes but is capable of creating flood conditions. Colloquially, the term cloudburst may be used to describe any sudden heavy, brief and usually unforecasted rainfall.

The heavy rainfall, flash floods, landslides and cloudbursts in June 2013 caused havoc in Uttarakhand causing death of thousands of people.

Drought

Drought is either the absence or deficiency of rainfall from its normal pattern in a region for an extended period of time leading to general suffering in the society. It is an interplay between the demand that people place on natural supply of water and the natural event that provides water in a given geographical region. The state of Kerala, which receives more than 3000 mm of rainfall every year was declared drought-affected in the past as it was insufficient to have two good crops. The more the imbalance in supply, the higher is the drought. The following explains this general definition further.

1. It is the slow onset of disaster and is difficult to demarcate the time of its onset and the end.
2. Any unusual dry period that results in shortage of useful water.

Although drought is basically caused by rainfall deficit, which is a meteorological phenomenon it manifests into different spheres because of various vulnerability factors associated with it. Some of these factors are induced by humans.

Although drought is a natural disaster, its effects are made worst in developing countries due to overpopulation, overgrazing, deforestation, soil erosion, excessive use of ground and surface water for growing crops and loss of biodiversity. The four types of droughts are as follows.

1. **Meteorological drought:** It is simply the absence or deficit of rainfall. It is the least severe form of drought and is identified by sunny days and hot weather.
2. **Hydrological drought:** It leads to reduction of natural stream flows or ground water levels, plus stored water supplies. The main impact is on the water resource systems.
3. **Agricultural drought:** This form of drought occurs when moisture level in the soil is insufficient to maintain average crop yields. The initial consequences are reduced seasonal output of crops and other related production. An extreme agricultural drought can lead to a famine, which is prolonged shortage of food in a restricted region causing widespread disease and death from starvation.
4. **Socio-economic drought:** It correlates the supply and demand of goods and services with the three above-mentioned types of drought.

Wildfire

A wildfire is any uncontrolled fire in combustible vegetation that occurs in the countryside or a wilderness area. A wildfire differs from other fires by its extensive size, the speed at which it can spread out from its

original source, its potential to change directions unexpectedly and its ability to jump gaps, such as roads, rivers and fire breaks.

Landslides

The term landslide includes all varieties of mass movement of hill slopes and can be defined as the downward and outward movement of slope-forming materials composed of rocks, soils, artificial fills or a combination of all these materials along surfaces of separation by falling, sliding and flowing, either slowly or quickly from one place to another. Although the landslides are primarily associated with mountainous terrains, these can also occur in areas where activities, such as surface excavation for highways, buildings, and open-pit mines take place. Landslides take place in conjunction with earthquakes, floods, and volcanoes. At times, prolonged rainfall causing landslide may block the flow of river for quite some time. The formation of river blocks can cause havoc to the settlements downstream on its bursting.

Causes of Landslides

1. **Geologically weak material:** Weakness in the composition and structure of rock or soil.
2. **Erosion:** Erosion of slope top due to cutting down of vegetation and construction of roads.
3. **Intense rainfall:** Intense rainfalls, heavy melting of snow in the hilly terrains.
4. **Human excavation:** Mining, deforestation and irrigation.
5. **Earthquake**
6. **Volcanic eruption**

ENVIRONMENT PROTECTION ACT (1986)

India is one of the few countries in the world where 'environment' finds an explicit mention in the constitution itself. Although not guaranteed as a fundamental right, 'environment' has acquired the status of a right by being recognized as an integral component of the 'right to life' by the higher judiciary in judicial decisions spanning over the last two decades.

Set up in 1972, The National Committee on Environmental Planning and Coordination (NCEPC) was earlier the apex advisory board relating to issues of environmental protection.

Central Pollution Control Board (CPCB) was set up in 1974 as an implementing agency of the Water Act. Later, it also took on the implementation of the Air Act of 1981. The CPCB is a statutory body attached to the MoEF.

In 1980, a separate Department of Environment was constituted with a mandate to plan, promote and coordinate programmes relating to the environment. A full-fledged Ministry of Environment and Forests (MoEF) was established in 1985 to oversee the environmental protection measures at the national level.

The National Environment Appellate Authority (NEAA) was set up in 1997.

A new institutional set-up is envisaged for conservation issues under the Biodiversity Act of 2002, comprising a National Biodiversity Authority, State Biodiversity Boards and Biodiversity Management Committees.

- The genesis of the Environment (Protection) Act, 1986 is in Article 48-A (Directive Principle of State Policy) and Article 51-A(g) (Fundamental Duty) of the Indian Constitution.
- There is a directive, given to the state as one of the **Directive Principles** of State Policy regarding the protection and improvement of the environment.

Article 48A states *'The State shall endeavour to protect and improve the environment and to safeguard the forests and wildlife of the country'*.

- The **Environment Protection Act of 1986 (EPA)** came into force soon after the Bhopal Gas Tragedy and is considered umbrella legislation as it fills many lacunae in the existing legislations.
- **Environmental protection act 1986 is also the Umbrella act** because it provides the framework to the central government in order to make the coordination between different state as well as the central authorities using different **act** like water **act**, etc.
- The main emphasis is given to 'Environment', defined to include water, air and land and the inter-relationships which exist among water, air and land and human beings and other living creatures, plants, microorganisms and property.
- It defines environmental pollution also. 'Hazardous substances' include any substance or preparation, which may cause harm to human beings, other living creatures, plants, microorganisms, property or the environment.

The main provisions of this Act are given below.

1. The Act empowers the **center** to 'take all such measures as it deems necessary'.
2. By virtue of this Act, the **Central government** has armed itself with considerable powers which include,
 - (a) coordination of action by state,
 - (b) planning and execution of nationwide programmes,
 - (c) laying down environmental quality standards, especially those governing emission or discharge of environmental pollutants,
 - (d) placing restriction on the location of industries and so on.
 - (e) Authority to issue direct orders, included orders to close, prohibit or regulate any industry.
 - (f) Power of entry for examination, testing of equipment and other purposes and power to analyze the sample of air, water, soil or any other substance from any place.
3. The Act explicitly prohibits discharges of environmental pollutants in excess of prescribed regulatory standards.
4. There is also a specific prohibition against handling hazardous substances except those in compliance with regulatory procedures and standards.
5. The Act provides provision for penalties. For each failure or contravention the punishment included a prison term up to five years or fine up to ₹ 1 lakh, or both.
6. The Act imposed an additional fine of up to ₹ 5000 for every day of continuing violation.
7. If a failure or contravention occurs for more than one year, the offender may be punished with imprisonment which may be extended to seven years.
8. Section 19 provides that any person, in addition to authorized government officials may file a complaint with a court alleging an offence under the Act.
9. This 'Citizens' Suit' provision requires that the person has to give notice of not less than 60 days of the alleged offence of pollution to the Central government.

The Genetic Engineering Appraisal Committee (GEAC) is the apex body constituted in the Ministry of Environment and Forests under 'Rules for Manufacture, Use, Import, Export and Storage of Hazardous Microorganisms/Genetically Engineered Organisms or Cells 1989', under the Environment Protection Act, 1986. The Rules of 1989 also define five competent authorities as mentioned below.

Presently there are six committees and they are listed below.

1. **Recombinant DNA Advisory Committee (RDAC):** It's advisory nature in nature. It recommends safety regulations for India in recombinant research, use and applications.
2. **Review Committee on Genetic Manipulation (RCGM):** It is established under the Department of Biotechnology, **Ministry of Science** and technology.
3. **Genetic Engineering Appraisal Committee (GEAC)**
4. **State Biotechnology Coordination Committee (SBCC's)**

5. **District Level Committees (DLCs):** This committee deals with the use of genetically modified organisms/hazardous microorganisms and its applications in environment.
6. **Institutional Biosafety Committee (IBSC):** It is established under the institution engaged in GMO research to oversee such research and to interface with the RCGM in regulating it.

INDIA'S NATIONAL ACTION PLAN ON CLIMATE CHANGE (NAPCC)

In this chapter, we discussed about the phenomenon of climate change, sustainable development goals among other things. NAPCC is also a plan that is sensitive to climate change. Following are the main principles of NAPCC.

1. The use of new technologies for inclusive and sustainable development.
2. Its implementation includes local governments, public private partnerships and civil society action.
3. The main focus is on promoting understanding of climate change, adaptation and mitigation, energy efficiency and natural resource conservation.
4. Linked with national growth.
5. Devising efficient and cost effective strategies for demand side management.
6. Welcoming international cooperation approach for research, development and technology transfers which are specifically under UNFCCC.

Keeping all these in view, there is a need for directional shift in development pathway. There are eight national missions which form the core of the National Action Plan.

Figure 9.20

National Solar Mission

The National Solar Mission has adopted 3-phase approach to promote ecologically sustainable growth while meeting India's energy security challenge. The period from 2017–22 is termed as its Phase 3.

The main objectives are to establish India as a global leader in solar energy with quicker disposition of policies. India wants to create an enabling policy framework for the deployment of 100,000 MW of solar power by 2022. To create favourable conditions for

solar manufacturing capability, particularly, solar thermal for indigenous production and market leadership. Its specific aspects have been discussed under solar power also in this chapter.

National Mission for Enhanced Energy Efficiency (NMEEE)

NMEEE has been envisaged to foster innovative and sustainable business models to the energy efficiency sector.

The Electricity Act, 2001 provides for legal mandate for Bureau of Energy Efficiency (BEE) for Union government and some other agencies in State governments. BEE makes a market based mechanism to encourage savings in such areas.

NMEEE also seeks to strengthen the market for energy efficiency by creating conducive regulatory and policy regime.

National Mission on Sustainable Habitat (NMSH)

NMSH seeks to promote sustainability of habitats through improvements in energy efficiency in buildings, urban planning, improved management of solid and liquid waste, modal shift towards public transport and conservation through appropriate changes in legal and regulatory framework, we can specifically talk about 'Energy Conservation Building Code'.

It also seeks to improve resilience of infrastructure, community based disaster management and measures for improving advance warning systems for extreme weather events.

National Water Mission (NWM)

This intends to ensure integrated water resource management for conservation of water, minimization of wastage and equitable distribution both across and within states.

There is a need to develop a framework for optimum water use through increase in water use efficiency by 20% through regulatory mechanisms with differential entitlements and pricing by taking the National Water Policy (NWP) into consideration. It is required that considerable share of water needs of urban areas is met through recycling of waste water.

There is a need to meet the mitigating water requirements of coastal cities through the adoption of new and appropriate technologies, such as low-temperature desalination technologies allowing the use of ocean water.

There is a need to revisit NWP to ensure basin-level management strategies to deal with variability in rainfall and river flows due to climate change. The optimization of efficiency of existing irrigation systems is also required.

National Mission for Sustaining the Himalayan Ecosystem (NMSHE)

The main objective is to develop a sustainable national capacity to continuously assess the health status of the Himalayan ecosystem and it is important for its perennial rivers and mountain ecosystems also. It also assists the states in their implementation of actions selected for sustainable development. Here, the community based approach is required.

National Mission for a Green India

There is a need to increase the forest/tree cover on 5 million hectares (ha) of forest/non-forest lands and improved quality of forest cover on another 5 million ha of non-forest/forest lands (a total of 10 million ha). The improved ecosystem services provides for biodiversity, hydrological services and carbon sequestration from the 10 million ha of forest/ non-forest lands as mentioned above.

There can be enhanced annual CO₂ sequestration by 50 to 60 million tons in the year 2020. Then there is a scope for increased forest-based livelihood income of about 3 million households living in and around the forests.

National Mission on Seabuckthorn

Sea buckthorn plant is popularly known as leh berries, it is also known as 'Wonder plant' and 'Ladakh gold'. It has the following properties.

1. It has numerous medicinal and nutritional properties, and it also helps in soil conservation and nitrogen fixation.
2. It is hardy, drought-resistant and tolerant to extreme temperatures from -43°C to $+40^{\circ}\text{C}$.
3. The plant has an extensive root system which can fix atmospheric nitrogen making it ideal for controlling soil erosion and preventing desertification.

The MoEF and DRDO have launched a major national initiative for sea buckthorn cultivation in the **high-altitude, cold desert ecosystems**. The initiative is one of many conservation measures for fragile high-altitude ecosystems.

This initiative is a part of Sub-Mission on Cold Desert Ecosystems under the Green India Mission, which is a part of the National Action Plan on Climate Change.

National Mission for Sustainable Agriculture (NMSA)

There are many adaptation and mitigation linked issues as listed below.

- Improved crop seeds, livestock and fish culture
- Water efficiency
- Pest management
- Improved farm practices
- Nutrient management
- Agricultural insurance
- Credit support
- Markets
- Access to information
- Livelihood diversification

If we look at World Trade Organisation, there are many agriculture based issues and the other issues have been sorted out to a great deal.

The National Mission on Strategic Knowledge for Climate Change (NMSKCC)

There is a need for formation of knowledge networks among the existing knowledge institutions engaged in research and development relating to climate science.

There is a need to establish some global technology watch groups with institutional capacities to carry out research on risk minimized technology selection for developmental choices.

There is a need to develop national capacity for modelling the regional impact of climate change on different ecological zones within the country for different seasons and living standards.

The establishment of research networks and encouraging research in the areas of climate change impacts on important socio-economic sectors, like agriculture, health, natural ecosystems, biodiversity, coastal zones, etc., are required.

National Bio-Energy Mission

The Union government is in the process of preparing a national bioenergy mission to boost power generation from biomass, a renewable energy source abundantly available in India.

This national mission will aim at improving energy efficiency in traditional biomass consuming industries that seek to develop a bio-energy city project and provide logistics support to biomass processing units.

It also proposes a GIS-based National Biomass Resource Atlas to map potential biomass regions in the country. According to the estimates, biomass from agro and agro-industrial residue can potentially generate 25,000 MW of power in India.

INDIAN NETWORK ON CLIMATE CHANGE ASSESSMENT

It was launched by the Ministry of Environment and Forests in an effort to promote domestic research on climate change. The reports are prepared by the INCCA forms a part of India's National Communication (Nat Com) to the United Nations Framework Convention on Climate Change (UNFCCC).

National Communication (NATCOM)

In pursuance of the implementation of the provisions of UNFCCC, India's NATCOM has been initiated in 2002 funded by the Global Environment Facility.

MONTREAL PROTOCOL

The Montreal Protocol, finalized in 1987 is a global agreement to protect the stratospheric ozone layer by phasing out the production and consumption of ozone-depleting substances (ODS). The stratospheric ozone layer filters out harmful ultraviolet radiation, which is associated with an increased prevalence of skin cancer and cataracts, reduced agricultural productivity and disruption of marine ecosystems.

This protocol has taken strong domestic action to phase out the production and consumption of ODS such as chlorofluorocarbons (CFCs) and halons.

The Montreal Protocol has proven to be innovative and successful, and is the first treaty to achieve universal ratification by all countries in the world. Leveraging worldwide participation, the Montreal Protocol has sent clear signals to the global market and placed the ozone layer, which was in peril on a path to repair.

Since its adoption, the Montreal Protocol has been modified for a number of times and its control provisions were strengthened in London (1990), Copenhagen (1992), Vienna (1995), Montreal (1997) and Beijing (1999).

On 15 October 2016, Parties to the Montreal Protocol adopted the Kigali amendment to phase down production and consumption of hydrofluorocarbons (HFCs) worldwide. HFCs are widely used alternatives to ozone depleting substances, such as hydrochlorofluorocarbons (HCFCs) and chlorofluorocarbons (CFCs), already controlled under the Protocol.

This amendment creates market certainty and opens international markets to new technology that is better for the environment, without compromising performance.

Rio Summit

We discussed climate change, global warming and the phenomena of green house gases in this chapter. As it is a global issue, affecting many nations, UN Conference on Environment and Development (UNCED) started a conference Earth Summit that was held at Rio de Janeiro, Brazil in the year 1992. The main objective was to reconcile worldwide economic development with protection of the environment. This Rio Summit was the largest gathering of world leaders, with 117 heads of state and representatives of 178 nations partaking in it. There were many treaties and other documents signed at the conference.

1. The Convention on Biological Diversity is a binding treaty requiring nations to take inventories of their plants and wild animals and protect their endangered species.

2. The United Nations Framework Convention on Climate Change (UNFCCC) or Global Warming Convention is a binding treaty that requires nations to reduce their emission of carbon dioxide, methane and other greenhouse gases thought to be responsible for global warming; though the treaty had not set any binding targets for emission reductions. Such targets were eventually established in an amendment to the UNFCCC, the Kyoto Protocol (1997), which was superseded by the Paris Agreement on climate change (2015).
3. The Declaration on Environment and Development or Rio Declaration, laid down 27 broad, non-binding principles for environmentally sound development. Agenda 21 outlined the global strategies for cleaning up the environment and encouraging environmentally sound development.
4. The Statement of Principles on Forests, aimed at preserving the world's rapidly vanishing tropical rainforests, which is a non-binding statement recommending that nations monitor and assess the impact of development on their forest resources and take steps to limit the damage done to them.

The Earth Summit was hampered by disputes between the wealthy industrialized nations of the North such as Western Europe and North America and the poorer developing countries of the South such as Africa, Latin America, the Middle East and parts of Asia.

In general, the countries of the South were reluctant to hamper their economic growth with the environmental restrictions urged upon them by the North unless they received increased Northern financial aid, which they claimed would help make environmentally sound growth possible. Every year a meeting is held in the form of Conference of Parties (COP).

Benchmarking

In the context of UNFCCC, benchmarking is the setting up of emission reduction commitment as measured against a particular base year. The only quantified target set in the original UNFCCC (Article 4) was for the developed countries to reduce their GHG emissions to 1990 levels as against the original 2000.

Conferences of the Parties

Since UNFCCC entered into force, parties have been meeting annually in Conferences of the Parties (COPs) to assess the progress in dealing with climatic changes. The meeting is held every year from last week of November to the first week of December. In the month of June, a lower level meeting of civil servants is held to assess the progress and to prepare the ground for next meeting. Kyoto Protocol has been a major achievement so far.

Table 9.6 Summary of Main COPs

Main COPs	Place of meeting	Key developments
COP 1	Berlin, Germany (1995)	First Meeting - Commitment for Subsidiary Body for Scientific and Technological Advice
COP 3 (1997)	Kyoto, Japan	Kyoto Protocol Annex I parties commit to binding reduction targets
COP 8	New Delhi, India (2002)	Call for transfer of technologies to developing nations to minimize the impact of climate change on developing nations.
COP 11	Montreal, Canada (2005)	Montreal Action Plan is an agreement to 'extend the life of the Kyoto Protocol beyond its 2012
COP 13	Bali, Indonesia (2007)	Discussion about post 2012 scenario
COP 15	Copenhagen, Denmark (2009)	Voluntary mitigation pledges
COP 16	Cancun, Mexico (2010)	Establishing a Green Climate Fund
COP 18	Doha, Qatar (2012)	The Kyoto Protocol has been extended till 2020.
COP 19 and 20	Warsaw (Poland) and Lima (Peru)	Intended Nationally Determined Contribution (INDC)
COP 21	Paris	Discussed separately

Table 9.7 Emissions by Countries

Country	Percentage share in global annual emissions	CO ₂ emissions per capita (tonnes/person)
World	100%	4.9
China	28.6%	7.1
United States	15.1%	16.4
European Union	10.9%	7.4
India	5.7%	1.6
Russia	5.1%	12.4
Japan	3.8%	10.4

Convention on Biological Diversity

The convention on biological diversity was inspired by the world community's growing commitment to sustainable development. It represents a dramatic step forward in the conservation of biological diversity, the sustainable use of its components and the fair and equitable sharing of benefits arising from the use of genetic resources.

Species extinction caused by human activities continues at an alarming rate. Keeping in view the earth's biological resources, the United Nations Environment Programme (UNEP) convened the Ad Hoc Working Group of Experts on Biological Diversity in November 1988. Additionally, some further changes were made on 22 May 1992 with the 'Nairobi Conference' for the Adoption of the Agreed Text of the Convention on Biological Diversity.

During the Rio 'Earth Summit' when the Convention was opened in United Nations Conference on Environment and Development, it had received 168 signatures. At the 1992 Earth Summit in Rio de Janeiro, world leaders agreed on a comprehensive strategy for 'sustainable development' meeting our needs while ensuring that we leave a healthy and viable world for future generations. The convention establishes three main goals, such as the conservation of biological diversity, the sustainable use of its components, and the fair and equitable sharing of the benefits from the use of genetic resources.

The first session of the Conference of the Parties was scheduled for 28 November to 9 December 1994 in the Bahamas.

The biological diversity is often understood in terms of the wide variety of plants, animals and microorganisms. So far, about 1.75 million species have been identified, mostly small creatures such as insects. Scientists reckon that there are actually about 13 million species, though estimates range from three to 100 million.

Biodiversity also includes genetic differences within each species, for example, between varieties of crops and breeds of livestock. Chromosomes, genes and DNA, the building blocks of life determines the uniqueness of each individual and each species.

The Cartagena Protocol on Biosafety and the Nagoya Protocol on Access and Benefit Sharing are supplementary agreements to the convention. UN decade on biodiversity contributes to implementation of strategic plan is being implemented for 2011-2020.

1. *Cartagena Protocol on Biosafety to the Convention on Biological Diversity* is an international treaty governing the movements of living modified organisms (LMOs) resulting from modern biotechnology from one country to another. It was adopted on 29 January 2000 as a supplementary agreement to the Convention on Biological Diversity and entered into force on 11 September 2003.
2. The Nagoya Protocol aims at sharing the benefits arising from the utilization of genetic resources in a fair and equitable way, including by appropriate access to genetic resources and by appropriate transfer of relevant technologies.

The Aichi Biodiversity Targets Task Force (ABTTF) was established to provide a platform for agencies and organizations to coordinate their activities in support of implementation of the Strategic Plan for Biodiversity 2011-2020 and its Aichi Biodiversity Targets at global and national levels during the United Nations Decade on Biodiversity.

Zero Extinction, Birdlife, Convention on Biological Diversity, Convention on Migratory Species, Convention on the International Trade in Endangered Species (CITES), Food and Agriculture Organization of the United Nations, (FAO), Global Environment Facility (GEF), The Nature Conservancy, Ramsar Convention, International Union for Conservation of Nature, UN Environment are the different agencies working with Aichi Biodiversity Targets Task Force.

The UN Biodiversity Conference is now held once in two years. The 2018 UN Biodiversity Conference was held at Sharm El-Sheikh, Egypt. The subsequent conference will be held at Beijing in 2020.

Kyoto Protocol

CO₂ is recognized as the key GHG that contributes to climatic changes and for which the developed countries are principally responsible for the high levels of GHG emission currently in the atmosphere, due to more than 150 years of industrial activity. Kyoto Protocol places a heavier burden on the developed nations under the principle of common but differentiated responsibilities. Kyoto Protocol entered into force on 16th February 2005.

The targets cover emission of six main GHGs, such as carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulphur hexafluoride (SF₆).

The following terms are worth mentioning in this context.

1. **Carbon footprints:** Using coal, natural gas or oil for electricity, heat or transportation, releases CO₂ into the atmosphere. Their daily CO₂ emissions make up the carbon footprint of any business unit.
2. **Carbon credit:** One carbon credit is equal to one tonne of CO₂ or its equivalent gases. For example, any business unit avoiding one tonne of CO emission will be issued a certificate of one carbon credit that can be traded in national or international market. Thus, any firm helping in avoiding CO₂ can actually make money.

The Kyoto mechanisms are as follows:

1. Emissions trading (known as the carbon market).
2. Clean development mechanism (CDM)
3. Joint implementation (JI)

International Solar Alliance

We have already discussed about renewable sources of energy. The main examples are solar energy, wind energy, hydroelectric energy, geothermal energy and biomass.

India is generating around 18.5% of India's total energy production from renewable energy sources, our energy needs are still based on non-renewable resources. Our dependence on international energy sources and our own geographic location asks for dependence on solar energy so that we can make our journey from developing nation to developed nation sustainable and cost effective.

Keeping it in our view, our PM Shri Narendra Modi and the former President of France Mr. François Hollande, jointly laid the foundation stone of the International Solar Alliance (ISA) on 25 January 2016. The first summit of the International Solar Coalition (ISA) on 11 March 2018 in New Delhi was organized.

International Solar Alliance or ISA consists of 121 countries. The ISA consists many of those countries which are located between the Tropic of Cancer and Tropic of Capricorn. These countries are located at the shortest distance from the sun that is why solar energy is available in these quantities throughout the year. The ISA has set a target of 1 TW of solar energy by 2030.

French Development Agency will allocate €300 million to developing solar energy over the next five years in order to finance the initial projects.

The following are the main objectives of International Solar Alliance.

1. The purpose of the International Solar Alliance is to bring such countries (which are located between the Tropics of Cancer and Capricorn) on a platform that supports clean energy, sustainable environment, clean public transport and clean climate.
2. This alliance wants to overcome the obstacles in the way of promoting solar energy.
3. ISA will promote the development and use of solar energy in order to provide energy security to present and future generations. ISA's goal is to generate 1 trillion Watt (1000 gigawatt) of solar power by 2030.
4. The establishment of the ISA will motivate other countries of the world to increase the production and consumption of solar energy for sustainable development.

India's Contribution in International Solar Alliance

It has its secretariat in India. ISA will increase the stature of India at the international level. Our stated objective **'India; aims to produce 100 gigawatt solar energy (which will be one-tenth of ISA's target) by 2022.'** India will produce 175 GW of electricity from renewable sources.

- Indian Renewable Energy Development Agency (IREDA) and Solar Energy Corporation of India (SECI) announced **contribution of US \$ 1 million** each to the ISA corpus fund.
- If this organization succeeds in achieving its goals, then it will not only be the source of clean fuel for the current generation, but will also meet the needs of future generations.

The Participation of Countries in ISA

The ISA is open to 121 prospective member countries, where most of them are located between the Tropic of Cancer and Capricorn as this is the region worldwide with a surplus of bright sunlight for most of the year. ISA has become one of the largest organizations in the world and **61 countries have signed the ISA Framework Agreement within 2 years** from its commencement.

Paris Agreement

During earlier deals for climate change, there were targets set by UNFCCC that conference of parties were not able to adhere. So a new mechanism was set in place to deal with such situation.

In 2015, Paris Agreement was signed as an international agreement with an **aim to reduce global greenhouse gases and thus, it deals with the climate change.** There are 29 articles in agreement.

TARGETS FOR PARIS AGREEMENT			
			
INDIA	CHINA	USA	EU (28)
Emission intensity of GDP 33–35% below 2005 levels by 2030, power capacity to be 40% non fossil fuel based	Emission intensity of GDP 60–65% below 2005 levels by 2030. Peak emissions around 2030. Non-fossil fuel to be 20% of primary energy consumption by 2030	Absolute emissions 26–28% below 2005 levels by 2025	Absolute emissions 40% below 1990 levels by 2030

Figure 9.21

The main aim of Paris Agreement is to keep the global temperature rise this century **well below 2 degrees Celsius** above the pre-industrial level. There have to be efforts to limit the temperature increase even **further to 1.5 degrees Celsius**. In French, the Paris Agreement is known as *L'accord de Paris*.

It talks about limiting the amount of greenhouse gases emitted by human activity to the same levels that trees, soil and oceans can absorb naturally, beginning at some point between 2050 and 2100. It also mentions the need to review each country's contribution to cutting emissions every five years so they scale up to the challenge.

The rich nations should help poorer nations by providing 'climate finance' to adapt to climate change and switch to renewable energy.

The Paris Agreement has a 'bottom up' structure. The agreement is binding in some elements like reporting requirements, while leaving other aspects of the deal, such as the setting of emissions targets for any individual country as non-binding.

Paris Agreement comes under the broad umbrella of **United Nations Framework Convention on Climate Change (UNFCCC)**. UNFCCC is a convention held in 1992 to combat climate change. Kyoto Protocol (1997) was another major international commitment under UNFCCC.

Intended Nationally Determined Contributions (INDC)

The Paris Agreement requires all parties to put forward their best efforts 'voluntarily' through 'Intended nationally determined contributions' and also to strengthen these efforts in the years ahead.

India's Intended Nationally Determined Contribution (INDC)

- India has also pledged to create an additional carbon sink of 2.5 to 3 billion tons of CO₂ equivalent through additional forest and tree cover by 2030.
- India will anchor a global solar alliance, INSPA (International Agency for Solar Policy and Application) of all countries located in between Tropic of Cancer and Tropic of Capricorn.

Frameworks under Paris Agreement

1. Technology framework
2. Capacity building framework
3. Transparency framework

Kyoto Protocol is set to expire in 2020. Paris Agreement deals with what should be done in the decade after 2020 and beyond this time frame. The text of the agreement includes a provision requiring developed countries to send **\$100 billion annually** to their developing counterparts beginning in 2020. That figure will be a 'floor' that is expected to increase with time.

On 5 October 2016, the threshold for entry into force of the Paris Agreement was achieved.

NATURAL RESOURCES—BIODIVERSITY

Biodiversity is the number of living organisms (both plants and animals) present in an ecosystem. Any loss in species in the food chain means breaking a link in the chain, which in turn affects all those who benefit from the chain. The diversity can be divided as follows.

1. **Genetic diversity:** Variation of genes in species that is a single population.
2. **Species diversity:** It is the most basic way to keep an account of biodiversity as it includes all forms of life from single cell organisms, such as amoeba and virus to multicellular organisms, such as plants and animals.
3. **Ecosystem diversity:** It differentiates between different habitats, ecological processes and ecosystems in which the species exist. This can be a forest ecosystem marine ecosystem, desert ecosystem and so on.

Endemic species are likely to develop on biologically isolated areas such as islands. Due to their geographical isolation, endemics can easily become endangered or extinct if their habitat changes not only due to human actions but also due to the introduction of new organisms. The opposite of endemic species is cosmopolitan species.

India is one of the richest countries in the world in terms of biodiversity. Due to many factors such as deforestation, urbanization, industrialization and climate changes (including global warming), many species have lost their habitat and even become extinct. International Union for Conservation of Nature and Natural Resources (IUCN) has categorized wild flora and fauna into eight categories (known as the Red List). This includes (i) extinct, (ii) extinct in wild, (iii) critically endangered, (iv) endangered, (v) vulnerable, (vi) lower-risk, (vii) data-deficient and (viii) not evaluated.

Schedule I of Wildlife (Protection) Act, 1972 defines endangered species in a formal manner. So far 38 species of birds, 18 of amphibians and reptiles, and 81 of mammals have been labelled as endangered. There are 47 critically endangered species in India.

Biological Hotspots in India

A biodiversity hotspot is a biogeographical region with a significant reservoir of biodiversity that is under threat from humans. India is a country rich in biological diversity. It is home to 7.31% species of fauna and 10.78% species of flora. Among the 34 hotspots of the world, two are located in India and then extending to the neighbouring countries These are Eastern Himalayas and Western Ghats (and Sri Lanka). Eastern Himalayas is home to 163 globally threatened species including Asian elephants, one-horned rhinoceros (*Rhinoceros unicornis*), wild water buffalos and panthers and tigers. Earlier, Eastern Himalayas was clubbed with Indo-Burma biodiversity hotspot. The Agasthyamalai Hills in Western Ghats is home to the highest level of plant biodiversity.

Conservation of Biodiversity

The process of conservation can be divided into two types.

1. **In situ conservation:** When conservation is attempted at the natural habitat of the species by creating national parks, sanctuaries, and biosphere reserves, it is called *in situ* conservation.
2. **Ex situ conservation:** This is done in case of complete degradation of natural habitat. The endangered species is kept under total human supervision, such as in zoos, botanical gardens and seed banks. Manas National Park has been declared a world heritage site. The other world heritage sites (natural) in India are Kaziranga National Park (Assam), Manas Wildlife Sanctuary (Assam), Keoladeo National Park (Rajasthan), Sundarbans National Park (West Bengal), and Nanda Devi National Park (Uttar Pradesh). These world heritage sites are recognized by UNESCO.

There are 27 tiger reserves in India under Project Tiger. Other prominent reserves are Bandipur (Karnataka), Corbett (Uttaranchal), Kanha (Madhya Pradesh), Ranthambore Sariska (Rajasthan) and Sundarbans (West Bengal).

Biosphere Reserves

Biosphere reserves protect larger areas of natural habitat in comparison to national parks or animal sanctuaries. Biosphere reserves are the areas of terrestrial and coastal ecosystems which promote the conservation of biodiversity with its sustainable use. UNESCO's Man and Biosphere (MAB) was launched in 1971. There are over 500 biosphere reserves across the globe in more than 100 countries. National parks, wild life sanctuaries, conservation reserves and community reserves are the four types of protected areas under The Wildlife Protection Act, 1972. Biosphere reserves are considered akin to national parks and it is usually larger than national parks. The primary criteria for the selection of biosphere reserves are effective protection and minimally disturbed core area. The secondary criteria include (i) having rare and endangered species (ii) diversity of soil and microclimatic conditions, and (iii) preservation of tribal/rural life. As on 1st April 2016, the total number of biosphere reserves in India was 18. Ten of these are a part of UNESCO's MAB Programme list.

Biosphere reserves are large areas of biodiversity where flora and fauna are protected. These regions of environmental protection roughly correspond to IUCN Category V Protected areas. The Indian government has established 18 Biosphere Reserves of India, which protect larger areas of natural habitat (than a National Park or Wildlife Sanctuary).

Concept of Threatened Species

Threatened species (T)

These species are likely to become extinct if immediate steps are not taken to ensure that they have proper food, proper habitat, protection from predators and exotic species so that they are able to realize their biotic potential.

A record of threatened species of plants and animals is maintained by **International Union for Conservation of Nature and Natural Resources (IUCN)**, Morges, Switzerland. It is called **Red Data Book**. For conservation purpose, the following four criteria have been used for this categorization.

- 1. Distribution:** Present, past, continuous or discontinuous distribution, area and degree of decline, if available.
- 2. Population:** Decline in population in course of time.
- 3. Natural habitat:** Abundance and quality.
- 4. Importance:** Potential value and biology of the species, IUCN has identified four categories of threatened species.

Endangered species (E)

These are threatened species or taxa which are in danger of extinction if the current causal factors continue to operate.

Examples: Lion-tailed macaque - *Macaca silenus*
Asiatic wild ass - *Asinus hemionus Khur*

Vulnerable species (V)

Vulnerable species or taxa have sufficient population at present, but at the same time, they deplete fast (hence, **depleted species**) so that they are likely to enter the category of endangered species if the factors bringing about depletion are allowed to continue.

Examples: Golden langur - *Presbytis geei*
Leopard cat - *Felis bengalensis*

Rare species (R)

The populations of species or taxa are small, either localized or thinly scattered.

Example: Hawaiian monk seal - *Monachus schauinslandi*
Slow loris - *Nycticebus coucang*

Biosphere Reserves of India often include one or more national parks or sanctuaries, along with buffer zones that are open to some economic uses. Protection

is granted not only to the flora and fauna of the protected region but also to the human communities who inhabit these regions and their ways of life.

Table 9.8 List of Biosphere Reserves of India

S. No.	Year	Name	State	Type	Key fauna
1	2008	Great Rann of Kutch	Gujarat	Desert	Indian wild ass
2	1989	Gulf of Mannar	Tamil Nadu	Coasts	Dugong or sea cow
3	1989	Sundarbans	West Bengal	Gangetic Delta	Royal Bengal tiger
4	2009	Cold Desert	Himachal Pradesh	Western Himalayas	Snow leopard
5	1988	Nanda Devi	Uttarakhand	Western Himalayas	NA
6	1986	Nilgiri Biosphere Reserve	Tamil Nadu, Kerala and Karnataka	Western Ghats	Nilgiri tahr, Lion-tailed macaque

(Continued)

S. No.	Year	Name	State	Type	Key fauna
7	1998	Dihang-Dibang	Arunachal Pradesh	Eastern Himalaya	NA
8	1999	Pachmarhi Biosphere Reserve	Madhya Pradesh	Semi-arid	Giant squirrel, flying squirrel
9	2010	Seshachalam Hills	Andhra Pradesh	Eastern Ghats	NA
10	1994	Simlipal	Odisha	Deccan Peninsula	Gaur, Royal Bengal Tiger, Wild elephant
11	2005	Achanakmar-Amarkantak	Madhya Pradesh, Chhattisgarh	Maikal Hills	NA
12	1989	Manas	Assam	East Himalayas	Golden langur, red panda
13	2000	Khangchendzonga	Sikkim	East Himalayas	Snow leopard, red panda
14	2001	Agasthyamalai Biosphere Reserve	Kerala, Tamil Nadu	Western Ghats	Nilgiri tahr, elephants
15	1989	Great Nicobar Biosphere Reserve	Andaman and Nicobar Islands	Islands	Saltwater crocodile
16	1988	Nokrek	Meghalaya	East Himalayas	Red panda
17	1997	Dibru-Saikhowa	Assam	East Himalayas	Golden langur
18	2011	Panna	Madhya Pradesh	Ken river	Tiger, chital, chinkara, sambhar and sloth bear

*Agasthyamala Biosphere Reserve has been added in World Network of Biosphere Reserves (UNESCO's MAB) in March 2016.

Source: wikipedia.com

Biosphere Reserves of India in World Network of Biosphere Reserves

Ten of the 18 biosphere reserves of India are a part of the world network of biosphere reserves based on the UNESCO Man and the Biosphere (MAB) Programme list. They are given in 'bold' in the above list.

Main difference between Biosphere Reserves, National Park, and Wild Life Sanctuaries

Biosphere reserves are the biggest entity among the three. The level of restriction in the increasing order

is biosphere reserves, wildlife sanctuaries and national parks. The Indian government has established 18 biosphere reserves of India, roughly corresponding to IUCN Category V Protected Areas. India has over 441 animal sanctuaries, referred to as wildlife sanctuaries (IUCN Category IV Protected Area). The national parks of India are IUCN Category II Protected Areas. As of July 2015, there were 105 national parks in India.

Important Legislations and Terms Relating to Environment, Pollution, Forests and Wildlife

- 1. The Factories Act, 1948:** This Act aims at providing information on hazardous processes taking place inside the factory to its workers, local residents and government officials.
- 2. The Insecticides Act, 1968:** It aims to regulate import, manufacture, sale, transport, distribution and the use of insecticides to prevent risk to human and animal life.
- 3. The Water (Prevention and Control of Pollution) Act, 1974:** This act defines what water pollution is and determines its penalties.

(Continued)

4. **The Air (Prosecution and Control of Pollution) Act, 1981:** This act controls and regulates emissions from automobiles and industrial plants.
5. **The Forest Conservation Act, 1980:** It mainly prohibits the State governments from declaring any reserve forest as non-reserve without approval of the central authority.
6. **The Wildlife Protection Act, 1972:** It aims to provide necessary protection against serious threat to wild-life (both animals and birds) by the expansion and advancement of agriculture, industry and urbanization. The Indian Board of Wildlife was set up in 1952. Various projects have been launched for the protection of endangered species, such as lions (1972), tigers (1973), crocodiles (1974) and brown antlered deer (1981). India became a party to the Convention of International Trade in Endangered Species of Fauna and Flora (CITES) in 1976. India also started a national component of United Nations Educational, Scientific and Cultural Organization's (UNESCO) Man and Biosphere (MAB) programme in 1971.
7. **The Environment Protection Act, 1986:** It lays down the standards for emission and discharge of pollutants, restricting areas for certain industries and laying down the safeguards for prevention of industrial accidents.
8. **Mashelkar Committee Recommendations:** The Auto Fuel Policy suggested by the expert committee headed by Dr. R. A. Mashelkar includes recommendations on auto fuel's quality, vehicular emission norms and its related issues for the country as a whole. It also recommended the introduction of low-sulphur diesel, unleaded petrol and low-benzene gasoline in a phased manner along with the promotion of alternative fuels such as compressed natural gas (CNG).

The policy is modelled on the pattern of Euro norms of European Union. Emission norms were introduced such as Bharat I, II, III and IV for different vehicles with different schedules for its implementation across India. Bharat III norms were introduced for all new passenger cars across India and Bharat IV norms were introduced in 12 major cities. With effect from February 2000, lead has been phased out of automobile fuel.

The Union Ministry of Transport is going to implement Bharat Stage V and Bharat Stage VI emissions standards to 2019 and 2021, respectively. They mainly aim at reducing sulphur levels in the air.

9. **National Green Tribunal (NGT):** The tribunal was established on 18 October 2010 under the National Green Tribunal Act 2010 for effective and expeditious disposal of cases related to environmental protection and conservation of forests and other natural resources. It is a specialized body equipped with the necessary expertise to handle environmental disputes involving multidisciplinary issues.
10. **Environment Impact Assessment (EIA):** It is a widely recognized study to assess the environmental impact of development projects. It is basically the cost-benefit analysis in context of the environment. Environmental risk assessment (ERA) is a fact-finding stage where EIA indicates the potential hazards. In India, the Department of Environment and National Council of Environmental Planning (NCEP) have adopted a preliminary procedure to prepare EIA.
11. **Precautionary principle:** The precautionary principle is a moral and political principle, which aims to prevent any action that can cause damage to the public or society at large. For example, the Supreme Court of India ordered the shifting of industries outside Delhi a few years back. In the Earth Summit held at Rio de Janeiro in 1992, a precautionary approach was codified for the first time at a global level, to protect the environment in the form of Principle 15 of Agenda 21. It emphasizes that every state should apply the principle according to its capabilities and lack of full scientific knowledge should not be used as a reason for not taking action. This is necessary to check the possibility of any irreversible damage to the environment. There are two popular terms associated with precautionary principle.
 - (a) **Polluter Pays Principle (PPP):** This idea first originated in the Organization for Economic Cooperation and Development where pollution control costs are to be financed by the polluter alone.
 - (b) **Beneficiary Pays Principle (BPP):** It suggests that funding for environmental improvement should be obtained from its beneficiaries. This method of financing would generate larger revenue for the government as the rich are willing and capable of paying more for environmental enrichment. Imposing carbon tax is an example.
12. **ISO 14000:** After the success of ISO 9000 Quality Management System, which focuses on continual improvement of the processes and quality of goods and services, International Standards Organisation (ISO) introduced ISO 14000 series of Environmental Management System in 1996. It specifically deals with environmental aspects of processes in products and services.

(Continued)

- 13. Emissions trading:** It is an administrative approach to deal with the issue of pollution control by providing financial incentives for achieving reduction in carbon emission. An organization earns one carbon credit if it is able to avoid emission of one ton of carbon dioxide or its equivalent. The carbon credits thus earned can be sold to other companies for whom it is mandatory to cut carbon emissions. It is also termed as cap and trade.
- 14. Carbon trading:** The idea of carbon trading is a part of Kyoto Protocol, which was signed in 1997 and came into force in 2002.

Few Important International Conventions on Environment and Biodiversity

Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), 1973: The objective is to control international commercial trade in endangered species or products derived from them.

Carbon space refers to the amount of carbon that can be released into the atmosphere by 2100 so that the rise in global temperature can be capped at 2 degree Celsius. It is set at 1,000 gigatonnes of carbon dioxide equivalent (GtCO₂eq).

Basel Convention, 1989: The main aim is to minimize transboundary movement of hazardous wastes.

UN Framework Convention on Climate Change (UNFCCC), 1992: The main aims are to stabilize emission of greenhouse gases and to check reasons for global warming and climate change.

Convention on Biological Diversity (CBD), 1992: The main aims are conservation of biodiversity, sustainable use of biological resources and equitable sharing of benefits.

Nagoya Protocol: It is a supplementary agreement to the Convention on Biological Diversity. The Nagoya Protocol on Access and Benefit Sharing (ABS) was adopted on 29 October 2010 in Nagoya, Japan.

Stockholm Convention: It was adopted in 2001 and enforced in 2004. It deals with reducing and eliminating the production and use of persistent organic pollutants.

Ramsar Convention: It was signed in Iranian city of Ramsar in 1971 and enforced in 1975. It deals with conservation and use of wetlands.

A Snap Shot of Main Environmental Movements in India

Chipko Movement: It was started in 1973 in Chamoli District of Uttarakhand. It entailed embracing the trees upon seeing an axe coming near the tree to cut it. Its main leader was Shri Sunderlal Bahuguna.

Appiko Movement: It was started in 1983 in the villages of Western Ghats in Uttar Kannada region of Karnataka. The main purpose was to prevent commercial felling of trees. It became a symbol for people's power for their rights of natural resources with regard to the state.

Tehri Dam Movement: This movement was spearheaded by Baba Amte against the submergence of land by construction of dams, population displacement among other environmental concerns. It started in 1970s and continued until a decade ago.

Save Silent Valley Movement: It was started in Palakkad district of Kerala in 1973 to save the Silent Valley Reserve Forest from being flooded by a hydroelectric project. The valley was declared as Silent Valley National Park in 1985.

Narmada Bachao Andolan: It was launched to protect the population from the adverse effects of Narmada Valley Project, i.e., two mega projects, such as Sardar Sarovar Project and Narmada Sagar Project in Madhya Pradesh. This interstate project involving Madhya Pradesh, Maharashtra and Gujarat has been constructed on Narmada River. Its main leader is Medha Patkar. The main issues involved are related to displacement of population and submerging of forest land.

Taj Trapezium Zone: Sulphur dioxide gas released by Mathura Oil Refinery and other industries (combined with oxygen and moisture to form sulphuric acid) caused extensive damage to Taj marbles. It corroded the marble and formed fungus also referred as 'marble cancer'. A lawyer Mahesh Chander Mehta filed a case before Supreme Court in 1984. The court ruled in 1996 to relocate and shift certain industries.

June 8	World Oceans Day		

Practice Exercises

PEOPLE AND ENVIRONMENT INTERACTION

- The term ecosystem was coined by
(a) Arthur Tansley (b) Al Gore
(c) Arrhenius Svante (d) Mobius
- Who first used and defined Ecology in 1866?
(a) H. Reiter (b) Haeckel
(c) Charles Elton (d) Odum
- In the study of man–environment interaction, the statement of Miss Semple that ‘the humans are slowly the product of their environment’ is [December 2004]
(a) An opinion
(b) A prejudice
(c) A fact
(d) A widely accepted phenomenon
- A habitat is
(a) An area inhabited by a community.
(b) A small part of ecosystem.
(c) A particular area inhabited by plants and animals.
(d) The number of different organisms living in a specific area.
- Biome is a natural community of
(a) Plants in a geographical area.
(b) Animals in a geographical area.
(c) Plants and animals in a geographical area.
(d) Plants in the Arctic region.
- If we combine all the ecosystems present on earth, then it is called
(a) Biome (b) Biosphere
(c) Habitat (d) Ecology
- All the energy in a food chain originates from
(a) Plants (b) Sea
(c) Sun (d) All of these
- A food web is to show
(a) How feeding relationships are interlinked.
(b) How several food chains are connected together.
(c) Who eats what.
(d) All the above
- In the analysis of man–environment relationship pragmatic possibilism implies that [December 2004]
(a) There is no limit for man to exploit the resources of earth.
(b) There are limited possibilities to explore the Earth’s resources.
(c) The man has to watch and assess the situation and then go ahead with resource utilization.
(d) The man has to keep in mind only his basic needs while planning to harness the potential of resourceful earth.
- Which of the following are included in the biosphere?
(a) Hydrosphere (b) Lithosphere
(c) Atmosphere (d) All of these
- Interlocking of two or more types of food chains at different trophic levels is called
(a) Food chain (b) Food web
(c) Succession (d) Ecological pyramid
- The transfer of food energy through a chain of organisms from one trophic level to another is called
(a) Energy chain (b) Food chain
(c) Trophic chain (d) Organism chain
- A keystone species is characterized by its
(a) Disproportionate large impact on ecosystem
(b) Very less impact on ecosystem
(c) No impact at all
(d) None of the above
- A population that is at equilibrium is
(a) Steadily decreasing
(b) Steadily increasing
(c) Its number is almost stable over a period of time.
(d) Intermixing rapidly with other populations.
- Which of the following are considered as producers in a food chain?
(a) Autotrophic plants (b) Herbivores
(c) Carnivores (d) Decomposers
- Which of the following are directly dependent on producers for living?
(a) Carnivores (b) Decomposers
(c) Scavengers (d) Herbivores
- The animals which feed only on other animals are known as
(a) Omnivores (b) Carnivores
(c) Herbivores (d) Autotrophs
- The green plants, which can make their own food with the help of process of photosynthesis are termed as
(a) Herbivores (b) Carnivores
(c) Autotrophs (d) None of the above
- The various levels through which energy passes into an ecosystem are called
(a) Consumers (b) Autotrophs
(c) Trophic levels (d) None of the above
- The transitional area between two ecosystems is termed as
(a) Ecoline (b) Ecotourism
(c) Ecotone (d) None of the above
- Population consists of
(a) Organisms in a species that are capable of reproducing among themselves.
(b) Different species that can interbreed.
(c) Collective members of a species living and interacting across the biosphere.
(d) Some organisms that may not belong to any species.

22. Which of the following is not an abiotic condition?
 (a) Water (b) Soil
 (c) Temperature (d) Bacteria
23. The existence of atmosphere on the earth is due to
 (a) The revolution of the earth around the sun.
 (b) The rotation of the earth.
 (c) The gravitational force of the earth.
 (d) None of the above
24. Match the following:

List-I	List-II
A. Troposphere	I. Dust particles
B. Stratosphere	II. Ozone layer
C. Ionosphere	III. Meteors
D. Exosphere	IV. Aurora

Codes:

- (a) A-I, B-II, C-III, D-IV (b) A-II, B-I, C-III, D-IV
 (c) A-IV, B-II, C-III, D-I (d) None of the above
25. Which of the following is the basis for all food chains?
 (a) Consumers (b) Producers
 (c) Decomposers (d) None of the above
26. Total organic matter in an ecosystem is called
 (a) Biome (b) Biotic community
 (c) Plants (d) Biomass
27. Energy pyramid is
 (a) Always inverted (b) Always horizontal
 (c) Sometimes diagonal (d) None of the above
28. As a result of biomagnification, the secondary consumers will be
 (a) The most toxic (b) The least toxic
 (c) Not toxic at all (d) None of the above
29. Which of the following gases is not harmful as a natural component of the atmosphere?
 (a) Carbon dioxide (b) Hydrogen
 (c) Nitrogen (d) Water vapours
30. The two main components of an ecosystem are
 (a) Plants and animals
 (b) Biotic and abiotic
 (c) Earth and its surroundings
 (d) Macro and microorganisms
31. Cloudy nights are warmer compared to clear nights (without clouds) during winters. This is because
 [December 2005]
 (a) Clouds radiate heat towards the earth.
 (b) Clouds prevent cold waves from the sky descending on the earth.
 (c) Clouds prevent escaping of heat radiation from the earth.
 (d) Clouds being at great heights from earth absorb heat from the sun and send them towards the earth.
32. The urbanization process accounts for the wind in the urban centres during nights to remain
 [December 2006]
 (a) Faster than that in rural areas.
 (b) Slower than that in rural areas.

- (c) The same as that in the rural areas.
 (d) Cooler than that in rural areas.
33. If population growth follows a logistic curve, then the maximum sustainable yield
 [June 2008]
 (a) Is equal to half the carrying capacity.
 (b) Is equal to the carrying capacity.
 (c) Depends on growth rates.
 (d) Depends on the initial population.
34. The structure of earth's system consists of the following. Match the following:
 [June 2008]

List-I (Zone)	List-II (Chemical character)
A. Atmosphere	I. Inert gases
B. Biosphere	II. Salt, fresh water, snow and ice
C. Hydrosphere	III. Organic substances
D. Lithosphere	IV. Light silicates

Codes:

- (a) A-II, B-III, C-I, D-IV (b) A-I, B-III, C-II, D-IV
 (c) A-II, B-I, C-III, D-IV (d) A-IV, B-II, C-III, D-I
35. Earth is often struck by solar eruptions, which comprise energetic particles that are hurled away from the Sun into space. Which of the following statements reflect the effect on earth?
 1. When these eruptions interact with the magnetic field, they cause beautiful auroras.
 2. They breakdown radio communication and power supplies.
 3. They don't affect life support system on earth.
Codes:
 (a) 1 only (b) 1 and 2 only
 (c) 2 and 3 only (d) 3 only
36. A temperature inversion is a condition when the air
 (a) Near the ground is lighter.
 (b) Near the ground is cooler than air at the higher altitudes.
 (c) Near the ground is hotter than that at higher altitudes.
 (d) None of the above
37. Beginning from the surface of earth, what is the sequence of different layers of atmosphere?
 (a) Stratosphere, Troposphere, Ionosphere, Exosphere
 (b) Troposphere, Stratosphere, Ionosphere, Exosphere
 (c) Troposphere, Stratosphere, Ionosphere
 (d) None of the above
38. The most dynamic layer of the atmosphere in terms of climatic and weather conditions is
 (a) Troposphere (b) Ionosphere
 (c) Stratosphere (d) Mesosphere
39. In which of the following layers of the atmosphere, ozone (O₃) gas is present?
 (a) Stratosphere (b) Mesosphere
 (c) Troposphere (d) None of the above

40. In which of the following atmospheric layers ionosphere occurs?
 (a) Mesosphere (b) Exosphere
 (c) Stratosphere (d) Troposphere
41. In an ecotone, the species which become abundant are called
 (a) Keystone species (b) Endemic species
 (c) Edge species (d) Foster species

SOURCES OF POLLUTION, POLLUTANTS AND THEIR IMPACT ON HUMAN LIFE

42. The air pollutants are mainly classified as
 (a) Point source and non-point source
 (b) Primary and secondary pollutants
 (c) Natural or anthropogenic pollutants
 (d) None of the above
43. The main difference between primary air pollutants and secondary air pollutants is
 (a) Former contains water molecules, while secondary pollutants do not.
 (b) Primary air pollutants have more direct effect on human health.
 (c) Former are released directly into the atmosphere, while the latter are formed by chemical reactions in the atmosphere.
 (d) Primary air pollutants are formed through photochemical reactions in the sunlight, while the secondary air pollutants are not.
44. Which of the following can be considered as the best example of primary air pollutants?
 (a) Carbon dioxide released from burning of coal.
 (b) Sulphur trioxide.
 (c) Ozone produced in photochemical smog.
 (d) Carbon dioxide released through photosynthesis.
45. Which of the following best illustrates a secondary air pollutant?
 (a) CO₂ released from the burning of coal.
 (b) NO₂ released from the burning of oil.
 (c) Ozone produced in photochemical smog.
 (d) None of the above
46. The common features between NO₂, SO₂, CO and SPM is that all of them
 (a) Are classified as primary pollutants.
 (b) Are classified as secondary pollutants.
 (c) Have equal role in causing acid rain.
 (d) Are greenhouse gases.
47. How are nitrogen oxides, sulphur oxides and carbon oxides related?
 (a) All of them are secondary air pollutants that contribute to global warming.
 (b) All of them are primary air pollutants that contribute to acid deposition.
 (c) All are air pollutants formed by combustion of fossil fuels.
 (d) All of them are air pollutants that result in respiratory diseases in humans.
48. Atmospheric pollutants are mainly present in
 (a) Ionosphere
 (b) Stratosphere
 (c) Mesosphere
 (d) Troposphere and lower stratosphere
49. Lead is used as an anti-knocking agent (tetra-ethyl lead) in petrol. It affects our
 (a) Central nervous system
 (b) Respiratory system
 (c) Cardiac system
 (d) Skeletal system
50. Match the following:
- | List-I
(Metal) | List-II
(Effects) |
|-------------------|----------------------|
| A. Chromium | I. Thalassaemia |
| B. Arsenic | II. Itai-Itai |
| C. Cadmium | III. Dermatitis |
| D. Iron | IV. Carcinogen |
- Codes:**
 (a) A-IV, B-III, C-II, D-I (b) A-IV, B-II, C-III, D-I
 (c) A-I, B-III, C-II, D-IV (d) A-I, B-II, C-III, D-IV
51. The chemical responsible for blue baby syndrome that is caused by restricted supply of oxygen to the brain is
 (a) Nitrates (b) Sulphates
 (c) Fluorides (d) Oxides
52. Which of the following metal is responsible for Minamata disease?
 (a) Mercury (b) Cadmium
 (c) Chromium (d) Iron
53. Intake of lead may primarily cause damage of the
 (a) Brain (b) Lung
 (c) Liver (d) Kidney
54. Which of the following geographic area is the largest source of CO₂ emissions from burning of fossil fuel?
 (a) China (b) Russia
 (c) North America (d) European Union
55. Industries generating hazardous waste are classified as
 (a) Brown (b) Green
 (c) Yellow (d) Red
56. Which of the following greenhouse gases are entirely anthropogenic in origin?
 (a) Water vapour (b) Carbon dioxide
 (c) CFCs (d) Methane
57. Peroxyacyl nitrate (PAN) is a by-product of
 (a) Photochemical smog (b) London smog
 (c) Sulphurous smog (d) None of the above
58. The balance in oxygen level is maintained by
 (a) Photosynthesis and cellular respiration
 (b) Industrial emissions of gases
 (c) Release of ozone in upper atmosphere
 (d) None of the above

59. The problems caused by air pollutants basically affect
 (a) Circulatory and nervous system
 (b) Circulatory and respiratory system
 (c) Muscular system
 (d) None of the above
60. Arrange List-II in proper sequence so as to match it with List-I and choose the correct answer from the code given below. [December 2004]

List-I (Activity)	List-II (Noise level (dB))
A. Hearing	I. 30
B. Whispering	II. 1
C. Interference with sleep	III. 60
D. Normal Talk	IV. 30–50

Codes:

- (a) A-I, B-II, C-III, D-IV (b) A-II, B-I, C-IV, D-III
 (c) A-IV, B-II, C-III, D-I (d) A-III, B-I, C-II, D-IV
61. Global warming during winter becomes more pronounced at the [December 2004]
 (a) Equator (b) Poles
 (c) Tropic of Cancer (d) Tropic of Capricorn
62. Malaria is caused by [December 2005]
 (a) Bacterial infection (b) Viral infection
 (c) Parasitic infection (d) Fungal infection
63. The main pollutant of the Indian coastal water is [December 2005]
 (a) Oil spills
 (b) Municipal sewage
 (c) Industrial effluents
 (d) Aerosols
64. Tamil Nadu coastal belt has drinking water problem due to [June 2006]
 (a) High evaporation.
 (b) Sea water flooding due to tsunami.
 (c) Over-exploitation of ground water by tube wells.
 (d) Seepage of sea water.
65. Arrange List-II in proper sequence so as to match it with List-I and choose the correct answer from the code given below. [December 2006]

List-I (Water quality)	List-II (pH Value)
A. Neutral	I. 5
B. Moderately acidic	II. 7
C. Alkaline	III. 4
D. Injurious	IV. 8

Codes:

- (a) A-II, B-III, C-I, D-IV
 (b) A-I, B-III, C-I, D-IV
 (c) A-II, B-I, C-IV, D-III
 (d) A-III, B-I, C-II, D-IV

66. The maximum emission of pollutants from fuel sources in India is caused by [December 2006]
 (a) Coal
 (b) Firewood
 (c) Refuse burning
 (d) Vegetable waste product
67. Which of the following is not a primary air pollutant? [June 2006]
 (a) Methane (b) Sulphur dioxide
 (c) Ozone (d) Asbestos
68. **Assertion (A):** Aerosols have potential for modifying climate.
Reason (R): Aerosols interact with both the short waves and radiations. [June 2006]
 (a) Both A and R are true, and R is the correct explanation of A.
 (b) Both A and R are true, but R is not the correct explanation of A.
 (c) A is true but R is false.
 (d) A is false but R is true.
69. With the absorption and decomposition of CO₂ in ocean water beyond desired level, there will be [December 2006]
 (a) Decrease in temperature.
 (b) Increase in salinity.
 (c) Growth of phytoplanktons.
 (d) Rise in sea level.
70. The inability to hear important environmental cues and animal signals is termed as
 (a) Masking (b) Tasking
 (c) Frisking (d) None of the above
71. Which of the following about peroxyacyl nitrates (PAN) is true?
 (a) They are secondary pollutants.
 (b) Produced when hydrocarbon radical reacts with nitrogen oxide.
 (c) Cause respiratory diseases in human beings.
 (d) All the above
72. Which of the following is an indicator of water quality and presence of organic matter in water?
 (a) BOD (b) COD
 (c) Both (a) and (b) (d) None of the above
73. Match List-I with List-II.

List-I (Disease)	List-II (Cause)
A. Osteoporosis	I. Fluorine
B. Leukaemia	II. Sr-90
C. Lung cancer	III. Benzopyrene

Codes:

- (a) A-I, B-III, C-II (b) A-III, B-I, C-II
 (c) A-I, B-II, C-III (d) A-III, B-II, C-I
74. The plume rise in a coal-based power plant depends on
 I. Buoyancy
 II. Atmospheric stability
 III. Momentum of exhaust gases [June 2007]

Codes:

- (a) (I) and (II) only (b) (II) and (III) only
 (c) (I) and (III) only (d) (I), (II) and (III)

75. Which of the following units is used to measure the intensity of noise? [June 2008]
 (a) Decibel (b) Hz
 (c) Phon (d) Watts/m²
76. Human ear is most sensitive to noise in which of the following frequency range? [June 2008]
 (a) 1–2 kHz (b) 100–500 Hz
 (c) 10–12 kHz (d) 13–16 kHz
77. Which of the following pairs regarding typical composition of hospitals wastes is incorrect? [December 2008]
 (a) Plastics: 9–12%
 (b) Metals: 1–2%
 (c) Ceramic: 8–10%
 (d) Biodegradable: 35–40%
78. Maximum soot is released from [December 2009]
 (a) Petrol vehicles (b) CNG vehicles
 (c) Diesel vehicles (d) Thermal power plants
79. Surface ozone is produced from [December 2009]
 (a) Transport sector (b) Cement plants
 (c) Textile industry (d) Chemical industry
80. In the metro city of Kolkata, the major cause of air pollution is
 (a) Hydrocarbons (b) Carbon monoxide
 (c) Water vapours (d) None of the above
81. Which of the following is the main discharge from coal-based power plants (thermal plants)?
 (a) SPM (b) Fly ash
 (c) Smog (d) None of the above
82. Which of the following methods can be used to increase the supply of usable, good quality water?
 (a) Chlorination (b) Metallurgy
 (c) Cloud seeding (d) None of these
83. Ozone depletion is caused due to increase in the level of
 (a) Water vapour (b) Chlorofluorocarbon
 (c) Oxygen (d) Carbon monoxide
84. What type of chemical weathering is enhanced by acid rain?
 (a) Dissolution (b) Hydrolysis
 (c) Oxidation (d) None of the above
85. What process causes the disintegration of rock at or near the earth's surface?
 (a) Physical weathering (b) Erosion
 (c) Chemical weathering (d) None of the above
86. Which of the following gas affects human health by reducing the blood's ability to carry oxygen to different parts of the body?
 (a) Carbon monoxide (b) Sulphur dioxide
 (c) Carbon dioxide (d) Nitrous dioxide
87. Nitrogen oxide affects human health by
 (a) Causing irritation to the eyes and skin.
 (b) Aggravating asthma problem.
 (c) Decreasing blood's ability to transport oxygen.
 (d) None of the above
88. Ozone is considered as a secondary air pollutant because it
 (a) Is in the upper layers of the atmosphere.
 (b) Is formed by chemical reactions in atmosphere.
 (c) Is produced in industry.
 (d) Secondary role in causing pollution.
89. Automobiles and trucks are not an important source of which of the following air pollutants?
 (a) Carbon dioxide (b) Hydrocarbons
 (c) Nitrogen oxides (d) Sulphur oxides
90. Sulphur dioxide is mainly released from
 (a) Cars and trucks
 (b) Photochemical reactions
 (c) Factories
 (d) None of the above
91. High concentration of oxides of nitrogen can cause
 (a) Headache
 (b) Dizziness and loss of consciousness
 (c) Respiratory irritation
 (d) All of the above
92. Excessive exposure to pesticides is mainly responsible for damage to
 (a) Endocrine and immune system
 (b) Respiratory system
 (c) Muscular system
 (d) Nervous system
93. Excessive exposure to pesticides mainly causes
 (a) Malaria
 (b) Diphtheria
 (c) Cancer and neurological problems
 (d) None of the above
94. The main chemical responsible for ozone depletion is
 (a) PAN (b) Sulphur dioxide
 (c) CO (d) CFCs
95. The process of dumping solid waste in a scientifically designated land area is called
 (a) Dumping (b) Waste disposal
 (c) Sanitary landfill (d) None of the above
96. The constituent of smog that causes irritation to the eyes is
 (a) NO (b) PAN
 (c) CO (d) None of these
97. The pesticide directly affecting the nervous system is
 (a) DDT (b) Aldrin
 (c) Organic phosphates (d) None of the above
98. Which of the following pollutants mainly released by burning of diesel fuel is responsible for photochemical smog?
 (a) Oxides of sulphur (b) Oxides of nitrogen
 (c) Oxides of carbon (d) None of the above
99. Which of the following fuels are mainly responsible for release of lead into the environment?
 (a) Diesel (b) Petrol
 (c) Coal (d) All of the above
100. All hydrocarbons (except CH₄) contribute to the production of
 (a) Acid deposition (b) Greenhouse effect
 (c) Photochemical smog (d) None of the above

101. Carbon dioxide and methane are similar in terms of
(a) Both being secondary air pollutants.
(b) Being responsible for respiratory diseases.
(c) Contribution to global warming.
(d) None of the above
102. What is the main source of pollutants of nitrogen oxides, sulphur oxides and carbon oxides?
(a) Photochemical reactions in the atmosphere.
(b) Burning fossil fuels at high temperatures.
(c) Industrial processes
(d) All the above
103. Why is photochemical smog typically worse in the summer?
(a) There is more solar energy to drive photochemical reactions.
(b) People tend to travel more in summers.
(c) Warm temperatures prevent the dissipation of pollutants.
(d) None of the above
104. How does photochemical smog form?
(a) The release of primary air pollutants.
(b) Interaction occurs between chemicals such as CFCs and ozone.
(c) Reactions occur between secondary air pollutants and sunlight.
(d) The release of formaldehyde and radon inside buildings.
105. Which of the following can help in reducing air pollution?
(a) Small-sized cars
(b) Removal of sulphur from coal
(c) Lower ignition fuels
(d) None of the above
106. Air pollution is an increasing problem in developing countries due to
(a) Burning of more coal to produce electricity.
(b) Changing lifestyles.
(c) Unavailability of environment-friendly technologies.
(d) All the above
107. Quality of resource not degraded due to pollution is
(a) Sun (b) Sand
(c) Water (d) Air
108. The main source of water pollution is
(a) Sewage water (b) Acid rain
(c) Industrial pollutants (d) None of the above
109. Which of the following ultimately causes oxygen depletion in water bodies?
(a) Fish (b) Human beings
(c) Microorganisms (d) None of the above
110. Which of the following is a water-borne disease?
(a) Blue baby syndrome (b) Meningitis
(c) Diarrhoea (d) Cholera
111. Which of the following statements is true with regard to noise and noise pollution?
(a) Decibel is the linear scale of noise measurement.
(b) A jet plane is one of the highest decibel sources of noise.
(c) A change from 40 dB to 80 dB is exactly double in loudness.
(d) Noise cannot be shielded.
112. Which of the following is the unit of measurement of noise pollution?
(a) Pascal (b) Decibels
(c) Hertz (d) All of these
113. Zero decibel is the
(a) Threshold point for hearing.
(b) Threshold point for physical pain.
(c) Where no sound waves can travel.
(d) None of the above
114. With which of following kinds of pollution, the term 'green muffler' is associated?
(a) Water pollution (b) Air pollution
(c) Nuclear pollution (d) Noise pollution
115. A natural phenomenon that becomes harmful due to pollution is
(a) Global warming (b) Ecological balance
(c) Greenhouse effect (d) Desertification
116. The pollutant responsible for ozone holes is
(a) SO₂ (b) CO
(c) CFC (d) CO₂
117. The best solution to get rid of non-biodegradable wastes is
(a) Burning (b) Dumping
(c) Burying (d) Recycling
118. Animal dung is
(a) Biodegradable (b) Non-biodegradable
(c) Hazardous (d) Toxic
119. Which of the following is non-biodegradable?
(a) Animal bones (b) Nylon
(c) Wool (d) Banyan tree leaves
120. Which of the following non-biodegradable waste has the potential of polluting earth to dangerous levels of toxicity, if not handled properly?
(a) DDT
(b) CFC
(c) Radioactive substances
(d) PAN
121. Which of the following is a non-point source of water pollution?
(a) Oil spill (b) Sewage treatment plant
(c) Open cast mine (d) Deep bore well
122. BOD stands for
(a) Biological oxygen demand
(b) Basic oxygen dissolved
(c) Biological organic demand
(d) Biological oxygen decomposition
123. Which of the following statement is not a method of purifying water?
(a) Reverse osmosis
(b) UV radiation
(c) Distillation
(d) Evaporation from a water body

124. Which of the following statements is not true with regard to normal plastic waste?
 (a) It lasts long.
 (b) It clogs the sewage system.
 (c) It is biodegradable.
 (d) Burning results in toxic fumes.
125. Acid rain is formed by the
 (a) Combination of chemical air pollutants with atmospheric water droplets.
 (b) Mixing of acid with rain.
 (c) Release of industrial pollutants in the atmosphere.
 (d) None of the above
126. Which of the following is not an impact of acid rain?
 (a) Death of trees
 (b) Loss of productivity of plants
 (c) Soil alkalinity
 (d) Death of fish in lakes and ponds
127. In a lake polluted with pesticides, which one of the following will contain the maximum amount of pesticides as a result of biomagnification?
 (a) Small fish (b) Microscopic animals
 (c) Big fish (d) Water birds
128. Which of the following is the most dangerous and long-lasting?
 (a) Nuclear waste (b) Volcano ash
 (c) Mining waste (d) Biomedical waste
129. Name the substance whose accumulation in pelicans of Lake Michigan led to the formation of thin shells of their eggs.
 (a) CFC (b) PAN
 (c) DDT (d) PAC
130. Name the process in which a harmful chemical enters the food chain and gets concentrated at each level in the food chain.
 (a) Concentration (b) Biomagnification
 (c) Expansion (d) Pollution
131. Combustion of most fuels releases
 (a) CO₂ (b) SO₂
 (c) NO₂ (d) O₂
132. The use of which of the following fuel can help in the reduction of air pollution?
 (a) Petrol (b) Diesel
 (c) CNG (d) None of the above
133. Which of the following organisms is the main indicator for sulphur dioxide pollution?
 (a) Blue green algae (b) Lichens
 (c) *E. coli* (d) None of the above
134. Petrol engines release gaseous oxides of
 (a) Sulphur (b) Nitrogen
 (c) Phosphorous (d) Carbon
135. They are covered under Stockholm Convention, the toxic is also known as Agent Orange. It was sprayed by the US forces during Vietnam War to destroy the forest cover.
 Which of the following chemicals is being referred to in the above statement?
 (a) Dioxin (b) Asbestos
 (c) Benzene (d) All the above
136. The best extinguisher for inflammable materials is
 (a) Water (b) SO₂
 (c) CO₂ (d) CO
137. CO₂ is stored as a liquid in cylinder at
 (a) High pressure (b) Low pressure
 (c) High temperature (d) Low temperature
138. The best way to dispose plant waste is
 (a) Burning
 (b) Composting
 (c) Dumping in a hilly area
 (d) Incineration
139. Which of the following is not one of the major environment problems resulting from human interference in the nitrogen cycle?
 (a) Global warming due to release of nitrous oxide
 (b) Acid rain
 (c) Eutrophication
 (d) Ozone depletion
140. Which of the following is not a major greenhouse gas?
 (a) Carbon dioxide (b) Water vapour
 (c) Methane (d) Calcium carbonate
141. Montreal Protocol signed in 1987 was signed to
 (a) Phase out the use of CFC's which cause depletion of the ozone layer.
 (b) Reduces the greenhouse effect.
 (c) Protect endangered species.
 (d) Ban nuclear testing in tropical oceans.
142. Which of the following is not one of the prime health risks associated with greater UV radiation through the atmosphere due to depletion of stratospheric ozone?
 (a) Increased skin cancer
 (b) Reduced immune system
 (c) Increased liver cancer
 (d) Damage to eyes
143. Unburnt carbon particles causes
 (a) Cardiac problem
 (b) Respiratory problems
 (c) Throat problems
 (d) Skin infection
144. Which of the following statements are correct in the context of carbon monoxide emissions?
 1. It is mainly due to incomplete combustion of fuel.
 2. They are more evident in petrol engine.
 3. Long-term exposure can cause nausea.
- Codes**
 (a) 1 and 2 only (b) 1, 2, and 3
 (c) 2 and 3 only (d) 1 and 3 only
145. According to WHO, the maximum permissible level of chlorides in drinking water is
 (a) 100 mg/l (b) 200 mg/l
 (c) 600 mg/l (d) 800 mg/l
146. Which of the following body parts is most likely to be affected by nuclear radiation during the early stages of exposure?

- (a) Skin (b) Bones
(c) Bone marrow (d) None of the above
147. Which of the following terms is used to describe phenomenon of removing carbon dioxide from nature by carbon sinks (natural or artificial)?
(a) Decomposition
(b) Biosequestration
(c) Emission trading
(d) None of the above
148. Which of the following terms is used to reflect the potential of a greenhouse gas to cause global warming?
(a) Warming potent
(b) Warming potential
(c) Global warming potential
(d) None of the above
149. The living organism that serves as an indicator of air pollution is
(a) Viruses (b) Fungi
(c) Bacteria (d) *E. coli*
150. The gas that is mainly responsible for global warming because of its quantity in the atmosphere is
(a) CFC (b) CO₂
(c) CH₄ (d) N₂
151. Which of the following statements are true in the context of particulate matter?
1. It is basically a mist, more prevalent during winter weather.
2. It is more prevalent in diesel engine vehicles.
3. Long-term exposure can harm respiratory track and lung functions.
Codes:
(a) 1 and 2 (b) 1, 2 and 3
(c) 2 and 3 (d) 1 and 3
152. Match List-I with List-II.
- | List-I (Act) | List-II (Year) |
|---|----------------|
| A Water (Prevention and Control of Pollution) | I 1974 |
| B Air (Prosecution and Control of Pollution) | II 1981 |
| C Wildlife Protection Act | III 1972 |
| D Environment Protection Act | IV 1986 |
- Codes:**
(a) A-I, B-II, C-III, D-IV
(b) A-I, B-III, C-II, D-IV
(c) A-IV, B-II, C-III, D-I
(d) A-IV, B-III, C-II, D-I
153. Which of the following elements is deposited into aquatic and terrestrial ecosystem when used in intensive agriculture practices?
(a) Nitrogen (b) Phosphorus
(c) Sulphur (d) None of these
154. Discharge of industrial wastewater causes all except
(a) Depletion of dissolved oxygen.
(b) Destruction of aquatic life.
(c) Change in climate.
(d) Impairment of biological activity.
155. The rules pertaining to biomedical waste (India) are notified under
(a) Environmental (protection) Act, 1980
(b) Environmental (protection) Act, 1983
(c) Environmental (protection) Act, 1986
(d) Environmental (protection) Act, 1988
156. Which of the following is not recommended for management of plastic waste?
(a) Incineration
(b) Deep burial
(c) Autoclave/hydroclave
(d) All the above
157. Fertilizers can be washed into rivers by rain leading to
(a) Bioaccumulation
(b) Eutrophication
(c) Biodegradation
(d) Spontaneous combustion
158. Which of the following is not an air pollutant?
(a) Oxides of carbon
(b) Oxides of sulphur
(c) Oxides of nitrogen
(d) Oxides of hydrogen
159. The gradual build-up of concentration of chemicals as they transfer through higher levels of food chain is called
(a) Biomagnification
(b) Biodegradation
(c) Bioconcentration
(d) None of the above
160. Stockholm Convention is a global treaty to protect environment and human health from
(a) Greenhouse gases
(b) Persistent organic pollutants
(c) Hospital acquired Infections
(d) None of the above
161. The presence of high algal content in water indicates that the water is
(a) Neutral (b) Alkaline
(c) Acidic (d) None of the above
162. When fluoride concentration in water exceeds 1.5 mg/l or so, the disease that may be caused is
(a) Fluorosis (b) Poliomyelitis
(c) Dental decay (d) None of the above
163. The safe permissible limit of sulphate in domestic water supplies is
(a) 100 mg/l (b) 200 mg/l
(c) 400 mg/l (d) 300 mg/l
164. Silicosis is caused in the
(a) Textile industry (b) Sugar industry
(c) Stone crushers (d) All the above

EXPLOITATION OF NATURAL AND ENERGY RESOURCES

165. The ultimate source of energy is
 (a) Plants (b) Animals
 (c) Bacteria (d) Sun
166. The source of energy of the sun is
 (a) Nuclear fission (b) Chemical reaction
 (c) Nuclear fusion (d) Photoelectric effect
167. Photosphere refers to
 (a) The outermost layer of earth's atmosphere.
 (b) The visible surface of the sun from where the radiation emanates.
 (c) The outer space.
 (d) None of the above
168. According to the India State of Forest Report 2015, the total forest and tree cover is 24.16 per cent of India's total geographical area.
 Which of the following states have shown maximum increase during the recent years as per report?
 (a) Odisha (b) West Bengal
 (c) Madhya Pradesh (d) Arunachal Pradesh
169. The maximum loss of forest lands in India is caused by
 [December 2004]
 (a) River valley projects
 (b) Industries
 (c) Means of transportation
 (d) Agriculture
170. Bitumen is obtained from
 [December 2005]
 (a) Forests and plants
 (b) Kerosene oil
 (c) Crude oil
 (d) Underground mines
171. The largest soil group of India is
 [December 2005]
 (a) Red soil (b) Black soil
 (c) Sandy soil (d) Mountain soil
172. Which one of the following is/are the main reason/s that solar energy could not become a viable alternative source of energy?
 (a) It needs continuous solar radiation.
 (b) Solar power plants need a lot of space.
 (c) It is still very expensive.
 (d) All the above
173. Deforestation leads to an increase in atmospheric carbon dioxide because
 (a) Decaying trees release carbon dioxide.
 (b) Living trees remove carbon dioxide from the atmosphere via photosynthesis.
 (c) Burning wood releases carbon dioxide into the atmosphere.
 (d) All the above
174. Thermal power generation in India is carried out by burning
 (a) Natural gas (b) Coal
 (c) Oil (d) All of these
175. The fuel used in the conventional nuclear reactor is
 (a) Cadmium (b) Radium
 (c) Uranium (d) Thorium
176. Calorific value is basically about
 (a) Fuel efficiency (b) Amount of heat
 (c) Amount of light (d) None of the above
177. The nuclear fuel used in the fast breeder reactor is
 (a) Cadmium (b) Radium
 (c) Uranium (d) Thorium
178. Nuclear fusion reactions happens spontaneously in
 (a) The core of the earth.
 (b) The commercial nuclear reactor.
 (c) The atmosphere of the sun.
 (d) The eruption of a volcano.
179. Which one of the following is not a renewable energy source?
 (a) Solar (b) Coal
 (c) Wave (d) Wind
180. The world's largest producer of rare earth metals, which are used mainly in electronics industry is
 (a) China (b) Japan
 (c) India (d) Russia
181. Which of the following causes the least pollution when burnt?
 (a) Petrol (b) Diesel
 (c) Coal (d) Natural gas
182. With the help of photosynthesis, plants convert solar energy into
 (a) Chemical energy (b) Mechanical energy
 (c) Kinetic energy (d) Nuclear energy
183. Deforestation during the recent decade has led to
 [December 2007]
 (a) Soil erosion
 (b) Land slide
 (c) Loss of biodiversity
 (d) All the above
184. In the sun, heat and light are produced by
 (a) Chemical reactions
 (b) Nuclear reactions
 (c) Ionic reactions
 (d) None of the above
185. Chemical weathering of rocks is largely dependent on
 [June 2008]
 (a) High temperature
 (b) Strong wind action
 (c) Heavy rainfall
 (d) Glaciation
186. In which of the following years, National Green Tribunal Act that intends to set up environment courts in the country was enacted?
 (a) 2003 (b) 2005
 (c) 2008 (d) 2010
187. Which of the following types of energy resources can last indefinitely or for a very long time due to judicious use
 (a) Non-renewable (b) Renewable
 (c) Domestic (d) None of the above

188. Match the following.

List-I (Type of coal)	List-II (Carbon content)
A Peat	I 50–60%
B Lignite (Brown)	II 70%
C Bituminous	III 80%
D Anthracite	IV 90–95%

Codes:

- (a) A-I, B-II, C-III, D-IV (b) A-I, B-III, C-II, D-IV
(c) A-IV, B-II, C-III, D-I (d) A-IV, B-III, C-II, D-I

189. The increased water demand in the cities can be better met by
(a) Larger desalination plants.
(b) Adoption of conservation measures.
(c) Drilling more tube wells.
(d) By sewerage treatment plants.
190. Which of the following is a conventional source of energy?
(a) Coal (b) Wind energy
(c) solar energy (d) Natural gas
191. Which of the following is NOT an inexhaustible natural resource?
(a) Air (b) Water
(c) Solar energy (d) Natural gas
192. Which of the following is a non-conventional source of energy?
(a) Wood (b) Sun
(c) Coal (d) Petroleum
193. Biogas is produced as a by-product of anaerobic breakdown and fermentation of biomass. The main constituent of biogas is
(a) Methane (b) Ethane
(c) Propane (d) Butane
194. Biogas is
(a) 50–70% of methane
(b) 30–40% carbon dioxide
(c) Hydrogen and hydrogen sulphide
(d) All the above
195. The tallest trees in the world are found in the
[December 2008]
(a) Equatorial region
(b) Temperate region
(c) Monsoon region
(d) Mediterranean region
196. A geographic unit that collects, stores and releases water is a
(a) Wasteland
(b) Watershed
(c) Wetland
(d) None of the above
197. The biggest fresh water lake in India is
(a) Wular (b) Sukhna Lake
(c) Dal Lake (d) Loktak Lake

198. The largest thorium reserves in the world are in

- (a) India (b) USA
(c) Australia (d) None of these

199. Freshwater achieves its greatest density at

[December 2008]

- (a) -4°C (b) 0°C
(c) 4°C (d) -2.5°C

200. Which one of the following non-conventional energy sources can be exploited most economically?

[December 2009]

- (a) Solar
(b) Wind
(c) Geothermal
(d) Ocean Thermal Energy Conversion (OTEC)

201. Bog is a wetland that receives water from

[June 2009]

- (a) Nearby water bodies (b) Melting
(c) Rainfall only (d) Sea only

202. The regur soil refers to

- (a) Black cotton soil (b) Laterite soil
(c) Desert soil (d) Alluvial soil

203. The soil's fertility can be increased by growing more

- (a) Food grains (b) Leguminous plants
(c) Fibre crops (d) None of the above

204. Which of the following soils is very hard to cultivate?

- (a) Alluvial (b) Red soil
(c) Cotton soil (d) Sandy soil

205. Which of the following is true about laterite soils?

- (a) They are formed as a result of leaching.
(b) They are rich in minerals such as aluminium and iron.
(c) They are found in hot and wet tropical areas.
(d) All the above

206. Which of the following layer of soil determines its pH value and also its rate of water absorption and retention?

- (a) O-Horizon (b) A-Horizon
(c) B-Horizon (d) C-Horizon

207. Which of the following is measured by the porometer?

- (a) Soil fertility (b) Soil salinity
(c) Soil acidity (d) All of these

208. Which of the following states has forests rich in sandalwood?

- (a) Andhra Pradesh (b) Karnataka
(c) Kerala (d) Madhya Pradesh

209. Soils in the Mahanadi Delta are less fertile than those in the Godavari Delta because of

- (a) Erosion of top soil by annual floods.
(b) Inundation of land by sea water.
(c) Traditional agriculture practices.
(d) The derivation of alluvial soil from red soil hinterland.

210. In India, oil is mostly found in

- (a) Anticlines and fault traps
(b) Sedimentary rocks
(c) Igneous rocks
(d) None of the above

211. CNG stands for
(a) Compressed Natural Gasoline
(b) Compressed Natural Gas
(c) Compressed Nitrogen Gas
(d) Calibrated Natural Gas
212. Which of the following are salt water wetlands?
(a) Marsh lands (b) Bogs
(c) Fish ponds (d) Estuaries
213. Hydroelectric power is
(a) Produced with the help of dams.
(b) Renewable energy source.
(c) Not contributing to global warming.
(d) All the above
214. The water suitable for drinking is
(a) Pure water (b) Portable water
(c) Potable water (d) Pungent water
215. Which of the following is a major pollutant causing acid rain?
(a) Carbon dioxide (b) Sulphur dioxide
(c) Hydrogen peroxide (d) Carbon monoxide
216. Which of the following is the main producer of carbon monoxide?
(a) Automobiles (b) Industry
(c) Dying industry (d) Domestic sector
217. Biodiesel is produced in India presently from
(a) *Calotropis* (b) *Catharanthus*
(c) *Jatropha* (d) *Delonix*
218. For harnessing ocean thermal energy, the temperature difference between water at the surface and water at depths up to 2 km should be more than
(a) 5°C (b) 10°C
(c) 15°C (d) 20°C
219. Which of the following is not a biomass energy source?
(a) Wood (b) Gobar gas
(c) Nuclear energy (d) Biogas
220. The production of nuclear energy
(a) Follows Einstein's principle of conversion of mass into energy.
(b) Is not ultimately derived from sun's energy.
(c) Both (a) and (b)
(d) None of the above
221. On which principle does a hydroelectric power plant work?
(a) Law of conservation of energy.
(b) The conversion of potential energy into kinetic energy.
(c) The conversion of mechanical energy into electrical energy.
(d) All the above
222. Which of the following is not a fossil fuel?
(a) Wood (b) Coal
(c) Petroleum (d) Natural gas
223. CBD stands for
(a) Coal bed methane
(b) Cheap bed methane
(c) Commercial bed methane
(d) None of the above
224. The energy source that eventually runs out of stock is known as
(a) Renewable resource
(b) Non-renewable resource
(c) Endangered resource
(d) None of the above
225. Which country is the leader in harnessing wind energy?
(a) Denmark (b) Germany
(c) India (d) USA
226. Which of the following country is a pioneer in the production of shale gas?
(a) China (b) USA
(c) Brazil (d) Saudi Arabia
227. Shale gas is basically entrapped in
(a) Igneous rocks (b) Sedimentary rocks
(c) Metamorphic rocks (d) None of the above
228. With which of the following sources of energy, the terms hydraulic fracturing or fracking is associated with?
(a) Coal bed methane
(b) Conventional gas production
(c) Shale gas exploitation
(d) Hydroelectric power
229. Which of the following is a renewable source of energy?
(a) Uranium (b) Petroleum
(c) Coal (d) Biomass
230. Which of the following element is used in the making of solar cells?
(a) Platinum (b) Carbon
(c) Silicon (d) Silver
231. The metal used in a solar panel is
(a) Gold (b) Copper
(c) Silver (d) Nickel
232. Which one of the following is a renewable resource?
(a) Natural gas (b) Petroleum
(c) Ground water (d) Coal
233. Which of the chemical substances released into the environment while burning of fossil fuels can lead to acid rain?
(a) Oxides of sulphur (b) Oxides of carbon
(c) Oxides of nitrogen (d) All of the above
234. Which of the following is not a biomass source?
(a) Gobar gas (b) Coal
(c) Wood (d) Nuclear energy
235. The energy which is not derived from the sun is
(a) Biomass (b) Fossil fuels
(c) Nuclear energy (d) Geothermal energy
236. Harmful radiation emitted by the sun is
(a) Visible (b) Infrared
(c) Ultraviolet (d) Radio waves
237. Fuel formed under the earth's surface by the decomposition of organic matter is called
(a) Fossil fuel
(b) Inorganic fuel
(c) Biogas
(d) None of the above

238. The main constituent of LPG is
 (a) Methane (b) Butane
 (c) Hydrogen (d) Propane
239. The main constituent of CNG is
 (a) Methane (b) Butane
 (c) Ethane (d) Propane
240. Which of these is not a renewable source of energy?
 (a) Solar energy (b) Natural gas
 (c) Wind energy (d) Ocean tidal energy
241. Exposure to which of the following radiations can cause skin problem?
 (a) Infrared (b) Ultraviolet
 (c) Gamma rays (d) None of the above
242. Which of following gas has the highest calorific value?
 (a) Butane (b) Methane
 (c) Ethane (d) Hydrogen
243. A solar cell converts
 (a) Heat energy into electrical energy.
 (b) Solar energy into electrical energy.
 (c) Heat energy into light energy.
 (d) Solar energy into light energy.
244. Which of the following sources of energy makes use of floating generators for its exploitation?
 (a) Tidal energy (b) Wave energy
 (c) Wind energy (d) OTEC power plant
245. Which of the following term is used for the molten material mixed with gases in the mantle of earth?
 (a) Litho (b) Lava
 (c) Geyser (d) Magma
246. The production of electricity from waste material is called
 (a) Pyrolysis (b) Landfill
 (c) Dumping (d) None of the above

NATURAL DISASTERS AND THEIR MITIGATION

247. Which of the following is not an example of natural disaster?
 (a) Tsunami (b) Heat waves
 (c) Nuclear accident (d) Epidemic
248. Which of the following is true with regard to tsunami?
 (a) It is a tidal wave.
 (b) It is caused by earthquake beneath the sea.
 (c) It moves very fast in the ocean water.
 (d) It is caused by the gravitational pull of the sun.
249. What best describes an earthquake?
 (a) Sudden movement along the surface of earth.
 (b) Collision of tectonic plates.
 (c) Any natural phenomenon causing destruction.
 (d) None of the above
250. What is the immediate energy source for earthquakes?
 (a) Stored elastic energy in bent rock.
 (b) Stored elastic energy in compressed rock.
 (c) Stored heat energy from the earth's interior.
 (d) Stored heat energy from the sun.
251. What does tsunami mean?
 (a) Series of waves
 (b) Any movement following earth quake
 (c) Harbour wave
 (d) None of the above
252. Which country is known for its frequent earthquakes?
 (a) China (b) Philippines
 (c) South Korea (d) Japan
253. What is a flood?
 (a) The building up of large quantities of water.
 (b) Any obstruction in the water flow.
 (c) Rise in groundwater level.
 (d) None of the above
254. Which place on earth is known as 'Ring of Fire' as it has the earth's most active volcanoes?
 (a) Europe (b) Pacific Ocean
 (c) South America (d) None of these
255. What is the correct description for volcanic eruption?
 (a) Vertical explosion of gas and ash.
 (b) Explosion or emission of lava, ashes and toxic gases.
 (c) Both (a) and (b)
 (d) None of the above
256. The most significant volcanic eruptions have been felt in the form of **[December 2006]**
 (a) Change in weather
 (b) Sinking of islands
 (c) Loss of vegetation
 (d) Extinction of animals
257. Tsunami occurs due to **[June 2007]**
 (a) Mild earthquakes and landslides in the oceans.
 (b) Strong earthquakes and landslides in the oceans.
 (c) Strong earthquakes and landslides in the mountains.
 (d) Strong earthquakes and landslides in the deserts.
258. Which of the following natural hazards has a big effect on the Indian people each year? **[June 2007]**
 (a) Cyclones (b) Floods
 (c) Earthquakes (d) Landslides
259. Comparative environment impact assessment study is to be conducted for **[June 2007]**
 (a) The whole year
 (b) Three seasons excluding monsoons
 (c) Any three seasons
 (d) The worst season
260. Sea level arises primarily as a result of **[June 2007]**
 (a) Heavy rainfall (b) Melting of glaciers
 (c) Submarine volcanism (d) Sea floor spreading
261. Which of the following describes the build-up and release of stress during an earthquake?
 (a) Modified Mercalli scale
 (b) Elastic rebound theory
 (c) The travel time difference
 (d) None of the above

262. The amount of ground displacement in an earthquake is called the
 (a) Epicentre (b) Dip
 (c) Slip (d) Focus
263. The point where the movement that triggers an earthquake is
 (a) Dip (b) Epicentre
 (c) Focus (d) strike
264. Which of the following sequences correctly lists the different arrivals from first to last?
 (a) P waves ... S waves ... Surface waves
 (b) Surface waves ... P waves ... S waves
 (c) P waves ... Surface waves ... S waves
 (d) No fixed pattern
265. How many seismograph stations are needed to locate the epicentre of an earthquake?
 (a) 1 (b) 2 (c) 3 (d) 4
266. What is the approximate percentage of earthquakes occurring at plate boundaries?
 (a) 25% (b) 50%
 (c) 75% (d) 90%
267. Body waves consist of
 (a) P waves only (b) S waves only
 (c) P and S waves (d) Surface waves
268. In general, the most destructive earthquake waves are the
 (a) P waves (b) S waves
 (c) Surface waves (d) Q waves
269. Which of the following is not associated with earthquakes?
 [December 2008]
 (a) Focus (b) Epicentre
 (c) Seismograph (d) Swells
270. Indian coastal areas experienced tsunami in the year
 [June 2009]
 (a) 2005 (b) 2004
 (c) 2006 (d) 2007
271. Match List-I with List-II.
- | List-I | List-II |
|-----------------------------|---------|
| A Rio Summit | 1 1997 |
| B Johannesburg Earth Summit | 2 1972 |
| C Kyoto Protocol | 3 1992 |
| D Stockholm Conference | 4 2002 |
- Codes:**
- | | | | |
|-------|---|---|---|
| A | B | C | D |
| (a) 3 | 4 | 1 | 2 |
| (b) 1 | 2 | 3 | 4 |
| (c) 4 | 3 | 2 | 1 |
| (d) 2 | 1 | 4 | 3 |
272. What is the main cause for the occurrence of tsunamis?
 (a) Because of ocean floor movement, induced by an earthquake and producing gigantic waves.
 (b) As a result of hurricane.
 (c) Volcanic eruption in the sea.
 (d) None of the above
273. The earthquake waves that have transverse movements are known as
 (a) Primary waves (b) Secondary waves
 (c) Surface waves (d) None of the above
274. Which of the following natural disaster can occur as a result of the earth's internal heat?
 (a) Hurricanes (b) Floods
 (c) Earthquakes (d) Tornadoes
275. Which of the following region is in the way of high risk zone of earthquakes?
 [June 2009]
 (a) Central Indian Highland
 (b) Coastal region
 (c) Himalayan region
 (d) Indian desert
276. The most recurring natural hazard in India is
 (a) Earthquakes (b) Floods
 (c) Landslides (d) Volcanoes
277. For which of the following phenomenon, solar energy is primarily responsible?
 (a) Precipitation (b) Wind
 (c) Erosion of earth materials (d) All the above
278. Which of the following can serve as a reliable safety hedge against coastal calamities?
 (a) Coral reefs (b) Mangroves
 (c) Both (a) and (b) (d) None of the above
279. The term used in context of landslides and basically the downslope movement of materials under the influence of gravity is
 (a) Mass wasting (b) Mass tracking
 (c) Mass transfer (d) None of the above
280. What is the correct order where you would find stream deposits starting at the headwaters and going towards the mouth across the course of the river?
 (a) Gravel, sand, silt (b) Sand, silt, gravel
 (c) Silt, sand, gravel (d) None of the above
281. The majority of earth's water is in the form of
 (a) Oceans
 (b) Atmosphere
 (c) Fresh water lakes and glaciers
 (d) Rivers
282. The point at which a fault first ruptures in the earth during earthquake is called
 (a) Hypocentre (b) Epicentre
 (c) Mouth (d) None of the above
283. A flash flood differs from a normal flood
 (a) By sudden increase in the level of water.
 (b) As it is likely to cause much more damage.
 (c) Both (a) and (b)
 (d) None of the above
284. Which of the following is a method to prevent flood?
 (a) Levees
 (b) Winding streams
 (c) Efficient sewage systems
 (d) All the above

285. The Richter scale measures
 (a) The number of deaths.
 (b) The size of its epicentre.
 (c) The energy released by an earthquake.
 (d) The body waves count.
286. What are the three main components of the water cycle?
 (a) Evaporation, sublimation, solidification
 (b) Evaporation, condensation, precipitation
 (c) Rain, snow, sleet
 (d) Liquid, solid, gas
287. The almost identical basic phenomenon is known by different names across countries in the world. Match the following:
- | List-I
(Phenomenon) | List-II
(Country) |
|------------------------|----------------------|
| A. Cyclone | I. India |
| B. Hurricane | II. USA |
| C. Typhoon | III. China |
| D. Willy willy | IV. Australia |
- Codes:**
 (a) A-I, B-II, C-III, D-IV (b) A-II, B-I, C-III, D-IV
 (c) A-IV, B-II, C-III, D-I (d) None of the above
288. What should you do to prepare for a hurricane?
 (a) Prepare for a safety route.
 (b) Arrange for emergency food and water.
 (c) Both (a) and (b)
 (d) None of the above
289. The main cause(s) that tsunami waves lose some of its energy as they get closer to the shore is
 (a) There is lesser depth/room for the tsunami.
 (b) Buildings on the beach.
 (c) Friction and turbulence from the beach.
 (d) None of the above
290. The main effect of volcanic eruptions is
 (a) Flying of ash contents
 (b) Mud slides
 (c) Low temperatures on earth's surface
 (d) All of the above
291. The loss of an entire animal species is referred to as
 (a) Distinction (b) Annihilation
 (c) Genocide (d) Extinction
292. Which of the following is true about ozone layer?
 (a) It absorbs most of the UV-B radiation.
 (b) It screens out the UV-C radiation.
 (c) Its depletion leads to cancer.
 (d) All the above
293. Which of the following is the main cause of global warming?
 (a) Burning of fossil fuel
 (b) Changes in carbon cycle
 (c) Climate change
 (d) None of the above
294. Which one of the following gases is not a greenhouse gas?
 (a) Methane (b) Hydrogen
 (c) Carbon dioxide (d) Sulphur hexafluoride
295. Volcanic eruptions can affect climate because
 (a) They heat the atmosphere.
 (b) Volcanic dust and gas in the upper atmosphere reflects and absorbs solar radiation.
 (c) Volcanoes have no effect on the earth's climate.
 (d) None of the above
296. Which of the following is an effective protection against cyclones and tsunamis?
 (a) Shrimp farms (b) Building walls
 (c) Mangrove forests (d) None of the above
297. The main aim of Kyoto Protocol is to
 (a) Require concessions from all countries involved equally in greenhouse gas emission.
 (b) Required increase in nuclear power generation.
 (c) Would have resulted in overall increases in greenhouse emissions.
 (d) Reduce emissions of six greenhouse gases to levels lower than those of 1990.
298. Which of the following gas is released when rice is grown in the wet fields?
 (a) Methane (b) Nitrous oxides
 (c) Ozone (d) Carbon dioxide
299. El Niño and La Niña are responsible for producing
 (a) Changes of opposite direction in global temperature.
 (b) Precipitation patterns
 (c) Both (a) and (b)
 (d) None of the above
300. The greenhouse effect involves warming of the earth's surface and the
 (a) Troposphere (b) Mesosphere
 (c) Stratosphere (d) Thermosphere
301. Tidal energy is also a potential renewable energy resource. Which of the following is the main cause for the formation of tidal waves?
 (a) Gravitational pull of moon
 (b) Gravitational pull of sun
 (c) Gravitational pull of sun and moon
 (d) None of the above

MISCELLANEOUS TOPICS

302. Biodiversity is described as
 (a) The range of different species in an environment.
 (b) The seasonal and daily changes in an environment.
 (c) The way species differ from one another.
 (d) The influence of physical factors on an environment.
303. How an organism suited to live in a particular place is called?
 (a) Competition
 (b) Adaptation
 (c) Addition
 (d) Participation

304. Which of the following is termed as the Tiger state?

- (a) Rajasthan (b) Gujarat
(c) Madhya Pradesh (d) Jammu and Kashmir

305. While all rivers of Peninsular India flows into Bay of Bengal, Narmada and Tapti flow into Arabian Sea because [June 2006]

- (a) These two rivers follow the slope of the rift valleys.
(b) The general slope of Indian Peninsula is from east to west.
(c) The Indian Peninsula, north of the Satpura Ranges is tilted towards the west.
(d) The Indian Peninsula, south of the Satpura Ranges is tilted towards the east.

306. Match the following. [December 2008]

List-I (National parks)	List-II (States)
A. Periyar	I. Orissa
B. Nandankanan	II. Kerala
C. Corbett National Park	III. Rajasthan
D. Sariska Tiger Reserve	IV. Uttarakhand

Codes:

- (a) A-II, B-III, C-IV, D-III (b) A-I, B-II, C-IV, D-III
(c) A-III, B-II, C-I, D-IV (d) A-I, B-II, C-III, D-IV

307. Environmental Impact Assessment is an objective analysis of the possible changes in the [June 2009]

- (a) Physical characteristics of the environment.
(b) Biophysical characteristics of the environment.
(c) Socio-economic characteristics of the environment.
(d) All the above

308. The Great Indian Bustard bird is found in [December 2009]

- (a) Thar Desert of Rajasthan
(b) Coastal regions of India
(c) Malabar coast
(d) Delta regions

309. The turpentine oil used in the manufacture of medicines is obtained from

- (a) Acacia (b) Chir pin
(c) Sunflower (d) None of the above

310. The main characteristic of biodiversity hotspots is/are

- (a) Threat from human beings.
(b) Biogeographical region with a specified percentage of endemic species.
(c) Both (a) and (b)
(d) Neither (a) nor (b)

311. The Sagarmatha National Park has been established to preserve the ecosystem of which mountain peak?

- [December 2009]
(a) Kanchenjunga (b) Mount Everest
(c) Annapurna (d) Dholavira

312. Chipko Movement, basically to protect environment, originated in 1974 in

- (a) Uttarakhand (b) Bihar
(c) Madhya Pradesh (d) None of the above

313. Solid waste treatment by pyrolysis refers to

- (a) Heating in the absence of air.
(b) No heating
(c) Heating in the presence of air.
(d) Treating with chemicals before heating.

314. The main reason for global warming is

- (a) Increased concentration of anthropogenic CO₂ in the air.
(b) Decreased concentration of CO₂ in the air.
(c) Increased water vapours in the atmosphere.
(d) None of the above

315. The number of major GHGs identified for reduced emissions as per Kyoto Protocol are

- (a) 4 (b) 5 (c) 6 (d) 8

316. The species those are especially likely to develop on biologically isolated areas such as islands are called

- (a) Endemic species (b) Extinct
(c) Wild (d) None of the above

317. Ramsar Convention is related to the conservation of

- (a) Tiger
(b) Elephants
(c) Crop genetic diversity
(d) Wetlands

318. The Great Indian Rhino has its natural home in

- (a) Kaziranga National Park
(b) Corbett National Park
(c) Sunderbans
(d) Kanha National Park

319. Which of the following results in bioaccumulation and contamination of food chains?

- (a) Pesticides
(b) Polychlorinated biphenyls
(c) PAN
(d) All the above

320. Pollutants in the soil can be broken by microorganisms. This process is called

- (a) Probiotics
(b) Bioremediation
(c) Bioaugmentation
(d) None of the above

321. Match the following.

List-I	List-II
A Ozone depletion	I Basel convention
B CO ₂ reduction	II Kyoto Protocol
C Sustainable development	III Rio Summit
D Hazardous waste	IV Montreal Protocol

Codes:

- (a) A-IV, B-II, C-III, D-I (b) A-IV, B-III, C-II, D-I
(c) A-I, B-II, C-III, D-IV (d) A-I, B-III, C-II, D-IV

322. The Lion Tail Macaque is endemic to
 (a) Andaman and Nicobar Islands
 (b) Lakshadweep
 (c) Nilgiris
 (d) Arunachal Pradesh
323. The most efficient method of biodegradable urban solid waste management is
 (a) Landfills (b) Pelletization
 (c) Gasification (d) Composting
324. Wild water buffalo or Asian Buffalo or Indian Buffalo is mostly found in
 (a) Eastern Himalayas (b) Western Ghats
 (c) Aravali Hills (d) Satpura Range
325. The status of World Heritage Site is assigned by the
 (a) UN (b) UNESCO
 (c) World Bank (d) UNHRC
326. Match the following.
- | List-I
(Sanctuary) | List-II
(State) |
|-----------------------------|--------------------|
| A. Kaziranga National Park | I. Assam |
| B. Keolado National Park | II. Rajasthan |
| C. Sunderbans National Park | III. West Bengal |
| D. Nanda Devi National Park | IV. Uttar Pradesh |
- Codes:**
 (a) A-I, B-II, C-III, D-IV
 (b) A-I, B-III, C-II, D-IV
 (c) A-IV, B-II, C-III, D-I
 (d) A-IV, B-III, C-II, D-I
327. As in the beginning of 2016, the number of biosphere reserves in India was
 (a) 15 (b) 18 (c) 20 (d) 22
328. MAB stands for
 (a) Man and Biome
 (b) Man and Biodiversity
 (c) Man and Biosphere
 (d) Man and Biosciences
329. As in 2016, the number of biosphere reserves in India as per UNESCO's MAB list is
 (a) 10 (b) 9
 (c) 11 (d) 12
330. UNESCO stands for
 (a) United Nations Educational, Scientific, and Cultural Organization
 (b) United Nations Engineering, Scientific, and Cultural Organization
 (c) United Nations Educational, Social, and Cultural Organization
 (d) United Nations Educational, Scientific Control Organization
331. How many biological hotspots are located in India?
 (a) 1 (b) 2
 (c) 3 (d) 4
332. In which city was the UN Conference on Environment also termed as Earth Summit, held in 1992?
 (a) Rio de Janeiro (b) Kyoto
 (c) Stockholm (d) Copenhagen
333. Which one of the following is not an *in situ* conservation for biological resources?
 (a) Biosphere reserve
 (b) National parks
 (c) Protected areas
 (d) Breeding in confined areas
334. Mauna Loa, in Hawaii (USA), is famous for
 (a) Botanical garden
 (b) Monitoring sea level rise since 1950.
 (c) Biggest collection of mammal fossils.
 (d) Continuous monitoring of atmospheric CO₂ levels since 1957.
335. The Tehri Dam is located in
 (a) Gujarat
 (b) Madhya Pradesh
 (c) Uttarakhand
 (d) Uttar Pradesh
336. IUCN stands for
 (a) International Union for Conservation of Nature and Natural Resources
 (b) Indian Union for Conservation of Nature and Natural Resources
 (c) Integrated Union for Conservation of Nature and Natural Resources
 (d) None of the above
337. In which of the following cities the phenomenon of classical smog was observed for the first time?
 (a) Japan (b) New York
 (c) London (d) Los Angeles
338. The process of conversion of solid waste into organic fertilizers by making use of microorganisms, such as bacteria and fungi is called
 (a) Disposal (b) Remediation
 (c) Composting (d) None of the above
339. The Coriolis effect results from
 (a) Earth's rotation.
 (b) The prevailing winds.
 (c) Heating of the earth near the equator and cooling near the poles.
 (d) Ocean currents.
340. On which of the following day, Environment Day is celebrated?
 (a) December 29
 (b) May 15
 (c) June 5
 (d) None of the above
341. Which of the following is considered as the common indicator organism of water pollution?
 (a) Coral reefs (b) *Plasmodium*
 (c) *Escherichia coli* (d) None of the above
342. In which year India announced a National Action Plan on Climate Change (NAPCC)?
 (a) 2008 (b) 2005
 (c) 2003 (d) 1998

343. Match the following.

List-I (Disease)	List-II (Causes)
A. Black foot	I. Arsenic
B. Pulmonary oedema	II. Nitrogen oxides
C. Hay fever	III. Allergy
D. Sariska tiger reserve	IV. Uttarakhand

Codes:

- (a) A-II, B-I, C-III (b) A-I, B-II, C-III
 (c) A-III, B-II, C-I (d) A-II, B-III, C-I

344. Which of the following region has the greatest biodiversity?
 (a) Tropical rain forests (b) Arctic region
 (c) Sub-tropical region (d) None of the above
345. Which national park is situated at the highest altitude in the country?
 (a) Corbett National Park
 (b) Hemis National Park
 (c) Silent Valley National Park
 (d) Dachigam National Park
346. The Indian government has established around eighteen biosphere reserves in India. Ten of eighteen biosphere reserves are a part of the World Network of Biosphere Reserves, based on the UNESCO's Man and the Biosphere (MAB) Programme list. Which of the following has been added in 2016?
 (a) Agasthyamala Biosphere Reserve
 (b) Seshachalam Hills
 (c) Achanakmar-Amarkantak Biosphere Reserve
 (d) Great Nicobar
347. Which of the following pairs of Health problem and its causing pollutant is not correctly matched?
 (a) Nervous system – Aldrin
 (b) Neurological disorders – Pesticides
 (c) Loss of consciousness – Oxides of Nitrogen
 (d) Skin cancer – PAN
348. India exploded her first underground nuclear device at
 (a) Kota (b) Ranchi
 (c) Jaipur (d) Pokhran
349. Weeds compete with crops for resources. Farmers can get rid of weeds by using
 (a) Insecticide (b) Fungicide
 (c) Herbicide (d) Rodenticide
350. Organic food is supposed to be better for human health as
 (a) It is raised on special chemicals.
 (b) It is more expensive.
 (c) It is grown without the use of artificial fertilizers and pesticides.
 (d) None of the above
351. The biggest impacts are made on the environment by
 (a) The migration of species
 (b) Human interference
 (c) Competition
 (d) None of the above
352. Maintaining balance between fulfilment of human needs and protection of environment is termed as
 (a) Environmental development
 (b) Sustainable development
 (c) Economic development
 (d) None of the above
353. The Rio Declaration on the Environment and Development and Agenda 21 encouraged people to
 (a) Think global, act local
 (b) Act global, think local
 (c) Act as we are, think as we do
 (d) Depends on situation
354. Which of the following would indicate a warming in the average global temperature?
 (a) An expansion of glaciers around the world.
 (b) A rise in sea level.
 (c) Earlier freeze dates for major lakes.
 (d) Both (a) and (b)
355. A by-product of fossil fuel combustion is carbon dioxide. Which of the following is the cleanest with respect to the release of carbon dioxide?
 (a) Coal (b) Oil
 (c) Wood (d) Natural gas
356. Vermicomposting is a method of composting that involves
 (a) Silkworms (b) Earthworms
 (c) Bacteria (d) One of these
357. The method which can increase the supply of usable, good quality water is
 (a) Chlorination (b) Recharging of water
 (c) Cloud seeding (d) None of the above
358. Why would global warming lead to an increase in sea level?
 (a) Melting of Polar ice
 (b) Melting of glaciers
 (c) An increase in water temperature would cause the water to expand.
 (d) All the above
359. Which of the following is not considered to be a greenhouse gas?
 (a) Methane
 (b) Chlorofluorocarbons (CFCs)
 (c) Hydrogen
 (d) Ozone
360. Baba Amte was the leader of
 (a) Appiko Movement
 (b) Chipko Movement
 (c) Narmada Bachao Andolan
 (d) Tehri Dam Movement
361. An organization or entity is to get one carbon credit if it is able to avoid emission of
 (a) One ton of carbon dioxide or its equivalent.
 (b) One ton of any greenhouse gas.
 (c) One ton of hydrocarbon emissions.
 (d) One ton of carbon monoxide.

362. Using coal, natural gas or oil for electricity, heat or transportation releases CO_2 into the atmosphere. The daily CO_2 emissions make up the
(a) Carbon footprint (b) Carbon dating
(c) Carbon credit (d) None of the above
363. Which of the following is considered as the best quality of coal?
(a) Peat (b) Lignite
(c) Bituminous (d) Anthracite
364. Which of the following organizations has categorized wild flora and fauna into eight categories (known as Red List) such as extinct, critically endangered and endangered?
(a) International Union for Conservation of Nature and Natural Resources
(b) UNESCO
(c) Conference on Biodiversity
(d) Kyoto Protocol
365. The small amount of warming that may set off unstoppable and irreversible changes is termed as
(a) Tipping point (b) Inflection point
(c) Turning point (d) None of the above
366. In which year was the Kyoto Protocol signed?
(a) 1997 (b) 1992
(c) 1995 (d) 2005
367. The endangered largest living lemur *Idri idri* is an inhabitant of
(a) Nepal (b) Pakistan
(c) Madagascar (d) USA
368. Which of the following is the most productive agroecosystem?
(a) Maize (b) Wheat
(c) Sugarcane (d) None of the above
369. In which year India announced National Action Plan on Climate Change?
(a) 2005 (b) 2008
(c) 2012 (d) 2013
370. The logo of WWF is
(a) Giant panda (b) Lion
(c) Tiger (d) None of the above
371. Greenhouse Gases Observing Satellite or GOSAT also known as Ibuki was launched by
(a) USA (b) Japan
(c) South Korea (d) China
372. Which of the following state has maximum of mangrove cover in India?
(a) Goa
(b) West Bengal
(c) Orissa
(d) Andaman and Nicobar Islands
373. On which of the following days Biological Diversity Day is celebrated?
(a) December 29 (b) June 5
(c) May 21 (d) October 22
374. Which of the following organizations have promoted Reducing Emissions from Deforestation and Forest Degradation (REDD+)?
(a) International Union for Conservation of Nature
(b) United Nations
(c) World Bank
(d) International Monetary Fund
375. Dachigam Sanctuary is associated with conservation of
(a) Hangul (b) Tiger
(c) Lion (d) Rhinoceros
376. Which of the following Indian States/UT has the maximum percentage of mangrove cover in the country?
(a) Gujarat
(b) West Bengal
(c) Andaman and Nicobar
(d) Orissa
377. 'India is graduating from megawatts to gigawatts in renewable energy production'. Which of the following is a new target for the solar energy production in India by 2022?
(a) 20 GW (b) 40 GW
(c) 100 GW (d) 350 GW
378. The Government of India submitted its Intended Nationally Determined Contribution (INDC) targets to United Nations Frame Work Convention on Climate Change.
Which of the following statements are true in this context?
1. To reduce the emissions intensity of its GDP by 33 to 35 per cent by 2030 from 2005 level.
2. To achieve about 40 per cent cumulative electric power installed capacity from non-fossil fuel-based energy resources by 2030.
3. To create an additional carbon sink of 2.5 to 3 billion tons of CO_2 equivalent through additional forest and tree cover by 2030.
- Codes:**
(a) 1 and 2 only (b) 1 and 3 only
(c) 1, 2 and 3 (d) 2 and 3 only

Higher Education System

LEARNING OBJECTIVES

After completing the chapter, you will be able to:

- Institutions of Higher Learning and Education in Ancient India
- Evolution of Higher Learning and Research in Post Independence India.
- Oriental, Conventional and Non-conventional Learning Programmes in India
- Professional, Technical and Skill Based Education
- Value Education and Environmental Education
- Policies, Governance, and Administration

‘Education is the manifestation of the perfection already in man’

— Swami Vivekananda

INTRODUCTION TO HIGHER EDUCATION

According to the Ministry of Human Resource Development (Higher Education Department), Higher Education is defined in two ways:

1. Education, which is obtained after completing 12 years of schooling and is pursued for a duration of at least nine months.
OR
2. After completing 10 years of schooling, it is pursued for a duration of at least 3 years.

Some examples are Ph.D., M.Phil., Post-graduation, Graduation, PG Diploma, Diploma, Certificate, etc., in any stream, like Arts, Commerce, Science, Engineering, Architecture, etc.

Higher education provides people with an opportunity to reflect on the critical, social, economical, cultural, moral and spiritual issues faced by humanity. It contributes to the national development through dissemination of specialized knowledge and skills. Therefore, it is considered as a crucial factor for survival. Being at the apex of the educational pyramid, it also has a key role in producing teachers for the educational system. Higher education is a key element in ‘demographic dividend’ and also that it intends to make optimum utilization of human resources specifically in age group from 15–59 years.

Indian higher education system, which includes technical education is one of the largest in the world, just after the United States and China.

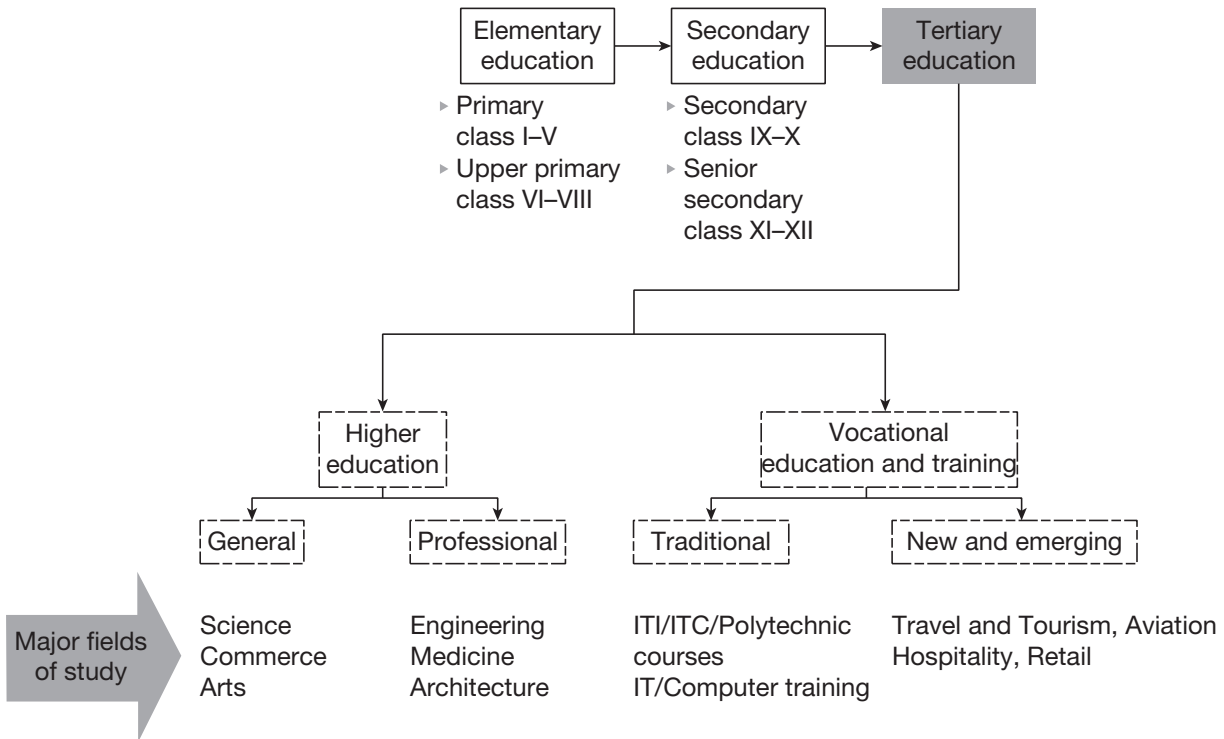

Formal education system can be categorized into three parts, namely primary, secondary and tertiary education. Tertiary education is a wider term and it is higher education plus vocational education. According to the perspective of the NET Paper I, our focus is on higher education.

Secondary education begins to expose students to the varied roles of science, humanities and social sciences and also to vocational streams. This is also an appropriate stage to provide children with a sense of history and national perspective and give them opportunities to understand their constitutional duties and rights as citizens. The Board of Secondary Education plays a main role in imparting this education. Elementary or primary education adopts child-centred approach. It continues up to 14 years.

There are three principle levels of qualification in higher education as listed below.

1. Undergraduate level leading to bachelor’s degree.
2. Postgraduate level leading to master’s degree.
3. Research level leading to Ph.D., Fellowship or Post Doctorate.

Some higher education institutes provide diplomas as well as Chartered Accountancy, PGDBA and PGDCA. Most undergraduate courses take three years except for certain professional courses, such as engineering and medicine. Postgraduate courses are generally of two-year duration.

Institutions of Higher Learning and Education in Ancient India

‘Education during the Vedic age was a journey from mortality to immortality, from chaos to spiritual bliss.’

Ancient education system has been very wide in India. Here, we intend to cover the basic tenets only. In ancient times, there were two education systems, such as ‘Vedic’ and ‘Buddhist’. The Vedic system refers to Vedas, the six Vedangas (phonetics, ritualistic knowledge, grammar, exegetics, metrics and astronomy), Upanishads, the six Darshanas (Nyaya, Vaisheshika, Sankhya, Yoga, Mimamsa and Vedanta), Puranas (history), Tarka shastra (logic). There were some allied subjects also. Sanskrit was the medium of instruction in Vedic system. Vedanga was the synonym of all these subjects taken together, where it corroborates the performance of sacrifice, correct pronunciation, knowledge of prosody, etymology, grammar and Jyotishi or the science of calendar.

First of all, we can focus on Vedic education, with semblances of Sutras, Brahmanism. Knowledge was passed on orally from one generation to another in ancient India. Basically, education involved the comprehension of three basic stages involved in the process.

1. **Sravana:** Stage of acquiring knowledge of ‘Shrutis’ by listening.
2. **Manana:** Meaning pupils to think, analyse themselves about what they heard, assimilate the lessons taught by their teacher and make their own inferences.
3. **Nididhyasana:** Meaning comprehension of truth and apply it into real life.

The main goal of life is self-realization despite all people have different inclinations. The preservation and enrichment of culture, character and cultivation of noble ideals were the main aims. There was to be holistic development of the individual by taking care of both the inner and the outer self.

Knowledge was divided into two broad streams as given below.

1. **The Paravidya:** The higher knowledge and the spiritual wisdom.
2. **The Aparavidya:** The lower knowledge and the secular sciences.

Under vedic education, special attention was paid to correct pronunciation of words, *Pada* or even letters. Indian sages devoted themselves to the study of a supra-sensible world and spiritual powers and moulded their life accordingly.

Pure oral teaching (from the lips of the teacher) was regarded as purely Vedic. The second method of teaching was 'Chintan' (thinking). So the primary subject of education was the mind itself.

The admission criteria were moral fitness and unimpeachable conduct. The discipline of brahmacharya (celibacy) was compulsory. It was one of the sacred duties of the pupil to serve his preceptor. 'Brahm Sangh' was the opportunity for students to acquire higher knowledge.

The society and state did not interfere much with the curriculum of studies or regulating the payment of fees.

A typical ancient Indian educational system was fully and compulsorily residential. The student had to live in the house of his teacher for learning purposes. The relationship was kind of spiritual.

Education was free most of the times, and that too upheld the dignity of labour, even if he was at the highest intellectual course. Students used to learn through seminars, discussions and debates.

The admission of students was made by the formal ceremony *Upanayana* (initiation). In the new home of Guru, he had a second birth and was called *Dvijya* or twice born. Education would start at the age of five with a ceremony called *Vidyarambha*, where it includes learning the alphabets and worshipping goddess Saraswathi. The *Upanayana* ceremony would start between the ages of eight to twelve years. He would now be called 'Brahmacharin'. A Bramacharin after finishing his education is eligible to become a Grihasta or a householder.

There was a high standard of learning for women also. In house, they might learn music and dancing. They had to undergo the *Upanayana* ceremony. There were two classes of educated women as stated below.

1. **Sadyodwahas:** They are people who prosecuted studies till their marriages.
2. **Brahmavadinis:** They are people who did not marry and pursued studies throughout out their lives.

Women were also taught the Vedas and Vedangas, but the extent of their study was restricted only to those hymns which were necessary for the Yajna (sacrifice) or other ritualistic operations. Women sages were called *Rishikas*. Here, we can name, scholarly women like Maitreyi and Gargi.

The fundamental principles of social, political and economic life were combined into a comprehensive theory, which is sometimes called religion in Hindu thought also. There was a total combination of ideals, practices and conduct called into a Dharma (Religion, Virtue or Duty) here. They identified their duty with devotion to the ideal of 'summum bonum' of mankind. Human soul was the material world. Sometimes, the

ultimate aim of education emerged as the *Chitta Vritti Nirodha*, which is the control of mental activities connected with the concrete world.

The doctrine of action (Karma) occupies a very significant place.

The word Veda means knowledge and are *nitya* (routine). They are basic to life and four in number:

Rig veda: It is the earliest work of all Indo-European languages and humanity that comprises 'Plain Living' and 'High Thinking'. *Gayatri mantram* that is also found in Sama Veda and Yajur Veda touch the highest point of knowledge and sustain human souls to this day. The Rig Veda is a collection of 1028 hymns.

Sama veda: The Sama Veda is a collection of verses from the Rig Veda for liturgical purposes. Liturgical is the participation of people in the work of God.

Yajur veda: It is the collection of prose mantras, though the duty of chanting the hymns on the occasion of sacrifice was mainly undertaken by the Hotri, the first order of priesthood.

In due course of time, the fourth Veda called the Atharva Veda was also recognized, where it is more original in contents. The majority of mantras have not been adapted from the Rig Veda. The Atharva Veda is thoroughly secular in character containing a vivid description of various arts and sciences.

Rig Veda mentions women Rais called Brahmanavadinis to denote equality between the sexes in the field of knowledge.

Chronologically, Vedas can be divided into the following two parts.

1. The early vedic (1500–1000 BCE) when most of the Rig Vedas were composed.
2. The later vedic (1000–600 BCE) when remaining vedas were composed.

Post Vedic education also continued with three types of institutions, namely *Gurukulas*, *Parishads* (*Academies*) and *Sammelans* (*Conferences*). The first lesson that was taught to the student was the performance of *sandhya* and also reciting of *gayatri*.

The period of the Vedic literature was followed by that of Sutra literature, between 600 BC and 200 BC. When Vedic literature spread, there was a need for some amicable institutions to take care of them. This brought *Sutras* (Dharam Sutras) literature with great principles of social conduct into existence. The Yoga of Patanjali, Nyaya of Gautama and Mimamsa Shastras were its products.

Besides, Smritis were written for proper guidance of life. The Sutra period was identical with that of Upanishad period.

In this way, the study of philosophy was complete in itself. It presented a correct solution to the problems of discipline, humanity and supreme knowledge.

Ramayana and the Mahabharata are the main epics of ancient India. These epics give us glimpses into the creed of militarism of that age.

A full-fledged Ashram is described as consisting of several departments, such as Agnithana (for fire worship and prayers), Brahmasthana (Vedas), Vishnusthana (Department for teaching Raja Niti, Arthaniti, and Vartta), etc.

About Brahmic education, Mr. F. E. Keay, in his book named '*History of Indian Education, Ancient and Later Times*' observes that not only did Brahman education developed a system of education which survived the crumbling empires and the changes in society, but they also, through all these thousands of years, kept a glow of the torch of higher learning and numbered amongst them many great thinkers who have left their mark not only on the learning of India but upon the intellectual life of the world.

In Brahmanic education, instead of collective teaching, individual teaching prevailed. Thus, there were more opportunities to develop the inner talents of the students, where it was not only theoretical but also gave the practical knowledge to face the struggles of life. Here, the course of study was much wider than that of Vedic period. The education was based on psychological principles.

Buddhist Education

'Buddhism involved a more liberal approach towards learning'

Lord Buddha realized the necessity of education for devotees at large. There was expansion of education. Some monasteries and viharas were established. Later on, many of these monasteries become full-fledged centres of education, where Bhikshus, Bhikshunis and common people and foreigners were given chance to acquire education.

Consequently, Nalanda and Takshila developed into Universities of International importance. They were managed on the basis of democratic principles. Thousands of learned teachers were appointed. Cultural relations with many Asian countries are mainly due to these educational institutions and their working system that existed hundreds of years back.

Here, a child would start his education at the age of eight after Prabrajya or Pabbajja ceremony that was open to all castes. This ceremony was open to person of all castes. After the initiation ceremony, his education would start as preceptor (monk). He was now called Sramana and used to wear a yellow robe. A Sramana

was given a full status of monkhood or Bhikshu. Pali was the medium of instruction in the Buddhist system of education for vocational and religious educations.

The main subjects or topics of study in Buddhist system of education were three Pitakas (Sutta, Vinaya and Abhidhamma), works of all the eighteen schools of Buddhism, Hetu-vidya, Sabda-vidya, Chikitsa-vidya, etc. The Vedas were also studied for acquiring comparative knowledge.

The art of writing was known very well in India. In Jaina, works like *Samavaya Sutra* and *Pragnapara Sutra* reference to 18 different scripts are available. Buddhist literary works like *Lalitavistara* and *Mahavastu* mention different types of scripts in vogue. While the former refer to 64 types of scripts and the latter to about a dozen types of scripts. Regarding the curricula of school students, the Chinese traveller Hiuen Tsang says that children began by learning the alphabet and then began the study of five subjects, like grammar, arts and crafts, medicine, logic and philosophy. This was the general scheme of studies for laymen of all sects. The other subjects of study were law (dharmashastras), arithmetic, ethics, art and architecture (silpasastra), military science (dhanurvedya), performing arts, etc.

Vocational Education

Ancient Indian literature refers to 64 professions or arts which includes weaving, dyeing, spinning, art of tanning leather, manufacture of boats, chariots, the art of training elephants and horses, the art of making jewels and so on. Young men used to work as apprentices under a trainer for a number of years and gained expertise in their respective professions. Education was free and provided with boarding and lodging by the trainer.

Knowledge

Knowledge was imparted orally and the different methods of learning are as follows.

- 1. Memorization:** It mainly deals with retention of facts.
- 2. Critical analysis:** Here, we can cite examples of Sri Ramanuja and Sri Madhvacharya.
- 3. Critical introspection:** Sravana (listening), Manana (contemplation) and Nididhyasana (concentrated contemplation) of the truth so as to realize it was another method to study Brahma Vidya (Vedanta).
- 4. Story telling:** Buddha mainly used this method to explain his doctrines.
- 5. Question and answer method:** For further probe into the discussion.

6. **Hands-on method:** For practical and professional courses such as medical science.
7. **Seminars:** The students also gained knowledge through debates and discussions which were held at frequent intervals.

It might take twelve years for a student to develop expertise in one Veda and thereafter, it would be twelve years, twenty years, thirty six years and so on. A graduate was called Snataka and the graduation ceremony was called Samavartana.

Itihas (history), Anviksiki (logic), Mimamsa (interpretation) Shilpashastra (architecture), Arthashastra (polity), Varta (agriculture, trade, commerce, animal husbandry) and Dhanurvedya (archery). Physical education too was an important curricular area and pupils participated in krida (games, recreational activities), vyayamaprakara (exercises), dhanurvedya (archery) for acquiring martial skills and yogasadhana (training the mind and body), shastrartha (learned debates) could be termed as the main subjects.

Types of Teachers

- **Acharya:** A teacher to teach Vedas without charging fee from the students.
- **Upadhyaya:** To earn his livelihood and taught only a portion of the Veda or Vedangas.
- **Charakas:** Wandering scholars to visit the nation for higher knowledge, usually regarded as possible source of knowledge by *Satapatha Brahmana*. Hiuen Tsang gained the knowledge this way.
- **Guru** used to lead a grihastha life by imparting education and by maintaining his family.
- **Yaujanasatika:** They were famous for their profound scholarship, students from distant places would visit them to seek education.
- **Sikshaka:** Instruction in arts such as dancing.

Educational Institutions

- **Gurukul** was the house of the teacher who was a settled house-holder.
- **Parishads:** Here, the students usually settle for higher education, they were originally conducted by three Brahmins. The number gradually increased, even a Parishad consisted of twenty Brahmins who were well versed in philosophy, theology and law. Sangam was also such Parishad during first century CE in Tamilnadu, here some works were submitted for criticism also. These gatherings were patronized by kings.
- **Goshti** or Conferences was a national gathering summoned by a great king in which representatives of various schools were invited to meet and exchange their views.

- **Ashramas** or hermitages were another centre where students from distant and different parts of the country flocked together for learning around famous sages and saints. For example, the Ashrama of Bharadwaj at Prayag.
- **Vidyapeeta** was an educational institution for spiritual aspects started by the great acharya. Sri Shankara started such institutions at Sringeri, Kanchi, Dwarka, Puri and Badri.
- **Ghathikas:** Here, both the teachers and the pupils met and discussed. The cultured scholars would meet, discuss and clash also.
- **Agraharas** were settlements of Brahmins in villages where they used to teach.
- **Mathas:** They were mainly for residing and receiving religious and secular instructions. These mathas belonged to both Shaiva and Vaishnava sects and were normally attached to some temple associations.
- **Brahmapuri:** A settlement of learned Brahmins in towns and cities or in any selected area for education purpose.
- **Vihara:** A Buddhist monastery where all Buddhist preaching and philosophy were taught.

Main Educational Institutions of Higher Education During Ancient India

India enjoyed a prominent position in all spheres of life, be it social, education or economics. The following are the few prominent Buddhist institutions.

1. **Taxila:** Taxila was the capital of Gandhar Kingdom. Taxila has been described as the first university established across the globe in 7th century BCE. Hiuen Tsang in his records mentioned the university of Taxila to be at par with Nalanda and Vikramshila universities.

Taxila was an important centre of Brahmanical education, it maintained its stature even during the Buddhism in Northern India. It had attracted many students from other nations.

Taxila university was famous for medical studies. Panini, the well known grammarian, Kautilya, the minister of Chandragupta Maurya, and Charaka, a medical teacher of repute had been part of it.

There was no popularly organized institution or university. Admission of the students as per decision of the teacher, though they were taught subjects as per choice. Usually, the minimum age was more than sixteen years.

There was no exam system, so there were no degrees or diplomas.

The main branches were Vedatrayi (Three Vedas), Vedanta, Vyakaran, Ayurveda, eighteen Sippas (crafts), military education, astronomy, agriculture, commerce, snake bite cure, etc.

It was popular as training centre in Indian Military science. Panini was an expert in Surgery and Medicine was its main product. The same was the case for Kautilya, the famous author of Arthashastra. There was no caste distinction. Taxila had been influenced by Greek culture also.

2. **Nalanda (Bihar):** It is located near Rajgriha in the province of Bihar, it has been the birth place of Sariputta, a favourite disciple of Lord Buddha, who is closely linked with Mahayana.

It was a Buddhist centre of learning from 427 CE to 1197 CE. It has been known as 'one of the first great universities' in recorded history.

A historian writes, '*The University of Nalanda was the educational center of international moral comparable in the universalism of its thought, the wide range of its studies, the international character of its community to the greatest universities of modern time like Oxford, Cambridge, Paris and Harvard.*'

It is stated that at one time there were 10,000 monks staying at Nalanda. Of these, 1510 were teachers and the remaining 8500 were students belonging to various levels of attainments and studying various subjects.

Its real importance begins with the year 450 CE. Then it was important for three centuries. Hiuen Tsang came here in 7th century CE. It progressed a lot during Gupta dynasty. In year 2010, Nalanda University was set up in Bihar as a Central University with Japan, China, Thailand, Laos, Singapore, Australia by collaborating in various manners.

This university was also renowned for its cosmopolitan and catholic character, the University of Nalanda was famous for its faculty of Logic.

Dwar Pandi, a teacher was the incharge for admission to the university.

Eight big halls named as *Samgharama* and the three hundred study chambers have been the main attraction.

It was considered to be a great centre of learning throughout the whole of Asia. There were somewhat tough admission criteria. The minimum age limit was twenty years for admission into the university, many facilities were being offered free of cost.

The *Kulpati* or Chancellor of the University was Shilbadra who had studied all Sutras and Shastras books.

There were three methods of teaching, namely verbal and explanatory, lectures and debates and discussions.

The university had a very big library corresponding to its reputation that had nine storeys. The library had three departments known as 'Ratna Sagar'.

Nalanda made unique contributions to the evolution, expansion and refinement of Indian culture.

Bakhtiar Khilzi put the university towards destruction by the end of 12th century CE.

3. **Valabhi:** Hiuen Tsang, I-Tsing had found Valabhi in the western side of India as glorious as Nalanda.

It was not just a centre of religious education as of other secular subjects, such as Arthashastra (economics), Niti Shastra (law) and Chikitsa Sastra (medicine) were also taught here.

It was mainly the centre for Hinayana form of Buddhism.

Valabhi was running in good financial position till 755 CE but some portion were destroyed due to Arab invasion. It still continued till 12th century.

4. **Vikramshila:** It was set up and established by the Emperor Dharmapala of Pal dynasty in the 8th century in Northern Magadh on the bank of the river Ganges. This university was famous for religious teachings and here 108 scholars were appointed as the incharge and Acharyas of the various temples. It attracted a large number of scholars from Tibet, who came there for higher studies. The university was later organized into six colleges. The central building was called the *Vigyan Bhawan*. A Dwar pandit was appointed at the main gate.

Mahasthavir was the highest authority of the University, being known as the Kulpati of the Gurukula. The main subjects of study were Vyakaran, Logic, Philosophy, Tantra Shastra and Karamkanda. Later on Tantra Shastra gained prominence. Degrees were conferred on the graduates and post-graduates at the time of Samavartana (Convocation) by the rulers of Bengal. It was destroyed by Bhaktiyar Khilji in 1203 CE. Thus, a mighty educational center fell. The University of Vikramasila was renowned for Tantric Buddhism.

5. **Odantapuri:** This university had been established long before the Kings of Pala dynasty came into power in Magadha. Odantpuri could not attain that level of fame and repute which either Nalanda or Vikramshila had accomplished. Still nearly 1000 monks and students resided and received education there. It attracted students from Tibet too.
6. **Jagaddala:** Pal King, Raja Ram Pal of Bengal constructed a monastery and named it as Jagaddala. It remained as the centre of Buddhist education for about 100 years. It was again destroyed during invasion in 1203 CE.

In Jagaddala, there were many scholars notable for their knowledge. The books were translated in Tibetan language.

7. **Mithila:** In the Upanishadic age, Mithila became a prominent seat of Brahmanical education. It was named as *Videha*.

It continued with its glory from Raja Janak upto Buddhist period. Later on this place produced devotees of Lord Krishna.

Famous poet Vidyapati, who had written in Hindi and Jaideo, a prominent poet of Sanskrit literature was born here.

From 12th century to 15th century, besides literature and fine arts, scientific subjects were also taught there.

- (a) There was a Nyaya Shastra and Tarka Shastra.
- (b) Gangesha Upadhyaya founded a school of New Logic (Navya-Nyaya).
- (c) Epoch- making work named Tattva Chintamani had been written.

Mithila produced a number of other scholars and literary celebrities.

Even upto Emperor Akbar, it continued to flourish as an important centre of education and culture.

8. **Nadia:** Situated at the confluence of Ganga and Jalangi rivers in Bengal, it was formerly called Navadweep. Education in Nadia University was imparted at three centres namely Navadweep, Shantipur and Gopaalpara.
 - (a) The lyrics of Gita Govind by Jaideva reverberated here.
 - (b) A school of logic owed its existence to Raghunatha Shiromani.
 - (c) Learning and efficiency in discussions was considered to be an essential qualification of a teacher of this university.
9. **Ujjain:** It was famous for its secular learning including mathematics and astronomy.
10. **Salotgi** in Karnataka was an important centre of learning. It had 27 hostels for its students who hailed from different provinces. This college was richly endowed in 945 CE by Narayana the minister of Krishna III with the revenues of houses, land and levies on marriages and other ceremonies.
11. **Ennayiram** in Tamilnadu provided free boarding and tuition to 340 students. Other important centers of learning in South India were **Sringeri** and **Kanchi**.

Decline of Ancient Education

The standard of education was so high in India that despite many hardships, students from different parts of the world used to stay in India and no student from India had to go abroad for knowledge. Indian scholars were in great demand abroad.

With the invasion of Muslim conquerors, nearly all the centres of higher learning of the Hindus and Buddhists were destroyed and were replaced by mosques. During the decline of Buddhist system, Vedic system of education moved to South. It was under the patronage of Vijayanagara rulers that the Vedic

savants Sayana and Madhava wrote commentaries on the Vedas.

With regards to the vocational system of education many new crafts and skills were introduced in India after the advent of Muslim into India and till the establishment of British rule in India, many industries, like textile manufacturing, ship building, jewelry making and other allied industries flourished which shows the skill and expertise Indians had and in turn the knowledge they had received from their teachers. The products of Indian industries not only fulfilled the needs of Asian and African countries but were also in great demand in the markets of Europe.

Astronomical treatise like *Brahmasiddhanta* and *Khanda Khadyaka* of Brahmagupta and medical books of Charaka, Susruta and Vagbhatta were translated to Arabic. Buddha and Shankara (philosophy), Kautilya (political science and administration), Sushruta (surgery), Charaka (medicine), Kanada (physicist; propounder of atomic theory), Nagarjuna (Chemistry), Aryabhata and Varahamihira (Astronomy), Baudhayana and Brahmagupta (mathematics) and Patanjali (yoga).

Muslim ruler elite promoted urban education in terms of libraries and literary societies. They founded primary schools (maktabs) in which students learned reading, writing and basic Islamic prayers, and secondary schools (madrassas) to teach and train for advanced language skills. Often attached to mosques, Islamic schools were open to the poor but were gender segregated, often only for boys. Muslim girls of affluent families studied at home.

From the beginning of the Mughal empire in India in 1526 until the end of Mughal political presence in 1848, Persian was the court language, and elite boys could attend Persian schools to learn literature, history, ethics, law, administration, and court protocol. More intimate settings for the spread of ideas were the retreats (*khanqah*) of famous Sufis (Muslims who professed mystic doctrines). These new educational models did not necessarily displace older ones, although state patronage patterns shifted. Sanskrit academies continued to teach young male Brahmans literature and law; apprenticeship and commercial schools taught boys the skills needed for business. Education for girls was an exception rather than a rule.

Evolution of Higher Learning and Research in Post Independence India

Before we can discuss Indian education post independence, it's better to get some idea about British education system. Modern education began in India under the British rule. Before the British, India had its own educational system like the Gurukulas and the Madrassas.

The main three basic agents of modern education in India were as follows.

1. The British Government or East India Company
2. Christian missionaries
3. Indian intellectuals and reformers

The company wanted some educated Indians who could assist them in the administration of the land.

The British also wanted to understand the local customs and laws well. Warren Hastings established the Calcutta Madrasa in 1781 for the teaching of Muslim law. In 1791, a Sanskrit College was started in Varanasi by Jonathan Duncan for the study of Hindu philosophy and law system.

Many schools were started in India with the purpose of Christianising and ‘civilizing’ the native Indians. The Charter Act of 1813 was the first step towards education being made an objective of the government. There was some split in the government viewpoint about the nature of education, either it should be traditional or modern.

In 1835, under Lord William Bentick, it was decided to introduce English as the medium of instruction. Macaulay minutes refer to his proposal of education for the Indians. It focused upon English education instead of traditional Indian learning, he told oriental culture was ‘defective’ and ‘unholy’. He believed in educating a few upper and middle class students. Ultimately, education would trickle down to the masses. This was called infiltration theory. He wished to create a class of Indians who were Indian in colour and blood but English in taste and affiliation.

In 1835, the Elphinstone College (Bombay) and the Calcutta Medical College were set and the Universities of Calcutta, Madras and Mumbai was established in 1850s.

There was a huge demand for clerks and other administrative roles in the company’s functioning as it was cost effective and it was the prime motive.

There was Hunter Commission (1882–83) to suggest the segregation of primary and higher education. In 1902, Universities Commission was set up under Sir Thomas Raleigh to enquire into conditions and prospects of setting up of universities in India. As a result, Indian Universities Act was passed in 1904. In 1905, National Council of Education was set up in 1905 by Swadeshi nationalist leaders and Jadavpur University is the result of it. Shri Rabindranath Tagore started Shantiniketan in Bengal during the era.

In 1913, there was a resolution on education policy. In 1917, Sandler Commission (popular as Calcutta University Commission) suggested the separation of intermediate education from degree colleges, it was precursor to 10+2+3 system and setting up of Central Advisory Board of Education (CABE). Government of India Act made education as provincial subject.

Hartog Commission (1929) focused on quality and standards of education.

Sapru Committee (1934) focused upon unemployment issue. Abbot Wood Report (1937) recommended English as a medium of instruction at university level. Wardha Scheme of Education (1937) recommended Nai Talim or Basic Education, as a recommendation of Mahatma Gandhi.

Sargent Report (1944) also known as Scheme of Post War Educational Development in India recommended setting up of University Grant Commission.

No doubt it spread western education among Indians, but the rate of literacy was abysmally low during British rule. The state of women education was pathetic. This was because the government did not want to displease the orthodox nature of Indians and also because women could not generally be employed as clerks. Scientific and technical education was mostly ignored by the British government.

In the new scenario after independence, education was recognized as the major element of socio-cultural, technical, political and economic changes.

Government of India took several initiatives to improve and promote higher education in the country after independence.

Radhakrishnan Commission (1948–1949)

Radhakrishnan Commission also known as University Education Commission, suggested the integration of secondary education and higher education by setting up of UGC. It also recommended the setting up of rural universities.

Mudaliar Commission (1952–1953)

It is also popular as the Secondary Education Commission. It recommended introducing a three-year secondary and a four-year higher education system. It also advocated the setting up of multipurpose schools and vocational training institutes.

Committee on Emotional Integration (1961)

It was set up under the chairmanship of Dr Sampurnanand to study the role of educational programmes for youth, in general, and students in schools and colleges, in particular, in order to strengthen the process of emotional integration.

Kothari Commission (1964–1966)

The commission was titled as ‘Education and National Development’ report. It is a very progressive report. It proposed a three-year degree course and a four-year honours degree course.

Establishment of Indian Education Service (IES) to improve the quality of Indian higher education with

emphasis on quality teaching faculties to vocationalize secondary education was recommended. It recommended that 6% of the national income should be spent on education.

Education Subject in Concurrent List (1976)

India has a federal setup and education is the concurrent responsibility of both the centre as well of states. Post-independence, education (including university education) was the responsibility of the states, while the centre was given the function of coordination and determination of standards.

However, in 1976, through Entry 25 (42nd Constitutional Amendment) in the Concurrent List of the Constitution of India, the centre was also given the responsibility along with the states for all levels of education.

National Policy on Education

Kothari Commission was followed by the National Policy on Education (NPE) of 1968 and 1986. These emphasized on improving the quality of higher education level and also proposed imparting higher education by distance learning mode.

Both policies suggested that 6% of our national income should be spent on education.

Note: It is ironical that though the outlay of 6% of GDP was recommended almost 50 years ago, we are still far from reaching the mark in view of the present outlay not crossing even 4% of GDP. The expenses for education in India has been lower than the world average. Globally, 4.9% of GDP was spent on education in 2010, whereas India spent only 3.3% of GDP, according to World Bank data. In 2014–15 budget, the figure was 3.9%.

If India has to realize its potential economic growth rate of 8–10% as envisaged in budget 2016–17, then it needs a skilled, trained and educated workforce to make it possible.

Here, it is important to mention that the second generation economic reforms followed by market-oriented reforms started by the Government of India in 1991 also called for making changes in the education system of India.

Gnanam Committee (1993)

It recommended flexibility and autonomy for ensuring academic excellence and asked for restricting the unchecked growth of deemed universities. It emphasized the need for a National Commission on higher education and research to regulate the quality of education and to encourage research in university system.

Sam Pitroda Committee

It was established in 2007. It is also popularly known as National Knowledge Commission (NKC). It recommended the restructuring of curricula to meet the demand for multidisciplinary professionals and criteria-based resource allocation to ensure maintenance of standards and strategic preferences to promote excellence in higher education. It supported the entry of foreign universities and also favoured reducing the burden of affiliation of colleges on universities. NKC recommended increasing the number of universities to 1500 by 2015.

Yashpal Committee

It suggested scrapping of all higher education, regulatory or monitoring bodies and creation of a super regulator, i.e., a seven-member Commission for Higher Education and Research (CHER). State Higher Education Councils would form the second tier of the system.

It also recommended that the deemed university status be abandoned and that all deserving deemed varsities be either converted into fullfledged universities or scrapped. The committee stressed the need for more attention to undergraduate programmes and a multidisciplinary approach to learning. Yashpal Committee also strongly recommended reducing the burden of affiliation of colleges on the universities and a GRE-like test be evolved for university education.

The recommendations of Yashpal Committee and the National Knowledge Commission emanated from the realization that fragmentation of various fields of knowledge in higher education led to inadequate growth of interdisciplinary learning.

Sharma Committee

Set up under Prof. M.M. Sharma, it deliberated upon the development of science and technology education in India. The committee suggested the establishment of Indian Institute of Science, Education, and Research (IISER). It also recommended the expansion of technical education, assuring quality and providing access and affordability for technical education. The committee also recommended that ₹500 crores be spent on research in basic sciences every year by the UGC.

Dr Anil Kakodkar Committee

It was constituted to recommend strategies to improve technical education in the country. It recommended 2% budget in every institution to be earmarked for research.

K. B. Pawar Committee

Constituted by the UGC, the committee recommended four models of Public–Private Partnership (PPP) in higher education.

ORTHODOX, CONVENTIONAL AND NON-CONVENTIONAL EDUCATION

Efficiency of conventional and non-conventional methods of teaching is influenced by a combination of collective, group, pair and individual work.

There are basically four factors that help us to decide which system to opt for and they are listed below.

1. Length of the programme
2. Technical access
3. Cost comparison
4. Location restriction

Orthodox Education

Knowledge was passed on orally from one generation to another as per orthodox education. Even now education is being imparted in orthodox manner.

Orthodox education involved three basic processes, in which it included ‘Sravana’ (stage of acquiring knowledge of ‘Shrutis’ by listening).

Two, ‘Manana’ (meaning pupils to think, analyse themselves about what they heard, assimilate the lessons taught by their teacher and make their own inferences;).

Three ‘Nidhyasana’ (meaning comprehension of truth and and apply/use it into real life).

C. Rajgopalachari had said, ‘If there is honesty in India today, any hospitality, any charity any aversion to evil, any love to be good, it is due to whatever remains of the old faith and the old culture’. Tolerance, truth, Ahimsa, peace and non-aggression are the hallmark of Indian culture. With a rational mind, raising it from ignorance, one can understand the greatness of Vedic literature.

During ancient times, much of our education system was dependent upon God, heaven and hell. God rewards us with heaven in case some justice is done and with hell in case no justice is done. Further, the existence of God is to be proved through very deep logical analysis and discussions. All the seminars and conferences in ancient India ran on single subject, as it includes the existence and nature of God. The resulting balanced society, without corruption and chaos gives immense happiness to the life of the humanity. Sometimes ancient materials and technologies were far better for health and environmental balance of the

world. Thus again, there is focus towards orthodox education even with the help from modern technologies.

In ancient India, orthodox education was confined to a very small section of Indian society. To some extent, it was due to some absence of any written material. Priestly schools in India had devised a transferring knowledge to succeeding generations in the form of hymns, where there was extreme sanctity.

Practice and experience matter a lot in orthodox education. This type of system led the society to have more production, economic efficiency and specialization in various areas of activities like, spinning, weaving, pottery making, bead making, seal making, terracotta, handicrafts, brick-laying, metal work, etc.

But still, illiterate masses get the benefit of the knowledge of learned sages and munies. On the basis of their scholarly researches and experiences, the sages prescribed certain guidelines in the form of rituals to be followed by common men. This is still being followed to some extent in India.

Conventional vs Non-Conventional Education

Teaching activity in the system of combination of conventional and non-conventional training can be safely treated as innovative creative activity. Most of the teachers have worked for a considerable part of their teaching life in a conventional school. Thus, the system of conventional and developing training is perceived as a ‘certain innovation’.

The new general-education system needs a teacher of a new type where the main goal is not to deliver knowledge to pupils but organize an independent activity of the pupils designed to master the methods of analysis and generalization of the teaching material. The combination of conventional and non-conventional education considerably enriches interpersonal communication between the students and the teacher, which positively affects the results of training and the personality of the student. Every learner is involved into training and organizing activity implemented through communication. The learners are encouraged and blamed in a benevolent atmosphere of communication. Communication in such lessons functions primarily as mutual assistance, correction and assessment. A good emotional contact facilitates increase in motivation to study and raises the level of communicative culture. Following is the tabled main features of combination of conventional and non-conventional methods of training.

Conventional Teaching	Non conventional Teaching
It is basically passive learning, where the child listens to teacher and follows directions from the teacher who sets the pace for instructions.	Active learning, where the moves freely, choosing her own work and the pace at which it is being done. Teacher, if any, may just be a facilitator.
Students provided with knowledge, skills and experience.	General development of students and mastering of learning modules.
Core competence - Examples, facts, arguments and text, a dedicated time and effort, the purpose is to master defined skills and develop socially.	Holistic development as it includes generalization of law, theory, rule and concept. Cognitive, social and psychological development of mind.
There is constant peer contact.	There is limited peer contact.
Group, individual, whole class.	Teamwork and collective way of training.
Verbal, visual and practical limited contact time.	Problem statement, partial search and heuristic / brainstorming methods.
Control and assessment by teacher.	Self control and self-assessment.
Subject-object relations.	Cooperation and collaboration.

Non-conventional education basically deals with the distance education and also with the concepts such as online education. In this chapter, distance education has been dealt with separately.

Regulatory and Policy Framework Structure of Higher Education in India

Now again we get ourselves shifted to higher learning in post independence India. Education is in concurrent list where both Central and State governments can legislate.

Regulatory Framework of Higher Education in India

While the centre coordinates and determines the standards in higher and technical education, school education is primarily the responsibility of the state. The key policy-making agencies for higher education are as follows.

- 1. Central government:** It lays down the National Policy on Education. It provides grants to the UGC and establishes Central Universities/Institutions of national importance in the country. It is also responsible for declaring an educational institution as 'Deemed-to-be University' on the recommendations of the UGC.
- 2. State government:** Many states have also set up state councils and advisory boards to provide guidelines for proper functioning of higher education institution in the states. State councils for higher education coordinates the roles of government, universities and apex regulatory agencies in higher education within the state.

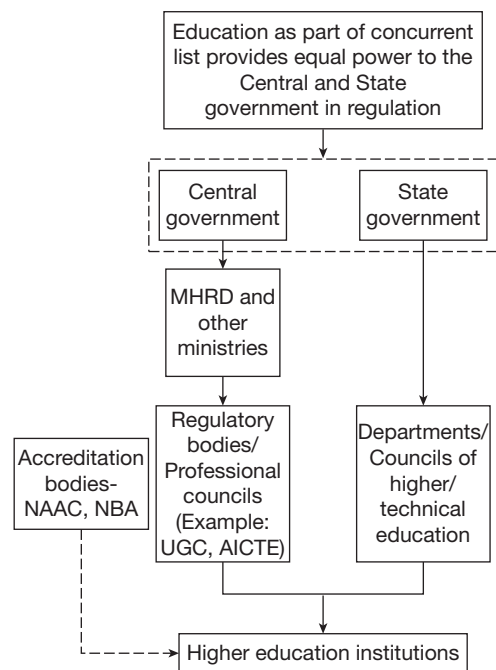

Figure 10.1

- 3. Central Advisory Board of Education (CABE)** was set up for coordination and cooperation between the union and the states in the field of education, including policy making.

APEX LEVEL BODIES

There are eight Apex Level Bodies (Regulatory Bodies/ Research Councils) under the Department of Higher Education, which are responsible for higher education

University Education System in India

The word 'university' is derived from the Latin word *Universitas*, which means specialized associations between students and teachers.

Universities are the seats of higher learning from where the society gets its leaders in Science, Arts and various other fields of national life. University education aims at providing knowledge and wisdom for developing personality.

The functions of the university mainly include providing instruction, conducting research and postgraduate studies and giving affiliation and extension to the colleges under it.

In India, university means a university established or incorporated by or under a central act, a provincial act, or a state act and includes any such institution as may be recognized by the UGC in accordance with the regulations made under this Act.

Universities have degree-granting powers and are responsible for conducting examinations. They have autonomy in matters of fees and curriculum design. They also have affiliating powers for colleges within a particular geographical region.

On the other hand, degree-granting colleges have autonomy in admissions. However, they have to follow the fee, examination and curriculum standards of the university they are affiliated to.

in India. These bodies can be broadly divided into two categories (i) regulatory bodies and (ii) research councils.

Regulatory Bodies

There are three regulatory bodies—University Grants Commission, All India Council for Technical Education, and Council of Architecture to regulate higher education in India.

University Grants Commission

UGC governs universities in India and came into existence on 28 December 1953. It became a statutory organization established by an act of Parliament in 1956.

1. According to Section 12 of UGC Act, the main function of UGC is coordination, determination and maintenance of standards in universities.
2. It also disburses funds within the university education system. Most importantly, it only acts as a recommendatory body since it does not have any power to establish or derecognize any university.

3. UGC consists of the Chairman, Vice-Chairman, and 10 other members appointed by the Central government. Secretary is the Executive Head. It functions from New Delhi as well as its six regional offices located in Bangalore, Bhopal, Guwahati, Hyderabad, Kolkata and Pune.
4. UGC also implements various schemes aimed at improving the quality of higher education, like Universities with Potential for Excellence (UPE), Colleges with Potential for Excellence (CPE), Centre with Potential for Excellence and a Particular Area (CPEPA), Special Assistance Programme (SAP), Basic Scientific Research (BSR), etc.
5. Dr C. D. Deshmukh was the first Chairman of UGC.

Categorization of Universities

Universities can be set up only through legislation or the deemed route. At present, the main constituents of universities or university-level institutions are listed below.

Table 10.1

Universities	Total Number
State Universities	399
Deemed to be Universities	126
Central Universities	49
Private Universities	330
Total	904

Source: ugc.ac.in as on March 1, 2019.

In addition, there are many university level institutions. In the consolidated UGC list, there is description of 49 universities.

Central Universities

A central university or a union university in India is established by the Act of Parliament and is under the purview of the Department of Higher Education in the Union Human Resource Development Ministry. In general, universities in India are recognized by UGC, which draws its power from the University Grants Commission Act, 1956.

1. There are 47 central universities under the purview of MHRD. Out of them, 16 new central universities were established in 2009 by an Act of Parliament, namely, Central Universities Act, 2009.
2. IGNOU, New Delhi is funded directly by the MHRD.
3. President of India is the Visitor of all central universities. In that capacity, he nominates some members to important committees of the university for their effective functioning. He also exercises powers in various legal matters and relevant amendments.

The state/UT wise list of central universities is given below.

State	Name and Place of Central University
Arunachal Pradesh	Rajiv Gandhi University, Itanagar.
Assam	Assam University, Silchar. Tezpur University, Sonitpur.
Telangana	University of Hyderabad, Hyderabad. Maulana Azad National Urdu University, Hyderabad. English and Foreign Languages University, Hyderabad.
New Delhi	Jamia Millia Islamia, Jamia Nagar. University of Delhi, South Moti Bagh. JawaharLal Nehru University, New Mehrauli Road. Indira Gandhi National Open University, Maidan Garhi. South Asian University, Chanakyapuri.
Madhya Pradesh	The Indira Gandhi National Tribal University, Amarkantak. Dr. Harisingh Gour Vishwavidyalaya, Sagar.
Maharashtra	Mahatma Gandhi Antarrashtriya Hindi Vishwavidyalaya, Wardha.
Mizoram	Mizoram University, Aizwal.
Meghalaya	North Eastern Hill University, Shillong.
Manipur	Manipur University, Imphal. Central Agricultural University, Imphal. National Sports University, Koutruk.
Nagaland	Nagaland University, Meriema.
Pondicherry	Pondicherry University, Kalapet.
Sikkim	Sikkim University, Gangtok.
Tripura	Tripura University, Suryamaninagar.
Uttar Pradesh	Aligarh Muslim University, Aligarh. Babasaheb Bhimrao Ambedkar University, Lucknow. Banaras Hindu University, Varanasi. University of Allahabad, Allahabad. Rajiv Gandhi National Aviation University, Rae Bareli. Rani Lakshmi Bai Central Agricultural University, Jhansi.
West Bengal	Visva-Bharati University, Bolpur.
Uttarakhand	Hemwati Nandan Bahuguna Garhwal University, Garhwal.
Tamil Nadu	Central University of Tamil Nadu, Thiruvavur. Indian Maritime University, Chennai.
Rajasthan	Central University of Rajasthan, Bandar Sindri.
Punjab	Central University of Punjab, Bathinda.
Orissa	Central University of Orissa, Koraput.
Kerala	Central University of Kerala, Kasaragod.
Karnataka	Central University of Karnataka, Kadaganchi.

(Continued)

State	Name and Place of Central University
Jharkhand	Central University of Jharkhand, Ranchi Dist, Brambe.
Jammu & Kashmir	Central University of Kashmir, Sonwar Bagh, Srinagar. Central University of Jammu, Samba District, Bagla.
Himachal Pradesh	Central University of Himachal Pradesh, Shahpur.
Haryana	Central University of Haryana, Mohindergarh.
Chhattisgarh	Guru Ghasidas Vishwavidyalaya, Bilaspur.
Bihar	Central University of South Bihar, Samanpura, Patna. Nalanda University, Rajgir, Nalanda. Mahatma Gandhi Central University, Belisarai, Motihari. Dr. Rajendra Prasad Central Agricultural University, Pusa.
Gujarat	Central University of Gujarat, Sector – 29, Gandhinagar.

Note: Nine Universities namely:

1. Central Agricultural University, Imphal, Manipur.
2. Indira Gandhi National Open University, New Delhi.
3. Indian Maritime University, Chennai.
4. Nalanda University, Rajgir, Dist. Nalanda, Bihar.
5. South Asian University, Akbar Bhawan Campus in Chanakyapuri, New Delhi.
6. Rajiv Gandhi National Aviation University, Rae Bareli, Uttar Pradesh.
7. Rani LakshmiBhai Central Agricultural University, NH-75, Near Pahuj Dam, Gwalier Road, Jhansi (Utter Pradesh).
8. Dr. Rajendra Prasad Central Agricultural University, Pusa, Samastipur, Bihar.
9. National Sports University, Koutruk, Manipur.

They are not under the purview of UGC and therefore, no Plan and Non-Plan grant being released to these Nine Central Universities.

Indian National Defence University (INDU) is a proposed university of defence of the Government of India, which will be established at Binola in Gurgaon, Haryana. The principle proposal was accepted by the Union Cabinet on 13 May 2010 and is expected to become functional by 2018–19.

State Universities

A university established or incorporated by a Provincial Act or by a State Act is called a state university.

The state universities are included in the List of 12 (B) of UGC Act, 1956 and are eligible for central assistance.

Although the development of state universities is the primary concern of State governments, development grants, including grants under special schemes, are provided to all eligible state universities. Such grants

facilitate the creation, augmentation, and upgradation of infrastructural facilities that are not normally available from the State government or other sources of funds.

State universities dominate university education in India as they account for almost half the universities and also for 84% of total enrollment.

Private Universities

A university established through the state or central act by a sponsoring body, namely a society registered under the Societies Registration Act, 1860 or any other corresponding law for the time being in force, in a state or a public trust or a company registered under Section 25 of the Companies Act, 1956 is called a private university.

The private universities are competent to award degrees as specified by UGC under Section 22 of the UGC Act with the approval of the statutory councils, wherever required through their main campus.

The first private university set up in 1995 was the Sikkim Manipal University of Health, Medical and Technological Science, Gangtok.

Deemed to be University

A deemed to be university, commonly known as a deemed university, refers to a high-performing institution, as declared by the Central government under Section 3 of the UGC Act, 1956.

Deemed universities can be approved only by an executive order after UGC recommendation. Although they enjoy all the powers of a university, they do not have the right to affiliate colleges.

1. Indian Institute of Science, Bangalore, and Indian Agricultural Research Institute, Delhi, were the first two institutes to be granted a deemed status.

IISc was granted the status in 1958 though it was set up in the year 1908.

2. Manipal Academy of Higher Education (MAHE) was the first private institution to be declared a deemed university in 1976.

The following institutions of higher learning are few prominent examples of deemed to be university.

1. National University of Educational Planning and Administration (NUEPA), New Delhi.
2. Rashtriya Sanskrit Sansthan, New Delhi.
3. Shri Lal Bahadur Shastri Rashtriya Sanskrit Vidyapeetha, New Delhi.
4. Rashtriya Sanskrit Vidyapeetha, Tirupati.
5. National Dairy Research Institute, Karnal.
6. Tata Institute of Fundamental Research, Mumbai.

The top ranking states in terms of total number of universities are Rajasthan, Uttar Pradesh and Tamil Nadu.

The 11th Five year plan envisaged the establishment of 14 world class central universities (renamed as innovative universities aiming at world-class standards).

Note: P. N. Tandon Committee in 2009 suggested blacklisting 44 deemed universities, saying they lacked the required quality. In 2015, UGC asked 10 deemed universities including BITS Pilani to shut their off-campus centres. In February 2016, UGC amended its regulation allowing private deemed universities to have up to six off-campus. This ceiling won't apply in case of government-established and managed deemed universities.

Meta University and CIC Concepts

During the 12th Plan, UGC initiated a concept of Meta University. The main purpose of the Meta University is to share learning resources by different Universities by using latest technologies available in order to enable students to benefit from learning resources available in other institutions. Meta Universities represent 2nd Generation Universities, free from physical boundary conditions and able to operate in virtual space, taking advantage of the innovation and flexibility possible in such domains.

For the first time in India, University of Delhi and Jamia Millia Islamia, the two main universities of India, under the Meta University Concept have started a 2-year joint degree program 'Master of Mathematics Education' (equivalent to M.Sc. Mathematics Education) from the academic session 2015.

Cluster Innovation Centre (CIC) is a Government of India funded institute established under the aegis of the University of Delhi. It was founded in 2011 and introduced innovation as a credit-based course for the first time in India.

Rashtriya Uchchatar Shiksha Abhiyan (RUSA)

Rashtriya Uchchatar Shiksha Abhiyan is a Centrally Sponsored Scheme (CSS), which was launched in 2013. It aims at providing strategic funding to eligible state higher educational institutions. The central funding (in the ratio of 65:35 for general category states and 90:10 for special category states) would be norm based and outcome dependent. The funding would flow from the central ministry through the State governments/UTs to the State Higher Education Councils before reaching the identified institutions. The funding to the states would be made on the basis of critical appraisal of State Higher Education Plans, which would describe each state's strategy to address the issues of equity, access and excellence in higher education.

RUSA is implemented and monitored through an institutional structure comprising the National Mission Authority, Project Approval Board and the National Project Directorate at the centre, and the State Higher Education Council and State Project Directorate at the state level.

RUSA programme also seeks enhancement of intake capacity of the existing institutions of higher education. It is designed on the lines of the Sarva Shiksha Abhiyan with an aim to increase Gross Enrolment Ratio to 25%, which at present is just 17%. It proposes to set up 800 new colleges under central universities (40 central universities covering 20 colleges each), 400 new college cluster universities, and a set of other new universities under various categories.

According to UGC sources, the promotion of evening colleges and universities would not only help in enhancing enrolment but would also provide opportunities to working class for improving their academic and professional qualifications. This would help in making optimum use of the existing infrastructure that remains unused for an average of 16–18 hours a day. The shift system of courses in colleges would be effectively supported by separate qualified teachers.

Other Higher Level Institutions

Inter-University Centres (IUCs)

UGC has established autonomous IUCs within the university system with an objective to provide common, advanced, centralized facilities and services for universities, in order to offer the best expertise in each field to teachers and researchers across the country.

Nuclear Science Centre at New Delhi (now called Inter University Accelerator Centre) was the first such research centre established in 1994.

At present, there are six IUCs functioning within the university system and these are as follows.

1. Inter-University Accelerator Centre (IUAC), New Delhi.
2. Inter-University Centre for Astronomy and Astrophysics (IUCAA), Pune.
3. UGC-DAE Consortium for Scientific Research (UGC-DAECSR), Indore.
4. Information and Library Network (INFLIBNET), Ahmedabad.
5. Consortium for Educational Communication (CEC), New Delhi.
6. National Assessment and Accreditation Council (NAAC), Bangalore.

Association of Indian Universities

Association of Indian Universities (AIU) is a forum for administrators and academicians of member universities to exchange views and discuss matters of common concern. The idea originated during Vice Chancellors' Conference at Shimla in 1924 that was convened by Lord Reading.

It got its present name in 1973. The members include traditional universities, open universities, professional universities, institutes of national importance, and deemed to be universities. In addition, there is a provision of granting associate membership to universities of neighbouring countries.

It brings out a number of useful publications, including the Universities Handbook, research papers, and a weekly journal titled University News.

Institutions of National Importance

An institution is established by an act of Parliament and is declared as an Institution of National Importance, such as IITs and IIMs among others. Some institutions are established or incorporated by the State Legislature Act.

Research Councils

1. Indian Council of Social Science Research (ICSSR), New Delhi.
2. Indian Council of Philosophical Research (ICPR), New Delhi.
3. Centre for Studies in Civilizations, Project of History of Indian Science, Philosophy and Culture (PHISPC).
4. Indian Council of Historical Research (ICHR), Guwahati.
5. National Council of Rural Institutes (NCRI), Hyderabad.

LANGUAGE UNIVERSITIES

India has six language universities out of which three are deemed to be universities and three are central universities. The deemed to be universities are for promotion of Sanskrit and the three central universities are, one each, for the promotion of English and foreign language, Hindi and Urdu.

UGC is funding these language universities.

1. Shri Lal Bahadur Shastri Rashtriya Sanskrit Vidyapeetha, New Delhi.
2. Rashtriya Sanskrit Vidyapeetha, Tirupati.
3. English and Foreign Languages University, Hyderabad.
4. Mahatma Gandhi Antarrashtriya Hindi Vishwavidyalaya, Wardha.
5. Maulana Azad National Urdu University, Hyderabad.
6. Rashtriya Sanskrit Sansthan, New Delhi.

Few Important Offices or Agencies in Higher Education

Subordinate Offices Under the Bureau of Language Education

1. **Central Hindi Directorate:** New Delhi, was set up in the year 1960 to develop Hindi as a link language throughout India, in pursuance of Article 351 of the Constitution of India. Its regional offices are located in Chennai, Kolkata, Hyderabad and Guwahati.
2. **Commission for Scientific and Technical Terminology** was constituted to evolve and define scientific and technical terms in Hindi and in all Indian languages.
3. **Central Institute of Indian Languages:** Mysore, set up in 1969 to help in evolving and implementing the language policy of Government of India and to coordinate the development of Indian languages by conducting research in areas of language analysis, language pedagogy, language technology and language use in the society.
4. **Regional Language Centres (RLC)** located at Bhubaneswar, Pune, Mysore, Patiala, Guwahati, Solan, and Lucknow work for the implementation of the three-language formula of the government and for preparation of instructional materials.
5. **National Testing Service (NTS)** was approved by the MHRD in 2006–2007 and implemented by the Centre of Testing and Evaluation (CT and E) under Central Institute of Indian Languages (CIIL), Mysore.
6. **Linguistic Data Consortium for Indian Languages (LDC-IL)**, A central sector scheme was

Classical Languages

Sanskrit, Tamil, Telugu, Kannada, Malayalam and Odia are the six classical languages in India. Tamil was the first language to be assigned the status of classical language in 2004. Odia was the last one to be assigned the status in February 2014, but it is the first language from the Indo-Aryan linguistic group to be assigned the status.

Sahitya Academy's Expert Committee gave the following four criteria for a classical language.

1. The high antiquity of early texts/recorded history of over 1500 to 2000 years.
2. A body of ancient literature/texts that is considered a valuable heritage by generations of speakers.
3. The literary tradition should be original and not borrowed from another speech community.
4. The classical language and literature should be distinct from the modern and there may also be a discontinuity between the classical language and its later forms of offshoots.

The proposals are made by the Ministry of Culture. Once a language is declared classical, it gets financial assistance for setting up a centre of excellence for the study of that language and also opens up an avenue for two major awards for scholars of eminence. Besides, the UGC can be requested to create to begin with at least in Central Universities, a certain number of professional chairs for classical languages for scholars of eminence in that language.

The fathers of the Constitution conferred Sanskrit the special status by Article 351 as it was the primary source language for many languages including Hindi.

Five languages in the world, namely Chinese, Sanskrit, Arabic, Greek and Latin have been assigned the status of Classical languages.

implemented by the Central Institute of Indian Languages (CIIL), Mysore from the financial year 2007–2008.

7. **National Translation Mission:** On the basis of recommendations of the National Knowledge Commission, MHRD set up the National Translation Mission (NTM) with the main objective of functioning as a clearing house for all translation activities, both theoretical and practical, in as many Indian languages as possible. Central Institute of Indian Languages (CIIL), Mysore is the nodal organization for operation of the scheme.

8. **National Book Trust** was established in 1957 with the objective of promoting a culture of reading in the society by publishing good literature at affordable price in all major Indian languages including English and by undertaking book promotion activities, such as organization of seminars, workshops, book fairs and book exhibitions in India and abroad.

ACCREDITATION IN HIGHER EDUCATION

Higher education sector ensures quality of the educational process with the help of accreditation agencies established for the purpose.

National Assessment and Accreditation Council (NAAC)

NAAC is an autonomous body established in 1994 by the UGC with its headquarters in Bangalore. It was established as per recommendations of NPE (1986).

The prime function of NAAC is to assess and accredit institutions of higher learning, universities and colleges or their departments, schools, institutions, programmes, etc.

It regularly publishes manuals and promotion materials for assessment and accreditation.

National Board of Accreditation (NBA)

Set up in 1994, NBA is an autonomous body established by AICTE to conduct periodical evaluation of technical courses offered in India. It has the authority to recognize or derecognize institutions or programmes. The accreditation process is not linked to funding.

Accreditation Board (AB)

AB was set up by the Indian Council of Agricultural Research in 1996 with a mandate to accredit agricultural institutions. Accreditation done by AB is generally valid for a period between 5–10 years and is linked to funding year wise number of institutions accredited.

It is important to note that although accreditation is voluntary in India, some states, such as Karnataka and Tamil Nadu have made it mandatory, especially for professional institutions. Despite this, only very few institutions are accredited. In fact, only 36% engineering and 10% management programs have been accredited by NBA.

Government is in the process of creating a single independent body to regulate various aspects of higher education. The same should be done at the earliest. However, due care needs to be taken to ensure that it gets adequate independence and autonomy.

NON-CONVENTIONAL EDUCATION

Open and Distance Education

Usually, we include 'Distance Education' as the main base of 'Non-conventional' education, that is mentioned under new NTA-NET syllabus. Thus, distance education here is being discussed as its part once again.

Today, two terms that are being used almost interchangeably are 'Open Learning' and 'Distance Education' and they are often combined to be known as Open and Distance Learning (ODL). Open learning is a philosophy, whereas distance education is the mode used for translating it into reality as the two are complementary to each other.

Distance education (DE) is an umbrella term that describes all the teaching and learning arrangements in which the learner and the teacher are separated by space and time. In fact, it is a mode of delivering education and instruction to learners who are not physically present in a traditional classroom setting. Transaction of the curriculum is effected by means of specially prepared materials [self-study (learning) materials] which are delivered to the learners at their doorstep through various media, such as print, television, radio, satellite, audio/video tapes, CD-ROMs, Internet, etc. In addition, a technological medium replaces the interpersonal communication of conventional classroom-based education that takes place between the teacher and the learners. Communication between the institution, teacher and learners is mainly through electronic media (telephone, interactive radio counselling, teleconferencing, videoconferencing, chat sessions, email, website, etc.) and also through postal correspondence and limited face-to-face contact sessions held at Study Centres that are set up by the DE institutions as close to the learners' homes as possible.

Open learning covers a wide range of innovations and reforms in the educational sector that advocates flexibility to the learner with regard to entry and exit, pace and place of study, method of study, choice and combination of courses; assessment and course completion. The lesser the restrictions, the higher the degree of openness. The open learning system aims to redress social or educational inequality and to offer opportunities not provided by conventional colleges or universities. Educational opportunities are planned deliberately so that access to education is available to larger sections of the society.

Therefore, ODL is a term that accepts the philosophy of 'openness' and uses the 'distance mode' of learning.

ODL occupies a special place in the Indian higher education system because of its major contribution in enhancing the Gross Enrollment Ratio and democratization of higher education to large segments of

the Indian population particularly to reach out to the unreached and to meet the demands of lifelong learning, which has become more of a necessity in the knowledge society.

The major objectives of DE system are as follows.

1. To democratize higher education to large segments of the population, in particular to the disadvantaged groups, such as those living in remote and rural areas, working people, women, etc.
2. To provide an innovative system of university-level education, which is both flexible and open in terms of methods and pace of learning, combination of courses, eligibility for enrollment, age of entry, conduct of examination and implementation of the programmes of study.
3. To provide an opportunity for upgradation of skills and qualifications.
4. To develop education as a lifelong activity to enable people to update their knowledge or acquire knowledge in new areas.

India has one of the largest DE systems in the world, second only to China. There are the **following types** of institutions offering DE.

1. National Open University
2. State Open Universities
3. Distance Education Institutions (DEIs) at:
 - (a) Institutions of National Importance
 - (b) Central Universities
 - (c) State Universities
 - (d) Deemed to be Universities
 - (e) State Private Universities
4. DEIs at Stand alone Institutions
 - (a) Professional Associations
 - (b) Government Institutions
 - (c) Private institutions

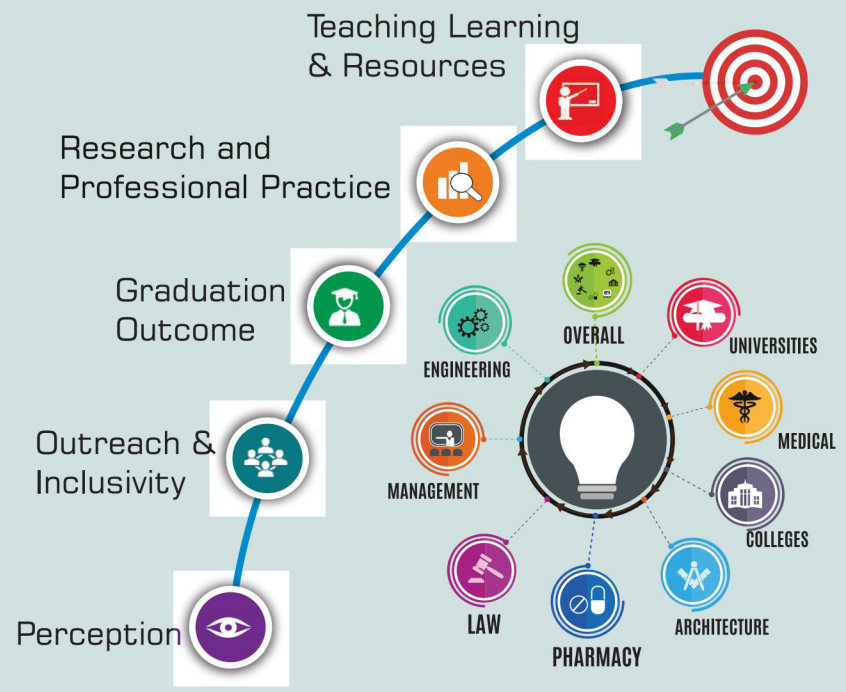

Historical Developments in Distance Education in India

The Expert Committee under the chairmanship of Dr D. S. Kothari in 1960s recommended the institution of correspondence courses in view of the greater flexibility, economic viability and innovative methods of imparting education. The committee also suggested that correspondence courses in India should be administered by the universities only and in the first instance, the initiative was done in the University of Delhi as a pilot project.

- Hence, in 1962, the University of Delhi's School of Correspondence Courses and Continuing Education was started. Subsequently, the Education Commission (1964–66) under the chairmanship of Dr. D. S. Kothari also perceived correspondence

National Institutional Ranking Framework - IInd List - Released on April 3rd, 2017

National Institutional Ranking Framework (NIRF) has been approved by the MHRD and was launched on 29 September 2015. The first list was released in April 2016. This framework outlines a methodology to rank institutions across the country. The methodology draws from the overall recommendations and broad understanding arrived at by the Core Committee set up by MHRD, to identify the broad parameters for ranking various universities and institutions.

Department of Higher Education
Ministry of Human Resource Development
Government of India

(Continued)

The following five parameters (weightages in brackets) were broadly considered.

1. Teaching and learning (0.30)
2. Research and professional practices (0.30)
3. Graduation outcomes (0.20)
4. Outreach and inclusivity (0.10)
5. Perception (0.10)

The 'India Rankings 2018' were put together with the participation of around 2800 private and public institutions. They were ranked by National Bureau of Accreditation (NBA). All institutions were judged based on self-disclosure of information.

Although the ranking frameworks are similar, the exact methodologies are domain specific. Ranking methods have been worked out for these categories, such as (1) Overall (2) Universities (3) Colleges, (4) Engineering (5) Management (6) Pharmaceuticals (7) Architecture and (8) Medical.

Overall Rankings

1. Indian Institute of Science
2. Indian Institute of Technology, Chennai.
3. Indian Institute of Technology, Mumbai.
4. Indian Institute of Technology, New Delhi.
5. Indian Institute of Technology, Kharagpur.

Universities

1. Indian Institute of Science
2. Jawaharlal Nehru University
3. Banaras Hindu University
4. Anna University
5. University of Hyderabad

Colleges

1. Miranda House, New Delhi.
2. St. Stephen's College, New Delhi.
3. Bishop Heber College, Tiruchirapalli.
4. Hindu College, New Delhi.
5. Presidency College, Chennai.

Management

1. Indian Institute of Management, Ahmedabad.
2. Indian Institute of Management, Bangalore.
3. Indian Institute of Management, Calcutta.
4. Indian Institutes of Management, Lucknow.
5. Indian Institute of Technology, Mumbai.

Pharmacy

1. National Institute of Pharmaceutical Education and Research, Mohali.
2. Jamia Hamdard, New Delhi.
3. Punjab University, Chandigarh.
4. Institute of Chemical Technology, Mumbai.
5. Birla Institute of Technology and Science, Pilani.

Medical Colleges

1. All India Institute of Medical Sciences, New Delhi.
2. Post Graduate Institute of Medical Education and Research, Chandigarh.
3. Christian Medical College, Vellore.
4. Kasturba Medical College, Manipal.
5. King George's Medical University, Lucknow.

Architecture

1. Indian Institute of Technology Kharagpur, Kharagpur.
2. Indian Institute of Technology Roorkee, Roorkee.
3. School of Planning and Architecture, New Delhi.
4. College of Engineering Trivandrum, Thiruvananthapuram.
5. School of Planning and Architecture, Bhopal.

Law

1. National Law School of India University, Bengaluru.
2. National Law University, New Delhi.
3. Nalsar University of Law, Hyderabad.
4. Indian Institute of Technology, Kharagpur.
5. National Law University, Jodhpur.

Engineering Colleges

1. Indian Institute of Technology, Chennai.
2. Indian Institute of Technology, Mumbai.
3. Indian Institute of Technology, New Delhi.

education as an answer to the increasing pressure of numbers as well as the growing financial pressures on the universities.

- The next decade, i.e., the 1970s saw the growth and spread of the correspondence education system in India by more conventional universities opening Correspondence Course Institutes (subsequently renamed as Directorates of Distance Education/Centres of Distance Education).
- The opportunity of access, affordability and convenience offered by the DE system contributed to its increasing popularity and growth. However, again the DE system was plagued by the rigidities of the conventional system. The only flexibility was with regard to the larger number of seats. Education was still out of reach of the marginalized and the disadvantaged. It was realized that unless we open educational opportunities to the deprived, unless we remove the structural rigidities in our educational system, and unless we integrate the educational system, with developments in communication technology, we cannot and will not make headway in realizing the uphill task of educating majority of the people and of catering to the diverse types of education that a modern society demands.
- Against this background, the government introduced the OUS system in the 1980s, with the objective to further democratize opportunities for higher education to large segment of the Indian population, particularly for those whom access was difficult or impossible such as those living in

remote and rural areas, working people, women, and other adults who wish to acquire and upgrade their knowledge and skills through studies in various fields.

- The Ministry of Human Resource Development, in its National Policy on Education (NPE) 1986, gave prominence to an OU system as a means to 'augment opportunities for higher education and as an instrument of democratizing education'. Clearly, the vision was that OUs would be different from conventional universities.
- Therefore, a new chapter in DE system began with the establishment of Dr B. R. Ambedkar Open University in Hyderabad in 1982, followed by the establishment of Indira Gandhi National Open University at the national level by the Parliament of India in 1985. The idea was accepted by many states and 1987 saw the emergence of two more Open Universities, namely Nalanda Open University (NOU) in Patna, Bihar, and Vardhman Mahaveer Open University (VMOU) in Kota, Rajasthan. Subsequently, Yashwantrao Chavan Maharashtra Open University (YCMOU) in Nashik, Maharashtra, was established in 1989.
- The major responsibility for the promotion and coordination of Open and DE was bestowed by the Parliament on the Indira Gandhi National Open University (IGNOU), instead of the UGC, which the statutory authority for regulating higher education India. Therefore, IGNOU became a unique institution as it was entrusted with a dual role of functioning like an Open University by offering

programmes of education and training through distance mode and also acting as the promoter and coordinator of the Open and Distance Education system in the country and determining standards in such systems. To fulfil this particular mandate, the Distance Education Council (DEC) was set up by IGNOU in 1991 as a statutory mechanism under IGNOU Act, which became operational in February 1992. The DEC functioned within the broad framework and the policies laid down by the Board of Management of IGNOU while enjoying a significant measure of autonomy in its operations.

- As per the mandate of the DEC and the NPE 1986, which was revised in 1992, the DEC started interacting with the state governments for establishing the SOUs in the respective states. As a result of DEC initiatives, several State governments established open universities. As emphasized in the NPE of 1986 and subsequently in the Programme of Action in 1992, the OUs adopted a radically different approach to reach the disadvantaged by adopting a variety of media and delivery channels for dissemination of information and knowledge. As a result of this, they have been able to make a definite impact on society and more Indians have access to higher education than ever before.
- The DEC took several initiatives for promotion, coordination and maintenance of standards of open and distance education system in the country. The DEC has developed guidelines for regulating the establishment and operation of ODL institutions in the country.
- In August 2010, the Ministry of Human Resource Development constituted a Committee under the chairmanship of Prof. Madhava Menon in respect of regulation of standards of education imparted through distance mode.
- The Ministry of Human Resource Development accepted the Madhava Menon Committee's report and its recommendations for the creation of a new regulatory body for ODL system, that is, the Distance Education Council of India (DECI). The Madhava Menon Committee also decided that as an interim measure, the DEC of IGNOU may be shifted to UGC.
- Subsequently, the MHRD, in an order dated 29 December 2012, transferred the regulatory authority of distance education from IGNOU to UGC, and UGC manages this function through Distance Education Bureau. This is an interim measure till such time an independent body, namely Distance Education Council of India, is created by the Parliament.

Indira Gandhi National Open University (IGNOU)

IGNOU was established in 1985 by an act of Parliament with dual responsibilities of (i) enhancing access and equity to higher education through distance mode and (ii) promoting, coordinating and determining standards in open learning and distance education systems. Since then, IGNOU has undergone rapid expansion and emerged as an international institution in the field of open and distance learning.

IGNOU practices a flexible and open system of education with regard to methods and places of learning, combination of courses and eligibility for enrolment, age for entry and methods of evaluation, and so on. The university has adopted an integrated strategy for imparting instruction. This consists of providing print materials, audio-video, tapes, broadcast on radio and educational TV channels, teleconferencing, video conferencing and also face-to-face counselling, at its study centres located throughout the country. The university has adopted the method of continuous assessment and term-end examination for evaluation of performance of its students enrolled in various subjects.

About 10% of the Annual Plan Budget is used to extensively earmark the development of north-east region.

The university has established eight regional centres in the north-east region. The university has developed a number of programmes for women, and special study centres were established in the backward areas and districts with low female literacy rate.

IGNOU makes use of Information and Communication Technologies extensively for imparting education. In addition to self-instructional printed materials, the university utilizes audio-video programme tapes, teleconferencing, Gyan Vani (FM radio), Gyan Darshan (educational TV channels), and computer networks for imparting instructions. IGNOU has a large number of programmes, ranging from purely academic to technical, professional, and vocational at various levels leading to awarding of competency certificates, diplomas, bachelor's, master's, and doctor's degree to successful candidates. Many of these programmes are modular in nature.

International Activities

Besides presence in many countries, IGNOU is offering distance education programmes in collaboration with UNESCO and International Institute for Capacity Building in many parts of Africa. IGNOU plays an active role in SAARC consortium for Open and Distance Learning (SACODiL) and Global Mega Universities Network (GMUNET).

Sakshat

This one-stop education portal was launched on 30 October 2006 to facilitate lifelong learning for students, teachers and employees or for those in pursuit of knowledge, free of cost. The content development task for Sakshat was looked after by the Content Advisory Committee (CAC). National Knowledge Network (NKN) interconnects all universities, libraries, laboratories, hospitals and agricultural institutions for sharing data and computing resources across the country over a high-speed information network having gigabyte capabilities.

State Open Universities

Presently, there are 13 state open universities in India, which are single-mode institutions. This means they provide education only in the distance mode. These universities cater to people who are unable to pursue regular courses due to various reasons. The list of the 13 SOUs is as follows.

1. Dr B. R. Ambedkar Open University, Hyderabad.
2. Vardhman Mahaveer Open University, Kota, Rajasthan.
3. Nalanda Open University, Patna, Bihar.
4. Yashwantrao Chavan Maharashtra Open University, Nashik, Maharashtra.
5. Madhya Pradesh Bhoj Open University, Bhopal, Madhya Pradesh.

Commonwealth of Learning

The Commonwealth of Learning (COL) is an intergovernmental organization established by the Commonwealth countries in 1988 to encourage development and sharing of open learning and distance education knowledge, resources and technologies.

COL was hosted in Canada by the Government of Canada. The major voluntary contributors currently are Canada, India, New Zealand, Nigeria, South Africa and the United Kingdom, where each are entitled to seats on COL's Board of Governors. The following Indian organizations are partners of COL for different purposes.

1. Indira Gandhi National Open University
2. National Institute of Open Schooling
3. National Assessment and Accreditation Council

6. Dr Babasaheb Ambedkar Open University, Ahmedabad, Gujarat.
7. Karnataka State Open University, Mysore, Karnataka.
8. Netaji Subhas Open University, Kolkata.
9. U.P. Rajarshi Tandon Open University, Allahabad.
10. Tamil Nadu Open University, Chennai, Tamil Nadu.
11. Pt. Sunderlal Sharma Open University, Bilaspur, Chhattisgarh.
12. Uttarakhand Open University, Haldwani, Uttarakhand.
13. Krishna Kanta Handique State Open University, Guwahati.

PROFESSIONAL, TECHNICAL AND SKILL DEVELOPMENT EDUCATION IN INDIA

There is a huge demand for professional, technical and skill development education in the modern age of science and technology. It is quite different from what we would find in our society seventy years back. In free India, the education was thoroughly reorganized again stressing the importance of science and technology to bring about a total regeneration. Hence, quite a number of regional engineering colleges, private/self-financial institutes of technology and centres for researches in science came into existence all over the country to provide technical education. This role of educational institutions found it necessary to redefine its goal mainly related to economic development and to ensure a place for India in the community of prosperous nations. It was not just an end, it was the dream of modern India and technical education was given the due importance with a view to realizing that dream. Besides this, in this age of unemployment, only technical education can assure one a job and a comfortable life. Then we need to focus on exploiting 'demographic dividend' as well.

PROFESSION

The profession is a vocation founded upon specialized educational training, the purpose of which is to supply counsel and service to others, for a direct and definite compensation, wholly apart from expectation of other business gain.

A profession arises when any trade or occupation transforms itself through 'the development of formal qualifications based upon education, apprenticeship, and examinations, the emergence of regulatory bodies with powers to admit and discipline members, and some degree of monopoly rights.'

Other Regulators in Higher Education: Specialized Professional Bodies

The professional regulatory bodies grant approval for establishment of institutes and determine standards for the same. Some of the specialized professional bodies are as follows.

1. Medical Council of India
2. Dental Council of India
3. India Nursing Council
4. Council of Architecture
5. Bar Council of India
6. Pharmacy Council of India
7. Indian Council of Agricultural Research (ICAR)
8. Rehabilitation Council of India
9. Central Council of Homeopathy
10. Central Council of Indian Medicine
11. Veterinary Council of India

Thus, a significant part of the Indian higher education system is regulated. However, there are certain areas that are not.

TECHNICAL EDUCATION

Technical education imparts knowledge of a specific trade, craft or profession. Technical education can meet the increasing demands of expanding society and it is multiplying demands and development. The industries, mechanized systems and scientific research centers all over the world prove that our bond with the past is breaking and instead of bare hands we must use machines and technological devices for all-round development and regeneration of human society.

To train our students/professionals in response to the need of the time, our education system must be reorganized to give it the necessary practical and technical bias. The Government of India is also very keen for universal recognition of our education system, and because of that all universities are trying hard to get the NBA accreditation.

We find that in a zeal to cope with the advancement of science and technology, our technical education system has become primarily skill-oriented and almost deficient or casual in the education in human values.

Technical Education Scenario in India

In India, technical education covers programmes in engineering, technology, management, architecture, town planning, pharmacy, applied arts and crafts, and hotel management and catering technology.

1. The first engineering college was established in Uttar Pradesh in 1847 for training of civil engineers at Roorkee. It conferred diplomas that were considered to be equivalent to degrees.

2. Three engineering colleges were opened by about 1856 in three presidencies, namely Calcutta, Bombay and Madras.
3. In Bengal, the leaders of the Swadeshi Movement tried to start many institutions. However, only College of Engineering and Technology at Jadavpur survived.
4. Many technical courses were started at the University of Banaras with great efforts put by Pandit Madan Mohan Malaviya (1917).
5. Many other courses were also started at the Bengal Engineering College at Shibpur in the 1930s.
6. A number of engineering colleges started since 15 August 1947. It was due to the realization that India had to become a great industrial country and would require a large number of engineers than could be supplied by the older institutions.

All India Council for Technical Education

All India Council for Technical Education (AICTE) governs technical education in India. It was set up in 1945 as an advisory body and later on in 1987, was given a statutory status by an act of Parliament. AICTE grants approval for starting new technical institutions, for the introduction of new courses, and for variation in intake capacity in technical institutions.

The AICTE is headquartered in New Delhi and has seven regional offices located at Kolkata, Chennai, Kanpur, Mumbai, Chandigarh, Bhopal and Bangalore. A new regional office at Hyderabad has been set up and is yet to be operational.

The council discharges its functions through an executive committee.

It is responsible for the maintenance of standards of technical education, which currently includes education research and training in the following fields.

1. Engineering
2. Technology including MCA
3. Architecture
4. Town planning
5. Management
6. Pharmacy
7. Hotel management and catering technology
8. Applied arts and crafts

Council of Architecture

The Council of Architecture (COA) was constituted by the Government of India under the provisions of the Architects Act, 1972, enacted by the Parliament which came into force on 1 September 1972. The Act provides for registration of architects and matters connected therewith.

MHRD-funded Institutions

Technical education system in the country can be broadly classified into three categories, namely central government-funded institutions, State government or state-funded institutions, and self-financed institutions. The centrally funded institution of technical and science education are as follows.

IITs	15	NITs	30
IIMs	13	IIITs	4
IISc, Bengaluru	1	NITTTRs	4
IISERs	5	Others	9

Indian Institute of Technology

These are the apex institutions for engineering education and research. At present, there are 15 Indian Institute of Technology (IITs).

IIT-Kharagpur (1951), IIT-Bombay (set up in 1958 with help from USSR and UNESCO), IIT-Madras (1959), IIT-Delhi (1963) and IIT-Guwahati (1994) are governed by the Institutes of Technology Act, 1961 which has declared them as Institutions of National Importance.

In 2008, the government approved the setting up of eight new IITs in Bihar (Patna), Rajasthan (Jodhpur), Odisha (Bhubaneswar), Andhra Pradesh (Hyderabad), Gujarat (Gandhinagar), Madhya Pradesh (Indore), Himachal Pradesh (Mandi) and Punjab (Ropar).

As part of the National Plan of Science and Technology, five centres of Advanced Study and Research have been set up in the IITs in Energy Studies (Delhi), Material Science (Kanpur), Cryogenic Engineering (Kharagpur), Ocean Engineering (Madras) and Resource Engineering (Bombay).

Indian Institutes of Management

Indian Institutes of Management (IIMs) located at Ahmedabad, Kolkata, Bangalore, Lucknow, Indore, Kozhikode and Shillong are some of the institutions of excellence, established with the objectives of imparting high-quality management education and training, conducting research and providing consultancy services in the field of management to various sectors of the Indian economy. All the IIMs are registered societies governed by their respective Board of Governors. IIM-Ahmedabad was set up in 1961.

During the 11th Five Year Plan, six new IIMs have been set up in Haryana (Rohtak), Chhattisgarh (Raipur), Jharkhand (Ranchi), Tamil Nadu (Tiruchirappalli), Uttarakhand (Kashipur) and Rajasthan (Udaipur) in 2010.

Indian Institute of Science (IISc), Bangalore

Indian Institute of Science (IISc), Bengaluru, was started in 1909 through the pioneering vision of J. N. Tata. The Institute has been engaged in higher learning and advanced research in the fields of science and engineering. As discussed earlier, IISc was the first deemed university in India.

Five new institutions devoted to science education and research have been set up as Indian Institutes of Science Education and Research (IISER) broadly on the pattern of IISc, Bangalore. These have been started at Kolkata, Pune, Mohali, Bhopal and Thiruvananthapuram.

National Institute of Technology

Based on the recommendations of Engineering Personnel Committee set up by the Planning Commission in 1955, eight regional engineering colleges (two each in east, west, north, and south) were set up in early sixties. Gradually, the number increased to 17.

In 2003, Regional Engineering Colleges (RECs) were rechristened as National Institute of Technology (NITs) and taken over as fully-funded institutes of the central government. They were granted a deemed university status. Over a period, the total number of NITs has gone up to 30.

Indian Institute of Information Technology (IIITs)

IIITs were specifically set up to meet the manpower requirements of the IT sector. The Central government established four IIITs at Allahabad, Gwalior, Jabalpur, and Kanchipuram. These institutions are meant to provide undergraduate as well as postgraduate education. The 11th Five Year Plan envisaged the establishment of 20 more IIITs in the country in the PPP mode.

List of IIITs

1. Indian Institute of Information Technology, Allahabad.
2. Atal Bihari Vajpayee-Indian Institute of Information Technology and Management (ABV-IIITM), Gwalior.
3. Pandit Dwarka Prasad Mishra-Indian Institute of Information, Technology, Design and Manufacturing (IIIT-D and M), Jabalpur.
4. Indian Institute of Information Technology, Design and Manufacturing (IIIT-D and M), Kanchipuram.

National Institute of Technical Teachers' Training and Research (NITTTRs)

Four National Institute of Technical Teachers' Training and Research (NITTTRs) located at Bhopal,

Chandigarh, Chennai, and Kolkata were established in mid-1960s for the training of polytechnic teachers to undertake activities in the areas of education, planning, and management.

Recent Government Initiatives

The present government aims at creating more institutions of higher learning and reducing the regional disparities as far as elite institutions of advanced studies are concerned. With this objective, the government has announced new institutes of excellence, where two IIMs will come up in Jammu and Kashmir and Andhra Pradesh. One IIT will come up in Karnataka, and the second will be formed by upgrading the Indian School of Mines, Dhanbad, in Jharkhand to an IIT.

The Government has announced the setting up of new National Institutes of Pharmaceutical Education and Research (NIPERs) in Maharashtra, Rajasthan, and Jharkhand. Institutes of Sciences and Educational Research are to be set up at Odisha and Nagaland.

A Centre for Film Production, Animation and Gaming will be set up in Arunachal Pradesh. Apprenticeship training institutes for women would come up in Haryana and Uttarakhand.

Externally Aided Projects in Technical Education

- 1. Technical Education Quality Improvement Programme (TEQIP):** It was launched by MHRD in 2002 to upscale and support the ongoing efforts in improving the quality of technical education. TEQIP Phase I (2003–09) and TEQIP Phase II were implemented with the assistance of World Bank.
- 2. Technician Education Project-III:** It was launched with the help of World Bank for the upgradation of polytechnics in the country.

Skill Development in India

Introduction skills and knowledge are the driving forces of economic growth and social development for any country. Presently, the country faces a demand-supply mismatch, as the economy needs more 'skilled' workforce than that is available. In the higher education sphere, knowledge and skills are required for diverse forms of employment in the sector of education, health care manufacturing and other services. Potentially, the target group for skill development comprises all those in the labour force, including those entering the labour market for the first time, those employed in the organized sector and also those working in the unorganized sector. Government of India, taking note of the requirement for skill development among students launched National Vocational Education Qualification

Framework (NVEQF) which was later on assimilated into National Skills Qualifications Framework (NSQF).

Various Sector Skill Councils (SSCs) are developing Qualification Packs (QPs), National Occupational Standards (NOSs) and assessment mechanisms in their respective domains, in alignment with the needs of the industry. In view of this, the UGC implemented the scheme of Community Colleges from 2013–14 in pilot mode on the initiative of the MHRD. Thereafter, realizing the importance and the necessity for developing skills among students, and creating work ready manpower on large scale, the Commission decided to implement the scheme of Community Colleges as one of its independent schemes from the year 2014–15. The Commission also launched another scheme of B.Voc. Degree programme to expand the scope of vocational education and also to provide vertical mobility to the students admitted into Community Colleges for Diploma programmes to a degree programme in the Universities and Colleges. While these two schemes were being implemented, it was also realized that there is a need to give further push to vocational education on a even larger scale. Accordingly, 'Deen Dayal Upadhyay Centres for Knowledge Acquisition and Upgradation of Skilled Human Abilities and Livelihood (KAUSHAL)' was also incorporated. Since all these three provisions serve a common purpose, all these schemes are merged into a single scheme for providing skill based education under National Qualification Framework.

Pradhan Mantri Kaushal Vikas Yojana (PMKVY) is the flagship scheme of the Ministry of Skill Development & Entrepreneurship (MSDE). The objective of this Skill Certification Scheme is to enable a large number of Indian youth to take up industry-relevant skill training that will help them in securing a better livelihood.

Though the present government is aiming to skill 40 crore people by 2022 through its 'Skill India' program, the lack of awareness among youth about the government-run skill development programs is one of the key obstacles with about 70% of Indian youth is not aware of these schemes, according to a recent study 'Young India and Work' by the Observer Research Foundation and World Economic Forum (WEF).

India is one of the youngest nations in the world, with over 62% of the population in the working age group. Approximately, 250 million young people will be joining the workforce over the next decade. The government had launched the Skill India initiative, which aims to train over 40 crore people in India in different skills by 2022. Since then, various schemes have been launched like Pradhan Mantri Kaushal Vikas Yojana

Components of Indian Education Systems

Undergraduate/Bachelor's Level Education

The undergraduate course, i.e., the Bachelor's degree is obtained after three years of study in the case of arts (B.A.), science (B.Sc.) and commerce (B.Com.). UG courses in professional subjects, for the Bachelor's degree, like Engineering (B.E., B.Tech.), Medicine (M.B.B.S.), Dentistry (M.D.) and Pharmacy (B.Pharma) range from 4 to 5 and a half years.

Postgraduate/Master's Level Education

Postgraduate courses in Arts, Science, Commerce, Engineering and Medicine are 2 year courses for the award of a Master's degrees. Master's program can be pursued only after completion of a bachelor's degree.

Doctoral Studies/ Ph.D Level Education

M.Phil. Program is of one and-half year to two years in duration. Ph.D. program is for a minimum of 3 years and can take several years. These courses involve research work under a chosen/allotted guide, leading to thesis submission and viva-voce. Successful completion of Ph.D. course designates the title of 'Doctor' to the individual.

Certificate and Diploma Programs

In addition to the degree programs, a number of diploma and certificate programs are also available in universities. Their range is wide and they cover anything from poetics to computers. Some of them are undergraduate diploma programs and others postgraduate programs. The duration varies from course to course and program to program and usually ranges between one year and three years.

(PMKVY) to further the aim of skill development, in order to enable a large number of youths in the country to take up industry-relevant skill training that will help them in securing a better livelihood.

VALUE EDUCATION

From a broader perspective, the aim of value education is linked with the fundamental question of what education itself is meant for.

- 1. Individual's perspective:** To enable students to achieve personal fulfilment for success in life and work.
- 2. Societal perspective:** Education aims to prepare the youth to contribute to society, nation and the world.

Plato wrote in *The Republic*, 'The mark of an educated person is the willingness to use one's knowledge and skills to solve the problems of society'.

Key Developments in Value Education

- 1. National Commission of Secondary Education (1952–1953)** emphasized character building as the defining goal of education.
- 2. University Education Commission (1962)** noted, 'If we exclude spiritual training in our

institutions, we would be untrue to our whole historical development'.

- 3. Education Commission of 1964–1966** put the spotlight on education and national development. Agreeing with the Sri Prakasa Committee Report 1959, it recommended direct moral instruction for which one or two periods a week should be set aside in the school time table.
- 4. NPE (1986)** advocated turning education into a forceful tool for the cultivation of social and moral values. Education should foster universal and eternal values, oriented toward the unity and integration of our people.
- 5. NPE—Programme of Action (1992)** tried to integrate the various components of value education into the curriculum at all stages of school education including the secondary stage.
- 6. Chavan's Committee Report (1999)** provided impetus to resume work on value orientation of education.
- 7. The National Curriculum Framework for School Education (2000)** advanced a plea to integrate value education into the curriculum.
- 8. National Curriculum Framework (2005)** articulates the need to reaffirm our commitment to the concept of equality amidst diversity, mutual

interdependence of humans to promote values that foster peace, humaneness, and tolerance in a multicultural society. The NCF, 2005 particularly emphasizes education for peace as one of the national and global concerns.

Main Issues behind the Need for Imparting Value Education

Tradition versus Modernity

Developing societies, such as India, face a conflict between tradition and modernization. It is important to make young learners develop attitudes where they do not see everything in tradition as bad or everything in modernization as good. There are many things positive about our traditional culture, which needs to be appreciated and understood, such as tolerance of dissonance, harmony rather than control over environment, collectivism and self-definition in a social context emphasizing modesty, cooperation, duty, acceptance and so on.

Globalization

Globalization signifies an omnipresent culture. Societies have become less and less mono-cultural. Consequently, the pluricultural environment in which we live now is more complex and multiple with different cultures developing in such a way that it is no longer possible to think of adapting to a homogeneous environment.

Diversity

India is a multilingual, multicultural and multi-religious country. Universality and diversity may seem incompatible, but both have to coexist in a democratic and diverse society such as ours, where values of democracy prevail along with the values of differences that are also fully recognized and respected.

Inclusivity

A healthy, happy society is one in which all its members feel included and do not feel excluded from the processes of the society because of their colour, culture, caste, religion, gender or community.

Environment

Making children sensitive to the environment and the need for its protection is an immediate social concern. The reckless exploitation of environment, depletion of ozone layer, global warming, industrial pollution, deforestation, and soil erosion are few problems faced by humanity.

Exploding World of Science and Technology

It is very clear that the coming decades are going to see a greater explosion of science and technology, while we are still trying to cope with the present challenges of new technology. It has many good and bad unintended consequences. How science and technology are to be used is a question of values. Application of science and technology in a more humane and rational way is related to moral and ethical responsibility.

Mass and Social Media

A major ubiquitous aspect of contemporary society is the intrusion of mass media into day-to-day life of all societies. The values and attitudes that get transmitted are rather contrary to the values desired by the family, society, or school. Propagating myths and derogatory images of women, for example, is likely to make the young learner grow up with prejudices that are injurious to women and society, rather than learning that all human beings are equal.

Values enshrined in our constitution, such as justice, liberty, equality, and fundamental duties have been discussed in the later sections.

KEY TRENDS IN HIGHER EDUCATION SYSTEM IN INDIA

1. General courses (arts, science and commerce) account for majority (around 80%) of student enrollments. Engineering has increasingly strengthened its position as the most highly preferred professional course.
2. Degree-granting courses have seen greater enrolment with regard to diploma and certificate courses. However, the relative enrolment of students in postgraduate programmes has declined as compared to enrolment in undergraduate courses.
3. The share of unaided private higher education institutions in the country has grown significantly in the last few years. The percentage of students in unaided private higher education institutions has also increased considerably.
4. There has been a rapid growth in the number of professional private higher education institutions. This growth is reflected in the dominant share of unaided private higher education institutions in professional courses.

All India Survey on Higher Education (AISHE)

MHRD initiated an AISHE in the year 2010–11 with reference date for filling up the Data Capture Format

(DCF) is 30th September of the Academic Year to build a robust database and to assess the correct picture of Higher Education in the Country.

Teachers Information Format (TIF) was added for the first time in 2016–17. The survey is being conducted on annual basis.

The e-version of Data Capture Format (DCF) and Teacher Information Format (TIF) has been prepared for collecting the data from all the Universities, Colleges and Stand-alone Institutions registered on AISHE Portal (<http://aishe.gov.in>).

The expectations from such surveys include the following.

1. Creation of Comprehensive database on Higher Education.
2. No time lag.
3. Complete and Reliable Educational Indicators.
 - (a) Student Enrolment, GER, GPI, PTR, etc.
 - (b) Teaching and non-teaching positions.
 - (c) Infrastructural facilities, examination result, number of program, student finance, etc.
 - (d) AISHE data are useful in making informed policy decisions and research for development of education sector.

Key Issues Facing Spread of Higher Education in India

National Policy on Higher Education translated the vision of the Radhakrishnan Commission and the Kothari Commission into an actionable policy by setting five main goals for higher education, which are enumerated as follows.

1. **Access**
2. **Equity:** Equity involves fair access to the poor and the socially disadvantaged groups to higher education.
3. **Quality and excellence**
4. **Relevance**
5. **Value-based education:** This involves inculcating basic moral values among the youth.

As per the UGC guidelines, the student–teacher ratio should be 30 : 1. However, in some of the states, the ratio is as high as 100 : 1.

Despite having one of the largest higher education systems in the world, few Indian institutions have earned global distinction. There is no Indian institute in the world's top 200.

New Government Initiatives

GIAN Global Initiative for Academic Network: GIAN aims at tapping the talent pool of scientists and entrepreneurs, internationally, to encourage their engage-

ment with the institutes of Higher Education in India so as to augment the country's existing academic resources, accelerate the pace of quality reform, and elevate India's scientific and technological capacity to global excellence. It is proposed to initiate the program under collaboration with various countries.

Skills Assessment Matrix for Vocational Advancement of Youth (SAMVAY): A credit framework—SAMVAY—is now in place which allows vertical and lateral mobility within vocational education system and between the current education systems. The strength of this framework is the seamless integration of pursuit of academic knowledge and practical vocational skills. Efforts like these will improve the employability of our educated youth.

Campus connect: The National Mission on Education through Information and Communication Technology (NMEICT) Scheme aims to leverage the potential of ICT for teaching and learning processes. The mission has two major components, such as (a) content generation and (b) provide connectivity along with provision for access devices to the institutions and learners. Under the NMEICT Mission, connectivity to 419 Universities/ University level Institutions and 25,000+ colleges and polytechnics in the country has been envisaged to be provided.

National e-Library: The National Digital Library of India is envisaged as a National knowledge asset that will provide ubiquitous digital knowledge source. It will support and enhance education, research and innovation catering to the needs of all types of learner groups over the country. Developing and providing efficient access to quality e-content addressed to various learners with different backgrounds, expectations and languages.

National Ranking Framework: A committee on National Ranking Framework under the chairmanship of Secretary (HE) was constituted to evolve a ranking framework for universities and institutions. Workshops were organized in coordination with the *Times Higher Education* World University Rankings (THER) and the Quacquarelli Symonds (QS) ranking agencies to address various ranking parameters. The MHRD and MHA are collaborating to address employment VISA requirements, which aims at increasing the number of foreign faculty. This will help improve the internationalization parameter in various ranking systems.

Mandatory Accreditation: National Assessment and Accreditation Council had submitted a project proposal to MHRD under Rashtriya Uchcharitar Shiksha

Abhiyan (RUSA). The major features of the National Quality Renaissance Initiative (NQRI) are (i) awareness building, popularization, and promotion of quality assurance mentoring higher education institutions, (ii) building collegium of assessors, and (iii) quality sustenance and enhancement initiatives.

Bachelor of Vocational Studies: The UGC has introduced the scheme for B.Voc degree with multiple exits at Diploma/Advanced Diploma under National Skill qualification Framework (NSQF).

The objectives are (i) to enhance the employability of youth, (ii) to maintain their competitiveness through provisions of multi-entry multi-exit learning opportunities and vertical mobility, (iii) to fill the gap between educated and employable, and (iv) to reduce the drop-out rate at the secondary level. Currently, 2035 schools across 25 states are implementing the scheme.

Education Sector Skill Council: Education Sector Skill Council was constituted in September 2014 to consider job roles other than academic faculties and teacher qualifications.

Kaushal Kendras: One hundred ‘Deen Dayal Upadhyay Centres’ for Knowledge Acquisition and Upgradation of Skilled Human Abilities and Livelihood’ (KAUSHAL) will be set up. These Kendras will formulate courses at postgraduate level keeping in mind the need of (i) industry in specialized areas, (ii) instructional design, curriculum design, and contents in the areas of skills development, (iii) pedagogy, assessment for skills development education and training, (iv) trained faculty in the areas of skill development, and (v) entrepreneurship.

Unnat Bharat Abhiyan: IIT, IISER and NIT to adopt villages and develop appropriate rural technologies for sustainable development through peoples’ participation. The Abhiyan will enable processes that connect institutes of higher education with local communities. Focus on water management, organic farming, renewable energy, frugal technology, infrastructure and livelihood.

Ishan Uday—Scholarship Scheme for Students of North East Region: The UGC has launched a Special Scholarship Scheme for students of North East Region, Ishan Uday, from the academic session 2014–15.

Ishan Vikas—Academic Exposure for North Eastern Students: The programme has been launched with a plan to bring selected college and school students from the North Eastern states into close contact with IITs, NITs and IISERs during their vacation periods for academic exposure.

Saakshar Bharat—Adult Literacy and Pradhan Mantri Jan Dhan Yojna: Centrally Sponsored Scheme of Adult Education and Skill Development has a special focus on underprivileged groups. Four hundred and ten districts are covered under the programme.

PRAGATI—Scholarships for Girl Child for Technical education: PRAGATI aims at providing encouragement and support to girl child to pursue technical education.

Budget 2016–17: Education Funding Agency (HEFA)

<p>What’s HEFA To be set up with joint participation by the government and philanthropic donors</p>	
<p>Will be set up under Section 8 of the Companies Act 2013 and registered with RBI as a non-banking finance company; will be chaired by a banker and have a board with 5 donors and 5 institutions selected on rotation basis</p>	
<p>All centrally funded higher educational institutions will automatically be added as members</p>	
<p>What will it do Finance capital expenditure for building quality infrastructure in IITs, NITs, IIITs and IISERs and central universities</p>	
<p>Fund state-of-the-art research labs and other infrastructure</p>	
<p>Where will the money come from</p>	
<p>Total corpus: ₹ 2,000 crore</p>	<p>Initial government contribution of ₹ 1,000 crore and ₹ 200 crore each from 5 other corporate donors, of which the sponsoring bank would be one</p>
<p>Debt funding of up to ₹ 10,000 crore from the financial markets, including pension and insurance funds</p>	
<p>1.5 ceiling on the own funds-to-debt ratio</p>	
<p>Inflows would be from market borrowings, CSR funds from PSUs and other corporates, escrowed funds from Institutions (Expected to be ₹ 2,000 Cr each year @ ₹ 2.5 lakh per student) and possibly viability gap funding. Debt to be serviced from the funds received through the escrowed student fee accounts and the donations received from the CSR funds and others</p>	
<p>What it means for a Higher Education Institute</p>	
<p>An institute will be eligible for a credit limit of 5 times the annual inflow of the student fee from the institution. The institute can then draw interest-free funds against an approved capital or research project and repay the amount over 5-10 years through the escrowed student fee</p>	
<p>Each institute will have to prepare a detailed master plan on infra gaps that will be assessed by an independent group before releasing amount sought</p>	<p>HEFA will monitor implementation, fund utilisation and review outcome, thus necessitating greater financial discipline across institutes</p>
<p>Will HEFA be financially viable?</p>	
<p>Can be self-sustaining if it manages investment of ₹ 25k cr over next 5 yrs and there is inflow of ₹ 25k cr from fee escrow account. Assumptions are that institutions will fully pay loan amount without any interest and market borrowings will be at 12%</p>	<p>It is expected investment of ₹ 25k cr over the next 5 yrs will be repaid in 12 yrs. Govt would then need to give viability gap funding between years 4 and 8 of ₹ 13,800 cr. This can be recouped between 12th and 15th year</p>

Swami Vivekananda Scholarship for Single Girl Child: UGC has introduced the Swami Vivekananda Scholarship for Single Girl Child for research in Social Sciences with an aim to compensate direct costs of higher education especially for such girls who happen to be the only girl child in their family.

CIHEC (Council for Industry Higher Education Cooperation): This relates to creating linkages between the Industry and Academia. A nodal agency potentially called the Council for Industry and Higher Education Collaboration (CIHEC) would be established to promote and facilitate industry–higher education collaboration.

Nineteen New Higher Educational Institutions: Five IITs (one each in Andhra Pradesh, Jammu & Kashmir, Chhattisgarh, Goa, and Kerala); Six IIMs (one each in Himachal Pradesh, Andhra Pradesh, Punjab, Maharashtra, Bihar, and Odisha); Four New Central Universities—Andhra Pradesh (one Central University and one Tribal University), Bihar (Mahatma Gandhi Central University); One IISER in Andhra Pradesh; One NIT in Andhra Pradesh; One IIIT in Andhra Pradesh; and One Tribal University in Telangana.

Many new institutions that are in pipeline have been discussed under New Government Initiatives on page 10.14.

GOVERNANCE, POLITY, AND ADMINISTRATION

The topics, such as governance, polity and administration, have their origins in the constitution of the country. In Net Paper 1 Exam, 3–4 questions are asked from constitution.

Defining Constitution

Constitution is a living document, an instrument that makes the government system work. The constitution of the United State of America, which was promulgated way back in 1787, became the world's first written constitution. Unlike most modern states, Britain does not have a codified constitution but an unwritten one formed of Acts of Parliament, court judgements, and conventions. Magna carta (origin UK) completed 800 years in 2015. It is considered as mother of all constitutions and fundamental rights.

Constitution is the supreme law of the land. All other laws have to conform to the constitution. It contains laws concerning the government and its relations with the people. We adopted many features from other constitutions of the world, which are as follows.

UK

1. Nominal head of state (President in India)
2. Cabinet system of ministers
3. Prime minister as the head of the government
4. Parliamentary system of government
5. Bicameral parliament with more powerful lower house (Lok Sabha)
6. Council of ministers responsible to lower house
7. Speaker in Lok Sabha

US

1. Written constitution
2. President being the supreme commander of the armed forces
3. fundamental rights
4. Supreme court—-independent judiciary and judicial review
5. Preamble

USSR

1. Fundamental Duties
2. Five Year Plans

Australia

1. Concurrent List
2. Language of the Preamble

Japan

1. Law on which the Supreme Court functions

Weimar Constitution of Germany

1. Suspension of fundamental rights during emergency

Canada

1. Scheme of federation with a strong centre, distribution of powers between the centre and the states and placing residuary powers with the centre.

Ireland

1. Concept of Directive Principles of States Policy
2. Method of election of President
3. Nomination of members in the Rajya Sabha by the President

Development of Constitution

Government of India Act (1935): It introduced provincial autonomy, i.e., a responsible government at the provinces with elected Indians in charge of the administration and responsible to the elected legislatures. A federal government was proposed, though it did not come into effect. At the centre, diarchy was introduced.

Note: 2015 was celebrated as 800th year of magna carta.

Constituent Assembly

1. The idea to have a constitution was given by M. N. Roy, a political philosopher.
2. Constituent Assembly of India (1946) to write the Constitution of India under the Cabinet Mission Plan. It took place on 9 December 1946. Dr Sachchidananda Sinha was elected as its ad hoc Chairman.
3. On 11 December 1946, Dr Rajendra Prasad was elected as the permanent chairman of the Constituent Assembly.
4. On 13 December 1946, Objective Resolution was introduced by J. L. Nehru, which later became the basis of Preamble to our constitution.
5. Dr Bhim Rao Ambedkar was elected as the Chairman of Drafting Committee.
6. Constituent Assembly approved the constitution on 11 November 1949, and the constitution came into effect on 26 January 1950. The Constituent Assembly took 2 years, 11 months and 8 days to complete the constitution.
7. India became republic on the same day.
8. Initially, it had 395 articles in 22 parts and 8 schedules, which are presently 12.
9. G. V. Mavalankar became the first speaker of the Legislative Assembly.
10. Constituent Assembly was to comprise of 389 members, of which as many as 296 of them were to be elected from British India and 93 of them were to be the representatives of the Native States.

Salient Features of the Constitution

In making the constitution, the Assembly was inspired by several sources such as the Preamble, which was inspired by the French Declaration of the Rights of Man and Citizen, the Fundamental Rights by the American Bill of Rights, the Directive Principles by the Irish Constitution, and the federal setup by the American Government as well as the Act of 1935.

The following are some of the prominent features of our constitution.

3. **Sovereign, socialist, and democratic republic:** India is sovereign because its government is not subject to any outside authority. It is socialist because it has mixed economy and is secular as there is no state religion. The state treats all religions equally. It is democratic as its rulers are elected by the people and are responsible to them, and it is republic as it has an elected head of state.
4. **Parliamentary form of government:** India has a parliamentary form of government. This means the executive (Prime Minister and his council of ministers) is responsible to the legislature (parliament). The three constituents of parliament are President, Lok Sabha and Rajya Sabha. The president of the union is the constitutional head of the state. The prime minister is considered as the head of the government.
5. **Blend of flexibility and rigidity:** Usually, the process of amendment of the Indian constitution is simple and it requires only a majority in the parliament. However, in cases involving the government of the states, the process of amendment is more complicated and requires the consent of at least half the state legislatures.
6. **Fundamental rights:** These are contained in Part III of the constitution. The fundamental rights are in the form of restrictions on the power of the government. They are protected by the Supreme Court.
7. **Directive Principles of State Policy:** These principles are in the spirit of Modern Welfare State. These are contained in Part IV and it defines the aims of the government. They aim to set up a socialistic state in India, in which all the basic needs are met by the government. However, they are not enforceable by the Supreme Court. The different schemes launched by the government are actually inspired by the Directive Principles.
8. **Universal adult suffrage (franchise):** Franchise or suffrage means the right to vote. In India, anybody above the age of 18 years can vote without qualifications of sex, property, taxation, or literacy.
9. **Independent judiciary:** The Indian Supreme Court is independent and impartial. It safeguards the fundamental rights and settles disputes between the centre and the states.
10. **Single citizenship:** Single citizenship states that any person who voluntarily acquires the citizenship of any other country is not an Indian citizen any longer.
11. **Fundamental duties:** These were introduced by the 42nd Amendment in 1976. They are intended to balance the fundamental rights. However, they are also not justiciable.

Preamble to the Constitution

The draft of the Preamble was prepared by Jawaharlal Nehru and is based on the American model. The Preamble states:

‘We, the People of India, having solemnly resolved to constitute India into a sovereign, socialist, secular, democratic, republic, and to secure to all its citizens.

1. **Justice** in terms of social, economic and political.
2. **Liberty** of thought, expression, belief, faith and worship.
3. **Equality** of status and of opportunity and to promote them among all.

4. **Fraternity** by assuring the dignity of the individual and the unity and integrity of the nation.

In our Constituent Assembly, 26 November 1949, do hereby adopt, enact, and give to ourselves this constitution’.

Through the 42nd Amendment in 1976, the words secular and socialist were added to the constitution.

The 42nd amendment is termed as the Mini constitution as many amendments were effected in the constitution.

The below Table 10.2 gives us a snapshot of our constitution.

Table 10.2 A Snapshot of Our Constitution

Part	Articles	Deals in
Part I	1–4	Territory of India, admission, establishment or formation of new states
Part II	5–11	Citizenship
Part III	12–35	Fundamental Rights
Part IV	36–51	Directive Principles of State Policy
Part IV A	51A	Duties of a citizen of India. It was added by the 42nd Amendment in 1976
Part V	52–151	Government at the union level
Part VI	152–237	Government at the state level
Part VII	238	States in Part B of First Schedule were repealed by 7th Amendment in 1956
Part VIII	239–241	Administration of Union Territories
Part IX	242–243	Territories in Part D of the First Schedule
Part X	244–244A	Scheduled and tribal areas
Part XI	245–263	Relations between the union and states
Part XII	264–300	Finance, property, contracts, and suits
Part XIII	301–307	Trade, commerce, and travel within the territory of India
Part XIV	308–323	Services under the union and states
Part XIV A	323A–323B	Added by the 42nd Amendment—administrative tribunals for settling disputes
Part XV	324–329	Election and election commission
Part XVI	330–342	Special provision to certain classes ST/SC and Anglo Indians
Part XVII	343–351	Official languages
Part XVIII	352–360	Emergency provisions
Part XIX	361–367	Miscellaneous provision—exemption of President and Governors from criminal proceedings
Part XX	368	Amendment of constitution
Part XXI	369–392	Temporary, transitional, and special provisions
Part XXII	393–395	Short title, commencement, and repeal of the constitution

Schedules in the Constitution of India

1. **First Schedule:** List of states and union territories
2. **Second Schedule:** Salaries of president, governors, chief judges, judges of high court and supreme court, comptroller and auditor general.
3. **Third Schedule:** Forms of oaths and affirmations.
4. **Fourth Schedule:** Allocation of seats for each state of India in Rajya Sabha.
5. **Fifth Schedule:** Administration and control of scheduled areas and tribes.
6. **Sixth Schedule:** Provisions for administration of tribal areas in Assam, Meghalaya, Tripura, Mizoram, and Arunachal Pradesh.
7. **Seventh Schedule:** Gives allocation of powers and functions between union and states. It contains three lists.

1	Union List	97 subjects
2	State List	66 subjects
3	Concurrent List	47 subjects

Both centre and states can legislate on the concurrent list.

8. **Eighth Schedule:** List of 22 languages of India recognized by the Constitution are as follows.
1. Assamese
 2. Bengali
 3. Gujarati
 4. Hindi
 5. Kannada
 6. Kashmiri
 7. Manipuri
 8. Malayalam
 9. Konkani
 10. Marathi
 11. Nepali
 12. Oriya
 13. Punjabi
 14. Sanskrit
 15. Sindhi
 16. Tamil
 17. Telugu
 18. Urdu
 19. Santhali
 20. Bodo
 21. Maithili
 22. Dogri
- Sindhi was added in 1967 by the 21st Amendment. Konkani, Manipuri, and Nepali were added in 1992 by the 71st Amendment. Santhali, Maithili, Bodo, and Dogri were added in 2003 by the 92nd Amendment.
9. **Ninth Schedule:** Added by the 1st Amendment in 1951; it contains acts and orders related to land tenure, land tax, railways, industries (right to property is not a fundamental right now).
10. **Tenth Schedule:** Added by the 52nd Amendment in 1985; it contains provisions for disqualification on grounds of defection.
11. **Eleventh Schedule:** Added by the 73rd Amendment in 1992; it contains provisions for Panchayati Raj.
12. **Twelfth Schedule:** Added by the 74th Amendment in 1992; it contains provisions for municipal corporation.

Is there any official language in India

India has no official language. The official language of the union government of Republic of India is Hindi, while English is the secondary official language. The constitution of India states that 'The official language of the Union shall be Hindi in Devanagari script', which was supported by a High Court ruling. However, languages listed in the Eighth Schedule of the Indian Constitution are sometimes referred to, without legal standing, as the National Languages of India.

Fundamental Rights

The fundamental rights are in Part III of the Indian Constitution, 1949, from Article 12 to 35. The framer of the Indian constitution borrowed it from USA. Part III of the Constitution is rightly described as the 'Magna Carta of India'. The Fundamental Rights are guaranteed by the Constitution to all persons without any discrimination. The Fundamental Rights are named so because they are guaranteed and protected by the Constitution, which is the fundamental law of the land.

Originally, the right to property was also included in the Fundamental Rights. However, the 44th Amendment, passed in 1978, revised the status of property rights by stating that 'No person shall be deprived of his or her property save by authority of law'.

The Fundamental Rights are given below.

Right to Equality

Article 14: Equality before law and equal protection of law.

Article 15: Prohibition of discrimination on grounds of religion, race, caste, sex or place of birth.

Article 16: Equality of opportunity in matters of public employment.

Article 17: End of untouchability.

Article 18: Abolition of titles; military and academic distinctions are, however, exempted.

Right to Freedom

Article 19: It guarantees the citizens of India the following six fundamentals freedoms.

1. Freedom of speech and expression
2. Freedom of assembly
3. Freedom to form associations
4. Freedom of movement
5. Freedom of residence and settlement
6. Freedom of profession, occupation, trade, and business

Article 20: Protection in respect of conviction for offences.

Article 21: Protection of life and personal liberty.

Article 22: Protection against arrest and detention in certain cases.

Right against Exploitation

Article 23: Trafficking of human beings is prohibited.

Article 24: No child below the age of 14 can be employed.

Right to Freedom of Religion

Article 25: Freedom of conscience and free profession, practice, and propagation of religion.

Article 26: Freedom to manage religious affairs.

Article 27: Prohibits taxes on religious grounds.

Article 28: Freedom as to attendance at religious ceremonies in certain educational institutions.

Cultural and Educational Rights

Article 29: Protection of interests of minorities.

Article 30: Right of minorities to establish and administer educational institutions.

Article 31: Omitted by the 44th Amendment Act.

Note: Minority Institutions – ‘All minorities ... shall have the right to establish and administer education institutions of their own’ _____ is the mandate, as per Article 30(1) of the Constitution. Government is committed to address the existing backwardness in education of minorities, especially the Muslims, constituting the major chunk of the minorities. Therefore, the Prime Minister’s New 15 Point Programme, inter-alia, aims to enhance opportunities for education of minorities ensuring an equitable share in economic activities and employment.

In January 2016, the government stated that Aligarh Muslim University, Aligarh and Jamia Millia Islamia, New Delhi were set up by acts of Parliament. Hence, they are not minority institutions.

Right to Constitutional Remedies

Article 32: The right to move the Supreme Court in case of violation of any right (called the heart and soul of the constitution by Dr B. R. Ambedkar).

Forms of Writ

As per the Right to Constitutional Remedies (Articles 32–35), a citizen has the right to move the court for securing his or her fundamental rights. Citizens can go to the Supreme Court or the High Court for getting their fundamental rights enforced. It empowers the courts to issue directions, orders or writs for this purpose.

The different forms of writs have been discussed below.

Habeas corpus means to have the body. It is in the nature of an order, calling upon a person who has unlawfully detained another person to produce the latter before the court.

Mandamus: It literally means command. It is thus an order of a superior court, commanding a person holding a public office or a public authority (including the government) to do or not to do something, in the nature of public duty.

Prohibition: A writ of prohibition is issued by a superior court to an inferior court or a tribunal to prevent it from exceeding its jurisdiction and to compel it to keep within the limits of its jurisdiction.

Certiorari: A writ of certiorari has much in common with a writ of prohibition. The only difference between the two is, whereas a writ of prohibition is issued to prevent an inferior court or tribunal to go ahead with the trial of a case in which it has assumed excess of jurisdiction, a writ of certiorari is issued to quash the order passed by an inferior court or a tribunal in excess of jurisdiction.

Quo Warranto: Quo warranto means what is your authority? A writ of quo warranto is issued against the holder of a public office in order to show the court under what authority he holds the office.

Writs can be initiated by the following institutions,

1. The Supreme and High Courts.
2. The National Human Rights Commission.
3. The State Human Rights Commissions and Human Rights Courts.
4. Non-Governmental Organizations such as People’s Union for Civil Liberties and Amnesty International.

Fundamental Duties

Our constitution has explicitly laid down certain fundamental duties of its citizens in Article 51A, emphasizing that every Indian citizen would:

1. Promote harmony and spirit of common brotherhood, transcending religious, linguistic, and regional or sectoral diversities.
2. Renounce practices derogatory to the dignity of women.
3. Value and preserve the rich heritage of our composite culture.
4. Protect and improve the natural environment.
5. Develop scientific temper.
6. Abjure violence and strive towards excellence in all spheres of individual and collective activity so that the nation constantly rises to higher levels of endeavour and achievement.

President of India

1. **Qualification:** Must be a citizen of India.
2. **Age:** Completed 35 years of age.
3. **Eligibility:** Eligible to be a member of Lok Sabha. Must not hold any government post except the following posts:
 - (a) President or Vice President
 - (b) Governor of any state
 - (c) Minister of the Union or of any State

4. **Election:** President is indirectly elected through the electoral college consisting of elected members of both the houses of the parliament and elected members of the Legislative Assemblies of the states (no nominated members). The Supreme Court inquires all disputes regarding the President's election.

The elected president takes oath in the presence of the Chief Justice of India, or in his absence, the senior-most judge of the Supreme Court.

5. **Terms and emoluments:** The terms and emoluments of the President are as follows.

(a) Five-year term

(b) Article 57 says that there is no upper limit on the number of times a person can become a President.

(c) Can give his or her resignation to the Vice President before full term.

6. **Impeachment:** Quasi-judicial procedure can be impeached only on grounds of violation of the constitution. The impeachment procedure can be initiated in both the houses of the Parliament.

7. **Vacancy:** In case if the office of the President falls vacant due to death, resignation or removal, the Vice President act as President. If he is not available then the Chief Justice, if not, then the senior-most judge of the Supreme Court shall act as the President of India.

The election is to be held within six months from the date of vacancy.

8. **Powers:** The powers of the President are given below.

(i) Appoints the PM, ministers, Chief Justice and the judges of Supreme Court and High Court, chairman and members of UPSC, Comptroller and Auditor General, Attorney General, Chief Election Commissioner and other members of Election Commission of India, Governors, members of Finance Commission, Ambassadors and so on.

(ii) Summon and prorogue the sessions of the two houses and can dissolve the Lok Sabha.

(iii) Appoints the Finance Commission (after every five years) that recommends the distribution of taxes between the union and the state governments.

(iv) Supreme Commander of the Defence Forces of India.

(v) Appoints the Chief of Army, Navy, and Air Force.

(vi) Declares wars and concludes peace to the approval of the Parliament.

(vii) No money bill or demand for grant can be introduced or moved in the Parliament unless it has been recommended by the President.

(viii) He has the power to grant pardon, reprieve, or remit punishment or commute death sentences.

9. **Emergency powers:** The President can promulgate three types of emergencies.

Type of emergency	Article
National emergency	352
State emergency (President's rule)	356
Financial emergency	360

Prime Minister of India

1. Prime Minister is the real executive authority.
2. He is the ex-officio Chairman of the National Institution for Transforming India (NITI Aayog, erstwhile Planning Commission), National Development Council, National Integration Council and Interstate Council.
3. The President convenes and prorogues all sessions of Parliament in consultation with the Prime Minister.
4. He can recommend the dissolution of Lok Sabha before expiry.
5. He appoints the council of ministers.
6. He allocates portfolios, and he can ask a minister to resign and can get him dismissed by the President.
7. He has the power to recommend to the President to declare emergency on grounds of war, external aggression or armed rebellion.
8. He advises the President about President's rule in the state or in case of emergency due to financial instability.
9. He is the leader of the house.

Vice President of India

1. **Election:** Elected by both the houses (Electoral College) in accordance with the system of proportional representation by means of a single transferable vote and the vote being secret. Nominated members also participate in his election.

The Supreme Court has the final and exclusive jurisdiction for resolving disputes and doubts relating to the election of the Vice President of India.

2. **Criteria:** Citizen of India

3. **Age:** More than 35 years of age

4. **Eligibility:** Possesses the qualification for membership of Rajya Sabha.

Does not hold any office of profit under union, state, or local authority. However, for this purpose, the President, Vice President, Governor of a state, and a minister of the union or a state are not held to be holding an office of profit.

Holds office for five years and can be re-elected for any number of terms.

Term can be cut short if he resigns or by a resolution of the Rajya Sabha, passed by a majority of all the members of the Rajya Sabha and agreed to by the Lok Sabha.

He is the ex-officio Chairman of the Rajya Sabha. As he is not a member of Rajya Sabha, he has no right to vote.

Being the Vice President of India, he is not entitled to any salary, but is entitled to the salary and allowances payable to the Chairman of Rajya Sabha.

All bills, resolution and motion can be taken in Rajya Sabha after his consent.

Can discharge the functions of the President; the Vice President shall not perform the duties of the office of the Chairman of Rajya Sabha and shall not be entitled to receive to salary of the Chairman. During this period, he is entitled for the salary and privileges of the President of India.

Citizenship

Citizen of a nation is a person who enjoys full civil and political rights in that nation. Aliens are people who do not enjoy all these rights.

Rights Available to a Citizen

In India, the following rights are available to its citizens only.

1. The right to not be discriminated against on grounds of religion, race, caste, sex, or place of birth.
2. The right to equality of opportunity in matters of public employment.
3. The right to the six freedoms of Article 19, namely, right to speech, assembly, association, movement, residence, and occupation.
4. Cultural and educational rights.
5. The right to vote for elections to the Parliament and the Legislative Assemblies of the states.
6. Certain offices, for example, the President, Prime Minister, Vice President, Judges of the Supreme or High Court, can be occupied only by Indian citizens.

The right to equality before law and equal protection of the law, right to the protection of life and personal liberty and the right to freedom of religion are available to aliens also.

Single and Dual Citizenship

India has single citizenship. It means a person can be only a citizen of India, not of any of the states of India. Also, the Indian constitution forbids dual citizenship, whereby a person may be a citizen of two countries at

the same time, or of a country and of one of its units or state at the same time.

A person can only be a citizen of India, and claim the rights and privileges that go with citizenship.

Who are the Citizens of India?

Constitutional Provisions

The constitution describes the classes of people who would be considered citizens of India at the time of commencement of the constitution.

1. **Citizens by domicile:** Those who live in India and fulfil any one of the following conditions, namely (a) they were born in India, (b) their parents were born in India, or (c) they must have lived in India for at least five years before the commencement of the constitution are called citizens by domicile.
2. **Migrants from Pakistan to India:** Migrants from Pakistan to India are to be considered Indian citizens if they, or their parents, were born in undivided India.
3. **Migrants from India to Pakistan:** Any person who migrated to Pakistan after March 1, 1947, ceases to be a citizen of India.
4. **People of Indian origin residing outside India:** Those who reside outside India, but whose parents or grandparents were born in undivided India can claim citizenship by registering as citizen with the diplomatic representatives of India.

Citizenship Acts

The Parliament passed the Citizenship Act (1955) and Citizenship (Amendment) Act (2003) laying down ways in which a person may acquire or lose Indian citizenship. According to these acts, a person may become a citizen of India,

1. By birth
2. By descent
3. By registration
4. By naturalization
5. By incorporation of territory

A person who has lived in India, or has served the Government of India for at least seven years, knows one of the official languages of India, has renounced the citizenship of his country of origin and has taken the oath of allegiance of India and is of good character, can apply for citizenship through naturalization.

Loss of Citizenship

According to these acts, a person can lose his citizenship by the following.

1. **Renunciation:** An Indian citizen can make a declaration of renouncing his citizenship, and have this declaration registered.

2. **Termination:** When a person becomes a citizen of another country voluntarily, he automatically loses his citizenship of India.
3. **Deprivation:** A person who becomes a citizen of India by naturalization or registration can be deprived of his citizenship if found that he gained it through false means, showed disrespect to the Indian constitution, was disloyal to the country, or was convicted of an offence within five years of getting the citizenship.

Citizenship (Amendment) Act of 2003 also made it possible for people to be the overseas citizens of India, if they are of Indian origin and hold the citizenship of some selected countries (West European and North American countries). This allows them to easily travel to and from India, but otherwise does not give them the privileges of people who are complete citizens of India.

PARLIAMENT

The Parliament of India consists of the President and the two houses namely, the Lower House or Lok Sabha and the Upper House or Rajya Sabha.

Rajya Sabha

It is the upper house of parliament. It consists of representatives of states and represents the federal character of the constitution. The membership of a state is based on the population of that state.

The maximum strength of the Rajya Sabha is 250. Of these, 238 represent the states and union territories and the remaining 12 are nominated by the President from amongst persons who have distinguished themselves in the field of literature, art, science, social service and so on.

Its members are elected by the members of state Legislative Assemblies on the basis of proportional representation through a single transferable vote.

Tenure

Rajya Sabha is a permanent body and not subject to dissolution. One-third of its members retire every two years. The members are elected by the elected members of the state Legislative Assemblies for a six-year term. There are no seats reserved for scheduled castes and tribes in the Rajya Sabha.

Qualifications for Membership

To be qualified to become a member of the Rajya Sabha, a person must be

1. A citizen of India.
2. Not less than 30 years of age.

3. Registered as a voter in any parliamentary constituency.

Chairman and Deputy Chairman of Rajya Sabha

The Vice President of India is the ex-officio Chairman of the Rajya Sabha. He presides over the proceedings of the Rajya Sabha. In his absence, the Deputy Chairman of the Rajya Sabha presides over. Deputy Chairman is elected by the members of the Rajya Sabha amongst themselves.

Lok Sabha

Lok Sabha is the lower house of the parliament. It consists of representatives elected by the people on the basis of universal adult franchise through a secret ballot. The constitution prescribes a membership of not more than 530 representatives of the states, not more than 20 representatives of the union territories and not more than two members of the Anglo-Indian Community nominated by the President, if in the opinion of the President the Anglo-Indian community is not adequately represented in the Lok Sabha.

The constitution empowers the Parliament to readjust the seats in the Lok Sabha on the basis of population after every census.

Tenure

The normal term of Lok Sabha is five years. However, it may be dissolved earlier by the President. The 42nd Amendment Act, 1976 extended the normal life of the Lok Sabha to six years. However, the 44th Amendment Act, 1978 has set it at five years as the original constitution envisaged.

The life of the Lok Sabha can be extended by the Parliament beyond the five-year term, when a proclamation of emergency under Article 352 is in force. The Parliament cannot extend the normal life of Lok Sabha for more than one year at a time, but in any case, such extensions cannot continue beyond a period of six months after the proclamation comes to an end.

Qualifications for Membership to Lok Sabha

In order to be a member of the Lok Sabha, a person must have the following qualifications.

1. A citizen of India.
2. Not less than 25 years of age.
3. Registered as a voter in any parliamentary constituency.

Speaker and Deputy Speaker of Lok Sabha

Speaker is the Chief Presiding Officer of the Lok Sabha. Speaker and the Deputy Speaker of Lok Sabha are elected by the members of Parliament amongst

themselves. Deputy Speaker performs the duties of Speaker in case of vacancy or absence.

Speaker and Deputy Speaker remain in office as long as they are the members of the House. Speaker continues in office even after dissolution of the House till the newly elected Lok Sabha is constituted.

Speaker and Deputy Speaker may be removed from their office by a resolution of the House after serving a 14-day notice to them. Speaker can exercise his casting vote in case of a tie, that is, in case of equality of votes on a bill.

Speaker possesses certain powers that do not belong to the Chairman of the Rajya Sabha. They are as follows.

1. To preside over a joint sitting of the Houses of the Parliament.
2. Power of certification of a money bill when transmitted from the Lok Sabha to the Rajya Sabha.
3. The decision of the Speaker as to whether the money bill is final.

Special Powers of the Lok Sabha

The Lok Sabha enjoys the following powers that are not available to the Rajya Sabha.

1. A confidence or no-confidence motion can be initiated and passed only in the Lok Sabha.
2. Money and financial bills can be introduced only in the Lok Sabha. It controls the purse of the government.

Rajya Sabha cannot reject or amend a money bill by virtue of its legislative powers. It can only recommend changes in the money bill and can delay it for a maximum period of 14 days only. Lok Sabha enjoys full legislative powers in this regard.

Under Article 352, Lok Sabha, in a special sitting, can disapprove the continuance in force of a national emergency proclaimed by the President. In such a case, the President shall revoke the national emergency.

The Parliament generally meets in three sessions in a year. These sessions are as follows:

1. Budget session – (January – March/April)
2. Monsoon session (July–August)
3. Winter session (November–December)

The President can call a joint sessions of the two houses if a bill passed by one house is rejected by the other house, if the amendments proposed to a bill by one house are not acceptable to the other house or a house does not take any action on a bill remitted to it for six months. Decision is taken by a majority of the total members present. The deadlock over a bill in a joint sitting is resolved by members present and voting.

Since the Lok Sabha has a larger membership in a joint sitting, generally the will of the Lok Sabha prevails. After the passage of the bill in a joint sitting, it is presented to the President for his assent. However, no joint sitting can be summoned to resolve a deadlock in case of a money bill or a Constitutional Amendment Bill. With effect from year 2017, the budget is to be presented in the month of January. Railway Budget has now been merged with General Budget.

Important Terms in Parliamentary Proceedings

1. **Question hour:** Normally, the first hour of the business of a house is devoted to questions every day and is called the question hour.
2. **Adjournment motions:** An adjournment motion is an extraordinary procedure, which if admitted, leads to setting aside the normal business of the house for discussing a definite matter of urgent public importance.
3. **Call-attention motion:** A member of Parliament may, with prior permission of the Speaker call the attention of a minister to any matter of urgent public importance and the minister may make a brief statement or ask for time to make a statement at a later hour or date.
4. **No confidence motion:** A motion moved by a member to express lack of confidence in the government for any reason is called no-confidence motion. The motion if allowed, is debated upon. At the conclusion of the debate, a vote of confidence is sought by the government and if it fails to get the required majority of votes, the government has to resign.

Parliamentary Committees

The work done by Parliament varies not only in nature, but considerably in volume too. A good deal of its business is transacted by Parliamentary Committees.

Ad hoc and Standing Committees

As the name suggests, Ad hoc Committees are appointed for a specific purpose. They cease to exist once the task is complete and they submit a report. The main Ad hoc Committees are the Select and the Joint Committees on bills.

Apart from the Ad hoc Committees, each House of Parliament has Standing Committees such as the Business Advisory Committee, the Committee on Petitions, Committee of Privileges, and the Rules Committee.

Other Committees

Some committees act as Parliament's watch dogs over the Executive. These are the Committees on Subordinate Legislation, Government Assurances, Estimates, Public Accounts and the Public Undertakings, and Departmentally Related Standing Committees (DRSCs).

ATTORNEY GENERAL

Attorney General is the first law officer of the Government of India. He is the primary lawyer in the Supreme Court of India. He must be a person qualified to be appointed as the Judge of the Supreme Court.

AG is appointed by the President of India under Article 76(1) of the Constitution. He/she holds office during the pleasure of the President.

His duties are to advise the government on legal matters and to perform other legal duties, which are referred to or assigned to him by the President and to discharge the functions conferred to him by the constitution. Though he is not a member of the cabinet, he has the right to speak in both the Houses of the Parliament; or any committee thereof, but has no right to vote. In performance of his official duties, the Attorney General shall have the rights of an audience in all the courts in the territory of India.

Attorney General represents the government but is allowed to take up private practice, provided the other party is not the state. Due to this, he is not paid a salary but a retainer to be determined by the President. The Attorney General gets a retainer equivalent to the salary of a judge of the Supreme Court.

COMPTROLLER AND AUDITOR GENERAL OF INDIA

Comptroller and Auditor General of India is appointed by the President. He holds office until the age of 65 years or at the expiry of six-year term, whichever is earlier.

He is the guardian of the public purse. His duties are to keep the accounts of the union and the states. CAG also ensures that no money is spent out of the Consolidated Fund of India or of the states without the sanction of the Parliament or of the state legislatures.

Constitution contains provisions to ensure impartiality of the office and to make it independent of the Executive.

He can be removed from his office only on grounds of proved misbehaviour or incapacity in the same

manner a judge of the Supreme Court is removed, that is each House of the Parliament passes a resolution supported by two-thirds of the members present who vote and by a majority of the House.

His salary and conditions of service cannot be changed to his disadvantage during his term of office, except under a financial emergency. His salary is charged on the consolidated Fund of India and is not subject to vote of the Parliament. He is paid a salary equivalent to that of a judge of the Supreme Court.

UNION PUBLIC SERVICE COMMISSION (UPSC)

UPSC is India's central agency authorised to conduct the Civil Services and many other exams. The agency's charter is granted by the Constitution of India. Articles 315 to 323 of Part XIV of the constitution, titled as Services under the Union and the States, provide for a Public Service Commission for the Union and for each state. The Royal Commission on the Superior Civil Services in India under the Chairmanship of Lord Lee, which submitted its Report in 1924, recommended the setting up of the Public Service Commission. This led to the establishment of the first Public Service Commission on 1 October 1926 under the Chairmanship of Sir Ross Barker.

The limited advisory function accorded to the Public Service Commission and the continued stress on this aspect by the leaders of our freedom movement resulted in the setting up of a Federal Public Service Commission under the Government of India Act, 1935. The Federal Public Service Commission became the Union Public Service Commission after Independence, and it was given a Constitutional status with promulgation of Constitution of India on 26 January 1950.

The Commission consists of a chairman and ten members. The terms and conditions of service of chairman and members of the commission are governed by the Union Public Service Commission (Members) Regulations, 1969. The chairman and other members of the UPSC (Union Public Service Commission) are appointed by the President of India. Every member holds office for a term of six years or until he attains the age of sixty-five years, whichever is earlier.

EXECUTIVES AT THE STATE LEVEL

The executives at the state level have been modelled on the central pattern. It consists of the Governor, the Council of ministers and the Chief Minister.

Governor

The executive power of the state is vested in the Governor and all the executive actions of the state have to be taken in the name of the Governor. Normally, there is a Governor for each state. However, it is possible to appoint the same person as a Governor for two or more states.

Appointment, Term of Office, and Qualifications

The Governor is appointed by the President. He can hold office during the pleasure of the President. The appointment is done for 5 years. He can relinquish his office earlier by tendering his resignation to the President. The President can also remove him from office before the expiry of his term. The Governor can be given charge for more than one state.

To be eligible for appointment as a Governor, a person.

1. Must be a citizen of India.
2. Must have completed 35 years of age.
3. Should not be a member of either House of Parliament or the state legislature.
4. Must possess the qualifications prescribed for membership of the state legislatures.
5. Must not hold any office of profit.

Powers and Functions

The constitution vests quite extensive powers in the Governor and he is expected to exercise on the advice of the council of ministers.

Executive Powers

The Governor is the executive head of the state and all executive actions of the state are taken in his name. He also appoints all important officials of the state including the chief minister, ministers, advocate general, chairman, and members of the state Public Service Commission.

Legislative Powers

Governor is a part of the state legislature. He has the power to prosecute the following actions.

1. Summon and dissolve state Legislature.
2. Appoint one-sixth of the members of Legislative Council.
3. Appoint one member from the Anglo-Indian community to the state Legislative Assembly.
4. Give assent to the bills passed by the state legislature.
5. Reserve certain bills passed by the legislature for the assent of the President.
6. Make laws through ordinances during the recess of the state legislatures.

Financial Powers

1. To ensure that the budget of the state is laid before the state legislature every year.
2. All money bills can be introduced in the state legislature only on recommendation of the Governor.
3. Administers the contingency fund of the state and can advance money out of it to meet any unforeseen expenditure pending its authorization by the legislature.

Judicial Powers

1. Consulted by the President while appointing the Chief Justice and judges of the state High Court.
2. Appoints judges of courts below the High Court.
3. Power to grant pardons, reprieves, respites, or remissions of punishment to persons convicted of an offence against the state laws.

Emergency Powers

Governor has the power to make a report to the President whenever he is sure that a situation has arisen in which governance of the state cannot be carried on in accordance with the provisions of the constitution (Article 356), thereby inviting the President to assume to himself the functions of the government of the state or any of them. When the state is placed under President's rule, the Governor acts as the representative of the President in the state and assumes extensive powers.

Chief Minister

Governor is assisted in discharging his functions by a council of ministers headed by the Chief Minister. The Chief Minister, who is generally the leader of the majority party in the state assembly is appointed by the Governor. He enjoys a term that runs parallel to that of the state legislature. CM recommends to the Governor, the names of council of ministers and allocates portfolios to them.

Council of Ministers

Any person can be appointed as a minister but he ceases to be one if he is not elected as a member of the state legislature within six months after his appointment as a minister. The council of ministers is collectively responsible to the Vidhan Sabha.

Advocate General

Advocate General is the first law officer of a state. The office corresponds to the office of the Attorney General of India and enjoys similar functions within the state. He is appointed by the Governor and holds office during the pleasure of the Governor. A person who is qualified to be appointed as a judge of a High Court

can only be appointed as Advocate General. He has the right to participate in the proceedings of the houses of state legislatures without the right to vote and has the right of audience in any court in the state.

STATE LEGISLATURE

The constitution provides for a legislature for every state. The legislature of every state consists of the Governor and one or two houses. The legislatures in the state are either bicameral (consisting of two houses) or unicameral (consisting of one house). The lower house is always known as the Legislative Assembly (Vidhan Sabha) and the upper house, wherever it exists, as the Legislative Council (Vidhan Parishad). At present, only five states have a bicameral legislature, namely Bihar, Jammu and Kashmir, Karnataka, Maharashtra, and Uttar Pradesh. All other states have only one house. The Legislative Councils can be created or abolished in a state by the Parliament under Article 169 by a simple procedure. If the legislative assembly of the state passes a resolution by a majority of the total membership of the assembly and by a majority of not less than two-third of the members present and voting, the parliament may approve the resolution by a simple majority.

Composition of the Houses

The strength of the Legislative Assembly varies from 60 to 500 in different states according to the population. However, the Legislative Assembly of Sikkim has only 32 members. The members of the assembly are chosen directly by the people on the basis of adult franchise from territorial constituencies in the state. Seats are reserved for STs and SCs on the basis of population. If the Governor of a state is of the opinion that the Anglo-Indian community is not adequately represented in the Legislative Assembly, he may nominate one member of that community to the assembly as he considers appropriate.

Tenure

The normal tenure of the Legislative Assembly of every state is of five years. However, it may be dissolved earlier by the Governor. Similarly, its term can be extended by one year at a time by the Parliament during national emergency.

Qualifications

A person can become a member of the Legislative Assembly only if he meets the following criteria.

1. Is a citizen of India.
2. Is more than 25 years of age.

3. Does not hold any office of profit under the state or central government.
4. Possesses such other qualifications as may be prescribed by law.

If any question arises as to whether a member of a house of the legislature of a state is subject to disqualification, the question shall be referred for the decision of the Governor and his decision shall be final.

Officers

A Legislative Assembly shall have its Speaker and Deputy Speaker elected from among its members.

Legislative Council

It is the upper house of the state legislature and contains various categories of members. It is popularly known as Vidhan Parishad. The membership of the council shall not be more than one-third of the membership of the legislature, but not less than 40. Broadly speaking, 5/6 of the total members of the council shall be indirectly elected and 1/6 shall be nominated by the Governor.

The Legislative Council is not subject to dissolution but after every two years, one-third of its members retire.

Qualifications

To be a member of the Legislative Council, a person satisfy the following criteria.

1. Must be a citizen of India.
2. Must be more than 30 years of age.
3. Must not hold any office of profit under the state or union government.
4. Must possess other qualifications as may be prescribed by the Parliament.

Sessions of the Legislature

The state legislature must meet at least twice a year and the interval between any two sessions should not be more than six months.

Legislative Procedure

The legislative procedure in a state having a unicameral legislature is simple. All bills originate in the single chamber, that is, the Legislative Assembly and when duly passed, are presented to the Governor for his assent. However, in case of a bicameral legislature, the procedure is slightly different from that of the Parliament. If the Vidhan Sabha rejects a bill which originated in the Vidhan Parishad, then that is the end of the bill. In case of money bills, the procedure followed is exactly similar to that of the Parliament.

FINANCE COMMISSION

The Finance Commission is set up under Article 280 of the constitution. It is constituted by the President, once in every five years. Its main function is to recommend about the (i) distribution of financial resources between the centre and the states and also among the states themselves, (ii) the principles which govern the grants- in-aid of the revenues amongst the states out of the consolidated fund of India.

SUPREME COURT

India opted for a unified and single judiciary and a single integrated system of courts for the union as well as the states, though it has opted for a federal system. Supreme Court stands at the apex of the judicial system of India. It consists of a chief justice and 30 other judges. The Supreme Court normally sits at New Delhi.

Appointment

The Chief justice of the Supreme Court is appointed by the President in consultation with other judges of the Supreme Court and High Courts, as he may deem necessary for the purpose. The other judges of the Supreme Court are appointed by the President in consultation with the Chief Justice.

Qualification of a Judge

A person, in order to be qualified for appointment as a judge of the Supreme Court must satisfy the following criteria.

1. Be a citizen of India.
2. Have been a judge of the High Court or two or more such courts in succession for at least five years or
3. Have been an advocate of a high court or two or more such courts in succession for at least 10 years or
4. A distinguished jurist in the opinion of the President.

Tenure

A judge of the Supreme Court vacates his office on attaining 65 years of age or by resignation addressed to the President or on removal by the President upon a resolution passed by both the Houses of the Parliament, supported by a majority of the total membership of that House and by a majority of not less than two-thirds of the members present and voting on grounds of proved misbehaviour or incapacity.

Independence of Supreme Court Judges

The constitution has made provisions to ensure independence of the judges. Some of these provisions are as follows.

1. The salaries and allowances of judges are charged on the consolidated fund of India and thus, they are not subject to a vote of Parliament. Moreover, the salaries and other service conditions of judges cannot be changed to their disadvantage during their tenure.
2. The Constitution's Articles 124 and 217 dealt with the appointment of judges of the higher judiciary. According to these articles, the judges could be appointed by the President of India after consulting the chief justice of India (CJI) and other judges.

The present system for appointment of judges that was adopted in 1993 is also known as Collegium system.

Note: The government sought to replace the system with National Judicial Appointments Commission (NJAC) that proposes a transparent and broad-based process of selection of judges of the Supreme Court and High Courts. They were to be selected by the commission whose members were drawn from the judiciary, legislature, and civil society for future appointment of judges. The constitution was also amended for the purpose. In its 17 October, 2015, judgement, Supreme Court struck down the new laws on NJAC on the ground of encroachment into judicial independence.

3. Once appointed, a judge of the Supreme Court can only be removed from office by the President, on the basis of a resolution passed by both the Houses of the Parliament with a majority of total membership and a majority of not less than two-thirds of the members present and voting in each house, on grounds of proved misbehaviour or incapacity of the judge in question.

Jurisdiction of the Supreme Court

The jurisdiction of the Supreme Court is five-fold and it is as follows.

1. **Original jurisdiction:** The original jurisdiction of the Supreme Court is purely federal in character, and it has exclusive authority to decide any dispute (a) between the centre and one or more states and (b) between two or more states.
2. **Writ jurisdiction:** Article 32 confers jurisdiction on the Supreme Court to enforce the fundamental rights. The power to issue writs for enforcement of the fundamental rights is given by the constitution to the Supreme Court and High courts.
3. **Appellate jurisdiction:** Supreme Court is the highest court of appeal and its writs and decrees run throughout the country.
4. **Advisory jurisdiction:** Under Article 143 of the constitution, Supreme Court renders advice to the President on any matter of law or fact whenever he seeks such advice. However, the advice is not binding on the President.

5. **Revisory jurisdiction:** Supreme Court, under Article 137 is empowered to review any judgement or order made by it with a view to remove any mistake or error that might have crept in the judgement or order.

Supreme Court and Power of Judicial Review

Supreme Court has been vested with the power of judicial review. Judicial review can be defined as the competence of a court of law to declare the constitutionality or otherwise of a legislative enactment. It can ensure that the laws passed by the legislature and the orders issued by the Executive do not contravene any provision of the constitution. If they go against any provision of the constitution, it can declare them unconstitutional or null and void.

HIGH COURT

The judiciary in states consists of a High Court and subordinate courts. However, the Parliament can establish by law, a common High Court for two or more such states, or for one or more state and one or more union territories.

Appointment of Judges

Every High Court shall consist of a Chief Justice and such other judges as the President may appoint from time to time. As in the case of Supreme Court, there is no fixed maximum number of judges of a High Court. The decision is left on to the President.

The President has the power to appoint (i) additional judges for a temporary period, not exceeding two years to clear pending cases or (ii) an acting judge, when the permanent judge of a High Court is temporarily absent or unable to perform his duties.

Qualifications

To qualify for appointment as a judge of the High Court, a person should meet the following criteria.

1. Must be a citizen of India.
2. Should have been an advocate of a High Court or two or more such courts in succession for at least 10 years or
3. Should have held a judicial office in Indian territory for a period of at least 10 years.

Tenure

The judge of High Court holds office till he attains the age of 62 years. He can resign from his position. The removal procedure is same as is the case of a judge of the Supreme Court.

Independence of the Judges

As in the case of a judge of the Supreme Court, the constitution seeks to maintain the independence of the judges of the High Court by a number of provisions.

ELECTION COMMISSION

The constitution provides for an independent election commission to ensure free and fair elections. Election commission consists of a Chief Election Commissioner and such other commissioners as the President may decide from time to time. In October 1993, the Government promulgated an act which provided for the appointment of election commissioners. At present, there is a Chief Election Commissioner and two other Election Commissioners who are appointed by the President for a five-year term. The term can be cut short on account of resignation or removal by the President on grounds of proved misbehaviour or incapacity on the recommendations of the Parliament.

Functions of the Election Commission

1. To superintend, direct and control elections to the Parliament and the state legislature.
2. To conduct elections to the post of the President and Vice President.
3. To lay down general rules for elections.
4. To determine constituencies and to control the preparation of electoral rolls, allot symbols to recognized political parties.
5. To settle any disputes arising in connection with the elections.
6. To conduct counting and declare results.
7. To postpone or countermand elections for specific reasons.

PANCHAYATI RAJ INSTITUTIONS

Panchayati Raj is an important feature of the Indian political system, which ensures direct participation of people at the grass root level. After independence, the framers of the constitution decided to give them importance and under Article 40 of the Directive Principles, directed the states to organize village panchayats as units of self-government. A number of committees were appointed such as the Balwantrai Mehta Committee and Ashok Mehta Committee to suggest measures for improvement of working of Panchayati Raj institutions. The constitution passed the 73rd and 74th Amendment Acts, 1992, which were related to the working of panchayats and municipalities.

Apart from mandatory provisions for reservation of SCs/STs and women, there are voluntary provisions for reservation of members from backward classes

also. The Ministry of Panchayati Raj was created in the year 2004 to look after ongoing process of decentralization and local governance in the states.

The constitution envisages a three-tier system of Panchayats and they are listed below.

1. The village level
2. The district panchayat at the district level.
3. The intermediate panchayat, which stands between the village and district panchayats in those states where the population is above 20 lakhs.

All the seats in a panchayat are filled by people chosen by direct election from territorial constituencies in the panchayat area.

The electorate is named as the Gram Sabha, consisting of people registered in the electoral rolls relating to a village comprised within the area of a panchayat. Seats are reserved for SCs and STs and also for women. A state may, by law, make provisions for similar reservation of the offices of chairpersons in panchayats at the village and other levels. Chairperson is elected according to the law passed by the state.

Duration of a Panchayat

Each panchayat shall continue for five years from the date of its first meeting. However, it can be dissolved earlier in accordance with the procedure prescribed by the state law.

Qualifications for Membership

All people who are qualified to be chosen to the state legislature shall be qualified to be chosen as a member of the panchayat. The only difference is that a person who has attained the age of 21 years will be eligible to be a member of the panchayat.

Powers and Functions of Panchayats

State legislatures have the legislative power to confer on the panchayat, such powers and authority as may be necessary to enable them to function as institutions of self-government. They are usually entrusted with the responsibility of the following.

1. Preparing plans for economic development and social justice.
2. Implementation of schemes for economic development and social justice.
3. Matters listed in the 11th Schedule. This schedule contains 29 items, for example, land improvement, minor irrigation, animal husbandry, fisheries, education, and women and child development. A state may, by law, authorize a panchayat to levy, collect and appropriate taxes, duties, tolls and so on.

A State Election Commission consisting of a State Election Commissioner is appointed by the Governor, to conduct elections to the panchayats. Any question with respect to elections shall be referred to such authority as the state legislature may provide by law. Courts will have no jurisdiction in this matter.

MUNICIPALITIES

Institutions of self-government in urban areas are called municipalities. They are of three types as listed below.

1. Nagar panchayat, for a transitional area (that is being transformed from a rural area to an urban area).
2. Municipal council for a smaller urban area.
3. Municipal corporation for a larger urban area.

Composition of Municipalities

The members of a municipality are generally elected by direct election. The legislature of a state may, by law, provide for representation in a municipality.

For one or more wards comprised within the territorial area of a municipality having a population of three lakhs or more, it would be obligatory to constitute ward committees.

Duration of Municipalities

Every municipality shall continue for five years from the date of its first meeting. However, it may be dissolved earlier according to law.

Qualifications for Membership

All people who are qualified to be chosen to the state legislature shall be qualified for being a member of the municipality. There is an important difference. Persons who have attained the age of 21 years shall be eligible to be a member, while for election to the state legislature, a person should have attained the age of 25 years.

A state legislature may, by law, authorize a municipality to levy, collect, and appropriate taxes, duties, tolls, and so on.

The State Election Commission shall have the power to conduct elections to municipalities.

Apart from giving constitutional recognition to municipalities, the 74th Amendment lays down that in every state two committees shall be constituted, namely,

1. At the district level, a district planning committee.
2. In every metropolitan area, a metropolitan planning committee.

UNION BUDGET (ARTICLE 112)

A budget is the annual financial statement of the government. It is a government bill and is classified as a Money Bill. It is presented to the Lok Sabha upon the recommendation of the President. The budget is a statement of the estimated receipts and expenditures of the government of India for the following financial year. All the expenditures approved through various demands for grants and expenses charged on the consolidated fund of India are then presented in the form of a single bill called the appropriation bill. The proposals for taxation to raise revenue are presented in the form of financial bill.

Consolidated Fund of India

It is a fund to which all the revenue, loans raised and income of the Government of India are deposited.

Charged expenditures are expenditures that do not require the approval of the Parliament to be spent out of the consolidated fund of India.

Contingency Fund of India

This fund was created in 1950 by an act of Parliament on the basis of powers provided under Article 267. It has a limit of 50 crores. It is placed at the disposal of the President to meet unforeseen expenditures where the Parliament's approval cannot be obtained owing to time factor.

Public Account of India

It accounts for flows for those transactions where the government is merely acting as a banker. This fund was constituted under Article 266 (2) of the Constitution. Examples of those are provident funds, small savings, and so on. These funds do not belong to the government. They have to be paid back at some time to their rightful owners. Because of this nature of the fund, expenditures from it are not required to be approved by the Parliament.

NITI AAYOG

National Institution for Transforming India (NITI Aayog) is a policy think-tank of government that replaces Planning Commission and aims to involve the states in economic policy-making in India. It will be providing strategic and technical advice to the Central and the State governments. The government had announced the formation of NITI Aayog on 1 January 2015. It has the following levels.

1. Prime Minister of India will be the Chairperson.
2. Governing Council comprises the Chief Ministers of all the States and Lieutenant Governors of Union Territories.
3. Regional Councils will be formed to address specific issues and contingencies impacting more than one state or a region. These will be formed for a specified tenure.
4. Experts, specialists and practitioners with relevant domain knowledge as special invitees will be nominated by the Prime Minister.

Practice Exercises

HIGHER EDUCATION SYSTEM

- The main governing body at the tertiary level of education in India is
 - NCERT
 - CBSE
 - AICTE
 - UGC
- The Government established the University Grants Commission by an act of Parliament in the year **[June 2007]**
 - 1980
 - 1948
 - 1950
 - 1956
- The tertiary education includes
 - Primary and secondary education
 - Higher education
 - Vocational education and training
 - Both (b) and (c)
- Which of the following is the regulator of higher education?
 - NCERT
 - AICTE
 - UGC
 - MHRD
- The idea of Four Pillars of Education was suggested by
 - UNICEF
 - UGC
 - NCTE
 - UNESCO
- The name of the plan to increase enrolment in the higher education institutions is
 - Rashtriya Uchcharat Shiksha Abhiyan (RUSA)
 - Sarva Shiksha Abhiyan
 - Both (a) and (b)
 - None of the above
- Which of the following agency put forward the concept of proactive university?
 - UNDP
 - UNESCO
 - AICTE
 - UGC
- 'Destiny of India is being shaped in her classroom'. This is stated in
 - National Policy on Education (1986)
 - National Knowledge Commission (2005)
 - Education Commission (1964–66)
 - University Education Commission (1948–49)
- CHEER stands for
 - Children Enrichment Education through Radio
 - Child health education electronic recording
 - Children for Engineers and Energy Requirement
 - None of the above
- Educational TV was first introduced in India in the year
 - 1961
 - 1959
 - 1968
 - 1965
- Which of the following agencies or organizations was constitutionally assigned the task of coordination and determination of standards of institutions in higher education?
 - UGC
 - Concerned state governments
 - Union government
 - None of the above
- Which of the following documents is termed as the Magna Carta of English education in India?
 - Charles Wood's dispatch
 - Macaulay minutes
 - Mountstuart Elphinstone's minutes
 - Wardha system
- In which of the following years, Presidency Universities of Calcutta, Bombay, and Madras were set up following the recommendations of Woods' dispatch?
 - 1854
 - 1857
 - 1858
 - 1861
- The University of Allahabad was founded in the year
 - 1887
 - 1901
 - 1905
 - 1911
- Which of the following institution was set up in 1945 to look after the functioning of three Central Universities of Aligarh, Banaras and Delhi?
 - University Grants Commission
 - University Grants Committee
 - Inter University Board
 - Association of Indian Universities
- The report of central advisory board of education on post war educational development in India is also termed as
 - Sargent report
 - Nehru report
 - Wardha report
 - None of the above
- Which section of the UGC Act provides for the promotion and coordination of university education and for the maintenance of standards of teaching, examination, and research?
 - Section 12
 - Section 15
 - Section 25
 - Section 28
- It is said that the present higher education system has its origin in Mountstuart Elphinstone's minutes, which stressed upon the need for establishing schools for teaching English and European sciences. This reported was presented in the year
 - 1823
 - 1835
 - 1858
 - 1861
- Inter University Board was set up in 1925 to promote university activities, by sharing information and cooperation in the field of education, culture, sports and allied areas. Now, it is known as
 - Association of Indian Universities
 - Central Advisory Board of Education
 - Central Board of Secondary Education
 - None of the above

20. Which of the following is known as Calcutta University Commission?
 (a) Saddler Commission
 (b) Kothari Commission
 (c) Hunter Commission
 (d) Wood Dispatch
21. Which of the following is regarded as the first policy measure regarding higher education in India?
 (a) Wood's dispatch
 (b) Macaulay's minutes
 (c) Elphinstone report
 (d) None of the above
22. Which of the following is a precursor to 10 + 2 + 3?
 (a) Saddler commission
 (b) Wood dispatch
 (c) Kothari commission
 (d) None of the above
23. Which of the following commissions recommended setting up UGC and is also known as the University Education Commission?
 (a) Radhakrishnan commission
 (b) Mudaliar commission
 (c) Wardha commission
 (d) Kothari commission
24. Which of the following commission's report is titled as education and national development report?
 (a) Radhakrishnan commission
 (b) Kothari commission
 (c) Mudaliar commission report
 (d) None of the above
25. National committee on 10 + 2 + 3 education structure set up in 1972 was headed by
 (a) Dr P. D. Shukla
 (b) Dr D. S. Kothari
 (c) Dr Radhakrishnan
 (d) None of the above
26. The following commissions were set up by the government or its agencies after independence. Arrange the following in a chronological order (in terms of their occurrence).
 I University Education Commission
 II Secondary Education Commission
 III Education Commission
Codes:
 (a) III, II and I (b) II, I and III
 (c) I, II and III (d) I, III and II
27. Which of the following committees recommended the spending of ₹500 crores to be spent on research in basic sciences every year by UGC every year?
 (a) M. M. Sharma committee
 (b) Kakodkar committee
 (c) Prof. Yashpal committee
 (d) None of the above
28. The committee set up by the Ministry of Human Resource Development which recommended autonomy of IITs was headed by
 (a) Prof. Anil Kakodkar (b) Prof. Yashpal
 (c) Sam Pitroda (d) None of the above
29. National knowledge commission (NKC) was headed by
 (a) Prof. Anil Kakodkar (b) Prof. Yashpal
 (c) Sam Pitroda (d) None of the above
30. A committee was set up in 1990 to review NPE (1986). Its report titled as 'Towards an Enlightened and Humane Society' stated that system of higher education encourages memorization of facts and regurgitation rather than creativity. The head of the committee was
 (a) Acharya Ramamurti (b) Prof. Yashpal
 (c) Prof. M. M. Joshi (d) None of the above
31. Which of the following committees recommended the setting up of National Commission for Higher Education and Research (NCHER) for prescribed standards of academic quality and defining policies for advancement of knowledge in higher educational institutions?
 (a) Sam Pitroda committee
 (b) Prof. Yashpal committee
 (c) M. M. Sharma committee
 (d) Gnanam committee
32. Chairman of UGC committee appointed in 1969 for the purpose of administrative legislation of the universities was
 (a) Dr D. S. Kothari (b) Dr P. B. Gajendragadkar
 (c) Prof. Yashpal (d) None of the above
33. Which of the following personalities headed the committee recommended setting up of 1500 universities so as to achieve the target gross enrolment of 30%?
 (a) Dr D. S. Kothari (b) Sam Pitroda
 (c) Prof. Yashpal (d) None of the above
34. Which of the following percentage figures was recommended by both Kothari Commission and National Policy that should be spent on education (1986)?
 (a) 4% of GDP (b) 5% of GDP
 (c) 6% of GDP (d) None of the above
35. Which of the following states has the maximum number of central universities?
 (a) Uttar Pradesh (b) Delhi
 (c) Both (a) and (b) (d) None of the above
36. Which of the following institution or organization publishes Universities Handbook?
 (a) University Grants Commission
 (b) Association of Indian Universities
 (c) Inter University Centres
 (d) Central Advisory Board of Education
37. In which year was the Association of Indian Universities (AIU) originally set up?
 (a) 1925 (b) 1945
 (c) 1953 (d) None of the above
38. Which of the following authorities is not empowered to bring a university into existence?
 (a) State government (b) Central government
 (c) UGC (d) None of the above
39. How many universities were set up under Central Universities Act, 2009?
 (a) 12 (b) 16
 (c) 40 (d) 43

40. Which among the following constitute the majority of institutions within the university system?
 (a) Central universities (b) State universities
 (c) Deemed universities (d) Private universities
41. Which among the following constitute the majority of enrolments within the university system?
 (a) Central universities (b) State universities
 (c) Deemed universities (d) Private universities
42. Universities having central campus for imparting education are called [June 2007]
 (a) Central universities (b) Deemed universities
 (c) Residential universities (d) Open universities
43. Which of the following agencies provide funding to Indira Gandhi National Open University?
 (a) University Grants Commission
 (b) Ministry of Human Resource Development
 (c) Both (a) and (b)
 (d) None of the above
44. The university that telecasts interactive educational programmes through its own channel is [June 2007]
 (a) Dr B. R. Ambedkar Open University, Hyderabad
 (b) IGNOU
 (c) University of Pune
 (d) Annamalai University
45. Which of the following pairs of authorities are at the top of hierarchy in the case of a Central University?
 (a) Visitors and Chancellor
 (b) Visitors and Vice Chancellor
 (c) Chancellor and Vice Chancellor
 (d) Vice President and Vice Chancellor
46. The state with most universities is
 (a) Tamil Nadu (b) Andhra Pradesh
 (c) Rajasthan (d) Uttar Pradesh
47. The state with most deemed universities is
 (a) Tamil Nadu (b) Andhra Pradesh
 (c) Maharashtra (d) Karnataka
48. According to Times Higher Education's research findings to rank the world's higher educational institutions, which of the following educational has top rank in India?
 (a) Delhi University, Delhi
 (b) IIT- Mumbai
 (c) Panjab University, Chandigarh
 (d) IIT- Delhi
49. Institute of National Importance is an institution in higher education which serves as a pivotal player in developing highly skilled personnel within the specified region of the country or state. This status can be conferred upon them by
 (a) University Grants Commission
 (b) An act of Parliament
 (c) All India Council for Technical Education
 (d) All the above
50. Commonwealth of learning (CoL) is the only official Commonwealth agency located outside Britain. It is located in
 (a) New Delhi, India (b) Vancouver, Canada
 (c) Sydney, Australia (d) Islamabad, Pakistan
51. As envisaged in 12th Five Year Plan, under the concept of College Cluster Universities, a minimum number of colleges in the vicinity of a city or district can establish a university. What is the minimum number of such colleges?
 (a) 25 (b) 50
 (c) 60 (d) 100
52. EHEI stands for
 (a) Equity in Higher Education Institutions
 (b) Equity in Higher Education Index
 (c) Equality in Higher Education Index
 (d) Equity in Hidden Education Income
53. API stands for
 (a) Academic Parameter Indicator
 (b) Academic Performance Indicator
 (c) Academic Paid Instalment
 (d) None of the above
54. National literacy mission was established in
 (a) 1996 (b) 1988
 (c) 1999 (d) 2000
55. The main aim of National Council for Teacher Education is
 (a) To open college of education.
 (b) To promote research in education.
 (c) To maintain standards in colleges of education.
 (d) To provide grant to colleges of education.
56. National Council of Educational Research and Training was established in
 (a) 1961 (b) 1962
 (c) 1963 (d) 1964
57. Which of the following organizations set up the National Assessment and Accreditation Council?
 (a) AICTE (b) UGC
 (c) MHRD (d) None of the above
58. National Assessment and Accreditation Council (NAAC) is headquartered in
 (a) New Delhi (b) Mumbai
 (c) Hyderabad (d) Bengaluru
59. NUEPA is mainly concerned with
 (a) Educational Supervision
 (b) Educational Unity
 (c) Educational Planning
 (d) Educational Evaluation
60. The title of Yashpal Committee Report (1993) is
 (a) ICT in Teacher education
 (b) Learning without burden
 (c) Learning through Broadcasting
 (d) None of the above
61. The number of representatives of Central Government in UGC is
 (a) 9 (b) 2
 (c) 6 (d) 3
62. Which of the following agencies or institutions set up the Accreditation Board (AB)?
 (a) Indian Council of Agricultural Research
 (b) All India Council for Technical Education
 (c) University Grants Commission
 (d) Ministry of Human Resource Development

63. The National Board of Accreditation (NBA) was set up in the year 1987 by
 (a) AICTE (b) UGC
 (c) MHRD (d) IGNOU
64. In which of the following years 'The National Policy of Education' was revised and a 'Programme of Action' was also attached to it?
 (a) 1968 (b) 1976
 (c) 1986 (d) 1992
65. Which of the following days is celebrated as National Education Day?
 (a) September 5 (b) October 2
 (c) November 11 (d) November 14
66. The purpose of National Education Policy is
 (a) Universalization of primary education
 (b) Vocationalization of education
 (c) To review the education
 (d) To give equal opportunity of education to all
67. According to Vision Paper of 12th Five Year Plan, the targeted staff strength (in terms of teacher-student ratio) envisaged for science and technology in higher education is
 (a) 1 : 10 (b) 1 : 15
 (c) 1 : 20 (d) 1 : 30
68. According to Vision Paper of 12th Five Year Plan, the targeted staff strength (in terms of teacher-student ratio) envisaged for social sciences, humanities, management and arts subjects in higher education courses is
 (a) 1 : 10 (b) 1 : 15
 (c) 1 : 20 (d) 1 : 30
69. In order to achieve the 12th Five Year Plan's Inclusive and Qualitative Expansion of Higher Education, the number of proposed women universities is
 (a) 10 (b) 15
 (c) 20 (d) 30
70. Apart from few short-term programmes, academic staff colleges set up for teachers' training basically offer
 (a) Subject-specific refresher courses
 (b) General orientation programmes
 (c) Both (a) and (b)
 (d) None of the above
71. Which of the following institutes is/are funded by central government?
 (a) National Institute of Foundry and Forge Technology, Ranchi.
 (b) North Eastern Regional Institute of Science and Technology, Itanagar.
 (c) Sant Longowal Institute of Engineering and Technology, Longowal, Punjab.
 (d) All the above
72. The first Committee to be constituted after independence by the Government of India on Women's Education was
 (a) Dr. Radhakrishnan Commission
 (b) The Mudaliar Commission
 (c) The Shri Sri Prakasa Committee
 (d) Dr. Durgabai Deshmukh Committee
73. Which article of the constitution provides for the rights of minorities to establish and administer the institutions of their choice?
 (a) Article 21 (1) (b) Article 30 (1)
 (c) Article 32 (d) None of the above

 (a) 2001 (b) 2003
 (c) 2004 (d) 2005
75. Which of the following is a specialized agency of UN to deal with copyright and other intellectual property rights?
 (a) WIPO (b) GATS
 (c) GATT (d) None of the above
76. The name of pilot project to provide education through massive satellite connectivity up to grass-root level is
 (a) Sarva Shiksha Abhiyan
 (b) Women Empowerment Project
 (c) Rajiv Gandhi Project
 (d) None of the above
77. Which of the following universities has been assigned the status of central university in 2013?
 (a) Panjab University
 (b) Osmania University
 (c) Nalanda University
 (d) Indira Gandhi National Tribal University
78. The number of Central Universities in India is
 (a) 40 (b) 41
 (c) 42 (d) 46
79. Rashtriya Sanskrit Vidyapeetha is located in
 (a) Tirupati (b) Chennai
 (c) Hyderabad (d) Jaipur
80. Which of the following languages was assigned the status of classical language in 2013?
 (a) Sanskrit (b) Tamil
 (c) Hindi (d) Malayalam
81. Match List-I with List-II and select the correct answer from the codes given below.
- | List-I | List-II |
|--|--------------|
| A National Council of Rural Institutes | I New Delhi |
| B Indian Council of Historical Research | II Hyderabad |
| C Indian Council of Philosophical Research | III Shimla |
| D Indian Institute of Advanced Study | IV Bangalore |
- Codes:**
 (a) A-II, B-IV, C-I, and D-III
 (b) A-II, B-IV, C-III, and D-I
 (c) A-II, B-III, C-IV, and D-I
 (d) A-II, B-I, C-IV, and D-III
82. Which of the following project(s) is/are funded by external agencies?

- (a) Technical Education Quality Improvement Programme
 (b) Technician Education Project
 (c) Colombo Plan Staff College, Manila
 (d) All the above
83. The South Asian University is located at
 (a) New Delhi (b) Jaipur
 (c) Kathmandu (d) Islamabad
84. The Vikram Sarabhai Space Research Centre is located at
 (a) Thiruvananthapuram (b) Sriharikota
 (c) Pune (d) Bengaluru
85. Which one of the following Councils has been disbanded in 2013?
 (a) Distance Education Council (DEC)
 (b) National Council for Teacher Education (NCTE)
 (c) National Council of Educational Research and Training (NCERT)
 (d) National Assessment and Accreditation Council (NAAC)
86. Centre for Cellular and Molecular Biology is located in
 (a) Hyderabad (b) Chennai
 (c) Bengaluru (d) Ahmedabad
87. Which of the following days is celebrated as National Education Day?
 (a) September 5 (b) October 2
 (c) November 11 (d) November 14
88. Which of the following regulatory bodies does not enjoy a statutory status as a professional body?
 (a) Bar Council of India
 (b) All India Council for Technical Education
 (c) Medical Council of India
 (d) None of the above
89. Under which of the following constitutional amendments, education was transferred to the concurrent list?
 (a) 42nd (b) 73rd
 (c) 74th (d) None of the above
90. UGC gets its funding from
 (a) Central government only
 (b) State governments
 (c) Both central and state governments
 (d) None of the above
91. Which of the following universities in India has Prime Minister as its chancellor?
 (a) Indira Gandhi National Open University
 (b) Visva – Bharti University
 (c) Indian Maritime University
 (d) Indian Defence University
92. Faculty Improvement Programme of UGC aims at
 (a) Appointment of additional faculty
 (b) Make faculty research oriented
 (c) Improving physical infrastructure
 (d) None of the above
93. Mahatma Gandhi Antarrashtriya Hindi Vishwavidyalaya is located at
 (a) New Delhi (b) Jaipur
 (c) Porbandar (d) Wardha
94. CAGE was set up in the year
 (a) 1925 (b) 1857
 (c) 1956 (d) 1992
95. IGNOU was set up in the year
 (a) 1985 (b) 1988
 (c) 1991 (d) 1992
96. The apex body for open and distance learning (ODL) system in the country is
 (a) DEC (b) IGNOU
 (c) MHRD (d) None of the above
97. The ex-officio chairperson of Distance Education Council (DEC) is
 (a) Vice Chancellor, IGNOU
 (b) HRD Minister
 (c) Either (a) or (b)
 (d) None of the above
98. The Ministry of Human Resource Development was created in the year
 (a) 1972 (b) 1980
 (c) 1985 (d) 1991
99. Government has set a target to increase the gross enrolment ratio in higher education to 30% by the year
 (a) 2015 (b) 2020
 (c) 2025 (d) 2030
100. Which of the following personalities was the first chairman of UGC?
 (a) Dr Shanti Swaroop Bhatnagar
 (b) Dr Manmohan Singh
 (c) Shri Humayun Kabir
 (d) Shri C. D. Deshmukh
101. The first open university in India was
 (a) Andhra Pradesh Open University
 (b) Indira Gandhi National Open University
 (c) Delhi University
 (d) None of the above
102. The first university in India to start correspondence course was
 (a) Andhra Pradesh Open University
 (b) IGNOU
 (c) Delhi University
 (d) None of the above
103. The rank of India in terms of enrolment in higher education institutions is
 (a) First (b) second
 (c) Third (d) Fourth
104. The National Knowledge Commission, a high level advisory body to Prime Minister of India, with the objective of transforming India into a knowledge society was set up in the year
 (a) 2005 (b) 2006
 (c) 2007 (d) 2008
105. The concept of a countrywide network for higher education that would allow students the flexibility to design their own curriculum and combine subjects of their choice is basically of
 (a) Innovation University (b) Meta University
 (c) Central University (d) Deemed university

106. The concept of Meta University was first propounded by
 (a) Massachusetts Institute of Technology
 (b) Jawaharlal Nehru University
 (c) Harvard Business School
 (d) Delhi University
107. The universities with NAAC 'A' Grade and 10 years of standing can get financial support from UGC for innovative teaching or educational programmes; these universities are known as
 (a) Meta Universities
 (b) Innovation Universities
 (c) Central Universities
 (d) None of the above
108. In which of the following countries, the Humboldtian Concept of University Education originated?
 (a) USA (b) Poland
 (c) France (d) Germany
109. The major concept underlying distance education is
 (a) Continuing education
 (b) Simplicity
 (c) Cost effectiveness
 (d) Objectivity
110. The course content of professional degree emphasizes on
 (a) Acquiring skills and practical analysis
 (b) Theory and research
 (c) Building concepts
 (d) None of the above
111. The number of universities at the time of independence was
 (a) 15 (b) 20 (c) 28 (d) 35
112. Networking of libraries through electronic media is called [June 2007]
 (a) Inlibnet (b) Libinfnet
 (c) The Internet (d) HTML
113. The first virtual university of India came up in [December 2013]
 (a) Andhra Pradesh (b) Maharashtra
 (c) Uttar Pradesh (d) Tamil Nadu
114. Match List-I with List-II and select the correct answer from the codes given below.

List-I (Institutions)	List-II (Locations)
A. Vikram Sarabhai Space Research Centre	I. Thiruvananthapuram
B. Centre for Cellular and Molecular Biology	II. Hyderabad
C. Indian Space Research Organization	III. Bengaluru
D. The Energy and Resources Institute	IV. New Delhi

Codes:

- (a) A-I, B-II, C-III and D-IV
 (b) A-I, B-III, C-II and D-IV
 (c) A-III, B-II, C-I and D-IV
 (d) A-III, B-I, C-II and D-IV
115. In which year was the NBA set up?
 (a) 1991 (b) 1994
 (c) 2001 (d) 2005
116. Aligarh Muslim University was set up in the year
 (a) 1857 (b) 1875
 (c) 1905 (d) 1916
117. Who among the following was the first Education Minister of independent India?
 (a) Abul Kalam Azad
 (b) S. Vallabhbhai Patel
 (c) S. Radhakrishnan
 (d) None of the above
118. There is a proposal to establish innovation universities aiming at world class standards. The proposed number of such institutions is
 (a) 10 (b) 14
 (c) 25 (d) None of the above
119. Which of the following satellite channel was launched on 26 January, 2003 for the spread of technical growth and development of distance education in India?
 (a) Eklavya (b) Dronacharya
 (c) Gyan Darshan (d) Gyan Vani
120. Which of the following institutions have been set up by the MHRD?
 (a) National Bal Bhawan, New Delhi
 (b) ISRO
 (c) DRDO
 (d) None of the above
121. SITE means
 (a) Satellite Instructional Television Experiment
 (b) Satellite Informational Television Experiment
 (c) Satellite Instructional Telecom Experiment
 (d) Satellite Informational Telecom Experiment
122. Name of the research station on Antarctic set up by India is
 (a) Dakshin Gangotri
 (b) Dakshin Ganga
 (c) Dakshin Godawari
 (d) None of the above
123. The foundation training of selected IAS officers is conducted at
 (a) LBS National Academy of Public Administration, Mussoorie.
 (b) MG Institute of Public Administration, Chandigarh.
 (c) UPSC, New Delhi.
 (d) All state capitals
124. The main objective of 'National Mission on Teachers and Training' is to improve
 (a) Students' enrolment
 (b) Quality of teaching
 (c) Women education
 (d) All the above

125. PACER is the acronym for
 (a) Professionals Action Committee for Educational Reforms
 (b) Professionals Accreditation Committee for Educational Reforms
 (c) Professionals Action Committee for Educational Research
 (d) None of the above
126. Mahila Samakhya was born out of the New Education Policy of 1986 which stressed the need for an intervention to create gender equality through women's education. It was launched in the year
 (a) 1989 (b) 1992
 (c) 1996 (d) 1998
127. Who was the chairman of University Education Commission set up in 1948?
 (a) Dr S. Radhakrishnan
 (b) Dr D. S. Kothari
 (c) Maulana Abul Kalam Azad
 (d) C. D. Deshmukh
128. University Education Commission recommended the setting up of UGC on the lines of University Grants Commission of
 (a) USA (b) Great Britain
 (c) Germany (d) USSR
129. Which of the following agency or institution proposed introduction of India Education Index (IEI) for ranking institutes based on academic, research, performance, and other parameters?
 (a) AICTE (b) NAAC
 (c) UGC (d) IIT-Delhi
130. The largest university in the world in terms of student enrolment is
 (a) Beijing University, Beijing, China.
 (b) Dr B. R. Ambedkar University Open University, Hyderabad.
 (c) Indira Gandhi National Open University, New Delhi.
 (d) None of the above
131. The first inter university centre which was established by UGC in 1984 is
 (a) Inter University Accelerator Centre (Nuclear Science Centre)
 (b) Inter University Centre for Astronomy and Astrophysics (IUCAA)

257. NITI Aayog is a
 (a) Statutory body
 (b) Executive body
 (c) Autonomous body
 (d) Advisory and non-statutory body
258. Consider the following statements:
Assertion (A): Rights and duties are the two sides of the same coin.
Reason (R): It is not the duty of the state to maintain the rights of the citizens.
 (a) Both (A) and (R) are true, and (R) is correct explanation of (A).
 (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true, but (R) is false.
 (d) (A) is false, but (R) is true.
259. Who holds the power of judicial review in India?
 (a) President (b) Prime Minister
 (c) Supreme Court (d) Parliament
260. Supreme Court of India consists of a Chief Justice and
 (a) Seven judges (b) Nine judges
 (c) Twenty-Five judges (d) Thirty judges
261. What is the minimum duration of a stay, before a person can apply for Indian citizenship?
 (a) Five years (b) Three years
 (c) Seven years (d) Ten years
262. CAG is the Chief Accountant and Auditor for
 (a) Union government
 (b) State governments
 (c) Union and State governments
 (d) Neither Union nor State government

MISCELLANEOUS

263. Ministry of Human Resource Development includes
[June 2006]
 (a) Department of Elementary Education and Literacy
 (b) Department of Secondary Education and Higher Education
 (c) Department of Women and Child Development
 (d) All the above
264. A uniform civil code has been recommended in the Directive Principles to ensure
 (a) To control the population growth
 (b) National security
 (c) National integration
 (d) Support for weaker sections of society
265. The language which enjoys special status in Article 351 of the Constitution of India as the primary source language for the development of the official standard of Hindi is
 (a) Sanskrit (b) Tamil
 (c) Bhojpuri (d) Maithili
266. Which of the following is the official language(s) as per Indian constitution?
 (a) Hindi
 (b) English
 (c) Hindi with English as an additional language
 (d) No official language
267. The National Language of India is
 (a) Hindi
 (b) English
 (c) Both English and Hindi
 (d) No national language
268. Which of the following High Courts gave ruling that India has no national language?
 (a) Mumbai (b) Gujarat
 (c) Lucknow (d) Patna
269. The Right of Children to Free and Compulsory Education Act, also popular as Right to Education Act (RTE Act) was enacted in the year
 (a) 2008 (b) 2009
 (c) 2010 (d) 2011
270. Right to Education Act (RTE) makes it mandatory to provide free and compulsory education for children age group between

- (a) 6 and 14 years (b) 6 and 12 years
(c) 8 and 14 years (d) None of the above
271. The Right to Education Act came into force in the year
(a) 2008 (b) 2009
(c) 2010 (d) None of the above
272. Which of the following articles of constitution states that the official language of the union shall be Hindi in Devanagari script?
(a) 343 (1) (b) 356
(c) 75 (d) 351
273. The first language to have been assigned the status of classical language in 2004 is
(a) Tamil (b) Sanskrit
(c) Kannada (d) Malayalam
274. Odia has been assigned the status of classical language in February 2014. With this, the number of classical languages in India is
(a) Three (b) Four
(c) Five (d) Six
275. Ninety-third Constitution Amendment Bill seeks
(a) To grant statehood to Uttaranchal
(b) To make elementary education compulsory
(c) To make army service mandatory
(d) None of the above
276. Which of the following parts of the Indian Constitution enjoins upon the state to provide free and compulsory education for children up to 14 years of age?
(a) Directive Principles of State Policy
(b) fundamental rights
(c) Fundamental Duties
(d) Special Provisions related to certain classes
277. Select the correct sequence in ascending order.
(a) Deputy Ministers, Ministers of State and Cabinet Ministers.
(b) Ministers of State, Deputy Ministers and Cabinet Ministers.
(c) Ministers of State, Cabinet Ministers and Deputy Ministers.
(d) Cabinet Ministers, Ministers of State and Deputy Ministers.
278. Which of the following pairs of articles of the Constitution of India and the subjects dealt with by them are correctly matched?
I Article 352: Proclamation of emergency
II Article 370: Special status in respect of Jammu and Kashmir
III Article 14: Equality of opportunity in matters of public employment
IV Article 40: Organization of village panchayats
Select the correct answer using the codes given below.
Codes:
(a) I and II (b) II, III and IV
(c) I, II and IV (d) I, III and IV
279. Which of the following is an example of extra-constitutional power of the Governor of a state in India?
(a) His role as Chancellor of the universities in the state.
(b) His power to dismiss the ministry.
(c) His power to dissolve the state Legislative Assembly.
(d) His power to return a bill to the state Legislative Assembly for reconsideration.
280. If Prime Minister of India belongs to the upper house of Parliament, then
(a) He will not be able to vote in his favour in the event of a no-confidence motion.
(b) He will not be able to speak on the budget in the lower house.
(c) He can make statements only in the upper house.
(d) He becomes a member of the lower house within six months after being sworn-in as the Prime Minister.
281. Two statements, one labelled as Assertion (A) and the other labelled as Reason (R), are given:
Assertion (A): The reservation of 33% of seats for women in Parliament and State Legislatures does not require constitutional amendment.
Reason (R): Political parties contesting elections can allocate 33% seats they contest to women candidates without any constitutional amendment.
In the context of these two statements, which of the following is correct?
(a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
(b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
(c) (A) is true, but (R) is false.
(d) (A) is false, but (R) is true.
282. Which of the following is/are stated in the Constitution of India?
I The President shall not be member of either house of Parliament.
II The Parliament shall consist of the President and two houses.
Choose the correct answer from the codes given below.
Codes:
(a) Neither I nor II (b) Both I and II
(c) I alone (d) II alone
283. Match List-I with List-II.
- | List-I
(Article of constitution) | List-II
(Subject) |
|-------------------------------------|-----------------------------------|
| A. Art 54 | I. President's Election |
| B. Art 75 | II. Prime Minister Appointment |
| C. Art 155 | III. Appointment of Governor |
| D. Art 164 | IV. Appointment of Chief Minister |
- Codes:**
(a) A-IV, B-II, C-III and D-I
(b) A-I, B-III, C-II and D-IV
(c) A-I, B-II, C-III and D-IV
(d) A-IV, B-III, C-II and D-I
284. Which of the following amendments relates to the local government institutions?
(a) 52nd Amendment (b) 73rd Amendment
(c) 66th Amendment (d) 70th Amendment

285. The real executive authority of the state is
 (a) The Governor
 (b) The Speaker
 (c) The Council of Ministers
 (d) The Chief Justice of High Court
286. Which of the following is the lengthiest amendment to the Constitution of India so far?
 (a) 24th Amendment (b) 30th Amendment
 (c) 42nd Amendment (d) 44th Amendment
287. The only President of India who was elected unopposed is
 (a) S. Radhakrishnan
 (b) Dr Zakir Hussain
 (c) Neelam Sanjeeva Reddy
 (d) Fakhruddin Ali Ahmed
288. Which of the following state Governors enjoys special powers with regard to the administration of tribal areas?
 (a) Odisha (b) Madhya Pradesh
 (c) Bihar (d) Assam
289. The normal tenure of the Governor of a state is
 (a) Five years
 (b) Till he/she enjoys the confidence of the President
 (c) Till he/she enjoys the confidence of the Chief Minister
 (d) None of the above
290. The Legislative Council in a state may be created or abolished by the
 (a) President, on the recommendation of the Governor.
 (b) Parliament
 (c) Parliament after the state Legislative Assembly passes a resolution to that effect.
 (d) Governor on a recommendation by the state cabinet.
291. Which of the following introduced Indian Penal Code?
 (a) Lord Macaulay (b) Lord Dalhousie
 (c) Lord Curzon (d) Lord Ripon
292. Constitution of India does not mention the post of
 (a) Deputy Prime Minister
 (b) Deputy Chairman of the Rajya Sabha
 (c) Deputy Speaker of the state Legislative Assembly
 (d) None of the above
293. Which of the following age groups is taken into consideration for constituting Gender Parity Index for higher education?
 (a) 15–22 years (b) 18–23 years
 (c) 16–22 years (d) 18–25 years
294. There was a major announcement in Budget 2016–17 in the form of Higher Education Funding Agency. Which of the following statements are correct in this context?
 I. An initial capital base of ₹ 1000 cr.
 II. Joint participation of Government and philanthropic donors.
 III. Quality infrastructure in IITs, NITs, IIITs, etc.
Codes:
 (a) I and II (b) II and III
 (c) I and III (d) All the above
295. According to 2011 Census Report, the difference between literacy rates of men and women in India is about
 (a) 10% (b) 17%
 (c) 21% (d) 27%
296. For equality of educational opportunities among women, the Constitution has provision under
 (i) Article 45
 (ii) Article 15(3)
 (iii) Article 16(1) and (2)
 (iv) All the above
 Which of the above is correct?
 (a) Only (i) is correct.
 (b) (i) and (ii) are correct.
 (c) (i) and (iii) are correct.
 (d) (iv) is correct.
297. Equality of educational opportunities is possible by
 (a) Extending portals of educational institutions to all without any discrimination.
 (b) Opening more educational institutions.
 (c) Privatizing the education system in the country.
 (d) Public funding of Education.
298. Who have signed MOU for recognition of Teacher Education in Special Education Programme in India?
 (a) NCTE and NAAC (b) RCI and NCERT
 (c) NCDS and RCI (d) RCI and NCTE
299. National youth day, observed across India on 12 January commemorates the birth anniversary of which famous Indian personality?
 (a) Swami Dayanand Saraswati
 (b) Swami Vivekanand
 (c) Aurobindo Ghosh
 (d) Rabindranath Tagore

UGC NET Paper 1

December 2012

- The English word communication is derived from which of the following words?
 - Communis and communicare
 - Communist and commune
 - Communism and communalism
 - Communion and common sense
- Chinese Cultural Revolution leader Mao Zedong used a type of communication to talk to the masses and it is known as
 - Mass line communication
 - Group communication
 - Participatory communication
 - Dialogue communication
- Conversing with the spirits and ancestors is termed as
 - Transpersonal communication
 - Intrapersonal communication
 - Interpersonal communication
 - Face-to-face communication
- The largest circulated daily newspaper among the following is
 - The Times of India*
 - The Indian Express*
 - The Hindu*
 - The Deccan Herald*
- The pioneer of silent feature film in India was
 - K. A. Abbas
 - Satyajit Ray
 - B. R. Chopra
 - Dadasaheb Phalke
- Classroom communication of a teacher rests on the principle of
 - Infotainment
 - Edutainment
 - Entertainment
 - Power equation
- The missing number in the series 0, 6, 24, 60, 120, ?, 336, is
 - 240
 - 220
 - 280
 - 210
- A group of 7 members having a majority of boys is to be formed out of 6 boys and 4 girls. The number of ways the group can be formed is
 - 80
 - 100
 - 90
 - 110
- The number of observations in a group is 40. The average of the first 10 members is 4.5 and the average of the remaining 30 members is 3.5. The average of the whole group is
 - 4
 - 15/2
 - 15/4
 - 6
- If 'MOHAN' is represented by the code 'KMFYL', then 'COUNT' will be represented by
 - AMSLR
 - MSLAR
 - MASRL
 - SAMLR
- The sum of the ages of two person A and B is 50. Five years ago, the ratio of their ages was 5 : 3. The present age of A and B is
 - 30 and 20
 - 35 and 15
 - 38 and 12
 - 40 and 10
- Let A mean minus (-), B mean multiplied by (·), C mean divided by (÷), and D mean plus (+). The value of $90 \div 9 \times 10 + 2 \times 10 - 12$ is
 - 8
 - 10
 - 12
 - 14
- Consider **Assertion I** and **Assertion II** and select the right code given below.

Assertion I: Even bank lockers are not safe. Thieves can break them and take away your wealth. However, thieves cannot go to heaven. So, you should keep your wealth in heaven.

Assertion II: The difference in skin colour of living beings is due to the distance from the sun and not because of some permanent traits. Skin colour is the result of body's reaction to the sun and its rays.

Codes:

 - Both the assertions are forms of argument.
 - Assertion I is an argument, but Assertion II is not.
 - Assertion II is an argument, but Assertion I is not.
 - Both the assertions are explanations of facts.
- By which of the following proposition, the proposition, some men are not honest is contradicted?
 - All men are honest.
 - Some men are honest.
 - No men are honest.
 - All the above
- A stipulative definition is
 - Always true
 - Always false
 - Sometimes true sometimes false
 - Neither true nor false
- Choose the appropriate alternative given in the codes to replace the question mark.

Examiner – Examinee, Pleader – Client, Preceptor – ?

 - Customer
 - Pathfinder
 - Perceiver
 - Disciple

17. If the statement, most of the students are obedient, is taken to be true, then which one of the following pair of statements can be claimed to be true?

- I. All obedient persons are students.
- II. All students are obedient.
- III. Some students are obedient.
- IV. Some students are not disobedient.

Codes:

- (a) I and II (b) II and III
- (c) III and IV (d) II and IV

18. Choose the right code:

A deductive argument claims that:

- I. The conclusion does not claim something more than that is contained in the premises.

II. The conclusion is supported by the premise or premises conclusively.

III. If the conclusion is false, then premise or premises may be either true or false.

IV. If premise or combination of premises is or are true, then conclusion must be true.

Codes:

- (a) I and II
- (b) I and III
- (c) II and III
- (d) All the above

On the basis of the data given in the following table, provide answers to questions from 19 to 24.

Government Expenditures on Social Services (as per cent of total expenditure)

S. No.	Items	2007-08	2008-09	2009-10	2010-11
	Social services	11.06	12.94	13.06	14.02
(a)	Education, sports and youth affairs	4.02	4.04	3.96	4.46
(b)	Health and family welfare	2.05	1.91	1.90	2.03
(c)	Water supply, housing, etc.	2.02	2.31	2.20	2.27
(d)	Information and broadcasting	0.22	0.22	0.20	0.22
(e)	Welfare of SC/ST and OBC	0.36	0.35	0.41	0.63
(f)	Labour and employment	0.27	0.27	0.22	0.25
(g)	Social welfare and nutrition	0.82	0.72	0.79	1.06
(h)	North-eastern areas	0.00	1.56	1.50	1.75
(i)	Other social services	1.29	1.55	1.87	1.34
	Total government expenditure	100.00	100.00	100.00	100.00

19. How many activities of social services have shown the expenditure to be less than 5% of the total expenditures incurred on social services in 2008-2009?

- (a) One (b) Three
- (c) Five (d) All of these

20. In which year, the expenditures on social services increased with the highest rate?

- (a) 2007-2008 (b) 2008-2009
- (c) 2009-2010 (d) 2010-2011

21. Which of the following activities remain almost stagnant in terms of shares of expenditure?

- (a) North-eastern areas
- (b) Welfare of SC/ST and OBC
- (c) Information and broadcasting
- (d) Social welfare and nutrition

22. Which of the following item's expenditure share is almost equal to the remaining three items in the given years?

- (a) Information and broadcasting
- (b) Welfare of SC/ST and OBC
- (c) Labour and employment
- (d) Social welfare and nutrition

23. Which of the following items of social services have registered the highest rate of increase in expenditure during 2007-2008 to 2010-2011?

- (a) Education, sports and youth affairs.
- (b) Welfare of SC/ST and OBC.
- (c) Social welfare and nutrition.
- (d) Overall social services.

24. Which of the following items have registered the highest rate of decline in terms of expenditure during 2007-2008 to 2009-2010?

- (a) Labour and employment
- (b) Health and family welfare
- (c) Social welfare and nutrition
- (d) Education, sports and youth affairs

25. ALU stands for

- (a) American Logic Unit
- (b) Alternate Local Unit
- (c) Alternating Logic Unit
- (d) Arithmetic Logic Unit

26. A personal computer uses a number of chips mounted on a circuit board called

- (a) Microprocessor (b) System board
- (c) Daughter board (d) Motherboard

27. Computer virus is a
 (a) Hardware (b) Bacteria
 (c) Software (d) None of these
28. Which one of the following is correct?
 (a) $(17)_{10} = (17)_{16}$ (b) $(17)_{10} = (17)_8$
 (c) $(17)_{10} = (10111)_2$ (d) $(17)_{10} = (10001)_2$
29. The file extension of MS-Word document in Office 2007 is _____
 (a) .pdf (b) .doc
 (c) .docx (d) .txt
30. _____ is a protocol used by e-mail clients to download e-mails to your computer.
 (a) TCP (b) FTP
 (c) SMTP (d) POP
31. Which of the following is a source of methane?
 (a) Wetlands
 (b) Foam industry
 (c) Thermal power plants
 (d) Cement industry
32. Minamata disease in Japan was caused by pollution due to
 (a) Lead (b) Mercury
 (c) Cadmium (d) Zinc
33. Biomagnification means increase in the
 (a) Concentration of pollutants in living organisms.
 (b) Number of species.
 (c) Size of living organisms.
 (d) Biomass
34. Nagoya protocol is related to
 (a) Climate change (b) Ozone depletion
 (c) Hazardous waste (d) Biodiversity
35. The second most important source after fossil fuels contributing to India's energy needs is
 (a) Solar energy (b) Nuclear energy
 (c) Hydropower (d) Wind energy
36. In case of earthquakes, an increase in magnitude 1 on Richter scale implies
 (a) A ten-fold increase in the amplitude of seismic waves.
 (b) A ten-fold increase in the energy of the seismic waves.
 (c) A two-fold increase in the amplitude of seismic waves.
 (d) A two-fold increase in the energy of seismic waves.
37. Which of the following is not a measure of human development index?
 (a) Literacy rate (b) Gross enrolment
 (c) Sex ratio (d) Life expectancy
38. India has the highest number of students in colleges after
 (a) UK (b) USA
 (c) Australia (d) Canada
39. Which of the following statement(s) is/are not correct about the Attorney General of India?
 I. The President appoints a person, who is qualified to be a judge of a High Court, to be the Attorney General of India.

- II. He has the right of audience in all the courts of the country.
 III. He has the right to take part in the proceedings of the Lok Sabha and the Rajya Sabha.
 IV. He has a fixed tenure.

Select the correct answer from the codes given below.

Codes:

- (a) I and IV (b) II, III and IV
 (c) III and IV (d) III only

40. Which of the following prefixes President Pranab Mukherjee desires to discontinue while interacting with Indian dignitaries as well as in official notings?

- I. His Excellency
 II. Mahamahim
 III. Hon'ble
 IV. Shri/Smt

Select the correct answer from the codes given below.

Codes:

- (a) I and III (b) II and III
 (c) I and II (d) I, II and III

41. Which of the following can be done under conditions of financial emergency?

- I. State Legislative Assemblies can be abolished.
 II. Central government can acquire control over the budget and expenditure of states.
 III. Salaries of the judges of High Courts and the Supreme Court can be reduced.
 IV. Right to constitutional remedies can be suspended.

Select the correct answer from the codes given below.

Codes:

- (a) I, II and III (b) II, III and IV
 (c) I and II (d) II and III

42. Match List-I with List-II and select the correct answer from the codes given below.

List-I	List-II
A. Poverty reduction programme	I. Mid-day meals
B. Human development scheme	II Indira Awaas Yojana (IAY)
C. Social assistance scheme	III National Old Age Pension (NOAP)
D. Minimum need scheme	IV MNREGA

Codes:

- (a) A-IV, B-I, C-III and D-II
 (b) A-II, B-III, C-IV and D-I
 (c) A-III, B-IV, C-I and D-II
 (d) A-IV, B-III, C-II and D-I

43. For an efficient and durable learning, the learner should have

- (a) Ability to learn only
 (b) Requisite level of motivation only.
 (c) Opportunities to learn only.
 (d) Desired level of ability and motivation.

44. Classroom communication must be
 (a) Teacher-centric (b) Student-centric
 (c) General-centric (d) Textbook-centric
45. The best method of teaching is to
 (a) Impart information.
 (b) Ask students to read books.
 (c) Suggest good reference material.
 (d) Initiate a discussion and participate in it.
46. Interaction inside the classroom should generate
 (a) Argument (b) Information
 (c) Ideas (d) Controversy
47. 'Spare the rod and spoil the child' gives the message that
 (a) Punishment in the class should be banned.
 (b) Corporal punishment is not acceptable.
 (c) Undesirable behaviour must be punished.
 (d) Children should be beaten with rods.
48. The type of communication that a teacher has in the classroom is termed as
 (a) Interpersonal
 (b) Mass communication
 (c) Group communication
 (d) Face-to-face communication
49. Which of the following is an indication of the quality of a research journal?
 (a) Impact factor (b) *h*-index
 (c) *g*-index (d) *i10*-index
50. Good research ethics means
 (a) Not disclosing the holdings of shares or stocks in a company that sponsors your research.
 (b) Assigning a particular research problem to one Ph.D. or research student only.
 (c) Discussing with your colleagues confidential data from a research paper that you are reviewing for an academic journal.
 (d) Submitting the same research manuscript for publishing in more than one journal.
51. Which of the following sampling methods is based on probability?
 (a) Convenience sampling
 (b) Quota sampling
 (c) Judgement sampling
 (d) Stratified sampling
52. Which one of the following references is written according to American Psychological Association (APA) format?
 (a) Sharma, V. (2010). Fundamentals of Computer Science. New Delhi: Tata McGraw Hill
 (b) Sharma, V. 2010. Fundamentals of Computer Science. New Delhi: Tata McGraw Hill
 (c) Sharma, V. 2010. Fundamentals of Computer Science, New Delhi: Tata McGraw Hill
 (d) Sharma, V. (2010), Fundamentals of Computer Science, New Delhi: Tata McGraw Hill
53. Arrange the following steps of research in correct sequence:
 I. Identification of research problem
 II. Listing of research objectives
 III. Collection of data

- IV. Methodology
 V. Data analysis
 VI. Results and discussion

Codes:

- (a) I, II, III, IV, V and VI (b) I, II, III, IV, V and VI
 (c) II, I, III, IV, V and VI (d) II, I, IV, III, V and VI

54. Identify the incorrect statement.
 (a) A hypothesis is made on the basis of limited evidence as a starting point for further investigations.
 (b) A hypothesis is a basis for reasoning without any assumption of its truth.
 (c) A hypothesis is a proposed explanation for a phenomenon.
 (d) A scientific hypothesis is a scientific theory.

Read the following passage carefully and answer the questions from 55 to 60.

The popular view of towns and cities in developing countries and of urbanization process is that despite the benefits and comforts it brings, the emergence of such cities connotes environmental degradation, generation of slums and squatters, urban poverty, unemployment, crimes, lawlessness, traffic chaos and so on. But what is the reality? Given the unprecedented increase in urban population over the past 50 years from 300 million in 1950 to 2 billion in 2000 in developing countries, the wonder is how well the world has coped and not how badly.

In general, the urban quality of life has improved in terms of availability of water and sanitation, power, health and education, communication, and transport. By way of illustration, a large number of urban residents have been provided with improved water in urban areas in Asia's largest countries, such as China, India, Indonesia and Philippines. Despite that, the access to improved water in terms of percentage of total urban population seems to have declined during the past decade of 20th century, although in absolute numbers, millions of additional urbanites have been provided improved services. These countries have made significant progress in the provision of sanitation services too, together, providing for an additional population of more than 293 million citizens within a decade (1990–2000). These improvements must be viewed against the backdrop of rapidly increasing urban population, fiscal crunch and strained human resources and efficient and quality-oriented public management.

55. The popular view about the process of urbanization in developing countries is
 (a) Positive (b) Negative
 (c) Neutral (d) Unspecified
56. The average annual increase in the number of urbanites in developing countries, from 1950 to 2000 AD, was close to

- (a) 30 million (b) 40 million
(c) 50 million (d) 60 million
57. The reality of urbanization is reflected in
(a) How well the situation has been managed
(b) How badly the situation has gone out of control
(c) How fast has been the tempo of urbanization
(d) How fast the environment has degraded
58. Which one of the following is not considered as an indicator of urban quality of life?
(a) Tempo of urbanization
(b) Provision of basic services
(c) Access to social amenities
(d) All of the above
59. The author in this passage has tried to focus on
(a) Extension of knowledge
(b) Generation of environmental consciousness
(c) Analytical reasoning
(d) Descriptive statement
60. In the above passage, the author intends to state
(a) The hazards of the urban life
(b) The sufferings of the urban life
(c) The awareness of human progress
(d) The limits of growth

ANSWER KEYS

1. (a) 2. (a) 3. (a) 4. (a) 5. (d) 6. (b) 7. (d) 8. (b) 9. (c) 10. (a)
11. (a) 12. (d) 13. (b) 14. (a) 15. (c) 16. (d) 17. (c) 18. (a) 19. (b) 20. (b)
21. (c) 22. (d) 23. (b) 24. (a) 25. (d) 26. (d) 27. (c) 28. (d) 29. (c) 30. (d)
31. (a) 32. (b) 33. (a) 34. (d) 35. (c) 36. (a) 37. (c) 38. (b) 39. (a) 40. (c)

51. (d) 52. (a) 53. (b) 54. (d) 55. (b) 56. (a) 57. (a) 58. (a) 59. (c) 60. (d)

HINTS AND SOLUTIONS

1. (a): The word 'Communication' is derived from the Latin word *Communicare* meaning to impart, share, or make common, which later entered English language in the 14th and 15th centuries. In the word communication, the key root is *mun-* (not *uni*), which is related to words such as 'community'.
2. (a): The mass line is the political, organizational and leadership methods developed by Mao Zedong during the Chinese Revolution and the communication used in the process is termed as mass line communication.
3. (a): Transpersonal communication: Here, trans means beyond and hence, transpersonal means beyond persons or human beings. Interpersonal means between two persons and intrapersonal means talking to himself or herself.
4. (a): The Times of India started as Bombay Times was setup in 1838 and it is the most widely read English language newspaper. The answer choices are among English Newspapers only. Otherwise, Dainik Jagran and Dainik Bhaskar are the largest read newspapers in India, both published in Hindi.
5. (d): Dadasaheb Phalke was the pioneer of the silent feature film in India titled '*Shree Pundalik*' (Marathi), which was directed by him and released in 1912. It was the first silent film in India. He also made the next silent feature film 'Raja Harishchander' in 1913.
6. (b): Edutainment in classroom is the combination of education and entertainmen. It means that effective education has to take place in a humorous environment.
7. (d): Here, the pattern is $0 \cdot 1 \cdot 2$, $1 \cdot 2 \cdot 3$, $2 \cdot 3 \cdot 4$, $3 \cdot 4 \cdot 5$, $4 \cdot 5 \cdot 6$, $5 \cdot 6 \cdot 7$, $6 \cdot 7 \cdot 8$, and so on.
8. (b): It is a question of combination and we have to make use of concept of probability. Here, to make a group of 7 people consisting majority of boys can have the following combinations = (6 boys and 1 girl) or (5 boys and 2 girls) or (4 boys and 3 girls).

$$= ({}^6C_6 \cdot {}^4C_1) + ({}^6C_5 \cdot {}^4C_2) + ({}^6C_4 \cdot {}^4C_3)$$

$$= (1 \times 4) + (6 \times 6) + 60$$

$$= 100$$
 Here, it should be noted that as the keyword is OR; we have to make use of addition theorem and also the number of combinations = nC_r , where n is the total number of elements and r means making r selections out of n .

$${}^nC_r = n! / r! (n - r)!$$
9. (c): It is a question of combined average.
 Combined average = $(N_1 \cdot X_1 + N_2 \cdot X_2) / (N_1 + N_2)$, where N_1 and N_2 are the respective number of elements in two groups, and X_1 and X_2 are their respective averages.

$$(10 \cdot 4.5 + 30 \cdot 3.5) / 40 = (45 + 105) / 40 = 150 / 40 = 15/4$$
10. (a)
- | | | | | |
|----|----|----|----|----|
| M | O | H | A | N |
| -2 | -2 | -2 | -2 | -2 |
| K | M | F | Y | L |
- Similarly,
- | | | | | |
|----|----|----|----|----|
| C | O | U | N | T |
| -2 | -2 | -2 | -2 | -2 |
| A | M | S | L | R |

11. (a): The sum of the ages of two persons A and B is 50. Five years ago, the ratio of their ages was 5 : 3.
Ten years ago, the sum of ages must be 10 years less (5 years less for each of A and B), it means that the sum of ages must be 40 years.
Total of ratios = 5 + 3 = 8
So, 5 years ago A's age = $5/8 \cdot 40 = 25$ years
Present age of A = 25 + 5 = 30 years
So, 5 years ago B's age = $3/8 \cdot 40 = 15$ years
Present age of B = 15 + 5 = 20 years
12. (d): $90 + 9 - 29 \cdot \text{by } 10 \cdot \text{by } 2 = 14$. The solution does not follow BODMAS.
13. (b): Assertion I is an argument to 'keep your wealth in heaven', whereas Assertion II is an explanation to a query, which is a probable query about skin colour.
15. (c): Stipulative definition: A definition that is stipulated by someone and that is not a standard usage, so this can be right or wrong.
16. (d): Here, the second term is being supervised or facilitated by the first term, so the answer is disciple.
17. (c): Looking at the Venn diagram, I and II cannot be true. In this type of statement, the subjects 'most' and 'some' carry the same sense, so III is true. When we read the language of statement IV, it should be read as 'Some students are obedient'.

18. (a): According to the definition of deductive argument, I, II and IV follow. Since III is wrong, answer choices (b) and (c) are omitted.
19. (b): Here, we have to calculate the expenditure incurred on different activities individually as a percentage of expenditure on social services.
- Education, sports and youth affairs = $(4.04/12.94) \cdot 100 \cdot 100 = 31.22\%$
 - Health and family welfare = $(1.91/12.94) \cdot 100 = 14.76\%$
 - Water supply and housing = $(2.31/12.94) \cdot 100 = 17.85\%$
 - Information and broadcasting = $(0.22/12.94) \cdot 100 = 1.70\%$
 - Welfare to SC/ST and OBC = $(0.35/12.94) \cdot 100 = 2.70\%$
 - Labour and employment = $(0.27/12.94) \cdot 100 = 2.08\%$
 - Social welfare and nutrition = $(0.72/12.94) \cdot 100 = 5.56\%$
 - Northeast states = $(1.56/12.94) \cdot 100 = 12.05\%$
 - Other social services = $(1.55/12.94) \cdot 100 = 11.97\%$

Thus, there are three service activities where the expenditure has been less than 5% of total expenditure incurred on social services. So, option (b) is the answer. In this question, approximate calculations of percentage figures can also help in solving the problem.

20. (b): In this question, since all figures are in the form of common size statement, wherein all figures have been reduced to percentage figures, we need to convert these figures to absolute figures to get correct answer as it cannot be ruled out that the absolute government expenditure might have reduced.

As per answer choices, if we assume that total government expenditure is kept at the same level in absolute figures (in terms of rupees), then 2008–2009 is the answer.

$$\frac{12.94 - 11.06}{11.06} \times 100 = 16.99\%$$

For 2009–2010:

$$\frac{13.06 - 12.94}{12.94} \times 100 = 0.12 / 12.94 \sim 1\%$$

For 2010–2011:

$$\frac{14.02 - 13.06}{13.06} \times 100 = (0.06 / 13.06) \times 100 \sim 0.5\%$$

So, clearly option (b) is the answer when the increase in the expenditure is maximum at 16.99%.

21. (c): Information and broadcasting
Just by observing and assuming that total government expenditure stands at the same level, option (c) is the answer.
22. (d): Here, the approach should be to pick the largest figure among the answer choices and just see that the total of remaining three is approximately equal to them or not for verification. Here, among the choices, the largest figure is social welfare and nutrition for different years. For 2008–2009, the total of information and broadcasting, welfare to SC/ST and OBC, and labour and employment is 0.85, which is comparable to that of social welfare and nutrition at 0.82. Same is the case for other years as well.
23. (b): The percentage increases between the years 2007–2008 and 2010–2011 for different items have been calculated as given below.
- (a) Education, sports and youth affairs = $(4.46 - 4.02)/4.02 \cdot 100 = 10.94\%$
 - (b) Welfare to SC/ST and OBC = $(0.63 - 0.36)/0.36 \cdot 100 = 0.27/0.36 \cdot 100 = 75\%$
 - (c) Social welfare and nutrition = $(1.06 - 0.82)/0.82 \cdot 100 = 0.24/0.82 \cdot 100 = 29.26\%$
 - (d) Overall social services = $(14.02 - 11.06)/11.06 \cdot 100 = 2.96/11.06 \cdot 100 = 26.76\%$
24. (a): Decline in percentage terms for different items during 2007–2008 to 2009–2010.
- (a) Labour and employment = $(0.27 - 0.22)/0.27 \cdot 100 = 18.51\%$

- (b) Health and family welfare = $(2.05 - 1.90)/2.05 \cdot 100 = 0.15/2.05 \cdot 100 = 7.31\%$
 (c) Social welfare and nutrition = $0.82 - 0.79/0.82 \cdot 100 = 0.03/0.82 \cdot 100 = 3.65\%$
 (d) Education, sports and youth affairs = $4.02 - 3.96/4.02 \cdot 100 = 1.49\%$

So, option (a) is the answer as the decline is maximum in percentage terms.

28. (d): There is no need to explore answer choices (a) and (b) as there is same number, i.e., on both sides of the equation with different bases.

Solving (c), we get:

$$(10111)_2 = 1 \cdot 2^4 + 0 \cdot 2^3 + 1 \cdot 2^2 + 1 \cdot 2^1 + 1 \cdot 2^0 = 16 + 4 + 2 + 1 = 23$$

Solving (d), we get:

$$(10001)_2 = 1 \cdot 2^4 + 0 \cdot 2^3 + 0 \cdot 2^2 + 0 \cdot 2^1 + 1 \cdot 2^0 = 16 + 1 = 17$$

$$\text{So, } (17)_{10} = (10001)_2$$

34. (d): Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization (ABS) to the Convention on Biological Diversity is a supplementary agreement to the Convention on Biological Diversity (CBD). It was adopted on 29 October 2010 in Nagoya, Japan.

35. (c): Hydropower contributes around 17% in meeting energy needs of India. Nuclear energy contributes around 3–4%, and wind energy and solar energy just 1–2%.

UGC NET Paper 1

June 2013

- 'www' stands for
 - Work With Web
 - Word Wide Web
 - World Wide Web
 - Worth While Web
- A hard disk is divided into tracks which is further subdivided into
 - Clusters
 - Sectors
 - Vectors
 - Head
- A computer program that translates a program statement by statement into machine language is called a/an
 - Compiler
 - Simulator
 - Translator
 - Interpreter
- A gigabyte is equal to
 - 1024 Megabytes
 - 1024 Kilobytes
 - 1024 Terabytes
 - 1024 Bytes
- A compiler is a software that converts
 - Characters to bits.
 - High-level language to machine language.
 - Machine language to high-level language.
 - Words to bits
- Virtual memory is
 - An extremely large main memory.
 - An extremely large secondary memory.
 - An illusion of extremely large main memory.
 - A type of memory used in supercomputers.
- The phrase 'tragedy of commons' is in the context of
 - Tragic event related to damage caused by the release of poisonous gases.
 - Tragic conditions of poor people.
 - Degradation of renewable free access resources.
 - Climate change
- 'Kyoto protocol' is related to
 - Ozone depletion
 - Hazardous waste
 - Climate change
 - Nuclear energy
- Which of the following is a source of emission leading to the eventual formation of surface ozone as a pollutant?
 - Transport sector
 - Refrigeration and air conditioning
 - Wetlands
 - Fertilizers
- The smog in cities in India mainly consists of
 - Oxides of sulphur
 - Oxides of nitrogen and unburnt hydrocarbons
 - Carbon monoxide and SPM
 - Oxides of sulphur and ozone
- Which of the following types of natural hazards have the highest potential to cause damage to humans?
 - Earth quakes
 - Forest fires
 - Volcanic eruptions
 - Droughts and floods
- The percentage share of renewable energy sources in the power production in India is around
 - 2–3 %
 - 22–25%
 - 10–12%
 - < 1%
- In which of the following categories, the enrolment of students in higher education in 2010–2011 was beyond the percentage of seats reserved?
 - OBC students
 - SC students
 - ST students
 - Woman students
- Which one of the following statements is not correct about the University Grants Commission (UGC)?
 - It was established in 1956 by an Act of Parliament.
 - It is tasked with promoting and coordinating higher education.
 - It receives Plan and Non-Plan funds from the Central government.
 - It receives funds from State governments in respect of State Universities.
- Consider the statement which is followed by two arguments (I) and (II).

Statement: Should India switch over to a two-party system?

Arguments:

 - Yes, it will lead to stability of Government.
 - No, it will limit the choice of voters.
 - Only argument (I) is strong.
 - Only argument (II) is strong.
 - Both the arguments are strong.
 - Neither of the arguments is strong.
- Consider the statement which is followed by two arguments (I) and (II):

Statement: Should persons with criminal background be banned from contesting elections?

Arguments:

 - Yes, it will decriminalize politics.
 - No, it will encourage the ruling party to file frivolous cases against their political opponents.
 - Only argument (I) is strong.
 - Only argument (II) is strong.
 - Both the arguments are strong.
 - Neither of the arguments is strong.

17. Which of the following statement(s) is/are correct about a Judge of the Supreme Court of India?
- A Judge of the Supreme Court is appointed by the President of India.
 - He holds office during the pleasure of the President.
 - He can be suspended, pending an inquiry.
 - He can be removed for proven misbehaviour or incapacity.
- Select the correct answer from the codes given below.
- Codes:**
- | | |
|----------------|----------------|
| (a) 1, 2 and 3 | (b) 1, 3 and 4 |
| (c) 1 and 3 | (d) 1 and 4 |
18. In the warrant of precedence, the Speaker of the Lok Sabha comes next only to
- The President
 - The Vice-President
 - The Prime Minister
 - The Cabinet Ministers
19. The blackboard can be utilized best by a teacher for
- Putting the matter of teaching in black and white.
 - Making the students attentive.
 - Writing important and notable points.
 - Highlighting the teacher himself.
20. Nowadays, the most effective mode of learning is
- Self-study
 - Face-to-face learning
 - e-Learning
 - Blended learning
21. At the primary school stage, most of the teachers should be women because they
- Can teach children better than men.
 - Know basic content better than men.
 - Are available on lower salaries.
 - Can deal with children with love and affection.
22. Which one is the highest order of learning?
- Chain learning
 - Problem-solving learning
 - Stimulus-response learning
 - Conditioned-reflex learning
23. A person can enjoy teaching as a profession when he
- Has control over students.
 - Commands respect from students.
 - Is more qualified than his colleagues.
 - Is very close to higher authorities.
24. 'A diagram speaks more than 1000 words'. The statement means that the teacher should
- Use diagrams in teaching.
 - Speak more and more in the class.
 - Use teaching aids in the class.
 - Not speak too much in the class.
25. A research paper
- Is a compilation of information on a topic.
 - Contains original research as deemed by the author.
 - Contains peer-reviewed original research or the evaluation of research conducted by others.
 - Can be published in more than one journal.
26. Which one of the following belongs to the category of good 'research ethics'?
- Publishing the same paper in two research journals without telling the editors.
 - Conducting a review of the literature that acknowledges the contributions of other people in the relevant field or relevant prior work.
 - Trimming outliers from a data set without discussing your reasons in a research paper.
 - Including a colleague as an author on a research paper in return for a favour even though the colleague did not make a serious contribution to the paper.
27. Which of the following sampling methods is not based on probability?
- Simple random sampling
 - Stratified sampling
 - Quota sampling
 - Cluster sampling
28. Which one of the following references is written as per Modern Language Association (MLA) format?
- Hall, Donald. Fundamentals of Electronics, New Delhi : Prentice Hall of India, 2005.
 - Hall, Donald, Fundamentals of Electronics, New Delhi : Prentice Hall of India, 2005.
 - Hall, Donald, Fundamentals of Electronics, New Delhi : Prentice Hall of India, 2005.
 - Hall, Donald. Fundamentals of Electronics. New Delhi : Prentice Hall of India, 2005.
29. A workshop is
- A conference for discussion on a topic.
 - A meeting for discussion on a topic.
 - A class at a college or a university in which a teacher and the students discuss a topic.
 - A brief intensive course for a small group, emphasizing the development of a skill or technique for solving a specific problem.
30. A working hypothesis is
- A proven hypothesis for an argument.
 - Not required to be tested.
 - A provisionally accepted hypothesis for further research.
 - A scientific theory.

Read the following passage carefully and answer the questions (31 to 36).

The Taj Mahal has become one of the world's best known monuments. This domed white marble structure is situated on a high plinth at the southern end of a four-quartered garden, evoking the gardens of paradise, enclosed within walls measuring 305 by 549 metres. Outside the walls, in an area known as Mumtazabad, were living quarters for attendants, markets, serais and other structures built by local merchants and nobles. The tomb complex and the other imperial structures of Mumtazabad were maintained by the income from thirty villages given specifically for the tomb's support. The name Taj Mahal is unknown in Mughal chronicles,

but it is used by contemporary Europeans in India, suggesting that this was the tomb's popular name. In contemporary texts, it is simply called the illuminated tomb (Rauza-i-Munavvara).

Mumtaz Mahal died shortly after delivering her fourteenth child in 1631. The Mughal court was then residing in Burhanpur. Her remains were temporarily buried by the grief-stricken emperor in a spacious garden known as Zainabad on the bank of River Tapti. Six months later, her body was transported to Agra, where it was interred in land chosen for the mausoleum. This land, situated south of the Mughal city on the bank of River Jamuna, had belonged to the Kachwaha rajas since the time of Raja Man Singh and was purchased from the then current raja, Jai Singh. Although contemporary chronicles indicate Jai Singh's willing cooperation in this exchange, extant farmans (imperial commands) indicate that the final price was not settled until almost two years after the mausoleum's commencement. Jai Singh's further cooperation was insured by imperial orders issued between 1632 and 1637 demanding that he provide stone masons and carts to transport marble from the mines at Makrana, within his 'ancestral domain', to Agra where both Taj Mahal and Shah Jahan's additions to the Agra fort were constructed concurrently.

Work on the mausoleum was commenced early in 1632. Inscriptural evidence indicates much of the tomb was completed by 1636. By 1643, when Shah Jahan most lavishly celebrated the 'Urs ceremony for Mumtaz Mahal', the entire complex was virtually complete.

31. Marble stone used for the construction of Taj Mahal was brought from the ancestral domain of Raja Jai Singh. The name of the place where mines of marble is located is
 (a) Burhanpur (b) Makrana
 (c) Amber (d) Jaipur
32. The popular name Taj Mahal was given by
 (a) Shah Jahan (b) Tourists
 (c) Public (d) European travellers
33. Point out the true statement from the following.
 (a) Marble was not used for the construction of Taj Mahal.
 (b) Red sandstone is non-visible in Taj Mahal complex.
 (c) Taj Mahal is surrounded by a four- quartered garden known as Chahar Bagh.
 (d) Taj Mahal was constructed to celebrate the 'Urs ceremony for Mumtaz Mahal'.
34. In the contemporary texts, Taj Mahal is known
 (a) Mumtazabad (b) Mumtaz Mahal
 (c) Zainabad (d) Rauza-i-Munavvara
35. The construction of Taj Mahal was completed between the period
 (a) 1632–1636 CE (b) 1630–1643 CE
 (c) 1632–1643 CE (d) 1636–1643 CE
36. The documents indicating the ownership of land, where Taj Mahal was built is known as
 (a) Farman
 (b) Sale deed
 (c) Sale-purchase deed
 (d) None of the above
37. In the process of communication, which one of the following is in the chronological order?
 (a) Communication, medium, receiver, effect, message.
 (b) Medium, communicator, message, receiver, effect.
 (c) Communicator, message, medium, receiver, effect.
 (d) Message, communicator, medium, receiver, effect.
38. Bengal Gazette, the first Newspaper in India was started in 1780 by
 (a) Dr Annie Besant (b) James Augustus Hicky
 (c) Lord Cripson (d) A. O. Hume
39. Press censorship in India was imposed during the tenure of which Prime Minister?
 (a) Rajiv Gandhi (b) Narasimha Rao
 (c) Indira Gandhi (d) Deve Gowda
40. Communication via New media such as computers, teleshopping, the Internet and mobile telephony is termed as
 (a) Entertainment
 (b) Interactive communication
 (c) Development communication
 (d) Communitarian
41. Classroom communication of a teacher rest on the principle of
 (a) Infotainment (b) Edutainment
 (c) Entertainment (d) Enlightenment
42. _____ is important when a teacher communicates with his/her student.
 (a) Sympathy (b) Empathy
 (c) Apathy (d) Antipathy
43. In a certain code, GALIB is represented by HBMJC. TIGER will be represented by
 (a) UJHFS (b) UHJSF
 (c) JHUSF (d) HUJSF
44. In a certain cricket tournament, 45 matches were played. Each team played once against each of the other teams. The number of teams participated in the tournament is
 (a) 8 (b) 10
 (c) 12 (d) 14
45. The missing number in the series 40, 120, 60, 180, 90, ?, 135 is
 (a) 110 (b) 270
 (c) 105 (d) 210
46. The odd numbers from 1 to 45 which are exactly divisible by 3 are arranged in ascending order. The number at 6th position is
 (a) 18 (b) 24
 (c) 33 (d) 36
47. The mean of four numbers a, b, c, d is 100. If c = 70, then the mean of the remaining numbers is
 (a) 30 (b) 85/2
 (c) 170/3 (d) 110

48. If the radius of a circle is increased by 50%, then the perimeter of the circle will increase by
 (a) 20% (b) 30%
 (c) 40% (d) 50%
49. If the statement 'some men are honest' is false, then which among the following statements will be true? Choose the correct code given below.
 (i) All men are honest.
 (ii) No men are honest.
 (iii) Some men are not honest.
 (iv) All men are dishonest.

Codes:

- (a) (i), (ii) and (iii) (b) (ii), (iii) and (iv)
 (c) (i), (iii) and (iv) (d) (ii), (i) and (iv)
50. Choose the proper alternative given in the codes to replace the question Bee - Honey, Cow - Milk, Teacher - ?
 (a) Intelligence (b) Marks
 (c) Lessons (d) Wisdom
51. P is the father of R and S is the son of Q and T is the brother of P. If R is the sister of S, then how is Q related to T?
 (a) Wife (b) Sister-in-law
 (c) Brother-in-law (d) Daughter-in-law
52. A definition put forward to resolve a dispute by influencing attitudes or stirring emotions is called
 (a) Lexical (b) Persuasive
 (c) Stipulative (d) Precisions
53. Which of the codes given below contains only the correct statements?

Statements:

- (i) Venn diagram is a clear method of notation.
 (ii) Venn diagram is the most direct method of testing the validity of categorical syllogisms.
 (iii) In Venn diagram method, the premises and the conclusion of a categorical syllogism is diagrammed.
 (iv) In Venn diagram method, the three overlapping circles are drawn for testing a categorical syllogism.

Codes:

- (a) (i), (ii) and (iii) (b) (i), (ii) and (iv)
 (c) (ii), (iii) and (iv) (d) (i), (iii) and (iv)
54. Inductive reasoning presupposes
 (a) Unity in human nature.
 (b) Integrity in human nature.
 (c) Uniformity in human nature.
 (d) Harmony in human nature.

Read the table below and based on this table, answer the questions from 55 to 60.

Area under major horticulture crop (in lakh hectares)

Year	Fruits	Vegetables	Flowers	Total horticulture area
2005-06	53	72	1	187
2006-07	56	75	1	194
2007-08	58	78	2	202
2008-09	61	79	2	207
2009-10	63	79	2	209

55. Which of the following two year have recorded the highest rate increase in area under the total horticulture?
 (a) 2005-06 and 2006-07
 (b) 2006-07 and 2008-09
 (c) 2007-08 and 2008-09
 (d) 2006-07 and 2007-08
56. Shares of the area under flowers, vegetables and fruits in the area under total horticulture, respectively, are
 (a) 1, 38 and 30 per cent.
 (b) 30, 38 and 1 per cent.
 (c) 38, 30 and 1 per cent.
 (d) 35, 36 and 2 per cent.
57. Which of the following has recorded the highest rate of increase in area during 2005-06 to 2009-10?
 (a) Fruits (b) Vegetables
 (c) Flowers (d) Total horticulture
58. Find out the horticultural crop that has recorded an increase of area by around 10 per cent from 2005-06 to 2009-10.
 (a) Fruits (b) Vegetables
 (c) Flowers (d) Total horticulture
59. What has been the share of area under fruits, vegetables and flowers in the area under total horticulture in 2007-08?
 (a) 53 per cent (b) 68 per cent
 (c) 79 per cent (d) 100 per cent
60. In which year, the area under fruits has recorded the highest rate of increase?
 (a) 2006-07 (b) 2007-08
 (c) 2008-09 (d) 2009-10

ANSWER KEYS

1. (b) 2. (b) 3. (d) 4. (a) 5. (b) 6. (b) 7. (c) 8. (c) 9. (a) 10. (d)
 11. (a) 12. (c) 13. (a) 14. (d) 15. (c) 16. (a) 17. (d) 18. (c) 19. (c) 20. (d)
 21. (d) 22. (b) 23. (b) 24. (a) 25. (c) 26. (b) 27. (c) 28. (d) 29. (d) 30. (c)
 31. (b) 32. (d) 33. (d) 34. (d) 35. (c) 36. (a) 37. (c) 38. (b) 39. (c) 40. (b)
 41. (b) 42. (b) 43. (a) 44. (b) 45. (b) 46. (c) 47. (d) 48. (d) 49. (a) 50. (d)
 51. (b) 52. (b) 53. (a) 54. (c) 55. (d) 56. (a) 57. (c) 58. (b) 59. (b) 60. (a)

HINTS AND SOLUTIONS

7. (c): First used by Garrett Hardin in 1968. This term is used in context of economy and ecology. This is related to over exploitation of common natural resources to benefit few people.
9. (a): It is also called 'Tropospheric Ozone' and also known as 'bad ozone' as it can damage the living tissues. This ground-level ozone is considered as a pollutant. Tropospheric ozone is formed by the interaction of sunlight, particularly ultraviolet light, with hydrocarbons and nitrogen oxides, which are emitted by automobiles, gasoline vapours, fossil fuel power plants, refineries and certain other industries.
14. (d): Statements under choices (a) and (b) are known facts. UGC receives funds from Central government. There are two kinds of grants for universities, institutions deemed to be universities, and colleges; they are Development (Plan) Grants and Maintenance (Non-plan) Grants. Central universities and colleges affiliated to them and institutions deemed to be university receive both the plan and non-plan grants. However, the state universities and their affiliated colleges receive only plan grants.
15. (c): Two-party system governments are more stable, for example, USA is a testimony to it. So argument I follows. India is a very diverse society, with regional parties assuming increasingly larger role in parliamentary democratic set up. So two-party system may not work in present situation. So, argument II also follows.
16. (a): Argument I is explicit, that is the obvious purpose of statement. As far as Argument II is concerned, filing frivolous cases against opponents is one thing and proving them in the court of law is another.
20. (d): A blended learning approach combines face-to-face classroom methods with computer-mediated activities to form an integrated instructional approach. The goal of a blended approach is to join the best aspects of both, face-to-face and online instruction.
27. (c): Convenience sampling, quota sampling and judgmental sampling are other types of non-probability sampling types.
39. (c): The emergency was imposed for a period of 21 months during 1975–77 when President Fakhruddin Ali Ahmed, upon request by PM Indira Gandhi, declared a state of emergency under Article 352 of the Constitution of India, effectively bestowing on her the power to rule by decree, suspending elections and civil liberties.
41. (b): Edutainment = Education + Entertainment. Here, entertainment means using sense of humour in class.
43. (a)

G	A	L	I	B
+1	+1	+1	+1	+1
H	B	M	J	C

Similarly,

T	I	G	E	R
+1	+1	+1	+1	+1
U	J	H	F	S

44. (b): In these types of questions, first of all, we identify whether it is a question of permutation or combination. Whether one team playing with another or vice versa, it will be considered as one match. So, it is a question of combination. According to the formula of combination, ${}^n C_r = n!/r!(n-r)!$ Here, n is the total number of teams playing. As two teams at a time are selected for playing with each other, $r = 2$. By solving, we get $n = 10$.
45. (b): Multiply by three, then divide by 2, again multiply by 3, then again divide by 2 and so on. It can be solved as a question of mixed series also.
46. (c): 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39 and so on. The underlined numbers are both odd as well as divisible by 3. So, 33 is the answer.
47. (d): $a + b + c + d = 400$
 $c = 70$
 $a + b + d = 400 - 70 = 330$
 Average of a, b and $c = 330/3 = 110$
48. (d): Perimeter = $2\pi r$
 After increase in 50%, r is $3/2r$.
 New perimeter = $2\pi \cdot 3/2r$
 $= 3\pi r$
 Increase in perimeter = $3\pi r - 2\pi r$
 $= 1\pi r$
 Percentage increase in perimeter = $1\pi r / 2\pi r \cdot 100 = 50\%$
50. (d): Teacher delivers wisdom that enables us to take right decisions in life. Opting for 'lessons' and 'marks' are narrow choices. Intelligence is a gift of nature.
51. (b)

53. (a): The circles may not be necessarily overlapping. So, (iv) can be safely omitted.

UGC NET Paper 1 Reconduct

June 2013 (in September, 2013)

Note:

- This paper contains **sixty (60)** multiple choice questions, each question carrying **two (2)** marks.
 - The candidate is expected to answer any **fifty (50)** questions.
 - In case more than **fifty (50)** questions are attempted, only the **fifty (50)** questions will be evaluated.
1. The world population growth rate at a certain reference year was 3.5%. Assuming exponential growth of population, after how many years, the population of the world would have increased by a factor 16?
(a) ~80 years (b) ~40 years
(c) ~160 years (d) ~320 years
 2. Telephone is an example of
(a) Linear communication
(b) Non-linear communication
(c) Circular
(d) Mechanized
 3. Means of grapevine communication are
(a) Formal (b) Informal
(c) Critical (d) Corporate
 4. Communication issues at the international level are addressed by
(a) ILO (b) ITU
(c) UNDP (d) UNESCO
 5. Referential framing used by TV audience connects media with
(a) Reality (b) Falsity
(c) Negativity (d) Passivity
 6. The communicated knowledge in a classroom is considered as
(a) Non-pervasive treasure
(b) Limited judgment
(c) Autonomous virtue
(d) Cultural capital
 7. Classroom communication is normally considered as
(a) Effective (b) Affective
(c) Cognitive (d) Non-selective
 8. A person writes all the numbers from 0 to 99. The number of times digit 3 will be written as
(a) 18 (b) 19
(c) 20 (d) 21
 9. Starting from point A, Ajit walks 14 metres towards west, he then turns to his right and walks 14 metres and then turns to his left and walks 10 metres. He again turns to his left and walks 14 metres and reaches to the point E. The shortest distance between A and E is
(a) 38 (b) 42
(c) 52 (d) 24
 10. A, B, C, D, E and F are sitting around a round table. A is between E and F. E is opposite to D and C is not in either of the neighbouring seats of E. The person opposite to B is
(a) C (b) D
(c) A (d) F
 11. The missing number in the series 2, 7, 24, 77, ?, 723 is
(a) 238 (b) 432
(c) 542 (d) 320
 12. In a certain city, the taxi charges comprise of a fixed charge and the charge of the distance travelled. A person paid ₹156 for a journey of 16 km and another person paid ₹204 for the journey of 24 km. The amount paid by a passenger who has travelled 30 km is
(a) 236 (b) 240
(c) 248 (d) 256
 13. In certain code, HEALTH is written as KHDOWK. The code of NORTH will be
(a) QRUWK
(b) RQWUK
(c) RWQUK
(d) RWUKQ
 14. Yedav, Arjun, Rajesh, and Kamal play cricket. Rajesh and Kamal play tennis but do not play football. Yadav does not play badminton but play golf. Arjun does not play tennis. Kamal sometimes plays badminton. Who does play only cricket?
(a) Yadav (b) Arjun
(c) Rajesh (d) Kamal
 15. A deductive argument cannot be valid:
(a) If its premise/premises is/are true, then its conclusion is true.
(b) If its premise/premises is/are true, then its conclusion is false.
(c) If its premise/premises is/are false, then its conclusion is false.
(d) If its premise/premises is/are false, then its conclusion is true.

16. An analogical argument is strengthened by
 (a) Making the claim bolder while its premises remain unchanged
 (b) Reducing the claim made on the basis of the premises affirmed.
 (c) Remaining the claim unchanged while the evidence in its support is found to exhibit greater frailty.
 (d) None of the above
17. If two propositions cannot be false but may be true, then what is the relation between the two propositions?
 (a) Contrary (b) Subcontrary
 (c) Subalternation (d) Contradictory
18. Given below are some codes of arrangements of three items in the order of wider scope. Select the correct code.
 (a) Garments, cloth and shirts.
 (b) Cloth, garments and shirts.
 (c) Shirts, garments and cloth.
 (d) Garments, shirts and cloth.
19. What is equivalent of the statement 'All atheists are pessimists'?
 (a) All non-pessimists are non-atheists.
 (b) All non-atheists are non-pessimists.
 (c) All pessimists are atheists.
 (d) None of the above.

In the following table, trends in the production of energy in India by primary sources are given. Study the table and answer question 20 to 23 (production in petajoules).

Year	Coal & lignite	Crude petroleum	Natural gas	Electricity (Hydro & nuclear)	Total
2006-07	7,459	1,423	1,223	4,763	14,868
2007-08	7,926	1,429	1,248	4,944	15,547
2008-09	8,476	1,403	1,265	5,133	16,277
2009-10	9,137	1,411	1,830	4,511	16,889
2010-11	9,207	1,579	2,012	5,059	17,857

20. In which year, primary sources recorded the lowest growth in total production of energy?
 (a) 2007-08 (b) 2008-09
 (c) 2009-10 (d) 2010-11
21. Which source of energy has shown the highest growth rate in production during 2006-07 to 2010-11?
 (a) Coal and lignite.
 (b) Crude petroleum.
 (c) Hydro and nuclear electricity.
 (d) Total production of energy.
22. Which one of the following primary sources of energy has recorded the highest growth in production in 2008-09?
 (a) Coal and lignite
 (b) Crude petroleum
 (c) Natural gas
 (d) Hydro and nuclear electricity
23. In which year, the production of hydro and nuclear electricity was almost double the production of crude petroleum and natural gas taken together?
 (a) 2006-07 (b) 2007-08
 (c) 2008-09 (d) 2009-10
24. The internet ethical protocol is called
 (a) Net protocol (b) Netiquette
 (c) Net ethics (d) Net morality
25. Commercial messages on the net are identified as
 (a) Net ads
 (b) The Internet commercials
 (c) Webmercials
 (d) Viral advertisements
26. Manuel Castells was the first to use the term
 (a) The Internet society
 (b) Electronic society
 (c) Network society
 (d) Telematic society
27. GIF stands for
 (a) Global Information Format
 (b) Graphics Information Format
 (c) Graphics Interchange File
 (d) Graphics Interchange Format
28. Which one of the following is not an Operating System?
 (a) IBM AIX (b) Linux
 (c) Sun Solaris (d) Firefox
29. Which of the following is/are a minority institution(s)?
 I Punjabi University, Patiala
 II Osmania University, Hyderabad
 III Kashmir University, Srinagar
 IV St. Stephens College, Delhi
- Select the correct answer from the code given below.
- Codes:**
 (a) I and II (b) II and IV
 (c) II only (d) IV only
30. Which of the following statements are correct about the National Advisory Council (NAC)?
 I The National Advisory Council is a statutory body.
 II It is headed by the Prime Minister of India.
 III It facilitates constant interaction with the leaders of civil society.
 IV It provides policy and legislative inputs to the Government of India.
- Select the correct answer from the code given below.
- Codes:**
 (a) I, II and III (b) II, III and IV
 (c) I, III and IV (d) III and IV
31. Which of the following are voluntary provisions in the 73rd Constitutional Amendment Act (1992)?
 I. Minimum age of 21 for contesting elections to Panchayats.
 II. Indirect elections to the post of Chairperson Panchayats at the intermediate and district levels.
 III. Representation of Members of Parliament and State Legislature on Panchayati Raj institutions
 IV. Reservation of seats for backward classes.

Select the correct answer from the code given below.

Codes:

- (a) I, II and IV (b) II, III and IV
(c) I, II and III (d) III and IV

32. In which of the following states the segment of population, which is in majority, enjoys the benefit of reservation of seats in the state assembly?
(a) Meghalaya and Mizoram
(b) Assam and Nagaland
(c) Madhya Pradesh and Assam
(d) Rajasthan and Arunachal Pradesh
33. Which of the following are the ways of acquiring Indian citizenship?
I. Birth
II. Descent
III. Naturalization
IV. Incorporation of territory

Select the correct answer from the code given below.

Codes:

- (a) I and II (b) I and IV
(c) I, II and III (d) I, II, III and IV

34. Which of the following statements about the Union Public Service Commission are correct?
I. UPSC is a constitutional body.
II. It serves as an advisory body.
III. It is called upon to advise the government with regard to representation of the Scheduled Castes and Scheduled Tribes in the Civil Service.
IV. It is consulted on appointments of Chairman and members of Tribunals and Commissions.

Select the correct answer from the code given below.

Codes:

- (a) I, II and III (b) I, II and IV
(c) I, III and IV (d) I and II

Read the following passage carefully and answer questions from 35 to 40.

I had occasion to work with her closely during the Women's International Year in 1975 when she was chairing a Steering Committee and made me the member in charge of publicity. Representatives from different political parties and women's organizations were on the committee and though the leftists claimed a sort of proprietary right over her, Aruna encouraged and treated all members alike. It was not her political affiliations or her involvement in a particular cause, which won her respect and recognition, but her utter honesty in public life, her integrity and her compassion for the oppressed, which made her an adorable person. She had the courage to differ with and defy the mightiest in the land, yet her human spirit prompted her to work in the worst of slums to offer succour to the poor and the exploited.

In later years, around late eighties and early nineties, Aruna Asaf Ali's health began to deteriorate. Although her mind remained alert, she could not actively take

up her pet causes, such as action for women's advancement, planning for economic justice, role of media, reaffirmation of values in public affairs, etc. Slowly, her movements were restricted and Aruna who had drawn sustenance from common people, from her involvement in public life, became a lonely person. She passed away in July 1996.

35. Which committee was chaired by Aruna?
(a) Women's International Year's Committee
(b) Steering Committee of Women's International Year
(c) A Committee of Publicity
(d) Women's Organizations
36. Who were made the members of the Committee of Publicity?

Choose the answer from codes given below.

- I. Representatives from different political parties.
II. Representatives from the leftist parties.
III. Representatives from the women's organizations.
IV. None of the above

Codes:

- (a) I and III (b) I and II
(c) I, II and III (d) IV only

37. Aruna earned respect because
(a) She identified with the leftists.
(b) She did not associate with any political party.
(c) Chairing a Steering Committee.
(d) She identified with women's organizations.
38. Who tried to monopolize Aruna as their proprietary right?
(a) Women organizations
(b) Leftists
(c) Steering committee
(d) Some political parties
39. Aruna's health began to deteriorate from
(a) 1985–2002 (b) 1998–2000
(c) 1981–2000 (d) 1989–2001
40. Aruna's pet cause(s) in her life was/were
(a) Role of media
(b) Economic justice
(c) Reaffirmation of values in public affairs
(d) All the above
41. A good teacher must be
(a) Resourceful and autocratic.
(b) Resourceful and participative.
(c) Resourceful and authoritative.
(d) Resourceful and dominant.
42. Which one of the following is the best method of teaching?
(a) Lecture method
(b) Discussion method
(c) Demonstration method
(d) Question-answer method
43. Successful communication in classroom teaching is
(a) Circular
(b) Reciprocal
(c) Directional
(d) Influential

44. Which one of the following types of evaluation assesses the learning progress to provide continuous feedback to both teachers and students during instruction?
 (a) Placement evaluation
 (b) Formative evaluation
 (c) Diagnostic evaluation
 (d) Summative evaluation
45. Which one of the following is a scaled down teaching situation?
 (a) Macroteaching
 (b) Team teaching
 (c) Cooperative teaching
 (d) Micro teaching
46. CLASS stands for
 (a) Complete Literacy and Studies in Schools
 (b) Computer Literates and Students in Schools
 (c) Computer Literacy and Studies in Schools
 (d) Centre for Literacy and Studies in Schools
47. Which one of the following is not a type of experimental method?
 (a) Single group experiment
 (b) Residual group experiment
 (c) Parallel group experiment
 (d) Rational group experiment
48. Which one of the following is not a non-parametric test?
 (a) *t*-test (b) Sign test
 (c) Chi-square test (d) Run test
49. Read the following statements, where one is labelled as Assertion (A) and the other as Reason (R):
Assertion (A): Qualitative research in India has a long way to go to reach international standards.
Reason (R): Because the funding agencies do not support qualitative research in academic institutions.
 Find the correct answer from the codes given below.
 (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true, but (R) is false.
 (d) Both (A) and (R) are false.
50. Identify the correct sequence of research steps.
 (a) Selection of topic, review of literature, data collection and interpretation of findings.
 (b) Review of literature, selection of topic, data collection and interpretation of findings.
 (c) Selection of topic, data collection, review of literature and interpretation of findings.
 (d) Selection of topic, review of literature, interpretation of findings and data collection.
51. Deconstruction is a popular method of research in
 (a) Basic science (b) Applied science
 (c) Social science (d) Literature
52. With that one of the following techniques communality is associated?
 (a) Univariate analysis (b) Factor analysis
 (c) Case studies (d) SWOT analysis
53. The variable that impacts the relationship between an independent variable and a dependent variable is known as
 (a) Antecedent variable (b) Precedent variable
 (c) Predictor variable (d) Control variable
54. Which one of the following is a non-probability sampling method?
 (a) Simple random sampling
 (b) Stratified sampling
 (c) Cluster sampling
 (d) Quota sampling
55. By the year 2022, the Climate Change Action Plan of Government of India aims at installing
 (a) 20,000 MW of wind power
 (b) 25,000 MW of wind power
 (c) 20,000 MW of solar power
 (d) 10,000 MW of solar power
56. Which one of the following biosphere reserves has UNESCO recognition?
 (a) Manas
 (b) Kanchenjunga
 (c) Seshachalam Hills
 (d) Greater Nicobar
57. Which activity contributes to water pollution more than any other throughout the world?
 (a) Agriculture
 (b) Hydroelectric power generation
 (c) Industry
 (d) Urbanization
58. Match List-I with List-II and find the correct answer from the codes given below.
- | List-I | List-II |
|------------------------|----------------------|
| A Nilgiri | I Deccan Peninsula |
| B Manas | II Chhattisgarh |
| C Simlipal | III Eastern Himalaya |
| D Achankmar-Amarkantak | IV Western Ghat |
- Codes:**
 A B C D
 (a) I II III IV
 (b) II III IV I
 (c) III IV II I
 (d) IV III I II
59. G5 are the five most important emerging economies of world. Which one of the following does not form a part of G5?
 (a) Mexico (b) Brazil
 (c) China (d) Korea
60. Which of the following nations has the maximum per capita emissions of carbon dioxide?
 (a) China (b) Japan
 (c) USA (d) India

ANSWER KEYS

1. (a) 2. (a) 3. (b) 4. (b) 5. (a) 6. (d) 7. (c) 8. (c) 9. (d) 10. (d)
 11. (a) 12. (b) 13. (a) 14. (b) 15. (b) 16. (b) 17. (b) 18. (b) 19. (a) 20. (c)
 21. (a) 22. (a) 23. (c) 24. (b) 25. (c) 26. (c) 27. (d) 28. (d) 29. (d) 30. (d)
 31. (d) 32. (a) 33. (d) 34. (d) 35. (b) 36. (a) 37. (b) 38. (b) 39. (c) 40. (d)
 41. (b) 42. (c) 43. (b) 44. (b) 45. (d) 46. (c) 47. (b) 48. (a) 49. (c) 50. (a)
 51. (d) 52. (b) 53. (d) 54. (d) 55. (c) 56. (d) 57. (a) 58. (d) 59. (d) 60. (c)

HINTS AND SOLUTIONS

1. (a): The geometric growth means 2, 4, 6, 8
 The exponential growth means 2, 4, 8, 16
 Exponential means compounded growth in population.
 Consider population as 1, since as factor it will cancel from both side anyway.
 Let number of years = 1 $(1 + 3.5/100)^x = 1 + 16$
 So, $(1.035)^x = 17$
 So, $x = \log 17 / \log 1.035 = 1.23044 / 0.0149403 = 82.35743$
 So, approximate number of years = 80
2. (a): The other examples of linear communication are face-to-face communication, email, chats, etc.
3. (b): Communication in informal groups is basically grapevine communication where hierarchy may not be followed.
7. (c): Cognitive means the development of intellectual capability and it is considered as the core learning domain. The candidates can refer to page 1.6 for better clarification.
9. (d):

10. (d):

11. (a): $2 \cdot 3 + 1 = 7$; $7 \cdot 3 + 3 = 24$; $24 \cdot 3 + 5 = 77$; $77 \cdot 3 + 7 = 238$; $238 \cdot 3 + 9 = 723$
12. (b): We need not calculate the fixed charges.
 Variable charges for 8 km (i.e., 24 km \square 16 km) = 204 \square 156 = ₹48
 Variable for 1 km = $48/8 = ₹6$
 Extra variable charges for 6 km = $6 \cdot 6 = ₹36$
 These can be added for total charges for 24 km to get total charges for 30 kms = $204 + 36 = ₹240$

13. (a):

H	E	A	L	T	H
+3	+3	+3	+3	+3	+3
K	H	D	O	W	K
<hr/>					
N	O	R	T	H	
+3	+3	+3	+3	+3	
Q	R	U	W	K	

14. (b):

	Cricket	Tennis	Football	Badminton	Golf
Yadav	✓			✗	✓
Arjun	✓	✗			
Rajesh	✓	✓	✗		
Kamal	✓	✓	✗	✓	

20. (c): The growth rate for different years: 4.56 % for 2007–08; 4.69% for 2008–09; 3.75% for 2009–10; 5.73% for 2010–11. So, option (c) is the answer.
21. (a): The growth figures for different primary sources of energy in India. For coal and lignite –23.43%; crude petroleum –10.96%; Hydro and Nuclear electricity –6.21%; Total production of energy –20.10 %.
28. (d): Mozilla Firefox 3.5 is one of the most popular browsers.
29. (d): Additional information: National Commission for Minority Educational Institutions (NCMEI) was established in 2004.
31. (d): Need to focus on key word - voluntary provisions. voluntary provisions. Otherwise, reservation for SCs/STs and women is compulsory.
44. (b): Please refer to page 1.19.
48. (a): In question, not a non-parametric test means the it is asking about parametric test. *t*-test, *z*-test, F-test for analysis of variance are the main examples of parametric tests.

52. (b): The communality is a measure of variance in a given variable that is explained by all the factors combined together. It also reflects upon the reliability of the indicator.
56. (d): There are 18 biosphere in Government of India's Man and Biosphere (MAB) List. Out of these eighteen, ten are recognized in UNESCO's Man and Biosphere

List. These nine biosphere reserves are Achanakmar-Amarkantak (Chhattisgarh, Madhya Pradesh), Gulf of Mannar (Tamil Nadu), Nanda Devi (Uttarakhand), Great Nicobar Islands, Nilgiri (TamilNadu, Kerala, Karnataka), Nokrek (Meghalaya), Pachmarhi (Madhya Pradesh), Simlipal (Odisha), Sundarbans (West Bengal) and Agasthyamala Biosphere Reserve (Kerala and Tamilnadu).

UGC NET Paper 1

December 2013

- Which is the main objective of research?
 - To review the literature.
 - To summarize what is already known.
 - To get an academic degree.
 - To discover new facts or to make fresh interpretation of known facts.
- Sampling error decreases with the
 - Decrease in sample size.
 - Increase in sample size.
 - Process of randomization.
 - Process of analysis.
- The principles of fundamental research are used in
 - Action research
 - Applied research
 - Philosophical research
 - Historical research
- Users who use media for their own ends are identified as
 - Passive audience
 - Active audience
 - Positive audience
 - Negative audience
- Classroom communication can be described as
 - Exploration
 - Institutionalization
 - Unsignified narration
 - Discourse
- Ideological codes shape our collective
 - Productions
 - Perceptions
 - Consumptions
 - Creations
- In communication, myths have power, but are
 - Uncultural
 - Insignificant
 - Imprecise
 - Unpreferred
- The first multilingual news agency of India was
 - Samachar*
 - API*
 - Hindustan Samachar*
 - Samachar Bharati*
- Organizational communication can also be equated with
 - Intrapersonal communication
 - Interpersonal communication
 - Group communication
 - Mass communication
- If two propositions having the same subject and predicate terms are such that one is the denial of the other, then the relationship between them is called
 - Contradictory
 - Contrary
 - Subcontrary
 - Subalternation
- Ananya and Krishna can speak and follow English. Bulbul can write and speak Hindi as Archana does. Archana talks with Ananya also in Bengali. Krishna can not follow Bengali. Bulbul talks with Ananya in Hindi. Who can speak and follow English, Hindi and Bengali?
 - Archana
 - Bulbul
 - Ananya
 - Krishna
- A stipulative definition may said to be
 - Always true
 - Always false
 - Sometimes true, sometimes false
 - Neither true nor false
- When the conclusion of an argument follows from its premise(s) conclusively, then the argument is called
 - Circular argument
 - Inductive argument
 - Deductive argument
 - Analogical argument
- Saturn and Mars are planets like Earth. They borrow light from the Sun and moves around the Sun as the Earth does. So those planets are inhabited by various orders of creatures as the Earth. What type of argument is contained in the above passage?
 - Deductive
 - Astrological
 - Analogical
 - Mathematical
- Given below are two premises. Four conclusions are drawn from those two premises in four codes. Select the code that states the conclusion validly drawn.

Premises:

 - All saints are religious (major)
 - Some honest people are saints (minor)

Codes:

 - All saints are honest.
 - Some saints are honest.
 - Some honest people are religious.
 - All religious people are honest.

The following table provides details about the Foreign Tourist Arrivals (FTAs) in India from different regions of the world in different years. Study the table carefully and answer the questions from 16 to 19 based on this table.

Region	Number of foreign tourist arrivals		
	2007	2008	2009
Western Europe	1686083	1799525	1610086
North America	1007276	1027297	1024469
South Asia	982428	1051846	982633
South East Asia	303475	332925	348495
East Asia	352037	355230	318292
West Asia	171661	215542	201110
Total FTAs in India	5081504	5282603	5108579

16. Find out the region that contributed around 20 per cent of the total foreign tourist arrivals in India in 2009.
 (a) Western Europe (b) North America
 (c) South Asia (d) South East Asia
17. Which of the following regions has recorded the highest negative growth rate of foreign tourist arrivals in India in 2009?
 (a) Western Europe (b) North America
 (c) South Asia (d) West Asia
18. Find out the region that has been showing declining trend in terms of share of foreign tourist arrivals in India in 2008 and 2009.
 (a) Western Europe (b) South East Asia
 (c) East Asia (d) West Asia
19. Identify the region that has shown hyper growth rate of foreign tourist arrivals than the growth rate of the total FTAs in India in 2008.
 (a) Western Europe (b) North America
 (c) South Asia (d) East Asia
20. The post-industrial society is designated as
 (a) Information society
 (b) Technology society
 (c) Mediated society
 (d) Non-agricultural society
21. The initial efforts for internet based communication was for
 (a) Commercial communication
 (b) Military purposes
 (c) Personal interaction
 (d) Political campaigns
22. Internal communication within institutions is done through
 (a) LAN (b) WAN
 (c) EBB (d) MMS
23. Virtual reality provides
 (a) Sharp pictures
 (b) Individual audio
 (c) Participatory experience
 (d) Preview of new films
24. The first virtual university of India came up in
 (a) Andhra Pradesh (b) Maharashtra
 (c) Uttar Pradesh (d) Tamil Nadu
25. Arrange the following books in chronological order in which they appeared. Use the code given below.
 (i) *Limits to Growth*
 (ii) *Silent Spring*
 (iii) *Our Common Future*
 (iv) *Resourceful Earth*
Codes:
 (a) (i), (iii), (iv) and (ii) (b) (ii), (iii), (i) and (iv)
 (c) (ii), (i), (iii) and (iv) (d) (i), (ii), (iii) and (iv)
26. Which one of the following continents is at a greater risk of desertification?
 (a) Africa (b) Asia
 (c) South America (d) North America
27. 'Women are closer to nature than men'. What kind of perspective is this?
 (a) Realist (b) Essentialist
 (c) Feminist (d) Deep ecology
28. Which one of the following is not a matter of a global concern in the removal of tropical forests?
 (a) Their ability to absorb the chemicals that contribute to depletion of ozone layer.
 (b) Their role in maintaining the oxygen and carbon balance of the earth.
 (c) Their ability to regulate surface and air temperatures, moisture content and reflectivity.
 (d) Their contribution to the biological diversity of the planet.
29. The most comprehensive approach to address the problems of man-environment interaction is which one of the following?
 (a) Natural Resource Conservation Approach
 (b) Urban-industrial Growth-oriented Approach
 (c) Rural-agricultural Growth-oriented Approach
 (d) Watershed Development Approach
30. The major source of the pollutant gas carbon monoxide (CO) in urban areas is
 (a) Thermal power sector
 (b) Transport sector
 (c) Industrial sector
 (d) Domestic sector
31. In a fuel cell-driven vehicle, the energy is obtained from the combustion of
 (a) Methane (b) Hydrogen
 (c) LPG (d) CNG
32. Which one of the following Councils has been disbanded in 2013?
 (a) Distance Education Council (DEC).
 (b) National Council for Teacher Education (NCTE).
 (c) National Council of Educational Research and Training (NCERT).
 (d) National Assessment and Accreditation Council (NAAC).
33. Which of the following statements is correct about the National Assessment and Accreditation Council?

- (i) It is an autonomous institution.
- (ii) It is tasked with the responsibility of assessing and accrediting institutions of higher education.
- (iii) It is located in Delhi.
- (iv) It has regional offices.

Select the correct answer from the codes given below.

Codes:

- (a) (i) and (iii) (b) (i) and (ii)
- (c) (i), (ii) and (iv) (d) (ii), (iii) and (iv)

34. The power of the Supreme Court of India to decide disputes between two or more states falls under its
- (a) Advisory Jurisdiction
 - (b) Appellate Jurisdiction
 - (c) Original Jurisdiction
 - (d) Writ Jurisdiction
35. Which of the following statements are correct?
- (i) There are seven Union Territories in India.
 - (ii) Two Union Territories have Legislative Assemblies
 - (iii) One Union Territory has a High Court.
 - (iv) One Union Territory is the capital of two States.

Codes:

- (a) (i) and (iii) only
- (b) (ii) and (iv) only
- (c) (ii), (iii) and (iv) only
- (d) (i), (ii), (iii) and (iv)

36. Which of the following statements are correct about the Central Information Commission?
- (i) The Central Information Commission is a statutory body.
 - (ii) The Chief Information Commissioner and other Information Commissioners are appointed by the President of India.
 - (iii) The commission can impose a penalty up to a maximum of ₹25,000/-
 - (iv) It can punish an errant officer.

Select the correct answer from the codes given below.

Codes:

- (a) (i) and (ii) only (b) (i), (ii) and (iv)
- (c) (i), (ii) and (iii) (d) (ii), (iii) and (iv)

37. Who among the following conducted the CNN-IBN-The Hindu 2013 Election Tracker Survey across 267 constituencies in 18 States?
- (a) The Centre for the Study of Developing Societies (CSDS).
 - (b) The Association for Democratic Reforms (ADR).
 - (c) CNN and IBN.
 - (d) CNN, IBN and *The Hindu*.
38. In a certain code, 'TEACHER' is written as 'VGCEJGT'. Then, the code of 'CHILDREN' will be
- (a) EKNJFTGP (b) EJKNFTGP
 - (c) KNJFGTP (d) None of these
39. A person has to buy both apples and mangoes. The cost of one apple is ₹7, whereas that of a mango is ₹5. If the person has ₹38, the number of apples he can buy is
- (a) 1 (b) 2
 - (c) 3 (d) 4

40. A man pointing to a lady said, 'The son of her only brother is the brother of my wife'. The lady is related to the man as
- (a) Mother's sister
 - (b) Grandmother
 - (c) Mother-in-law
 - (d) Sister of father-in-law
41. In the series, 6, 4, 1, 2, 2, 8, 7, 4, 2, 1, 5, 3, 8, 6, 2, 2, 7, 1, 4, 1, 3, 5, 8, 6, how many pairs of successive numbers have a difference of 2 each?
- (a) 4 (b) 5 (c) 6 (d) 8
42. The mean marks obtained by a class of 40 students is 65. The mean marks of half of the students is found to be 45. The mean marks of the remaining students is
- (a) 85 (b) 60
 - (c) 70 (d) 65
43. Anil is twice as old as Sunita. Three years ago, he was three times as old as Sunita. The present age of Anil is
- (a) 6 years (b) 8 years
 - (c) 12 years (d) 16 years
44. Which of the following is a social network?
- (a) amazon.com (b) eBay
 - (c) gmail.com (d) Twitter
45. The population information is called parameter, whereas the corresponding sample information is known as
- (a) Universe (b) Inference
 - (c) Sampling design (d) Statistics

Read the following passage carefully and answer the questions from 46 to 51.

Heritage conservation practices improved worldwide after the International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM) was established with UNESCO's assistance in 1959. The intergovernmental organization with 126 member states has done a commendable job by training more than 4000 professionals, providing practice standards and sharing technical expertise. In this golden jubilee year, as we acknowledge its key role in global conservation, an assessment of international practices would be meaningful to the Indian conservation movement. Consistent investment, rigorous attention and dedicated research and dissemination are some of the positive lessons to imbibe. Countries like Italy have demonstrated that prioritizing heritage with significant budget provision pays. On the other hand, India, which is no less endowed in terms of cultural capital, has a long way to go. Surveys indicate that in addition to the 6600 protected monuments, there are over 60,000 equally valuable heritage structures that await attention. Besides the small group in the service of Archaeological Survey of India, there are only about 150 trained conservation professionals. In order to overcome this severe shortage, the emphasis has been on setting up dedicated labs and training institutions.

It would make much better sense for conservation to be made part of mainstream research and engineering institutes, as has been done in Europe.

Increasing funding and building institutions are the relatively easy part. The real challenge is to redefine international approaches to address local contexts. Conservation cannot limit itself to enhancing the art-historical value of the heritage structures, which international charters perhaps overemphasize. The effort has to be broad-based. It must also serve as a means of improving the quality of life in the area where the heritage structures are located. Therefore, the first task is to integrate conservation efforts with sound development plans that take care of people living in the heritage vicinity. Unlike in western countries, many traditional building crafts survive in India and conservation practices offer an avenue to support them. This has been acknowledged by the Indian National Trust for Art and Cultural Heritage charter for conservation but is yet to receive substantial state support. More strength for heritage conservation can be mobilized by aligning it with the green building movement. Heritage structures are essentially eco-friendly and conservation could become a vital part of the sustainable building practices campaign in future.

46. The outlook for conservation heritage changed
- After the establishment of the International Centre for the Study of the Preservation and Restoration of Cultural Property.
 - After training the specialists in the field.
 - After extending UNESCO's assistance to the educational institutions.
 - After ASI's measures to protect the monuments.
47. The intergovernment organization was appreciated because of
- Increasing number of members to 126.
 - Imparting training to professionals and sharing technical expertise.
 - Consistent investment in conservation.
 - Its proactive role in renovation and restoration.
48. Indian conservation movement will be successful if there would be
- Financial support from the Government of India.
 - Non-governmental organizations, role and participation in the conservation movement.
 - Consistent investment, rigorous attention and dedicated research and dissemination of awareness for conservation.
 - Archaeological Survey of India's meaningful assistance.
49. As per the surveys of historical monuments in India, there is very small number of protected monuments. As per the given total number of monuments and enlisted number of protected monuments, the percentage comes to
- | | |
|-----------------|-----------------|
| (a) 10 per cent | (b) 11 per cent |
| (c) 12 per cent | (d) 13 per cent |
50. What should India learn from Europe to conserve our cultural heritage?
- There should be significant budget provision to conserve our cultural heritage.
 - Establish dedicated labs and training institutions.
 - Force the government to provide sufficient funds.
 - Conservation should be made part of mainstream research and engineering institutes.
- Choose the correct answer from the codes given below.
- (i), (ii), (iii) and (iv)
 - (i), (ii) and (iv)
 - (i) and (ii)
 - (i), (iii) and (iv)
51. INTACH is known for its contribution for conservation of our cultural heritage. The full form of INTACH is
- International Trust for Art and Cultural Heritage.
 - Intra-national Trust for Art and Cultural Heritage.
 - Integrated Trust for Art and Cultural Heritage.
 - Indian National Trust for Art and Cultural Heritage.
52. While delivering lecture if there is some disturbance in the class, a teacher should
- Keep quiet for a while and then continue.
 - Punish those causing disturbance.
 - Motivate to teach those causing disturbance.
 - Not bother of what is happening in the class.
53. Effective teaching is a function of
- Teacher's satisfaction.
 - Teacher's honesty and commitment.
 - Teacher's making students learn and understand.
 - Teacher's liking for professional excellence.
54. The most appropriate meaning of learning is
- Acquisition of skills.
 - Modification of behaviour.
 - Personal adjustment.
 - Inculcation of knowledge.
55. Arrange the following teaching process in order.
- Relate the present knowledge with previous one.
 - Evaluation
 - Reteaching
 - Formulating instructional objectives
 - Presentation of instructional materials
- Codes:**
- (i), (ii), (iii), (iv) and (v)
 - (ii), (i), (iii), (iv) and (v)
 - (v), (iv), (iii), (i) and (ii)
 - (iv), (i), (v), (ii) and (iii)
56. CIET stands for
- Centre for Integrated Education and Technology.
 - Central Institute for Engineering and Technology.
 - Central Institute for Education Technology.
 - Centre for Integrated Evaluation Techniques.
57. Teacher's role at higher education level is to
- Provide information to students.
 - Promote self learning in students.
 - Encourage healthy competition among students.
 - Help students to solve their problems.

58. The Verstehen School of Understanding was popularized by
 (a) German Social Scientists
 (b) American Philosophers
 (c) British Academicians
 (d) Italian Political Analysts
59. The sequential operations in scientific research are
 (a) Covariation, Elimination of Spurious Relations, Generalization and Theorization.
 (b) Generalization, Covariation, Theorization and Elimination of Spurious Relations.
 (c) Theorization, Generalization and Elimination of Spurious Relations, Covariation.
 (d) Elimination of Spurious Relations, Theorization and Generalization, Covariation.
60. In sampling, the lottery method is used for
 (a) Interpretation (b) Theorization
 (c) Conceptualization (d) Randomization

ANSWER KEYS

1. (d) 2. (b) 3. (b) 4. (b) 5. (d) 6. (b) 7. (c) 8. (c) 9. (c) 10. (a)
 11. (c) 12. (d) 13. (c) 14. (c) 15. (c) 16. (b) 17. (a) 18. (c) 19. (c) 20. (a)
 21. (b) 22. (a) 23. (c) 24. (d) 25. * 26. (a) 27. (b) 28. (a) 29. (d) 30. (b)
 31. (b) 32. (a) 33. (b) 34. (c) 35. (d) 36. (c) 37. (a) 38. (b) 39. (d) 40. (d)
 41. (c) 42. (a) 43. (c) 44. (d) 45. (d) 46. (a) 47. (b) 48. (c) 49. (a) 50. (b)
 51. (d) 52. (c) 53. (c) 54. (b) 55. (d) 56. (c) 57. (b) 58. (a) 59. (a) 60. (d)

** denotes marks given to all candidates.

HINTS AND SOLUTIONS

1. (d): Refer pages 2.1 and 2.2
 2. (b): Refer 'Step 4: Selecting samples' on pages 2.22 and 2.23.
 3. (b): Refer 'Classification of Research on the Basis of Application' on page 2.7.
 10. (a): Refer 'Squares of Opposition' on pages 6.12 and 6.13.
 11. (c): One need to go step-by-step to solve this question and update this table in every step. In the solution given below, S stands for speak, F for follow and W for write.

	English	Hindi	Bengali
Ananya	S & F	S & F	S & F
Krishna	S & F		
Bulbul		W & S	
Archana		W & S	S & F

So, Ananya is the answer.

12. (d): Refer 'Types of Definitions' on page 6.15.
 13. (c): Refer pages 6.1 and 6.2.
 14. (c): Refer page 6.4.
 15. (c): This question can be solved with the help of Venn diagram as well.

Here, *R*, *S* and *H* stand for Religious, Saints and Honest, respectively. There are two ways through which *H* can be shown.

Note that 'Some honest persons are saints' does not mean that some saints are honest. Hence, option (b) is not true.

16. (b): Some approximation can be applied by ignoring the last four digits in all the figures.
 30. (b): Refer Table 9.1 on page 9.10.
 32. (a): Refer 'Open and Distance Education' on page 10.16
 33. (a): Refer page number 10.16
 34. (c): Refer page number 10.41
 38. (b)

T	E	A	C	H	E	R
+1	+1	+1	+1	+1	+1	+1
V	G	C	E	J	G	T

Similarly,

C	H	I	L	D	R	E	N
+1	+1	+	+	+1	+	+	+1
		1	1		1	1	
E	J	K	N	F	T	G	P

40. (d): We can make use of standard symbols to draw family diagram.

The diagram shows that lady's brother is father-in-law of man, so the lady in question is 'sister of father-in-law'. So, option (d) is the answer.

42. (a): It is a question of combined arithmetic mean.

43. (c): Let's assume that present age of Anil = x years,

Then, Sunita's age = $x/2$ years

$$x + 3 = 3(x/2 + 3)$$

By solving the equation, the present age of Anil = 12 years.

45. (d): Refer 'Step 4: Selecting Samples' on page 2.22

52. (c): Refer page 1.30. In answering these types of questions, lot of subjectivity is there. Motivating students is always the best approach. In case of misbehaviour, the teacher should stop teaching for a while.

53. (c): Effective means to ensure that end objective is achieved. End objective in teaching is 'making students learn and understand'.

54. (b): Learning is basically a psychological concept. Refer page 1.15.

58. Refer page 2.2. Verstehen is linked with teaching as well.

59. (a) In research, first of all, we look for similarities (covariation) across a range of situations to help us narrow down specific attributions. Thus, elimination of spurious relationships logically becomes the second step. Factor analysis mentioned on page 2.15 is the statistical technique that can be used for this purpose. Generalization and theory are the ultimate desirable aims of almost every research.

60. One of the most desirable feature of research is objectivity. For that data collection and sampling should be unbiased to the extent possible. Random sample means every member of population has equal chance of being selected. Candidates need to refer 'Randomization' on page 2.18 and 'Types of sampling techniques' on page 2.22.

UGC NET Paper 1

June 2014

- Breakdown in verbal communication is described as
(a) Short circuit (b) Contradiction
(c) Unevenness (d) Entropy
- The Telephone Model of Communication was first developed in the domain of
(a) Technological theory
(b) Dispersion theory
(c) Minimal effects theory
(d) Information theory
- The Dadasaheb Phalke Award for 2013 has been conferred on
(a) Karan Johar (b) Amir Khan
(c) Asha Bhonsle (d) Gulzar
- Photographs are not easy to
(a) Publish (b) Secure
(c) Decode (d) Change
- The grains that appear on a television set when operated are also referred to as
(a) Sparks (b) Green dots
(c) Snow (d) Rain drops
- In circular communication, the encoder becomes a decoder when there is
(a) Noise (b) Audience
(c) Criticality (d) Feedback
- In a post office, stamps of three different denominations of ₹7, ₹8, and ₹10 are available. The exact amount for which one cannot buy stamps is
(a) 19 (b) 20 (c) 23 (d) 29
- In certain coding method, the word QUESTION is encoded as DOMESTIC. In this coding, what is the code word for the word RESPONSE?
(a) OMESUCEM (b) OMESICSM
(c) OMESICEM (d) OMESISCM
- If the series 4, 5, 8, 13, 14, 17, 22, is continued in the same pattern, then which one of the following is not a term of this series?
(a) 31 (b) 32 (c) 33 (d) 35
- Complete the series BB, FE, II, ML, PP, _____ by choosing one of the following option given.
(a) TS (b) ST (c) RS (d) SR
- A man started walking from his house towards south. After walking 6 km, he turned to his left and walked 5 km. Then he walked further 3 km after turning left. He then turned to his left and continued his walk for 9 km. How far is he away from his house?
(a) 3 km (b) 4 km
(c) 5 km (d) 6 km
- One writes all numbers from 50 to 99 without the digits 2 and 7. How many numbers have been written?
(a) 32 (b) 36
(c) 40 (d) 38
- 'If a large diamond is cut up into little bits, it will lose its value just as an army is divided up into small units of soldiers, it loses its strength'.
The argument put above may be called
(a) Analogical (b) Deductive
(c) Statistical (d) Causal
- Given below are some characteristics of logical argument. Select the code which expresses a characteristic which is not of inductive in character.
(a) The conclusion is claimed to follow from its premises.
(b) The conclusion is based on causal relation.
(c) The conclusion conclusively follows from its premises.
(d) The conclusion is based on observation and experiment.
- If two propositions having the same subject and predicate terms can both be true but both cannot be false, then the relation between those two propositions is called
(a) Contradictory (b) Contrary
(c) Subcontrary (d) Subaltern
- Given below are two premises and four conclusions drawn from those premises. Select the code that expresses conclusion drawn validly from the premises (separately or jointly).
Premises:
(a) All dogs are mammals.
(b) No cats are dogs.
Conclusions:
(i) No cats are mammals.
(ii) Some cats are mammals.
(iii) No dogs are cats.
(iv) No dogs are non-mammals.
Codes:
(a) (i) only
(b) (i) and (ii)
(c) (iii) and (iv)
(d) (ii) and (iii)

17. Given below is a diagram of three circles A, B and C interrelated with each other. The Circle A represents the class of Indians, the Circle B represents the class of scientists, and Circle C represents the class of politicians. Here, p, q, r and s represent different regions. Select the code containing the region that indicates the class of Indian scientists who are not politicians.

Codes:

- (a) q and s only (b) s only
(c) s and r only (d) p, q and s only

Read the following table carefully. Based upon this table answer the questions from 18 to 22.

Net area under irrigation by sources in a country (thousand hectares)

Year	Government canals	Private canals	Tanks	Tube wells & other wells	Other sources	Total
1997-98	17,117	211	2593	32,090	3102	55,173
1998-99	17,093	212	2792	33,988	3326	57,411
1999-00	16,842	194	2535	34,623	2915	57,109
2000-01	15,748	203	2449	33,796	2880	55,076
2001-02	15,031	209	2179	34,906	4347	56,672
2002-03	13,863	206	1802	34,250	3657	53,778
2003-04	14,444	206	1908	35,779	4281	56,618
2004-05	14,696	206	1727	34,785	7453	58,867
2005-06	15,268	207	2034	35,372	7314	60,196

18. Which of the following sources of irrigation has registered the largest percentage of decline in net area under irrigation during 1997-98 and 2005-06?
- (a) Government canals
(b) Private canals
(c) Tanks
(d) Other sources
19. Find out the source of irrigation that has registered the maximum improvement in terms of percentage of net irrigated area during 2002-03 and 2003-04.
- (a) Government canals
(b) Tanks
(c) Tube wells and other wells
(d) Other sources
20. In which of the following years, the net irrigation by tanks increased at the highest rate?
- (a) 1998-99 (b) 2000-01
(c) 2003-04 (d) 2005-06
21. Identify the source of irrigation that has recorded the maximum incidence of negative growth in terms of net irrigated area during the years given in the table.
- (a) Government canals
(b) Private canals
(c) Tube wells and other wells
(d) Other sources
22. In which of the following years, shares of the tube wells and other wells in the total net irrigated area was the highest?
- (a) 1998-99 (b) 2000-01
(c) 2002-03 (d) 2004-05
23. The acronym FTP stands for
- (a) File Transfer Protocol
(b) Fast Transfer Protocol
(c) File Tracking Protocol
(d) File Transfer Procedure
24. Which one of the following is not a/an image/graphic file format?
- (a) PNG (b) GIF
(c) BMP (d) GUI
25. The first web browser is
- (a) Internet Explorer (b) Netscape
(c) World Wide Web (d) Firefox
26. When a computer is booting, BIOS is loaded to the memory by
- (a) RAM (b) ROM
(c) CD-ROM (d) TCP
27. Which one of the following is not the same as the other three?
- (a) MAC address
(b) Hardware address
(c) Physical address
(d) IP address
28. Identify the IP address from the following.
- (a) 300 □ 215 □ 317 □ 3
(b) 302 □ 215@ 417 □ 5
(c) 202 □ 50 □ 20 □ 148
(d) 202 - 50 - 20 - 148
29. The population of India is about 1.2 billion. Take the average consumption of energy per person per year in India as 30 megajoule. If this consumption is met by carbon-based fuels and the rate of carbon emissions per kilojoule is $15 \cdot 10^6$ kg, then the total carbon emissions per year from India will be
- (a) 54 million metric tons
(b) 540 million metric tons
(c) 5400 million metric tons
(d) 2400 million metric tons
30. Which of the following cities has been worst affected by urban smog in recent times?
- (a) Paris (b) London
(c) Los Angeles (d) Beijing

31. The primary source of organic pollution in fresh water bodies is
 (a) Run-off urban areas.
 (b) Run-off from agricultural forms.
 (c) Sewage effluents.
 (d) Industrial effluents.
32. 'Lahar' is a natural disaster involving
 (a) Eruption of large amount of material.
 (b) Strong winds.
 (c) Strong water waves.
 (d) Strong winds and water waves.
33. In order to avoid catastrophic consequences of climate change, there is a general agreement among the countries of the world to limit the rise in average surface temperature of earth compared to that of pre-industrial times by
 (a) 1.5°C to 2°C (b) 2.0°C to 3.5°C
 (c) 0.5°C to 1.0°C (d) 0.25°C to 0.5°C
34. The National Disaster Management Authority functions under the Union Ministry of
 (a) Environment (b) Water Resources
 (c) Home Affairs (d) Defence
35. Match List-I and List-II and select the correct answer from the codes given below.

List-I	List-II
A. Flood	I. Lack of rainfall of sufficient duration.
B. Drought	II. Tremors produced by the passage of vibratory waves through the rocks of the earth.
C. Earthquake	III. A vent through which molten substances come out.
D. Volcano	IV. Excess rain and uneven distribution of water.

Codes:

- (a) A-IV, B-I, C-II, D-III (b) A-II, B-III, C-IV, D-I
 (c) A-III, B-IV, C-II, D-I (d) A-IV, B-III, C-I, D-II

36. Which one of the following green house gases has the shortest residence time in the atmosphere?
 (a) Chlorofluorocarbon
 (b) Carbon dioxide
 (c) Methane
 (d) Nitrous oxide
37. Consider the following statements and select the correct answer from the code given below.
 (i) Rajasthan receives the highest solar radiation in the country.
 (ii) India has the fifth largest installed wind power in the world.
 (iii) The maximum amount of wind power is contributed by Tamil Nadu.
 (iv) The primary source of uranium in India is Jaduguda.

Codes:

- (a) (i) and (ii) (b) (i), (ii) and (iii)
 (c) (ii) and (iii) (d) (i) and (iv)

38. Who among the following is the de facto executive head of the Planning Commission?
 (a) Chairman
 (b) Deputy Chairman
 (c) Minister of State for Planning
 (d) Member Secretary
39. Education as a subject of legislation figures in the
 (a) Union List (b) State List
 (c) Concurrent List (d) Residuary Powers
40. Which of the following are Central Universities?
 (i) Pondicherry University
 (ii) Vishwa Bharati
 (iii) H. N. B. Garhwal University
 (iv) Kurukshetra University

Select the correct answer from the codes given below.

Codes:

- (a) (i), (ii) and (iii) (b) (i), (iii) and (iv)
 (c) (ii), (iii) and (iv) (d) (i), (ii) and (iv)

41. Consider the statement which is followed by two arguments (i) and (ii).

Statement: India should have a very strong and powerful Lokpal.

Arguments:

- (i) Yes, it will go a long in eliminating corruption in bureaucracy.
 (ii) No, it will discourage honest officers from making quick decisions.

Codes:

- (a) Only argument (i) is strong.
 (b) Only argument (ii) is strong.
 (c) Both the arguments are strong.
 (d) Neither of the arguments is strong.

42. Which of the following universities has adopted the meta university concept?
 (a) Assam University
 (b) Delhi University
 (c) Hyderabad University
 (d) Pondicherry University

43. Which of the following statements are correct about a Central University?

- (i) Central University is established under an Act of Parliament.
 (ii) The President of India acts as the visitor of the University.
 (iii) The President has the power to nominate some members to the Executive Committee or the Board of Management of the University.
 (iv) The President occasionally presides over the meetings of the Executive Committee or Court.

Select the correct answer from the code given below.

Codes:

- (a) (i), (ii), and (iv) (b) (i), (iii), and (iv)
 (c) (i), (ii), and (iii) (d) (i), (ii), (iii), and (iv)

44. Which one of the following is considered a sign of motivated teaching?
 (a) Students asking questions.
 (b) Maximum attendance of the students.
 (c) Pin drop silence in the classroom.
 (d) Students taking notes.
45. Which one of the following is the best method of teaching?
 (a) Lecture (b) Discussion
 (c) Demonstration (d) Narration
46. Dyslexia is associated with
 (a) Mental disorder (b) Behavioural disorder
 (c) Reading disorder (d) Writing disorder
47. The e-content generation for under-graduate courses has been assigned by the Ministry of Human Resource Development to
 (a) INFLIBNET
 (b) Consortium for Educational Communication
 (c) National Knowledge Commission
 (d) Indira Gandhi National Open University
48. Classroom communication is normally considered as
 (a) Effective (b) Cognitive
 (c) Affective (d) Selective
49. Who among the following propounded the concept of paradigm?
 (a) Peter Haggett (b) Von Thunen
 (c) Thomas Kuhn (d) John K. Wright
50. In a thesis, figures and tables are included in
 (a) The appendix (b) A separate chapter
 (c) The concluding chapter (d) The text itself
51. A thesis statement is
 (a) An observation (b) A fact
 (c) An assertion (d) A discussion
52. The research approach of Max Weber to understand how people create meanings in natural settings is identified as
 (a) Positive paradigm (b) Critical paradigm
 (c) Natural paradigm (d) Interpretative paradigm
53. Which one of the following is a non-probability sampling?
 (a) Simple random (b) Purposive
 (c) Systematic (d) Stratified
54. Identify the category of evaluation that assesses the learning progress to provide continuous feedback to the students during instruction.
 (a) Placement (b) Diagnostic
 (c) Formative (d) Summative
55. The research stream of immediate application is
 (a) Conceptual research (b) Action research
 (c) Fundamental research (d) Empirical research

Read the following passage carefully and answer the questions from 56 to 60:

Traditional Indian values must be viewed both from the angle of the individual and from that of the geographically delimited agglomeration of people or groups enjoying a common system of leadership which we call the 'State'. The Indian 'State's' special feature

is the peaceful, or perhaps mostly peaceful, co-existence of social groups of various historical provenances that mutually adhere in a geographical, economic, and political sense, without ever assimilating to each other in social terms, in ways of thinking, or even in language. Modern Indian law will determine certain rules, especially in relation to the regime of the family, upon the basis of how the loincloth is tied, or how the turban is worn, for this may identify the litigants as members of a regional group and therefore, as participants in its traditional law, though their ancestors left the region three or four centuries earlier. The use of the word 'State' above must not mislead us. There was no such thing as a conflict between the individual and the State, at least before foreign governments became established, just as there was no concept of state 'sovereignty' or of any church-and-state dichotomy.

Modern Indian 'secularism' has an admittedly peculiar feature as it requires the state to make a fair distribution of attention and support amongst all religions. These blessed aspects of India's famed tolerance (Indian kings so rarely persecuted religious groups that the exceptions prove the rule) at once struck Portuguese and other European visitors to the West Coast of India in the sixteenth century, and the impression made upon them in this and other ways gave rise, at one remove, to the basic constitution of Thomas More's Utopia. There is little about modern India that strikes one at once as Utopian. However, the insistence upon the inculcation of norms and the absence of bigotry and institutionalized exploitation of human or natural resources are two very different features that link the realities of India and her tradition with the essence of all Utopians.

56. Which of the following is a special feature of the Indian State?
 (a) Peaceful coexistence of people under a common system of leadership.
 (b) Peaceful coexistence of social groups of different historical provenances attached to each other in a geographical, economic and political sense.
 (c) Social integration of all groups.
 (d) Cultural assimilation of all social groups.
57. The author uses the word 'State' to highlight
 (a) Antagonistic relationship between the state and the individual throughout the period of history.
 (b) Absence of conflict between the state and the individuals up to a point in time.
 (c) The concept of state sovereignty.
 (d) Dependence on religion.
58. Which one is the peculiar feature of modern Indian 'secularism'?
 (a) No discrimination on religious considerations.
 (b) Total indifference to religion.
 (c) No space for social identity.
 (d) Disregard for social law.

59. The basic construction of Thomas More's Utopia was inspired by
 (a) Indian tradition of religious tolerance.
 (b) Persecution of religious groups by Indian rulers.
 (c) Social inequality in India.
 (d) European perception of Indian state.
60. What is the striking feature of modern India?
 (a) A replica of Utopian State.
 (b) Uniform laws.
 (c) Adherence to traditional values.
 (d) Absence of Bigotry.

ANSWER KEYS

1. (d) 2. (d) 3. (d) 4. (c) 5. (c) 6. (d) 7. (a) 8. (c) 9. (c) 10. (a)
 11. (c) 12. (a) 13. (a) 14. (c) 15. (c) 16. (c) 17. (b) 18. (c) 19. (d) 20. (d)
 21. (a) 22. (c) 23. (a) 24. (d) 25. (c) 26. (b) 27. (d) 28. (c) 29. (*) 30. (d)
 31. (c) 32. (a) 33. (a) 34. (c) 35. (a) 36. (c) 37. (*) 38. (b) 39. (c) 40. (a)
 41. (a) 42. (b) 43. (c) 44. (a) 45. (c) 46. (c) 47. (b) 48. (b) 49. (c) 50. (d)
 51. (c) 52. (d) 53. (b) 54. (c) 55. (b) 56. (b) 57. (b) 58. (a) 59. (a) 60. (d)

“*” denotes that marks are given to those candidates who have attempted this question within their first fifty attempted questions.

HINTS AND SOLUTIONS

7. (a): Elimination of choices is required to solve this question. Look at (a). For exact amount of 19, no combination fits, for (b) $10 \cdot 2 = 20$; (c) $(8 \cdot 2) + (7 \cdot 1) = 23$; (d) $(7 \cdot 3) + (8 \cdot 1) = 29$. Thus, option (a) is the answer.
8. (c)

Q	U	E	S	T	I	O	N
↓	↓	↓	↓	↓	↓	↓	↓
D	O	M	E	S	T	I	C

Similarly,

R	E	S	P	O	N	S	E
↓	↓	↓	↓	↓	↓	↓	↓
?	M	E	?	I	C	E	M

Only one choice is possible that is matching of last four letters ICEM. Hence, option (c) is the answer.

9. (c): Difference of 1, 3, 5 is the pattern. The terms after 22 will be 23, 26, 31, 32, 35..... Hence, 33 is not the term and option (c) is the answer.

10. (a)

B	+3	F	+2	I	+3	M	+2	P	+3	T
B	+2	E	+3	I	+2	L	+3	P	+2	S

Hence, TS is the answer.

11. (c)

Using Pythagoras theorem (adding squares of 3 and 4, and then taking their square root), the answer is 5 km.

12. (a) Hint – total numbers is 50. Eighteen numbers are to be deducted from it.
13. (a): Refer page 6.4
14. (c): Refer pages 6.1–6.2
15. (c): Refer ‘Squares of Opposition’ on pages 6.12–6.13.
16. (c): Let us assume that M stands for mammals, D for dogs and C for Cats.

There can be three scenarios for C as shown in the above diagram.

29. * - None of the choices are correct. Marks were given to candidates who attempted this question. Solution is still provided here for the understanding of candidates.
 Population of India = 1.2 billion = $1.2 \cdot 10^9$
 Total energy consumption in India = $1.2 \cdot 10^9 \cdot 30 \cdot 10^6$
 $= 36 \cdot 10^{15}$ Joules
 Carbon emission per kilojoule = $15 \cdot 10^6$ kg
 Carbon emission per Joule = $15 \cdot 10^6 / 10^3 = 15 \cdot 10^3$ kg
 Total carbon emissions from India = $36 \cdot 10^{15} \cdot 15 \cdot 10^3$
 kgs = $540 \cdot 10^{18}$ kg
 None of the choices match the answer.

30. (d)

Note: Beijing Red Alert was issued in Beijing in December 2015 as well for alarming levels of pollution. There are four levels of pollution alert in Beijing, red alert being the most severe and PM2.5 being alarmingly high.

33. (a): The temperature increase limits is known as tipping point, beyond which the climate change will be catastrophic and irreversible. Some research scientists mention 4°C as the tipping point.
35. (a): Refer 'Natural Hazards and their mitigation' on page 9.17
36. (c): CH₄ emitted today lasts about a decade on average, which is much less time than CO₂. However, CH₄ also absorbs much more energy than CO₂. The net effect of the shorter lifetime and higher energy absorption is reflected in the Global Warming Potential (GWP). GWP of methane is much higher than that of CO₂. The methane GWP also accounts for some indirect effects, such as the fact that methane is a precursor to ozone, and ozone is itself a greenhouse gas. For further details, the candidates may visit www3.epa.gov/climatechange/ghgemissions/gwps.html.
38. (b): On 1 January 2015, Planning Commission was replaced with NITI Ayog—National Institution for Transforming India (details in Unit 10).
39. (c): Refer 'Education Subject in Concurrent List (1976)' on page 10.4.
42. (b): Refer page 10.10.
43. (c): Refer page 10.7
46. (c): Dyslexia is the most common learning disability in children and it is characterized by trouble with reading despite normal intelligence persists throughout the life. Steve Jobs, the founder of Apple also suffered from this disorder.
51. (c): Refer page 2.29.
53. (b): Refer 'selecting samples' on page 2.22.
54. (c): Refer page 1.19.
55. (b): Refer page 2.7.

CBSE-UGC NET Paper 1

December 2014

- The term 'Yellow Journalism' refers to
 - Sensational news about terrorism and violence.
 - Sensationalism and exaggeration to attract readers/viewers.
 - Sensational news about arts and culture.
 - Sensational news prints in yellow paper.
- In a classroom, the teacher sends the message either as words or images. The students are really
 - Encoders
 - Decoders
 - Agitators
 - Propagators
- Media is known as
 - First estate
 - Second estate
 - Third estate
 - Fourth estate
- The mode of communication that involves a single source transmitting information to a large number of receivers simultaneously is called
 - Group communication
 - Mass communication
 - Intrapersonal communication
 - Interpersonal communication
- A smart classroom is a teaching space which has
 - Smart portion with a touch panel control system.
 - PC/Laptop connection and DVD/VCR player.
 - Document camera and specialized software.
 - Projector and screen.Select the correct answer from the codes given below.
 - (i) and (ii) only
 - (ii) and (iv) only
 - (i), (ii) and (iii) only
 - (i), (ii), (iii) and (iv)
- Digital Empowerment means
 - Universal digit literacy.
 - Universal access to all digital resources.
 - Collaborative digital platform for participative governance.
 - Probability of all entitlements for individuals through cloud.Choose the correct answer from the codes given below.
 - (i) and (ii) only
 - (ii) and (iii) only
 - (i), (ii) and (iii) only
 - (i), (ii), (iii) and (iv)
- The next term in the series 2, 7, 28, 63, 126, _____ is
 - 215
 - 245
 - 276
 - 296
- The next term in the series AB, ED, IH, NM, _____ is
 - TS
 - ST
 - TU
 - SU
- If STREAMERS is coded as UVTGALDQR, then KNOWLEDGE will be coded as
 - MQPYLCDFD
 - MPQYLD CFD
 - PMYQLDFCD
 - YMQPLDDFC
- A is brother of B. B is the brother of C. C is the husband of D. E is the father of A. D is related to E as
 - Daughter
 - Daughter-in-law
 - Sister-in-law
 - Sister
- Two numbers are in the ratio 3 : 5. If 9 is subtracted from the numbers, the ratio becomes 12 : 23. The numbers are
 - 30, 50
 - 36, 60
 - 33, 55
 - 42, 70
- The mean of the ages of father and his son is 27 years. After 18 years, the father will be twice as old as his son. Their present ages are
 - 42, 12
 - 40, 14
 - 30, 24
 - 36, 18

Read the following passage carefully and answer questions 13 to 17.

The literary distaste for politics, however, seems to be focused not so much on the largely murky practice of politics in itself as a subject of literary representation but rather more on how it is often depicted in literature, i.e., on the very politics of such representation. A political novel often turns out to be not merely a novel about politics but a novel with a politics of its own, for it seeks not merely to show us how things are but has fairly definite ideas about how things should be and precisely what one should think and do in order to make things move in that desired direction. In short, it seeks to convert and enlist the reader to a particular cause or ideology; it often is (in an only too familiar phrase) not literature but propaganda. This is said to violate the very spirit of literature which is to broaden our understanding of the world and the range of our

sympathies rather than to narrow them down through partisan commitment. As John Keats said, 'We hate poetry that has a palpable design upon us'.

Another reason why politics does not seem amenable to the highest kind of literary representation seems to arise from the fact that politics by its very nature is constituted of ideas and ideologies. If political situations do not lend themselves to happy literary treatment, then political ideas present perhaps an even greater problem in this regard. Literature, it is argued, is about human experiences rather than about intellectual abstractions; it deals in what is called the 'felt reality' of human flesh and blood, and in sap and savour (*rasa*) rather than in arid and lifeless ideas. In an extensive discussion of the matter in her book *Ideas and the Novel*, the American novelist Mary McCarthy observed that 'ideas are still today felt to be unsightly in the novel' though that was not so in 'former days', i.e., in the 18th and 19th centuries. Her formulation of the precise nature of the incompatibility between ideas on the one hand and the novel on the other betrays perhaps a divided conscience in the matter and a sense of dilemma shared by many writers and readers, 'An idea cannot have loose ends, but a novel, I almost think, needs them. Nevertheless, there is enough in common for the novelists to feel... the attraction of ideas while taking up arms against them – most often with weapons of mockery.'

13. According to the passage, a political novel often turns out to be a
 - (a) Literary distaste for politics.
 - (b) Literary representation of politics.
 - (c) Novel with its own politics.
 - (d) Depiction of murky practice of politics.
14. A political novel reveals
 - (a) Reality of the things.
 - (b) Writer's perception.
 - (c) Particular ideology of the readers.
 - (d) The spirit of literature.
15. The constructs of politics by its nature is
 - (a) Prevalent political situation.
 - (b) Ideas and Ideologies.
 - (c) Political propaganda.
 - (d) Understanding of human nature.
16. Literature deals with
 - (a) Human experiences in politics.
 - (b) Intellectual abstractions.
 - (c) Dry and empty ideas.
 - (d) Felt reality of human life.
17. The observation of the novelist, Mary McCarthy reveals
 - (a) Unseen felt ideas of today in the novel.
 - (b) Dichotomy of conscience on political ideas and novels.
 - (c) Compatibility between idea and novel.
 - (d) Endless ideas and novels.

18. When in a group of propositions, one proposition is claimed to follow from the others, that group of propositions is called
 - (a) An argument
 - (b) A valid argument
 - (c) An explanation
 - (d) An invalid argument
19. Namita and Samita are brilliant and studious. Anita and Karabi are obedient and irregular. Babita and Namita are irregular but brilliant. Samita and Kabita are regular and obedient. Who among them is/are brilliant, obedient, regular and studious?
 - (a) Samita alone
 - (b) Namita and Samita
 - (c) Kabita alone
 - (d) Anita alone
20. Warrior is related to sword, carpenter is related to saw, farmer is related to plough. In the same way, the author is related to

(a) Book	(b) Fame
(c) Reader	(d) Pen
21. Given below is a diagram of three circles A, B and C overlapping each other. The circle A represents the class of honest people, the circle B represents the class of sincere people and circle C represents the class of politicians. p, q, r, s, U, X, Y represent different regions. Select the code that represents the region indicating the class of honest politicians who are not sincere.

Codes:

- | | |
|-------|-------|
| (a) X | (b) q |
| (c) p | (d) s |
22. 'A man ought no more to value himself for being wiser than a woman if he owes his advantage to a better education, than he ought to boast of his courage for beating a man when his hands were tied'. The above passage is an instance of
 - (a) Deductive argument
 - (b) Hypothetical argument
 - (c) Analogical argument
 - (d) Factual argument
 23. By which of the following proposition, the proposition 'wise men are hardly afraid of death' is contradicted?
 - (a) Some wise men are afraid of death.
 - (b) All wise men are afraid of death.
 - (c) No wise men is afraid of death.
 - (d) Some wise men are not afraid of death.

For a country, CO₂ emissions (million metric tons) from various sectors are given in the following table. Answer the questions (24 to 29) based on the data given.

CO ₂ emissions (million metric tons)					
Sector	Power	Industry	Commercial	Agriculture	Domestic
Year					
2005	500	200	150	80	100
2006	600	300	200	90	110
2007	650	320	250	100	120
2008	700	400	300	150	150
2009	800	450	320	200	180

24. What is the percentage (%) growth of CO₂ emissions from power sector during 2005 to 2009?
 (a) 60 (b) 50 (c) 40 (d) 80
25. Which sector has recorded maximum growth in CO₂ emissions during 2005 to 2009?
 (a) Power (b) Industry
 (c) Commercial (d) Agriculture
26. By what percentage (%), the total emissions of CO₂ have increased from 2005 to 2009?
 (a) ~89.32% (b) ~57.62%
 (c) ~40.32% (d) ~113.12%
27. What is the average annual growth rate of CO₂ emissions in power sector?
 (a) ~12.57% (b) ~16.87%
 (c) ~30.81% (d) ~50.25%
28. What is the percentage contribution of power sector to total CO₂ emissions in the year 2008?
 (a) ~30.82% (b) ~41.18%
 (c) ~51.38% (d) ~60.25%
29. In which year, the contribution (%) of industry to total sectoral CO₂ emissions was minimum?
 (a) 2005 (b) 2006
 (c) 2007 (d) 2009
30. Symbols A-F are used in which one of the following?
 (a) Binary number system
 (b) Decimal number system
 (c) Hexadecimal number system
 (d) Octal number system
31. Which one of the following is not a search engine?
 (a) Google (b) Chrome
 (c) Yahoo (d) Bing
32. CSS stands for
 (a) Cascading Style Sheets
 (b) Collecting Style Sheets
 (c) Comparative Style Sheets
 (d) Comprehensive Style Sheets
33. MOOC stands for
 (a) Media Online Open Course
 (b) Massachusetts Open Online Course
 (c) Massive Open Online Course
 (d) Myrind Open Online Course
34. Binary equivalent of decimal number 35 is
 (a) 100011 (b) 110001
 (c) 110101 (d) 101011
35. The terms gif, jpg, bmp, png are used as extensions for files which store
 (a) audio data (b) image data
 (c) video data (d) text data
36. Which of the anthropogenic activity accounts for more than $\frac{2}{3}$ rd of global water consumption?
 (a) Agriculture
 (b) Hydropower generation
 (c) Industry
 (d) Domestic and municipal usage
37. One of the anthropogenic sources of gaseous pollutants chlorofluorocarbons (CFCs) in air is
 (a) Cement industry
 (b) Fertilizer industry
 (c) Foam industry
 (d) Pesticide industry
38. In terms of total CO₂ emissions from a country, identify the correct sequence.
 (a) U.S.A. > China > India > Russia
 (b) China > U.S.A. > India > Russia
 (c) China > U.S.A. > Russia > India
 (d) U.S.A. > China > Russia > India
39. Match List – I and List – II and identify the correct code.
- | List-I | List-II |
|-------------------------|-------------------|
| A. World Health Day | I. 16th September |
| B. World Population Day | II. 1st December |
| C. World Ozone Day | III. 11th July |
| D. World AIDS Day | IV. 7th April |
- Codes:
 (a) A-I, B-II, C-III, D-IV (b) A-IV, B-III, C-I, D-II
 (c) A-II, B-III, C-IV, D-I (d) A-III, B-IV, C-II, D-I
40. The cyclone 'Hudhud' hit the coast of which state?
 (a) Andhra Pradesh (b) Karnataka
 (c) Kerala (d) Gujarat

41. Which of the following is not a renewable natural resource?
 (a) Clean air (b) Fresh water
 (c) Fertile soil (d) Salt
42. The maximum number of fake institutions/universities as identified by the UGC in the year 2014 are in the State/Union territory of
 (a) Bihar (b) Uttar Pradesh
 (c) Tamil Nadu (d) Delhi
43. Which of the following institutions are empowered to confer or grant degrees under the UGC Act, 1956?
 1. A university established by an Act of Parliament.
 2. A university established by an Act of Legislature.
 3. A university/institution established by a linguistic minority.
 4. An institution which is a deemed to be university.
 Select the correct answer from the codes given below.
 (a) 1 and 2 (b) 1, 2 and 3
 (c) 1, 2 and 4 (d) 1, 2, 3 and 4
44. Which of the following are the tools of good governance?
 1. Social audit
 2. Separation of powers
 3. Citizen's charter
 4. Right to information
 Select the correct answer from the codes given below.
 (a) 1, 3 and 4 (b) 2, 3 and 4
 (c) 1 and 4 (d) 1, 2, 3 and 4
45. Which of the following powers, the President has in relation to Lok Sabha?
 1. Summoning
 2. Adjournment – sine die
 3. Prorogation
 4. Dissolution
 Select the correct answer from the codes given below.
 (a) 1 and 4 (b) 1, 2 and 3
 (c) 1, 3 and 4 (d) 1, 2, 3 and 4
46. The interval between two sessions of parliament must not exceed
 (a) 3 months (b) 6 months
 (c) 4 months (d) 100 days
47. Right to Privacy as a Fundamental Right is implied in
 (a) Right to Freedom
 (b) Right to Life and Personal Liberty
 (c) Right to Equality
 (d) Right against Exploitation
48. Which of the following organizations deals with 'capacity building program' on Educational Planning?
 (a) NCERT (b) UGC
 (c) NAAC (d) NUEPA
49. 'Education is the manifestation of perfection already in man' was stated by
 (a) M. K. Gandhi (b) R. N. Tagore
 (c) Swami Vivekanand (d) Sri Aurobindo
50. Which of the following is not a prescribed level of teaching?
 (a) Memory (b) Understanding
 (c) Reflective (d) Differentiation
51. Maximum participation of students during teaching is possible through
 (a) Lecture method (b) Demonstration method
 (c) Inductive method (d) Textbook method
52. Diagnostic evaluation ascertains
 (a) Students performance at the beginning of instructions.
 (b) Learning progress and failures during instructions.
 (c) Degree of achievement of instructions at the end.
 (d) Causes and remedies of persistent learning problems during instructions.
53. Instructional aids are used by the teacher to
 (a) Glorify the class (b) Attract the students
 (c) Clarify the concepts (d) Ensure discipline
54. The attitude of the teacher that affects teaching pertains to
 (a) Affective domain (b) Cognitive domain
 (c) Connative domain (d) Psychomotor domain
55. When planning to do as social research, it is better to
 (a) Approach the topic with an open mind.
 (b) Do a pilot study before getting stuck into it.
 (c) Be familiar with literature on the topic.
 (d) Forget about theory because this is very practical.
56. When academicians are called to deliver lecture or presentation to an audience on certain topics or a set of topics of educational nature, it is called
 (a) Training program (b) Seminar
 (c) Workshop (d) Symposium
57. The core elements of a dissertation are
 (a) Introduction; Data Collection; Data Analysis; Conclusions and Recommendations.
 (b) Executive Summary; Literature review; Data gathered; Conclusions; Bibliography.
 (c) Research Plan; Research Data; Analysis; References.
 (d) Introduction; Literature Review; Research Methodology; Results; Discussion and Conclusion.
58. What is a research design?
 (a) A way of conducting research that is not grounded in theory.
 (b) The choice between using qualitative or quantitative methods.
 (c) The style in which you present your research findings, for example, a graph.
 (d) A framework for every stage of the collection and analysis of data.
59. 'Sampling cases' means
 (a) Sampling using a sampling frame.
 (b) Identifying people who are suitable for research.
 (c) Literally the researcher's brief case.
 (d) Sampling of people, newspapers, television programmes, etc.
60. The frequency distribution of a research data which is symmetrical in shape similar to a normal distribution but centre peak is much higher, is
 (a) Skewed (b) Mesokurtic
 (c) Leptokurtic (d) Platykurtic

ANSWER KEYS

1. (b) 2. (b) 3. (d) 4. (b) 5. (d) 6. (d) 7. (a) 8. (a) 9. (b) 10. (b)
 11. (c) 12. (a) 13. (c) 14. (b) 15. (b) 16. (d) 17. (a) 18. (a) 19. (a) 20. (d)
 21. (d) 22. (c) 23. (b) 24. (a) 25. (d) 26. (a) 27. (a) 28. (b) 29. (a) 30. (c)
 31. (b) 32. (a) 33. (c) 34. (a) 35. (b) 36. (a) 37. (c) 38. (b) 39. (b) 40. (a)
 41. (d) 42. (b) 43. (c) 44. (b) 45. (c) 46. (b) 47. (b) 48. (d) 49. (c) 50. (d)
 51. (b) 52. (d) 53. (c) 54. (a) 55. (c) 56. (b) 57. (d) 58. (d) 59. (d) 60. (c)

HINTS AND SOLUTIONS

1. (b): **Yellow journalism** is a sensational style of newspaper reporting that emerged at the end of the 19th century when rival newspaper publishers William Randolph Hearst and Joseph Pulitzer competed for sales in the coverage of events leading up to and during the Spanish-American War, and it's a type of reporting that continues today.
3. Fourth Estate refers to the news media. The origin of the term is attributed to Edmund Burke, who used it in a parliamentary debate in 1787 in the House of Commons of Great Britain.
7. (a): $1^3 + 1, 2^3 - 1, 3^3 + 1, 4^3 - 1, 5^3 + 1$ and so on. Hence, the answer is 126.
8. (a): B + 2 gives D, D + 1 (and reversing order) gives ED, again D + 4 gives H and so on. Hence, option (a) is the answer.
9. (b)

S	T	R	E	A	M	E	R	S
+2	+2	+2	+2		-1	-1	-1	-1
U	V	T	G	A	L	D	Q	R
<hr/>								
K	N	O	W	L	E	D	G	E
+2	+2	+2	+2		-1	-1	-1	-1
M	P	Q	Y	L	D	C	F	D

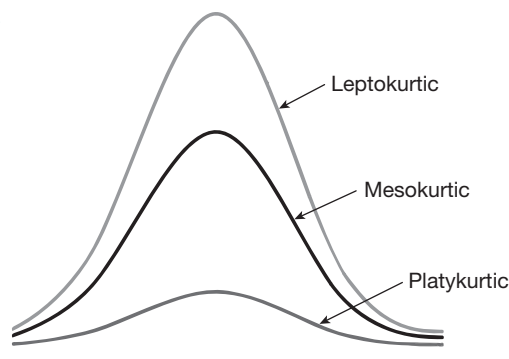

Hence, (b) is the correct option.

11. (c): Let's assume that numbers are $3x$ and $5x$. According to the statement, $(3x - 9)/(5x - 9) = 12/23$ solving it we get $x = 11$. Hence, the numbers are 33 and 55.
18. An argument is a form of communication that tries to persuade its audience to adopt a particular position about a topic. Arguments have three main parts, such as a claim that states the position to be argued, reasons that logically explain why the claim should be accepted; and evidence that supports the reasons with facts, anecdotes, statistics, expert testimony and examples. The statements a writer makes to offer a claim, reasons and evidence can weaken or strengthen an argument. (Source: study.com)

19. (a)

	Brilliant	Obedient	Regular	Studious
Namita	✓			✓
Samita	✓	✓	✓	✓
Anitha		✓		
Karabi		✓		
Babita	✓			
Kabita		✓	✓	

23. Refer 'Squares of Opposition' on pages 6.12 and 6.13.
36. (a): Refer water pollution and its types on page 9.12. Different sources have different percentage figures.
38. (b): Refer to Carbon Emissions Table on page 9.40.
40. (a): The practice of naming storms (tropical cyclones) began in order to help in the quick identification of storms in warning messages because the names are presumed to be far easier to remember than numbers and technical terms. This is mainly taken care of by World Meteorological Organisation. For details, visit the link <https://www.wmo.int/pages/prog/www/tcp/Storm-naming.html>.

CBSE-UGC NET Paper 1

June 2015

- Which of the following is the highest level of cognitive ability?
(a) Knowing (b) Understanding
(c) Analysing (d) Evaluating
- Which of the following factors does **not** impact teaching?
(a) Teacher's knowledge.
(b) Class room activities that encourage learning.
(c) Socio-economic background of teachers and students.
(d) Learning through experience.
- Which of the following statements about teaching aids are correct?
(i) They help in retaining concepts for longer duration.
(ii) They help students learn better.
(iii) They make teaching learning process interesting.
(iv) They enhance rote learning.
Select the correct answer from the codes given below.
(a) (i), (ii), (iii) and (iv)
(b) (i), (ii) and (iii)
(c) (ii), (iii) and (iv)
(d) (i), (ii) and (iv)
- Techniques used by a teacher to teach include
(i) Lecture
(ii) Interactive lecture
(iii) Group work
(iv) Self study
Select the correct answer from the codes given below.
(a) (i), (ii) and (iii)
(b) (i), (ii), (iii) and (iv)
(c) (ii), (iii) and (iv)
(d) (i), (ii) and (iv)
- Achievement tests are commonly used for the purpose of
(a) Making selections for a specific job.
(b) Selecting candidates for a course.
(c) Identifying strengths and weaknesses of learners.
(d) Assessing the amount of learning after teaching.
- A good teacher is one who
(a) Gives useful information.
(b) Explains concepts and principles.
(c) Gives printed notes to students.
(d) Inspires students to learn.
- Which of the following statements regarding the meaning of research are correct?
(i) Research refers to a series of systematic activity or activities undertaken to find out the solution of a problem.
(ii) It is a systematic, logical and an unbiased process wherein verification of hypothesis, data analysis, interpretation and formation of principles can be done.
(iii) It is an intellectual enquiry or quest towards truth.
(iv) It leads to enhancement of knowledge.
Select the correct answer from the codes given below.
(a) (i), (ii) and (iii)
(b) (ii), (iii) and (iv)
(c) (i), (iii) and (iv)
(d) (i), (ii), (iii) and (iv)
- A good thesis writing should involve
(i) Reduction of punctuation and grammatical errors to a minimum.
(ii) Careful checking of references.
(iii) Consistency in the way the thesis is written.
(iv) A clear and well-written abstract.
Select the correct answer from the codes given below.
(a) (i), (ii), (iii) and (iv)
(b) (i), (ii) and (iii)
(c) (i), (ii) and (iv)
(d) (ii), (iii) and (iv)
- Jean Piaget gave a theory of cognitive development of humans on the basis of his
(a) Fundamental research
(b) Applied research
(c) Action research
(d) Evaluation research
- 'Male and female students perform equally well in a numerical aptitude test'. This statement indicates a
(a) Research hypothesis
(b) Null hypothesis
(c) Directional hypothesis
(d) Statistical hypothesis
- The conclusions/findings of which type of research cannot be generalized to other situations?
(a) Historical research
(b) Descriptive research
(c) Experimental research
(d) Causal comparative research
- Which of the following steps are required to design a questionnaire?

- (i) Writing primary and secondary aims of the study.
- (ii) Review of the current literature.
- (iii) Prepare a draft of questionnaire.
- (iv) Revision of the draft.

Select the correct answer from the codes given below.

- (a) (i), (ii) and (iii)
- (b) (i), (iii) and (iv)
- (c) (ii), (iii) and (iv)
- (d) (i), (ii), (iii) and (iv)

Read the following passage carefully and answer the questions from 13 to 18.

Storytelling is not in our genes. Neither it is an evolutionary history. It is the essence of what makes us human.

Human beings progress by telling stories. One event can result in a great variety of stories being told about it. Sometimes those stories differ greatly. Which stories are picked up and repeated and which ones are dropped and forgotten often determine how we progress. Our history, knowledge and understanding are all the collections of the few stories that survive. This includes the stories that we tell each other about the future and how the future will turn out depends partly, possibly largely, on which stories we collectively choose to believe.

Some stories are designed to spread fear and concern. This is because some storytellers feel that there is a need to raise some tensions. Some stories are frightening and they are like totemic warnings, 'Fail to act now and we are all doomed'. Then, there are stories that indicate that all will be fine so long as we leave everything up to a few especially able adults. Currently, this trend is being led by those who call themselves 'rational optimists'. They tend to claim that it is human nature to compete and to succeed and also to profit at the expense of others. However, the rational optimists, do not realize how humanity has progressed overtime through amiable social networks and how large groups work in less selfishness and in the process accommodate rich and poor, high and low alike. This aspect in storytelling is considered by the 'Practical Possibles', who sit between those who say all is fine and cheerful and be individualistic in your approach to a successful future, and those who ordain pessimism and fear that we are doomed.

What the future holds for us is which stories we hold on to and how we act on them.

Answer the following questions.

13. Our knowledge is a collection of
- (a) All stories that we have heard during our lifetime.
 - (b) Some stories that we remember.
 - (c) A few stories that survive.
 - (d) Some important stories.
14. Story telling is
- (a) An art
 - (b) A science
 - (c) In our genes
 - (d) The essence of what makes us human
15. How the future will turn out to be, depends upon the stories
- (a) We collectively choose to believe in.
 - (b) Which are repeatedly narrated.
 - (c) Designed to spread fear and tension.
 - (d) Designed to make prophecy.
16. Rational optimists
- (i) Look for opportunities.
 - (ii) Are sensible and cheerful.
 - (iii) Are selfishly driven.
- Identify the correct answer from the codes given below.
- (a) (i), (ii) and (iii)
 - (b) (i) only
 - (c) (i) and (ii) only
 - (d) (ii) and (iii) only
17. Humans become less selfish when
- (a) They work in large groups.
 - (b) They listen to frightening stories.
 - (c) They listen to cheerful stories.
 - (d) They work in solitude.
18. 'Practical possibles' are the ones who
- (a) Follow midway path
 - (b) Are doom-mongers
 - (c) Are self-centre
 - (d) Are cheerful and carefree
19. Effectiveness of communication can be traced from which of the following?
- (i) Attitude surveys
 - (ii) Performance records
 - (iii) Students attendance
 - (iv) Selection of communication channel
- Select the correct answer from the codes given below.
- (a) (i), (ii), (iii) and (iv)
 - (b) (i), (ii) and (iii)
 - (c) (ii), (iii) and (iv)
 - (d) (i), (ii) and (iv)
20. **Assertion (A):** Formal communication tends to be fast and flexible.
Reason (R): Formal communication is a systematic and orderly flow of information.
- (a) Both (A) and (R) are correct, and (R) is the correct explanation of (A).
 - (b) Both (A) and (R) are correct, but (R) is not the correct explanation of (A).
 - (c) (A) is correct, but (R) is false.
 - (d) (A) is false, but (R) is correct.
21. Which of the following are the characteristic features of communication?
- (i) Communication involves exchange of ideas, facts and opinions.
 - (ii) Communication involves both information and understanding.
 - (iii) Communication is a continuous process.
 - (iv) Communication is a circular process.

Select the correct answer from the codes given below.

- (a) (i), (ii), and (iii) (b) (i), (ii), and (iv)
 (c) (ii), (iii), and (iv) (d) (i), (ii), (iii), and (iv)
22. The term 'grapevine' is also known as
 (a) Downward communication
 (b) Informal communication
 (c) Upward communication
 (d) Horizontal communication
23. Which of the following is not a principle of effective communication?
 (a) Persuasive and convincing dialogue.
 (b) Participation of the audience.
 (c) One-way transfer of information.
 (d) Strategic use of grapevine.
24. In communication, the language is
 (a) The verbal code
 (b) Intrapersonal
 (c) The symbolic code
 (d) The non-verbal code
25. The next term in the series is
 2, 5, 9, 19, 37, ?
 (a) 73 (b) 75 (c) 78 (d) 80
26. In certain code, MATHURA is coded as JXQEROX. The code of HOTELS will be
 (a) LEQIBP (b) ELQBIP
 (c) LEBIQP (d) ELIPQB
27. One day Prakash left home and walked 10 km towards south, turned right and walked 5 km, turned right and walked 10 km and turned left and walked 10 km. How many km will he have to walk to reach his home straight?
 (a) 10 (b) 20 (c) 15 (d) 30
28. A girl introduced a boy as the son of the daughter of the father of her uncle. The boy is related to the girl as
 (a) Brother (b) Uncle
 (c) Nephew (d) Son
29. In an examination, 10,000 students appeared. The result revealed the number of students who have
- | | | |
|-------------------------------|---|------|
| Passed in all five subjects | = | 5583 |
| Passed in three subjects only | = | 1400 |
| Passed in two subjects only | = | 1200 |
| Passed in one subject only | = | 735 |
| Failed in English only | = | 75 |
| Failed in Physics only | = | 145 |
| Failed in Chemistry only | = | 140 |
| Failed in Mathematics only | = | 200 |
| Failed in Bio-science only | = | 157 |
- The number of students passed in at least four subjects is
 (a) 6300 (b) 6900
 (c) 7300 (d) 7900
30. At present, a person is 4 times older than his son and is 3 years older than his wife. After 3 years, the age of the son will be 15 years. The age of the person's wife after 5 years will be
 (a) 42 (b) 48 (c) 45 (d) 50

31. If we want to seek new knowledge of facts about the world, we must rely on reason of the type
 (a) Inductive (b) Deductive
 (c) Demonstrative (d) Physiological
32. A deductive argument is invalid if
 (a) Its premises and conclusions are all false.
 (b) Its premises are true but its conclusion is false.
 (c) Its premises are false but its conclusion is true.
 (d) Its premises and conclusions are all true.
33. Inductive reasoning is grounded on
 (a) Integrity of nature
 (b) Unity of nature
 (c) Uniformity of nature
 (d) Harmony of nature
34. Among the following statements **two** are contradictory to each other. Select the correct code that represents them.

Statements:

- (i) All poets are philosophers.
 (ii) Some poets are philosophers.
 (iii) Some poets are not philosophers.
 (iv) No philosopher is a poet.

Codes:

- (a) (i) and (ii) (b) (i) and (iv)
 (c) (i) and (iii) (d) (ii) and (iii)

35. Which of the codes given below contains only the **correct** statements? Select the code :

Statements:

- (i) Venn diagram represents the arguments graphically.
 (ii) Venn diagram can enhance our understanding.
 (iii) Venn diagram may be called valid or invalid.
 (iv) Venn diagram is a clear method of notation.

Codes:

- (a) (i), (ii) and (iii) (b) (i), (ii) and (iv)
 (c) (ii), (iii) and (iv) (d) (i), (iii) and (iv)

36. When the purpose of a definition is to explain the use or to eliminate ambiguity, then the definition is called
 (a) Stipulative (b) Theoretical
 (c) Lexical (d) Persuasive

Question numbers 37 to 42 are based on the tabulated data given below.

A company has 20 employees with their age (in years) and salary (in thousand rupees per month) mentioned against each of them.

S.No.	Age (In years)	Salary (In thousand rupees per month)
1.	44	35
2.	32	20
3.	54	45
4.	42	35
5.	31	20

(Continued)

S.No.	Age (In years)	Salary (In thousand rupees per month)
6.	53	60
7.	42	50
8.	51	55
9.	34	25
10.	41	30
11.	33	30
12.	31	35
13.	30	35
14.	37	40
15.	44	45
16.	36	35
17.	34	35
18.	49	50
19.	43	45
20.	45	50

37. Classify the data of age of each employee in class interval of 5 years. Which class interval of 5 years has the maximum average salary?
 (a) 35–40 years (b) 40–45 years
 (c) 45–50 years (d) 50–55 years
38. What is the frequency (%) in the class interval of 30–35 years?
 (a) 20% (b) 25%
 (c) 30% (d) 35%
39. What is the average age of the employees?
 (a) 40.3 years (b) 38.6 years
 (c) 47.2 years (d) 45.3 years
40. What is the fraction (%) of employees getting salary $\leq 40,000$ per month?
 (a) 45% (b) 50%
 (c) 35% (d) 32%
41. What is the average salary (in thousand per month) in the age group between 40–50 years?
 (a) 35 (b) 42.5
 (c) 40.5 (d) 36.5
42. What is the fraction of employees getting salary less than the average salary of all the employees?
 (a) 45% (b) 50%
 (c) 55% (d) 47%
43. Encoding or scrambling data for transmission across a network is known as
 (a) Protection (b) Detection
 (c) Encryption (d) Decryption
44. Which of the following is **not** an output device?
 (a) Printer (b) Speaker
 (c) Monitor (d) Keyboard
45. Which of the following represents one billion characters?
 (a) Kilobyte (b) Megabyte
 (c) Gigabyte (d) Terabyte
46. Which of the following is not open source software?
 (a) Internet explorer (b) Fedora Linux
 (c) Open office (d) Apache HTTP server
47. Which one of the following represents the binary equivalent of the decimal number 25?
 (a) 10101 (b) 01101
 (c) 11001 (d) 11011
48. Which of the following is an instant messenger that is used for chatting?
 (a) AltaVista (b) MAC
 (c) Microsoft Office (d) Google Talk
49. In which of the countries per capita use of water is maximum?
 (a) USA (b) European Union
 (c) China (d) India
50. India's contribution to total global carbon dioxide emissions is about
 (a) \square 3% (b) \square 6%
 (c) \square 10% (d) \square 15%
51. Two earthquakes A and B happen to be of magnitude 5 and 6, respectively, on Richter scale. The ratio of the energies released E_B/E_A will be approximately
 (a) \square 8 (b) \square 16
 (c) \square 32 (d) \square 64
52. Which of the following combinations represent renewable natural resources?
 (a) Fertile soil, fresh water and natural gas.
 (b) Clean air, phosphates and biological diversity.
 (c) Fishes, fertile soil and fresh water.
 (d) Oil, forests and tides.
53. In the recently launched Air Quality Index in India, which of the following pollutants is not included?
 (a) Carbon monoxide (b) Fine particulate matter
 (c) Ozone (d) Chlorofluorocarbons
54. The factors that are most important in determining the impact of anthropogenic activities on environment are
 (a) Population, affluence per person and land availability per person.
 (b) Population, affluence per person and the technology used for exploiting resources.
 (c) Atmospheric conditions, population and forest cover.
 (d) Population, forest cover and land availability per person.
55. The session of the parliament is summoned by
 (a) The President
 (b) The Prime Minister
 (c) The Speaker of the Lok Sabha
 (d) The Speaker of the Lok Sabha and the Chairman of the Rajya Sabha
56. Civil Service Day is celebrated in India on
 (a) 21st April (b) 24th April
 (c) 21st June (d) 7th July

57. The South Asia University is situated in the city of
 (a) Colombo
 (b) Dhaka
 (c) New Delhi
 (d) Kathmandu
58. The University Grants Commission was established with which of the following aims?
 (i) Promotion of research and development in higher education.
 (ii) Identifying and sustaining institutions of potential learning.
 (iii) Capacity building of teachers.
 (iv) Providing autonomy to each and every higher educational institution in India.
59. The Gross Enrolment Ratio (GER) in institutions of higher education in India at present (2015) is about
 (a) 8 per cent (b) 12 per cent
 (c) 19 per cent (d) 23 per cent
60. The total number of central universities in India in April 2015 was
 (a) 08 (b) 14
 (c) 27 (d) 43

Select the correct answer from the codes given below.

- (a) (i), (ii), (iii) and (iv)
 (b) (i), (ii) and (iii)
 (c) (ii), (iii) and (iv)
 (d) (i), (ii) and (iv)

ANSWER KEYS

1. (d) 2. (c) 3. (b) 4. (a) 5. (d) 6. (d) 7. (d) 8. (a) 9. (a) 10. (b)
 11. (a) 12. (d) 13. (c) 14. (d) 15. (a) 16. (a) 17. (a) 18. (a) 19. (b) 20. (d)
 21. (d) 22. (b) 23. (c) 24. (a) 25. (b) 26. (b) 27. (c) 28. (a) 29. (a) 30. (d)
 31. (a) 32. (b) 33. (c) 34. (c) 35. (b) 36. (c) 37. (d) 38. (d) 39. (a) 40. (a)
 41. (b) 42. (c) 43. (c) 44. (d) 45. (c) 46. (a) 47. (c) 48. (d) 49. (b) 50. (b)
 51. (c) 52. (c) 53. (d) 54. (b) 55. (a) 56. (a) 57. (c) 58. (b) 59. (c) 60. (d)

HINTS AND SOLUTIONS

1. (d): Refer page 1.7.
 Under Bloom's classification of teaching and instructional objectives, there are six levels under cognitive domain, such as (i) knowledge, (ii) comprehension, (iii) application, (iv) analysis, (v) synthesis and (vi) evaluation.
2. (c): Refer 'Effective Teaching Practices' on page 1.5.
3. (b): Refer 'Benefits of Teaching Aids' on page 1.21.
4. (a): Refer 'Teaching Methods' on page 1.8.
5. (d): Refer 'Evaluation Systems' on page 1.19.
6. (d): Refer 'Effective Teaching Practices' on page 1.5.
7. (d): Refer 'Research Concept and Definitions' on page 2.1.
8. (a): Refer page 2.29
10. (b): Here, null means no difference. Thus, null hypothesis means no difference between the two sets of students here, such as one male and other female. Then, we collect data to test the hypothesis. Refer page 2.15 for more details.
12. (d): Refer page 2.21 and 2.22.
19. (b): Effectiveness of communication (specifically classroom communication) is guessed through enhancement in learning that further aims at permanent change in behaviour. Thus, (i), (ii), and (iii) are applicable.
20. (d): Refer 'Classification of Communication Based on Purpose and Style' on page 4.9.
21. (d): Refer pages 4.1–4.3.
22. (b): Refer 'Informal Communication' on page 4.9.

23. (c): Effective communication is a two-way process. Also, refer point 3 under 'Nature and Characteristics of Communication' on page 4.2.

24. (a): Refer page 4.3.

25. (b): $x^2 + 1$, $x^2 - 1$, $x^2 + 1$ and so on.
 $2x^2 + 1$, $5x^2 - 1$, $9x^2 + 1$, $19x^2 - 1$ and so on.

26. (b):

29. (a): Venn diagram for 5 variables is a difficult approach.
 Let's solve it by method that is usually described under probability topic. Number of students passed in at least four subjects = Number of students passed exactly in four subjects + Number of students exactly passed in five subjects. (i)
 But, the number of students passed in four subjects = Number of students failed in one subject only = Failed in English only + ... Failed in Bioscience only = 75 + 145 + 140 + 200 + 157 = 717.

Substituting it in (i), number of students passed in at least four subjects = $5583 + 717 = 6300$.

30. (d): Let us assume that present age of person = x years.
Hence, son's age = $x/4$ years.
According to the statement $x/4 = 15 - 3 = 12$ years
 $\implies x = 48$ years.
Hence, wife's age = $48 - 3 = 45$ years.
Wife's age after 5 years = $45 + 5 = 50$ years.
31. (a): Refer page 6.1. Here, some examples are also mentioned.
32. (b): Refer pages 6.2 and 6.3.
33. (c): Refer page 6.1.
36. (c): Refer 'Types of definitions' on page 6.15.
37. (d):

Classes (Age groups)	Class frequencies	Sum of salaries for different classes (In thousands)	Average group salaries (In ₹) = Sum of salaries/class frequencies
30–35	HHHI = 7	$30 + 30 + \square = 2,00,000$	28,571
35–40	II = 2	$40 + 35 = 75,000$	37,500
40–45	HHH = 6	2,40,000	40,000
45–50	II = 2	= 1,00,000	50,000
50–55	III = 3	= 1,60,000	53,333

Hence, class 50–55 has the maximum average salary.

38. (d): Required percentage = $7/20 \cdot 100 = 35\%$
39. (a): Total of ages (from the question table) = $44 + 32 + 54 + 43 + 45 = 806$ years
Average age = $806/20 = 40.3$ years
40. (a): Required percentage = $9/20 \cdot 100 = 45\%$
41. (b): Required average salary in the age group (45–50) = $340/8 = 42.5$ years
42. (c): Average salary of all ages = $7,75,000/20 = ₹ 38,750$
45. (c): A gigabyte (GB) is a measure of computer data storage capacity that is roughly equivalent to 1 billion bytes.

46. (a): Open-source software (OSS) is a computer software with its source code made available with a license in which the copyright holder provides the rights to study, change and distribute the software to anyone and for any purpose.
47. (c): This question is quite simple. We have to solve all choices one by one.
 168421
 $10101 = 16 \cdot 1 + 8 \cdot 0 + 4 \cdot 1 + 2 \cdot 0 + 1 \cdot 1 = 21$
Similarly, solve for other options also. Option (c) is the right answer.
 $11001 = 1 \cdot 16 + 1 \cdot 8 + 0 \cdot 4 + 0 \cdot 2 + 1 \cdot 1 = 25$
Students can visit <http://www.cimt.plymouth.ac.uk> for more examples.
49. (b): Visit www.unwater.org for facts relating to water.
51. (c): Magnitudes are based on a logarithmic scale (base 10). It means that for each whole number you go up on the magnitude scale, the amplitude of the ground motion recorded by a seismograph goes up 10 times. Using this scale, a magnitude 6 earthquake would result in 10 times the level of ground shaking as a magnitude 5 earthquake (and 32 times as much energy would be released).
53. (d): Refer page 9.9
54. (b): Refer pages 9.36
55. (a): Article 87(1) of the constitution provides, 'At the commencement of the first session after each general election to the House of the People and at the commencement of the first session of each year, the President shall address both Houses of Parliament assembled together and inform Parliament of the causes of its summons'.
57. (c): Refer 'Note' in the list of Central universities on page 10.9.
58. (b): Refer page 10.6 and 10.7 (University Education System, aims of Higher Education and UGC).
59. (c): Refer page 10.23. Here, some basic information is given about GER is given under 'Key Issues Facing Spread of Higher Education in India'.
60. (d): The updated list is given on page 10.7 onwards according to UGC/MHRD sources.

CBSE-UGC NET Paper 1

December 2015

1. Greater the handicap of the students coming to the educational institutions, greater the demand on the
- (a) Family (b) Society
(c) Teacher (d) State

2. What are the characteristics of continuous and comprehensive evaluation?
- (i) It increases the workload on students by taking multiple tests.
(ii) It replaces marks with grades.
(iii) It evaluates every aspect of the student.
(iv) It helps in reducing examination phobia.

Select the correct answer from the codes given below.

- (a) (i), (ii), (iii) and (iv)
(b) (ii) and (iv)
(c) (i), (ii) and (iii)
(d) (ii), (iii) and (iv)
3. Which of the following attributes denote great strengths of a teacher?
- (i) Full-time active involvement in the institutional management.
(ii) Setting examples.
(iii) Willingness to put assumptions to the test.
(iv) Acknowledging mistakes.

Select the **correct** answer from the codes given below.

- (a) (i), (ii) and (iv) (b) (ii), (iii) and (iv)
(c) (i), (iii) and (iv) (d) (i), (ii), (iii) and (iv)
4. Which one of the following statements is correct in the context of multiple-choice type questions?
- (a) They are more objective than true–false type questions.
(b) They are less objective than essay type questions.
(c) They are more subjective than short answer type questions.
(d) They are more subjective than true–false type questions.

5. As Chairman of an independent commission on education, Jacques Delors' report to UNESCO was titled
- (a) International Commission on Education Report
(b) Millennium Development Report
(c) Learning : The Treasure Within
(d) World Declaration on Education for All

6. What is required for good teaching?
- (i) Diagnosis (ii) Remedy
(iii) Direction (iv) Feedback

Select the correct answer from the codes given below.

- (a) (i), (ii), (iii) and (iv) (b) (i) and (ii)
(c) (ii), (iii) and (iv) (d) (iii) and (iv)
7. Which of the following statements is **not** true in the context of participatory research ?
- (a) It recognizes knowledge as power.
(b) It emphasises on people as experts.
(c) It is a collective process of enquiry.
(d) Its sole purpose is production of knowledge.
8. Which of the following statements is true in the context of the testing of a hypothesis?
- (a) It is only the alternative hypothesis that can be tested.
(b) It is only the null hypothesis that can be tested.
(c) Both the alternative and the null hypotheses can be tested.
(d) Both the alternative and the null hypotheses cannot be tested.
9. Which of the following are the basic rules of APA style of referencing format?
- (i) Italicize titles of shorter works such as journal articles or essays.
(ii) Invert authors' names (last name first).
(iii) Italicize titles of longer works such as books and journals.
(iv) Alphabetically index reference list.

Select the correct answer from the codes given below.

- (a) (i) and (ii) (b) (ii), (iii) and (iv)
(c) (iii) and (iv) (d) (i), (ii), (iii) and (iv)
10. Which of the following are the characteristics of a seminar?
- (i) It is a form of academic instruction.
(ii) It involves questioning, discussion and debates.
(iii) It involves large groups of individuals.
(iv) It needs involvement of skilled persons.

Select the correct answer from the codes given below.

- (a) (ii) and (iii) (b) (ii) and (iv)
(c) (ii), (iii) and (iv) (d) (i), (ii) and (iv)
11. A researcher is interested in studying the prospects of a particular political party in an urban area. What tool should he prefer for the study?
- (a) Rating scale (b) Interview
(c) Questionnaire (d) Schedule

12. Ethical norms in research do not involve guidelines for
- Thesis format
 - Copyright
 - Patenting policy
 - Data sharing policies

Read the following passage carefully and answer the questions from 13 to 17.

I did that thing recently where you have to sign a big card—which is a horror unto itself, especially as the keeper of the Big Card was leaning over me at the time. Suddenly I was on the spot, a rabbit in the headlights, torn between doing a fun message or some sort of in-joke or a drawing. Instead overwhelmed by the myriad options available to me, I decided to just write ‘Good luck, best, Joel’.

It was then that I realized, to my horror, that I had forgotten how to write. My entire existence is ‘tap letters into computer’. My shopping lists are hidden in the notes function of my phone. If I need to remember something I send an e-mail to myself. A pen is something I chew when I am struggling to think. Paper is something I pile beneath my laptop to make it a more comfortable height for me to type on.

A poll of 1000 teens by the stationers, Bic found that one in 10 do not own a pen, a third have never written a letter, and half of 13 to 19 years old have never been forced to sit down and write a thank you letter. More than 80% have never written a love letter, 56% do not have letter paper at home, and a quarter have never known the unique torture of writing a birthday card. The most a teen ever has to use a pen is on an exam paper.

Bic, have you heard of mobile phones? Have you heard of e-mail, Facebook, and snap chatting? This is the future. Pens are dead. Paper is dead. Handwriting is a relic.

‘Handwriting is one of the most creative outlets we have and should be given the same importance as other art forms such as sketching, painting or photography’.

Answer the following questions:

13. When confronted with signing a big card, the author felt like ‘a rabbit in the headlight’. What does this phrase mean?
- A state of confusion
 - A state of pleasure
 - A state of anxiety
 - A state of pain
14. According to the author, which one is not the most creative outlet of pursuit?
- Handwriting
 - Photography
 - Sketching
 - Reading
15. The entire existence of the author revolves round
- Computer
 - Mobile phone
 - Typewriter
- Identify the correct answer from the codes given below.
- (ii) only
 - (i) and (ii) only
 - (i), (ii) and (iii)
 - (ii) and (iii) only
16. How many teens, as per the Bic survey, do not own a pen?
- 800
 - 560
 - 500
 - 100
17. What is the main concern of the author?
- The teens use social networks for communication.
 - The teens use mobile phones.
 - The teens use computer.
 - The teens have forgotten the art of handwriting.
18. The main objectives of student evaluation of teachers are
- To gather information about student weaknesses.
 - To make teachers take teaching seriously.
 - To help teachers adopt innovative methods of teaching.
 - To identify the areas of further improvement in teacher traits.
- Identify the correct answer from the codes given below.
- (i) and (ii) only
 - (ii), (iii) and (iv) only
 - (i), (ii) and (iii) only
 - (i) only
19. Using the central point of the classroom communication as the beginning of a dynamic pattern of ideas is referred to as
- Systemization
 - Problem-orientation
 - Idea protocol
 - Mind mapping
20. Aspects of the voice, other than the speech are known as
- Physical language
 - Personal language
 - Para language
 - Delivery language
21. Every type of communication is affected by its
- Reception
 - Transmission
 - Non-regulation
 - Context
22. Attitudes, actions and appearances in the context of classroom communication are considered as
- Verbal
 - Non-verbal
 - Impersonal
 - Irrational
23. Most often, the teacher–student communication is
- Spurious
 - Critical
 - Utilitarian
 - Confrontational
24. In a classroom, a communicator’s trust level is determined by
- The use of hyperbole.
 - The change of voice level.
 - The use of abstract concepts.
 - Eye contact
25. Find the next term in the series
2, 5, 10, 17, 26, 37, _____?
- 50
 - 57
 - 62
 - 72
26. A group of 210 students appeared in some test. The mean of $\frac{1}{3}$ rd of students is found to be 60. The mean of the remaining students is found to be 78. The mean of the whole group will be

- (a) 80 (b) 76
(c) 74 (d) 72
27. Anil after travelling 6 km towards east from his house realized that he has travelled in a wrong direction. He turned and travelled 12 km towards west, turned right, and travelled 8 km to reach his office. The straight distance of the office from his house is
(a) 20 km (b) 14 km
(c) 12 km (d) 10 km
28. Find the next term in the series
B2E, D5H, F12K, H27N, ?
(a) J56I (b) I62Q (c) Q62J (d) J58Q
29. A party was held in which a grandmother, father, mother, four sons, their wives and one son and two daughters to each of the sons were present. The number of females present in the party is
(a) 12 (b) 14 (c) 18 (d) 24
30. P and Q are brothers. R and S are sisters. The son of P is brother of S. Q is related to R as
(a) Son (b) Brother
(c) Uncle (d) Father
31. Consider the argument given below.
'Pre-employment testing of teachers is quite fair because doctors, architects, and engineers who are now employed had to face such a testing'.
What type of argument it is?
(a) Deductive (b) Analogical
(c) Psychological (d) Biological
32. Among the following propositions, two are related in such a way that they can both be true although they cannot both be false. Which are those propositions? Select the correct code.
Propositions:
(i) Some priests are cunning.
(ii) No priest is cunning.
(iii) All priests are cunning.
(iv) Some priests are not cunning.
Codes:
(a) (i) and (ii) (b) (iii) and (iv)
(c) (i) and (iii) (d) (i) and (iv)
33. A cluster of propositions with a structure that exhibits some inference is called
(a) An inference (b) An argument
(c) An explanation (d) A valid argument
34. Consider the following assertion (A) and reason (R) and select the correct code given below.
(A): No man is perfect.
(R): Some men are not perfect.
(a) Both (A) and (R) are true, but (R) does not provide sufficient reason for (A).
(b) Both (A) and (R) are true and (R) provides sufficient reason for (A).
(c) (A) is true, but (R) is false.
(d) (A) is false, but (R) is true.
35. A definition that has a meaning that is deliberately assigned to some symbol is called
(a) Lexical (b) Precising
(c) Stipulative (d) Persuasive

36. If the proposition 'No men are honest' is taken to be false, then which of the following proposition/propositions can be claimed certainly to be true?

Propositions:

- (a) All men are honest.
(b) Some men are honest.
(c) Some men are not honest.
(d) No honest person is man.

Given below in the table is the decadal data of population and electrical power production of a country.

Year	Population (Million)	Electrical power production (GW)*
1951	20	10
1961	21	20
1971	24	25
1981	27	40
1991	30	50
2001	32	80
2011	35	100

* 1 GW = 1000 million watt

Based on the above table, answer the questions from 37 to 42.

37. Which decade registered the maximum growth rate (%) of population?
(a) 1961–71 (b) 1971–81
(c) 1991–2001 (d) 2001–2011
38. Average decadal growth rate (%) of population is
(a) 12.21% (b) 9.82%
(c) 6.73% (d) 5%
39. Based on the average decadal growth rate, what will be the population in the year 2021?
(a) 40.34 million
(b) 38.49 million
(c) 37.28 million
(d) 36.62 million
40. In the year 1951, what was the power availability per person?
(a) 100 W (b) 200 W
(c) 400 W (d) 500 W
41. In which decade, the average power availability per person was maximum?
(a) 1981–1991 (b) 1991–2001
(c) 2001–2011 (d) 1971–1981
42. By what percentage (%), the power production increased from 1951 to 2011?
(a) 100% (b) 300%
(c) 600% (d) 900%
43. NMEICT stands for
(a) National Mission on Education through ICT
(b) National Mission on E-governance through ICT
(c) National Mission on E-commerce through ICT
(d) National Mission on E-learning through ICT

44. Which of the following is an instant messaging application?
 (i) WhatsApp
 (ii) Google Talk
 (iii) Viber
 Select the **correct** answer from the codes given below.
 (a) (i) and (ii) only (b) (ii) and (iii) only
 (c) (i) only (d) (i), (ii) and (iii)
45. In a computer, a byte generally consists of
 (a) 4 bits (b) 8 bits
 (c) 16 bits (d) 10 bits
46. Which of the following is **not** an input device?
 (a) Microphone (b) Keyboard
 (c) Joystick (d) Monitor
47. Which of the following is an open source software?
 (a) MS Word (b) Windows
 (c) Mozilla Firefox (d) Acrobat Reader
48. Which of the following enables us to send the same letter to different people in MS Word?
 (a) Mail join (b) Mail copy
 (c) Mail insert (d) Mail merge
49. Inside rural homes, the source(s) of Nitrogen Oxide Pollution may be
 (i) Unvented gas stoves
 (ii) Wood stoves
 (iii) Kerosene heaters
Choose the correct code from the following.
 (a) (i) and (ii) only (b) (ii) and (iii) only
 (c) (ii) only (d) (i), (ii), and (iii)
50. Which of the following pollutants can cause cancer in humans?
 (a) Pesticides (b) Mercury
 (c) Lead (d) Ozone
51. **Assertion (A):** People population control measures do not necessarily help in checking environmental degradation.
Reason (R): The relationship between population growth and environmental degradation is rather complex.
 Choose the correct answer from the following.
 (a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true, but (R) is false.
 (d) (A) is false, but (R) is true.
52. Which of the following phenomena is not a natural hazard?
 (a) Wildfire
 (b) Lightning
 (c) Landslide
 (d) Chemical contamination
53. As a part of National Climate Change Policy, Indian government is planning to raise the installed capacity of renewable energy by the year 2030 to
 (a) 175 GW (b) 200 GW
 (c) 250 GW (d) 350 GW
54. At present, in terms of per capita energy consumption (kWh/year), identify the correct sequence.
 (a) Brazil > Russia > China > India
 (b) Russia > China > India > Brazil
 (c) Russia > China > Brazil > India
 (d) China > Russia > Brazil > India
55. Which of the following are the objectives of Rashtriya Uchchatar Shiksha Abhiyan (RUSA)?
 (i) To improve the overall quality of state institutions.
 (ii) To ensure adequate availability of quality faculty.
 (iii) To create new institutions through upgradation of existing autonomous colleges.
 (iv) To downgrade universities with poor infrastructure into autonomous colleges.
 Select the correct answer from the codes given below.
 (a) (i), (ii), (iii) and (iv)
 (b) (i), (ii) and (iii)
 (c) (i), (iii) and (iv)
 (d) (i), (ii) and (iv)
56. The grounds on which discrimination in admission to educational institutions is constitutionally prohibited are
 (i) Religion (ii) Sex
 (iii) Place of birth (iv) Nationality
 Select the correct answer from the codes given below.
 (a) (ii), (iii) and (iv)
 (b) (i), (ii) and (iii)
 (c) (i), (ii) and (iv)
 (d) (i), (ii), (iii) and (iv)
57. Which of the following statements are correct about Lok Sabha?
 (i) The constitution puts a limit on the size of the Lok Sabha.
 (ii) The size and shape of the Parliamentary Constituencies are determined by the Election Commission.
 (iii) First - past - the Post electoral system is followed.
 (iv) The Speaker of Lok Sabha does not have a casting vote in case of an equality of votes.
 Select the correct answer from the codes given below.
 (a) (i) and (iii)
 (b) (i), (ii) and (iii)
 (c) (i), (iii) and (iv)
 (d) (i), (ii), (iii) and (iv)
58. Public order as an item in the constitution figures in
 (a) The Union List
 (b) The State List
 (c) The Concurrent List
 (d) The Residuary Powers
59. The term of office of the Advocate General of a state is
 (a) 4 years
 (b) 5 years
 (c) 6 years or 65 years of age whichever is earlier
 (d) Not fixed
60. Which among the following states has the highest number of seats in the Lok Sabha?
 (a) Maharashtra (b) Rajasthan
 (c) Tamil Nadu (d) West Bengal

ANSWER KEYS

1. (c) 2. (d) 3. (b) 4. (a) 5. (c) 6. (a) 7. (d) 8. (b) 9. (b) 10. (d)
 11. (c) 12. (a) 13. (a) 14. (d) 15. (b) 16. (d) 17. (d) 18. (b) 19. (d) 20. (c)
 21. (d) 22. (b) 23. (c) 24. (d) 25. (a) 26. (d) 27. (d) 28. (d) 29. (b) 30. (c)
 31. (b) 32. (d) 33. (b) 34. (a) 35. (c) 36. (b) 37. (a) 38. (b) 39. (b) 40. (d)
 41. (c) 42. (d) 43. (a) 44. (d) 45. (b) 46. (d) 47. (c) 48. (d) 49. (d) 50. (a)
 51. (a) 52. (d) 53. (d) 54. (c) 55. (b) 56. (b) 57. (a) 58. (b) 59. (d) 60. (a)

HINTS AND SOLUTIONS

- This is happening due to formalization of education also.
- Refer 'Desirable Characteristics of Evaluation' on page 1.20.
- For full text www.unesco.org/education/pdf/15_62.pdf can be visited.
- Refer 'Maxims and Principles of Teaching under Best Teaching Practices' on page 1.5.
- Refer 'Research Objectives' on page 2.1. The production of knowledge is not the sole objective of any kind of research.
- Refer to the concept of null and alternative hypothesis on page 2.16. Rejection of null hypothesis means acceptance of alternative hypothesis. Only null hypothesis is tested.
- Refer page 2.30
- Refer page 2.36
- Refer 'Functions of Evaluation' on page 1.20.
- Refer pages 1.23 – 24
- Among the **forms of paralanguage**, we find physical elements like facial expressions or gestures. There are also many vocal features that contribute to our interpretation of spoken language, such as voiced pauses or intonation.
- Refer point number 11 under 'Nature and Characteristics of Communication' on page 4.3.
- Refer 'Non-verbal Communication' on page 4.8.
- Classroom communication takes place with certain clear objectives, so it is utilitarian.
- +3, +5, +7, +9, □
- It is the question of combined arithmetic mean. $X_{12} = (X_1 N_1 + X_2 N_2) / N$, where X_1 and X_2 are arithmetic means of two groups and N_1 and N_2 are their respective frequencies. N is the total number of frequencies.
 Here, $N_1 = 70, N_2 = 210 - 70 = 140$
 Combined arithmetic mean = $(60 \cdot 70 + 78 \cdot 140) / 210 = 72$

Making use of Pythagoras theorem = $\sqrt{6^2 + 8^2} = 10$ km

So, P's son, S and R are siblings. Hence, Q is the uncle of R.

- Refer page 6.2
- Refer 'Types of Definition' on page 6.15.
- Refer page 6.8, here the solution to a similar kind of question is provided.
- Here, we need to calculate the decadal growth: 1951–61, 61–71, ..., 2001–2011.
 For example, decadal growth of 1951–61 = $(21 - 20) / 20 \cdot 100 = 5\%$
 For 1961–71 = $(24 - 21) / 21 \cdot 100 = 14.28\%$
 For 1971–81, it is 12.5%
 For 1981–91, it is 11.11%
 For 1991–2001 = 6.66%, and for 2001–2011, it is 9.375%
 Hence, option (a) is the answer.
- Making use of calculation done in solution for Q. No. 37, average growth rate = $(5\% + 14.28\% + 12.5\% \square 9.375\%) / 6 = 9.82\%$
 It is as per available choices, the compound annual growth calculation is most likely to be different.
- Here, we have to make use of calculation done in Q. No. 38. The required answer = $[(100 + 9.82) / 100] \cdot 35 = 38.49$ million
- The required answer (per capita availability of power) = $10 \text{ GW} / 20 \text{ million} = 10 \cdot 1000 \text{ million watts} / 20 \text{ million} = 500 \text{ watt}$.

41. The calculation is to be done in the same manner as done is Q. No. 40.
42. The required answer (increase over 1951–2011) = $(100 - 10)/10 \cdot 100 = 900\%$
49. Refer 'Indoor Air Pollution' on page 9.12.
50. Refer Table 9.1 on page 9.10.
52. Refer page 9.17.
55. Refer page 10.11.
56. Refer 'Right to Equality' on page 10.31.
57. The size and shape of parliamentary constituencies are determined by Delimitation Commission of India, ideally on the basis of recent census. The representation from each state is not changed during this exercise. The constitution (under Article 81, Section 2) stipulates about the allocation of seats.
- The Ninety-First Amendment to the Constitution has put off reallocation of seats between states up to 2026.
- The Lok Sabha Speaker has the casting vote in case the vote of the house is evenly split.
60. Maharashtra - 48, Rajasthan - 25, Tamil Nadu - 39 and West Bengal - 42.
- Uttar Pradesh at 85 has the largest number of seats in Lok Sabha.

CBSE-UGC NET Paper 1

July 2016

The following table shows the percentage profit (%) earned by two companies A and B during the years 2011–15. Answer questions 1–3 based on the data contained in the table.

Profit earned by two companies

Year	Percentage profit (%)	
	A	B
2011	20	30
2012	35	40
2013	45	35
2014	40	50
2015	25	35

Where per cent (%) Profit =

$$\frac{\text{Income} - \text{Expenditure}}{\text{Expenditure}} \times 100$$

- In which year, the percentage profit earned by company B is less than that of company A?
(a) 2012 (b) 2013
(c) 2014 (d) 2015
- If the total expenditure of the two companies was ₹9 lakh in the year 2012 and the expenditure of A and B were in the ratio 2 : 1, then what was the income of the company A in that year?
(a) ₹9.2 lakh (b) ₹8.1 lakh
(c) ₹7.2 lakh (d) ₹6.0 lakh
- What is the average percentage profit earned by the company B?
(a) 35% (b) 42%
(c) 38% (d) 40%

The following table shows the number of people in different age groups who responded to a survey about their favourite style of music. Use this information to answer the questions that follow. (Question 4–6) to the nearest whole percentage:

Style of music	Age	Number of people		
		(Years) 15–20	(Years) 21–30	(Years) 31+
Classical		6	4	17
Pop		7	5	5
Rock		6	12	14
Jazz		1	4	11
Blues		2	3	15
Hip-Hop		9	3	4
Ambient		2	2	2

- What percentage of respondents aged 31+ indicated a favourite style other than classical music?
(a) 64% (b) 60%
(c) 75% (d) 50%
- Approximately what percentage of the total sample were aged 21–30?
(a) 31% (b) 23%
(c) 25% (d) 14%
- Approximately what percentage of the total sample indicates that Hip-Hop is their favourite style of music?
(a) 6% (b) 8%
(c) 14% (d) 12%
- The process of copying files to a CD-ROM is known as
(a) Burning (b) Zipping
(c) Digitising (d) Ripping
- An unsolicited e-mail message sent to many recipients at once is a
(a) Worm (b) Virus
(c) Threat (d) Spam
- The statement 'the study, design, development, implementation, support or management of computer-based information systems, particularly software applications and computer Hardware' refers to
(a) Information Technology (IT)
(b) Information and Collaborative Technology (ICT)
(c) Information and Data Technology (IDT)
(d) Artificial Intelligence (AI)

10. If the binary equivalent of the decimal number 48 is 110000, then the binary equivalent of the decimal number 51 is given by
 (a) 110011 (b) 110010
 (c) 110001 (d) 110100
11. Identify the air pollutant in urban areas which irritates eyes and also respiratory tract of human beings.
 (a) Particulate matter
 (b) Oxides of nitrogen
 (c) Surface ozone
 (d) Carbon monoxide
12. Which of the following is the largest source of water pollution in major rivers of India?
 (a) Untreated sewage
 (b) Agriculture run-off
 (c) Unregulated small scale industries
 (d) Religious practices
13. Sustainable development goals have specific targets to be achieved by
 (a) 2022 (b) 2030
 (c) 2040 (d) 2050
14. Indian government's target of producing power from biomass by the year 2022 is
 (a) 50 GW (b) 25 GW
 (c) 15 GW (d) 10 GW
15. **Assertion (A):** Conserving our soil resources is critical to human survival.
Reason (R): Soil is home to many microorganisms and it contains minerals.
 Choose the correct code from the following options.
 (a) Both (A) and (R) are correct and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are correct but (R) is not the correct explanation of (A).
 (c) (A) is true and (R) is false.
 (d) (A) is false and (R) is true.
16. World Meteorological Organisation's (WMO) objective is to reduce the number of deaths due to hydro-meteorological disasters over the decade 2010–2019 by (with reference to the decade 1994–2003)
 (a) 25% (b) 50%
 (c) 75% (d) 80%
17. _____ is a type of memory circuitry that holds the computer's start-up routine.
 (a) RIM (Read Initial Memory)
 (b) RAM (Random Access Memory)
 (c) ROM (Read Only Memory)
 (d) Cache Memory
18. An ASCII is a character-encoding scheme that is employed by personal computers in order to represent various characters, numbers and control keys that the computer user selects on the keyboard. ASCII is an acronym for
 (a) American Standard Code for Information Interchange.
 (b) American Standard Code for Intelligent Information.
 (c) American Standard Code for Information Integrity.
 (d) American Standard Code for Isolated Information.
19. The National Judicial Appointments Commission (NJAC) has been declared unconstitutional by
 (a) The Supreme Court of India
 (b) The High Court
 (c) The High Court and the Supreme Court both
 (d) The President of India
20. Which of the following statement(s) about the Indian political system is/are correct?
 (A) The President is both Head of the State and Head of the Government.
 (B) Parliament is supreme.
 (C) The Supreme Court is the guardian of the Constitution.
 (D) The Directive Principles of State Policy are justiciable.
 Select the correct answer from the codes given below.
 (a) (A), (B), (C) and (D) (b) (B), (C) and (D)
 (c) (B) and (C) (d) (C) only
21. Which of the following are the fundamental duties?
 (A) To respect the National Flag.
 (B) To protect and improve the natural environment.
 (C) For a parent to provide opportunities for education to his/her child.
 (D) To protect monuments and places of national importance.
 Select the correct answer from the codes given below.
Codes:
 (a) (A), (B) and (C) (b) (A), (B) and (D)
 (c) (A), (C) and (D) (d) (A), (B), (C) and (D)
22. Which of the following statements are correct in respect of NITI Aayog?
 (A) It is a constitutional body.
 (B) It is a statutory body.
 (C) It is neither a constitutional body nor a statutory body.
 (D) It is a think-tank.
 Select the correct answer from the codes given below.
 (a) (A) and (D) (b) (B) and (D)
 (c) (C) and (D) (d) (B), (C) and (D)
23. Which of the following core values among the institutions of higher education are promoted by the NAAC (National Assessment and Accreditation Council)?
 (A) Contributing to national development.
 (B) Fostering global competencies among the students.
 (C) Inculcating a value system among students and teachers.
 (D) Promoting the optimum utilisation of the infrastructure.
 Select the correct answer from the codes given below.
Codes:
 (a) (B), (C) and (D) (b) (A), (B) and (C)
 (c) (A), (C) and (D) (d) (A), (B), (C) and (D)
24. The best way for providing value education is through
 (a) Discussions on scriptural texts.
 (b) Lectures/discourses on values.
 (c) Seminars/symposia on values.
 (d) Mentoring/reflective sessions on values.

25. A college-level assistant professor has planned his/her lectures with an intent to develop cognitive dimensions of students centred on skills of analysis and synthesis. Below, given are two sets of items, Set - I consisting of

levels of cognitive interchange and Set - II comprising of basic requirements for promoting them. Match the two sets and indicate your answer by choosing the correct alternative from the codes given below.

Set - I (Levels of cognitive interchange)	Set - II (Basic requirements for promoting cognitive interchange)
A. Memory level	I. Giving opportunity for discriminating examples and non-examples of a point.
B. Understanding level	II. Recording the important points made during the presentations.
C. Reflective level	III. Asking the students to discuss various items of information.
	IV. Critically analysing the points to be made and discussed.

Codes:

- A B C
 (a) II IV I
 (b) III IV II
 (c) II I IV
 (d) I II III

26. Which set of learner characteristics may be considered helpful in designing effective teaching-learning systems? Select the correct alternative from the codes given below.

- (A) Prior experience of learners in respect of the subject.
 (B) Interpersonal relationships of learner's family friends.
 (C) Ability of the learners in respect of the subject.
 (D) Student's language background.
 (E) Interest of students in following the prescribed dress code.
 (F) Motivational-orientation of the students.

Codes:

- (a) (A), (B), (C) and (D)
 (b) (A), (C), (D) and (F)
 (c) (B), (C), (D) and (E)
 (d) (C), (D), (E) and (F)

27. **Assertion (A):** The purpose of higher education is to promote critical and creative thinking abilities among students.

Reason (R): These abilities ensure job placements.

Choose the correct answer from the following code.

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
 (c) (A) is true but (R) is false.
 (d) (A) is false but (R) is true.

28. Match the items of the first set with that of the second set in respect of evaluation system.

Choose the correct code.

Set - I	Set - II
A. Formative evaluation	I. Evaluating cognitive and co-cognitive aspects with regularity.
B. Summative evaluation	II. Tests and their interpretations based on a group and certain yardsticks.
C. Continuous and comprehensive evaluation	III. Grading the final learning outcomes.
D. Norm and criterion referenced tests	IV. Quizzes and discussions.

Codes:

- A B C D
 (a) IV III I II
 (b) I II III IV
 (c) III IV II I
 (d) I III IV II

29. Select the alternative which consists of positive factors contributing to effectiveness of teaching.

List of factors:

- (A) Teacher's knowledge of the subject.
 (B) Teacher's socio-economic background.
 (C) Communication skill of the teacher.
 (D) Teacher's ability to please the students.
 (E) Teacher's personal contact with students.
 (F) Teacher's competence in managing and monitoring the classroom transactions.

Codes:

- (a) (B), (C) and (D)
 (b) (C), (D) and (F)
 (c) (B), (D) and (E)
 (d) (A), (C) and (F)
30. The use of teaching aids is justified on the grounds of
 (a) Attracting students' attention in the classroom.
 (b) Minimising indiscipline problems in the classroom.
 (c) Optimizing learning outcomes of students.
 (d) Effective engagement of students in learning tasks.
31. The format of thesis writing is the same as in
 (a) Preparation of a research paper/article.
 (b) Writing of seminar presentation.
 (c) A research dissertation.
 (d) Presenting a workshop/conference paper.
32. In qualitative research paradigm, which of the following features may be considered critical?
 (a) Data collection with standardised research tools.
 (b) Sampling design with probability sample techniques.
 (c) Data collection with bottom-up empirical evidences.
 (d) Data gathering to take place with top-down systematic evidences.
33. From the following list of statements, identify the set which has negative implications for 'research ethics'.
 (A) A researcher critically looks at the findings of another research.
 (B) Related studies are cited without proper references.
 (C) Research findings are made the basis for policy making.
 (D) Conduct of practitioner is screened in terms of reported research evidences.
 (E) A research study is replicated with a view to verify the evidences from other researches.
 (F) Both policy making and policy implementing processes are regulated in terms of preliminary studies.
- Codes:**
 (a) (A), (B) and (C)
 (b) (B), (C) and (D)
 (c) (B), (D) and (F)
 (d) (A), (C) and (E)
34. In a research on the effect of child-rearing practices on stress-proneness of children in completing school projects, the hypothesis formulated is that 'child rearing practices do influence stress-proneness'. At the data-analysis stage, a null hypothesis is advanced to find out the tenability of research hypothesis. On the basis of the evidence available, the null hypothesis is rejected at 0.01 level of significance. What decision may be warranted in respect of the research hypothesis?
 (a) The research hypothesis will also be rejected.
 (b) The research hypothesis will be accepted.
 (c) Both the research hypothesis and the null hypothesis will be rejected.
 (d) No decision can be taken in respect of the research hypothesis.
35. A researcher intends to explore the effect of possible factors for the organization of effective mid-day meal interventions. Which research method will be most appropriate for this study?
 (a) Historical method
 (b) Descriptive survey method
 (c) Experimental method
 (d) Ex-post-facto method
36. Which of the following is an initial mandatory requirement for pursuing research?
 (a) Developing a research design.
 (b) Formulating a research question.
 (c) Deciding about the data analysis procedure.
 (d) Formulating a research hypothesis.

Read the following passage carefully and answer question numbers from 37 to 42.

In terms of labour, for decades, the relatively low cost and high quality of Japanese workers conferred considerable competitive advantage across numerous durable goods and consumer electronics industries (For example, machinery, automobiles, televisions, radios). Then labour-based advantages shifted to South Korea, then to Malaysia, Mexico and other nations. Today, China appears to be capitalizing best on the basis of labour. Japanese firms still remain competitive in markets for such durable goods, electronics and other products, but the labour force is no longer sufficient for competitive advantage over manufacturers in other industrializing nations. Such shifting of labour-based advantage is clearly not limited to manufacturing industries. Today, a huge number of IT and service jobs are moving from Europe and North America to India, Singapore, and other countries with relatively well-educated, low-cost workforces possessing technical skills. However, as educational levels and technical skills continue to rise in other countries, India, Singapore and other nations enjoying labour-based competitive advantage today are likely to find such advantage cannot be sustained through emergence of new competitors. In terms of capital, for centuries, the days of gold coins and later even paper money restricted financial flows. Subsequently, regional concentrations were formed where large banks, industries and markets coalesced. But today, capital flows internationally at rapid speed. Global commerce no longer requires regional interactions among business players. Regional capital concentrations in places, such as New York, London and Tokyo still persist, of course, but the capital concentrated there is no longer sufficient for competitive advantage over other capitalists distributed worldwide. Only if an organization is able to combine, integrate and apply its resources (For example, land, labour, capital, IT) in an effective manner that is not readily imitable by competitors can such an organization enjoy competitive advantage sustainable overtime. In a knowledge-based theory of the firm, this idea is extended to view organizational knowledge as a resource with at least the same level of power and importance as the traditional economic inputs. An organization with superior

knowledge can achieve competitive advantage in markets that appreciate the application of such knowledge. Semiconductors, genetic engineering, pharmaceuticals, software, military warfare and like knowledge-intensive competitive arenas provide both time-proven and current examples. Consider semiconductors (For example, computer chips), which are made principally of sand and common metals. These ubiquitous and powerful electronic devices are designed within common office buildings, using commercially available tools and fabricated within factories in many industrialized nations. Hence, land is not the key competitive resource in the semiconductor industry.

Based on the passage answer the following questions.

37. How can an organization enjoy competitive advantage sustainable overtime?
 (a) Through regional capital flows.
 (b) Through regional interactions among business players.
 (c) By making large banks, industries and markets coalesced.
 (d) By effective use of various instrumentalities.
38. What is required to ensure competitive advantages in specific markets?
 (a) Access to capital (b) Common office buildings
 (c) Superior knowledge (d) Common metals
39. The passage also mentions about the trend of
 (a) Global financial flow.
 (b) Absence of competition in manufacturing industry.
 (c) Regionalization of capitalists.
 (d) Organizational incompatibility.
40. What does the author lay stress on in the passage?
 (a) International commerce
 (b) Labour-intensive industries
 (c) Capital resource management
 (d) Knowledge-driven competitive advantage
41. Which country enjoyed competitive advantages in automobile industry for decades?
 (a) South Korea (b) Japan
 (c) Mexico (d) Malaysia
42. Why labour-based competitive advantages of India and Singapore cannot be sustained in IT and service sectors?
 (a) Due to diminishing levels of skill.
 (b) Due to capital-intensive technology making inroads.
 (c) Because of new competitors.
 (d) Because of shifting of labour-based advantage in manufacturing industries.
43. What are the barriers to effective communication?
 (a) Moralizing, being judgemental and comments of consolation.
 (b) Dialogue, summary and self-review.
 (c) Use of simple words, cool reaction and defensive attitude.
 (d) Personal statements, eye contact and simple narration.
44. The choice of communication partners is influenced by factors of
 (a) Proximity, utility and loneliness.
 (b) Utility, secrecy and dissonance.
 (c) Secrecy, dissonance and deception.
 (d) Dissimilarity, dissonance and deviance.
45. As a teacher, select the best option to ensure your effective presence in the classroom.
 (a) Use of peer command.
 (b) Making aggressive statements.
 (c) Adoption of well-established posture.
 (d) Being authoritarian.
46. Every communicator has to experience
 (a) Manipulated emotions.
 (b) Anticipatory excitement.
 (c) The issue of homophiles.
 (d) Status dislocation.
47. Imagine you are working in an educational institution where people are of equal status. Which method of communication is best suited and normally employed in such a context?
 (a) Horizontal communication
 (b) Vertical communication
 (c) Corporate communication
 (d) Cross communication
48. Identify the important element a teacher has to take cognizance of while addressing students in a classroom.
 (a) Avoidance of proximity (b) Voice modulation
 (c) Repetitive pause (d) Fixed posture
49. Two railway tickets from city A to B and three tickets from city A to C cost ₹177. Three tickets from city A to B and two tickets from city A to C cost ₹173. The fare for city B from city A will be
 (a) ₹25 (b) ₹27
 (c) ₹30 (d) ₹33
50. A person walks 10 m in front and 10 m to the right. Then every time turning to his left, he walks 5, 15 and 15 m, respectively. How far is he now from his starting point?
 (a) 20 m (b) 15 m
 (c) 10 m (d) 5 m
51. A is the sister of B. F is the daughter of G. C is the mother of B. D is the father of C. E is the mother of D. A is related to D as
 (a) Granddaughter (b) Daughter
 (c) Daughter-in-law (d) Sister
52. In the series AB, EDC, FGHI, ...?..., OPQRST, the missing term is
 (a) JKLMN (b) JMKNL
 (c) NMLKJ (d) NMKLJ
53. Among the following propositions two are related in such a way that one is the denial of the other. Which are those propositions? Select the correct code.
Propositions:
 (A) All women are equal to men.
 (B) Some women are equal to men.
 (C) Some women are not equal to men.
 (D) No women are equal to men.

Codes:

- (a) (A) and (B) (b) (A) and (D)
 (c) (C) and (D) (d) (A) and (C)

54. In certain code, SELECTION is coded as QCJCARGML. The code of AMERICANS will be
 (a) YKCPGAYLQ (b) BNFSJDBMR
 (c) QLYAGPCKY (d) YQKLCYPAG
55. In the series
 3, 11, 23, 39, 59,
 The next term will be
 (a) 63 (b) 73
 (c) 83 (d) 93
56. Select the option which is not correct about Venn diagram.
 (a) Venn diagram represents propositions as well as classes.
 (b) It can provide clear method of notation.
 (c) It can be either valid or invalid.
 (d) It can provide the direct method of testing the validity.
57. Select the code which is not correct in the context of deductive argument with two premises.
 (a) An argument with one true premise, one false premise and a false conclusion may be valid.
 (b) An argument with two true premises and a false conclusion may be valid.
 (c) An argument with one true premise, one false premise and a true conclusion may be valid.
 (d) An argument with two false premises and a false conclusion may be valid.

58. Given below are two premises and four conclusions are drawn from them (taking singly or together). Select the code that states the conclusions validly drawn.

Premises:

- (I). All religious persons are emotional.
 (II). Ram is a religious person.

Conclusions:

- (A). Ram is emotional.
 (B). All emotional people are religious.
 (C). Ram is not a non-religious person.
 (D). Some religious people are not emotional.

Codes:

- (a) (A), (B), (C) and (D) (b) (A) only
 (c) (A) and (C) only (d) (B) and (C) only

59. If the proposition 'All thieves are poor' is false, then which of the following propositions can be claimed certainly to be true?

Propositions:

- (a) Some thieves are poor.
 (b) Some thieves are not poor.
 (c) No thief is poor.
 (d) No poor person is a thief.

60. Consider the following statement and select the correct code stating the nature of the argument involved in it. To assume that the earth is the only populated world in the infinite space is as absurd as to assert that in an entire field of millet only one grain will grow.
 (a) Astronomical (b) Anthropological
 (c) Deductive (d) Analogical

ANSWER KEYS

1. (b) 2. (b) 3. (c) 4. (c) 5. (c) 6. (d) 7. (a) 8. (d) 9. (a) 10. (a)
 11. (c) 12. (a) 13. (b) 14. (d) 15. (b) 16. (b) 17. (c) 18. (a) 19. (a) 20. (d)
 21. (a) 22. (c) 23. (b) 24. (d) 25. (c) 26. (b) 27. (b) 28. (a) 29. (d) 30. (c)
 31. (c) 32. (c) 33. (c) 34. (b) 35. (d) 36. (b) 37. (d) 38. (c) 39. (a) 40. (d)
 41. (b) 42. (c) 43. (a) 44. (a) 45. (c) 46. (b) 47. (a) 48. (b) 49. (d) 50. (d)
 51. (a) 52. (c) 53. (d) 54. (a) 55. (c) 56. (c) 57. (b) 58. (c) 59. (b) 60. (d)

HINTS AND SOLUTIONS

1. It is a question of simple observation.
2. Total of radios = 2 + 1 = 3.
 Expenditure of company A in 2012
 $= \frac{2}{3} \times 9 = ₹6$ lakhs
 Given that profit of company A in 2012 = 35%
 Thus, 35 = [(Income of company A - 6)/6] · 100
 Solving, it we get that income of company A = ₹18.10 lakhs
3. Required percentage
 $= \frac{30+40+35+50+35}{5} = \frac{190}{5} = 38\%$

Here, we calculate this percentage on the basis of assumption that expenditure figure is same for all years. Otherwise, none of the choices is correct.

4. Required percentage
 $= \frac{5+14+11+15+4+2}{17+5+14+11+15+4+2} \times 100 = \frac{51}{68} \times 100$
 $= \frac{51}{68} = 75\%$
5. Total sample size = 134
 Total of people between ages 21 □ 30 years = 33
 Required percentage = $\frac{33}{134} \times 100 = 25\%$

6. Required percentage = $\frac{\text{Hip - Hop Total}}{\text{Grand total}} \times 10$
 $= \frac{16}{134} \times 100 = 12\%$ (Approximately)

10. As we need binary code for 51, we can find binary code for 3 and add it to that for 48.

Binary for 48 = 110000 (Given)

2	3	1
2	2	1
	0	

So, binary for 3 = 011

Binary for 51 = 110000 + 011
 $= 110011$

11. Refer Table 9.1 on page 9.10.
12. The largest source of water pollution is major rivers in India with untreated sewage.
13. The SDGs came into effect in January 2016, and they will continue guide UNDP policy and funding for the next 15 years. Also known as Global Goals, they are a universal call to action to end poverty, protect the planet and ensure that all people enjoy peace and prosperity. Seventeen SDGs build on the successes of the Millennium Development Goals, while including new areas such as climate change, economic inequality, innovation, sustainable consumption, peace, and justice, among other priorities.
14. India has renewable energy generation target of 175 GW by 2022. Of the target capacity, 100 GW would be from solar power, 60 GW from wind, 10 GW from biomass and 5 GW from small hydro power.
19. Refer page 10.42
20. President is the head of State and PM is the head of Government. In Indian context, people of the country are sovereign, whereas the Constitution of India is supreme. Parliament is the supreme law making body. The Directive Principles of State Policy are not justiciable.
21. Refer page 10.33
22. Refer page 10.46
23. Refer page 1.2-3
30. Refer page 1.22
31. Refer page 2.27
32. Refer page 2.2 and 2.9
33. Refer page 2.32
35. Refer 2.5-6
43. Refer page 4.10
47. Refer page 4.9
49. Let Railway fare from City A to City B = ₹x
 And from City A to City C = ₹y
 According to question, we get:

$2x + 3y = 177$ (i)
 $3x + 2y = 173$ (ii)

Solving Equations (i) and (ii), we get $x = ₹ 33$, which is the required answer.

50.

51.

52. The number of alphabets is increasing by 1 and are alternatively being written in reverse order.

AB, EDC, FGHI, NMLKJ, OPQRST

53. First proposition: 'All women are equal to men' is given among the answer choice. We can start with that.

All women are equal to men also mean that 'some women are equal to men'. It is based on the rules of syllogism, which means that what applies to all also applies to part of it. Now, the denial of it is 'some women are not equal to men'. That is the third proposition.

54.

S	E	L	E	C	T	I	O	N
□2	□2	□2	□2	□2	□2	□2	□2	□2
Q	C	J	C	A	R	G	M	L

Similarly,

A	M	E	R	I	C	A	N	S
□2	□2	□2	□2	□2	□2	□2	□2	□2
Y	K	C	P	G	A	Y	L	Q

55. +8, +12, +16, +20, +24 and so on.

58.

CBSE-UGC NET Paper 1

January 2017

- The principal of a school conducts an interview session of teachers and students with a view to explore the possibility of their enhanced participation in school programmers. Which type of research does this endeavour be related to?
 - Evaluation research
 - Fundamental research
 - Action research
 - Applied research
- In doing action research, what is the usual sequence of steps?
 - Reflect, Observe, Plan, Act
 - Plan, Act, Observe, Reflect
 - Plan, Reflect, Observe, Act
 - Act, Observe, Plan, Reflect
- Which sequence of research steps is logical in the following list?
 - Problem formulation, Analysis, Development of Research design, Hypothesis Making, Collection of data, Arriving at generalizations and conclusions.
 - Development of Research Design, Hypothesis making, Problem Formulation, Data analysis, Arriving at conclusions and Data collection.
 - Problem Formulation, Hypothesis making, Development of a Research design, Collection of a Data, Data analysis and formulation of generalizations and Conclusions.
 - Problem formulation, Deciding about the sample and data collection tools, Formulation of Hypothesis, Collection and Interpretation of research evidence.
- The following are two sets, such as research methods (Set-I) and data collection tools (Set-II). Match the two sets and indicate your answer by selecting the correct code.

Set-I	Set-II
A. Experimental method	(i) Using primary secondary sources
B. Ex post-facto method	(ii) Questionnaire
C. Descriptive survey method	(iii) Standardized tests
D. Historical method	(iv) Typical characteristics tests

Codes:

- | | | | | |
|-----|-------|-------|-------|------|
| | A | B | C | D |
| (a) | (ii) | (i) | (iii) | (iv) |
| (b) | (iii) | (iv) | (ii) | (i) |
| (c) | (ii) | (iii) | (i) | (iv) |
| (d) | (ii) | (iv) | (iii) | (i) |
- The issue of 'research ethics' may be considered pertinent at which stage of research?
 - At the stage of problem formulation and its definition.
 - At the stage of defining the population of research.
 - At the stage of data collection and interpretation.
 - At the stage of reporting the findings.
 - In which of the following, reporting format is formally prescribed?
 - Doctoral-level thesis
 - Conference of researchers
 - Workshops and seminars
 - Symposia

Read the following passage carefully and answer questions from 7 to 12.

The last Great War, which nearly shook the foundations of the modern world, had little impact on Indian literature beyond aggravating the popular revulsions against violence and adding to growing disillusionment with the 'humane pretensions' of the Western World. This was eloquently voiced in Tagore's poems and his last testament, 'Crisis in Civilization'. The Indian intelligentsia was in a state of moral dilemma. On the one hand, it could not help sympathizing with the England's dogged courage in the hour of peril, with the Russians fighting with their backs on the wall against ruthless Nazi hordes, and with the China groaning under the heel of Japanese militarism. On the other hand, their own country was practically under the military occupation of their own soil and the Indian army under Subhas Bose was trying from the opposite camp to liberate their country. No creative impulse could issue from such confusion of loyalties. One would imagine that the achievement of Indian independence in 1947, which came in the wake of the

Allies victory and was followed by collapse of colonialism in the neighbouring countries of South East Asia, would have released an upsurge of the creative energy. No doubt it did, but it was soon submerged in the great agony of partition with the inhuman slaughter of innocents and the uprooting of the millions of the people from their homeland followed by the martyrdom of Mahatma Gandhi. These tragedies along with Pakistan's invasion of Kashmir and its later atrocities in Bangladesh, did indeed provoke a pregnant writing, particularly in the languages of the regions most affected, Bengali, Hindi, Kashmiri, Punjabi, Sindhi and Urdu. Both poignant or passionate writing does not by itself make great literature. What reserves of enthusiasm and confidence served these disasters have been mainly absorbed in the task of national reconstruction and economic development. Great literature has always emerged out of chains of convulsions. Indian literature is richer today in terms of volume, range and variety than it ever was in the past.

7. What was the impact of the last great war on Indian literature?
 - (a) It had no impact.
 - (b) It aggravated popular revulsion against violence.
 - (c) It shook the foundations of literature.
 - (d) It offered eloquent support to the Western World.
8. What did Tagore articulate in his last testament?
 - (a) Offered support to Subhas Bose.
 - (b) Exposed the humane pretensions of the Western World.
 - (c) Expressed loyalty to England.
 - (d) Encouraged the liberation of countries.
9. What was the stance of Indian intelligentsia during the period of great war?
 - (a) Indifference to Russia's plight.
 - (b) They favoured Japanese militarism.
 - (c) They prompted creativity out of confused loyalties.
 - (d) They expressed sympathy for England's dogged courage.
10. Identify the factor responsible for the submergence creative energy in Indian literature.
 - (a) Military occupation of one's own soil.
 - (b) Resistance to colonial occupation.
 - (c) Great agony of partition.
 - (d) Victory of allies.
11. What was the aftermath that survived tragedies in Kashmir and Bangladesh?
 - (a) Suspicion of other countries
 - (b) Continuance of rivalry
 - (c) Menace of war
 - (d) National reconstruction
12. The passage has the message that
 - (a) Disasters are inevitable.
 - (b) Great literature emerges out of chains of convulsions.
 - (c) Indian literature does not have a marked landscape.
 - (d) Literature has no relation with war and independence.
13. Effective communication pre-supposes
 - (a) Non-alignment
 - (b) Domination
 - (c) Passivity
 - (d) Understanding
14. When verbal and non-verbal messages are contradictory, it is said that most people believe in
 - (a) Indeterminate messages
 - (b) Verbal messages
 - (c) Non-verbal messages
 - (d) Aggressive messages
15. The typical feature of information-rich classroom lecture is in the nature of being
 - (a) Sedentary
 - (b) Staggered
 - (c) Factual
 - (d) Sectoral
16. Expressive communication is driven by
 - (a) Passive aggression
 - (b) Encoder's personality characteristics
 - (c) External clues
 - (d) Encoder-decoder contract
17. Positive classroom communication leads to
 - (a) Coercion
 - (b) Submission
 - (c) Confrontation
 - (d) Persuasion
18. Classroom communication is the basis of
 - (a) Social identity
 - (b) External inanities
 - (c) Biased passivity
 - (d) Group aggression
19. The missing term in the series 1, 4, 27, 16, ?, 36, 243, ... is
 - (a) 30
 - (b) 49
 - (c) 125
 - (d) 81
20. The next term in the series YEB, WFD, UHG, SKI, _?_ will be
 - (a) TLO
 - (b) QOL
 - (c) QLO
 - (d) GQP
21. If A is coded as C, M as I, N as P, S as O, I as A, P as N, E as M, O as E, and C as S, then the code of COMPANIES will be
 - (a) SPEINMOAC
 - (b) NCPSEIOMA
 - (c) SMOPIEACN
 - (d) SEINCPAMO
22. Among the following, identify the continuous type of data.
 - (a) Number of languages a person speaks.
 - (b) Number of children in a household.
 - (c) Population in cities.
 - (d) Weight of students in a class.
23. Ali buys a glass, a pencil box and a cup and pays ₹21 to the shopkeeper. Rakesh buys a cup, two pencil boxes, and a glass, and he pays ₹28 to the shopkeeper. Preeti buys two glasses, a cup, and two pencil boxes, and she pays ₹35 to the shopkeeper. Then, the cost of 10 cups will be
 - (a) ₹40
 - (b) ₹60
 - (c) ₹80
 - (d) ₹70
24. Out of the following four cities, three are alike in some manner while the fourth one is different. Identify the odd one.
 - (a) Lucknow
 - (b) Rishikesh
 - (c) Allahabad
 - (d) Patna

25. The following are some characteristics of reasoning. Select the code that states a characteristic that is not a deductive reasoning.
- The conclusion must be based on observation and experiment.
 - The conclusion should be supported by the premise/premises.
 - The conclusion must follow from the premise/premises necessarily.
 - The argument may be valid or invalid.
26. If two standard-form categorical propositions with the same subject and predicate are related in such a manner, i.e., when one is undermined and the other must be undetermined, then what is their relation?
- Contrary
 - Subcontrary
 - Contradictory
 - Subaltern
27. Men and women may have different reproductive strategies but neither can be considered inferior or superior to the other, any more than a bird's wings can be considered superior or inferior to a fish's fins. Select the code that states those two propositions.
- Biological
 - Physiological
 - Analogical
 - Hypothetical
28. Among the following propositions, two are related in such a way that they cannot both be true but can be false. Select the code states those two propositions.

Propositions:

- Every student is attentive.
- Some students are attentive.
- Students are never attentive.
- Some students are not attentive.

Codes:

- (i) and (ii)
- (i) and (iii)
- (ii) and (iii)
- (iii) and (iv)

29. The following are two premised (A) and (B). From those two premises, four conclusions i, ii, iii, iv are drawn. Select the code that states the conclusions validly drawn from the premises (taking singly or jointly).

Premises:

- Untouchability is a curse.
- All hot pans are untouchable.

Conclusions:

- All hot pans are curse.
- Some untouchable things are hot pans.
- All curses are untouchable.
- Some curses are untouchable.

Codes:

- (i) and (ii)
- (ii) and (iii)
- (iii) and (iv)
- (ii) and (iv)

30. If the statement 'None but the brave wins the race' is false, then which of the following statements can be claimed to be true?
- All brave persons win the race.
 - Some persons who win the race are not brave.
 - Some persons who win the race are brave.
 - No person who wins the race is brave.

The following table embodies data on the sales revenue (₹ in lakhs) generated by a publishing house during the years 2012–2015 while selling books, magazines and journals as three categories of items. Answer questions 31–33 based on the data given in the table.

Sales revenue (₹ In lakh)				
Year →	2012	2013	2014	2015
Item ↓				
Journals	46	47	45	44
Magazines	31	39	46	51
Books	73	77	78	78
Total				

31. In 2015, approximately what per cent of total revenue come from books?
- 45%
 - 55%
 - 35%
 - 25%
32. The number of years in which there was an increase in revenue from at least two categories of items is
- 0
 - 1
 - 2
 - 3
33. If the year 2016 were to show the same growth in terms of total sales revenue as the year 2015 over the year 2014, then the revenue in the year 2016 must be approximately
- ₹194 lakh
 - ₹187 lakh
 - ₹172 lakh
 - ₹177 lakh

A university professor maintains data on MCA students tabulated by performance and gender of the students. The data is kept on a computer hard disk, but accidentally some of its data are lost because of a computer virus. Only the following could be recovered.

Gender	Average	Good	Excellent	Total
Male			10	
Female				32
Total		30		

Panic buttons were pressed but to no avail. An expert committee was formed, which decided that the following facts were self-evident.

- Half the students were either excellent or good.
- 40% of the students were females.
- One-third of the male students were average.

Answer questions 34–36 based on the data given above.

34. How many female students are excellent?
- 0
 - 8
 - 16
 - 32
35. What proportion of female students are good?
- 0
 - 0.25
 - 0.50
 - 0.75

36. Approximately, what proportion of good students are male?
 (a) 0 (b) 0.73
 (c) 0.43 (d) 0.27
37. Which of the following statement(s) is/are TRUE?
 S1: The decimal number 11 is larger than the hexadecimal number 11.
 S2: In the binary number 1110.101, the fractional part has the decimal value as 0.625.
 (a) S1 Only (b) S2 Only
 (c) Both S1 and S2 (d) Neither S1 nor S2
38. Read the following two statements.
 I: Information and Communication Technology (ICT) is considered as a subset of Information Technology (IT).
 II: The 'right to use' a piece of software is termed as copyright.
 Which of the above mentioned statement(s) is/are CORRECT?
 (a) Both I and II (b) Neither I nor II
 (c) II Only (d) I Only
39. Which of the following correctly lists the types of the computer memory from highest to lowest speed?
 (i) Secondary storage
 (ii) Main memory (RAM)
 (iii) Cache memory
 (iv) CPU registers
Codes:
 (a) (i), (ii), (iii), (iv)
 (b) (iv), (iii), (i), (ii)
 (c) (iv), (iii), (ii), (i)
 (d) (iii), (iv), (ii), (i)
40. Which of the following is a characteristic of Web 2.0 applications?
 (a) Multiple users schedule their time to use Web 2.0 applications one by one.
 (b) Web2.0 applications are focused on the ability for people to collaborate and share information online.
 (c) Web2.0 applications provide users with content rather than facilitating users to create it.
 (d) Web2.0 applications use only static pages.
41. With regard to a word processing software, the process of combining static information in a publication together with variable information in a data source to create one merged publication is called
 (a) Electronic mail (b) Data sourcing
 (c) Mail merge (d) Spam mail
42. DVD technology uses an optical media to store the digital data. DVD is an acronym for
 (a) Digital Vector Disc
 (b) Digital Volume Disc
 (c) Digital Versatile Disc
 (d) Digital Visualization Disc
43. **Assertion (A):** Sustainable development is critical to well-being of human society.
Reason (R): Environmentally sound policies do not harm the environment or deplete the natural resources.
 Choose the correct code:
 (a) Both (A) and (R) are correct and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are correct, but (R) is not the correct explanation of (A).
 (c) (A) is true and (R) is true.
 (d) (A) is false and (R) is true.
44. The dominant source of pollution due to oxides of nitrogen (NOx) in urban areas is
 (a) Road transport
 (b) Commercial Sector
 (c) Energy use in industry
 (d) Power plants
45. Which of the following is not a water-borne disease?
 (a) Typhoid (b) Hepatitis
 (c) Cholera (d) Dengue
46. The Government of India has set targets for power production from small hydro-projects by the year 2022 is
 (a) 1 Gigawatt (b) 5 Gigawatt
 (c) 10 Gigawatt (d) 15 Gigawatt
47. In which country, the recent international agreement on phasing out HydroFluoroCarbons (HFCs) was signed?
 (a) Rwanda (b) Morocco
 (c) South Africa (d) Algeria
48. Which of the following natural hazards is not hydro-meteorological?
 (a) Snow avalanche (b) Sea erosion
 (c) Tropical cyclone (d) Tsunami
49. Which of the following are the demerits of globalization of higher education?
 (i) Exposure to global curriculum.
 (ii) Promotion of elitism in education.
 (iii) Commodification of higher education.
 (iv) Increase in the cost of education.
 Select the correct answer from the following codes.
Codes:
 (a) (i) and (iv) (b) (i), (iii) and (iv)
 (c) (ii), (iii) and (iv) (d) (i), (ii), (iii) and (iv)
50. Which of the following statements are correct about deemed universities?
 (i) The Governor of the State is the chancellor of deemed universities.
 (ii) They can design their own syllabus and course work.
 (iii) They can frame their own guidelines regarding admission and fees.
 (iv) They can grant degrees.
 Select the correct answer from the following codes.
Codes:
 (a) (i), (ii) and (iii) (b) (ii), (iii) and (iv)
 (c) (i), (iii) and (iv) (d) (i), (ii), (iii) and (iv)
51. The purpose of value education is best served by focusing on
 (a) Cultural practices prevailing in the society.
 (b) Norms of conduct laid down by a social group.
 (c) Concern for human values.
 (d) Religious and moral practices and instructions.

52. Which of the following statements are correct?
- Rajya Sabha is a permanent house that can be dissolved only during national emergency.
 - Rajya Sabha does not represent the local interests of the states.
 - Members of the Rajya Sabha are not bound to vote at the dictates of the states they represent.
 - No union territory has a representative in the Rajya Sabha.

Select the correct answer from the following codes.

Codes:

- (a) (i) and (iv) (b) (ii) and (iii)
(c) (ii), (iii) and (iv) (d) (i), (ii), (iii) and (iv)

53. Which of the following are not necessarily the immediate consequences of the proclamation of the President's Rule in a state?

- Dissolution of the State of Ministers in the State.
- Removal of the Council of Ministers in the State.
- Takeover of the State administration by the Union government.
- Appointment of a new Chief Secretary.

Select the correct answer from the following codes.

Codes:

- (a) (i) and (iv) (b) (i), (ii) and (iii)
(c) (i), (ii), (iii) and (iv) (d) (ii) and (iii)

54. Instead of holding the office during the pleasure of the President who among the following hold (s) office during good behaviour?

- Governor of a state.
- Attorney General of India.
- Judges of the High Court.
- Administrator of a Union Territory.

Select the correct answer from the following codes.

Codes:

- (a) (i) Only (b) (iii) Only
(c) (i) and (iii) (d) (i), (ii), (iii) and (iv)

55. Which of the following set of statements represents acceptable propositions with respect to teaching-learning relationships? Choose the correct code to indicate your answer.

- When students fail in a test, it is the teacher who fails.
- Every teaching must aim at ensuring learning.
- There can be teaching without learning taking place.

- There can be no learning without teaching.
- A teacher teaches but learns also.
- Real learning implies rote learning.

Codes:

- (a) (ii), (iii), (iv), and (v) (b) (i), (ii), (iii), and (v)
(c) (iii), (iv), (v), and (vi) (d) (i), (ii), (v), and (vi)

56. **Assertion (A):** Learning is a lifelong process.

Reason (R): Learning to be useful must be linked with life processes.

Choose the correct answer from the following code.

- Both (A) and (R) are true and (R) is the correct explanation of (A).
- Both (A) and (R) are true, but (R) is not the correct explanation of (A).
- (A) is true, but (R) is false.
- (A) is false, but (R) is true.

57. Effectiveness of teaching has to be judged in terms of

- Course coverage.
- Students' interest.
- Learning outcomes of students.
- Use of teaching aids in the classroom.

58. In which teaching method, the learner's participation is made optimal and proactive?

- Discussion method
- Buzz session method
- Brainstorming session method
- Project method

59. One of the most powerful factors affecting teaching effectiveness is related to the

- Social system of the country.
- Economic status of the society.
- Prevailing political system.
- Educational system.

60. **Assertion (A):** Formative evaluation tends to accelerate the pace of learning.

Reason (R): As against summative evaluation, formative evaluation is highly reliable.

Choose the correct answer from the following code.

- Both (A) and (R) are true and (R) is the correct explanation of (A).
- Both (A) and (R) are true, but (R) is not the correct explanation of (A).
- (A) is true, but (R) is false.
- (A) is false, but (R) is true.

ANSWER KEYS

- | | | | | | | | | | |
|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| 1. (c) | 2. (b) | 3. (c) | 4. (b) | 5. (c) | 6. (a) | 7. (b) | 8. (b) | 9. (d) | 10. (c) |
| 11. (d) | 12. (b) | 13. (d) | 14. (c) | 15. (c) | 16. (b) | 17. (d) | 18. (a) | 19. (c) | 20. (b) |
| 21. (d) | 22. (d) | 23. (d) | 24. (a) | 25. (a) | 26. (c) | 27. (c) | 28. (b) | 29. (d) | 30. (b) |

| 51. (c) | 52. (b) | 53. (a) | 54. (b) | 55. (b) | 56. (b) | 57. (c) | 58. (d) | 59. (d) | 60. (c) |

HINTS AND SOLUTIONS

- Refer page 2.7, action research has many applications in solving the local problems, specifically in education sector.
- Refer page 2.7
- Refer Table 2.3 on page 2.11
- Refer types of research on page 2.5
- Refer page 2.27 under 'Research Process' gives detailed description about research report/thesis.
- Refer page 4.9 under concept of kinesics it has been mentioned that words account for 71%. Tone of voice is 38% and body language accounts for 55% of communication.
- Information rich means more facts are being delivered in lecture.
- Implied in the question statement itself.
- Positive classroom communication means it should motivate or persuade students to learn.
- A social identity is the portion of an individual's self-concept derived from perceived membership in a relevant social group. Social identity has been explained in a way that makes it easy to explain intergroup behaviour.
- It's a question of mixed series.
First series: 13, 33, 53, 73,
Second Series: 22, 42, 62,
Thus, 53, i.e., 125 is the right answer.

20. Refer 'EJOTY' on page 5.3.

Thus, option (b) is the answer.

- 21.

A	N	M	S	I	P	E	O	C
C	I	P	O	A	N	M	E	S
5	3	6	9	7	4	8	2	1

So, the code for companies will be SEINCPAMO.

22. Refer page 2.14. There are two types of variables:
- Discrete:** Definite values such as 1, 2... 4, 5 and so on. For example, number of chairs can only be 1, 2, 3 and not value 1.2357, etc.
 - Continuous Variables:** Take possible value with in a range. For example, weight, the weight of a boy can be anything such as 5.23125.....kg.
23. Let's g students for glass, p for pencil box and c for cup.
Ali: $1g + 1p + 1c = ₹21$ (i)
Rakesh: $1g + 2p + 1c = ₹28$ (ii)
Preeti: $2g + 2p + 1c = ₹35$ (iii)
Comparing (i) and (iii), we get $1p = ₹7$
Comparing (ii) and (iii), we can say that the cost of $1g = ₹7$
Substituting them in equation (i), we get:
 $1c = ₹7$
So, the cost of 10 cups = $7 \cdot 10 = ₹70$.

- Lucknow is on the bank of River Gomti, whereas all others are on banks of Holy Ganga.
- Refer page 2.8 under Inductive Research, the first point denotes 'observe the different phenomena'. It means first choice in the question is about inductive reasoning and not deductive reasoning.
- Refer page 6.12 - Square of Opposition.
- Refer page 6.4 - Analogous arguments.
- On page 6.5, there are rules for converting common language statements into their logical forms. Thus, proposition (a) will become 'All the students are attentive'. Similarly, proposition (c) will become 'No student is attentive'. Propositions (a) and (c) comply with the conditions mentioned in the question statement. So, option (b) is the answer.
- Draw the Venn diagram.

C – Curses
U – Untouchable
P – Pans

Conclusions (i), (ii) and (iv) seems to be valid, but according to official answer key, (d) is the right answer.

- First of all, the total of each column should be done.
2012 – 150, 2013 – 163, 2014 – 169, 2015 – 173
Required % age = $(78/173) \cdot 100 = 45\%$ (approximately).
- By simple observation, we can find the answer. In 2013, there was an increase in sales in all categories. In 2014, there was an increase in sales in magazines and books in comparison to previous years.
- Percentage increase in 2015
 $= (173 - 169)/169 \cdot 100 = 2.36\%$
Now desired sales revenue in 2016 = $173 + 2.36\%$ of 173 = ₹176.97 lakh or ₹177 lakh approximately.

- 34.

	Average	Good	Excellent	Total
M	163	224	10	482
F	24	8	06	32
T	40	30	105	801

From statement (b), 40% of total students = 32.
Thus, total students = $32 \cdot 100/40 = 801$.
From this, we can say, total of male students = $80 - 32 = 482$.
From statement (c), number of male students who are average = $1/3 \cdot 48 = 163$.
Number of male students who are good = $48 - (16 + 10) = 224$.

Half the students were either excellent or good = $\frac{1}{2} \cdot 80 = 40$.

Thus, the total of excellent students = $40 \square 30 = 105$.

Thus, the number of female students who are excellent = $10 \square 10 = 06$.

35. Proportion of female students who are good = $\frac{8}{32} = 0.25$.
36. Proportion of good students who are male = $\frac{22}{30} = 0.73$.

39. Refer page 8.14–15.

40. Refer social media on page 8.26.

44. Refer page 9.11.

57. Refer page 1.1. This fact is mentioned in the definition of teaching itself.

58. Refer page 1.9.

59. All factors mentioned here affect the teaching effectiveness but 'Educational system' is the most direct.

CBSE-UGC NET Paper 1

November 2017

- Which of the following set of statements best represents the nature and objective of teaching and learning?
(A) Teaching is like selling and learning is like buying.
(B) Teaching is a social act while learning is a personal act.
(C) Teaching implies learning whereas learning does not imply teaching.
(D) Teaching is a kind of delivery of knowledge while learning is like receiving it.
(E) Teaching is an interaction and is triadic in nature, whereas learning is an active engagement in a subject domain.
Codes:
(a) (A), (D) and (E) (b) (B), (C) and (E)
(c) (A), (B) and (C) (d) (A), (B) and (D)
 - From the list given below identify the learner characteristics which would facilitate teaching-learning system to become effective. Choose the correct code to indicate your answer.
(A) Prior experience of learner
(B) Learner's family lineage
(C) Aptitude of the learner
(D) Learner's stage of development
(E) Learner's food habits and hobbies
(F) Learner's religious affiliation
Codes:
(a) (A), (C) and (D) (b) (D), (E) and (F)
(c) (A), (D) and (E) (d) (B), (C) and (F)
 - Assertion (A):** All teaching implies learning.
Reason (R): Learning to be useful must be derived from teaching.
Choose the correct answer from the following.
(a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
(b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
(c) (A) is true, but (R) is false.
(d) (A) is false, but (R) is true.
 - On the basis of summative tests, a teacher is interpreting his/her students, performance in terms of their wellness life style evident in behaviour. This will be called
(a) Formative testing
(b) Continuous and comprehensive evaluation
(c) Norm-referenced testing
(d) Criterion-referenced testing
 - Which one of the following is a key behaviour in effective teaching?
(a) Using student ideas and contribution
(b) Structuring
(c) Instructional variety
(d) Questioning
 - Which of the following research types focuses on ameliorating the prevailing situations?
(a) Fundamental research
(b) Applied research
(c) Action research
(d) Experimental research
 - A researcher attempts to evaluate the effect of method of feeding on anxiety-proneness of children. Which method of research would be appropriate for this?
(a) Case study method
(b) Experimental method
(c) Ex-post-facto method
(d) Survey method
 - In which of the following arrangements a wider spectrum of ideas and issues may be made possible?
(a) Research Article (b) Workshop mode
(c) Conference (d) Symposium
 - In finalizing a thesis writing format which of the following would form part of supplementary pages?
(a) List of tables and figures.
(b) Table of contents.
(c) Conclusions of the study.
(d) Bibliography and Appendices.
 - Which of the following is susceptible to the issue of research ethics?
(a) Inaccurate application of statistical techniques.
(b) Faulty research design.
(c) Choice of sampling techniques.
(d) Reporting of research findings.
- Read the following passage carefully and answer Questions from 11 to 15.**
Climate change is considered to be one of the most serious threats to sustainable development with adverse impacts on the environment, human health, food security, economic activity, natural resources and physical infrastructure. Global climate varies naturally. According to the Intergovernmental Panel on Climate Change (IPCC), the effects of climate change

have already been observed, and scientific findings indicate that precautionary and prompt action is necessary. Vulnerability to climate change is not just a function of geography or dependence on natural resources, whereas it also has social, economic and political dimensions which influence how climate change affects different groups. Poor people rarely have insurance to cover loss of property due to natural calamities, i.e., drought, floods, super cyclones, etc. The poor communities are already struggling to cope with the existing challenges of poverty and climate variability and climate change could push many beyond their ability to cope or even survive. It is vital that these communities are helped to adapt to the changing dynamics of nature. Adaptation is a process through which societies make themselves better able to cope with an uncertain future. Adapting to climate change entails taking the right measures to reduce the negative effects of climate change (or exploit the positive ones) by making appropriate adjustments and changes. These range from technological options such as increased sea defences or flood-proof houses on stilts to behavioural change at the individual level, such as reducing water use in times of drought. Other strategies include early warning systems for extreme events, better water management, improved risk management, various insurance options and biodiversity conservation. Because of the speed at which climate change is happening due to global temperature rise, it is urgent that the vulnerability of developing countries to climate change is reduced and their capacity to adapt is increased and national adaptation plans are implemented. Adapting to climate change will entail adjustments and changes at every level from community to national and international. Communities must build their resilience, including adopting appropriate technologies while making the most of traditional knowledge, and diversifying their livelihoods to cope with current and future climate stress. Local coping strategies and knowledge need to be used in synergy with government and local interventions. The need of adaptation interventions depends on national circumstances. There is a large body of knowledge and experience within local communities on coping with climatic variability and extreme weather events. Local communities have always aimed to adapt to variations in their climate. To do so, they have made preparations based on their resources and their knowledge accumulated through experience of past weather patterns. This includes times when they have also been forced to react to and recover from extreme events, such as floods, drought and hurricanes. Local coping strategies are an important element of planning for adaptation. Climate change is leading communities to experience climatic extremes more frequently, as well as new

climate conditions and extremes. Traditional knowledge can help to provide efficient, appropriate and time - tested ways of advising and enabling adaptation to climate change in communities who are feeling the effects of climate changes due to global warming.

11. Given below are the factors of vulnerability of poor people to climate change. Select the code that contains the correct answer.
 - (A) Their dependence on natural resources
 - (B) Geographical attributes
 - (C) Lack of financial resources
 - (D) Lack of traditional knowledge

Codes:

 - (a) (A), (B) and (C)
 - (b) (B), (C) and (D)
 - (c) (A), (B), (C) and (D)
 - (d) (C) only
12. Adaptation as a process enables societies to cope with
 - (A) An uncertain future
 - (B) Adjustments and changes
 - (C) Negative impact of climate change
 - (D) Positive impact of climate change

Select the most appropriate answer from the following code.

 - (a) (A), (B), (C) and (D)
 - (b) (A) and (C)
 - (c) (B), (C) and (D)
 - (d) (C) only
13. To address the challenge of climate change, developing countries urgently require
 - (a) Imposition of climate change tax.
 - (b) Implementation of national adaptation policy at their level.
 - (c) Adoption of short-term plans.
 - (d) Adoption of technological solutions.
14. The traditional knowledge should be used through
 - (a) Its dissemination.
 - (b) Improvement in national circumstances.
 - (c) Synergy between government and local interventions.
 - (d) Modern technology.
15. The main focus of the passage is on
 - (a) Combining traditional knowledge with appropriate technology.
 - (b) Coordination between regional and national efforts.
 - (c) Adaptation to climate change.
 - (d) Social dimensions of climate change.
16. The interaction between a teacher and students creates a zone of proximal

(a) Difference	(b) Confusion
(c) Development	(d) Distortion
17. The spatial audio reproduction in a classroom can reduce the students'
 - (a) Cognitive load in understanding
 - (b) Respect for the teacher
 - (c) Motivation for excellence
 - (d) Interest in technology-orientation

18. The classroom communication should essentially be
 (a) Contrived (b) Empathetic
 (c) Abstract (d) Non-descriptive
19. A good communicator begins his/her presentation with a
 (a) Complex question (b) Non-sequitur
 (c) Repetitive phrase (d) Ice-breaker
20. In a classroom, the probability of message reception can be enhanced by
 (a) Establishing a viewpoint.
 (b) Exposing the ignorance of students.
 (c) Increasing the information load.
 (d) Using high decibel audio tools.
21. In the series 1, 6, 15, 28, 45, ... the next term will be
 (a) 66 (b) 76
 (c) 56 (d) 84
22. The next term in the series ABD, DGK, HMS, MTB, ... is
 (a) NSA (b) SBL
 (c) PSK (d) RUH
23. In certain code, COVALENT is coded as BWPDUOFM. The code of ELEPHANT will be
 (a) MFUIQRTW (b) QMUBIADH
 (c) QFMFUOBI (d) EPHNTEAS
24. Ajay is a friend of Rakesh. Pointing to an old man Ajay asked Rakesh 'who is he?' and Rakesh said 'His son is my son's uncle'. The old man is related to Rakesh as
 (a) Grandfather (b) Father-in-law
 (c) Father (d) Uncle
25. A postman walked 20 m straight from his office, turned right and walked 10 m. After turning left he walked 10 m and after turning right walked 20 m. He again turned right and walked 70 m. How far he is from his office?
 (a) 50 m (b) 40 m (c) 60 m (d) 20 m
26. It is Truism to say that no one was there when life first appeared on earth. Any assertion about life's origin, thus, should be treated as a theory.
 The above two statements constitute:
 (a) A historical explanation
 (b) A narrative
 (c) An argument
 (d) A conjecture
27. Given below are four statements. Among them two are related in such a way that they can both be true but they cannot both be false. Select the code that indicates those two statements.
Statements:
 (A) Honest people never suffer.
 (B) Almost all honest people do suffer.
 (C) Honest people hardly suffer.
 (D) Each and every honest person suffers.
Codes:
 (a) (A) and (B) (b) (A) and (C)
 (c) (A) and (D) (d) (B) and (C)
28. A deductive argument is invalid if
 (a) Its premises and conclusion are all true.
 (b) Its premises and conclusion are all false.
 (c) Its premises are all false but its conclusion is true.
 (d) Its premises are all true but its conclusion is false.
29. Given below are two premises (a and b). From those two premises, four conclusions (i), (ii), (iii), and (iv) are drawn. Select the code that states the conclusion/conclusions drawn validly (taking the premises singularly or jointly).
Premises:
 (A) All bats are mammals.
 (B) No birds are bats.
Conclusions:
 (i) No birds are mammals.
 (ii) Some birds are not mammals.
 (iii) No bats are birds.
 (iv) All mammals are bats.
Codes:
 (a) (i) only (b) (i) and (ii) only
 (c) (iii) only (d) (iii) and (iv) only
30. Just as melting ice-cubes do not cause a glass of water to overflow, melting sea-ice does not increase oceanic volume.
 What type of argument is it?
 (a) Analogical (b) Hypothetical
 (c) Psychological (d) Statistical

Answer the questions 31 to 35 based on the data given in the table below.

Table: Number of registered vehicles in India and India's population.

Year	Total vehicles (Lakh)	Two wheelers (Lakh)	Cars, Jeeps, Taxis (Lakh)	Buses (Lakh)	Goods vehicles (Lakh)	Others (Lakh)	Population (India) (Million)
1961	6.65	0.88	3.1	0.57	1.68	0.42	439.23
1971	18.65	5.76	6.82	0.94	3.43	1.70	548.15
1981	53.91	26.18	11.60	1.62	5.54	8.97	683.32
1991	213.74	142.00	29.54	3.31	13.56	25.33	846.42
2001	549.91	385.56	70.58	6.34	29.48	57.95	1028.73
2011	1417.58	1018.65	191.23	16.04	70.64	121.02	1210.19

31. The maximum decadal growth in population of India is registered in the period
 (a) 1961–1971 (b) 1991–2001
 (c) 2001–2011 (d) 1981–1991
32. In which year the decadal growth (%) in number of cars surpassed that of the two wheelers?
 (a) 1991 (b) 2001
 (c) 1981 (d) 2011
33. What was the average decadal growth in the number of cars during 1961–2011?
 (a) ~131% (b) ~68%
 (c) ~217% (d) ~157%
34. In the year 2001, out of the total number of vehicles, the number of passenger vehicles (4 wheelers) accounted for
 (a) ~14% (b) ~24%
 (c) ~31% (d) ~43%
35. What was the per capita ownership of two wheelers in India in the year 2011?
 (a) ~0.084% (b) ~0.0084%
 (c) ~0.84% (d) ~0.068%
36. What is the name for a webpage address?
 (a) Domain (b) Directory
 (c) Protocol (d) URL
37. The data storage hierarchy consists of
 (a) Bytes, bits, fields, records, files and databases.
 (b) Bits, bytes, fields, records, files and databases.
 (c) Bits, bytes, records, fields, files and databases.
 (d) Bits, bytes, fields, files, records and databases.
38. Which of the following domains is used for profit businesses?
 (a) .org (b) .net
 (c) .edu (d) .com
39. What is the full form of USB as used in computer related activities?
 (a) Ultra Security Block
 (b) Universal Security Block
 (c) Universal Serial Bus
 (d) United Serial Bus
40. Which of the following represents billion characters?
 (a) Terabytes (b) Megabytes
 (c) Kilobytes (d) Gigabytes
41. Which of the following pollutants is the major cause of respiratory diseases?
 (a) Suspended fine particles
 (b) Nitrogen oxides
 (c) Carbon monoxide
 (d) Volatile organic compounds
42. **Assertion (A):** In urban areas, smog episodes occur frequently in winters.
Reason (R): In winters, a lot of biomass is burnt by people for heating purposes or to keep themselves warm.
 Choose the correct answer from the code given below.
 (a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true and (R) is false.
 (d) Both (A) and (R) are false.
43. Occurrence of natural hazards is affected by
 (A) Land use changes
 (B) Drainage and construction
 (C) Ozone depletion
 (D) Climate change
 Choose the correct answer from the code given below.
 (a) (A), (C) and (D) (b) (A), (B) and (C)
 (c) (A), (B) and (D) (d) (B), (C) and (D)
44. Which of the following pollutant gases is not produced both naturally and as a result of industrial activity?
 (a) Chlorofluorocarbons (b) Nitrous oxide
 (c) Methane (d) Carbon dioxide
45. Among the following fuels of energy, which is the most environment friendly?
 (a) Ethanol (b) Biogas
 (c) CNG (d) Hydrogen
46. Which of the following are the goals of higher education in India?
 (A) Access
 (B) Equity
 (C) Quality and Excellence
 (D) Relevance
 (E) Value based education
 (F) Compulsory and free education
 Select the correct answer from the code given below.
 (a) (A), (B) and (E) only
 (b) (A), (B), (E) and (F)
 (c) (A), (B), (C), (D) and (E)
 (d) (A), (B), (C), (D), (E) and (F)
47. Which of the following has been ranked the best college in the country (2017) as per the National Institutional Ranking Framework (NIRF)?
 (a) Miranda House, Delhi
 (b) St. Stephen's College, Delhi
 (c) Fergusson College, Pune
 (d) Maharaja's College, Mysore
48. Which of the following universities has received the Visitor's Award for the best Central University in India in February 2017?
 (a) Jawaharlal Nehru University
 (b) Banaras Hindu University
 (c) Tezpur University
 (d) University of Hyderabad
49. Who among the following can be removed by the President without Parliament's resolution?
 (a) Judge of a High Court
 (b) Governor of a State
 (c) Chief Election Commissioner
 (d) Comptroller and Auditor-General
50. Which of the following come(s) within the ambit of the term 'corruption'?
 (A) Misuse of official position.
 (B) Deviation from rules, laws and norms.
 (C) Non-action when action is required.
 (D) Harm to public good.
 Select the correct answer from the code given below.
 (a) (A) only (b) (A) and (B) only
 (c) (A), (B) and (D) (d) (A), (B), (C) and (D)

ANSWER KEYS

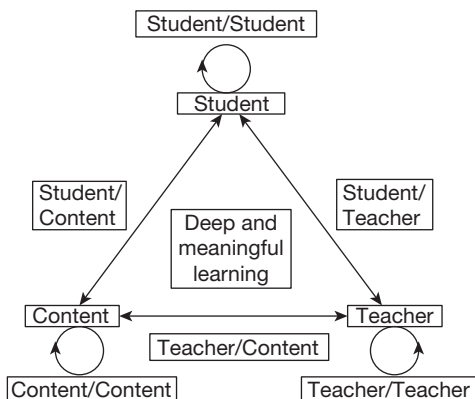

1. (b) 2. (a) 3. (c) 4. (d) 5. (c) 6. (c) 7. (c) 8. (c) 9. (d) 10. (d)
 11. (a) 12. (a) 13. (b) 14. (c) 15. (c) 16. (c) 17. (a) 18. (b) 19. (d) 20. (a)
 21. (a) 22. (b) 23. (c) 24. (c) 25. (a) 26. (c) 27. (d) 28. (d) 29. (c) 30. (a)
 31. (a) 32. (d) 33. (a) 34. (a) 35. (*) 36. (d) 37. (b) 38. (d) 39. (c) 40. (d)
 41. (a) 42. (b) 43. (c) 44. (a) 45. (d) 46. (c) 47. (a) 48. (a) 49. (b) 50. (d)

“*” Answers should not be in percentages. So marks allotted to all candidates.

HINTS AND SOLUTIONS

1. (b): Learning is basically a psychological concept, so depends upon individual to a great extent. It is active engagement in a subject domain.

In (a) and (d), teaching is being described as a kind of commodity, so they are to be eliminated. Teaching is triadic in nature as shown in the diagram below.

3. (c): Assertion (A) is right, as the ultimate objective of teaching is to make students learn. Reason (R) is false as learning is a lifelong process and not all of it takes place in classroom. In a broader perspective, a great deal of learning takes place in actual life situations as well.
4. (d): Summative tests are usually conducted by external agencies with well-defined criteria. These are tests that measure a particular student's performance against a standard or **criteraion**. They should not be confused with the **norm-referenced** assessments that measure a student's performance against that of other students. The content and skills in a **criterion-referenced** assessment are more specific.
5. (c): The main objective of using instructional variety is to ensure optimum involvement of all senses so that understanding and retention is better, for example, multimodal teaching.
6. (c): Action research mainly focuses on providing solutions/insights into immediate problems/issues.
7. (c): Ex-post-facto method: Here, the effects of feeding on anxiety may be ascertained after a long time gap.

8. (c): Refer Page 2.36 for detailed explanation.

9. (d): **Appendices are always supplementary to the research paper.** As such, your study must be able to stand alone without the appendices and the paper must contain all information including tables, diagrams, and results necessary to understand the research problem. The key point to remember when including an appendix is that the information is non-essential; if it were removed, the reader would still be able to comprehend the significance, validity, and implications of your research.

10. (d): Research findings, specifically, in social sciences are prone to subjective interpretation.

16. (c): Vygotsky developed a Theory of Cognitive Development that focused on the role of culture in the development of higher mental functions. Zone of Proximal Development (ZPD) is defined as the range of tasks that a child can perform with the help and guidance of others but cannot yet perform independently. Within ZPD, there are two levels, such as **actual development level** and **potential development level**.

For future exams, NET aspirants must remember that closely related to ZPD is the concept of 'scaffolding' where a teacher should provide clues about how to proceed through the problem.

17. (a): It was developed by Sweller in late 1980s, **Cognitive Load** theory focuses on amount of mental effort being used in working memory and how instructional design can be used to reduce **cognitive load** in learners.

19. (d): The main objective of ice-breaking questions/interactions is to create congenial, humorous and motivating environment for discussion.

20. (a): This is specifically true when students move to higher classes.

21. (a):
- | | | | | | | |
|------------|---|----|----|----|----|----|
| | 1 | 6 | 15 | 28 | 45 | 66 |
| Difference | | 5 | 9 | 13 | 17 | 21 |
| | | +4 | +4 | +4 | +4 | |

22. (b):

A	+3	D	+4	H	+5	M	+6	S
B	+5	G	+6	M	+7	T	+8	B
D	+7	K	+8	S	+9	B	+10	L

23. (c):

Similarly,

24. (c):

25. (a):

In right-angled triangle on left,

$$\text{Hypotenuse} = \sqrt{40^2 + 30^2} = \sqrt{2500} = 50 \text{ m}$$

Thus, the distance from office to destination is 50 m.

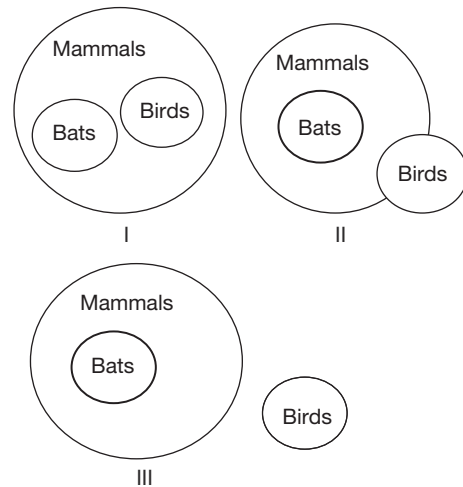

27. (d): Refer rules mentioned on pages 6.5–6.7 to convert these statements into their logical forms. Once that is done, refer to pages 6.12–6.14 (Square of Opposition).

	Given statement	Logical form	Type of proposition
(a)	Honest people never suffer.	No honest person suffers.	E Type
(b)	Almost all honest people do suffer.	Some honest people suffer.	I Type
(c)	Honest people hardly suffer.	Some honest people don't suffer.	O Type
(d)	Each and every honest person suffers.	All honest persons suffer.	A Type

Now, as per question, they can both be true, but they cannot both be false. The propositions are to be subcontrary. I-Type and O-Type makes sub-contrary. Thus, (B) and (C) are to be answers. Accordingly, option (d) is the right answer.

28. (d): Refer pages 6.2–6.3.

29. (c): Based upon premises, there can be three Venn diagrams as shown below.

Now looking at all conclusions:

- (i) No birds are mammals: May or may not be, so its invalid.
- (ii) Some birds are not mammals: May or may not be, so its invalid.
- (iii) No bats are birds: Valid
- (iv) All mammals are bats: May or may not be, so its invalid.

Thus, only (c) is valid and hence, it is the right answer.

31. (a): Growth for 1961–1971 = $[(548.15 - 439.23)/439.23] \cdot 100 = 24.79\%$

Similarly, the growth rate can be calculated for decades given in answer choices.

Here, option (a) is the right answer.

32. (d): In question 33, we have to calculate the decadal growth for cars. The same is to be done in case of two wheelers. Students can eliminate choices by doing some approximation.

$$\begin{aligned} \text{For year 2011, decadal growth rate of two wheelers} &= [(1018.65 - 385.56)/385.56] \cdot 100 \\ &= (633.09/385.56) \cdot 100 = 164.40\% \end{aligned}$$

$$\begin{aligned} \text{For year 2011, decadal growth rate of cars} &= [(70.58 - 29.54)/29.54] \cdot 100 \\ &= (41.04/29.54) \cdot 100 = 138.93\% \end{aligned}$$

Hence, option (d) is the right answer.

33. (a): In this question, calculations are to be done for all five decades. Then averaging is done for all of these growth figures.

34. (a): Passenger vehicles = $\frac{(70.58+6.34)}{549.91} = 13.9\%$

35. Here, all figures should be converted into lakh or millions. Let's convert them into smaller units, i.e., lakh.
Population = 1210.19 million = $1210.19 \cdot 10^6$
Two wheelers = 1018.65 lakhs = $1018.65 \cdot 10^5$
Per capita availability of two wheelers = Number of two wheelers/Total population = $1018.65 \cdot 10^5 / 1210.19 \cdot 10^6 = 0.084$

Answer should not be in percentage as mentioned in question paper.

42. (b): Both A and R are true. However, biomass is mainly used in rural areas. So, option (b) is the right answer.
45. (d): Hydrogen has the highest calorific value and there is no residue on its burning.
47. (a): Refer page 10.17.

CBSE-UGC NET Paper 1

July 2018

1. Which of the following set of statements best describes the nature and objectives of teaching?
- (A) Teaching and learning are integrally related.
 - (B) There is no difference between teaching and training.
 - (C) Concern of all teaching is to ensure some kind of transformation in students.
 - (D) All good teaching is formal in nature.
 - (E) A teacher is a senior person.
 - (F) Teaching is a social act whereas learning is a personal act.

Select the correct answer from the codes given below.

- (a) (A), (B) and (D)
 - (b) (B), (C) and (E)
 - (c) (A), (C) and (F)
 - (d) (D), (E) and (F)
2. Which of the following learner characteristics is highly related to effectiveness of teaching?
- (a) Prior experience of the learner.
 - (b) Educational status of the parents of the learner.
 - (c) Peer groups of the learner.
 - (d) Family size from which the learner comes.
3. In the two sets given below Set –I indicates the methods of teaching while Set –II provides the basic requirements for success/effectiveness. Match the two sets and indicate your answer by choosing from the code.

Set – I (Method of teaching)

- (A) Lecturing
- (B) Discussion in groups
- (C) Brainstorming
- (D) Programmed Instructional procedure

Set – II (Basic requirements for success/effectiveness)

- (i) Small step presentation with feedback provided.
- (ii) Production of large number of ideas.
- (iii) Content delivery in a lucid language.
- (iv) Use of teaching-aids.
- (v) Theme based interaction among participants.

- | | | | |
|-----------|-------|-------|-------|
| (A) | (B) | (C) | (D) |
| (a) (i) | (ii) | (iii) | (iv) |
| (b) (ii) | (iii) | (iv) | (v) |
| (c) (iii) | (v) | (ii) | (i) |
| (d) (iv) | (ii) | (i) | (iii) |

4. From the list of evaluation procedures given below identify those which will be called 'formative evaluation'.

Indicate your answer by choosing from the code.

- (A) A teacher awards grades to students after having transacted the course work.
- (B) During interaction with students in the classroom, the teacher provides corrective feedback.
- (C) The teacher gives marks to students on a unit test.
- (D) The teacher clarifies to doubts of students in the class itself.
- (E) The overall performance of a student is reported to parents at every three months interval.
- (F) The learner's motivation is raised by the teacher through a question-answer session.

Select the correct answer from the codes given below.

- (a) (A), (B) and (C)
- (b) (B), (C) and (D)
- (c) (A), (C) and (E)
- (d) (B), (D) and (F)

5. **Assertion (A):** All teaching should aim at ensuring learning.

Reason (R): All learning results from teaching.

Choose the correct answer from the following code.

- (a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.

6. There are two sets given below.

Set – I specifies the types of research, while Set –II indicates their characteristics. Match the two and given your answer by selecting the appropriate code.

Set – I (Research types)

- (A) Fundamental research
- (B) Applied research
- (C) Action research
- (D) Evaluative research

Set – II (Characteristics)

- (i) Finding out the extent of perceived impact of an intervention.
- (ii) Developing an effective explanation through theory building.
- (iii) Improving an existing situation through use of interventions.
- (iv) Exploring the possibility of a theory for use in various situations.
- (v) Enriching technological resources.

- | | (A) | (B) | (C) | (D) |
|-----|-------|-------|-------|------|
| (a) | (ii) | (iv) | (iii) | (i) |
| (b) | (v) | (iv) | (iii) | (ii) |
| (c) | (iii) | (ii) | (iii) | (iv) |
| (d) | (ii) | (iii) | (iv) | (v) |

7. Which of the sets of activities best indicate the cyclic nature of action research strategy?
 - (a) Reflect, Observe, Plan, Act
 - (b) Observe, Act, Reflect, Plan
 - (c) Act, Plan, Observe, Reflect
 - (d) Plan, Act, Observe, Reflect
8. Which of the following sequence of research steps is nearer to scientific method?
 - (a) Suggested solution of the problem, deducing the consequences of the solution, perceiving the problem situation, location of the difficulty and testing the solutions.
 - (b) Perceiving the problem situation, locating the actual problem and its definition, hypothesizing, deducing the consequences of the suggested solution and testing the hypothesis in action.
 - (c) Defining a problem, identifying the causes of the problem, defining a population, drawing a sample, collecting data and analysing results.
 - (d) Identifying the causal factors, defining the problem, developing a hypothesis, selecting a sample, collecting data and arriving at generalization and conclusions.
9. The problem of 'research ethics' is concerned with which aspect of research activities?
 - (a) Following the prescribed format of a thesis.
 - (b) Data analysis through qualitative or quantitative technique.
 - (c) Defining the population of research.
 - (d) Evidence based research reporting.
10. In which of the following activities, potential for nurturing creative and critical thinking is relatively greater?
 - (a) Preparing research summary.
 - (b) Presenting a seminar paper.
 - (c) Participation in research conference.
 - (d) Participation in a workshop.

Reading Comprehension: Read the following passage carefully and answer questions from 11 to 15.

If India has to develop her internal strengths, the nation has to focus on the technological imperatives, keeping in mind the three dynamic dimensions, such as the people, the overall economy and the strategic interests. These technological imperatives also take into account a 'fourth' dimensions, time, and offshoot of modern day dynamism in business, trade and technology that leads to continually shifting targets. We believe that technological strengths are especially crucial in dealing with this fourth dimension underlying continuous change in the aspirations of the people, the economy in the global context and the strategic interests. The progress of technology lies at the heart of human history. Technological strengths are the

key to creating more productive employment in an increasingly competitive market place and to continually upgrade human skills. Without a pervasive use of technologies, we cannot achieve overall development of our people in the years to come. The direct linkages of technology to the nation's strategic strengths are becoming more and more clear, especially since 1990s. India's own strength in a number of core areas still puts it in a position of reasonable strength in geopolitical context. Any nation aspiring to become a developed one needs to have strengths in various strategic technologies and also the ability to continually upgrade them through its own creative strengths. For people-oriented actions as well, whether for the creation of large scale productive employment or for ensuring nutritional and health security for people, or for better living conditions, technology is the only vital input. The absence of greater technological impetus could lead to lower productivity and wastage of precious natural resources. Activities with low productivity or low value addition, in the final analysis hurt the poorest most important. India, aspiring to become a major economic power in terms of trade and increase in GDP, cannot succeed on the strength of turnkey projects designed and built abroad or only through large-scale imports of plant machinery, equipment and know how. Even while being alive to the short-term realities, medium and long-term strategies to develop core technological strengths within our industry are vital for envisioning a developed India.

11. According to the above passage, which of the following are indicative of the fourth dimension?
 - (A) Aspirations of people
 - (B) Modern day dynamism
 - (C) Economy in the global context
 - (D) Strategic interests

Select the correct answer from the codes given below.

- (a) (A), (B) and (C) only
- (b) (B), (C) and (D) only
- (c) (A), (C) and (D) only
- (d) (A), (B) and (D) only

12. More productive employment demands
 - (a) Pervasive use of technology
 - (b) Limiting competitive market place
 - (c) Geopolitical considerations
 - (d) Large industries

13. Absence of technology would lead to
 - (A) Less pollution
 - (B) Wastage of precious natural resources
 - (C) Low value addition
 - (D) Hurting the poorest most

Select the correct answer from the codes given below.

- (a) (A), (B) and (C) only
- (b) (B), (C) and (D) only
- (c) (A), (B) and (D) only
- (d) (A), (C) and (D) only

14. The advantage of technological inputs would result in
 (a) Unbridled technological growth.
 (b) Importing plant machinery.
 (c) Sideling environmental issues.
 (d) Lifting our people to a life of dignity.
15. Envisioning a developed India requires
 (a) Aspiration to become a major economic player.
 (b) Dependence upon projects designed abroad.
 (c) Focus on short-term projects.
 (d) Development of core technological strengths.
16. Differentiation between acceptance and non-acceptance of certain stimuli in classroom communication is the basis of
 (a) Selective expectation of performance.
 (b) Selective affiliation to peer groups.
 (c) Selective attention.
 (d) Selective morality.
17. **Assertion (A):** The initial messages to students in the classroom by a teacher need not be critical to establish interactions later.
Reason (R): More control over the communication process means more control over what the students are learning.
 (a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true, but (R) is false.
 (d) (A) is false, but (R) is true.
18. **Assertion (A):** To communicate well in the classroom is a natural ability.
Reason (R): Effective teaching in the classroom demands knowledge of the communication process.
 (a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true, but (R) is false.
 (d) (A) is false, but (R) is true.
19. **Assertion (A):** Classroom communication is a transactional process.
Reason (R): A teacher does not operate under the assumption that students' responses are purposive.
 (a) Both (A) and (R) are true, and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true, but (R) is false.
 (d) (A) is false, but (R) is true.
20. Which of the following set of statements is correct for describing the human communication process?
 (A) Non-verbal communication can stimulate ideas.
 (B) Communication is a learnt ability.
 (C) Communication is not a universal panacea.
 (D) Communication cannot break-down.
 (E) More communication means more effective learning by students.
 (F) Value of what is learnt through classroom communication is not an issue for students.
 Select the correct answer from the codes given below.
 (a) (A), (C), (E) and (F)
 (b) (B), (D), (E) and (F)
 (c) (A), (B), (C) and (D)
 (d) (A), (D), (E) and (F)
21. The next term in the series -1, 5, 15, 29, _____, ... is
 (a) 36 (b) 47
 (c) 59 (d) 63
22. The next term in the series: ABD, DGK, HMS, MTB, SBL, _____, ... is
 (a) ZKU (b) ZCA
 (c) ZKW (d) ZKU
23. If VARANASI is coded as WCUESGZQ, then the code of KOLKATA will be
 (a) LOQOZEH (b) HLZEOOQ
 (c) ZELHOQO (d) LQOOFZH
24. Introducing, Rakesh to her husband a woman said, 'His brother's father is the only son of my grandfather'. The woman is related to Rakesh as
 (a) Aunt (b) Mother
 (c) Sister (d) Daughter
25. Two numbers are in the ratio 2 : 5. If 16 is added to both the numbers, then their ratio becomes 1 : 2. The numbers are:
 (a) 6, 40 (b) 20, 50
 (c) 28, 70 (d) 32, 80
26. Superiority of intellect depends upon its power of concentration on one theme in the same way as a concave mirror collects all the rays that strike upon it into one point.
 (a) Mathematical (b) Psychological
 (c) Analogical (d) Deductive
27. Given below are two premises (A and B). Four conclusions are drawn from them. Select the code that states validity drawn conclusion (s) (taking the premises individually or jointly).
Premises:
 (A) Most of the dancers are physically fit.
 (B) Most of the singers are dancers.
Conclusions:
 (A) Most of the singers are physically fit.
 (B) Most of the dancers are singers.
 (C) Most of the physically fit persons are dancers.
 (D) Most of the physically fit persons are singers.
 Select the correct answer from the codes given below.
 (a) (A) and (B) (b) (B) and (C)
 (c) (C) and (D) (d) (D) and (A)
28. Which one among the following is a presupposition in inductive reasoning?
 (a) Law of identity.
 (b) Unchangeability in nature.
 (c) Harmony in nature.
 (d) Uniformity of nature.

41. 'Fly ash' produced in thermal power plants is an ecofriendly resource for use in
 (A) Agriculture as micro-nutrient
 (B) Wasteland development
 (C) Dam and water holding structures
 (D) Brick industry
 Choose the correct answer from the codes given below.
 (a) (A), (B) and (D) only
 (b) (B), (C) and (D) Only
 (c) (A), (C) and (D) Only
 (d) (A), (B), (C) and (D)
42. Which of the following types of natural disasters has no definite beginning and end?
 (a) Earthquakes (b) Landslides
 (c) Hurricanes (d) Droughts
43. **Assertion (A):** Indoor air pollution is a serious hazard.
Reason (R): The dispersal of air pollutants is rather limited in indoor environment. Choose the correct answer from the codes given below.
 (a) Both (A) and (R) are true and (R) is the correct explanation of (A)
 (b) Both (A) and (R) are true and (R) is not the correct explanation of (A)
 (c) (A) is true and (R) is false.
 (d) Both (A) and (R) are false.
44. In terms of their contribution to the total power generation in India, identify the correct sequence of energy sources, such as Thermal Power Plants (TPP), Large Hydropower Projects (LHP), Nuclear Energy (NE) and Renewable Energy (RE) which includes solar energy, wind energy, biomass and small hydropower projects.
 (a) TPP > RE > LHP > NE
 (b) TPP > LHP > RE > NE
 (c) LHP > TPP > RE > NE
 (d) LHP > TPP > NE > RE
45. Which of the following is considered as a major source of pollution in rivers of India?
 (a) Unregulated small scale industry
 (b) Untreated sewage
 (c) Agricultural run-off
 (d) Thermal power plants
46. India has the largest higher education system in the world after
 (A) United States of America
 (B) Australia
 (C) China
 (D) United Kingdom (UK)
- Select the correct answer from the codes given below.
 (a) (A), (B), (C) and (D)
 (b) (A), (B) and (C) only
 (c) (A), (C) and (D) only
 (d) (A) and (C) only
47. Prime Minister Research Fellowship is for students pursuing Ph.D. programme in
 (a) State and Central Universities.
 (b) Central Universities, IISc, IITs, NITs, IISERs and IIITs.
 (c) IISc, IITs, NITs, IISERs, IIITs, State and Central Universities.
 (d) IITs and IISc.
48. Leader of the opposition is a member of committees which select
 (A) Central Information Commissioner
 (B) Central Vigilance Commissioner
 (C) Chairperson of National Human Rights Commission
 (D) Chairperson of National Commission for women
 Select the correct answer from the codes given below.
 (a) (A), (B), (C) and (D)
 (b) (A), (B) and (C) only
 (c) (A), (C) and (D) only
 (d) (A), (B) and (D) only
49. Which of the following statements are correct about gender budgeting?
 (A) It separates budget addressing the specific needs of women.
 (B) It assesses the impact of government budget on women.
 (C) It is an accounting exercise.
 (D) It is another budgeting innovation.
 Select the correct answer from the codes given below.
 (a) (B) and (D) only
 (b) (A) and (D) only
 (c) (A), (C) and (D) only
 (d) (A) and (B) only
50. Which of the following are the barriers to citizen-centric administration in India?
 (A) Wooden and inflexible attitude of the civil servants.
 (B) Ineffective implementation of laws and rules.
 (C) Awareness of rights and duties of citizens.
 (D) Lack of job opportunities for the youth.
 Select the correct answer from the codes given below.
 (a) (A), (B), (C) and (D)
 (b) (A), (B) and (C) only
 (c) (A), (B) and (D) only
 (d) (A) and (B) only

ANSWER KEYS

HINTS AND SOLUTIONS

- We need to look at the statements one by one:
 - Refer Pages 1.6 and 1.7. Under objectives of teaching, the last line clearly mentions that the objectives of teaching and learning must integrate.
 - Page 1.4, L.H.S. Column – Teaching is a wider concept than training.
 - Page 1.15: L.H.S., under definition of learning, 1st, 2nd, 3rd points talk about transformation.
 - Page 1.1, L.H.S., 1st Paragraph under ‘Concept of Teaching’ – first three lines.
 - Page 1.5: ‘Maxims of Teaching’ do not indicate that a teacher is to be a senior person. Questions 39 – 94 deal with requisite qualities of a teacher.
 - Page 1.15, L.H.S., Heading – Learner’s Characteristics are mainly about individual differences reflect that learning is a personal act. Types of learners also reflect upon this point.
- On Page 1.5, under Effective Teaching Practices/Maxims of Teaching, point 2 clearly mentions, ‘Known to Unknown’ that retention is always better if new knowledge can be linked with the known one that is basically prior experience of learner.
- All of these methods have been mentioned in Lecture Method (Page 1.8), Discussion (Page 1.9), Brainstorming (Page 1.10), Programmed Instruction (Page 1.13).
- Formative means judging while the program activities are forming (in progress. formative evaluation is mentioned under ‘types of evaluation on the basis of phase of instruction’ on Page 1.21.
For future exams, NET aspirants should refer to ADDIE Process also –
 - Analysis
 - Design
 - Development
 - Implement
 - Evaluate
 It is considered part of part of the ISD (Instructional System Design).
- On Page 1.1, Teaching definitions refer to learning as main objective.
On Page 1.7, ‘Objectives of Teaching’ mentions ‘intended learning outcomes’. On Page 1.8, under Gagne and Griggs Classification of Teaching Objectives, there is mention of learning outcomes.
Thus, Assertion (A) is right.
Learning is the modification of behaviour, it is not necessarily through teaching. On Page 1.1, under concept of teaching, it is mentioned that there are informal agencies such as family that teach in an informal manner, so Reason (R) is wrong.
- Pages 2.5–2.10 – ‘Types of Research’.
- Refer Page 2.7.
- Refer Page 2.11–2.26 deal with Research Process in a comprehensive manner.
- Refer Page 2.32, there is a list of ‘desirable elements to ensure ethics in research’. On Page 2.34, there is mention of ‘avoiding bias’ and other points under Ethical issues relating to the researcher that emphasise ‘objectivity’ or ‘evidence based research reporting’.
- A research paper is an essay in which one explains what has been learnt after exploring some topic in depth. The information can be included from sources, such as books, articles, interviews, and Internet sites. One can also use one’s own ideas, knowledge and opinions. It should be in one’s own words.
A workshop is a period of discussion or practical work on a particular subject in which a group of people share their knowledge or experience.
- Selective attention is a cognitive process in which a person attends to one or a few sensory inputs/stimuli while ignoring the other ones.
‘Selective Expectation of Performance’ is also seemingly right but it is not a standardized term. Students are aware of differential classroom treatment, where high achievers receive more frequent and challenging opportunities to participate in class, more appreciation, more trust and greater autonomy.
NET aspirants can refer to terms ‘sensory buffer’, ‘filtering of messages’, ‘selective perception’, etc., for future exams.
On Page 4.11, there is mention of ‘competing stimuli’ on L.H.S. Column.
- Refer to Page 4.13 – Principles of Effective Classroom Communication. A teacher sometimes mentions ‘expected learning outcomes’ at the beginning of lecture.
- Refer to Page 4.13 – Principles of Effective Classroom Communication. To communicate well in the classroom is more a learnt ability than a natural ability. So, option (A) is false.
Effective teaching is helped by the knowledge of communication process.
- Refer Page 4.3 – Classroom Communication Process – Classroom communication is basically a transactional model wherein a sender represents the individual who has important information that needs to reach someone else, and a feedback mechanism is very crucial to ensure its effectiveness.
Reason (R) is incorrect as teaching is effective only if there is some feedback mechanism and students’ responses are to be taken seriously.
‘Cole and Chan Model’ is considered as two way ‘interactive’ communication process.
- Refer Page 4.2, Nature and importance of communication.
- Difference is increasing by 4, so the next difference is 18, and the next term should be 47.
 $5 - (-1) = 6; 15 - 5 = 10, 29 - 15 = 14$

22.

A	+3	D	+4	H	+5	M	+6	S	+7	Z
B	+5	G	+6	M	+7	T	+8	B	+9	K
D	+7	K	+8	S	+9	B	+10	L	+11	W

23.

V	A	R	A	N	A	S	I
+1	+2	+3	+4	+5	+6	+7	+8
W	C	U	E	S	G	Z	Q

Similarly,

K	O	L	K	A	T	A
+1	+2	+3	+4	+5	+6	+7
L	Q	O	O	F	Z	H

24.

25. Let the numbers be $2x : 5x$
 $(2x + 16)/(5x + 16) = 1/2$
 Solving this $x = 16$
 Hence, the numbers are
 $2 \times 16 = 32$ and $5 \times 16 = 80$
26. Refer Page: 6.16, its analogous definition. The statement draws analogy between 'power of concentration' and 'concave mirror collects all the rays'.
27. Refer 'Converting Common Language Statements into their Logical forms' on page 6.5 (R.H.S.), replace 'Most of the' with 'some' in premises and conclusions. As there are exactly three terms in premises, we can go for their alignment if required.

Some of the dancers are physically fit.
 Some of the singers are dancers.

After alignment

Some of physically fit are dancers – (I-Type)
 Some of dancers are singers – (I-Type)
 I-Type + I-Type – No conclusion.

NET aspirants should note that the alignment of sentences is not of any use in this case as $I + I$ in any case does not give any conclusion.

Thus, (A) some of singers are physically fit and (B) some of physically fit are singers both statements don't apply. Now we can go for immediate inference by refer table 6.2 on Page 6.7 to check for statements (B) and (C).

Some of physically fit are dancers – (I-Type)

After conversion: Some dancers are physically fit.

Some of dancers are singers – (I-Type)

After conversion: Some singers are dancers.

Thus, (B) and (C) are valid conclusions.

Alternatively, we can try to solve the same question by Venn diagrams also.

OR

Conclusion (A) - Some of the singers are physically fit. Keeping in view with two possibilities in Venn diagrams may be true or may not be true. In case of doubt, it is not a valid conclusion. Similarly, conclusion (D) is also not a valid conclusion.

Thus, both (B) and (C) apply and hence, (B) is the right answer.

28. According to immediate inference, b and c are valid conclusions. This is directly mentioned on Page 6.2, R.H.S. Column.

29. These types of questions require conceptual clarity, thorough practice and patience. Refer to 'Converting common language statements into their Logical Forms' on Pages 6.5 to 6.7.

First look at the main proposition. Sentences containing words as few, seldom, hardly, scarcely are to be reduced to O if there is no sign of negation (use of word in this case). Thus, 'domestic animals are hardly ferocious' is converted into O-type proposition 'some domestic animals are not ferocious'.

Now refer to square of opposition on Pages 6.12–6.14.

Here, it is mentioned that the statement is taken to be false. If **O Type** is false, then **E Type** is false. Here, E-type false means 'No domestic animals are ferocious'. It means that (C) is false.

(A) Since 'O' and 'A' are contradictories, if 'O' is false, then 'A' must be true. All domestic animals are ferocious. If an **O**-proposition is false, then you can conclude that the **A**-proposition would be true.

(B) We need to convert most of the domestic animals are ferocious into its logical form some domestic animals are ferocious, that is I-type. Since 'I' and 'O'

type are subcontraries, if one is false, then the other must be true. If 'O' is false, then 'T' must be true, thus (B) is valid.

All domestic animals are ferocious is valid conclusion.

- (C) Again, if an O-proposition is false, then you can conclude that the E-proposition would be false. Since these fall under subalternation, if the particular is false, then the corresponding universal must be false. It means 'No domestic animal is ferocious' is not valid.

Keeping in view choices, we can say that (1) is the right answer.

We can try to solve this question in a very simple manner. If the proposition 'domestic animals are hardly ferocious' is taken to be false, then 'all domestic animals are ferocious' is true. Accordingly (A) is correct. Again as per mediate inference rules 'some' is part of 'all'. So, (B) is also true. Thus, (1) is the correct answer.

30. A syllogism is a two premises argument having three terms, each of which is used twice in the argument. Since we have three classes, we expect to have three overlapping circles.

31. Consumption for different years is given as follows.

2012: $186.5 - 114 = 72.5$

2013: $202 - 114 = 88$

2014: $238 - 130 = 108$

2015: $221 - 116 = 105$

2016: $215 - 88 = 127$

For year 2013, percentage increase

$= (88 - 72.5)/72.5 \times 100 = 21.37\%$

For year 2014, percentage increase

$= (108 - 88)/88 \times 100 = 22.72\%$

For year 2015, there is decrease in consumption.

For year 2016, percentage increase

$= (127 \times 105)/105 \times 100 = 20.95\%$

32. Per capita consumption = (Consumption in million kg)/(Population in million)

Or population in million = Consumption in million kg/Per capita consumption

$= 108 \text{ million kg}/38.7 \text{ kg} = 2.79 \text{ million}$

Note: As population is to be calculated in million, there is no need for conversion of units as consumption is also given in millions. Kg in both numerator and denominators will cancel out each other.

33. We have already calculated consumption in question

For 2012, desired ratio = $114 : 72.5 = 1.57$

For 2013, desired ratio = $114 : 88 = 1.29$

For 2014, desired ratio = $130 : 108 = 1.20$

For 2015, desired ratio = $116 : 105 = 1.10$

For 2016, desired ratio = $88 : 127 = 0.69$

34. Population = Consumption (in million kg)/Per capita consumption (in kgs)

Population for 2013 = $88/35.2 = 2.5 \text{ million}$

Population for 2014 = 2.79 (already calculated)

Population for 2015 = $105/40.5$

$= 2.59 \text{ million}$

Population for 2016 = $127/42$

$= 3.02 \text{ million}$

35. Average consumption

$= (72.5 + 88 + 108 + 105 + 127)/5$

$= 500.5/5 = 100.1 \text{ million kg}$

36. Refer Page 8.1, under Meaning of ICT, 2nd paragraph, there is mention that different tools are now able to work together and combined to form our networked world – a massive infrastructure of interconnected telephone services, standardised computerised hardware, internet, radio, TV, etc.

37. Solid State Drive (SSD) is another type of Hard Disk Drive (HDD). SSD has no moving mechanical components. A conventional hard disk drive has magnetic discs in which data is stored. SSD has an integrated circuit that stores data. The advantages over conventional HDD includes higher speed, shock resistant, security of data, lighter in weight, smaller size, drastic decrease in boot times, much less power consumption.

39. Refer Page 8.17- R.H.S. A bit is a digit within binary number system.

40. Refer Page 8.14.

41. The most common use of fly ash is as a partial replacement for portland cement used in producing concrete.

42. Refer Page 9.22, R.H.S. Column, 1st point - drought has been described as 'slow onset of disaster and is difficult to demarcate the time of its onset and the end'.

43. Refer Page: 9.12, R.H.S., last paragraphs.

- 44.

Fuel	MW	% of Total
Total thermal	2,22,693	64.8%
Coal	1,96,958	57.3%
Gas	24,897	7.2%
Oil	838	0.2%
Hydro (Renewable)	45,403	13.2%
Nuclear	6780	2.0%
RES* (MNRE)	69,022	20.1%
Total	343,899	

* Installed capacity in respect of RES (MNRE) as on 31.03.2018.

45. Refer question 98 on Page 9.55.
46. Refer Page 10.1, L.H.S., under Introduction to Higher Education, 2nd paragraph.
48. Some important points about leader of opposition is as follows.
- (a) The Leaders of Opposition (LoPs) in Lok Sabha and Rajya Sabha were given statutory recognition in the year 1977.
 - (b) To become LoP, a political party needs atleast 10% strength of the house. The Speaker of Lok Sabha is the final judge to decide about leader of opposition. There is no LoP in 16th Lok Sabha (2014–2019) as no party could fulfil this condition.
 - (c) LoP gets the same salaries and allowances that are equivalent to a Cabinet minister.
 - (d) LoP is necessary to ensure public confidence in candidate selection in high posts. He/She is the member of committees to select CIC, CVC, NHRC, Lokpal and NJAC. It is necessary to ensure public confidence in candidate selection in the high posts.
- (e) Law Commission in its March 2015 report recommended that the appointment of all election commissioners, including the CEC be made by President in consultation with a three-member collegium, consisting of the PM, leader of the opposition in the Lok Sabha (or the leader of the largest opposition party in the lower house) and CJI.
49. The concept of 'Gender Budgeting', also known as 'Budget for Gender Equity' was introduced in India in 2005–06. It is a powerful tool for achieving gender mainstreaming so as to ensure that benefits of development reach women as much as men. It started with two types of schemes, such as Women Specific Schemes (100% allocation for women) and Pro Women Schemes (at least 30% of the allocation for women).
50. On the contrary, awareness of rights and duties of citizens is the facilitator of citizen-centric administration in India.

CBSE-UGC NET Paper 1

December 2018

- Which among the following is a cognitive characteristic of learner?
(a) Sensory perception
(b) Belief
(c) Academic self-concept
(d) Level of visual literacy
- As a teacher you wish to predict the capacity and potential success in your subject. Your main purpose is to predict or to identify individuals who have the greatest potential for development along special lines or who are likely to profit most by special training. Which test you would apply to accomplish that?
(a) Aptitude test (b) Intelligence test
(c) Personality test (d) Prognostic test
- According to Jean Piaget, there are _____ stages of cognitive development.
(a) 2 (b) 4
(c) 6 (d) 8
- John Dewey explained school as a/an _____ institution and education as a _____ process.
(a) Social, philosophical
(b) Social, social
(c) Economical, philosophical
(d) Environmental, psychological
- Who among the following proposed the theory of 'Multiple Intelligences'?
(a) Sigmund Freud (b) Howard Gardner
(c) Albert Einstein (d) Jean Piaget
- Empirical research in social sciences is associated with
(a) Fictional narratives
(b) Positivist philosophy
(c) Historical artifacts
(d) Religious practices
- Reasoning from a specific case to a general conclusion is known as
(a) Scientific logic (b) Inductive logic
(c) Deductive logic (d) Theoretical logic
- The purpose of review of literature includes
(i) To understand the subject background.
(ii) To formulate research questions.
(iii) To find out relevant methodology.
(iv) To debate the ethical aspects of research.
(v) To carry out meta analysis of bibliography.
(vi) To identify the data sources code.

Options:

- (a) (i), (ii), (iii) and (iv)
(b) (ii), (iii), (iv) and (v)
(c) (i), (ii), (iii) and (vi)
(d) (iii), (iv), (v) and (vi)
- If you are to calculate Spearman's rho, then what kind of data you would enter?
(a) Actual scores (b) Ranks
(c) Dichotomous data (d) Nominal data
- A variable that measures the effect of a manipulated variable is known as
(a) Independent variable
(b) Dependent variable
(c) Confounding variable
(d) Controlled variable

Read the following passage carefully and answer questions from 11 to 15.

It has to be noted that, although certain overall results had been obtained in the matter of economic growth in the developing countries regarded as a group, little progress had been made towards the establishment of the new international economic order within the framework of negotiations among nations for the purpose of applying the principles adopted in 1974 by the United Nations General Assembly. The situation appeared to be marked by a slowing down at world level in the effort to find a solution to most of the major problems, due to certain inability to control the evolution of societies and economies, and a fairly widespread feeling of uncertainty as to the future. The changes which have occurred between 1978 and 1980 have only magnified the difficulties, so that today there is much talk of a deterioration in the international situation. This is immediately apparent in regard to inequalities between human beings, whether considered as individuals or groups or nations. Overall economic disparities have not been attenuated. In many countries, per capita gross national product remains less than \$300, while in others it is situated at levels ten, twenty or even thirty times higher than this amount. In some rich countries, the average income is a hundred times higher than in the poorest countries. Particularly,

drastic is the state of penury, destitution and all too often, homelessness of those populations that may be regarded as history's most recent rejects: tire dis-inherited masses of the poorest countries. In these countries, whose economic situation is particularly critical, the problems of hunger, disease and ignorance experienced by a large part of the population seem to all but paralyse efforts made to cope with them.

11. What was the purpose of principles adopted by the United Nations General Assembly?
 - (a) Considering developing countries as a group.
 - (b) Obtaining results in the economic growth of developing countries.
 - (c) Establishing a new international economic order.
 - (d) Permitting negotiations among nations.
12. What is the consequence due to the little progress made by nations during negotiations?
 - (a) Evolution of societies
 - (b) Control of economies
 - (c) UN intervention
 - (d) Uncertain future
13. What is apparent due to the changes occurred between 1978 and 1980?
 - (a) Plan adjustment
 - (b) Support of rich countries
 - (c) Reduction in poverty
 - (d) Inequality between human beings
14. How economic disparities are reflected?
 - (a) \$300 per capita GNP as benchmark.
 - (b) Collectivizing individuals into groups or nations.
 - (c) Higher average income for poor countries.
 - (d) Average income of some countries is a hundred times higher than in the poor countries.
15. Whom do you call as history's recent rejects?
 - (a) Homeless population
 - (b) Ignorant population
 - (c) Large part of population
 - (d) Rich countries
16. In classroom communication, analogies are considered as
 - (a) Supporting evidence
 - (b) Unwanted information
 - (c) Control devices
 - (d) Attention-breakers
17. **Assertion (A):** Empathy is essential for effective communication between the communicator and the communicatee.
Reason (R): Empathy links the teacher and students.
 - (a) Both (A) and (R) are true.
 - (b) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
 - (c) (A) is true, but (R) is false.
 - (d) (A) is false, but (R) is true.
18. Computer-assisted language learning is called
 - (a) Aided learning
 - (b) Communicative call
 - (c) Language logic
 - (d) Electronic mediation

19. The word 'haptics' denotes
 - (a) Spatial communication
 - (b) Timely communication
 - (c) Staggered communication
 - (d) Tactile communication
20. Social media platforms have created a
 - (a) Society of reactionary opinions
 - (b) Society of consumables
 - (c) Society of negativity
 - (d) Society of networking
21. If DICE is coded as FLGJ, then the code for BITE will be
 - (a) DLXJ
 - (b) DKYH
 - (c) DKVY
 - (d) DICL
22. The next term in the series 7, 11, 19, 35, 67, _____ is
 - (a) 121
 - (b) 133
 - (c) 131
 - (d) 99
23. The next term in the letter series KB, JH, IM, HQ, GT, _____ is
 - (a) EY
 - (b) FV
 - (c) FU
 - (d) EU
24. Choose the word which is different from the rest.
 - (a) Paper
 - (b) Wool
 - (c) Plastic
 - (d) Jute
25. Pointing to a man, Abhijit said 'His granddaughter is the only daughter of my brother'. How is the man related to Abhijit?
 - (a) Father
 - (b) Grandfather
 - (c) Uncle
 - (d) Brother-in-law

Comprehension

Year	Items of expenditure (₹ in crores)				
	Salary	Fuel	Bonus	Interest on loans	Taxes
2008	57.6	19.6	0.6	4.68	16.6
2009	68.4	22.4	0.5	6.50	21.6
2010	64.8	20.2	0.76	8.32	14.8
2011	67.2	26.6	0.74	7.28	17.6
2012	84.0	28.4	0.80	9.88	19.6

The above table shows details of expenditure incurred by a tea garden during the years 2008 to 2012. Note that all expenditure reported is in crores.

Answer the following questions based on the data given in the above table.

26. The average yearly expenditure on 'Interest on Loans' during the period 2008-2012 was approximately
 - (a) ₹6.33 Crores
 - (b) ₹6.88 Crores
 - (c) ₹8.32 Crores
 - (d) ₹7.33 Crores
27. Bonus as a percentage (%) of salary was highest in the year
 - (a) 2008
 - (b) 2009
 - (c) 2010
 - (d) 2011

28. In which year, was the total expenditure (over the five heads of expenditure listed in the table above) the least?
 (a) 2008 (b) 2009
 (c) 2010 (d) 2011
29. In which years, the percentage (%) growth of expenditure on salary (as compared to the previous year), was more than 10%?
 (a) 2009 and 2010 (b) 2010 and 2012
 (c) 2011 and 2012 (d) 2009 and 2012
30. In which year, the expenditure of taxes and 'Interest on loans', was less than the expenditure on fuel, etc.?
 (a) 2009 (b) 2010
 (c) 2011 (d) 2012
31. Two propositions are contradictory when
 (a) Truth of one proposition implies falsity of the other and vice versa.
 (b) Truth of one proposition supposes the falsity of the other and vice versa.
 (c) Truth of one proposition does not guarantee the falsity of the other.
 (d) Truth of one proposition rejects the falsity of the other and vice versa.
32. Among the following, identify the two statements which are in such a relation that the truth of one implies the truth of the other, but not conversely.
Statements:
 (i) All plastics are synthetic.
 (ii) Some plastics are synthetic.
 (iii) Some plastics are not synthetic.
 (iv) No plastics are synthetic.
Options:
 (a) (i) and (ii) (b) (i) and (iii)
 (c) (i) and (iv) (d) (ii) and (iv)
33. Identify the argument which involves a leap from the known to the unknown.
 (a) Deductive argument
 (b) Reductive argument
 (c) Inductive argument
 (d) Analogical argument
34. Given below are two premises (A and B). Four conclusions are drawn from them. Select the code that states validly drawn conclusion(s) (Taking the premises individually or jointly).
Premises:
 (A) No non-literates are graduates.
 (B) All non-graduates are non-teachers.
Conclusions:
 (i) All teachers are non-literates.
 (ii) All teachers are graduates.
 (iii) All non-teachers are non-graduates.
 (iv) No non-literate is a teacher.
Options:
 (a) (i) and (ii) (b) (ii), (iii) and (iv)
 (c) (iii) and (iv) (d) (ii) and (iv)
35. The argument which claims that its conclusion is supported by its premises conclusively is
 (a) Analogical argument
 (b) Inductive argument
 (c) Demonstrative argument
 (d) Deductive argument
36. If the binary equivalent of the decimal number 53 is 110101, then the binary equivalent of the decimal number 50 is given by
 (a) 110011 (b) 110010
 (c) 110001 (d) 110100
37. Which one of the following is not part of suite of products of Microsoft Office?
 (a) Microsoft Excel (b) Microsoft PowerPoint
 (c) Microsoft Publisher (d) Microsoft Windows
38. The internet began with the development of
 (a) USENET (b) Intranet
 (c) ARPANET (d) Intranet
39. RFID is an acronym for
 (a) Roaming Frequency Identification
 (b) Radio Frequency Identification
 (c) Runtime Frequency Identification
 (d) Remote Frequency Identification
40. Bluetooth is an example of
 (a) PAN (b) LAN
 (c) MAN (d) WAN
41. Recently in Brazil, a bacterium exhibited antibiotic resistance, which was not reported previously
 (a) Pseudomonas species
 (b) Salmonella species
 (c) Klebsiella species
 (d) Streptococcus species
42. One of the following has a positive human influence on the environment?
 (a) Deforestation (b) Over population
 (c) Pollution (d) Conservation
43. **Assertion (A):** The environmental impact of soil erosion can best be mitigated by removing vegetative cover only from the specific site in which construction is to take place.
Reason (R): The environmental impact of soil erosion can also be mitigated by disturbing the vegetation in adjacent areas as little as possible.
 (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
 (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
 (c) (A) is true but (R) is false.
 (d) (A) is false but (R) is true.
44. **Assertion (A):** Hydropower is an exhaustible energy resource.
Reason (R): The power of falling water would neither diminish nor get exhausted.
 (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
 (b) (A) and (R) are true, but (R) is not the correct explanation of (A).
 (c) (A) is true, but (R) is false.
 (d) Both (A) and (R) are false.

45. In the scheme of life, soil is an essential resource of life, as it plays the following roles.
- It is a reservoir of carbon.
 - It is the medium for growth of food and energy for the animal world.
 - It provides oxygen to the biotic community.
 - It is a natural reservoir for the huge amount of water.

Select the correct answer from the above.

- (a) (i), (ii) and (iii) (b) (i), (ii) and (iv)
 (c) (ii), (iii) and (iv) (d) (i), (iii) and (iv)
46. In terms of year of establishment, which open university is the youngest among the following (established most recently)?
- Tamil Nadu Open University, Tamil Nadu
 - Odisha Slate Open University, Odisha
 - Krishna Kanta Handique State Open University, Assam
 - Pt. Sunderlal Sharma Open University, Chattisgarh
47. Match the following.

Set-I	Set-II
(a) Swayam Prabha	(i) FM education radio network.
(b) GIAN (Global Institute of Academic Network)	(ii) Internet audio counselling service.
(c) Gyan Vani	(iii) Free DTH channel for education.
(d) Gyan Darshan	(iv) Talent pool of scientists and entrepreneurs for engagement with Indian higher education institution.
(e) Gyandhara	(v) Educational Television Channel

Code:

- (a) (b) (c) (d) (e)
 (a) (i) (ii) (v) (iv) (iii)
 (b) (ii) (iii) (iv) (i) (v)
 (c) (iii) (iv) (i) (v) (ii)
 (d) (v) (iii) (ii) (iv) (i)

48. The institutions of eminence lag granted by the union government in public sector are

- IIT, Delhi
- IIT, Bombay
- Jawaharlal Nehru University, Delhi
- University of Hyderabad
- Pondicherry University
- Indian Institute of Science

Options:

- (i), (ii), (iv) and (v) only
- (ii), (iii), (v) and (vi) only
- (i), (ii) and (vi) only
- (iii), (iv), (v) and (vi) only

49. Which among the following was launched on 2 October 1978 (the birthday of Mahatma Gandhi)?

- National Adult Education Programme
- EduSAT
- First educational radio channel
- 10 + 2 + 3 Scheme

50. On the recommendations of which commission, 10 + 2 + 3 structure was incorporated in the statement of National Policy on Education, 1968?

- Kothari Commission
- Mudaliar Commission
- Ramamurti Commission
- Mandal Commission

ANSWER KEYS

1. (d) 2. (a) 3. (b) 4. (a) 5. (b) 6. (b) 7. (b) 8. (c) 9. (b) 10. (b)
 11. (c) 12. (d) 13. (d) 14. (d) 15. (a) 16. (a) 17. (a) 18. (b) 19. (d) 20. (d)
 21. (a) 22. (c) 23. (b) 24. (c) 25. (a) 26. (d) 27. (c) 28. (a) 29. (d) 30. (c)
 31. (a) 32. (a) 33. (c) 34. (d) 35. (d) 36. (b) 37. (d) 38. (c) 39. (b) 40. (a)
 41. (b) 42. (d) 43. (b) 44. (a) 45. (b) 46. (b) 47. (c) 48. (c) 49. (a) 50. (a)

CBSE-UGC NET Paper 2

December 2018

- Poster sessions in research conferences provide better opportunities for
 - Focus group discussions
 - Interpersonal interactions
 - Formal speeches
 - Display of common interest
- Which among the following best describes emotional intelligence as a learner characteristic?
 - Recognize their own and other people's emotions.
 - Expressing their emotions strongly.
 - Use emotional information to guide thinking and behaviour.
 - Good observation, scientific thinking and deductive reasoning.
 - Adjusting emotions to adapt to environments.
 - Being creative and open to diverse viewpoints.

Options:

 - (iii), (v) and (vi)
 - (i), (iv) and (vi)
 - (i), (iii) and (v)
 - (ii), (iv) and (v)
- In a school, in which there are large number of failures, you may like to develop test for eliminating those who are likely to have substantial difficulties in meeting the academic goals of teaching. For this you need to develop test which should be able to predict the individual's ability or readiness to undertake the study of a school subject successfully. What is the name of such tests?
 - Prognostic tests
 - Attitude tests
 - Achievement tests
 - Analytical tests
- The goal of formative assessment is to
 - Promote student to next level.
 - Form a group of students on the basis of their learning.
 - Compare student learning against a standard or benchmark.
 - Monitor student learning to provide ongoing feedback.
- The characteristics of scientific method of research are
 - Empiricism
 - Objectivity
 - Systematic
 - Secretive
 - Security' related
 - Predictive

Options:

 - (i), (ii), (iii) and (vi)
 - (i), (ii), (iv) and (v)
 - (iv), (v), (vi) and (i)
 - (iii), (iv), (v) and (vi)
- The kind of numbers which do not represent amounts but instead represent kind (different qualities, types or categories) are known as
 - Absolute
 - Ordinal
 - Prime
 - Nominal
- In a research setting, participants may act differently because they think they are getting special attention. This reaction of treatment group to the special attention rather than the treatment itself is known as
 - Jung effect
 - Hawthorne effect
 - Attention deficit
 - Markov effect
- Which among the following can best be used as an asynchronous teaching aid?
 - Skype
 - Blog
 - Facebook post
 - Online chat
 - Email
 - Google Hangout

Options:

 - (i), (iii) and (vi)
 - (iii), (v) and (vi)
 - (i), (ii) and (iii)
 - (ii), (iii) and (v)
- In teaching learning context, the results of an evaluation are useful to teachers in various ways. Which among the following is most important use for a teacher?
 - To decide placement of students in other institutions.
 - Planning instruction and knowing the effectiveness of the teaching strategies used by them.
 - Getting information about student's study interests.
 - To identify home influence on students.
- When a reviewer reviews a research article without knowing the authors name, it is referred to as
 - Anonymous review
 - Uncategorized review
 - Blind review
 - Behind-the-curtain review

Read the passage carefully and answer questions 11 to 15.

Today, in the digital age, who owns information owns the future. In this digital world, we face a fundamental choice between open and closed. In an open world, information is shared by all and it is freely available

to everyone. In a closed world, information is exclusively owned and controlled by a few. Today, we live in a closed world a world of extraordinary and growing concentrations in power and wealth. A world where innovation is held back and distorted by the dead hand of monopoly, where essential medicines are affordable only to the rich, where freedom is threatened by manipulation, exclusion and exploitation; and each click you make, every step you take, they will be watching you. By contrast, in an open world, all of us would be enriched by the freedom to use, enjoy and build on everything from statistics and research to newspaper stories and books, from software and films to music and medical formulae. In an open world, we would pay innovators and creators more and more fairly, using market-driven remuneration rights in place of intellectual property monopoly rights. As they have improved, digital technologies have taken on ever more of the tasks that humans used to do, from manufacturing cars to scheduling appointments. And in the next few decades, artificial intelligence may well be not only driving our cars for us but drafting legal contracts and performing surgery. On the face of it, we have much to gain if machines can spare us tedious or routine tasks and perform them with greater accuracy. The danger, though, is that robots run on information-software, data algorithms and at present the ownership of this sort of information is unequal. And because it is protected by our closed system of intellectual property rights.

11. The crux of the passage contains the following statements.
- Digital technology is dangerous.
 - Those who own information will own the future.
 - Artificial intelligence will do the human tasks.
 - Monopoly of digital technology has led to unequal ownership of information.
 - Intellectual property rights should be protected in an open world.
- Options:**
- (iv), (v) and (i)
 - (iii), (iv) and (v)
 - (i), (ii) and (iii)
 - (ii), (iii) and (iv)
12. What is the impact of digital technologies on the present day world?
- Tedious tasks see an upward trend.
 - Mechanical accuracy is distorted.
 - Creativity is sidelined.
 - Human tasks are performed by machines.
13. Which of these characteristics of a closed world?
- Concentration in power and wealth increases.
 - Innovation is controlled.
 - Only the rich have access to medicines.
 - Freedom is manipulated.
 - Information is shared by all.
 - Creativity is recognized.

Options:

- (iii), (iv), (v) and (vi)
 - (i), (ii), (iii) and (iv)
 - (iv), (v), (vi) and (i)
 - (ii), (iii), (iv) and (v)
14. What is the status of intellectual property rights in an open world?
- Replaced by remuneration rights.
 - They are monopoly rights.
 - Protected proprietorial rights.
 - Medical formulae are restricted.
15. How will an open world function?
- With limited choices.
 - Information is available to everyone.
 - Information is controlled.
 - Information is exclusive.
16. If FACE is coded as HCEG, then the code for HIGH will be
- ZXYZ
 - KH1K
 - BEFB
 - JKIJ
17. Ram said to Shyam, 'That girl playing with the doll, is the younger of the two daughters of my father's wife'.
- How is the girl playing with the doll related to Ram?
- Cousin
 - Sister-in-law
 - Sister
 - Aunty
18. The next number in the series 12, 15, 21, 33, 57, _____ is
- 97
 - 95
 - 107
 - 105
19. Modern educational communication is described as
- Telescopic
 - Teleologic
 - Non-distributive
 - Unapproximate
20. In verbal communication, words act as
- Symbols
 - Decoratives
 - Passive barriers
 - Fillers
21. Classroom communication has a basis in
- Audience fragmentation
 - Intensive listener focus
 - Attention diversion
 - Non-informative cues
22. Which of these words is different from the rest?
- Sharp
 - Thin
 - Huge
 - Tall
23. In which of the following instances, deductive argument is invalid?
- When its premises and conclusion are all true.
 - When its premises are false and conclusion is true.
 - When its premises and conclusion are all false.
 - When its premises are true but conclusion is false.
24. Effective classroom communication would help students internalize
- Knowledge
 - Subject matter
 - Articulation
 - Language felicity
 - Non-responsiveness
 - Modalities of resistance

Options:

- (a) (i), (ii), (iii) and (iv)
- (b) (iii), (iv), (v) and (vi)
- (c) (ii), (iii), (iv) and (v)
- (d) (i), (iv), (v) and (vi)

25. The next term in the letter series DY, JX, OW, SV, VU, _____ is
 (a) XS (b) YT
 (c) XT (d) VVV

26. The reasoning which would be helpful in seeking new knowledge of facts about the world is
 (a) Inductive (b) Speculative
 (c) Deductive (d) Demonstrative

27. The challenging behaviours of students as related to communication are
 (i) Purposive challenges
 (ii) Critical challenges
 (iii) Procedural challenges
 (iv) Evaluation challenges
 (v) Practicality challenges
 (vi) Power challenges

Options:

- (a) (iii), (iv), (v) and (vi)
- (b) (ii), (iii), (iv) and (vi)
- (c) (i), (ii), (iii) and (iv)
- (d) (iv), (v), (vi) and (i)

28. Among the following statements, two are contradictory to each other.

Statements:

- (i) All men are humans.
- (ii) Some men are humans.

- (iii) Some men are not humans.
- (iv) No men are humans.

Select the code that represents them:

- (a) (i) and (iii)
- (b) (ii) and (iii)
- (c) (i) and (ii)
- (d) (i) and (iv)

29. Given below are two premises with four conclusions drawn from them (taking singly or together). Which of the following conclusions could be validly drawn from the premises?

Premises:

- (A) All cats are animals.
- (B) Birds are not cats.

Conclusions:

- (i) Birds are not animals.
- (ii) Cats are not Birds.
- (iii) All animals are cats.
- (iv) Some animals are cats.

Select the correct answer from the code given below.

- (a) (i) and (iii)
- (b) (ii), (iii) and (iv)
- (c) (ii) and (iv)
- (d) (i), (ii) and (iv)

30. Inductive argument proceeds from

- (a) Particulars to Universal.
- (b) Particulars to Particulars.
- (c) Universals to Particulars.
- (d) Universals to Universals.

Comprehension

Subject	Total number of students appeared	Number of students who passed	Number of Students who failed	Maximum/Full marks in the subject
English	600	–	36	600
Mathematics	–	240	60	–
Science	300	216	–	400
Social Studies	360	–	48	400
Computer	–	168	32	400

Study the table given above carefully. It shows the number of students appeared, passed and failed in five subjects. The full marks in each subject is also given.

Some of the cells have missing data. You might need to determine some of the missing data to answer the questions below.

31. What is the difference between the number of failed students in Science and the number of students passed in Social Studies?
 (a) 238 (b) 218
 (c) 228 (d) 312

32. Which of the following could be the full marks in Mathematics if the pass marks in Mathematics was 35% and the person who just passed scored 70?

- (a) 400 (b) 600
- (c) 500 (d) 200

33. What is the maximum marks that a student can score in all the five subjects together? (You may use the answer of the previous question)

- (a) 500 (b) 1500
- (c) 1000 (d) 2000

34. In which subject, was the failure percentage the least?
 (a) Mathematics (b) Social Studies
 (c) Science (d) English
35. What is the approximate difference in percentage between the pass % in Social Studies and the pass % in Mathematics?
 (a) 6.5% (b) 26.5%
 (c) 2.5% (d) 16.5%
36. DNS stands for
 (a) Domain Name Standard
 (b) Domain Name System
 (c) Distributed Name System
 (d) Dynamic Name Standard
37. University and University-level institutions are categorized into
 (i) Central Universities
 (ii) State Universities
 (iii) Private Universities
 (iv) Deemed-to-be Universities
 (v) Institutions of Higher Learning
 (vi) Civil Sector Institutions
Options:
 (a) (i), (ii), (iii) and (iv)
 (b) (ii), (iv), (v) and (vi)
 (c) (iii), (iv), (v) and (i)
 (d) (i), (iii), (v) and (vi)
38. The Council of Rural Institutes Authority is situated at
 (a) Pune (b) Hyderabad
 (c) Ahmedabad (d) Ludhiana
39. The first Open University established in India is at
 (a) Bhim Rao Ambedkar Open University, Hyderabad.
 (b) Tamil Nadu Open University, Chennai.
 (c) Nalanda Open University, Patna.
 (d) Yashwantrao Chavan Maharashtra Open University, Nasik.
40. In 1948, under whose Chairmanship a University Education Commission was set up to reconstruct University Education in India?
 (a) Sardar Vallabh Bhai Patel
 (b) Dr. Vikram Sarabhai
 (c) Prof. P. C. Joshi
 (d) Dr. S. Radhakrishnan
41. 'e-Pathshala' is an initiative by
 (a) NCERT (b) UGC
 (c) CBSE (d) NCTE
42. The biggest hindrance in using biomass as a major energy source is
 (a) Energy yield of low level.
 (b) Large amount of land required to grow energy crops.
 (c) Technology not well developed for commercialization.
 (d) Air pollution due to combustion.
43. A terabyte is equal to
 (a) 1024 Megabytes (b) 1024 Kilobytes
 (c) 1024 Gigabytes (d) 1024×1024 Kilobytes
44. An earthquake is rated as 'major' if its magnitude in Richter Scale is in the range of
 (a) 4.0 - 4.9 (b) 6.0 - 6.9
 (c) 7.0 - 7.9 (d) 5.0 - 5.9
45. The binary equivalent of $(-23)_{10}$ is (2's complement system for negative numbers is used)
 (a) 01001 (b) 10111
 (c) 01010 (d) 01000
46. Plants suitable for bio monitoring of sulphur dioxide pollution are
 (a) Tomato and lettuce.
 (b) Apricot, peach and gladiolus.
 (c) Tobacco, grapes and garden bean.
 (d) White pine, moss and lichens.
47. The full form of PDF is
 (a) Portable Data format
 (b) Portable Document Form
 (c) Portable Document Format
 (d) Portable Data Form
48. Which of the given statements are true?
 (i) Modem is a networking device.
 (ii) Modem is a voltage stabilizer.
 (iii) Modem converts analogue signal to digital signal and vice versa.
Options:
 (a) (ii) and (iii) (b) (i) and (iii)
 (c) (i) and (ii) (d) (i), (ii) and (iii)
49. Which among the following industries, consumes maximum water in India?
 (a) Engineering (b) Textiles
 (c) Thermal power plants (d) Paper and pulp
50. **Assertion (A):** Climate change is going to increase social tension in India.
Reason (R): The frequency and intensity of the extreme weather events will have serious consequences for food security.
 (a) (A) is false, but (R) is true.
 (b) Both (A) and (R) are true, and (R) is not the correct explanation of (A).
 (c) Both (A) and (R) are true, and (R) is the correct explanation of (A).
 (d) (A) is true, but (R) is false.

ANSWER KEYS

1. (b) 2. (c) 3. (a) 4. (d) 5. (a) 6. (d) 7. (b) 8. (d) 9. (b) 10. (c)
 11. (d) 12. (d) 13. (b) 14. (a) 15. (b) 16. (d) 17. (c) 18. (d) 19. (b) 20. (a)
 21. (b) 22. (a) 23. (d) 24. (a) 25. (c) 26. (a) 27. (a) 28. (a) 29. (d) 30. (a)
 31. (c) 32. (d) 33. (d) 34. (d) 35. (a) 36. (b) 37. (a) 38. (b) 39. (a) 40. (d)
 41. (a) 42. (b) 43. (c) 44. (c) 45. (a) 46. (d) 47. (c) 48. (b) 49. (c) 50. (c)
